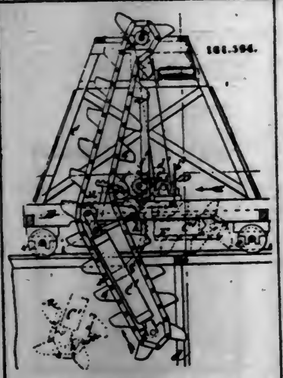
1. The combination of the front and back uprights A B, of reverse zigzag construction or arrangement relatively with each other, and the longitudinal tubes C, made to connect each front zigzag upright with two back zigzag uprights, and each of said back uprights with two of said front uprights, substantially as and for the purposes herein set forth.

2. The combination, with the drums D E, or either of them, and end uprights, to which they are attached, of the tubes b, the taper rings or plugs c, and the clamps d, connected with the end uprights by screws e e, substantially as specified.

161,583. JIG-SAWS. Giles S. Williams, Madison, Wis. [Filed Dec. 10, 1874.]

Brief.—A reciprocating motion is given to the saw through the agency of a treadle operating a pair of toggle-levers, which are connected to the same.



1. The compound double toggle-lever connecting the saw-frame of a jig-saw directly with the operating-treadle, substantially as described, for the purpose specified.

2. The vibrating pivot-arm Q, connecting the compound lever to the frame of the machine, substantially as described, for the purpose specified.

3. The combination of the compound lever, vibrating pivot-arm Q, and the balance-wheels with the saw and frame of the machine, substantially as described, for the purpose specified.

161,584. COAL AND OTHER ELEVATORS. S. Winslow, Rutherford Park, N. J., and T. Goldsmith, New York, N. Y. [Filed Oct. 23, 1874.]

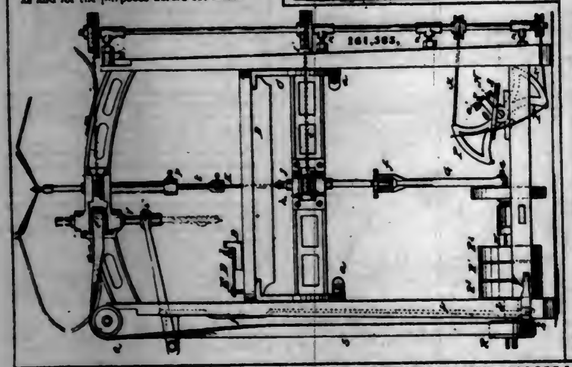
Brief.—Portable ways are placed over a scow or other vessel, on which runs a carriage having an endless chain, in two sections, of buckets, the lower section adapted, by a top pivot, to vary its angle with the upper one, by means of a pinion and segmental rack.

161,384.

1. The combination, with the buckets G, connected to the chains F F by the upper and lower pins e e', of the drum E, having a plurality of sides, and provided at each end with a pulley, *i*, having notches, with which the chain-pins e e' engage, substantially as described, and for the purposes set forth.

2. The combination, with the movable truck frame B and section C of elevating-buckets mounted upon said truck-frame, of the bucket-carrying section C', pivoted upon a shaft, *i*, mounted in the frame B, substantially as described, whereby the said section C' may be moved or adjusted to a horizontal, vertical, or angular position, for the object specified.

3. The combination, with the endless chains F, section C of buckets, and pivoted bucket-carrying section C', of the rollers M, having fixed centers, and the rollers N, attached to the upper extensions of the swinging-frame section, substantially as described.



161,383. SCROLL-SAWING-MACHINES. Geo. S. Young, Clearfield, Pa. [Filed Feb. 27, 1875.]

Brief.—The saw is so arranged that it may o revolved by the action of a treadle. A boring device is attached and the saw-table made adjustable.

1. The combination, with the sleeve J', of the collar *p*, with tube *s*, adjustable rod *t*, and adjustable guide *w*, arranged to turn with the saw, substantially as and for the purposes herein set forth.

2. The combination, with the upright shaft M, of the pulleys *y y'*, chains *x x'*, quadrants I' I'', with arms *z z*, set-screw *a'*, shaft N, and foot-piece O, all constructed substantially as and for the purposes herein set forth.

3. The combination, with the driving-shaft of a scroll-sawing machine, of the loose pulley R', fast pulley R'', pulley R', having elongated hub *b'*, with pulley R, and the belt S, connecting with the boring-spindle V, substantially as and for the purposes herein set forth.

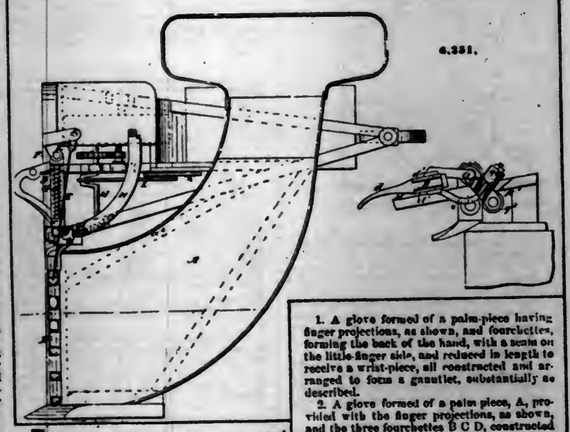
161,383.

REISSUES.

6,351. HARVESTERS. John E. Buxton and Thos. J Howe, Owatonna, Minn. Patent No. 147,477, dated Feb. 17, 1874. [Filed Oct. 10, 1874.]

Brief.—As the cut grain falls upon the inclined platform it is carried by the sweep-rake to the binders' table.

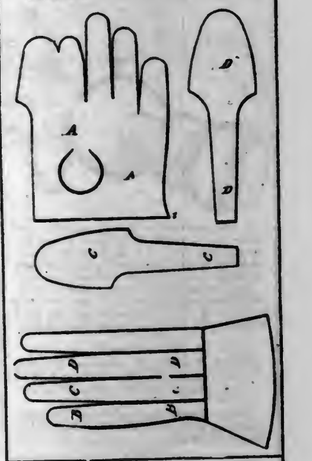
1. The harvester-platform extending backward and upward on a regular curve in a spiral plane, narrower at its rear than at its front, and combined with a binder's stand or stands, and platform at its rear, substantially as and for the purposes set forth.



2. In combination with the harvester-platform A, rising, receding, and narrowing in a spiral plane, as set forth, the rake D *d d'*, journaled in a rising hinge, F, and guided by the rising track H, substantially as described.

3. The rubber spring *g'*, brace-rod *x*, and arm *g'*, combined with rake-head, substantially as described.

4. A harvester rake having teeth flexibly connected and alternately contracted and expanded by a push-rod, E, substantially as and for the purpose specified.



5. A rake-shank, G, journaled in a rising hinge, F, and provided with spring *g*, roll *g'*, arm *g''*, and roll *g'''*, in combination with a rising track, H, substantially as and for the purpose described.

6. The two tracks H H', having a junction at the notches *h h'*, combined with the spring-supported auxiliary track H'' and the pivoted rake-shank G, having the spring-vibrated arm *g''*, substantially as and for the purpose set forth.

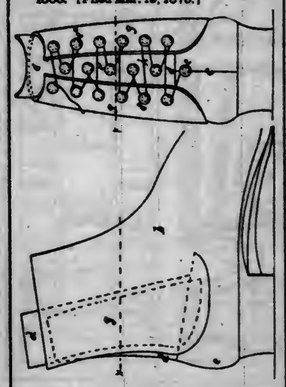
6,351.

6,338. GLOVES. Solomon J Clute and Dast. M. Durfee, Rockwood, N. Y. Patent No 129,934, dated July 30, 1872. [Filed Feb 25, 1875.]

1. A glove formed of a palm-piece having finger projections, as shown, and fourchettes, forming the back of the hand, with a seam on the little-finger side, and reduced in length to receive a wrist-piece, all constructed and arranged to form a gauntlet, substantially as described.

2. A glove formed of a palm piece, A, provided with the finger projections, as shown, and the three fourchettes B C D, constructed and arranged substantially for the purposes herein set forth.

3. The enlarged or projected corners *i i'*, formed on the palm-piece A and fourchette B, respectively, substantially as and for the purposes herein set forth.



6,352. GRATE-BARS. Robt. C. Graves, Cambridge, Ohio, assignor to Wm. H. Hobbs and R. C. Graves. Patent No. 135,799, dated Feb. 11, 1873. [Filed Feb. 6, 1875.]

The combination of the bar D, provided with studs *c*, with grate-bars or ribs A, and operating lever E, substantially as and for the purposes set forth.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

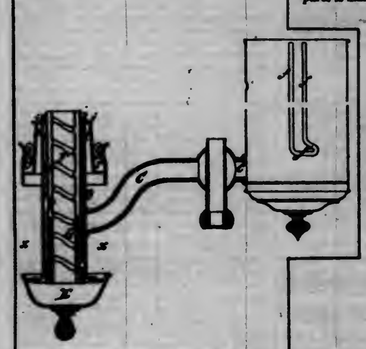
6,354. SHOES. Charles Parley, New York, N. Y., assignor to Calvin Heyscone, Boston, Mass. Patent No. 76,046, dated Mar. 3, 1868. [Filed Mar. 19, 1875.]

1. A shoe, with side openings, in which the front-quarters overlap the back-quarters, and have their lower rear edges drawn toward each other by a fastening extending across the back near the heel.

2. A boot or shoe having flaps *g g*, combined with a back, *d*, and a check or checks, substantially as described.

3. A shoe, having side openings, the front quarters overlapping the back quarters, and cut in such a pattern that the rear edges of the front quarters fall in the recess back of and below the ankle-joint and above the heel, substantially as and for the purposes specified.

4. A boot or shoe opening at the sides, and provided with a check or checks, *c*, at the back portion thereof to prevent the parts from working out of place.



5. The padding, applied at *f* within the rear portion of the boot or shoe, substantially as and for the purposes specified.

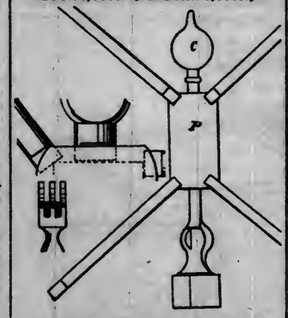
6. The padded back *d*, substantially as and for the purposes specified.

7. The buttons or fastenings along the back *d*, between the flaps *g g*, substantially as and for the purposes set forth.

6,355. LAMPS. Bennett B. Schneider, New York, N. Y. Patent No. 102,163, dated Apr. 19, 1870. [Filed Feb. 2, 1875.]

Brief.—The valve in the bottom of the reservoir is operated, upon turning the reservoir, by means of an arm which works in a groove or passage on the wall of the receiver. The slotted wick-tube is strengthened by strips of metal.

1. The combination, with the bottom plate of the reservoir B, having an aperture therein for the admission and escape of oil, of a valve having a corresponding aperture, and attached to the bottom of the reservoir, to be capable of turning thereon, substantially as herein described.



2. The combination of the reservoir B, a turning-valve attached to its bottom, an arm, *c*, provided on such valve, and a receiver, A, having a groove or passage in its inner side receiving said arm, substantially as and for the purpose herein described.

3. The combination, with the reservoir B, valve *b* or *c*, furnished with an arm, *c*, of a receiver, A, provided in its inner side with a passage, terminating in a transverse extension, substantially as herein set forth, whereby the reservoir may be secured in the said receiver against removal by simply lifting it out.

4. The plate or sheet of metal which unites the deflector I to the tube H, constructed with a series of apertures in close contiguity with the tube H, substantially as set forth.

5. The combination of the tube H and strips of metal *i i*, substantially as set forth.

6,356. TOY BLOCKS. Charles M. Crandall, Montrose, Pa., assignor to C. M. Crandall & Co., same place. Patent No. 61,721, dated Feb. 5, 1867. [Filed Mar. 8, 1875.]

1. As a new article of manufacture, children's building-blocks or other toys, constructed with interchangeable mortise and tenon joints, substantially as described, so that the several parts of the toy, irrespective of size or shape, may be fitted together and retain any desired position or combination by the clamping or friction caused by one part fitting or entering into another part, substantially as and for the purpose set forth.

2. Children's toys, provided with one or more jaws, grooves, recesses, or similar clamping devices, within which corresponding tongues, tenons, or other projections of the toy are fitted and retained in position by friction alone, substantially as described, so that a given combination and arrangement of the several parts is maintained, as specified.

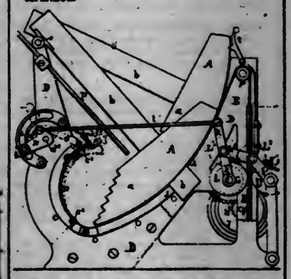
6,357. PUMPS. Francis Curtis and Edward P. Russell, Newburyport, Mass. Patent No. 154,785, dated Sept. 8, 1874. [Filed Jan. 20, 1876.]

Brief.—A double-acting pump having a piston-cylinder and two valve-cylinders, each containing inlet and discharge valves; the piston and valve cylinders being so arranged that their upper ends terminate in an open basin, into which the valve-cylinders discharge their contents, and through which free access is had to all three cylinders, and to the several valves

1. In a double-acting pump, the combination of an open water-basin with two valve-wells, each provided with inlet and discharge valves, and opening and discharging their contents into the basin, substantially as shown and described.

2. The combination in a double-acting pump of the valve-wells D E, each provided with inlet and discharge valves, and piston-cylinder B, with an open water-basin extending over said valve-wells and piston-cylinder, said valve-wells discharging their contents into the basin, substantially as shown and described.

3. The cross-stay *b'*, secured to the basin, and forming a guide for the piston-rod of the pump, and provided with legs *b''* for holding the cap or cover *b* in place, substantially as shown and described.



4. The combination, with the cross-stay *b'* and its legs *b''*, of the studs *b'''*, passing through holes in the cross-stay and keys *b''*, whereby the cross-stay *b'* and cap *b* are secured without requiring screws or bolts, substantially as shown and described.

5. The combination, with the casing A formed with a main or piston cylinder, a pair of valve cylinders D E, and a basin, F, having a central nozzle, C, all cast in one piece, and provided with studs *b'*, as described, of the stay *b'*, provided with a bearing for the piston-rod *b'*, and vertical projections *b''*, for retaining the cap or cover *b* in position, substantially as set forth.

6. The piston-cylinder B and its head *b*, in combination, with the projections *b''*, of the bridge piece *b''*, substantially as and for the purpose specified.

6,358. FULLING-MILLS. Rudolf Bickensoyer, Yonkers, N. Y., assignor to Bickensoyer Fulling Company. Patent No. 144,841, dated Nov. 25, 1873. [Filed May 9, 1874.]

Brief.—The hinged apron and the flange hinged to its top are independently and jointly adjustable, to vary the area of the falling-space. The straps which elevate the stocks are operated by griping-rolls, which alternately seize and release them. These rolls are actuated by gear-wheels, so hung in an adjustable frame that the contact of the rolls may be governed, and the height to which the stocks are raised thereby determined.

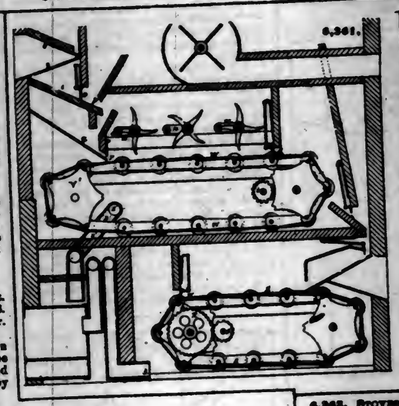
1. The combination, substantially as before set forth, of the adjustable tip and the adjustable apron of the bed of the fulling-mill.

2. The combination, substantially as before set forth, of the fulling-stock with adjustable raising mechanism, which is adjustable to vary the distance to which the fulling-stock is raised, so that the force of the blow can be varied as the fulling progresses.

3. The combination, substantially as before set forth, of the adjustable bed for the fulling-mill, the fulling-stock, and the adjustable raising mechanism for the fulling-stock, so that the resistance to the movement of the articles may be increased when the force of the blow is increased.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

4. The combination, substantially as before set forth, of the falling-stock, the adjustable raising mechanism therefor, and the cone-pulley for varying the number of strokes of the falling-stock in a given time.



5. The combination, substantially as before set forth, of the falling-stock, the raising-strap, and the griping-rollers.

6. The combination, substantially as before set forth, of the raising-strap, the eccentric griping-rollers, and the adjusting mechanism for varying the relative angular positions of said rollers, so as to vary the time during which they operate upon the raising-strap.

7. The combination, substantially as before set forth, of the falling-stock, the raising-strap, the griping-surfaces which operate on said strap, and the springs which cause one of said griping surfaces to bear against said strap with a yielding pressure.

6,259. HARVESTERS. John H. Hiward, St. Paul, Minn., assignor to himself and W. S. Goodhue. Patent No. 113,000, dated Apr. 25, 1871. [Filed Mar. 5, 1875.]

Brief.—The binders' seat is adjustable on the stand I, to or from the grain-receiver. The main supporting-axle is adjustable up and down in the main frame, and secured to it by pins.

6,259.

1. The binders' platform I, suspended from the transverse overhanging bars G, supported by the main frame, substantially as described.

2. The movable binders' seat J, provided with the fork J' and stirrup *f*, in combination with the binders' stand or platform, as described.

3. The main drive-wheel axle E, provided with the flattened ends, in combination with the grooved segments or flangings, and the through-pins, for setting the axle at any desired height, and for stiffening the frame, as described.

6,260. MANUFACTURE OF PUTTY. George W. Hatfield, Dayton, Ohio. Patent No. 99,231, dated Oct. 26, 1869; reissue No. 6,161, dated Dec. 8, 1874. [Filed Feb. 1, 1875.]

As a new article of manufacture, putty composed, in part, of pulverized limestone, substantially as and for the purpose specified.

6,261. GRAIN-DRIERS. Ransom S. Reynolds, Waterbury, Conn., assignor, by mesne assignments, to James A. Maloney, James S. Welch, A. H. Herr, E. P. Welch, J. H. Welch, Rosie W. Welch, and H. P. Welch. Patent No. 82,926, dated June 23, 1868. [Filed Mar. 20, 1875.]

Brief.—Either hot or cool air is blown under the endless apron in the upper chamber, and the dust is drawn out by the fan at the top. The automatic valves prevent egress of air at the grain inlet and outlet.

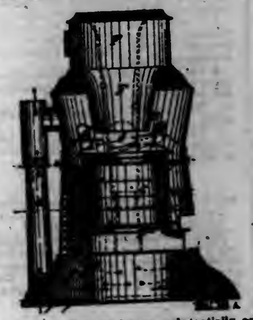
6,261.

1. The combination, in a machine for drying, cooling, or cleaning grain or other material, of a horizontal movable apron or screen within an air-tight case, a blower-fan for producing an air-blast, auxiliary air-pipes connected with said fan to convey the air generated by the fan-blower immediately beneath said horizontal movable apron or screen, thereby causing the air to pass up through the perforations of the same, and a suction or exhaust fan and discharge duct or trunk connected with the chamber above the horizontal movable apron or screen, substantially as and for the purpose set forth.

2. In a machine for drying, cooling, or cleaning grain or other material, the combination of a horizontal movable apron or screen with an air-tight case, an air-blast from a fan-blower beneath it and auxiliary air-pipes, an exhaust or suction fan connected with the upper portion of said horizontal movable apron or screen, automatic valves for feeding and delivering the grain or other material, and preventing the entrance and exit of air with the grain or other material, substantially as and for the purpose set forth.

3. In a machine for drying, cooling, or cleaning grain or other material, the combination of a horizontal movable apron or screen within an air-tight case, with adjustable feed-regulator, an exhaust or suction fan, two or more eddy or cam chambers arranged above said horizontal movable apron or screen, substantially as and for the purpose set forth.

6,262. APPARATUS FOR DRYING SHOE-SOLES. Aaron F. Smith, Lynn, Mass., assignor by mesne assignments, to Lyman A. May, Amos B. Withey, and Henry L. Drake. Patent No. 123,560, dated Feb. 13, 1872. [Filed Jan. 20, 1870.]



Brief.—A metallic case, into which heat is introduced by means of a perforated pipe, is provided with a raised rack, upon which boots or shoes are placed for drying the soles. Reissue of No. 123,186, of February 13, 1872.

The portable box or case A, provided with heating apparatus, as shown, and a raised or elevated rack for supporting a boot or shoe, substantially as and for the purposes described.

6,263. STOVES. Hiliu Smith, Albany, N. Y., assignor to Saml. H. Ransom, trustee. Patent No. 62,966, dated Apr. 12, 1869; reissue No. 5,709, dated Dec. 20, 1873; reissue No. 5,902, dated July 7, 1874; reissue No. 6,091, dated Oct. 20, 1874. [Filed Mar. 10, 1875.]

Brief.—The stove is adapted to heat its walls adjacent to the upper plane of the fire-pot, and also the sloping walls of a chamber located below the plane of the ash-pit chamber, more highly than the intermediate parts. The main current of smoke is drawn to the rear edge of the fire-pot, and away from the mica lights.

1. In a stove or heater, substantially as above described, a descending flue placed at the rear, and an ascending flue near to or adjoining the same, and a hot-gas-circulating chamber located below the ash-pan chamber and the bottom plate proper of the stove, combined to operate substantially as set forth.

2. In a stove or heater, substantially as above described, a combustion-chamber above the fire-pot, a gas-circulating chamber in the base of the stove, beneath the ash-pan chamber and the bottom plate proper of the stove, a descending flue communicating from the combustion-chamber above to the said hot-gas chamber, an ascending flue located near the said descending flue, and communicating from the said gas-circulating chamber to the exit, and a fire-pot section, with an air-space between the fire-pot and its casing, substantially as set forth.

3. In a stove or heater, substantially as described, a combustion-chamber inclosed by a grate set with mica lights, and a fuel-receiver terminating within the said combustion-chamber, and opposite said mica lights, combined with a descending flue located within the casing of the stove, in rear of and adjoining the fire-pot, heated by radiant heat from the latter, and communicating from the said combustion-chamber to the hot-gas chamber, located below the ash-pan chamber and in the base of the stove, substantially as set forth.

OFFICIAL GAZETTE

OF THE

United States Patent Office.

VOL. 7.—NO. 14. TUESDAY, APRIL 6, 1875. PRICE { $6,00 per year—single. $5,00 per year in clubs.

The OFFICIAL GAZETTE is published on Tuesday of each week, from the United States Patent Office. The subscription price for 1875 is six dollars per year for single subscribers; five dollars per year to clubs of not less than five sent at one time, and which will be mailed free of postage to separate addresses if desired. Subscriptions will commence and terminate with the year. All orders should be addressed to the Commissioner of Patents, Washington, D.C.

COMMISSIONER'S DECISIONS.

CASE *vs.* HASTINGS.—*Interference.*

[*Appeal from the Board of Examiners-in-Chief in the matter of the interference between the application of Thurman Case and the application for reissue of Glover S. Hastings, for* "IMPROVEMENT IN TOY PISTOLS."—*Decided February* 19, 1875.]

Where the Examiner and the Board agree in their findings upon the facts in interferences, it is not necessary for the Commissioner to minutely review the testimony.

The case of *Stoddard* vs. *Perry*, (6 OFFICIAL GAZETTE, 33,) commented on to show the distinction to be made, in ascertaining priority of invention, between an abandoned experiment and a perfected invention.

Where an inventor employed and paid an attorney to file his application for patent, and was deceived by false representations that it had been done, the delay thus fraudulently caused was not unreasonable delay by the inventor, such as to work forfeiture or abandonment of his invention.

Claims for what are called "mechanical processes" should not be allowed when they comprehend no more than the mere functions of mechanism described; in such cases it is the apparatus only that is patentable.

THACHER, *Commissioner:*

Hastings filed his original application September 25, 1873, and a patent was issued to him the 23d day of December following. He filed an application for the reissue of this patent March 11, 1874. Case's application is an original one, and was filed March 26, 1874. The burden of proof, therefore, rests upon Case; and Hastings, having already obtained a patent, is entitled to all the advantages growing out of this fact.

The Examiner of Interferences and the Examiners-in-Chief have agreed in their findings of fact, and, also, in awarding priority of invention to Case. This being the state of the case, in accordance with the usual practice of the Commissioner, it will not be necessary to review the testimony at great length. It may be summed up as follows:

Hastings conceived the idea of exploding matches by a crushing action early in October, 1870. He experimented at that time with a pair of shoemaker's pliers, and found that he could explode matches with this instrument, but did nothing more, except to bend the handle of the pliers, so as to obtain a better leverage. The pliers were still further changed in some unessential particulars, and put in the condition in which they appear in the case in the summer of 1873. Another pair of pliers is also exhibited, in which the upper jaw is severed, the nose portion being riveted to the lower jaw, and a horizontal hole drilled between the two, in which the match is to be placed, and from which it is projected by the explosion. It is admitted, however, that this modification of these pliers was not made before July, 1873. Up to July, 1873, both exhibits (1 and 2) were nothing more than common shoemakers' pliers, and all that could be done with them was simply to crush the end of the match between the jaws to produce an explosion. The stick would not be projected from the jaws, for it must be pinched between them; but the invention consists not merely in exploding the match by a crushing action, but also in throwing the splint from its receptacle by the force of the explosion; and the device in controversy is one which will accomplish both results. Exhibit 2, in its present condition, will, perhaps, explode the match and project the stick from the hole in the nose. It may be regarded, then, as a crude embodiment of the invention. It is, however, the first illustration by Hastings of the device in controversy; and, as it was not accomplished until the summer of 1873, an earlier date cannot be fixed for the invention by him.

Case appears to have commenced with the idea of projecting the match-splint from the barrel. He conceived this idea as early as July, 1870. His first experiment was for the purpose of determining whether the explosion of the match would throw out the stick, and he used a small block of cast-iron, in which a hole was drilled, the match being exploded both by percussion and by crushing the end. This was in July, 1870.

In August of the same year he made a wooden pattern of a pistol, which is not of much account, however, in the development of the invention. In November, 1870, he had a pistol cast, which is filed in the case, and marked Exhibit C. This pistol is a complete embodiment of the entire invention. A slight change was made subsequently in the exploding device; but in this pistol (Exhibit C) the match is exploded by a crushing force, and the splint is thrown from the barrel by the explosion. It is, therefore, a practical embodiment of the invention in controversy. The subsequent change to the construction shown in Case's application was merely mechanical; but even this was effected prior to the invention of Hastings, for in the winter or spring of 1871 the pistol (Exhibit E) was constructed, which is identical with the device shown in his application. Three additional pistols were made prior to June 10, 1871, which were shown to and tested by others.

From this evidence, the conclusion is unavoidable that Case was the first to conceive the invention, the first to commence experiments, the first to embody the device in practical form, and, also, the first to exhibit it as a completed and salable article.

I have no hesitation whatever in deciding the question of priority in favor of Case.

The decision in the case of *Stoddard* vs. *Perry* (6 OFFICIAL GAZETTE, 33) has been referred to as authority for a different conclusion; but an examination will show that the facts in the two cases are very different. The finding in the Stoddard and Perry interference was that Stoddard never reduced the invention to practical form. The first and only machine built by him was used experimentally only, and then destroyed. It was held, therefore, to have been an abandoned experiment. But in this case I find no ground for the conclusion that the issue of Case's efforts was only an abandoned experiment. His early models were preserved, and the pistols, showing the full embodiment of the invention, were shown to others, tested, and are brought forward as exhibits in this interference. I fail, therefore, to see any similarity between the two cases. In one there is an invention perfected, in the other there is not.

The opinion pronounced in *Stoddard* vs. *Perry* does not appear to be applicable to the present controversy.

But it is insisted that, if Case is the first inventor, he has forfeited his right to a patent by long delay in applying therefor. I believe that the evidence shows that this delay is excusable.

In 1871, Case employed a patent solicitor to prepare and prosecute an application for letters patent, putting into his hands the necessary models and papers, and paying him the fees required. It appears, however, that the solicitor cheated his client. He never filed the application, although he represented to Case that he had done so, and put him off from time to time with statements that the application was delayed in the Patent Office. Under these circumstances, and in view of the decision in the case of *Russell and Ervin Manufacturing Company* vs. *Mallory*, (5 Fisher, 632,) I do not think the delay of Case can be held to work either forfeiture or abandonment of the invention.

The decision of the Examiners-in-Chief, awarding priority of invention and the right to a patent to the applicant, Case, is affirmed.

I find occasion, however, to criticise somewhat the claim presented. Not only is the device claimed, but also the method of impelling match-splints from the barrel of a pistol. Claims for what are called "mechanical processes" are, in the majority of instances, objectionable. I do not intend to say that a mechanical process is an impossibility; but claims are repeatedly presented to the Office, and in many instances granted, which cover nothing more than the operation of the ordinary functions of the mechanism described. When this is the case, there is nothing patentable but the device or apparatus itself, and claims for such processes ought not to be allowed. They have been sharply criticised by the courts, and in some instances saved only by forcibly construing them to cover devices only.

I recommend the Examiner to carefully investigate this question before allowing a patent to issue with the first claim in Case's application.

ARNOLD *vs.* WILCOX.—*Interference.*

[*Appeal from the decision of the Examiners-in-Chief in the matter of the interference between the applications of Alfred Arnold and Horace C. Wilcox for Letters Patent for* IMPROVEMENT IN COFFEE-URNS.—*Decided February* 26, 1875.]

Where the invention is a very limited improvement upon an old device, a former patent covering such device will not be held to embrace the improvement unless it is distinctly described therein.

He is the inventor, entitled to the protection of the patent law, who is first to complete the invention and publish it to the world, and not he who confines the knowledge of it to his closet.

THACHER, *Commissioner:*

The subject-matter of this interference is a very limited improvement upon the construction of urns for table use.

The issue is defined by the Principal Examiner in his letter to Arnold, declaring the interference to be "the base B, constructed with a seat for the inner vessel, which is provided with a faucet, as shown, in combination with the removable case A, having an open bottom, and with or without the opening and cover C."

In his letter to Wilcox notifying him of the interference, the Examiner states that the subject-matter involved "is explained by the claim." The claim of Wilcox is as follows: "The base *a* constructed with a faucet, D, and fitted to the said seat *b*, combined with the removable case E, constructed with its top closed and bottom open, so as to set over said inner vessel and rest upon said base, substantially as herein set forth.

In view of Arnold's patent of April 20, 1869, the matter in issue is limited to the specific form of the base of the urn. The Examiner, rightfully, I think, regarded the base B of Arnold to be precisely the same in construction as Wilcox's base *a*, otherwise there would have been no ground on which to base an interference between the two applications. Arnold now insists that his 1869 patent covers this form of the base, as well as all other features of the device. This also appears to have been the opinion of the Examiner of Interferences and the Board.

The case was remanded to the Principal Examiner for reconsideration, in view of the patent referred to. The Examiner adhered to the position already taken by him that Arnold's patent is not a sufficient reference, so far as the urn-stand claimed by the parties is concerned. In this opinion I think he is right. The Examiner of Interferences and the Examiners-in-Chief erred in construing the claim to be broadly for the combination of the decoctor and *a base*.

Arnold, in the patent referred to, speaking of the removable case, says: "When applied to urns the spirit-lamp" may be dispensed with, as but little "heat will be radiated." He thus clearly indicates that the ornamental jacket could be applied to any form of urn then in common use. He makes no allusion, however, to the base of an urn, and shows no form for one. This single loose expression in regard to urns cannot be construed to comprehend all forms of urns or urn-stands that might thereafter be constructed.

The urn-base which forms the important element of the subject of this controversy is of a specific form. It is not a table, or a block of wood, or a fruit-dish, or any similar well-known support; but, as shown and described by both applicants, it is a base having an inner annular flange below its rim, forming a seat for the inner vessel, and provided with a notch or recess corresponding to a similar notch in the jacket to receive the faucet of the decoctor, so that when the decoctor is placed upon the stand and the case put over it a neat close joint is formed at the junction of the stand and the case. There is no proof that such a base was known when Arnold's patent was granted. Arnold's patent of 1869 has answered the purpose of narrowing down the subject of this controversy to the special construction above described, which limited invention it does not cover.

The evidence adduced in behalf of Arnold consists alone of the testimony of himself and wife. From this it appears that Arnold conceived the subject of this dispute about the time he filed the application for his former patent, which was in April, 1869. He, at that time, made a sketch of an urn, which is introduced in evidence. It represents the form of base now claimed. Instead of incorporating the form thus represented in his application he put the sketch away somewhere in his house, where it remained undisturbed and unnoticed for five years, and where it might have continued to so remain for an indefinite period of time had he not learned that Wilcox had filed an application for a patent embracing the same device.

The evidence in behalf of Wilcox shows that he conceived this invention in January, 1874, and at once embodied it in an urn capable of use, which urn he filed as a model with his application for a patent February 11, 1874.

Priority of invention must be awarded to Wilcox in this case on the well-established ground that he is the inventor entitled to the protection of the patent laws who is first to complete the invention and publish it to the world, and not he who confines the knowledge of it to his closet.

Arnold's excuse that he thought his 1869 patent covered the present invention cannot avail him. The inventions of a patentee are to be gathered solely from the matter of his patent, and if, by his own negligence or carelessness, his whole invention is not embodied therein, he alone should suffer the evil results of such omission if any occur.

The decision of the Board is affirmed.

DECISIONS OF THE COURTS.

SUPREME COURT, DISTRICT OF COLUMBIA.

[*General term, March* 13, 1875.]

STEPHEN HULL *vs.* COMMISSIONER OF PATENTS.—*Mandamus.*

[*In the matter of Stephen Hull's petition for mandamus against the Commissioner of Patents.*]

Powers and duties of the Commissioner of Patents.

A favorable decision of an Examiner or of the Board of Examiners-in-Chief in the Patent Office, upon an application for a patent, is not conclusive upon the Commissioner of Patents, and it does not follow thereupon that he has only the ministerial duty to perform of countersiguing and sealing the patent.

According to the organization of the Patent Office, the question of patentability of an alleged invention is to be referred for examination first to one of the Primary Examiners. If his decision be unfavorable the applicant has the right of appeal to the Examiners-in-Chief; and then—in case of unfavorable decisions—to the Commissioner and to the Supreme Court District of Columbia.

The statute nowhere prescribes the duties of Examiners and their assistants. They are appointed upon nomination of the Commissioner, and their duties are such as he is authorized to prescribe under the 19th section of the patent act. (Sec. 483 Revised Statutes.)

The result of an examination is to be reported to the Commissioner, and if it should appear to him, upon inspection of the report, that the alleged invention is neither novel nor meritorious, he would be bound in duty, under section 31, not to issue the patent. (Sec. 4893 Revised Statutes.)

If to decide that a claimant is justly entitled to a patent, and that his invention is sufficiently useful and important, be the office of Examiners, then, by section 7 of the statute, it is made the duty of the Commissioner to superintend the performance of these duties by the Examiners.

Under the 23d section of the act (sec. 4885 Revised Statutes) it is not the duty of Examiners to pass and allow patents. It is the duty of the Commissioner alone, after the examination has been reported, to say whether the patent shall be allowed and passed.

The 53d section of the act contains an express recognition of power in the Commissioner to refuse patents, and an *ex parte* bill in equity is given applicants as a remedy for such refusal. This section provides for a different class of cases from those which come before the Commissioner by appeal from the Examiners under sections 47 and 48—cases in which the Commissioner may refuse patents after favorable decisions by his subordinates, by virtue of his general supervisory authority. (Secs. 4910, 4911, and 4915 Revised Statutes.)

In that the 53d section supplies a remedy for a refusal of a patent by the Commissioner in such cases, it is decisive against the remedy by mandamus; for this writ will not issue where the law furnishes any other adequate specific remedy.

[*Charles Mason*, for the relator.
Marcus B. Hopkins, for the Commissioner.]

WYLIE, *J.:*

The petitioner, having made application for a patent in the usual manner, his application was referred, in the first instance, to one of the Primary Examiners, who made an adverse decision. It was then carried by appeal to the Board of Examiners-in-Chief, by whom a favorable decision was made.

The Commissioner himself, however, was not convinced by the favorable decision, and for reasons satisfactory to himself has heretofore withheld the patent.

The first question for the court to determine in the present case is this: Whether, *in an ex parte application* for a patent, the Commissioner possesses any authority,

under the law, to withhold a patent in opposition to the report of a Primary Examiner, or the report of the Board of Examiners-in-Chief in its favor; in other words, whether, in such a case, the decision of the Primary Examiner, if favorable to the patent, is conclusive upon the Office, and if unfavorable, and the applicant has carried his case by appeal before the Board of Examiners in-Chief, and there obtained a favorable decision, this latter decision is conclusive, so that nothing is left to the Commissioner except the ministerial act of countersigning and affixing the seal of the Office to the parchment.

The petitioner, for this writ, claims that, according to the organization of the Patent Office, the question of the patentability of an alleged invention is to be referred for examination first to one of the primary or assistant examiners. If his decision be unfavorable, the applicant has the right to appeal to the Examiners in-Chief. If their decision should also be unfavorable, he has the right of appeal to the Commissioner. And should the Commissioner's decision be unfavorable, the right of still further appeal to this court.

In all this the petitioner's views of the law are correct; but he, also, claims that because his application is *ex parte*, and no one can take the appeal but himself, and nobody will ever appeal from a decision in his own favor, that the first favorable decision he obtains at any stage of the proceedings must be conclusive on the Office, since the case can go no further except by appeal. This view of the law we think is not correct.

The only act of Congress now in force on this subject is the act approved July 8, 1870, entitled "An act to revise, consolidate, and amend the statutes relating to patents and copyrights."

The first step to be taken by an applicant for a patent is, of course, to file his application.

By the 31st section of the act it is provided—

That on the filing of any such application and the payment of the duty required by law, the Commissioner shall cause an examination to be made of the alleged new invention or discovery; and if, on such examination, it shall appear that the claimant is justly entitled to a patent under the law, and that the same is sufficiently useful and important, the Commissioner shall issue a patent therefor.

By this section it is made the duty of the Commissioner to cause an examination to be made of the alleged new invention or discovery; but neither in this section nor in any other of the act is he specifically told by what particular officers he is to have the examination made. It is true that he is furnished, under the law, with a large number of officers, among whom are twenty-two principal examiners, twenty-two first assistant examiners, and twenty-two second assistant examiners, all of whom are appointed by the Secretary of the Interior upon the Commissioner's nomination.

The duties to be performed by these officers are nowhere defined in the law, but are such only as the Commissioner himself is authorized to prescribe in pursuance of the 19th section, which is in these words—

That the Commissioner, subject to the approval of the Secretary of the Interior, may, from time to time, establish rules and regulations, not inconsistent with law, for the conduct of proceedings in the Patent Office.

All these "principal examiners," "first assistant examiners," and "second assistant examiners," sixty-six in number, have no functions to perform in the Office except only such as may be assigned to them by the Commissioner.

Would it not be a very anomalous condition of things if the Commissioner, under these circumstances, were to have no authority to review and set aside the acts of any of these subordinate officers? We shall look into this question a little more fully after we have examined the law in regard to the Examiners in-Chief.

The duties of Examiners in-Chief are, in general terms, prescribed in the 10th section, which is in these words—

SEC. 10. *And be it further enacted.* That the Examiners-in-Chief shall be persons of competent legal knowledge and scientific ability, whose duty it shall be, on the written petition of the appellant, to revise and determine upon the validity of the adverse decisions of examiners upon applications for patents, and for reissues of patents, and in interference cases; and, when required by the Commissioner, they shall hear and report upon claims for extensions, and perform such other like duties as he may assign them.

Upon this section, especially, is it that the relator in the present proceeding relies in his application for a mandamus against the Commissioner. By it the Examiners in Chief are required to be persons of competent legal knowledge and scientific ability, qualifications nowhere expressly required for the Commissioner himself. These officers, also, as required by section 2, are appointed by the President, by and with the advice and consent of the Senate. One of their duties is to "revise and determine upon the validity of the adverse decisions" of the subordinate Examiners which may be brought before them by appeal.

Undoubtedly the decision of this board, when in favor of the applicant for a patent, must be conclusive, unless a superior supervisory authority is vested by law in the Commissioner. The same may be said with equal force, also, in respect to the decisions of the inferior Examiners in like circumstances; for none but adverse decisions can be appealed at any stage of the examination.

It is provided, also, by the 31st section, that—

If, on such examination, it shall appear that the claimant is justly entitled to a patent under the law, and that the same is sufficiently useful and important, the Commissioner shall issue a patent therefor.

But by the same section it is declared that it is the Commissioner who is to cause the examination to be made. The examination, when made, with its results, is then to be reported to the Commissioner, and if, "on such examination"—that is, on the face of the examination—"it shall appear," &c., the Commissioner shall issue the patent. But suppose it should "appear" to the Commissioner, on his own inspection of the report, that the alleged invention is neither novel nor meritorious, he would be bound, in duty, under this section, not to issue the patent. Certainly there is nothing in this section which excludes this superintending authority of the Commissioner.

Had Congress intended that the decision of the Examiners, when favorable to the applicant, should be final and conclusive, we would suppose so great an anomaly in executive administration would have been introduced into the law by the use of terms of the clearest import. A certified copy of the decision would have been a mandate to the Commissioner, requiring him to issue the patent by authority, it might be, of a second assistant examiner who had been appointed at his instance, and subject to removal in the like manner.

By the 7th section it is declared—

That it shall be the duty of the Commissioner, *under the direction of the Secretary of the Interior, to superintend or perform all the duties respecting the granting and issuing of patents which herein are, or may hereafter be, by law, directed to be done;* and he shall have charge of all books, records, papers, models, machines, and other things belonging to said Office.

If to decide "that the claimant is justly entitled to a patent under the law, and that the same is sufficiently useful and important," be the office of the Examiners, then by this section it is made the duty of the Commissioner to superintend the performance of these duties by the Examiners. It is impossible to escape from this conclusion except by denying that these duties are such as respect the issuing and granting of patents. If the decisions of the Examiners, when favorable to applicants, leave nothing to be done by the Commissioner but the ministerial act of writing his name at the left-hand corner of the parchments and directing the seal to be affixed, how vain are the words of the law which declare that it shall be his duty "to superintend or perform all the duties respecting the granting and issuing of patents which herein are, or hereafter may be, by law, directed to be done."

By the 23d section it is provided—

That every patent shall date as of a day not later than six months from the time at which it was passed and allowed.

By whose authority are patents to be "passed and allowed?" If they are to be passed by the Commissioner, they are also to be allowed by him. This language is not appropriate to the duties of Examiners. These officers neither pass nor allow patents. They examine claims for inventions or discoveries. It is the duty of the Commissioner alone, after the examination has been reported, to say whether the patent shall be allowed and passed.

By the 52d section it is provided as follows:

That whenever a patent on application *is refused*, for any reason whatever, *either by the Commissioner* or by the Supreme Court of the District of Columbia upon appeal from the Commissioner, the applicant may have remedy by bill in equity; and the court having cognizance thereof, on notice to adverse parties and other due proceedings had, may adjudge that such applicant is entitled, according to law, to receive a patent for his invention, as specified in his claim, or for any part thereof, as the facts in the case may appear; and such adjudication, if it be in favor of the right of the applicant, shall authorize the Commissioner to issue such patent, on the applicant filing in the Patent Office a copy of the adjudication, and otherwise complying with the requisitions of law. And in all cases where there is no opposing party a copy of the bill shall be served on the Commissioner, and all the expenses of the proceeding shall be paid by the applicant, whether the final decision is in his favor or not.

Here is an express recognition of power in the Commissioner to refuse the patent, and an *ex parte* bill in equity given to the applicant as a remedy for such refusal. On the trial the court is to investigate the merits of the applicant's claim *de novo*, and determine the right. What need to provide this mode of investigation if the Commissioner is bound by law in all cases to issue the patent where a favorable decision has been made by the Examiners? Should the decision be against the applicant, he can get no patent, although he may have previously secured favorable decisions from all the Examiners in the Patent Office. On the trial such decisions would not be received as even *prima facie* evidence in support of his claim. This section provides for a different class of cases from those which come before the Commissioner by appeal from the Examiners under the 47th and 48th sections of the act. In these cases the Commissioner is obliged by law to make his decision, and, if such decision be adverse to the applicant, the latter may appeal to this court, as provided in the 49th and 50th sections of the act.

The case of the present relator was not one of this class. It was not brought before the Commissioner by appeal from any adverse decision of the Examiners. It was not brought before him at all, except with the report made by the Examiners-in-Chief, and he exercised no authority in respect to it, save such as belongs to him in virtue of his general supervisory authority in such a case. He simply withholds the patent for reasons which he does not give, but makes no decision. It is not a case, therefore, which could be brought into this court by appeal; but it is a case for which the applicant may have the remedy given by the 52d section, and that is alone sufficient, without respect to any other question, why the application for a mandamus in this case should be denied.

In that this section recognizes the authority of the Commissioner to withhold a patent in any case, for any reason satisfactory to himself, it shows that the decisions of the Examiners are in no case obligatory as to his action. In that it supplies a remedy under which his judgment in withholding the patent may be revised, it is decisive against the remedy by mandamus applied for in the present instance, for this writ will not lie where the law furnishes the party with any other adequate specific remedy. (See *Kendall* vs. *The United States*, 12 Peters, 614.)

Mr. Justice OLIN—

I fully concur with the views expressed by Mr. Justice Wylie as to the true interpretation of this patent law. The interpretation contended for would turn the head of the Office into the tail.

It will be noticed that the law provides for the appointment of Primary Examiners upon the nomination of the Commissioner, but gives no appeal from their favorable action upon an application for a patent. Now, upon the principle contended for here by the relator, the decision of the Primary Examiner would be final, and would conclude and bind the Commissioner, whose nominee he is.

The relator's counsel has dwelt upon the fact that the law does not expressly give the Commissioner the right of appeal from the decision of the Examiners-in-Chief, and has urged this as proof that such action is final. This does not seem to me to be the proper inference. I think the right of appeal was omitted because it was unnecessary to confer it; for the Commissioner's supervisory power over the acts of the subordinates in the Office is such as to preclude any necessity of his "appealing" from the Examiners-in-Chief. He can refuse to grant the patent.

As to the remedy; nothing is clearer than that where the law has pointed out a particular remedy the writ of mandamus does not lie.

Moreover, the Commissioner does not issue the patent. It is signed by the Secretary of the Interior, and countersigned by the Commissioner. The former really controls the issuing.

I had intended to write out an opinion, but in the feeble state of my health I have not completed it. In fact I found I was going further in the statement of principles governing the case than my brethren might feel inclined to follow me.

Chief Justice CARTTER and Justice MAC ARTHUR dissented.

Mr. Justice MAC ARTHUR—

I suppose the officers in charge of the Patent Office desire to ascertain the grounds on which the mandamus was refused, so as to regulate their future actions in matters affected by the decision.

The views of the minority will not be of much importance in this respect, as the judgment of the court and not the dissenting opinions will determine the course to be followed hereafter. On a subject of so much consequence, however, I desire to state some of the reasons for the dissent which I indicated one week ago, and I am authorized by the Chief Justice to say that he agrees with me in opinion.

I will premise by observing that the Patent Office has become a conspicuous feature in our Government. This branch of business had accumulated so enormously that in 1870 Congress revised and reduced the whole system to order by the law of that year. The officers were classified, and their duties, to some extent, defined, so that the work might go on efficiently and harmoniously. In conformity with this idea the second section provides for three Examiners-in-Chief to be appointed by the President by and with the consent of the Senate, and their duties are prescribed in the tenth section, which reads as follows:

"That the Examiners-in-Chief shall be persons of competent legal knowledge and scientific ability, whose duty it shall be, on the written petition of the appellant, to revise and determine upon the validity of the adverse decisions of Examiners upon applications for patents, and for reissues of patents, and in interference cases; and, when required by the Commissioner, shall hear and report upon claims for extensions, and perform such other like duties as he may assign them."

The forty-sixth section enacts—

"That every applicant for a patent, or the reissue of a patent, any of the claims of which have been twice rejected, and every party to an interference, may appeal from the decision of the Primary Examiner, or of the Examiner in charge of interferences, in such case to the Board of Examiners-in-Chief, having once paid the fee for such appeal provided by law."

The sections following this provide for an appeal where the party is dissatisfied with the decisions of the Examiners-in-Chief to the Commissioner in person, and then for an appeal to the Supreme Court of this District from the decision of the Commissioner, if it is adverse to the applicant. Here we have a system judicial in form and substance for the express purpose of deciding upon the rights of applicants for patents, and there is nowhere throughout the entire law any power given to the Commissioner to set aside or disregard the rights of an applicant thus settled and pronounced, except in the cases which come to him by way of appeal from the adverse decisions of the Board. It appears to have been the design of Congress to furnish in the Patent Office itself a judicial method of determining when a patent ought to issue, giving to the Commissioner only an appellate power of revision, and it is simply in these cases that he is to exercise the right of refusing a patent. The Examiners-in-Chief are to be selected with reference to their fitness to perform the special duties assigned them. The law directs that they shall be persons of competent legal knowledge and scientific ability, and, therefore, specially qualified to pass upon the legal and scientific questions that are in most cases involved in deciding upon the validity of a claim for a patent. No such requirement is made in selecting the Commissioner. His position is undoubtedly one of high trust and great responsibility; but he is appointed on account of his general character and administrative capacity. The special duty of deciding upon the propriety of a patent is, therefore, confided to the Examiners designated by the law for that purpose, and no appeal is given, except upon an adverse decision. In no other case and in no other way does the law provide for a revision of their action. If their decision is favorable to the inventor there is no authority given the Commissioner to defeat his rights by suspending the proceedings, or refusing to prepare and countersign the patent. On the contrary, the thirty-first section expressly makes it his duty, if upon the examination it shall appear that the claimant is justly entitled to a patent, 'The Commissioner shall issue a patent therefor.' The law is mandatory upon him in case the applicant procures a favorable decision, and he cannot evade it without dispensing with the law itself. He has no right to take up cases except by appeal, overrule decisions, suspend proceedings, and refuse patents at his own will and pleasure. Congress never designed to confer a power so dangerous in the hands of any Commissioner, and one so inimical to the interests of inventors. They have provided how the merits of an application for a patent are to be examined and determined, and the result is called a 'decision.' The case is heard before the Examiners upon testimony and argument. The inventor is heard by himself or counsel, and a decision is then made in his favor upon the merits of his application. Is it possible that where there is no regular appeal given, and without notice, or any of the forms prescribed by the law, the Commissioner can take this case up on his own arbitrary motive and defeat or reverse the whole proceedings? We are not at liberty to infer that Congress intended an act so inconsistent with the judicial system they have ordained in the law of 1870.

Where any new fact is developed, raising new grounds of objection, or where fraud is discovered, or where any gross irregularity appears, then it is competent, no doubt, for the Commissioner, by virtue of his supervisory power, to direct a re-examination of the case. In this very case there was a re-examination by order of the Commissioner, and the Board affirmed their previous decision in favor of Hull. But when a case has been regularly presented and duly examined, and decided favorably to the applicant on its merits, it is the duty of the Commissioner to prepare the patent, and the law, as we have seen, expressly makes it mandatory upon him in all cases.

It has been suggested that the remedy of the relator is under the 52d section, which provides 'that whenever a patent is refused for any reason whatever, either by the Commissioner or by the Supreme Court of the District of Columbia upon appeal from the Commissioner, the applicant may have remedy by bill in equity,' and that, therefore, mandamus will not lie in this case, as the applicant has a remedy. But it is to be noticed that this proceeding in equity is given only in case the Commissioner refuses to issue the patent. It is clear to my mind that the refusal of the Commissioner can only occur in cases which regularly come before him on an appeal from an adverse decision of the Examiners-in-Chief. These are the only cases he can examine and decide, and it is not until his refusal to issue the patent in a case upon such an appeal that the remedy prescribed by the 52d section can be invoked. We have seen that, by the 31st section, it is the duty of the Commissioner, where an application is filed, to cause an examination to be made, and if such examination shows that the applicant is entitled to a patent the Commissioner shall issue one to him. He can refuse to issue a patent when he himself makes the examination, and this he can only do upon an appeal regularly taken from the action of the Board. It is only an adverse decision that can be reviewed by a bill in equity, while here the last regular decision was in favor of Hull. The Commissioner clearly understood that he could not absolutely refuse to issue a patent, for on the 14th of April, 1870, he simply placed a written order on file 'suspending further proceedings until his further order,' and no further order has ever been made. The proceedings are still suspended, and the further order, when made, may or may not be a refusal. The contingency, therefore, upon which the remedy in equity depends has not occurred, and cannot be urged as an objection to the mandamus.

The Commissioner has, in fact, decided nothing and examined nothing respecting the merits of Hull's application. In his return he sets forth certain circumstances in the history of the case that have no relation to the rights acquired by Hull in the favorable decision of the Board. He has simply interdicted all further proceedings until he shall make a further order. It is impossible for Hull to resort to equity before this final action shall have taken place. If the Commissioner should make an adverse decision, the statute provides for an appeal to this court; but in the present anomalous condition of the record I can see no remedy, unless it may be asserted in this form.

As to the objection that Hull is barred in this case by the delay of more than two years in prosecuting his application, it is sufficient to say that the time limited in the 32d section does not begin to run until notice shall have been given of the action taken by the Office, and no such notice of the order suspending the proceedings has been served in this case.

I have thus given my construction of the patent law of 1870 as far as the same is involved in this case, and I think the writ ought to issue in such form as will compel the Commissioner to perform the ministerial work necessary in issuing a patent.

U. S. CIRCUIT COURT, SOUTHERN DISTRICT OF OHIO.

PHILIP GEIER *vs.* AUGUST GOETINGER.

[*In equity.—Before* SWING, *J.—October term*, 1874.]

The presumptions of the law are in favor of the patent and the utility of the invention.

The patentee having described a wooden bung rendered impervious by the application of a coating to its end, and having pointed out the particular material which he regards as the most suitable for the purpose, his claim for "A wooden bung rendered impervious to the passage of fluids through the pores of the wood by means of the described *or other suitable substances*" will not be held void as being too broad.

Testimony of witnesses examined in a case as to alleged prior use by parties not set up in the answer, can only be considered by the court for the purpose of showing the state of the art at the time of patentee's invention.

The same rule would apply to printed publications by which it is sought to anticipate the invention.

If it should appear that such testimony clearly established the invalidity of the patent, the court might grant the respondents leave to amend.

Letters patent to Philip Geier, of February 23, 1869, for "Improved Method of rendering Wooden Bungs Impervious to Liquids and Gases," construed and sustained.

[*Dunham & Forsker*, for complainant.
Shouter & Smith, for defendant.]

SWING, *J.*:

In construing a patent, the court should look to the patent, specifications, and drawings to ascertain what is the thing claimed and patented. (*Pitts* vs. *Whitman*, 2 Story, 621; *Duvall* vs. *Brown*, 1 Woodbury & Minot, 57; *Hogg* vs. *Emerson*, 11 Howard, 606; *Goodyear* vs. *Railroad*, 2 Wall, Jr., 363; *Bell* vs. *Daniels*, 1 Fisher, 374.)

Applying this rule, what is the thing claimed and patented? The patent recites that Philip Geier alleges that he has invented a "new and useful improved mode of rendering wooden bungs impervious to liquids and gases." In the schedule the patentee says he has invented "a new and useful improvement in wooden bungs," and says: "My invention consists in rendering wooden bungs impervious to the passage of gases, or beer or other liquor, through the pores of the wood by means of any suitable substance." The drawing shows a bung with a coat of the impervious material. Then the substance used is described, as also its manner of application. The claim is: "A wooden bung rendered impervious to the passage of fluids through the pores of the wood by means of the described or other suitable substance."

I think, from the patent, specifications, and drawings, that the invention of the patentee consisted in a wooden bung rendered impervious to the passage of gases or beer or other liquids. This is the thing he has produced. This is the end he has accomplished, and a fair interpretation and application of the language used cannot well bear any other construction.

The patentee points out the method by which his invention is produced, and the material used—to wit, by the application of impervious material to the end of the wooden bung. He also describes a particular material, which he regards as most suitable, but claims the use of any suitable substance for accomplishing the result.

The presumptions of the law are in favor of the patent and the utility of the invention; but, aside from that, the testimony establishes clearly the utility of the invention. The testimony shows that many experiments had been made, prior to complainant's invention, to produce such a thing; but they had failed to produce one adapted to the use for which they were desired.

So far as the prior use of the respondent is concerned, the testimony does not show that his experiments were more successful than many others, for it shows that the bungs which he manufactured did not answer the purpose, and the use thereof was abandoned.

It is attempted to be shown in the testimony, however, that the invention had been used by other parties than those set up in answer; and it is also attempted to be shown that the invention had been described in printed publications. If the testimony clearly established either of these propositions, we might, perhaps, grant the respondent leave to amend; but they do not

so clearly establish either point as to warrant the court to permit such an amendment at the hearing of the case. Such testimony cannot, therefore, be considered by the court, except for the purpose of showing the state of the art at the time of complainant's invention, and such knowledge would in nowise affect the construction which I have given to the patent.

If the pleadings properly raised the issue, I should not think the patent void by reason of the claim being too broad.

The respondent, having admitted the manufacture of the invention of the complainant, by the use of substances which are within complainant's patent, is, therefore, guilty of an infringement; and, as no reference is desired, and the damage shown is but fifteen cents, a decree for an injunction will be granted without costs.

DISCLAIMERS FILED.

17,798.—Improvement in Harvesters.—JOHN P. MANNY, Rockford, Ill. Patent granted July 4, 1857; reissue No. 3,580, dated August 3, 1869. Division A. Disclaimer filed April 10, 1875. Disclaims:

"The fifth and seventh clauses of the claim, in the following words, to wit:

"'5. The combination of a platform vibrating about the main axle, reel-supports vibrating with the platform, and an oscillating rake, also vibrating vertically in conformity with the movements of the platform, the combination being and operating substantially as set forth.

"'7. The combination of a rake turning on a vertical axis with a cam-guide vibrating vertically in unison with the movements of the platform about the main axle, the combination being and operating substantially as set forth.'"

26,013.—Girt-Buckles.—LUCIUS C. CHASE, Boston, Mass. Patent granted November 8, 1859; reissue No. 1,438, dated May 26, 1863. Disclaimer filed September 7, 1874. Disclaims:

"In the matter of the disclaimer filed in case of Lucius C. Chase's patent for 'Improvement in Buckles,' reissued May 26, A. D. 1863, I hereby amend the said disclaimer by adding thereto at the end thereof, after the words 'Frazer buckle,' the following: 'thereby limiting said claim to the use of the wings B B, or their equivalents, furnished with holes for the rivets or screws,' so that said claim as amended shall read 'Confining a buckle to a strap or other article by means of rivets or screws passing through wings or flanges B B, substantially as set forth, and for the purpose described.'"

159,365.—Improvement in Wrought-Iron Columns.—JOHN B. CORNELL, New York, N. Y. Patented February 2, 1875. Disclaimer filed April 8, 1875. Disclaims:

"Add to the third line of the second column, as printed in the letters patent issued, so as to read as follows, the additional portion being in brackets:

"'The cylindrical strut or cord is formed of the rolled plates *a*, of segmental form, provided with vertical strengthening-ribs *b*. The joint between the several plates *a* is formed by riveting their edges to the lateral flanges of the T-shaped bars *c*, as shown, the said lateral flanges being within the cylinder formed by the rolled plates *a*, and there being at least two strengthening-ribs, *b*, rolled with each of said plates *a*.'"]

DESIGNS PATENTED DURING THE WEEK.

[Each Design bearing date April 6, 1875.]

8,237.—Toy Money-Box.—THOMAS A. BAILEY, Philadelphia, Pa. Application filed March 19, 1875. Term of patent 3½ years.

8,238.—Clip or Fastener for Suspending Cards.—GEORGE W. MCGILL, New York, N. Y.—Case A. Application filed February 26, 1875. Term of patent 14 years.

8,239.—Tread of Boot and Shoe Heels.—FRANKLIN SHAW, Braintree, Mass. Application filed March 18, 1875. Term of patent 7 years.

TRADE-MARKS REGISTERED DURING THE WEEK.

[Each certificate bearing date April 6, 1875.]

2,338.—Pig-Iron.—BAY STATE IRON COMPANY, Boston, Mass. Application filed June 8, 1872.

"Port Henry."

2,339.—Plate Metal.—BAY STATE IRON COMPANY, Boston, Mass. Application filed June 8, 1872.

"Bay State."

2,340.—Baking-Powder.—GEORGE F. GANTZ, New York, N. Y. Application filed April 16, 1872.

"words 'Gantz Sea-Foam,' used in conjunction with the following emblems and devices, viz: A figure of a crown within a double circle, between the outer and inner lines of which are the words, letters, and numerals 'G. F. Gantz & Co., 176 Duane St., N. Y.' A group or stand of flags, the two outer ones bearing upon their faces a figure of a Maltese cross. Upon the extreme right and left of these flags are two banners or standards, bearing upon their faces certain words and letters. In the center of this group, and situated upon the flags, and between the banners above mentioned, is the figure of a circle or disk, bearing upon its face the following words, letters, and numerals: 'Awarded to Geo. F. Gantz & Co. by the American Institute, for the best Baking-Powder, 1870.'"

2,341.—Sewing-Machines.—GROVER & BAKER SEWING-MACHINE COMPANY, Boston, Mass. Application filed August 23, 1872.

"monogram of the initials G and B and the name of our company."

2,342.—Moth-Proof Fabric.—HALL & KENNELL, New York, N. Y. Application filed March 13, 1875.

"word 'Mothaline.'"

2,343.—Bitters.—WILLIAM H. KNOEPFEL, New York, N. Y. Application filed September 23, 1871.

"words 'J. G. B. Siegert's Angostura Bitters.'"

2,344.—Bitters.—WILLIAM H. KNOEPFEL, New York, N. Y. Application filed January 24, 1873.

"words 'Angostura Bitters.'"

2,345.—Spring-Beds.—WILLIAM LATHERS, New York, N. Y. Application filed March 13, 1875.

"words 'CENTENNIAL SPRING-BED.'"

2,346.—Soap.—CHRISTOPHER LIPPS, Baltimore, Md. Application filed March 31, 1875.

"words and letters 'Chr. Lipps, Premium Soap,' arranged as shown, above and below the figure of a sitting woman, resting with her left arm on a shield with cross in its center, and pointing to the left side with her right arm, and placed in a circular medallion, upon one side of which are inscribed the words 'Premium awarded to.' The whole is inclosed by an ornamental border."

2,347.—Soap.—MCKEONE, VAN HAAGEN & CO., Philadelphia, Pa. Application filed March 24, 1875.

"words 'CROWN JEWEL,' and the figure of a crown."

2,348.—Cloth-Faced or Paper Collars.—MEDBERRY & MANN, Ballston Spa, N. Y. Application filed March 15, 1875.

"word-symbol 'GARRETT.'"

2,349.—Tobacco.—CHARLES R. MESSINGER, Toledo, Ohio. Application filed March 13, 1875.

"word 'GAMBRINUS,' in connection with the figure of King Gambrinus sitting astride of a cask of beer, and holding up an overflowing tankard of beer."

2,350.—Cod-Liver Oil.—PETER MÖLLER, London, England. Application filed March 13, 1875.

"representation of a fish, in connection with the words 'Möller's Cod-Liver Oil,' arranged within the same."

2,351.—Cotton Sheetings and Shirtings.—MONOHANSETT MANUFACTURING COMPANY, Putnam, Conn. Application filed February 13, 1875.

"word 'PEERLESS.'"

2,352.—Rubber Goods.—NATIONAL RUBBER COMPANY, Bristol, R. I. Application filed April 1, 1872.

"word 'ANCHOR' and representation of an anchor."

2,353.—Life-Ointment.—WILLIAM OSTRANDER & SON, Watsonville, Cal. Application filed March 5, 1875.

"likeness of Dr. S. F. Collins."

2,354.—Mustard.—ASA A. PLASTRIDGE, Chicago, Ill. Application filed March 13, 1875.

"word 'ACME,' inscribed upon a flag, which is mounted on the summit of a mountain."

2,355.—Grey Cloth.—L. POMEROY'S SONS, Pittsfield, Mass. Application filed February 14, 1871.

"words 'WEST POINT CADET.'"

2,356.—Medicine.—WILLIAM RENNE & SONS, Pittsfield, Mass. Application filed April 13, 1872.

"words 'Magic Oil.'"

2,357.—Shirts.—STERN & CO., New York, N. Y. Application filed August 31, 1872.

"words 'Champion Shirts.'"

2,358.—Medical Preparation.—JAMES D. WATTLES, New York, N. Y. Application filed March 27, 1875.

"figure of a heart having a key in the center thereof, with the words 'Dr. H. W. Beach's Vital Principle' above, the word 'or' on the left, and the word 'the' on the right, and the words 'Key of Life' below."

2,359.—Suspenders and Elastic Webbing.—JOSEPH WARREN WATTLES, Canton, Mass. Application filed September 10, 1870.

"representation of the bust of an Indian chief or warrior surmounting the words 'Trade-Mark,' and having on the head a coronet of feathers, and on its neck a necklace of talons."

2,360.—Cooking-Stoves.—FULLER, WARREN & CO., Troy, N. Y. Application filed March 27, 1875.

"words and figures 'Spirit of 76.'"

2,361.—Oil.—SIMONS & BROTHER, Philadelphia, Pa. Application filed March 27, 1875.

"words 'Nova Scotia Wool-Oil,' in connection with the representation of a bale of wool."

BOUND VOLUMES OF PATENTS.

The Office is now prepared to furnish to subscribers the monthly volumes of patents at $125 00 per annum, bound in half-sheep.

In these volumes the specifications are in full, the type of the same size as the printed patents and records; the drawings are in full, but are one-half the size (linear) of those attached to the patents and bound up for record; the illustrations are four on a page, but *fac-similes* of the originals, with the headings and signatures.

The volumes are the same size as the patents and the OFFICIAL GAZETTE, and have an average of 800 pages of specifications, 260 of drawings; total of each volume about 1,060 pages. They commenced with the issue of July 2, 1872, being the successors in this form of the weekly volumes of patents published under the joint resolution of Congress, passed January 11, 1871, which discontinued the publication of the illustrated annual report of the Commissioner of Patents, and provided for the publication in lieu thereof of complete copies of the specifications and drawings of patents issued subsequently to June 30, 1869. Under this resolution the volumes were to be placed for free public inspection in the capital of each State and Territory of the United States, and in the clerk's office of certain of the federal courts. The Commissioner is also authorized by the resolution to "furnish a complete set of such specifications and drawings to any public library which will pay for binding the same into volumes to correspond with those in the Patent Office, and for the transportation of the same, and which shall also provide proper custody for the same, with convenient access for the public thereto, under such regulations as the Commissioner shall deem reasonable."

After filling the requisition as provided above, a surplus remains which the Commissioner now offers at the rate of $125.00 per annum—say, 1,060 pages per month: 9,600 pages of specifications, 3,120 pages of drawings—12,720 pages.

The OFFICIAL GAZETTE of the United States Patent Office is published weekly by the Patent Office. It is printed by authority of an act of Congress, which provides for its gratuitous distribution to libraries at the rate of eight for each congressional district.

The GAZETTE contains the decisions of the Commissioner of Patents, and such decisions of the courts in patent causes as are believed to possess general interest to inventors and patentees.

During the past year a complete synopsis of foreign patent laws, prepared by members of the British Legation in foreign countries, has been printed in the GAZETTE. Also an epitome of the proceedings of the Vienna International Patent Congress, with the action of that body to perpetuate itself. Matters of this character will receive further attention in the GAZETTE.

The claims of all patents granted are printed in the GAZETTE, bearing the same date as the issue of the patent, accompanied by a brief synopsis of the invention and a portion of the drawing.

The illustrations are photographic reproductions on a reduced scale of the drawings accompanying the original application, and preserve their fidelity, which was sometimes lost under the old plan of drawing or tracing and engraving.

Application for extension of patents, and the action of the Office in such cases, have their earliest publication in the GAZETTE. Disclaimers filed in the Office are nowhere else published.

Changes in the rules of practice of the Office are announced in the GAZETTE, which affords a much readier mode of communication with parties interested than to await a new edition of the Rules of Practice.

Finally, any matter believed to be of interest to inventors in their official intercourse with the Office, will receive in the GAZETTE the attention the subject warrants.

FINAL FEES.

The final fee upon a patent must be paid within six months after the time at which the application was allowed and notice thereof mailed to the applicant or his agent. And if the final fee for such patent or a certificate of deposit for the amount be not received at the Office within that time, the patent will be forfeited, and the invention therein described will become public property, as against the applicant therefor, unless he shall make a new application within two years from the date of notice of the original allowance.

APPLICATION FOR EXTENSION.

UNITED STATES PATENT OFFICE,
Washington, D. C., March 22, 1875.

On the petition of JOHN HASELTINE, of Boston, Mass., authorized by act of Congress approved February 18, 1875, praying for the extension of a patent granted to him on the 25th day of March, 1856, for an Improvement in Water-Wheels,

It is ordered that the testimony in the case be closed on the 11th day of May next; that the time for filing arguments and the Examiner's report be limited to the 21st day of May next; and that said petition be heard on the 26th day of May next.

Any person may oppose this extension.

J. M. THACHER, *Commissioner.*

INDEX OF INVENTIONS PATENTED APRIL 6, 1875.

	Class No.	No. of Patent.
Alarm register, fire, F. H. Field	50	161,676
Axle skein, J. A. Ellis	31	161,603
Bag holder, J. A. Bndlong	57	161,589
Bale tie, J. W. Philp	7	161 819
Basket, S. Weinstock	88	161 846
Bed bottom, J. L. Decker	62	161,765
Bee hive, E. Gerry	9	161,606
Beer cask, P. Knudson	40	161,796
Bird cage, A. B. Hendryx	170	161,788
Boiler covering, A. Leydet	149	161,691
Boiler explosions, preventing, G. Selden	148	161,709
Bolt, door, W. C. Hurd	24	161,624
Bolt, king, C. G. Lazear	31	161,799
Book case, J. J. Crandall	62	161,669
Book clamp, J. B. Boyce	15	161,743
Boot and shoe, Meyer and Freiburg	16	161,809
Boot clamp for boot-blacks, O. Collier	22	161,593
Boots and shoes, screw-threaded wire for use in manufacture of, A. Van Wagenen	16	161,842
Boxes, machine for cutting the heads and bottoms of wooden, E. Hersey, (reissue)	174	6,367
Brewers, mash machine for, J. Schafhaus	19	161,708
Broiler, G. D. Dudley	154	161,601
Bronzing machine, H. Battermann	54	161,734
Brush and mop holding device, R. C. May	22	161,805
Buckle, turn, G. H. Spencer	60	161 832
Burial vault, L. K. Dutton	39	161,673
Burner, gas, A. G. Bayles	64	161,735
Burner, laboratory gas, C. D. Cheney	64	161,666
Burner, vapor, C. H. Prentiss	90	161,635
Calcimine, M. P. Church	4	161,591
Can, sheet metal, J. A. Wilson	136	161,848
Cans, producing flanged lids and collars for sheet metal, J. M. Patterson	136	161,634
Car brake, railway, G. Hiller	122	161,789
Car coupling, L. I. Baker	122	161,586
Car coupling, J. Yeagly	122	161 850
Car replacer, S. L. Gates	122	161,605
Car seat, T. West	121	161,646
Car, stock, J. R. McPherson	121	161,807
Carding machine, Higgins and Whitworth	28	161,613
Carriage axle, J. Kline	31	161,618
Carriage bodies, hanging, S. N. Beecher	31	161,738
Carriage spring, C. G. Lazear	31	161,800
Carriage top, E. P. Stedman	31	161,637
Carriages and wagons, running gear for, H. Dibel	31	161,767
Cartridge loading implement, H. L. Hepburn	32	161,682
Cartridge loading implement, W. G. Rawbone	32	161,636
Cattle support, F. H. Relph	144	161 825
Centrifugal hydro-extractor, C. C. Webber	155	161,719
Chair, invalid, W. Burch	62	161,748
Chair rounds, machine for tenoning, G. W. Parker	173	161,818
Chair seat, H. A. Moore	62	161,699
Chair, tilting, W. T. Doremus	62	161,671
Chimney cowl, A. J. Robinson	166	161,704
Chuck for making swelled tenons, A. D. Ruff	172	161,706
Churn, T. B. Jewett	45	161,794
Churn, C. W. Patton	45	161 633
Cigar mold, R. Appleby	160	161,651
Cigar press, Svoboda and Luxa	160	161,715
Clock, pendulum, F. Eckel	36	161,674
Clocks, calendar movement of, T. H. Mott	36	161,813
Cloth friezing machine, G. G. Bishop	37	161,588
Clothes frame, C. F. Whipple	91	161,649

	Class No.	No. of Patent.
Clothes wringer, I. F. Brown	91	161,662
Coal, apparatus for separating slate from, Broadbent, Zeigler, and Culver	3	161,744
Coal, separating refuse from, S. Thomas	3	161,840
Cock, stop, J. C. Meloon	152	161,698
Collar ends, machine for folding and pasting, C. Spofford	38	161,833
Comb, E. Brown	161	161,661
Condenser ferrule, T. H. Savery	148	161,707
Cooler and cheese vat, milk, C. W. Grannis	45	161,608
Cooler and refrigerator, combined water, J. K. Korff	58	161 797
Cooler, lard, F. C. Pray	26	161,703
Copying press, W. U. Fairbairn, (reissue)	146	6,365
Corkscrew, wire, W. B. Clough	88	161,755
Corn dropper, J. Jackman	133	161,685
Corn stalk cutter, C. B. Sights	73	161,830
Corset, L. Ulman	80	161,841
Corset box, M. K. Bortree	80	161,741
Counter press, I. Frechette	16	161,774
Curry comb, J. O. Berry	144	161,654
Curry comb, G. Hall	44	161,787
Cutlery, securing handles to, E. C. Carlton	154	161,714
Damper, J. Stewart	128	161,675
Door, safe, J. Farrel	24	161,619
Door hanger, J. Lumbert	38	161,773
Drawers, J. J. Fits Patrick	100	161 616
Drill chuck, N. W. Horton	124	161,631
Drill, steam rock, Nutting and Githens	79	161,641
Elevator, scuttle, F. A. Smith	70	161,717
Emery wheels, &c., rest for truing off, E. Thomas	150	161,711
Engine, compound steam, F. E. Sickels	150	161,764
Engines, automatic regulating device for steam, A. De Beaumont	152	161,779
Engines, valve for compound, S. B Greacen	109	161,604
Envelope cutting machine, J. F. Ellis	31	161,623
Equalizer, draft, W. M. McClelland, Sr	157	161,658
Eyeglass frame, M. C. Brackett	165	161,776
Fan, automatic, Gilliford and Hoffman	165	161,777
Fan, table, C. Good	167	161,768
Faucet, self-closing, P. W. Doherty	167	161,630
Faucet, ventilating, W. C. North	53	6,368
Fence, farm, L. E. Hogue, (reissue)	29	161,598
Ferrule for tool handles, E. C. Denio	96	161,897
Fertilizer, S. Seitz	123	161,615
Fire arm, revolving, F. W. Hood	30	161,602
Fire escape, M. F. Eldredge	58	161,596
Fish for market, preparing, D. W. and S. H. Davis	88	161,816
Fruit press, filter, and funnel, combined, G. A. Newsham	149	161,620
Furnace, revolving, J. Manes	35	161 831
Galvanizers' dross, purifying, Spear and Richards	143	161 827
Game apparatus, C. Metz	1	161,738
Gas generator, carbonic acid, O. Zwietusch	66	161,836
Gas, process and apparatus for the manufacture of, I. N. Stanley	66	161,716
Gas retorts, mouth piece lid for, S. A. Thomas	52	161,756
Gate, farm, L. S. Cohn	52	161,817
Gate, farm, L. W. Noyes	54	161,760
Glass, &c., ornamenting surfaces of, J. H. and G. W. Crane	133	161,688
Grain drills, feed wheel for, B. Kuhns	149	161,758
Grate bar, A. W. Cram	143	161,772
Gyrator, aerial and marine, P. B. Fernandes	73	161,838
Harrow and roller, A. M. Stratton	74	161,723
Harvester rake, W. N. Whiteley	31	161,637
Hay slide, A. J. Reed	148	161,587
Heater, feed water, E. B. Bennett	16	161,811
Heel stiffeners or counter blanks, mechanism for feeding, S. and G. F. Moore	24	161,729
Hinge, self-supporting, S. Adams	144	161,757
Hitching devices, clasp or thimble for, J. C. Covert	60	6,364
Hoof spreader, T. Armstrong, (reissue)	23	161,843
Hook, snap, A. J. Vaughan	159	161,663
Horse collar fastening, V. M. Beamer	167	161 763
Horse power, G. E. Burt	167	161,740
Hose nozzle, M. S. Curtis	116	161,722
Hydrant, adjustable, G. D. Blocher	148	161,815
Incubator, C. C. Weston	91	161,594
Injector W. H. Newell	87	161 665
Ironing apparatus, J. G. Crawford	33	161,644
Journal and bearing, G. A. Chapman	90	161,798
Ladles, stopper for, H. Swank	93	161,705
Lamp attachment, T. C. Lawrence	93	161,700
Latch for doors, &c., F. D. Robinson	93	161,706
Latch, reversible, W. T. Munger	138	161,670
Life preserving stool, H. E. Crosswell	19	161,642
Liquors, aging, J. G. Spier	93	161,737
Lock, combination, C. O. Yale	87	161,695
Locking device for machinery, Marsh and Crane	95	161,595
Loom, G. Crompton	95	161,702
Loom shuttle, J. M. Peckham	62	161,733
Lounge, camp, G. T. Barker	87	161,614
Lubricator for piston rods, S. Hoffmaster	174	161,746
Lumber, W. E. Brock	139	161,653
Materials, machine for testing the strength of, L. A. Beardslee	132	161,625
Measure, liquid, J. McInnes	58	6,370
Meats, preserving and packing cooked, W. J. Wilson, (reissue)	67	161,753
Mechanical power, E. Cary		
Meter, liquid, H. S Maxim	118	161,631
Miter box, T. C. Lawrence	29	161,690
Molding machine, T. F. Hammer	33	161,784
Musical instruments, key board for, W. H. McChesney	102	161,806
Nailing machine, box, A. E. White	103	161,650
Napkin holder, W. Clark	88	161,667
Oil cup, Hallas and Weeden	87	161,783
Oiler, I. Levy	87	161,693
Oleaginous seeds, machine for crushing, A. B. Lawther	26	161,691
Ore separator, T. B. McConaughey	3	161,697
Ore washers, shaft for, Kittoe and Brotherhood	3	161,647
Ox-shoes, machine for making, J. Hall	60	161,782
Packing, piston, J. L. Sherman	151	161,710
Paper bag machine, W. Webster	109	161,720
Paper, composition for filling the fibers of, Goodwin and Seaverns	108	161,778
Pen holder, J. Boyd	146	161,657
Petroleum, compound for decolorizing, H. Dubbs	47	161,672
Pinking machine, T. Hagerty	38	161,780
Pitcher, ice, L. Evans	88	161,769
Plane, bench, T. Hagerty	29	161,609
Plane, bench, J. E. Norwood	29	161,701
Planing machine, C. and G. F. Buss	173	161,749
Planing machine, G. E. Woodbury	173	161,726
Planter, seed, J. T. Carr	133	161,664
Plow and cultivator, combined gang, W. Clements	114	161,592
Plow riding attachment, J. T. Wells	114	161,645
Plow standard fastening, G. B. Birmingham	114	161,745
Plow, sulky, J. Fay	114	161,770
Pocket, safety, J. C. Iden	38	161,617
Pot, coffee, C. B. Smith	136	161,640
Press, baling, P. K. Dederick	7	161,766
Press, cotton, W. W. Knowles	7	161,795
Press, cotton, W. W. Louis	7	161,802
Press, cotton and hay, B. J. Wilson	7	161,847
Press, cotton bale, E. L. Morse	7	161,812
Press, filter, and funnel, combined fruit, G. A. Newsham	88	161,816
Press, screw and toggle lever, R. Butterworth	7	161,751
Quilting frame, Simmons and Franz	36	161,639
Radiator, steam, J. Mason	147	161,804
Railway rail joint fastening, J. B. Tapscott	120	161,839
Rake, horse hay, A. Bugbee	77	161,590
Refrigerating table, P. Libert	58	161,694
Refrigerator, J. A. Meeks	58	161,636
Rein holder, C. Hutchings	31	161,792
Rivet setting machine, M. Bray	100	161,659
Riveting machine, M. Bray	100	161,660
Rocker, seesaw, and chair, child's combined, J. A. Crandall	143	161,759
Rolls, three-high, Harris and Ayer	125	161,786
Roofing, A. Cummings	126	161,762
Roofing composition, fire-proof, E. Kinzendorf	126	161,689
Rope molding, machine for making, O. P. Doray	173	161,600
Rowing exercise, machine for, G. W. Moore	143	161,629
Ruler, G. W. Crosscup	146	161,761
Sacks shaping block for for, J. Glass	38	161,607
Saddle, riding, C. H. Harris	72	161,785
Saddle, riding, R. Reiman	72	161,824
Sash fastener, S. D. Arnold	24	161,652
Sash fastener, Buechley and Thorn	24	161,635
Screw cutting die plate, H. Griffing	14	161,679
Seeding machine, broadcast, Buist and Allen	133	161,747
Sewing machine caster, J. McEwen	134	161,624
Sewing machine fly wheels, journal for, G. Rehfuss	134	161,823
Sewing machine, shoe, T. L. Miller	134	161,628
Sewing machines, embroidering attachment for, C. H. Palmer	134	161 632
Sheep shearing chair, C. H. and J. H. McCall	135	161,622
Shovels and forks, lifting attachment for, F. M. Gardner	141	161,678
Skate, J. Lovak, (reissue)	143	6,369
Slate frame, J. H. Barbarick	146	161,732
Soda fountain, F. W. Wiesebrock	1	161,845
Spark arrester, M. B. Mason	94	161,803
Spooling machine, J. W. West	17	161,647
Sphygmoscope, E. A. Pond	156	161,821
Steam brake, Fouts and Planck	122	161,677
Steel welding compound, Anthony and Beadle	85	161,730
Stone dressing machine, J. J. Squire	153	161,835
Stove grate, A. N. Houseoe	154	161,790
Stove, heating, Hatch and Fuller	154	161,611
Stove, summer, E. Hawks	154	161,612
Stud and button fastening, B. Clayton	86	161,668
Table, folding, H. Butman	62	161,750
Table, folding, W. Decker	62	161,597
Tea caddy, W. T. Sherer	88	161,629
Telegraphs, compound switch for fire alarm, S. Weeks	50	161,721
Telegraphs, transmitter and receiver for electric, A. G. Bell	50	161,739
Tenons and cutting wedges, machine for relishing, J. H. Milliespaugh	173	161,810
Testing machine, L. A. Beardslee	67	161,737
Thill coupling, C. Robinson	31	161,626
Tire setter, D. Sealer	60	161 834
Tire tightener, J. and C. M. Lesher	31	161,692
Tire upsetting machine, H. S. Vinton	60	161 814
Tobacco hanger, S. C. Shelton	160	161,828
Tongue support, E. Spears	31	161,713

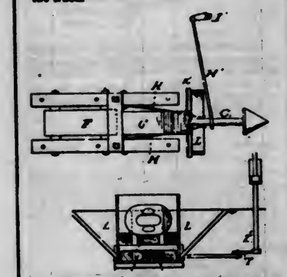
	Class No.	No. of Patent.
Toy, aerial, P. B. Fernandes	143	161,771
Track clearer, C. G. Waterbury	120	161,718
Trap, fly or insect, H. G. Nelson	63	161 814
Truss, D. King	156	161,686
Turpentine pan, W. W. Clements	63	161,754
Twine holder, J. Hill	127	161,683
Umbrella rib tip holder, A. S. Hubbell	165	161,791
Under-waist and skirt supporter, combined, Frost and Phelps	38	161,851
Valve, steam, Dewey and Palmer	152	161,599
Valve, steam, J. Hare	152	161,610
Vegetable slicer, Winne and Kent	59	161,849
Vehicle tongue support, J. McCarter	31	161,696
Ventilating attachment to hearths, W. S. Winfield	154	161,724
Vessels, means for discharging bilge water from, C. M. Gearing	137	161,775
Vise, M. and W. Picken	100	161,690
Vulcanizing apparatus, W. J. Birdsall	84	161,656
Wagon hound and tongue, C. F. Whipple	31	161,648
Warping machine, J. S. Richard	95	161,638
Washing machine, A. Israel	94	161,793
Washing machine, boiler, J. D. M. Armbrust	91	161,731
Watch case, S. B. Simon	36	161,712
Watch, stem winding, C. V. Woerd	36	161,725
Watches, cannon pinion for, S. Ramey	36	161,822
Water raising apparatus, regulator for electrical, J. H. Guest	50	161 680
Water wheel, J. H. Staples	168	161,643
Weaving mats, mechanism for, D. M. Harman	95	161 681
Whiffletree, Bots and White	31	161,742
Whiffletree coupling, B. H. Merriman	31	161,808
Wringer, A. W. and A. E. Hall	91	161,781
Yoke attachment, neck, B. Folts, (reissue)	31	6,366

INDEX OF PATENTEES TO WHOM PATENTS WERE GRANTED APRIL 6, 1875.

	Patent No.
Adams, F., Self-supporting hinge	161,729
Alden and Buist	161,747
American Button Hole Overseaming and Sewing Machine Company, assignee	161,823
American Watch Company, assignee	161,725
Anthony, E., and J. Beadle, Compound for welding steel	161,730
Appleby, R., Cigar mold	161,651
Armbrust, J. D. M., Boiler washing machine	161,731
Armstrong, T., Hoof spreader, (reissue)	6,364
Arnold, S. D., Sash fastener	161,652
Ayer and Harris	161,786
Baker, L. I., Car coupling	161,586
Barbarick, J. H., Slate frame	161,732
Barker, G. T., Camp lounge	161,733
Battermann, H., Bronzing machine	161,734
Bayles, A. G., Gas burner	161,735
Beadle and Anthony	161,730
Beamer, V. M., Horse collar fastening	161,736
Bear, W., assignee	161,618
Beardslee, L. A., Machine for testing the strength of materials	161,653
Beardslee, L. A., Testing machine	161,737
Beecher, S. N., Hanging carriage bodies	161,738
Bell, A. G., Transmitter and receiver for electric telegraphs	161,739
Benedict and Burnham Manufacturing company, assignee	161,783
Bennett, E. B., Feed water heater	161,587
Berry, J. O., Curry comb	161,654
Birdsall, W. J., Vulcanizing apparatus	161,656
Birmingham, G. B., Plow standard fastening	161,745
Bishop, G. G., Cloth frizing machine	161,588
Blocher, G. D., Adjustable hydrant	161,740
Bortree, M. K., Corset box	161 741
Bots, G. H., and W. H. White, Whiffletree	161,742
Bowdoin, F. A., assignee	161,849
Boyd, J., Pen holder	161,657
Boyce, J. B., Book clamp	161,743
Brackett, M. C., Eyeglass frame	161,658
Branch, J. W., assignee	161,812, 161,835
Bray, M., Rivet setting machine	161,659
Bray, M., Riveting machine	161,660
Brigden, G. B., assignee	161,658
Broadbent, S., C. W. Zeigler, and W. B. Culver, Apparatus for separating slate from coal	161,744
Brock, W. E., Lumber	161,746
Brotherhood and Kittoe	161,687
Brown, E., Comb	161,661
Brown, I. F., Clothes wringer	161,662
Budlong, J. A., Bag holder	161,589
Buechley, W., and T. Thorn, Sash fastener	161,655
Bugbee, A., Horse hay rake	161,590
Buist, D., and C. E. Alden, Broadcast seeding machine	161,747
Burch, W., Invalid chair	161,748
Burt, G. E., Horse power	161,663
Bass, C. and G. F., Planing machine	161,749
Butman, H., Folding table	161,750
Butterworth, R., Screw and toggle lever press	161,751
Carlton, E. C., Securing handles to cutlery	161,752
Carr, J. T., Seed planter	161,664
Cary, E., Mechanical power	161,753
Chamberlain, W. S., assignee, (reissue)	6,365
Chapman, G A., Journal and bearing	161,665
Cheney, C. D., Laboratory gas burner	161,666
Church, M. P., Calcimine	161,591
Clapp, J. J., assignee	161,643
Clark, W., Napkin holder	161,667
Clayton, B., Stud and button fastening	161,668
Clements, W., Combined gang plow and cultivator	161 592
Clements, W. W., Turpentine pan	161,754
Clough, W. B., Wire corkscrew	161,755
Cohn, L. S., Farm gate	161,756
Collier, O., Boot clamp for boot-blacks	161,593
Corbin, P. and F., assignees	161,652, 161,700
Covert, J. C., Clasp or thimble for hitching devices	161,757
Cram, A. W., Grate bar	161,758
Crandall, J. A., Child's combined rocker, seesaw, and chair	161,759
Crandall, J. J., Book case	161,669
Crane, J. H. and C. W., Ornamenting surfaces of glass, &c	161,760
Crane and Marsh	161,695
Crawford, J. G., Ironing apparatus	161,594
Crompton, G., Loom	161,595
Crosscup, G. W., Ruler	161,761
Crosswell, H. E., Life-preserving stool	161,670
Culver, Broadbent, and Zeigler	161,744
Cummings, A., Roofing	161,762
Curtis, M. S., Hose nozzle	161,763
Davis, D. W. and S. H., Preparing fish for market	161,596
De Beaumont, A., Automatic regulating device for steam engines	161,764
Decker, J. L., Bed bottom	161,765
Decker, W., Folding table	161,597
Dederick, P. K., Baling press	161,766
Denio, E. C., Ferrule for tool handles	161,598
Destleta, C., assignee	161,826
Dewey, E. H., and C. H. Palmer, Steam valve	161,599
Dibel, H., Carriage and wagon running gear	161,767
Doherty, P. W., Self-closing faucet	161,768
Doray, O. P., Machine for making rope molding	161,600
Doremus, W. T., Tilting chair	161,671
Dubbs, H., Compound for decolorizing petroleum	161,672
Dudley, G. D., Broiler	161,601
Dutton, L. K., Burial vault	161,673
Eastman, G., assignee	161,591
Eckel, F., Pendulum clock	161,674
Eldredge, M. F., Fire escape	161,602
Ellis, J. A., Axle skein	161,603
Ellis, J. F., Envelope cutting machine	161,604
Emmerick, F., assignee	161,734
Evans, L., Ice pitcher	161,769
Fairbairn, W. U., Copying press, (reissue)	6,365
Farrel, J., Safe door	161,675
Fay, J., Sulky plow	161,770
Fernandes, P. B., Aerial toy	161,771
Fernandes, P. B., Aerial and marine gyrator	161,772
Field, F. H., Fire alarm register	161,676
Fits Patrick, J. J., Drawers	161,773
Folts, B., Neck yoke attachment, (reissue)	6 366
Fouts, T. F., and E. Planck, Steam brake	161,677
Frans and Simmons	161,639
Frechette, I., Counter press	161,774
Freiburg and Meyer	161,809
Frost, G., and G. H. Phelps, Combined underwaist and skirt supporter	161,851
Fuller and Hatch	161,611
Gardner, F. M., Lifting attachment for shovels and forks	161,678
Gates, S. I., Car replacer	161,605
Gearing, C. M., Means for discharging bilge water from vessels	161,775
Gerry, E., Bee hive	161,606
Gilliford, J., and J. M. Hoffman, Automatic fan	161,776
Githens and Nutting	161,631
Glass, J., Shaping block for for sacks	161,607
Good, C., Table fan	161,777
Goodwin, G. H., and G. W. Seaverns, Composition for filling the fibers of paper	161,778
Grannis, C. W., Milk cooler and cheese vat	161,608
Greacen, S. B., Valve for compound engines	161,779
Griffing, H., Screw cutting die plate	161,679
Grove, M. M., assignee	161,618
Guest, J. H., Regulator for electrical water raising apparatus	161,680
Hagerty, T., Bench plane	161,609
Hagerty, T., Pinking machine	161,780
Hall, A. W. and A. E., Wringer	161,781
Hall, J., Machine for making ox-shoes	161,782
Hallas, J. G., and W. N. Weeden, Oil cup	161,783
Hammer, T. F., Molding machine	161,784
Hare, J., Steam valve	161,610
Harman, D. M., Mechanism for weaving mats	161,681
Harris, C. H., Riding saddle	161,785
Harris, S. A., assignee	161,590
Harris, W., and J. M. Ayer, Three-high rolls	161,786
Hatch, W. W., and C. W. Fuller, Heating stove	161,611
Hawell, G., Curry comb	161,787
Hawks, E., Summer stove	161,612
Hendryx, A. B., Bird cage	161,788
Hendryx and Bartholomew, assignees	161,788
Hepburn, L. L., Cartridge loading implement	161,682
Hersey, E., Machine for cutting the heads and bottoms of wooden boxes, (reissue)	6,367

	Patent No.
Higgins, H., and T. S. Whitworth, Carding machine	161,613
Hill, J., Twine holder	161,663
Hiller, G., Railway car brake	161,709
Hoffman, J. H., assignee	161,833
Hoffman and Glilliford	161,776
Hoffmaster, S., Lubricator for piston rods	161,614
Hogue, L. E., Farm fence. (reissue)	6,368
Hood, F. W., Revolving fire arm	161,615
Hood Fire Arms Company, assignee	161,616
Horton, N. W., Drill chuck	161,790
Horsfee, A. N., Stove grate	161,739
Hubbard, G. G., assignee	161,791
Hubbell, A. S., Umbrella rib tip holder	161,635
Humphrey, J. P., assignee	161,803
Hunt, R. H., assignee	161,684
Hurd, W. C., Door bolt	161,792
Hutchings, C., Rein holder	161,617
Iden, J. C., Safety pocket	161,793
Israel A., Washing machine	161,685
Jackman, J., Corn dropper	161,849
James, R., assignee	161,794
Jewett, T. B. Churn	161,849
Kent and Winne	161,686
King, D., Truss	161,687
Kittoe, E. F., and F. Brotherhood, Shaft for ore washers	161,618
Kline, J., Carriage axle	161,795
Knowles, W. W., Cotton press	161,796
Knudson, P., Beer cask	161,797
Korff, J. K., Combined water cooler and refrigerator	161,729
Koss, J. W., assignee	161,688
Kuhns, B., Feed wheel for grain drills	161,689
Kunzendorf, E., Fire-proof roofing composition	161,601
Latham, C. H., assignee	161,690
Lawrence, T. C., Miter box	161,798
Lawrence, T. C., Lamp attachment	161,691
Lawther, A. B., Machine for crushing oleaginous seeds	161,799
Lazear, C. G., King-bolt	161,800
Lazear, C. G., Carriage spring	161,692
Leaber, J. and C. M., Tire tightener	161,693
Levy, L., Oiler	161,801
Leydet, A., Boiler covering	161,694
Libert, P., Refrigerating table	161,802
Louis, W. W., Cotton press	6,369
Lovatt, J., Skate, (reissue)	161,619
Lumbert, J., Door hanger	161,715
Luxa and Svoboda	161,620
Manes, J., Revolving furnace	161,695
Marsh, T. D., and F. M. Crane, Locking device for machinery	161,804
Mason, J., Steam radiator	161,803
Mason, M. B., Spark arrester	161,621
Maxim, H. S., Liquid meter	161,805
May, R. C., Brush and mop holding device	161,622
McCall, C. H. and J. H., Sheep shearing chair	161,696
McCarter, J., Vehicle tongue support	161,806
McCheesney, W. H., Key board for musical instruments	161,623
McClelland, W., Sr., Draft equalizer	161,763
McCollum, W., assignee	161,697
McConoughey, T. E., Ore separator	161,624
McEwen, J., Sewing machine caster	161,625
McInnes, J., Liquid measure	161,807
McPherson, J. R., Stock car	161,626
Meeks, J. A., Refrigerator	161,698
Meloon, J. C., Stop cock	161,808
Merriman, B. H., Whiffletree coupling	161,627
Metz, C., Game apparatus	161,809
Meyer, W., and H. Freiburg, Boot and shoe	161,628
Miller, T. L., Shoe sewing machine	161,810
Millspaugh, J. H., Machine for reliabing tenons and cutting wedges	161,629
Moore, G. W., Machine for rowing exercise	161,699
Moore, H. A., Chair seat	161,650
Moore, H. E., assignee	161,618
Moore, J. A., assignee	161,811
Moore, S. and G. F., Mechanism for feeding heel stiffeners or counter blanks	161,812
Morse, E. L., Press for cotton bales	161,813
Mott, T. H., Calendar movement of clocks	161,700
Munger, W. T., Reversible latch	161,814
Nelson, H. G., Fly or insect trap	161,815
Newell, W. H., Injector	161,816
Newsham, G. A., Combined fruit press, filter, and funnel	161,630
North, W. C., Ventilating faucet	161,701
Norwood, J. E., Bench plane	161,817
Noyes, L. W., Farm gate	161,631
Nutting, G. E., and J. C. Githens, Steam rock drill	161,599
Palmer and Dewey	161,632
Palmer, C. H., Sewing machine embroidering attachment	161,818
Parker G. W., Machine for tenoning chair rounds	161,634
Patterson, J. M., Producing flanged lids and collars for sheet metal cans	161,633
Patton, C. W., Churn	161,702
Peckham, J. M., Loom shuttle	161,851
Phelps and Frost	161,819
Philp, J. W., Rein tie	161,820
Picken, M. and W., Vise	161,609
Pickersgill, J. A., assignee	161,780
Pickersgill, J. A., assignee	161,677
Planck and Fouts	161,821
Pond, E. A., Sphygmoscope	161,703
Pray, F. C., Lard cooler	

	Patent No.
Prentiss, C. H., Vapor burner	161,635
Price, E., Jr., assignee	161,730
Ramey, S., Cannon pinion for watches	161,822
Randall, C. E., assignee, (reissue)	6,365
Rawbone, W. G., Cartridge loading implement	161,636
Reed, A. J., Hay slide	161,637
Rehfuss, G., Journal for sewing machine fly wheels	161,823
Reiman, R., Riding saddle	161,824
Relph, F. H., Cattle support	161,825
Richard, J. S., Warping machine	161,638
Richards and Spear	161,831
Robinson, A. J., Chimney cowl	161,704
Robinson, C., Thill coupling	161,826
Robinson, F. D., Latch for doors, &c	161,705
Rogers, H., assignee	161,811
Ross, J. W., assignee	161,729
Ruff, A. D., Chuck for making swelled tenons	161,706
Sanders, T., assignee	161,739
Savery, T. H., Condenser ferrule	161,707
Schaffhaus, J., Mash machine for brewers	161,708
Scherer, C., assignee	161,713
Scranton, C. A., assignee	161,808
Seaman, R., assignee	161,845
Seaverns and Goodwin	161,778
Seitz, S., Fertilizer	161,827
Selden, G., Preventing boiler explosions	161,709
Shelton, S. C., Tobacco hanger	161,828
Shepard, H. W., assignee	161,845
Sherer, W. T., Tea caddy	161,829
Sherman, J. L., Piston packing	161,710
Sherwood, D., assignee	161,601
Sickels, F. E., Compound steam engine	161,711
Sights, C. B., Corn stalk cutter	161,830
Simmons, G. P., and J. Franz, Quilting frame	161,639
Simon, S. B., Watch case	161,712
Smith, C. B., Coffee pot	161,640
Smith, F. A., Scuttle elevator	161,641
Spear, W. B., and J. W. Richards, Purifying galvanizer's dross	161,831
Spears, E., Tongue support	161,713
Spencer, G. H., Turn buckle	161,832
Spier, J. G., Aging liquors	161,642
Spofford, C., Machine for folding and pasting collar ends	161,833
Squier, D., Tire setter	161,834
Squire, J. J., Stone dressing machine	161,835
Stanley, I. N., Process and apparatus for the manufacture of gas	161,836
Staples, J. H., Water wheel	161,643
Stedman, E. P., Carriage top	161,837
Stetson, G. H., assignee	161,605
Stewart, J., Damper	161,714
Stratton, A. M., Harrow and roller	161,838
Svoboda, F., and F. Luxa, Cigar press	161,715
Swank, H., Stopper for ladles	161,644
Swartwout, T. G., executor, (reissue)	6,369
Tapscott, J. B., Railway rail joint fastening	161,839
Thomas, E., Rest for truing off emery wheels, &c	161,717
Thomas, S., Separating refuse from coal	161,840
Thomas, S. A., Mouth piece lid for gas retorts	161,716
Thorn and Buechley	161,655
Trott, L. G., assignee	161,597
Ulman, L., Corset	161,841
Union Manufacturing Company, assignee	161,588
Van Wagenen, A., Screw threaded wire for use in manufacture of boots and shoes	161,842
Vaughan, A. J., Snap hook	161,843
Vincent, G. H., assignee	161,646
Vinton, H. S., Tire upsetting machine	161,844
Waterbury C. G., Track cleaner	161,718
Webber, C. C., Centrifugal hydro-extractor	161,719
Webster, W., Paper bag machine	161,720
Weeden and Hallas	161,763
Weeks, S., Compound switch for fire alarm telegraph	161,721
Weidig, J., assignee	161,764
Weinstock, S., Basket	161,846
Welch, A. T., assignee	161,621
Wells, J. T., Riding attachment for plows	161,645
West, J. W., Spooling machine	161,847
West, T., Car seat	161,646
Weston, C. C., Incubator	161,722
Whipple, C. F., Wagon hound and tongue	161,648
Whipple, C. F., Clothes frame	161,649
White, A. E., Box nailing machine	161,650
White, E. D., assignee	161,836
White and Bois	161,749
Whiteley, W. N., Harvester rake	161,723
Whitworth and Higgins	161,613
Wiesebrock F. W., Soda fountain	161,845
Wilson, B. J., Cotton and hay press	161,847
Wilson, J. A., Sheet metal can	161,848
Wilson Packing Company, assignee, (reissue)	6,370
Wilson, W. J., Preserving and packing cooked meats, (reissue)	6,370
Winfield, W. S., Ventilating attachment to hearths	161,724
Winne, J. J., and W. H. Kent, Vegetable slicer	161,849
Woerd, C. V., Stem winding watch	161,725
Woodbury, G. E., Planing machine	161,726
Woods, E. P., assignee	161,601
Yale, C. O., Combination lock	161,727
Yeagly, J., Car coupling	161,850
Yockel, C., assignee	161,764
Zeigler, Culver, and Broadbent	161,744
Zwietusch, O., Carbonic acid gas generator	161,728



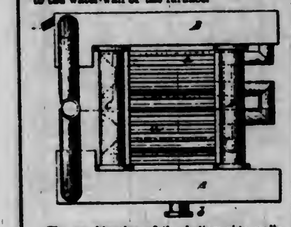
TITLES, DRAWINGS, AND CLAIMS

OF

PATENTS GRANTED APRIL 6, 1875

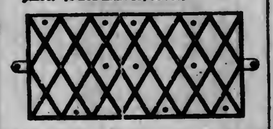
161,586. CAR-COUPLINGS. Lewis J. Baker, Minneapolis, Minn. [Filed Aug. 11, 1874.]

Brief.—When the cars come together the arrow head passes between the jaws on the approaching draw-head, which catch behind its head. The cars are uncoupled by moving the arrow-head to one side or other, and consequently will uncouple when one car leaves the track.



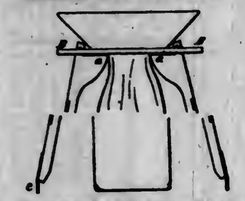
1. The coupling-bolt C, having the conical or arrow head C', and connected to the spring-rod D by the eyes *a a'*, so as to produce a flexible joint, in combination with the side springs H H, and the top spring G, connected to the movable cross-head K, all substantially as and for the purpose described.

2. The coupling-bolt C, side springs H, and the top spring G, connected to the cross-head K, bearing against the coupling-bolt, in combination with the link H', and the vertical shaft I', having the lateral arm I, at its lower end, and connected to the link H', substantially as and for the purpose described.



161,587. FEED-WATER HEATERS. Bert B. Bennett, St. Johnsbury, Vt. [Filed Mar. 3, 1875.]

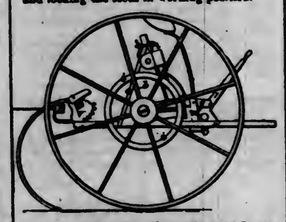
Brief.—Water is caused to circulate through the grate-bars, from whence it is conveyed, by a tortuous pipe located beneath the grate-bars, to the water-wall of the furnace.



The combination of the hollow side walls A B, connecting-pipe C, closed at one end, connecting-pipe D, closed at both ends, and the hollow grate-bars *a a*, connecting the two pipes C D, substantially as herein set forth.

161,588. CLOTH-PRESSING MACHINES. Geo. G. Bishop, Norwalk, Conn., assignor to the Union Manufacturing Company, same place. [Filed Mar. 15, 1875.]

The combination of the plates with a resilient gum-elastic frieze having its surface divided into numerous small angular cavities by means of elastic bisecting walls or partitions, substantially as described, and for the purposes set forth.



161,589. BAR-HOLDERS. Jos. A. Budkeg, Chicago, Ill. [Filed Feb. 18, 1875.]

The combination of the horizontal base or open table B and the legs C C, pivoted in slots in the said table and provided with the projections *a a*, arranged to press against the lower side of the table, and with the points or spurs *c c* arranged as shown, substantially as and for the purposes specified.

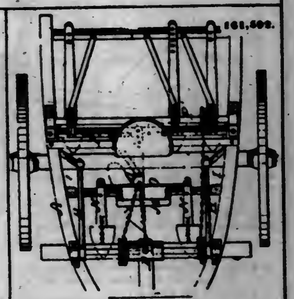
161,590. HORSE HAY-RAKES. A. Bugbee, Hilkhart, Ind., assignor to Saml. A. Harris, Minneapolis, Minn. [Filed Jan. 19, 1875.]

Brief.—Devices for operating the rake-head and locking the teeth in working position.

1. The combination of the rake-head 2, cam 9, sliding lever 8, arm 10, rod 6, and lever 7, substantially as specified.

2. The lever 7, provided with the arm 8 and notch 9, in combination with the sliding lever 8 and pin 10, substantially as shown and described.

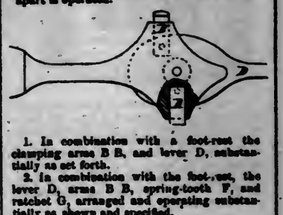
161,591. CALCIMINE. Melvin S. Church, Grand Rapids, assignor to himself and G. Bartman, Hastmanville, Mich. [Filed May 22, 1874.]



A calcimining composed adapted to be used with brushes, composed of pulverized calcined gypsum, dissolved glue, and cold water, substantially as described

161,592. COMBINED GANG-PLOWS AND CULTIVATORS. William Clements, Fickville, Tex. [Filed Dec. 23, 1874.]

Brief.—Pivoted standards upon the arched cross-beam of a cultivator, whereby the shovels may be vibrated laterally or lifted from the ground.

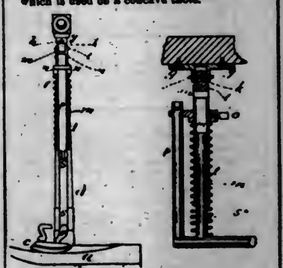


The cross-bar M, adapted to straddle the row, and rising up to form a foot-rest, and journaled in the frame I L, in combination with the cultivator-standards N, pivoted at or near their centers to the bar M, and near their upper ends to a cross-bar, O, whereby they may be lifted or laterally adjusted, substantially as and for the purposes set forth.

161,593.

161,594. BOOT-CLAMPS FOR BOOT-BLACKS. Orvis Collier, Sacramento, Cal. [Filed Jan. 6, 1875.]

Brief.—The sole of the boot is clamped upon a standard to hold it while being blacked. A ratchet and pawl holds the jaws automatically as the lever that throws them together or apart is operated.



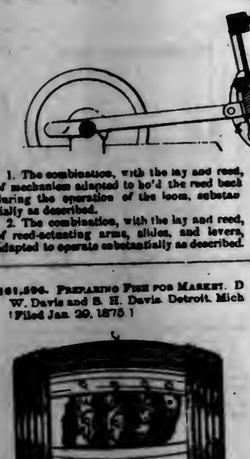
1. In combination with a foot-rest the clamping arms B B, and lever D, substantially as set forth.

2. In combination with the foot-rest, the lever D, arms B B, spring-tooth F, and ratchet G, arranged and operating substantially as shown and specified.

161,595. IRONING APPARATUS. James G. Crawford, Boston, Mass. [Filed Aug. 3, 1874.]

Brief.—To a pivoted arm is jointed a tube, in which slides a rod surrounded by a spiral spring. The rod is curved to form a handle, and is attached to a convex smoothing-iron, which is used on a concave table.

1. The combination of the knees *g*, block *k*, pin *l*, and tube *m* with the spring *t* and rods *p s s' s''*, substantially as and for the purpose herein specified.



2. In an ironing apparatus, the combination, with the smoothing-iron, arranged as described, of the concave table *e*, as and for the purpose set forth.

3. The combination of the frame *d e f*, table *e*, and iron *s*, rods *s s' s'' p*, tube *m*, connecting-piece *n*, nut *o*, pin *o*, and spring *t*, substantially as and for the purposes herein before set forth.

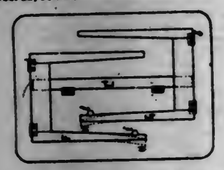
HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

161,595. LOOMS. George Crompton, Worcester, Mass. [Filed Feb. 3, 1875.]

Brief.—To prevent the reed from beating up when the loom is reversed, it is carried back by means of an arm pivoted to the lay-sword, and operated by a treadle.

1. The combination, with the lay and reed, of mechanism adapted to hold the reed back during the operation of the loom, substantially as described.

2. The combination, with the lay and reed, of reed-actuating arms, slides, and levers, adapted to operate substantially as described.



161,596. PREPARING FISH FOR MARKET. D W. Davis and S. H. Davis, Detroit, Mich. [Filed Jan. 29, 1875.]

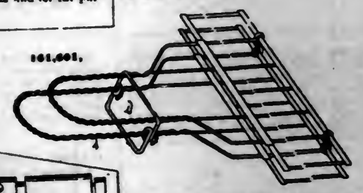
1. The mode of preparing fish for transportation and market by freezing them into cakes suitable to be packed in casks or other packages, substantially as described.

2. As an improved method of preparing fish for market, the series of cakes D of frozen fish, arranged as to size and height to completely fill the barrel or package C, substantially as described.

161,597. FOLDING TABLES. Wm. Decker, Manchester, Mass., assignor of one-half his right to L. C. Trott, same place. [Filed Dec. 15, 1874.]

The top A, provided with the headed pins *c c*, in combination with one leg, B B, of each pair, capable of being sprung out over said pins, to hold them in position when folded, as set forth.

161,598. FERRULES FOR TOOL-HANDLES. Rice C. Denio, Auburn, N. Y. [Filed Feb. 8, 1875.]



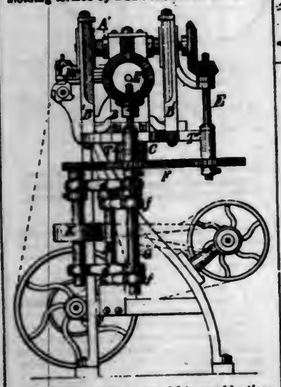
Brief.—The head of a tool is supported by two or more annular curved and slotted ferrules, each of which extends beyond the end of the tool-handle, forming a double bearing upon each side of the head.

Two or more ferrules, D G, each being slotted to receive the head of the tool, and each extending beyond the end of the handle, and bent or curved over to support the head of the tool, in combination with a handle, A, and tool-head B, constructed as and for the purpose set forth.

161,601. BROILERS. Geo. D. Dudley, Lowell, Mass., assignor to E. P. Woods, Danl. Sherwood, and C. H. Latham, same place. [Filed Feb. 19, 1875.]

Brief.—The double-looped slide is attached to the longer handle.

The double or two-looped slide D, attached by eyes *g* to the broiler-handle A, and presenting one of its loops in position to slide over the other broiler-handle, whichever way the broiler may be folded together, substantially as described.



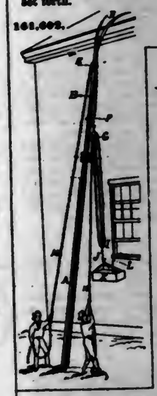
161,599. STEAM-VALVES. E. H. Dewey and C. H. Palmer, New York, assignors to C. H. Dewey, Brooklyn, N. Y. [Filed Dec. 24, 1874.]

1. Cylinders *a b*, in combination with conduits *f g*, ports *i*, *j*, and *e*, when arranged to operate by oscillation of the valve, substantially as herein set forth.

2. Grooves *c c* and canal *d*, when said grooves encircle the entire circumference of *c*, as and for the purposes described.

161,600. MACHINES FOR MAKING HOOP MOLDING. Onesiphore P. Dorey, Worcester, Mass. [Filed Feb. 5, 1875.]

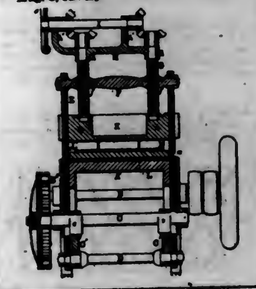
Brief.—The material is carried forward and rotated by rollers placed diagonally, and the molding formed by a suitable rotary cutter.



1. The supporting-arms *f f*, in combination with the pivoted feed mechanism, as above set forth.

2. The cross-rolls A and A', their pivoted stands B and B', the shafts J, E, and C, the gears F and H, and the arms *f f* and *d d*, in combination, as and for the purposes above set forth and described.

161,602. FIRE-ESCAPES. M. F. Eldredge, Lynn, Mass. [Filed Mar. 1, 1875.]



The sectional mast A B, bearing at the end the duplex claws D and sheave E, cord M, and ring F, in combination with the tackle G H I J and box K, all constructed and operated as set forth.

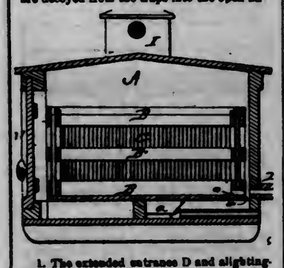
161,603. AXLE-SKEINS. J. Alder Ellis, Chicago, Ill. [Filed Jan. 5, 1875.]

The combination of the band A, straps C C, having the ribs or flanges D D, and the shoulders H H, as and for the purposes specified.

161,604. ENVELOPE-CUTTING MACHINES. John F. Ellis, Toronto, Canada. [Filed Aug. 5, 1874.]

In an envelope-machine, the reciprocating cross-head K, adjusting screws G, cross bar F, frame H *h'*, shaft I, bevel gears J' J', and hand-wheel J, in combination with the vertically-reciprocating standards E, substantially as specified.

161,605. CAR-REPLACERS. Saml. L. Oaten, Boston, Mass., assignor of one-half his right to G. H. Stetson, same place. [Filed Nov. 10, 1874.]



Brief.—A car replacer and displacer provided with a laterally-extending tread-surface, which, in case of the wheel-flange failing to roll inside of the guiding-flange, will take up the wheel, and permit of its being pulled over into the guide-flange.

In a car-replacer, the deflecting-rail D, so applied as to form a guiding-projection, *a*, and a bearing-surface, *d*, as described.

161,606. BEE-HIVES. Edson Gurry, Garden City, Minn. [Filed Feb. 26, 1875.]

Brief.—A sectional hive so constructed that the tops of the sections form feeding-boards and the bottoms form tops to the moth-traps. These traps are so constructed that the moths are decoyed from the traps into the open air.

1. The extended entrance D and alighting-board E, forming passage *a'*, in combination with the sections having passages *a''*, and the open space forming passage *a'''*, leading to chamber *c*, and the tube *b* on the bottom of chamber leading to the outside of the hive, all as and for the purpose set forth.

2. The sections, substantially as described, having passages *d* and *d'*, in combination with the reversible board G and cone A, as and for the purpose set forth.

3. The open-top frames B, provided with blocks *f'*, in combination with the board H, with cut corners and chambers *e*, and perforations *e'*, and openings *e'*, forming a bee-feeder and a support for comb-frames, all as and for the purpose set forth.

161,607. SHAPING-BLOCKS FOR FUR SACKS. Jacob Glass, Buffalo, N. Y. [Filed Jan. 18, 1875.]

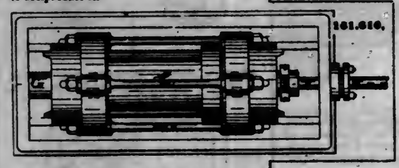
The forming-block B, provided with the three projections or ribs B^1, B^2, and B^3, substantially as set forth and described.

161,608. MILK-COOLERS AND CHEESE-VATS. Charles W. Granais, Gowanda, N. Y. [Filed Dec. 23, 1874.]

Brief.—The cool surrounding the interior of the pan is attached thereto, one-half of the pipe being formed by the sides of the pan. The second coil is suspended in the pan.

The horns described pan for use in cooling milk or making cheese, composed of the vessel A, provided with a fixed central injection-pipe, B, and connected series of fixed pipes *b*, *c*, *d*, *d'*, *e*, *f*, *g*, *h*, *i*, *j*, *h'*, *p p'*, *q q'*, *r r'*, *s s'*, and *t*, and the ejection-pipe *u*, constructed and arranged substantially as shown and specified.

161,609. BENCH-PLANES. Thos. Hagarty, New York, N. Y., assignor to J. A. Pickersgill, same place. [Filed Dec. 2, 1874.]

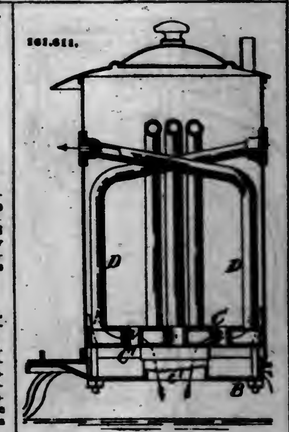


Brief.—The plane-iron and cap are of semi-circular form, fastened together by a clamp-screw, and secured to a bed-block of corresponding shape by means of a slotted clamp-plate and screw. The bit is adjusted as desired by a flange-nut which traverses a male screw, the flange of said nut operating in a transverse slot in the rear of the cap.

The combination of the plane-stock A with the bed-block B, semicircular bit C, cap D, and adjusting-nut E, provided with screw *b*, all constructed and operating substantially as herein shown and described.

161,610. STEAM-VALVES. James Hare, Brooklyn, N. Y. [Filed Oct. 16, 1874.]

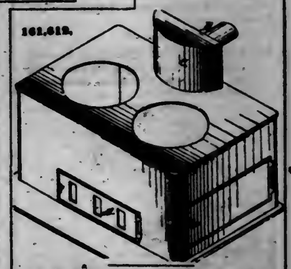
Brief.—As the small piston-valve is reciprocated it alternately admits and exhausts steam from the ends of the main valve-piston to reciprocate it.



The combination, substantially as herein-before set forth, of a main sliding valve, arranged to reciprocate in steam-chest on a valve-seat, over suitable ports, its ends being fitted to cylinders sustained by said valve, but prevented from moving endwise by stops on the chest, as described, with a central piston-valve, recessed, so as to act in connection with suitable ports and passages in said main valve, to admit and release steam or other fluid to and from said cylinders, for giving motion to said main sliding valve, for the purpose set forth.

161,611. HEATING-STOVES. William W. Hatch and C. W. Fuller, Lowell, Mich. [Filed Oct. 30, 1874.]

Brief.—The air-passages which lead to the fuel-chamber are distinct from those which discharge into the apartment.

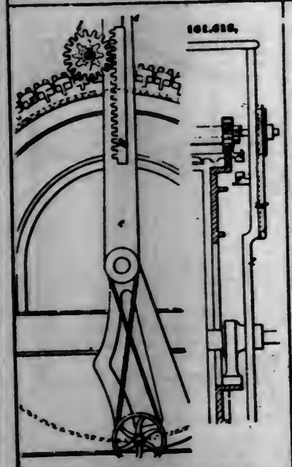


1. The combination of the base B, air-conduits b^1 *c'*, and hollow grate, composed of the plates C C^1, the perforations of which are connected by short pipes *c*, substantially as and for the purpose specified.

2. The combination of the hollow grate C *c*, air-conduits b^1 *c'*, and dome D, ranging along the sides of the combustion-chamber, and having horizontal portions extending across the upper portion thereof, substantially as and for the purpose specified.

161,612. GARDING-MACHINES. Henry Higgins and Thos. S. Whitworth, Manchester, Great Britain. [Filed Sept. 3, 1874.]

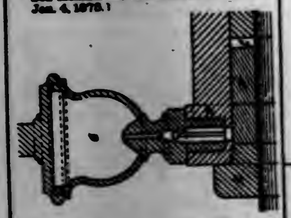
Brief.—The bands are toothed, and gear-wheels on opposite ends of a hollow shaft carried by the traversing stripper-frame engage the teeth on the bands, and square the motion of the frame. The ends of the flats are made in separate and adjustable pieces, so that they may be aligned truly over the pockets of the filters.



161,613. SUMMER-STOVES. Elizabeth Hawkins, Troy, N. Y. [Filed Nov. 28, 1874.]

Brief.—The stove has a grate, and may or may not be placed upon a larger stove.

The combination, in a stove in which the body is constructed with an imperforate bottom and provided with a draft-opening, of the hot-air drum C and pipe D, the said drum rising from the body of the stove and constructed with a flat top adapted to form a heating-shelf, substantially as described.



161,616.

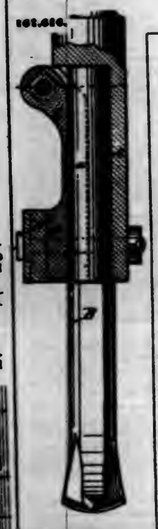
1. The combination, with the vibrating levers *c*, of the bands *b*, having racks *d*, and the shafts *f h*, having pinions *i F* and *l P*, as and for the purpose described.

2. A fan having the parts *h* made in separate pieces, and adjustable, as and for the purpose specified.

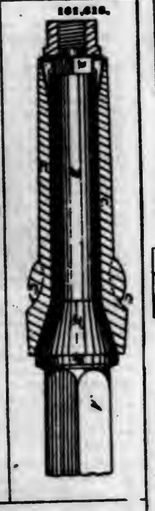
161,617. LUBRICATORS FOR PISTON-RODS. Sol. Hollinger, Harrisburg, Pa. [Filed Jan. 4, 1875.]

The gland A, having a bushing, D, and nut E, forming the annular chamber C around the piston-rod, for the reception and retention of the pad F, the oil being supplied from the oil-cup G, or other reservoir, substantially as described.

161,618. REVOLVING FIRE-ARMS. Freeman W. Hood, Norwich, Conn., assignor to the Hood Fire-Arms Company, same place. [Filed Mar. 15, 1875.]

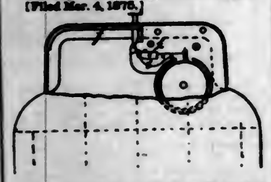


The compound elastic latch E, substantially as described, composed of the main spring *g*, its stud *h*, and the auxiliary elastic-armed hook *i*, arranged in and applied to the lock and magazine-frame, and to the hammer, as set forth, in combination with the cam *a*, constructed and projected from the hammer essentially in manner as specified.



161,619. DRILL-CHUCKS. N. W. Horton, New York, N. Y. [Filed Mar 23, 1875.]

The combination, in a drill chuck, of the socket A, the bisgel jaw C, slightly curved longitudinally on its its inner face, the clamp bar D, and bolts *e e'*, as and for the purpose specified.



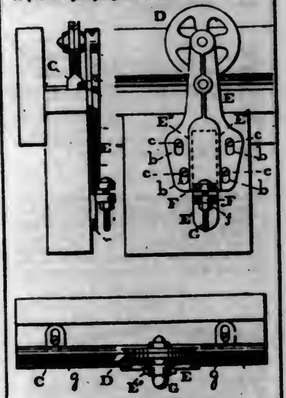
161,616.

161,618.

161,617. SAFETY-POCKETS. Jas. C. Idle, Buckingham Township, Bucks County, Pa. [Filed Mar. 4, 1875.]

A bag or pocket made of a textile or other fabric crossed at intervals with wires or metallic plates and attached to a spring-clasp, in combination with a bell and hammer, or other equivalent alarm devices, arranged within guards inside of said pocket, and actuated to sound an alarm by the depression of the thumb-piece or clasp-fastening when the pocket is opened, substantially as set forth.

161,619. CARRIAGE-AXLES. Jacob Kline, Camp Hill, assignor of three-fourths his right to J. A. Moore and W Bear, same place, and M. M. Grove, Harrisburg, Pa. [Filed Mar. 5, 1875.]



1. The axle A B, provided with the square part D and the screw E, as a solid extension of arm B, as and for the purposes set forth.

2. The combination of the axle A B D E, the follower G, nut F, and skein C, all constructed and combined to operate compensatingly, as set forth.

3. The combination of the axle A B D F, follower G, nut F, skein C, and washer H, as and for the purpose shown and described.

161,619. DOOR HANGERS. Jos. Lambert, Wiltraham, Mass. [Filed Feb. 26, 1875.]

Brief.—A door-hanger, differing but little in appearance from the ordinary construction, is given double adjustability, to prevent sagging and the like—vertical by means of sliding plates, tongue, slots, and an adjusting-screw, and horizontal by transverse slots in the rail, and pins or screws working therein. There is also on the bracket a projection or lug, which engages with the shouldered rails, to prevent jumping the track.

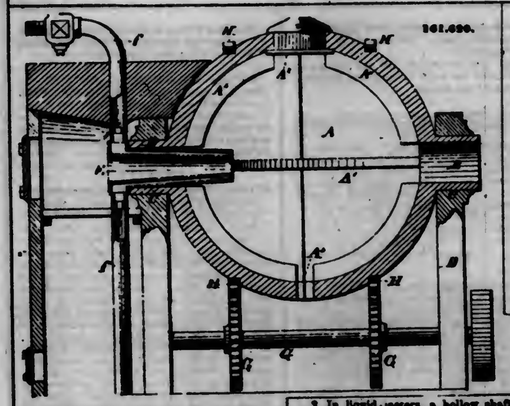
1. The combination, with the sheave D, of the sliding-plate E', formed with the longitudinal depression *d*, and the vertically-adjusting plate E with tongue *e*, and with the screw-bolt G, substantially as and for the purpose set forth.

2. The combination, with the sheave D, of the supporting-rail C, made transversely adjustable by means of slots and the screws *g*, substantially as and for the purpose set forth.

3. The rail with shoulder J, and bracket with projection or lug K, combined and operating substantially as and for the purpose set forth.

161,620. REVOLVING FURNACES. James Mason, Pittsburg, Pa. [Filed Mar. 6, 1875.]

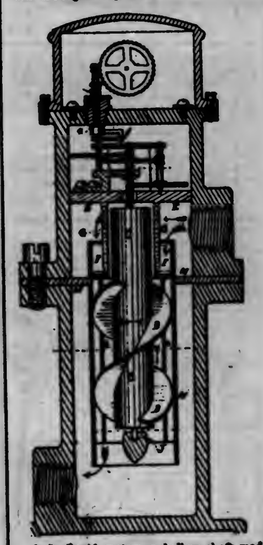
Brief.—The ore is placed in the globe, the blast enters through the tuyere, and, the globe revolving, the mass is stirred by the intersecting ribs A', and roasted and smelted by the blast.



1. The globe or sphere A, constructed of sheet metal boiler-plates, and lined in the interior with fire-brick A', provided on both sides with hollow axles B B, through one or both of which project water tuyeres E, a man-hole, A', discharge-vent A', and shelves A', secured in the interior of the globe, in circles at right angles to each other entirely around its central portion, as and for the purposes described.

2. In combination with the globe A and furnaces F, constructed as described, the tuyeres, E, supplied with a constant stream of water through pipes *f f'*, as and for the purpose described.

3. In combination with sphere or globe A, the shelves A', secured entirely around the interior of the globe, in circles at right angles to each other at its central or large portion, as and for the purposes described.



4. The combination, in a furnace for general purposes, of the globe A A' A', revolving on hollow axles B B, one or more furnaces, F, placed on the sides and communicating through the hollow axles, water tuyeres E, and revolving mechanism G *G' g* H, all constructed and adapted to operate substantially as and for the purposes described.

161,620.

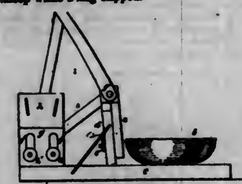
161,621. LIQUID-METERS. Hiram S. Maxim, Brooklyn, N. Y., assignor of one-half his right to A. T. Welch, same place. [Filed Feb. 10, 1875.]

Brief.—The screw-shaft is made of light metal, hollow, and is supplied with chemicals (in a dry state) for producing carbonic-acid gas, to reduce the specific gravity of the screw to less than that of water, and, by the revolution of the gas upon the first sweeping of moisture through the metal, to prevent the filling of the shaft, so keeping it light. The case in which the screw revolves is square, with vertical radial splines in the angles of it, to prevent the water taking the course of the pitch of the screw. The shaft has a very small pivot at the top, and a larger one at the bottom, and by its own lightness runs upon the former when but a small quantity of water is passing, and changes to the latter when the quantity is greater. A shaft working in a ground tapering joint connects the interior with the registering-heads.

1. In liquid-meters, a hollow shaft made lighter than the surrounding liquid, when protected from filling with water, in the manner hereinbefore set forth.

2. In liquid-meters, a hollow shaft made lighter than the surrounding liquid, and provided with two pivots, one on which it runs when a large volume of liquid is passing, and another and smaller one, onto which it changes when only a small volume is passing, in combination with the acid and carbonate of soda, when operating in the manner and for the purpose herein before specified and set forth.

3. The combination of the plate B B, cylinder G G, and radial arms F F, as set forth, and for the purpose specified.



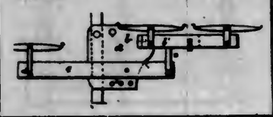
4. The square trunk M, having the internal vertical webs *h h h h*, for the purpose herein described and set forth.

5. The combination of the air-tight ground joint *e*, crank *f*, and spiral spring, when used for the purpose specified, and in the manner set forth.

6. The combination of the hollow shaft C, screw-blades *D D*, square trunk M, vertical webs *h h h h*, plate B B, cylinder G G, and arm F F, all operating in the manner herein described, and for the purpose set forth.

161,622. SHEEP-SHEARING CHAIRS. Chas. E. McCall and J. E. McCall, Morristown, Ohio. [Filed Feb. 5, 1875.]

Brief.—A chair having a stationary seat, about which revolves a platform carrying rack with adjusting apparatus, for supporting the sheep while being clipped.

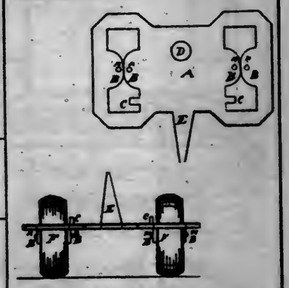


1. The revolving platform *c*, in combination with the stationary seat *b*, substantially as and for the purpose specified.

2. The combination of the adjustable frame *c*, with the rack *f*, revolving platform *c*, and seat *b*, substantially as and for the purpose set forth.

3. The combination of the adjustable frame *h* and brace *i*, with the revolving platform *c*, frame *c*, and rack *f*, substantially as and for the purpose set forth.

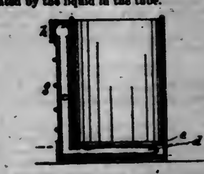
161,623. DRAFT-EQUALIZERS. Wm. McClelland, Sr., Fowler, Ill. [Filed Nov. 18, 1874.]



1. The adjustable supporting-plate *a*, substantially as shown.

2. The combination of the long lever *c*, short lever *l*, connecting straps *n*, supporting-plate *a*, and the means of attachment for the horses, substantially as described.

161,624. SEWING-MACHINE CASTER. Jas. McEwen, Chicago, Ill. [Filed Jan. 7, 1875.]



Brief.—Novelty is confined to peculiarities in the blank from which the caster-plate is struck up or formed.

A caster for sewing-machines, consisting of the plate A, which is provided with two upwardly-projecting legs, C C, lug E, ears B, and screw-hole D, formed from a single sheet of metal, and combined with rollers F F, and secured to the foot of a sewing-machine table, as and for the purpose specified.

161,625. LIQUID-MEASURES. John McInnes, Jersey City Heights, N. J. [Filed Jan. 26, 1875.]

Brief.—A flexible bulb inside a measure is connected with a glass tube having a bulb at top, on outside of measure. The lower bulb is filled with a liquid, so that when liquid is put in the measure, its quantity will be indicated by the liquid in the tube.

1. As a means of indicating the amount of liquids in a vessel by the pressure thereof the bulbs *d* and *f*, with connecting-tube *e*, combined to operate substantially as described and set forth.

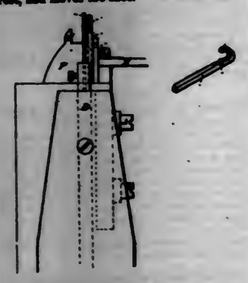
2. In a measuring-vessel, the combination composed of the following elements, viz., perforated plate or false bottom *c*, bulb *d*, tube *e*, bulb *f*, protecting-plate *h*, with gage *g*, substantially as and for the purpose described and set forth.

161,626. REFRIGERATORS. John A. Meeks, Berea, Ohio. [Filed Mar. 6, 1875.]

Brief.—In an outer case having packed walls and bottom, with an inner air-space around the packed walls, communicating with the outer air, and with the ice-chamber, is loosely set a cooling-chamber, carrying around it near its foot a rack for the ice, which is placed between this chamber and the outer case. Narrow racks for food slide horizontally from side to side of the cooling-chamber. The removable drip-pan slides on and off ways beneath the outer case.

The refrigerator or preserver consisting of a box or case, A, provided with the charcoal-space C, the air-space D, with its openings *d*, the ice-chamber E, water-drip G, with its openings *g*, and interior portable box F, substantially as and for the purpose described.

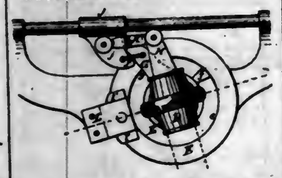
161,627. GAME APPARATUS. Christn. Metz, Pawtucket, R. I. [Filed Mar. 3, 1875.]



Brief.—Improved apparatus for a spinning-top to attack, knocking over movable figures in its course.

The game apparatus herein described, consisting, essentially, of the box *a*, fort, outworks, soldiers, and other figures, numbered and stationed, swing-doors *c*, cannon *i*, spring *n*, flag-staff and flags, and the top *p*, all constructed and arranged to operate substantially as set forth.

161,628. SHOE-SEWING MACHINES. Thos. L. Miller, Philadelphia, Pa. [Filed May 20, 1874.]



Brief.—The shoe is supported on the double-pronged stationery rest, the prongs entering the channel. The heel passes about the edge of the sole, and between it and the last, and the beveled edge of the sole rests against the guide near the curved portion of the heel. The sole is held firmly by the rest and heel. The needle enters the sole, and moves horizontally between the prongs, and in front of the rest, and moves the shoe.

The heel-rest I, provided with guides *b d*, when combined and arranged with the stationery rests C and C', as and for the purpose set forth.

161,629. MACHINES FOR ROWING EXERCISE. George W. Moore, Newark, N. J. [Filed Feb. 19, 1875.]

Brief.—For use on dry land, the action and resistance of the machine imitating the same in a boat on the water.

1. The horizontal slide J, link K, and arm H, in combination with the rowlock C, as and for the purposes described.

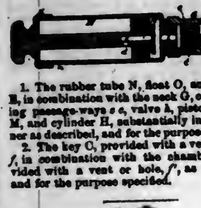
2. The rowlock C, lever-arm H, link K, and horizontal reciprocating slide J, with arm *j*, in combination with the arm G and spring *j'*, constructed substantially as described, whereby a varying resistance is produced in the stroke of the oar.

3. The rowlock C, lever-arm H, link K, slide J, having arm *j*, arm G, and pivoted pawl or clutch-arm *j*, in combination with the revolving wheel E, substantially as and for the purpose described.

4. The bracket L, temper-screw *m*, spring-plate *n*, and ribbon *l* and F, in combination with the revolving wheel E, substantially as and for the purposes described.

161,630. VENTILATING-FAUCETS. William C. North, Cleveland, Ohio. [Filed Mar. 4, 1875.]

Brief.—The neck of the faucet is provided with a core having passage-ways through it, which are controlled by a valve. Air from the pump-cylinder is forced, through the pipe on the side of the faucet and the hose, into the cask. The key is provided with a vent to prevent any liquor remaining in it.

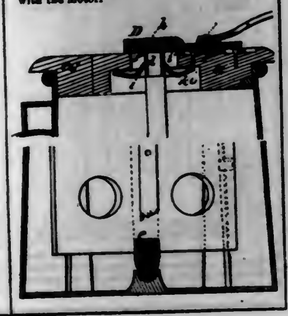


1. The rubber tube N, float O, and air-tube B, in combination with the neck G, core *b*, having passage-ways *c c*, valve *h*, piston I, valve M, and cylinder H, substantially in the manner as described, and for the purpose set forth.

2. The key C, provided with a vent or hole, *f*, in combination with the chamber B, provided with a vent or hole, *f'*, as described, and for the purpose specified.

161,631. STEAM ROCK-DRILLS. George E. Nutting and Joseph C. Githens, New York, N. Y. [Filed Mar. 20 1874.]

The combination, in the interior of the steam-chest and cylinder of a steam-engine, of the three-armed rocking lever J, the valve I, and the double-headed piston K, having an annular recess between the heads and the inclined surfaces *h h'*, constructed and operating as and for the purpose specified.



161,632. EMBROIDERING ATTACHMENTS FOR SEWING-MACHINES. Charles H. Palmer, New York, N. Y. [Filed Nov. 18, 1874.]

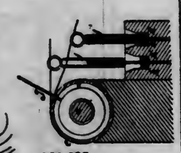
Brief.—A tubular embroidery-thread carrier is attached to the lower end of a vertical rock-shaft, which is journaled in arms projecting from the side of a lever that is pivoted at its upper end to an arm projecting from the presser foot. This lever is provided on its edge with an inclined projection, against which a screw in the needle-bar acts, imparting to such lever a swinging motion, causing thereby the carrier to be swung back and forth past the needle, and on its backward movement it strikes a shoulder on the presser-foot, and is partially revolved with the rock-shaft against the action of a spring thereon, which movement, in connection with the swinging cam, forms an embroidery-loop upon the surface of the cloth around the path of the needle

161,633. CHUCKS. Chas. W. Patton, Louisville, Ky. [Filed Aug. 10, 1874.]

Brief.—A concave-convex disk countersunk in the under side of the cover deflects the splash, and catches impurities from above, where the perpendicular revolving shaft goes with the motor.

161,634. CARTRIDGE-LOADING IMPLEMENTS. W. G. Rawbone, Toronto, Canada. [Filed Feb. 12, 1875.]

1. The pressure-lever G, with cam G^2, link F, and pin G^1, in combination with the arm A^1, with crosser-bit C, and arm A^2, with head B, arranged and operating substantially as described, and for the purpose specified.



2. The lever-arm A^2, adjusting-pin D, and spring E, or its equivalent, in combination with the upper arm A^1, arranged and operating substantially as described, and for the purpose specified.

161,635. VAPOR-BURNERS. Chas. H. Prentiss, Cleveland, Ohio, assignor of one-half his right to John P. Humphrey, same place. [Filed Mar. 2, 1875.]

Brief.—The flange for spreading the flame is provided with an opening for supplying air.

The combination of the tip *a*, the flaring flange *b*, having the recess *c* and the opening *e*, and the plate *d*, as shown and described.

161,636. WARPING-MACHINES. J. S. Richard, Paris, France. [Filed Dec. 2, 1874.]

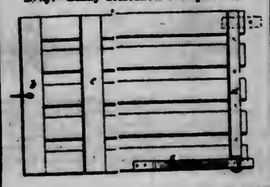
Brief.—The cleats of the expanding and contracting reed are inserted in holes drilled through the coils of a spiral spring, which is inclosed in a slotted case. Each thread carries a forked wire or rider, which, when the thread breaks, drops into a double mercury-trough connected with an electro-magnet, thereby completing the electric circuit, and operating the armature, which is arranged to control the stopping mechanism.

1. The spiral spring *e*, made with perforated coils and combined with the projecting dents *g*, said dents being inserted in the holes drilled into the coils and arranged to form a reed or comb, substantially as set forth.

2. In combination with the right and left screw *c* and nuts *b b*, the spiral spring *e*, dents *g*, and slotted box *e*, all arranged substantially as described, and for the purpose specified.

3. In combination with the electric stopping mechanism of a warping-machine, the riders *j*, constructed substantially as shown, and the mercury-troughs adapted to receive and support the riders, all operating together to stop the machine when a thread breaks, as herein before described and set forth.

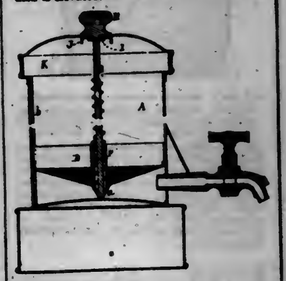
4. In combination with the electric stopping mechanism of a warping-machine, the double mercury-trough *k k'*, provided with a partition adapted to guide and support the riders *j*, substantially as hereinbefore described and set forth.



5. In combination with the electric stopping mechanism of a warping-machine and the riders *j*, the double mercury-troughs *k k'* constructed substantially as described, and provided with a hinged cover, as set forth.

6. In combination with the electric stopping mechanism of a warping-machine and the double mercury-trough, slotted as shown, a two-pronged rider provided with an eye arranged to receive the thread below the trough, substantially as hereinbefore described and set forth.

7. In combination with the armature *x* of the electric stopping mechanism of a warping-machine, the sliding bar *a'*, provided with a friction-roller, *c*, the spring *s*, and rollers s^1 s^2, all operating together substantially as herein before described and set forth.

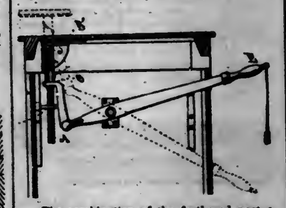


161,637. HAY-SLINGS. A. J. Reed, Pleasant Grove, Ind. [Filed Feb. 13, 1875.]

Brief.—Easily detachable hook-piece.

161,638. QUILTING-FRAMES. Geo. F. Simmons and Johan Frans, Cambridge, Mass. [Filed Mar. 1, 1875.]

A quilting-frame consisting of the rail A, side rails B B, eyes K, head-stocks C C, and roller D, the head stocks being provided with the screws I and bolts G, and the roller with holes in its ends to receive the bolts, the whole being combined and arranged to operate substantially as and for the purpose specified.



161,640. COFFEE-POTS. Charles B. Smith, Cleveland, Ohio. [Filed Mar. 13, 1875.]

Brief.—By turning the knob the perforated dish is elevated.

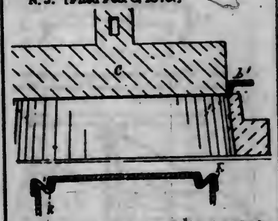
The knob H, clamp J, and cover K, in combination with the screw G, dish D, and body A, substantially in the manner as described, and for the purpose set forth.

161,641. SCUTTLE-ELEVATORS. Ferdinand A. Smith, Portland, Oreg. [Filed Aug. 21, 1874.]

Brief.—The scuttle-cover is mounted near one corner upon a revolving post mounted by a hand-lever. Said post has a "feather," straight for a portion of the way, and oblique for the remainder. The straight portion carries the scuttle directly up until it clears its seat, when the screw-shaped portion comes into play, and throws the scuttle around, so as to permit egress.

The combination of the featherel post A, the brackets B and B', and the lever E, substantially as and for the purpose herein described.

161,642. METHODS OF AGING LIQUORS. J. G. Spier, Peoria, Ill. [Filed Dec. 30, 1874.]



Brief.—Percolates the spirits through wood chips or shavings which have been baked in an oven heated from 190° to 210° Fahrenheit. Claims that the spirits absorb the tannic acid and are rapidly "ripened."

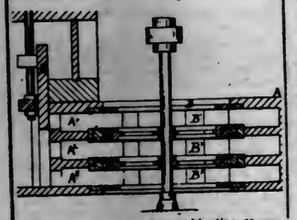
1. The process of aging spirituous liquors, consisting in treating them with baked wood in chips or in shavings, or ground, to impart the tannic principle thereto, substantially as described.

2. The combination of the stratum of gravel and pulp, gravel, shavings, dust, or chips of baked white-oak or other wood, for a percolator or filter in aging spirits, as described.

The concave-convex disk *k*, attached to the upper end of the dasher-shaft B and arranged in an opening, *i*, in the cover *a*, in combination with the spur-wheel *f* and cap D, provided with an opening, *f'*, substantially as and for the purpose set forth.

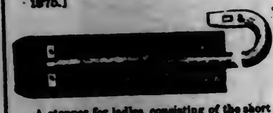
161,639. MACHINES FOR PRODUCING FLANGED LIDS AND COLLARS FOR SHEET-METAL CANS. Jacob M. Patterson, Woodbury, N. J. [Filed Feb. 8, 1875.]

The process or mode described and set forth, of producing the flanged and grooved collar E and the flanged lid or cover D, whereby the portion *b'*, which remains, (after the portion which forms the flanged lid or cover D has been punched out,) is grooved and its aperture contracted to receive the said flanged lid or cover over and upon the surrounding inner flange of the said collar, as and for the purpose described.



DEPARTMENT OF JUSTICE LIBRARY.

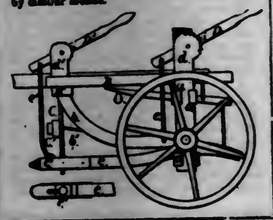
161,642.



161,642. WATER-WHEELS. J. H. Staples, Chelsea, assignor, by mesne assignments, of one-half his right to J. J. Clapp, South Braintree, Mass. [Filed Mar. 20, 1874.]

Brief.—This water-wheel has a single straight gate, which, when opened to a greater or less degree, will admit water into one or more horizontal flumes, each horizontal section of the inclosing a distinct horizontal section of the wheel. The divisions of sections on the wheel correspond accurately with the divisions of the flumes, each having an annular-groove water-packing.

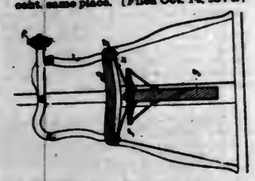
In a water-wheel, the combination of two gates D, the gateways or flumes A^1 A^2 A^3, provided with water-packed joints between the divisions of the flume and the wheel, with the wheel B divided into horizontal sections B^1 B^2 B^3, all the parts operating together, substantially as described, and for the purpose set forth.



161,643. STOPPERS FOR LADLES. Hiram Swank, Johnstown, Pa. [Filed Feb. 9, 1875.]

A stopper for ladles, consisting of the short baked sections b d, secured to the rod a by means of a cement of fire-clay and black-lead, substantially as shown and described.

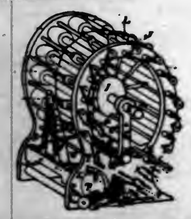
161,644. RIDING ATTACHMENTS FOR PLOWS. James T. Wells, Scott County, Ill. [Filed Nov. 12, 1874.]



Brief.—The forward end of the plow-beam is swiveled to a block that slides up and down upon a hanging rod, and is held at any desired position by means of a pawl and ratchet upon the end of the elevating-lever. The rear end of the plow can be raised simultaneously by similar means.

1. Block d', in combination with lever D', rod c', and upright d', substantially as and for the purpose set forth.

2. Levers D' and O, upright d', rod c', and block c', in combination with pieces C C', B B', b b', all constructed and arranged to operate substantially as and for the purpose set forth.



161,645. CAR-SEATS. True West, Boston, Mass., assignor to himself and G. H. Vincent, same place. [Filed Oct. 14, 1874.]

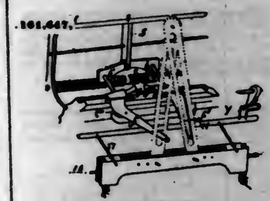
In a railway-car, the seat A and its springs E, arranged and connected as described, in combination with the brackets F, applied to the support-piece g, and also with the said support-piece extended along underneath the seat, and connected to the end portions of the frame B, all being as shown and described.

161,647. SPOOLING-MACHINES. J. W. West, Boston, Mass. [Filed Feb. 13, 1875.]

Brief.—The threads, on their way to the delivering and polishing guides, are led through eyes on two series of levers—one series for operating the belt-shifter when a knot occurs in the thread, and the other operating it when a thread breaks. The guide-rods are passed through a head-stock, and are reciprocated by an oscillating lever engaging alternately the right and left hand screw. The times and amount of reciprocation are governed by studs on the oscillating lever sliding over and under horizontal levers, one stud traveling over and the other under one of the horizontal levers its length, and then being tilted by a spring, so as to reverse their position. One end of each horizontal lever is placed in an inclined slot of the converging rods on the transverse bar. As the spools fill, the thread presses against the thread-guides, forcing them out against a lever that depresses this bar, and causes the levers to time the throw of the oscillating arms, so as to increase the amount of reciprocation as the length of the spool increases on the flange.

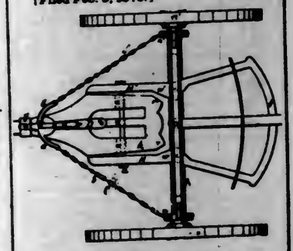
1. The head-stock I, rods K, bar S, rod H, screw d d, and arms a a', in combination with a device for automatically changing the movements of the rods K, substantially as and for the purpose specified.

2. The arms a a', provided with the studs b b', in combination with the levers f f', springs g g', and screw d d, substantially as and for the purpose specified.



3. In combination with the finger M, the rocking shaft W, bar Q, and slotted bars P, for actuating the levers f f', substantially as set forth.

4. In combination with the rods K, the wires n', eyes L, and lever e, substantially as and for the purpose described.

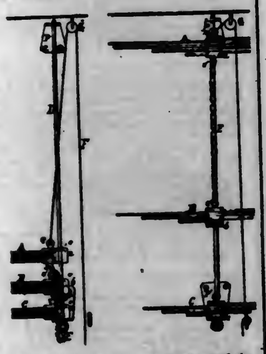


5. The rod K, provided with the slot v, and the spoke J, provided with the pin z, combined to operate as and for the purpose specified.

6. The stop mechanism described, the same consisting of the levers U, provided with the needles 6, the lever T, provided with the eyes 4, and the lever 11, combined to operate with the shipper 9, substantially as set forth.

161,647.

161,648. WAGON HOUNDS AND TONGUES. Clarence F. Whipple, Grand Rapids, Wis. [Filed Feb. 9, 1875.]



1. In a wagon, the combination of the tongue T, the slotted hounds h h', with their outer sides inclined toward each other from front to rear, the large hounds H H', projecting from the axle A parallel to each other, the bolt e, the brace-bar D, pivoted upon the tongue at c, having the end or arm c, the guide-plate g, the draw-chains C and C', with their swivels f and f', the hooks n n', and the bands c c' and d d', as described.

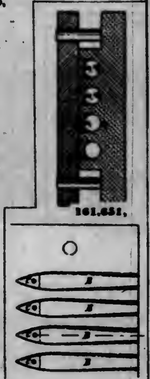
2. The combination of the tongue T, the slotted hounds h h', with their beveled ends r and r', the large hounds H H', with their wedges w and w', the pin c, the draw-bar D, pivoted upon the tongue at c, the end or arm c, the guide-plate g, the chains C and C', the hooks n and n', and the axle A, as described.

3. The combination of the band c' with its lug p, having an opening in it through which passes the hooked end n of the band d', forming a hinged joint, the bolt x, the axle A, and the draw-chain C, as described.

161,649. CLOTHES-FRAMES. Clarence F. Whipple, Grand Rapids, Wis. [Filed Feb. 13, 1875.]

The combination, as a clothes-drier, of the sets of bars A B C, the perforated clamps a b c, the bolts a' b' c', the eyes c c', the stanchion e, the rod 19, the brackets 1^1 1^2, with their openings, the chain 15, the rope F, and the pulley G, constructed and arranged to operate as described.

161,650. BOX-NAILING MACHINES. Albert E. White, Chicago, Ill., assignor to H. E. Moore, same place. [Filed Dec. 22, 1874.]

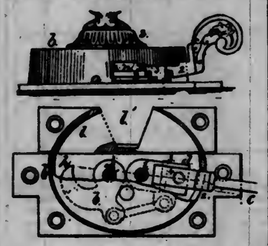


Brief.—A hopper for receiving the nails is attached by a spring to the die.

The combination of the hopper E, mounted freely on the yielding arm F, the die, and the punch-holder or clip, substantially as and for the purposes specified.

161,650.

161,651.



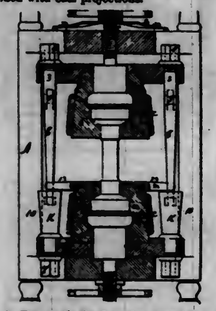
161,651. CIGAR-MOLDS. R. Appleby, Perth Amboy, N. J. [Filed Dec. 26, 1874.]

Brief.—The tips of the upper halves of the molds are of metal, and the lower corresponding parts are provided with an inclined metal plate, so that the edges of the cigars will be sheared off to a taper, and the shearings permitted to escape.

The notched plate D, sloping toward edge of mold, and metal tips C, in combination with wooden mold having cavities A B, as and for the purpose specified.

161,652. FASTENINGS FOR MEETING-RAILS OR SASHES. Stephen D. Arnold, New Britain, Conn., assignor to P. and F. Corbin, same place. [Filed Feb. 13, 1875.]

Brief.—A suitable box or case carries a lever-latch, which has a spring applied so that it latches upwardly into two or more locking-notches of the curved front plate. This lever is jointed to a jaw-piece, and connected by a link with a swinging hook-ended holder, and this last, operated by the lever-handle, engages with a curved keeper, which is notched to pass around or straddle the mullion of the sash. There is also an ornamental knob, having a conical skirt for ornamentation, detachably connected by a screw, and independent of the other parts, so that two styles can be made from the one set of patterns.



1. The lever-handle a, jointed to the jaw d, and provided with a spring, in combination with the hook-ended holder h, plate a, box b, and curved front plate, notched at 2, as and for the purposes set forth.

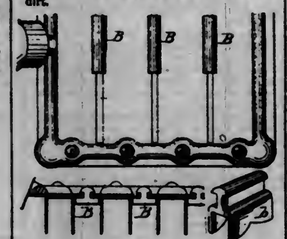
2. The lever-handle c, jointed to the jaw d, in combination with the hook-ended holder h, link n, and keeper-plate l, substantially as set forth.

3. The sash-lock, made with a lever and hook-ended holder between the plate a and box b, in combination with the knob r and skirt c, connected by a screw to the top of the box b, as set forth.

161,653. MACHINES FOR TESTING THE STRENGTH OF MATERIALS. L. A. Beardslee, Washington, D. C. [Filed Jan. 23, 1875.]

Brief.—The clamps holding the piece to be tested are held together by a number of rods having hooks and eyes. The strain is suddenly transferred to the piece to be tested by disengaging the hooks by means of a ring provided with cam projections.

1. The method of testing metals by suddenly transferring a given strain from any means of restraint to the specimen to be tested, for the purpose set forth.



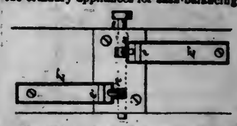
2. The plates B B', in combination with the bolts 3 3, legs g g, having feet h h, and bolts k k, having recesses 10 10, substantially as described.

3. The plates B B', bolts 3 3, legs g g, having feet h h, bolts k k, having recesses 10 10, in combination with the clamps b b', as and for the purpose set forth.

4. The ring m, constructed with the lever 12 and projections 13 and 13, in combination with the clamp B and legs g g, substantially as described, and for the purpose set forth.

161,654. CURRY-COMBS. Jas. Owens Berry, Vienna, Va., assignor of one-half his right to Richd. Berry, Georgetown, D. C. [Filed Feb. 26, 1875.]

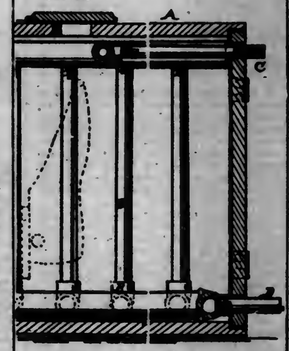
Brief.—The back of the comb is slotted crosswise, and in these slots slide loose weights, for jarring, or scraping and jarring, off the dirt.



1. In combination with a curry-comb, a movable weight or knocker, for the purpose of jarring dust, &c., therefrom, substantially as set forth.

2. In combination with a curry-comb, A, one or more sliding weights, B, held and guided by slots or equivalent guides, as set forth.

3. In combination with a curry-comb, a sliding weight, B, provided with a lip, b, to remove adhering hair from the teeth of the comb, as set forth.

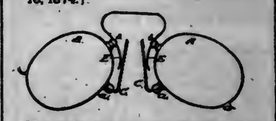


161,655. SASH-FASTENERS. Wm. Buechley and Theodore Thorn, Pottsville, Pa. [Filed Mar. 15, 1875.]

Brief.—A pair of long, flat springs, one to either sash, are recessed in the sash-frame, there being lugs attached thereto, which engage with notches in the sash. These are thrown in and out of engagement by means of a crank-shaft provided with short operating-arms; and the device may be used in connection with a window-sash, winding up and down on spiral rods, or furnished with any of the ordinary appliances for sash-balancing.

The combination, with the recessed window-sash B C, of the springs E E', having lugs a a', and the shaft m, provided with crank G and arms n n', substantially as and for the purposes herein set forth.

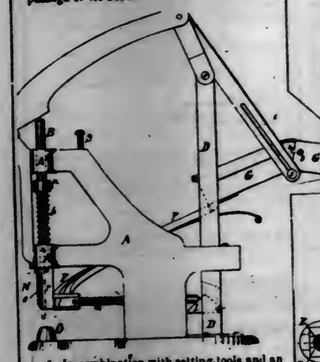
161,656. VULCANIZING APPARATUS. Wm. J. Birdsall, Naugatuck, Conn. [Filed Feb. 6, 1875.]



In a vulcanizing apparatus, the combination of the steam-pipes B C D and cross-pipes E within, on the bottom, and on the sides of the chamber A, as and for the purpose specified.

161,657. PEN-HOLDERS. John Boyd, New York, N. Y. [Filed Mar. 6, 1875.]

In combination with the handle A, a pen-holder, B, an elastic band, D, and a spring, E, the arrangement being substantially as shown and described.



161,658. EYEGLASS-FRAMES. Marrick C. Brackett, Holland, Mass., assignor to Geo. B. Brigden, Norwich, Conn. [Filed Nov. 16, 1874.]

The eye-frames A A, having the side springs C C, provided with roughened facings, and fastened in the joints or posts a a, and extending upward above the posts b b, and also having the re-enforcing springs E E projecting below the posts b b, to support the upper free ends of the side springs, substantially as and for the purpose set forth.

161,660. RIVET-SETTING MACHINES. M. Bray, Newton, Mass. [Filed Feb. 19, 1875.]

Brief.—The hopper for receiving the rivets is made in two parts, and hinged together, each part inclining in opposite directions, the front portion loosely pivoted to an inclined chute, and the rear portion to a slotted arm attached to a vibrating frame. The hopper is slotted longitudinally in the bottom of the front portion, to receive the body of the rivet, and an aperture cut in the end to admit of the passage of its head.

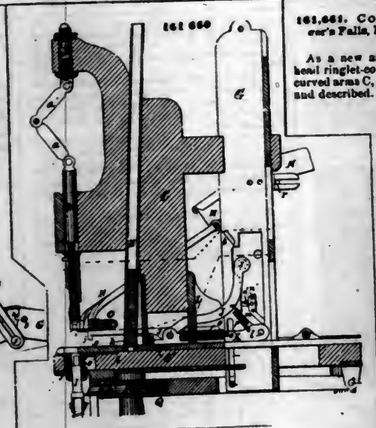
1. In combination with setting-tools and an inclined chute for conveying the rivets thereto, a hopper provided with a slot in its bottom, of suitable width to receive the body of the rivet, and an opening through one end for the passage of the head of the rivet, with the hopper pivoted at one end to the upper end of the chute, and adapted to be vibrated around the pivots, substantially as described, for the purpose specified.

2. A hopper for receiving, separating, and arranging rivets, pivoted and slotted, as described, having that portion of its bottom farthest from its pivoted end and beyond the end of the slot made at an angle to the other portion, substantially as and for the purpose set forth.

3. The hopper G G', made in two parts, hinged together, and adapted for adjustment at different angles relative to each other, substantially as described.

4. In combination with a hopper, an inclined chute leading therefrom, and a plunger for moving the lower rivet in the chute to the setting-tools, the pivoted wedge-cam L, operating-bar D, and spring *m*, all arranged to operate substantially as described.

5. The combination of the chute F, guide-channel *h*, provided with the spring *l*, plunger J, and receiver N, arranged to operate substantially as described, whether said receiver is mounted upon the setting-plunger or the anvil.



6. The receiver N, adapted to hold the rivet in position to be acted upon by the setting-tools, and to move vertically or in line with the movement of the setting-plunger, for the purpose of guiding the rivet to the work, whether said receiver is mounted upon the setting-plunger or the anvil, substantially as described.

7. The rivet-receiver N, provided with the springs *r* and *r'*, mounted upon the setting-plunger B, and arranged to operate substantially as described, for the purpose specified.

8. The combination of the receiver N, setting-plunger B, and special anvil O *u*, provided with the slit *w*, all arranged to operate as and for the purposes described.

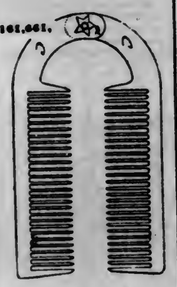
161,659. RIVETING-MACHINES. M. Bray, Newton, Mass. [Filed Feb. 19, 1875.]

Brief.—The rivets are fed from a hopper down an inclined chute, and are transferred singly to a receiver, through which the setting-instrument works. An automatic reciprocating punch cuts a hole in the stock, and a burr or washer is fed underneath the punched stock, the rivet forced down, and headed by a hammer or plunger from beneath, each instrument automatically receding in its order of action, and all operating at one and the same point.

1. In a riveting-machine, the combination of the plunger D, receiver E, hammer I, and tubular receptacle H, into which a column of burrs or washers may be placed, and from the lower end of which the bottom burr or washer may be separated and fed into a position in line with the setting-tools, substantially as described.

2. In a riveting-machine, the combination of a pivoted hopper provided with a slot, as shown, into which the rivets are placed in bulk, and from which they emerge in regular order, with their heads all in one direction; an inclined chute, down which the rivets move from the hopper to the setting-tools; a tubular receptacle, in which is placed a column of burrs or washers, one above another, and a reciprocating carrier-bar, all arranged as set forth, to separate a single rivet and a single burr, and feed them into position, so that the descent of the setting-plunger will pass the rivet through the material to be riveted, and through the burr, all substantially as and for the purpose described.

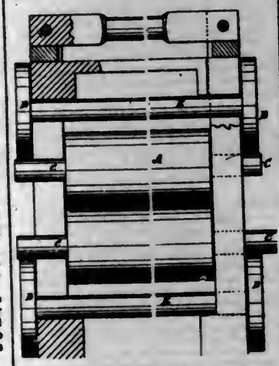
3. The operating-bar G, provided with the cam-slot *e*, in combination with the carrier-bar *g*, provided with the recess *h*, arranged to feed the lower burr in the column of burrs in the tube H to the setting-tools, substantially as described.



4. The operating-bar G, provided with the inclined leg *k* and cam-groove *m*, having the pivoted side *n*, in combination with the reciprocating bar K, pivoted lever J, carrying the punch *j*, and the springs *o* and *p*, all arranged to operate substantially as described, for the purposes specified.

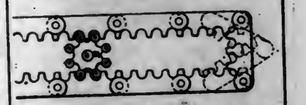
5. The combination, in a machine for setting rivets, of a punch adapted to be moved into position to punch the material to be riveted directly in line with the setting-tools, and then to recede from its position; a mechanism for separating a single rivet from a number, and feeding it to a position in line with the setting-tools upon one side of the material; a mechanism for separating a single burr from a column of burrs, and feeding it into a position in line with the setting-tools upon the other side of the material; a mechanism for forcing the rivet through the hole punched in the material, and through the hole in the burr, and a hammer arranged to rivet the whole together by a single blow, the consecutive actions being accomplished without moving the goods on the table, substantially as described.

6. The vibrating lever Q, provided with the yielding pin *q*, in combination with the hammer-rod I, provided with the collar *o'* and spring *w*, all arranged to operate substantially as described.



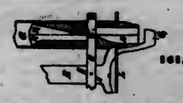
161,661. COMBS. Elias Brown, Wappinger's Falls, N. Y. [Filed Mar. 6, 1875.]

As a new article of manufacture, a back-head ringlet-comb, made in two parts, having curved arms C, pivoted at their ends, as shown and described.



161,662. CLOTHES-WRINGERS. I. F. Brown, New London, Conn. [Filed Jan. 18, 1875.]

Brief.—Each journal of the roller bears upon a single anti-friction roller, the two being connected by a shaft under a spring-bearing.

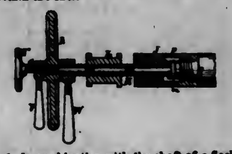


The combination, with roll *A*, having extension-journals C C, of the wheels D D, arranged on the ends of spring-pressed shaft E, as and for the purpose specified.

161,663. HORSE-POWERS. George B. Burt, Harvard, Mass. [Filed May 5, 1873.]

The combination, in a horse-power, of an endless chain or gear, and a pinion which communicates the power to the machine operated, having the cylindrical teeth of one of the interengaging sets constructed to revolve upon their respective axes, substantially as set forth.

161,664. SEED-PLANTERS. James T. Carr, Milo, Me. [Filed Mar. 5, 1875.]

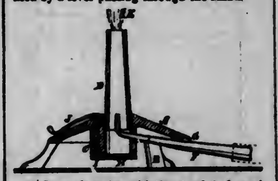


161,665.

The improved hand seed-planter described, consisting of the plate I, provided with the covers M, the bifurcated plunger E, having feet O and handle J, the slotted hoppers H within the casings *a*, and the slide C, having the openings P, the whole being constructed and arranged to operate substantially as and for the purpose specified.

161,666. JOURNALS AND BEARINGS. Geo. A. Chapman, Millbury, Mass. [Filed Sept. 26, 1874.]

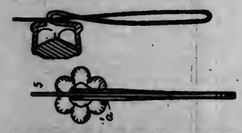
Brief.—Within an oil-receptacle an adjustable bearing is arranged, to adjust the cutters within the shell.



1. In combination with the shaft of a flocking-machine, the sleeve J, shouldered screw K, and stationary nut L, substantially as shown and described.

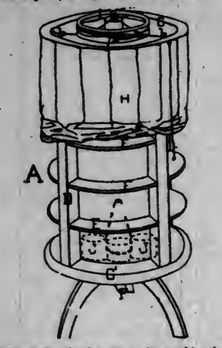
2. The combination of the sleeve J, screw K, pin *a*, with the stationary nut L, and screw S, substantially as and for the purpose described.

161,667. LABORATORY GAS-BURNERS. C. D. Cheney, Canandaigua, N. Y. [Filed Mar. 6, 1875.]



Brief.—The foot-tube secured to the stand by a dovetail connection. The valve is actuated by a lever passing through the stand.

1. In combination with the stand A, formed of a rim or flange and a central hollow pendent portion, C, the valve H, pivoted at one side and operated by handle J, and the burner-tube D, secured by a detachable connection, as shown and described.

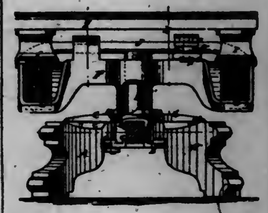


2. In a napkin-holder, the combination of the ring A, legs B, and rest C, substantially as and for the purpose set forth.

161,668. FASTENINGS FOR STUDS AND BUTTONS. Barnes Clayton, Philadelphia, Pa. [Filed Mar. 4, 1875.]

A looped-spring fastening for a stud or button, constructed with the bifurcated end *a'*, and attached to the back of the stud or button, as described, for the purpose of allowing the free arm *b* to be moved in the space between the said attached bifurcated end of the looped spring, as and for the purposes hereinbefore set forth and described.

161,669. BOOK-CASES. John J. Crandall, Philadelphia, Pa. [Filed Oct. 15, 1874.]



A revolving book-case, A, in combination with the curtain H, pulley I, and the cords *b c*, as shown and described.

161,670. LIFE-PRESERVING STOOLS. H. B. Cromwell, Providence, R. I. [Filed Nov. 7, 1874.]

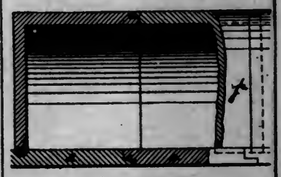
A life-preserving stool having the air-chamber A, and with air-chambers formed in the legs, substantially as set forth.

161,671. TILTING CHAIRS. W. T. Doremus, New York, N. Y. [Filed Jan. 11, 1875.]

1. The herein-described plates B C, constructed with flanges *b' c'*, points *c'*, and pivot E, said plates being bolted together to hold the legs A, in the manner set forth.

2. The combination with hooks K, cross-bar F, having inclined seats G at its ends and rubber blocks H, and of rock-bar J that connects arms I, as and for the purpose specified.

3. The combination of cross-heads L, yokes M, holes N, and rubber blocks O, with the cross-bar F and rock-bar J, as and for the purpose set forth.



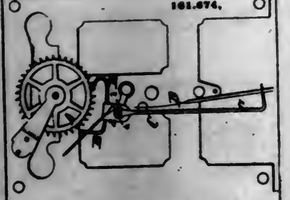
4. The combination of rock-bar J, front cross-bar F, pivot-bar B, and arms I, as shown and described, to bring the center of oscillation in front of the center of rotation.

161,672. COMPOUNDS FOR DECOLORIZING PETROLEUM. Henry Dubbs, Franklin, Pa. [Filed Jan. 9, 1875.]

Brief.—Slaked lime, water, and sawdust are mixed at a pasty consistency, kept until the sawdust is saturated, then dried at not exceeding 200° Fahrenheit. The oil is filtered through this compound in a filter heated by steam in a jacket, to be deodorized and discolored.

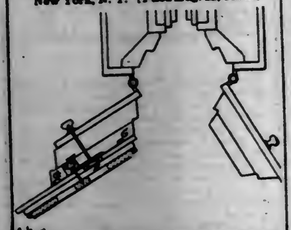
The improved compound for decolorizing petroleum or other oils, consisting of lime and sawdust combined, in the manner substantially as herein described, for the purpose specified.

161,673. BURIAL-VAULTS. L. K. Dutton, Oskaloosa, Iowa. [Filed May 21, 1874.]



An improved portable and adjustable burial-vault, consisting of the two arched end sections *f*, having their sides, top, and end made in one solid piece, lap-jointed, and tongued, the bottom or base plate sections *d d c c*, lap-jointed and grooved, and the interchangeable arched sections *f' f'* of corresponding lengths, and lap-jointed and tongued, all substantially as described and shown, for the purpose set forth.

161,674. PENDULUM-CLOCKS. F. Eckel, New York, N. Y. [Filed Feb. 4, 1875.]

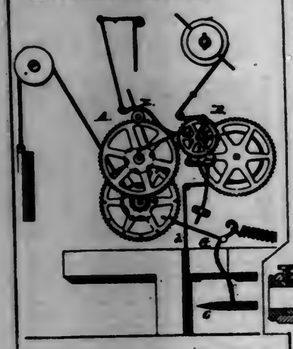


Brief.—The crutch-wire and anchor-escapement work upon the same axis, which forms a flexible joint, to alter their position as the position of the clock-frame is altered.

The combination of the crutch-wire C, which carries the tubular screw *a*, with the fixed pin *b*, and with the anchor B, having the threaded leg *d*, all arranged substantially as herein shown and described.

161,674.

161,675. DOORS FOR SAFES. John Farrel, New York, N. Y. [Filed Aug. 12, 1872.]

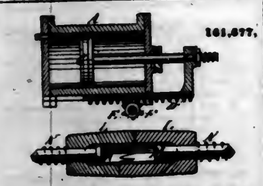


1. The combination of inner and outer doors and bolt-works, connected by the means specified, or its equivalent, whereby the inner door may be detached and separately locked, and when opened is attached to the outer door and swings with it.

2. The projections F, depressions G, clasps E, and cavities E', to provide for attaching and detaching the inner from the outer door at will.

161,676. FIRE-ALARM REGULATORS. F. H. Field, Providence, R. I. [Filed Sept. 26, 1874.]

Brief.—Bell-hammer in backward movement preceding each stroke strikes the arm of the lever, starting both sets of gears. Paper strip is unwound from the roll, and carried down by the weight. The point, operated by levers and spring, records on paper strip the number of strokes of bell-hammer.

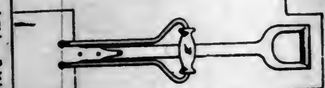


The combination of point C, ribbon d, gears A B, and levers E G, operating substantially as and for the purpose specified.

161,677. STRAIN-BREAKER. T. F. Foote and Elijah Flenck, Burlington, Iowa. [Filed Feb. 13, 1875.]

Brief.—A rack on the piston-rod, which moves transversely to the engine, rotates a shaft that runs the length of the train. The shaft is coupled between the cars by two cups, which are held together by springs, and in which the square ends of the shafts slide.

161,677.

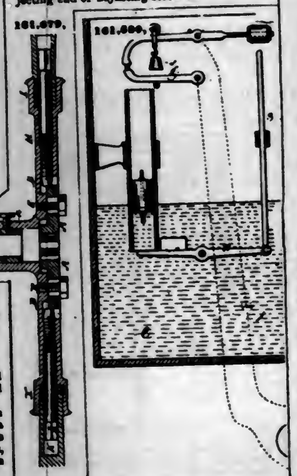


1. The combination of the cylinder A, piston C, sliding rack-bar D, and spring E, all arranged and operating transversely in respect to the locomotive, with the line or brake-operating shaft E and pinion F, as and for the purpose set forth.

2. The sliding socket-couplings L and springs N, combined with the sections of the line-shaft, substantially as specified.

161,678. LIFTING ATTACHMENTS FOR SHOVELS AND FORKS. Francis M. Gardner, Hornellsville, N. Y. [Filed Mar. 31, 1875.]

Brief.—A lifting attachment consisting of two rods extending downward upon each side of the handle, and hooking into holes in the upper part of the shovel-blade, or embracing the head-bar of a fork each side of the handle. This supplemental handle is about half the length of the ordinary shovel-handle, is detachable, and may be applied to any shovel or fork.



A lifting attachment consisting of two arms and a handle, each arm provided with a hook for attaching and detaching at will, with the blade of an ordinary shovel or cross-bar or head of a pitch-fork upon each side of the main rigid handle, substantially as described.

161,679. SCREW-CUTTING DIE-PLATES. B. Grilling, New Haven, Conn. [Filed July 13, 1874.]

Brief.—Pipe-guide rigidly attached to plate, and both dies adjustable to center, with it. Detachable handle J is slotted to receive projecting end of adjusting-screw H.

161,679.

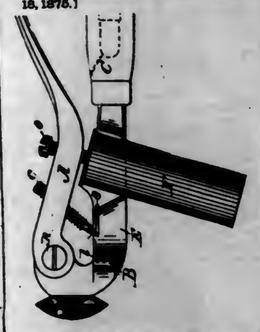
161,680.

1. In a screw-plate for cutting pipe, the combination of the detachable and adjustable slotted dies A A and fastening bolts E E with the recessed holder B, pipe-guide C, adjusting-screw H, and handles J, substantially as herein described, for the purpose set forth.

2. The combination, with the frame B, provided with socket I, of the screw H and screw-threaded hollow handle J, substantially as herein described, for the object set forth

161,680. REGULATORS FOR ELECTRICAL WATER-RAISING APPARATUS. J. H. Guest, Brooklyn, N. Y. [Filed Nov. 3, 1874.]

A float and circuit-closing levers, arranged and acting substantially as described, in combination with a circuit to a battery and motor, and a pump driven by such motor, substantially as set forth.

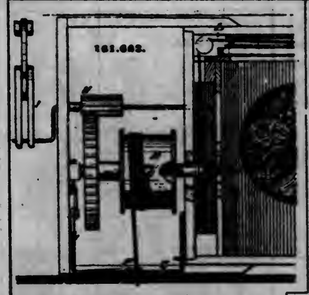


161,681. MECHANISMS FOR WEAVING MATS. Daniel M. Herman, Baltimore, Md. [Filed Feb. 15, 1875.]

Brief.—The device is intended for use in the manufacture of cocoa mats, and consists of a flat bar, which, after its insertion in the shed, is so operated as to press up the tufting-warp, and thereby form the loops, which are fastened to the foundation-warp by the weft-threads.

The flat filling-bar D, provided with an arm, *d*, and adapted to be operated in such a manner as to raise the tufting-warps into loops, as and for the purpose set forth.

161,682. CARTRIDGE-LOADING IMPLEMENTS. Lewis L. Hepburn, Bloc. N. Y. [Filed Jan. 18, 1875.]



1. The implement consisting of the arm B, having a recess, E, in its side for receiving and holding the shell, in combination with the arm A, provided with the pointed screw *c*, said arms being pivoted together at their extremity, in the manner shown, whereby the implement is made to operate substantially as described.

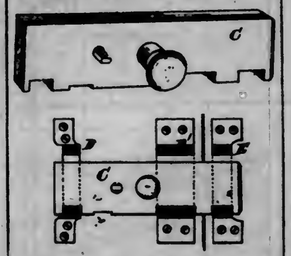
2. The arm B, provided with the recess E, having the groove *e* and flange or lip *l*, constructed and arranged to operate substantially as shown and described.

3. The arm B, having the recess D in its side, in combination with the pivoted arm A, provided with the adjustable plunger *c*, all constructed and arranged to operate as set forth.

4. The herein-described implement, having one of its arms provided with the circular head I and the handle C, whereby it is adapted for use as a cartridge-loader, as set forth.

161,683.

161,683. TWINE-HOLDERS. Jonathan Hill, Stanhope, N. J. [Filed Jan. 20, 1875.]



1. The combination of ball-box A, hollow axle C, and drum D, all constructed and arranged substantially as and for the purpose specified.

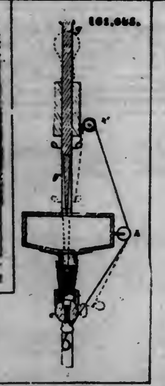
2. The combination, with spring-drum D, of trip-lever G, having eye F, the swinging axle-support N, and the regulator H I, as and for the purpose specified.

3. The combination of the drum D, hollow spindle C, spring-drum J, and belt L, substantially as specified.

161,684. DOOR-BOLTS. William C. Hurd, Watertown, Conn. [Filed Mar. 13, 1875.]

Brief.—A gravitating sliding bolt is provided with suitable notches in its lower edge, so arranged as to engage or hook over corresponding bars in both the keeper and the supporting-frame or staples which carry the bolt. The construction requires the bolt to be lifted bodily its entire length before it can be disengaged and slid back, while the force of gravity again automatically rocks it in restored position.

The gravitating bolt C, having suitable notches in one edge, in combination with corresponding bars in both the keeper E and the supporting frame or loops D D', substantially as and for the purpose specified.



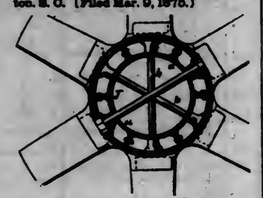
161,685. CORN-DROPPERS. Jos. Jackman, Richmond, Ohio. [Filed Mar. 5, 1875.]

Brief.—The uprights are secured at the top to a head-block, between which and the seed-cylinder is a hopper, into and through which is worked the lower end of a plunger, for agitating the seed and forcing it into the depositing spout beneath, to which is fastened a feeding-tube, the lower end being made concave to fit over the seed-cylinder, operated by a cord passing over pulleys and secured to the plunger, so that when it is forced down the cylinder is revolved. A spring retracts the seed-cylinder.

1. The combination, with the shaft *g g'* and seed-cylinder *c*, of the spring *f*, cord *h*, and pulley *h'*, as and for the purpose specified.

2. The combination, with the box *b* and seed-cylinder *c*, of the wire spout *e* and shaft *g g' g''*, for the purposes set forth.

161,685.



161,686. TRUSSES. Delaney King, Salamanca, N. Y. [Filed Feb. 20, 1875.]

Brief.—Radial pivoted arms carry small pads at their ends. The arms are automatically adjusted through an embracing-ring, which is itself adjustably connected by a short arm to the main band of the truss.

1. In a truss, the combination of a series or cluster of self-adjusting finger-pads I and pivoted arms G, substantially as herein described, for the purpose set forth.

2. The disk H, flange J, arm E, arc F, ring D, and fingers G, for the purposes described, in combination with a truss.

161,687. SHAFTS FOR ORE-WASHERS. R. F. Kittoe and Fred Brotherhood, Charleston, S. C. [Filed Mar. 9, 1875.]

1. A shaft for ore-washing machines, &c., consisting of a tubular column, J, composed of flanged plates *c*, riveted together at the edges, and blocks D, secured to the column between the ribs formed by the flanges, as set forth.

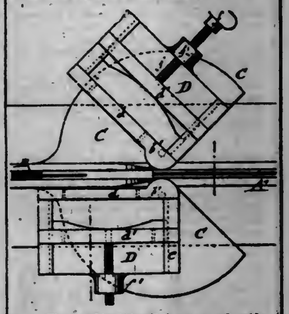
2. The combination, in a shaft for ore-washing machines, of a hollow ribbed column, J, sections C, confined to the column between the ribs, and blades D, secured to or forming part of said sections, as set forth.

3. The combination of the column J, blades D, and bolts *b*, passing through the column and securing the blades, as described.

161,688. FEED-WHEELS FOR GRAIN-DRILLS. Benj. Kuhns, Dayton, Ohio. [Filed Mar. 9, 1875.]

Brief.—Upon the feed-wheel are projecting flanges, converging toward and diverging from each other, and from end to end of the wheel.

The within-described feed-wheel, consisting of the hub A and projecting flanges A', the flanges converging toward and diverging from each other from end to end of the wheel in a zigzag line, substantially as and for the purpose set forth.

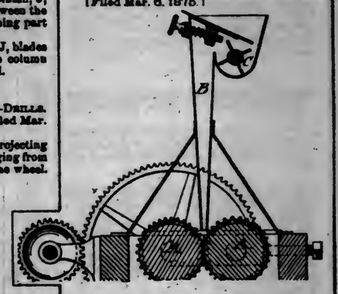


161,689. FIRE-PROOF ROOFING COMPOSITIONS. Emil Kunzendorf, Newark, N. J. [Filed Mar. 10, 1875.]

Brief.—A composition of one part lime, six parts carbonate of lime, ten parts sand or powdered stone, and sufficient water-glass to produce a mass of the consistency of mortar. This mastic is then spread on the roof-boards, which are preferably narrow strips, and before the mastic sets or becomes hard, nails may be driven through the mastic, and partially into the roof-boards.

The composition of lime, carbonate of lime, sand, and water-glass, substantially as and in the proportions set forth.

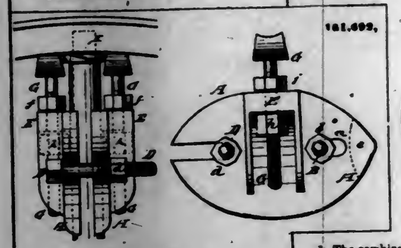
161,690. MITER-BOXES. T. C. Lawrence, Ladoga, Ind. [Filed Dec. 28, 1874.]



Brief.—The box is constructed entirely of metal, and is provided with a metallic recessed guide-casing, having a central wooden strip. The saw operates in the casing by means of detachable guide-strips upon the same; and the work is secured at the desired angle by two pivoted clamping-plates, one upon either side of the casing, and supported upon symmetrically-extending wing-plates.

1. The combination of the recessed guide-casing A, horizontal wing-plates C, and pivoted adjustable clamping-plates or work-holders D, substantially as herein described, for the purpose set forth.

2. The combination of the recessed guide-casing A, central wooden strip A', and pivoted work-holders D, with a saw having pendent guide-strips B, substantially as herein described.



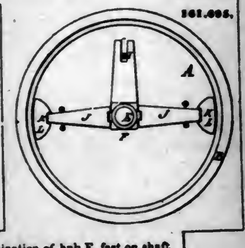
161,691. MACHINES FOR CRUSHING OLEAGINOUS SEEDS. A. B. Lawther, Chicago, Ill. [Filed Mar. 6, 1875.]

Brief.—The hopper and the crushing-rollers are connected by means of a tube contracted at its lower end, through which the seeds are fed to the crushing-rollers by means of the fluted roller within the hopper.

An improved machine for crushing oleaginous seeds, composed of crushing-rollers, revolving at great pressure, in combination with an upright feeding-tube, through which the oil-seeds are forced, under suitable pressure, for being uniformly crushed by the rollers, substantially in the manner shown, and for the purpose described.

161,692.

161,692. TUBE-EXPANDERS. John Lesher and Charles M. Lesher, Northumberland, Pa. [Filed Mar. 11, 1875.]



1. The clamps A A, forked at one end, and provided with slots *a a* at the other end, said ends being beveled on the inner sides at *c*, and the clamps fastened by means of bolts B D and nut *b d*, substantially as and for the the purposes set forth.

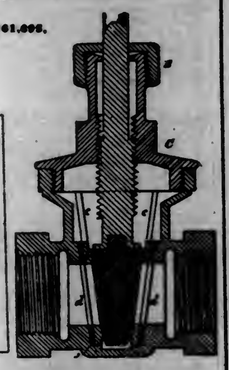
2. The combination of the clamps A A, provided with projections E E, the fastening-bolts B D, with nuts *b d*, and the raising-bolts G G, with nuts *f f* and *h h*, all substantially as and for the purposes set forth.

161,693. LOCKING DEVICES FOR MACHINERY. Timothy D. Marsh and F. M. Crane, Jersey, Ohio. [Filed Feb. 6, 1875.]

Brief.—The clutch mechanism is combined with regulating mechanism, by means of which the griping-arms can be adjusted so as to propel the disks in one or either direction, or their motion may be entirely stopped.

161,693.

1. The combination of hub F, fast on shaft E, and shoes K L, having arms J loosely attached to said hub, with a loose and flanged disk, A B, as and for the purpose described.

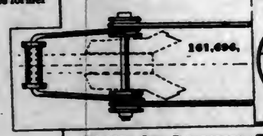


2. The combination, with hub F, of end-slotted lever *a* having pins I P, spring R, and disk D, having pin Q, and arc slot O, all arranged substantially as and for the purpose specified.

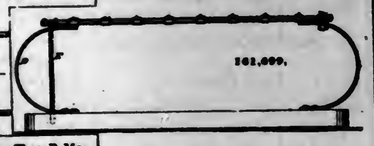
161,694. TONGUE-SUPPORTS FOR VEHICLES. James McCarter, Frankfort, Ind. [Filed Feb. 20, 1875.]

Brief.—Adds a spool or pulley to spring-supports for tongue.

A support for wagon-tongues, consisting of a tongue bearing front pulley, in combination with a spring attached thereto, bent spirally around side pulleys of the tongue-pivot, and having its rear ends fitted to the front axle, substantially as and for the purpose set forth.



161,695.

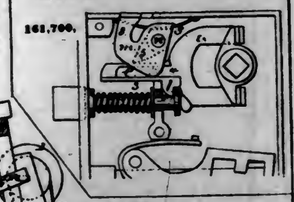


161,695. CHAIR-SEATS. Henry A. Moore, Brooklyn, N. Y. [Filed Aug. 22, 1874.]

The chair-seat constructed with the continuous metallic rim A, the interlaced metal straps B, folded over the said rim, and attached thereto, the arc-shaped springs D, and the vertical guide-stems E, the whole combined and arranged substantially as herein set forth.

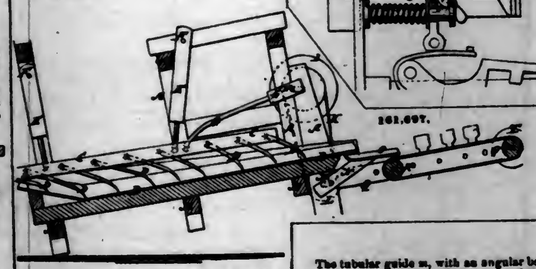
161,696.

161,699.



161,697. ORE-SEPARATORS. Thos. B. McConaughey, Newark, Del. (Filed Feb. 13, 1875.]

Brief.—By means of the reciprocating shovels the ore is forced through a current of water upon an oscillating screen, which delivers it upon the endless apron.

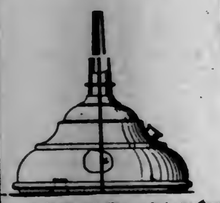


The combination, with belt, screen, and trough, arranged substantially as described, of the reciprocating shovels D, whereby the ore is dragged up the inclined trough and discharged upon the screen and belt, in the manner set forth.

161,700. REVERSIBLE LATCHES. Wallace T. Munger, New Britain, Conn., assignor to P. & F. Corbin, same place. [Filed Feb. 27, 1875.]

161,700.

161,697.



The tubular guide *m*, with an angular bearing for the spring *o*, a curved arm, S, and studs 4 and 5, in combination with the grooved bar *s* of the horseshoe, the talon *l*, and reversible latch, whereby the sliding bar is securely held in position when in use, as set forth.

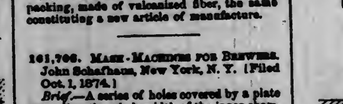
The combination of inclined box D and rectangular box E, having intermediate space F between them, covered by table A, having hinged part, and supported upon legs C, as and for the purpose specified.

161,698. OILERS. Isaac Levy, Ellaville, Fla. [Filed Mar. 13, 1875.]

Brief.—One half of the oiler is made of sheet metal and the other of rubber. The latter is used for blowing away dust, shavings, &c., from the place to be oiled, and the former used for applying the oil.

An improved oiler, made in two parts—one made of sheet metal, for the oil, and the other made of india-rubber, for the air—said parts being separated by a division plate, and each part being provided with its own nozzle or discharge-channel, substantially as herein shown and described.

161,694. REFRIGERATING-TABLES. Pauline Libert, Leavenworth, Kans. [Filed Feb. 6, 1875.]

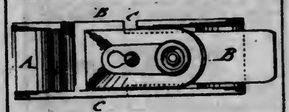


Brief.—A table has a packed and drained cooling-tank directly beneath its top, a part of which constitutes the hinged cover of the tank.

161,702. CHEMNEY-COWLS. A. J. Robinson, Troy, N. Y. [Filed Jan. 16, 1875.]

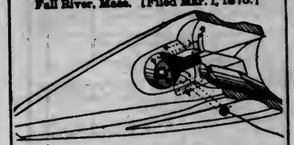
Brief.—The plate separates horizontally the smoke and the air blowing through the trumpet-mouthed pipe.

The oblique and angled plate E, arranged in the ventilator A B C D, as and for the purpose described.



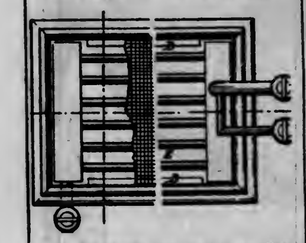
161,703. LATCHES FOR DOORS, &c. Francis D. Robinson, Boston, Mass., assignor to Albert M. Robinson, same place. [Filed Feb. 17, 1875.]

The combination, with the sliding bolt, slotted at its front end, as described, of the notched or forked lever D, pivoted to the latch-case to work in the slot of the bolt, and engaging with its notched or forked part a transverse pin, *b*, extending across the slot, substantially as shown and set forth.



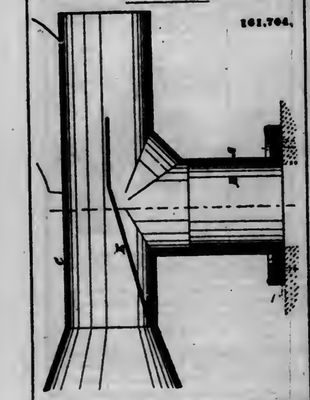
161,701. BENCH-PLANES. J. B. Norwood, Boston, Mass. [Filed Feb. 13, 1875.]

Brief.—The plane-stock has guide-edges on its sides, and is provided with side openings, through which the cutting-iron, having side extensions, passes. The lower edges of the iron are flush with the outside of the stock.



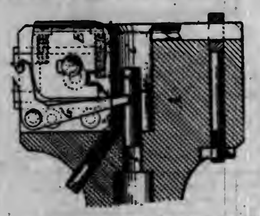
The combination of a stock, having guide-edges on each side, with openings C C and a plane-iron, B, having extensions B', as and for the purpose described.

161,702. LOOM-SHUTTLES. J. M. Peckham, Fall River, Mass. [Filed Mar. 1, 1875.]



The tension-cloth holder F, constructed substantially as described, in combination with a shuttle body, having grooves *k k*, for the purpose set forth.

161,705. LABEL-COOLERS. Frank C. Pray, New York, N. Y. [Filed Feb. 5, 1875.]



The combination, with vessel A, spreading-sleeve, C, and cooling-tubes E, of a bottom sleeve, D, as shown and described, whereby the lard is blanched, after having been cooled, by being separated through the perforations of bottom sleeve and caused to drop in small globules through the air.

161,704.

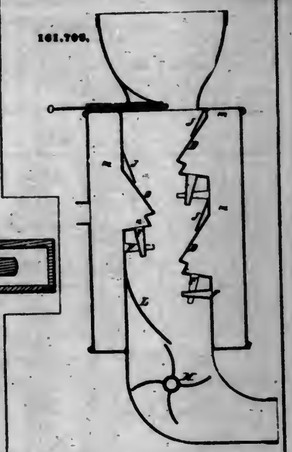
161,706. CHUCKS FOR MAKING SWELLED TENONS. Alexander D. Ruff, Owingsville, Ky. [Filed Jan. 18, 1875.]

Brief.—Swelled tenons are cut by means of a revving chuck, provided with a suitable cavity, in connection with a turning-tool, which is forced down against the portion of the blank to be dressed, by the end of the blank pushing a sliding pin back as the blank enters the cavity. A curved spring secured in a slot in the exterior of the chuck draws back the tool, frees the sliding pin, and thus prevents the swell of the tenon from being cut off as the blank is being withdrawn.

1. The combination of the pin J, lever G, and the sliding and adjustable tool E in a chuck, A, having a cavity, C, and a notch, D, substantially as specified.

2. The combination of the spring L with the sliding tool E, lever G, and pin J in a chuck, A, substantially as specified.

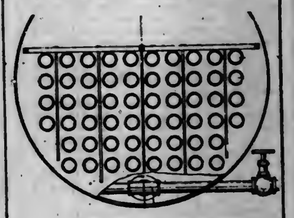
161,707. CONDENSER-FERRULES. Thomas H. Savery, Wilmington, Del. [Filed May 29, 1874.]



The within-described condenseer ferrule or packing, made of vulcanized fiber, the same constituting a new article of manufacture.

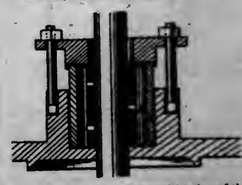
161,708. MASH-MACHINES FOR BREWERS. John Schaefhaus, New York, N. Y. [Filed Oct. 1, 1874.]

Brief.—A series of holes covered by a plate extending the whole width of the inner chamber, terminating close upon the inclined ridges or surfaces, in such a manner that a continuous flat stream of water is made to pass over these surfaces, to wash the same perfectly clean, and prevent the lodgment or accumulation of any substance thereon. There is also a wheel in the passage below the chamber, upon which the mash falls, turning thereby said wheel.



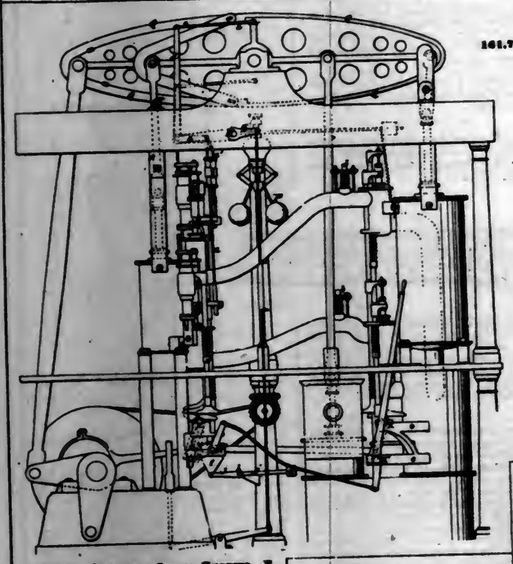
161,709.

1. The holes or openings *m* at the upper part of the surfaces D, in combination with the plate J, arranged in relation with the projecting surfaces D in a mash-machine, substantially as and for the purpose set forth.



2. In a mash-machine, constructed substantially as herein described, the self-turning wheel H, in combination with the guiding plate I, arranged and operating in the manner and for the purpose specified.

161,709. MEANS FOR PREVENTING BOILER-EXPLOSIONS. Geo. Selden, Erie, Pa. [Filed May 18, 1874.]



As a means of preventing steam-boiler explosions, the method herein described, consisting in forcing or injecting air into the contained water of the boiler at or near the bottom thereof while the said water is at rest and subjected to the action of heat.

161,710. PISTON-PACKINGS. J. L. Sherman, Janesville, Wis. [Filed Dec. 19, 1874.]

In a piston-packing, the combination of the ring H, having grooves I, with a series of divided rings, F, and the cup D, the arrangement being such that an annular chamber, I, is formed around said rings to receive the steam, as shown and described.

161,711.

161,711. COMPOUND STEAM-ENGINE. F. R. Sickel, Swarthmore, Pa. [Filed Feb. 27, 1875.]

Brief.—The engines are connected to opposite ends of the beam. The exhaust from the small cylinder enters the adjacent ends of the large cylinder, the pistons moving in opposite directions. If the cut-off fails on one stroke a larger quantity of steam is admitted to the low-pressure cylinder, equalizing the action. When the engine is unlocked, the small engine steam-valves are open; the hand-lever then gives live steam to the large cylinder.

1. The combination of the trip cut-off and its fluid-check with the compound engine, substantially as described.

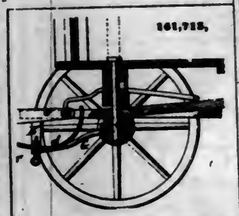
2. The combination of the trip cut-off and its fluid-check with the governor and the compound engine, substantially as described.

3. The combination of the double truss with the skeleton beam, to carry the load of the small cylinder, substantially as described.

4. The toes on the rock-shaft of the small cylinder, to hold open the exhaust-valves of that cylinder, in combination with the blow-valves on the exhaust-pipes, to avoid compressing the steam, substantially as described.

5. The combination of the rock-shaft to work the valves of the small cylinder for blowing through, with the rock-shaft that applies the steam direct from the boiler to the large cylinder, substantially as described.

161,712. WATCH-CASES. Simon B. Simon, New York, N. Y. [Filed Mar. 1, 1875.]

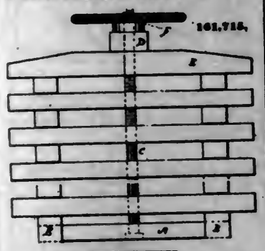


A cylindrical watch-case, constructed substantially as herein shown and described.

161,713. TONGUE-SUPPORTS. Emanuel Spoors, La Fayette, Ind., assignor of one-half his right to Christian Sefherer, same place. [Filed Mar. 4, 1875.]

1. The combination of the tongue A, curved and perforated bar D d, fixed hanger E, and pin F, substantially as and for the purpose specified.

2. The combination of the tongue A, bar D d, pin F, hanger E, brace G, and axle C, substantially as specified.

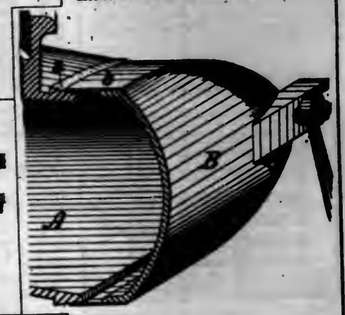


161,715.

161,715. CIGAR-PRESSES. Ferdinand Svoboda and Franz Leza, Cleveland, Ohio. [Filed Mar. 6, 1875.]

1. The cigar-press, consisting of a lower frame or platform, an upright central screw-shaft, a movable jaw traveling upon the said central screw-shaft, and a hand-lever set for causing the said movable jaw to traverse up and down the shaft, and whereby pressure is transmitted, substantially as and for the purpose described.

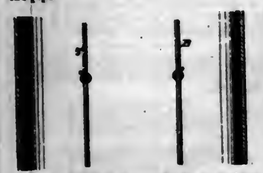
2. The combination, with the cross piece A and the side pieces B, vertical shaft C, and the cross-piece D, side pieces E, and hand-lever set F, substantially as and for the purposes described.



3. The combination, with a press, constructed substantially as described, of the cigar-molds H, arranged between the jaws of the said press in block-house order, substantially as and for the purpose described.

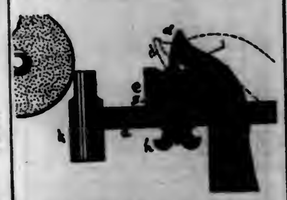
161,715.

161,716. MOUTH-PIECE LIDS FOR GAS-RETORTS. Samuel A. Thomas, Philadelphia, Pa. [Filed Mar. 15, 1875.]



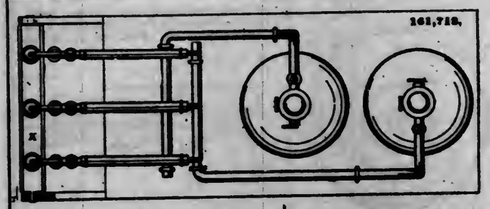
Brief.—The lid is screwed down, and the flexible flange fits over a bevsled bearing-surface on the end of the retort-neck.

As a new article of manufacture, a mouth-piece lid for retorts provided with a flexible rim or flange, substantially as set forth.



161,716. DAMPERS. Jacob Stewart, Moline, Ill. [Filed Oct. 24, 1874.]

Brief.—The dampers are both operated by one movement, and when partially closed leave a space in the center of the flue for ascending smoke, and also an open space next the pipe.



The combination, in a smoke-damper, of two plates, B, pivoted at opposite sides of the center of a flue, to form converging inclines, and the wheels or toothed segments D, substantially as specified.

161,717. REMS FOR TRUING-OUT BRIGHT-WHEELS. Eleazer Thomas, Pawtucket, R. I. [Filed Mar. 4, 1875.]

In a rest for truing-off emery-wheels and stones, and for evening-up castings, &c., the slotted bar *a*, having a support and arm or arms, *b*, in combination with the cam-lever *c d*, and its supporting and adjusting devices *e f h*, substantially as herein specified.

161,718. TRACE-CLEANERS. C. G. Waterbury, New York, N. Y. [Filed Mar. 6, 1875.]

161,718.

1. The combination, in a portable snow-melting track-cleaner, of an oxygen-gas holder, a hydrogen-gas holder, oxyhydrogen-burners, and pipes connecting them with the gas-holders, substantially as and for the purposes set forth.

2. The combination of pivoted burners G H, pivoted support K, flexible joints J, and supply-pipes, substantially as and for the purpose set forth.

161,719. CENTRIFUGAL HYDRO-EXTRACTORS. C. C. Webber, Holyoke, Mass. [Filed Aug. 20, 1874.]

Brief.—The basket revolves in a horizontal plane, while its supporting-shaft oscillates from one to another side of a vertical position; a band-brake on the belt-wheel.

1. The combination of the basket B, constructed substantially as described, with the ring *a*, pivots *c*, pivot *d*, and shaft E, arranged substantially as herein set forth.

2. In combination with the basket B, the ring *a*, pivots *c* and *d*, shaft E, the foot-plate G, horizontal springs A, and springs *n*, and the universal joint, all arranged substantially as described.

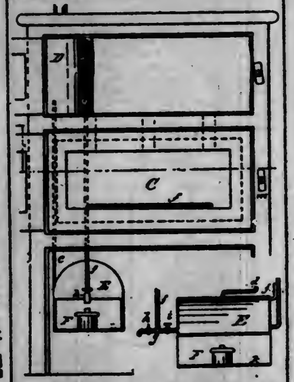
161,720. PAPER-BAG MACHINES. William Webster, Middletown, Ohio. [Filed Jan. 19, 1875.]

Brief.—Improvement on patent to applicant January 13, 1874.

1. The adjustable rest S, in combination with the paste-carrier frame, for the purpose specified.

2. The hinged plate or former R, in combination with the body-former C, substantially as described.

3. The slotted adjustable rest *a b c*, in combination with the hinged former R, substantially as and for the purpose described.



161,721. COMPOUND SWITCHES FOR FIRE-ALARM TELEGRAPHS. Sami. Weeks, New Orleans, La. [Filed Jan. 11, 1875.]

A compound switch for fire-alarm telegraphs, for throwing by one movement a series of switches into circuit, composed of a series of upper switch-fingers, establishing and breaking circuit of main alarm-battery, and of a set of lower spring-fingers for closing and opening the local batteries, in combination with an intermediate insulated crank-shaft, with opposite non-conducting cam-extensions, so arranged that a turn of the crank-shaft causes simultaneously the contact of the upper fingers and the disconnecting of the lower, or the breaking of contact of the upper and the closing of the lower, substantially in the manner and for the purpose set forth.

161,722. INCUBATORS. C. G. Wenton, Washington, D. C. [Filed Mar. 3, 1875.]

Brief.—Cold water is forced into the boiler by pressure of hot water through the safety-pipe, which terminates near the top of the reservoir. Water returning from the coil in the hatching-room may be admitted to the boiler, or discharged without it to regulate temperature.

1. In an air-incubator, the reservoir D, arranged above the hatching-room C, and communicating with the boiler B through pipe *e*, as specified.

2. In an air-incubator, the combination, with the boiler B and reservoir D, of the safety-pipe *d*, substantially as and for the purpose set forth.

3. In an air-incubator, the combination, with the boiler E and heating-pipes *f*, of the means, substantially as herein described, whereby the temperature of the hatching-room can be regulated by controlling the circulation of the water through the heating-pipes, as set forth.

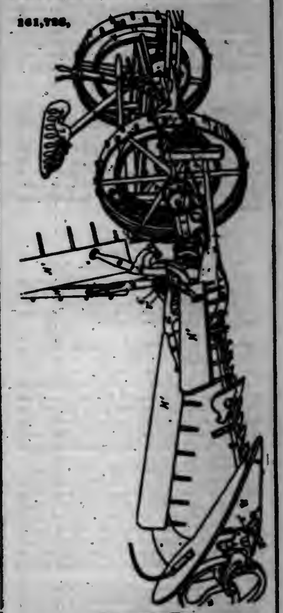
4. The reservoir D, boiler E, lamp F, and pipes *e d f*, and the pipe *g*, provided with flanges *h i*, the whole combined and arranged to operate as specified.

161,723. HARVESTER-RAKES. William N. Whiteley, Springfield, Ohio. [Filed Apr. 23, 1874.]

Brief.—Special construction of devices for supporting and guiding the rake mechanism.

1. The rake-supporting arch or bridge A', constructed with a lateral offset, *a*, projecting outward, and oblique top surface, substantially as shown and described.

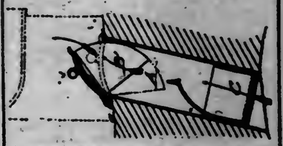
2. The base-plate B', constructed with a depressed seat for the bridge-plate A', a radial serrated seat for the rake-cam, and a spindle-stud, *q*, projecting laterally and slightly downward for the rake-driving pinion, all as shown and described.



3. The rake-arm G', jointed at its inner end to the carrier F', and bifurcated at its outer end, to receive the end of the beater H', and provided with a curved slot, *g'*, at its outer end for the reception of an adjusting clamp-bolt and a pendent arm, *i*, bearing a roller, I', to traverse the arm D, as shown and described.

4. In combination with the base-plate B', cam D' resting thereon, and cam with corresponding radial serrations, and the revolving carrier F', the sleeve-journal E', cap *c'*, and bolt *d'*, as and for the purpose set forth.

5. The rake-bridge A', constructed with a lateral offset, as described, and attached at its front end to the lug *b* and at its rear end to the arm or stiffener T, as set forth.



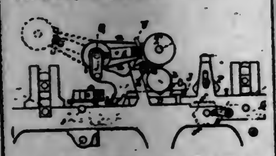
6. In combination with the shoe U, the grain-wheel bracket V, bolted directly thereto at its front and rear, and the divider W, bolted only to said bracket, as set forth.

161,723.

161,724. VENTILATING ATTACHMENTS TO HEARTHS. Wm. S. Winfield, Cross Plains, Tenn. [Filed Jan. 20, 1875.]

Brief.—Intended to supply a better draft, and to obviate smoking during kindling of the fire.

The ventilating attachments to hearths of open fire-places or grates, composed of a hollow box or casing set into the bottom of the hearth, to communicate with the air outside of the room, and provided with a hinged or adjustable lid, with side wing-plates, for throwing a direct current of air on the grate, substantially as specified.



161,725. STEM-WINDING WATCHES. Chas. V. Woerd, Waltham, Mass., assignor to American Watch Company, same place. [Filed Feb. 19, 1874.]

The means for actuating the mechanism whereby the watch is changed from a stem winder to a stem-setter, consisting of the combination, with a watch, of a cam, *c*, and thumb-catch *f*, for actuating the cam, and the flattened surface or landing *c'*, whereby the cam is caused to rest steady, after being raised, until again pressed back into the case, substantially as and for the purpose described.

161,726. PLANING-MACHINES. George H. Woodbury, Cambridge, Mass. [Filed Mar. 26, 1874.]

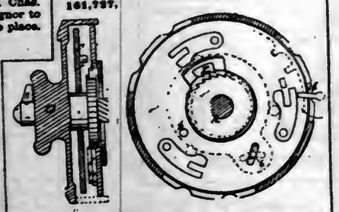
Brief.—A grinding device is attached for the purpose of sharpening the cutters upon the planing-cylinders without removing them from the machine, and the feeding-rolls are placed in a swinging frame, so as to give ready access to the planing-cylinders.

1. A chip-breaking pressure-bar, H, or roll, constructed and arranged to move in an arc of a circle the curve of which is in the reverse direction to the arc of a circle described by the edge of the planing cutters while they are acting upon the board, substantially as described.

2. In a machine for planing lumber, the combination of two cutting-cylinders, adapted to plane both sides of a board at the same time, and a pair of draft-rolls, placed in front of said cylinders, and mounted upon a supplementary frame, arranged to be swung to one side, for the purpose of giving access to the under cylinder, all the parts being constructed, arranged, and operating in the manner shown and described.

3. The combination, with the cylinder G in a planing-machine, of the grinding-wheel T, the radius-arm b, the shaft G_2, the pulleys R and *n*, and the belt *a*, all arranged and operating substantially as shown and described.

4. In combination with the radius-arms S and the pulley R, fitted to slide on the shaft Q, and grinding-wheel T, the adjustable stop U, arranged to operate substantially as described.



5. The combination, with the cutter-cylinder G, of a pivoted hook, arranged to lock said cylinder in position by engaging with holes formed in said shaft, or a hub or flange secured thereon, substantially as described.

6. The pivoted hook S, made in two parts and screwed together, substantially as described, for the purpose specified.

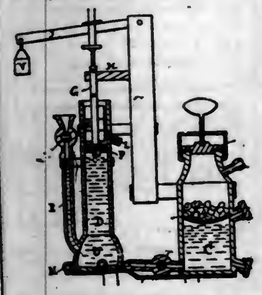
161,727. CORRELATION-LOCKS. C. O. Yale, New York, N. Y. [Filed Dec. 1, 1874.]

1. The combination, with an operating-spindle and freely-revolving dial or indicator, of suitable engaging mechanism, and one or more sets of tumblers to control and determine the action of the engaging mechanism.

2. The dog-plate attached to the dial, and the catch-wheel on the spindle, for locking the dial to the spindle and preventing its removal therefrom while free to rotate thereon.

3. Arranging and combining the tumblers on and pivoted to a plate affixed to the dial, so as to revolve with it.

4. In combination, the engaging mechanism, the tumblers, and the displacing-studs on the fence-plate for disarranging or displacing the tumblers.



5. The combination, with the catch-wheel, of the engaging-dog and dog-plate, operated by a motion of the fence-plate in coupling the dial to the spindle.

6. The special form of cam-stop described, in combination with the dial or indicator adapted thereto, as set forth.

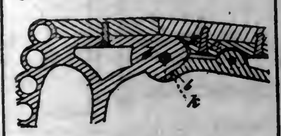
7. The combination, with the engaging-dog, spindle, and catch-wheel, of an index-pointer, to show the relation of the dial or indicator B to the catch-wheel.

161,728. CARBONIC-ACID-GAS GENERATORS. Otto Zwietasch, Milwaukee, Wis. [Filed Jan. 14, 1875.]

Brief.—The gas-generator is connected by a coiled pipe to a water-cylinder. A loaded piston in the latter, acting upon the water, forces the acid up into the alkali-chamber. The pressure of the gas generated forces back the acid, and consequently the water-column and piston. As the gas is drawn off the piston again acts to cause the acid to come in contact with the alkali. Instead of piston, may use water under pressure.

1. In combination with a carbonic-acid-gas generator, a water receiver or cylinder, suitably connected with said generator, whereby the generation of the gas is controlled by the alternate action of the gas pressure and hydrostatic column, substantially as described.

2. In combination with a receiver, D, the piston F, rod G, and weighted pivoted lever J, all arranged to operate substantially as set forth.



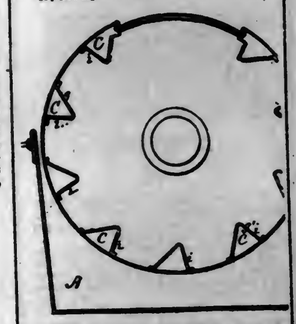
3. In combination with a gas-generator and cylinder D, the piston F, and overflow-pipe L, substantially as and for the purpose described.

4. The cylinder D, filling-pipe E, cock *e*, and pipe N, in combination with the acid-chamber O, substantially as and for the purpose set forth.

5. The cylinder D and coil-pipe N, in combination with a carbonic-acid-gas generator, substantially as and for the purpose set forth.

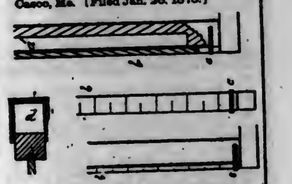
6. The piston-rod G, guide H, lever J, weights K and V, all in combination with the piston F, cylinder D, and frame A, substantially as and for the purpose set forth.

161,729. SELF-SUPPORTING HINGES. Saml. Adams, Boston, Mass., assignor to Jos. W. Ross, same place. [Filed Nov. 12, 1874.]



The hinge C, composed of the portion *d* and the portion *h*, with its notch *k*, in combination with the lever or pawl *k*, and with or without the spring *i*, constructed and operating substantially as and for the purpose set forth.

161,730. COMPOUNDS FOR WELDING STEEL. Edwd. Anthony and James Beadle, Shickshinny, assignors of one-third their right to Edwd. Price, Jr., Scranton, Pa. [Filed Jan. 26, 1875.]

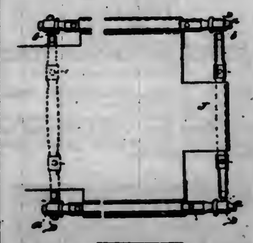


The compound for welding steel herein described, consisting of dross, saltpeter, and lime, as set forth.

161,731. BOILER WASHING-MACHINES. J. D. M. Armbrust, Apollo, Pa. [Filed Dec. 19, 1874.]

The combination, in a rotating clothes-receptacle, of the angular ribs C, having induction perforations *j*, and distributing perforations *i*, with the steam and water spaces *e* formed by walls *d d'*, and communicating with boiler A by means of perforations *f*, substantially as specified.

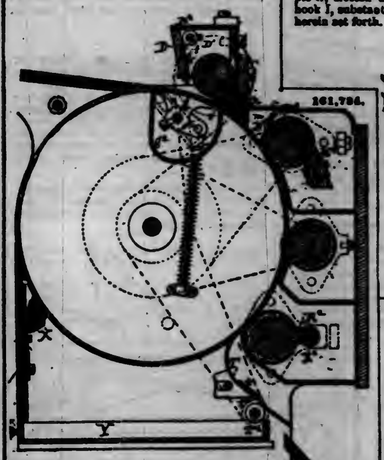
161,732. SLATE-FRAMES. J. H. Barbarick, Casco, Mo. [Filed Jan. 26, 1875.]



A slate-frame, provided with the channel *a'*, the rule *b*, elastic band *c*, incision *d*, and cap *e*, all constructed and arranged to operate substantially as and for the purpose set forth.

161,733. CAMP-LOUNGES. G. T. Barker, Pittsfield, Mass. [Filed Jan. 16, 1875.]

1. As a new article of manufacture, a camp-lounge arranged and constructed to support the body of the occupant in a reclining position above the ground, while the feet rest on the ground, substantially as specified.



2. The combination of couplings D, consisting of ferrule *a* and shank *b*, with the side pieces and cross-pieces of the frame, substantially as specified.

3. The combination of the legs T with the ferrules for driving them on and off the side pieces.

161,734. BRONZING-MACHINES. H. Battermann, New York, N. Y., assignor to F. Emmerich, same place. [Filed Feb. 4, 1875.]

Brief.—Pertains to special construction of parts.

1. The combination, with the cylinder C, of the bronze-receptacle D, bronzing-roller E, and scrapers G and H, and bronzing pad or cushion K, adjustable substantially as and for the purpose shown and described.

2. The combination, with the receptacle D and bronzing-roller E, of the removable and adjustable partitions D^1 and bar D^2, substantially as and for the purpose shown and described.

3. The combination, with the bronze-receptacle D, of the reciprocating scrapers G and H, and pad K, and their carrying-bar I, substantially as and for the purpose shown and described.

4. The combination of the sliding plate M^2 with the wiping-roller L and the cylinder C, substantially as shown and described.

5. The slide M^1, in combination with the reciprocating pad K and sliding plate M^2, substantially as and for the purpose shown and described.

6. The combination, with the delivery-roller R, of the reciprocating brush R^2, substantially as shown and described, for the purpose specified.

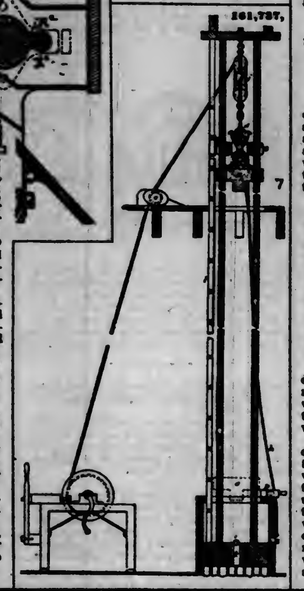
7. The combination of the curved plate T, wires *i*, and disks i^2, on the shaft T^2, as shown and described, for the purpose specified.

8. The combination, with the fly-board W, of the slotted hinges and the set-screws, for adjusting the height and inclination of the fly-board, substantially as described.

161,735. GAS-BURNERS. Alfred G. Bayles, New York, N. Y. [Filed Mar. 15, 1875.]

Brief.—Adapted to render the flow of gas even.

The hollow cap C, with wire-gauze disks *g*, in combination with chamber A, with inlet-pipe *b* and burner *d*, substantially as described and set forth.



161,736. HORSE-COLLAR FASTENINGS. V. M. Beamer, Noblesville, Ind. [Filed Feb. 15, 1875.]

The combination, with a horse-collar, A, hames B B, and neck-yoke strap C, of the staple G, slotted metal straps H H, and snap-hook I, substantially as and for the purposes herein set forth.

161,736.

161,737.

1. The combination, with the cylinder C, of the bronze-receptacle D, bronzing-roller E, and scrapers G and H, and bronzing pad or cushion K, adjustable substantially as and for the purpose shown and described.

2. The combination, with the receptacle D and bronzing-roller E, of the removable and adjustable partitions D^1 and bar D^2, substantially as and for the purpose shown and described.

3. The combination, with the bronze-receptacle D, of the reciprocating scrapers G and H, and pad K, and their carrying-bar I, substantially as and for the purpose shown and described.

4. The combination of the sliding plate M^2 with the wiping-roller L and the cylinder C, substantially as shown and described.

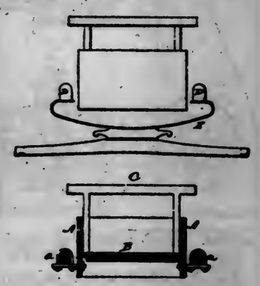
5. The slide M^1, in combination with the reciprocating pad K and sliding plate M^2, substantially as and for the purpose shown and described.

6. The combination, with the delivery-roller R, of the reciprocating brush R^2, substantially as shown and described, for the purpose specified.

7. The combination of the curved plate T, wires *i*, and disks i^2, on the shaft T^2, as shown and described, for the purpose specified.

8. The combination, with the fly-board W, of the slotted hinges and the set-screws, for adjusting the height and inclination of the fly-board, substantially as described.

161,737. TESTING-MACHINES. Lester A. Beardslee, Washington, D. C. [Filed Feb. 26, 1875.]



Brief.—The specimen to be tested is laid across the opening in the anvil, and the hammer, with wedge-shaped face, allowed to fall upon it from any desired height.

1. The hammer *a*, provided with a wedge-shaped face, in combination with the anvil *i*, provided with the central opening *k*, substantially as and for the purpose described.

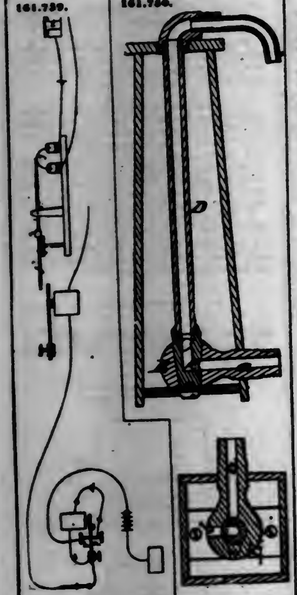
2. The hammer *a*, provided with a wedge-shaped face, and anvil *i*, provided with the central opening *k*, in combination with the traveling block *c*, hooks *d*, and trip-bar *h*, substantially as and for the purpose described.

3. The hooks *d*, provided with the spring between the lower jaws, in combination with the rod *l*, provided with the pointer *n* and hook *m*, and with the traveler *c*, substantially as and for the purpose described.

161,738. HANGING CARRIAGE-BODIES. S. N. Beecher, Milford, Conn. [Filed Jan. 22, 1875.]

The combination of the body A, elastic bottom B, elastic side bars D, rigidly attached to the body, and the end springs E, substantially as described.

161,739. TRANSMITTERS AND RECEIVERS FOR ELECTRIC TELEGRAPHS. Alex. G. Bell, Salem, assignor to himself and Thos. Sanders, Haverhill, and G. G. Hubbard, Cambridge, Mass. [Filed Mar. 6, 1875.]



Brief.—Receiver set into vibration by isochronous pulsations transmitted from the sending end. The vibrating piece *b* takes against a lever, *f*, whose times of vibration are less than those of *b*; hence, during each vibration, its end *f* is kept depressed, changing the intermittent contacts of *b* and *f* into a continuous close of circuit.

1. In a system of telegraphy in which the receiver is put in vibration by electrical impulses sent along the line-wire from the transmitting-station, as described, the combination at the receiving end of a local circuit independent of the receiver and a vibratory circuit-breaker in said local circuit, acted upon by said receiver to effect a permanent make or break, as the case may be, of the local circuit, which is continued so long as the receiver continues to vibrate, and ceases with the cessation of the receiver's vibration, substantially as herein set forth.

2. The combination, substantially as herein described, with the vibratory portion of the receiver, of a vibratory circuit-breaking lever which will vibrate or oscillate at a slower rate than that at which the former moves when in vibration, as and for the purposes set forth.

3. The autograph-telegraph, comprising the combination of a series of transmitters and transmitting bristles or wires, a single main wire, receivers corresponding in number to the transmitters, tuned to a pitch to vibrate in unison with the succession of electric impulses transmitted from their respective transmitters, vibratory circuit-breakers, one for each receiver, and a local circuit, electro-magnet, and recording-lever for each circuit-breaker, the whole for operation substantially as shown and described.

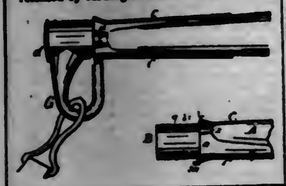
161,739.

161,740.

161,740. ADJUSTABLE HYDRANTS. Geo. D. Hosher, Martinsburg, W. Va. [Filed Feb. 13, 1875.]

Brief.—The water is let on or cut off by turning the discharge-pipe, the nozzle of which works in a bridge provided with a removable stop, by the shifting of which the pipe may be limited to turn in a direction to allow the waste-water to escape or not, according to the season of the year.

In a hydrant having a waste-passage, b, a tubular plug, C, discharge-pipe D, and nozzle d, the bridge E, perforated at e e', and removable pin f, all combined in the manner described.

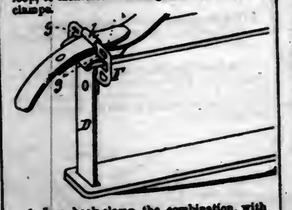


161,741. CORSET-BONES. M. E. Burtess, Jackson, Mich. [Filed Feb. 12, 1875.]

The herein-described corset-case, consisting of the box A and cover A', the latter having octagonal end pieces e', substantially as shown and set forth.

161,742. WHIFFLETREES. Geort H. Bote and Wm. H. White, Zeeland, Mich. [Filed Oct. 13, 1874.]

Brief.—The trees can be locked in place or released by turning the hook and sleeve.



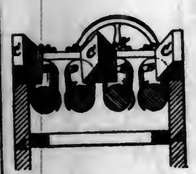
1. The sleeve D, provided with the hook G, in combination with the ferrule B, having shoulder e, with notch or groove x, and the straps C C, all constructed to operate substantially as and for the purposes set forth.

2. In combination with the whiffletree A, ferrule B, and sleeve D, the L-shaped pin m, to work in the slot i on the sleeve D, for the purposes set forth.

3. The combination, with a whiffletree, A, of the ferrule B, with grooved shoulder e and straps C C, the sleeve D, with hook G and slot i, the pin m, washer d, and screw e, all substantially as and for the purposes set forth.

161,743. BOOK-CLAMPS. Joseph B. Boyce, Lockport, N. Y. [Filed Nov. 28, 1874.]

Brief.—Loop F, attached to the end of strap D, is drawn over and upon the end of the upper bar, and lodged in groove c'. Strap B forms a handle, and is rigidly attached to the upper bar. A supplemental strap, G, is centrally attached to the free end of the handle-strap, both passing out beneath bridge h of the loop, to facilitate attaching and releasing the clamps.



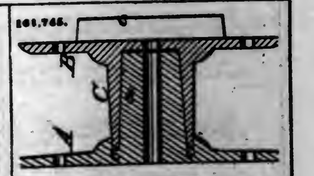
1. In a book-clamp, the combination, with the board A, having a transverse groove, c', of the loop F, having shoulders g g', substantially as specified.

2. The combination, with the loop F and the groove c' of the upper board A, of a detaching-strap, substantially as specified.

161,744. APPARATUS FOR SEPARATING SLATE FROM COAL. Sidney Broadbent, C. W. Ziegler, and W. B. Oliver, Scranton, Pa. [Filed May 17, 1875.]

Brief.—The mixture of coal and slate is directed by the triangular piece between the upwardly-revolving inclined rollers, between which the slate falls, while the coal passes on and is discharged at the lower end of the rollers.

1. The series of inclined revolving rollers B, arranged and operating substantially as and for the purpose shown and described.



2. The combination, with the rollers B, of the covering-bars C, arranged over the descending sides of said rollers, substantially as and for the purpose shown and described.

161,745. PLOW-STANDARD FASTENINGS. G. B. Brimingham, Trenton, Tenn. [Filed Jan. 23, 1875.]

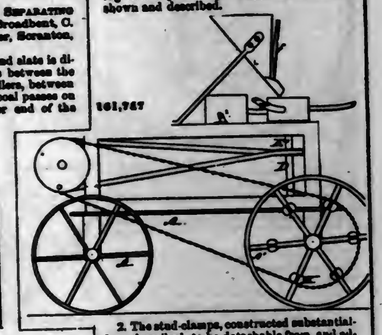
Brief.—A plate having a conical projection is secured to the beam, and another flanged plate for the standard has a corresponding cavity, allowing the standard to be adjusted at any angle with the beam.

In a standard-fastening for plows or cultivators, a plate, A, having a perforated tapered boss formed on it, in combination with the plate B, having a socket portion, C, formed on it to receive said boss, substantially in the manner and for the purposes set forth.

161,746.

161,746. LUMBER. Wm. H. Brock, Philadelphia, Pa. [Filed Mar. 3, 1875.]

Brief.—The pieces of lumber are formed of two different kinds of wood, connected by tongues and grooves of the peculiar form shown in the drawing.



The mode herein described of uniting boards—that is to say, forming on the faces to be united a series of ribs, each of which is straight on one side and inclined on the other, and by forcing the ribs of one board into the corresponding grooves of the other, all as set forth.

161,747. BROADCAST SEEDING-MACHINES. David Buist and Charles E. Alden, Philadelphia, Pa. [Filed Nov. 28, 1874.]

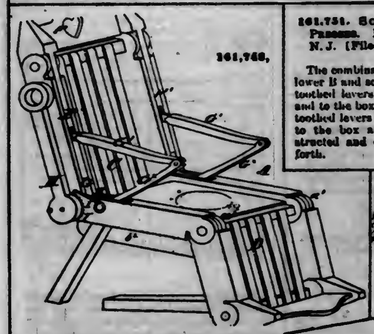
Brief.—To the centrifugal scattering-box are removably attached tubular arms, curving laterally and upwardly. To the spokes of one of the front bearing-wheels are clamped adjustable studs, around which passes an endless belt, for communicating motion to the scattering-box.

1. The broadcast centrifugal scatterer or distributer F, having the tubular arms F', curving laterally and upwardly, substantially as shown and described.

161,747

2. The stud-clamps, constructed substantially as described, to be detachable from, and adjustable upon, the spokes of any ordinary wheel A, substantially as and for the purpose specified.

161,748. INVALID-CHAIRS. Wm. Reych, Anstinburg, Ohio. [Filed Oct. 24, 1874.]



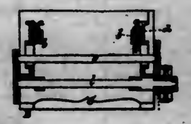
Brief.—The head and foot rests are adjusted by a lever pivoted at the point of junction with the seat.

1. In combination with a reclining-chair having a rigid seat, and a hinged back and foot section, connected through the lever F, the lever H, ratchet I, and pawl I', arranged at one side, as shown, said lever H being attached to the hinge-plate connecting section C and lever F, as and for the purpose described.

2. The jointed legs F', in combination with the jointed sections C D and jointed braces G', substantially as described and shown.

3. The combined arms and leg-braces G' G' and supplementary legs F', in combination with the folding bed and chair frame A, substantially as shown and described.

161,749.



161,750.

161,749. PLANING-MACHINES. Chas. Bass and George F. Bass, Marlborough, N. H. [Filed Sept. 16, 1874.]

Brief.—The lumber is carried beneath the planing-cylinder upon a vertically-adjustable endless bed.

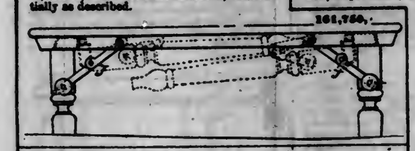
The herein-described combination of the ribs a a, bars b b, and packing-plates d d, in connection with the housing E E, and bed-rails H H, substantially as and for the purposes stated.

161,750. FOLDING TABLES. H. Butman, Brooklyn, N. Y. [Filed Aug. 18, 1874.]

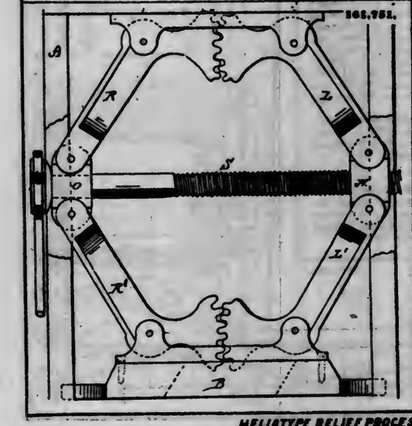
A folding table containing the combination of top board A, end stripe C, clamp-hinges H, rod E, and knee-joint braces J, substantially as described.

161,751. SECURING HANDLES TO OUTLERY. E. C. Carleton, Port Huron, Mich. [Filed Mar. 6, 1875.]

Brief.—The tang passes entirely through the handle, and has a slotted key, which is pivoted in its mortised end. After the tang is passed through the handle, this key is turned up at right angles, and rests against the end of the handle.



The slotted key C, secured to the mortised tang A for detachably fastening the handle B thereon, substantially as described.



161,752. MECHANICAL POWERS. R. Carr, New York, N. Y. [Filed Feb. 6, 1875.]

Brief.—The stud of the connecting-rod is guided by a swivel-box, which, as it reaches the point in the slotted cam in line with the connecting-rod, it gives a sliding movement, without imparting any motion to the lower shaft, while the driving-shaft is turned without interruption. Therefore the lower shaft makes a partial revolution, and there it stops during the time the stud slides in the cam-slot, as previously explained.

161,750.

161,751.

161,752.

161,753. SCREW AND TOGGLE-LEVER PRESSES. Robert Butterworth, Trenton, N. J. [Filed Mar. 10, 1875.]

The combination, with the frame A and follower B and screw S, of the nut N, box O, the toothed levers E' L', pivoted to the follower and to the box and nut, respectively, and the toothed levers E L, pivoted to the frame and to the box and nut, respectively, all constructed and operating substantially as set forth.

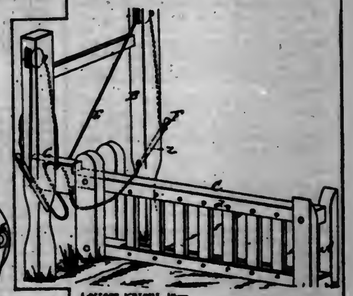
161,754.

The combination of the rod B, swivel guide-box C, eccentric wrist-pin b, shaft A, slotted cam F, and shaft E, all constructed and operating substantially in the manner herein shown and described.

161,754. TURPENTINE-PANS. W. W. Clements, Camilla, Ga. [Filed Feb. 13, 1874.]

Brief.—The turpentine-pan is formed of a single plate of sheet metal by folding or doubling the corners, and pressing into the proper shape without soldering. It fits around the tree, and is secured to it by means of nails passing through the ends of the lip into the tree.

As a new article of manufacture, the laterally bowed metallic cup or box, struck or pressed out of sheet metal in the concavo-convex form, adapted to fit the convexity of the trunk of a tree, and having its upper portion perforated, substantially as and for the purpose specified.



161,755. WIRE CORKSCREWS. William R. Clough, Newark, N. J. [Filed Mar. 17, 1875.]

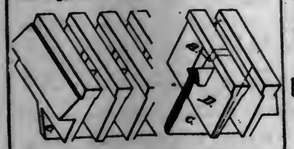
A corkscrew formed of a wire of iron, steel, brass, or other metal, twisted spirally, as described, for a portion of its length, the remaining portion being bent into an angular or polygonal shaped loop to form the handle, the free end being secured to the wire immediately at the termination of the spiral, as and for the purposes herein set forth.

161,756. FARM-GATES. Leopold S. Cohn, Berlin, Wis. [Filed Dec. 19, 1874.]

Brief.—The endless operating-cord plays through high posts on opposite sides of the gate, and also through the weighted end of the gate, and by means of removable wedging-pins, which are inserted in the holes in the high posts against the cord, the movement of the gate is controlled.

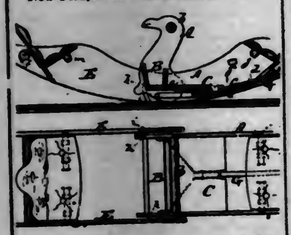
Letters Patent, to—

In combination with the sliding and folding gate C, having weight G, the posts B B, having pulleys y y and inclined holes e e, the endless cord E, and the pins F F, all substantially as set forth.



161,757. CLASPS OR THIMBLES FOR HINGING DUTCHES. Jas. C. Covert, Troy, N. Y. [Filed Feb. 4, 1875.]

The combination of the tube A, having the projection *a*, with interior screw-threads cast therewith, and the screw C, having the eye D and the sharp point *x*, for entering into the rope, all constructed as and for the purposes set forth.

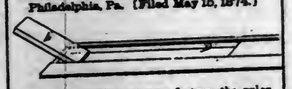


161,762. GRATE-BARS. Alonzo W. Cram, Haverhill, Mass. [Filed Jan. 20, 1875.]

Brief.—The main bar is provided with short transverse bars, having an open space through them, to cause a circulation of air over the entire length of said bar.

1. The cross-bars D, provided with the opening A, in combination with the main supporting-bar C.
2. The cross-bar D, provided with the space E and opening A, in combination with the main supporting-bar C.

161,763. CHILD'S COMBINED ROCKERS, SIDE-SAWS, AND OBLIQUE. James A. Crandall, New York, N. Y. [Filed Mar. 6, 1875.]



1. A combined rocker and seesaw, or double rocker, composed of the rocking side plates A A, seat D, and folding side rockers E E, substantially as herein shown and described.
2. The stop-pin *h* and groove *i*, in combination with the folding side plates A E of a combined rocker and seesaw, or double rocker, as set forth.
3. The pivoted seat D, arranged to be adjustable in a rocker, so that its position may be changed when said rocker is converted into a seesaw, or double rocker, or into a chair, substantially as specified.
4. The combined rocker and baby-chair, composed of the side plates A E, pivoted seat D, and cross-bar *f*, substantially as herein shown and described.

161,765. PROCESSES FOR ORNAMENTING SURFACES OF GLASS, &c. John H. Crane and Chas. W. Crane, Boston, Mass. [Filed Oct. 21, 1874.]

Brief.—The surface painted with asphaltum, which is then coated with soap; design brushed through stencil-plate with spirits turpentine, and washed out with water; same process applied to silvered glass, after being coated with red shellac paint; the shellac then washed away with alcohol, where it is not protected by the asphaltum; the exposed silver then removed with nitric acid, the glass subjected to the action of the sand-blast, the asphaltum removed with spirits turpentine, and the shellac with alcohol.

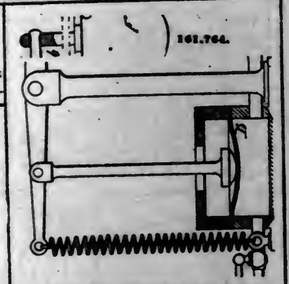
1. The described process of forming designs upon surfaces, consisting essentially of the employment of asphaltum varnish, soap, stencil-plates, and spirits of turpentine, as and for the purpose substantially set forth.
2. The described process of ornamenting silvered glass, consisting essentially of the subject-matter above claimed, with the additional employment of red shellac paint, alcohol, nitric acid, and the sand-blast, as and for the purpose substantially set forth.

161,761. RULERS. George W. Cronecup, Philadelphia, Pa. [Filed May 15, 1874.]

As a new article of manufacture, the ruler A, provided with the receptacle D for containing pens, pencils, &c., the sliding cover C, and the pencil-sharpener E, pivoted to the sides of the receptacle, so as to fold therein, substantially as hereinbefore described and set forth.

161,762. ROOFING. Allan Cummings, New York, N. Y. [Filed Mar. 17, 1875.]

In combination with the roof A of a building covered with water-proof felting or paper *a'* the strips of wood *a a* and *b*, fastened thereto at suitable intervals, dividing the roof into a series of sections inclined from its center, into which sections is placed a coating of composition and gravel, substantially as and for the purposes as herein shown and described.

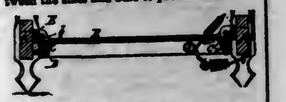


161,763. HOSE-MOULDS. Mosely S. Curtis, Long Island City, assignor of one-half to W. McCollum, New York, N. Y. [Filed July 1, 1874.]

Brief.—Attached to the end of a nozzle is a tip of rubber, having a cylindrical bore and an inverted bell-shaped exterior form. A sleeve encircling the tip is arranged to be forced outward, for contracting the sectional area of the nozzle at its end without changing abruptly the direction of the water.

1. A nozzle provided on its end with a flexible rubber tubular tip, attached rigidly thereto, the said tip being of inverted bell shape, or inverted conical exterior form, in combination with a stretching-sleeve of similar internal contour, encircling the said tip, and arranged to be forced in a direction from the end of the nozzle, the rubber acting by its own retractile force to draw itself back through the small end of the sleeve, thereby diminishing its bore.
2. The combination of nozzle A, tip B, stretching-sleeve D, and mechanism for driving the said sleeve in a direction from the end of the nozzle, substantially as and for the purposes set forth.
3. The tip B, made of flexible rubber, of inverted frustum of a cone, or inverted conical exterior form, and provided with a cylindrical bore, substantially as described.

161,764. AUTOMATIC REGULATING DEVICES FOR STEAM-ENGINES. Alex. de Beaumont, Philadelphia, Pa., assignor of one-half his right to John Weidig and Charles Yockel, same place. [Filed Dec. 14, 1874.]

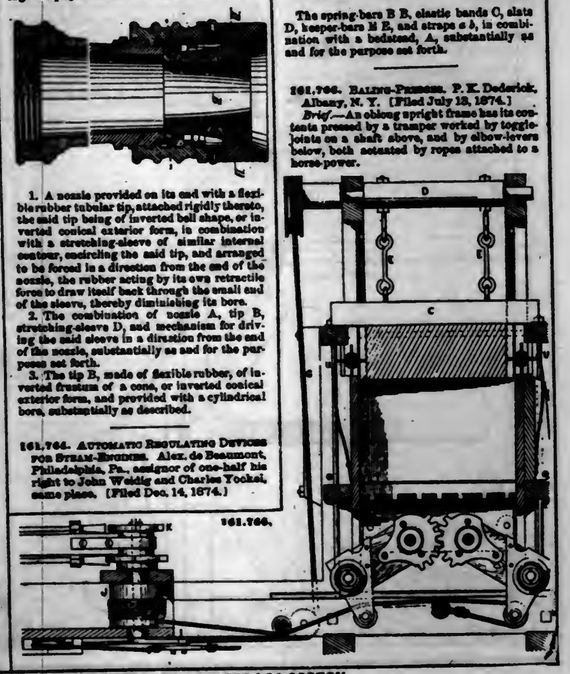


161,764.

A steam-engine regulator, in which are combined the following elements—namely, an elastic loaded diaphragm or piston, B, a chamber, I, beneath the same, the exhaust-pipe or exhaust-passage of the engine, a pipe, *b*, forming a communication between the exhaust-pipe and the chamber, an outlet, *c*, from the latter, a regulating-valve, F, and mechanism whereby the pulsating movements of the diaphragm or piston are communicated to the said regulating-valve, all substantially as set forth.

161,765. SEED-BOTTOMS. James L. Decker, Wayne, Mich. [Filed Nov. 7, 1874.]

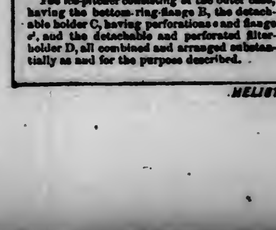
Brief.—The slats rest on transverse spring-bars suspended from the side rails by elastic bands, and the slats are kept in place by transverse bars bearing on them at their ends. Rubber or other elastic straps are placed between the slats and bars to prevent noise.



The spring-bars B B, elastic bands C, slats D, keeper-bars E E, and straps *a b*, in combination with a bedstead, A, substantially as and for the purpose set forth.

161,766. BALING-PRESSES. P. K. Dederick, Albany, N. Y. [Filed July 13, 1874.]

Brief.—An oblong upright frame has its contents pressed by a tramper worked by toggle-joints on a shaft above, and by elbow-levers below, both actuated by ropes attached to a horse-power.



161,766.

1. In a baling-press, the combination of the roll D, tramper C, and toggle or jointed connection F, constructed and operating as and for the purposes set forth.
2. In a baling-press, the retaining-rolls U U, substantially as and for the purpose set forth.
3. The retaining-wedge T, in combination with the springs S and box A, substantially as and for the purpose set forth.
4. The combination of the ropes O, swivel H, crank I, shaft and ratchet K, capstan-drum J, and horse-lever P, substantially as and for the purpose set forth

---

161,767. RUNNING-GEARS FOR CARRIAGES AND WAGONS. Henry Dibel, Ridgway, Pa. [Filed Feb. 13, 1875.]

1. The combination of the axle, bounds, sand-board, and holding-clips, the clips being placed around the sand-board and axle and through the bounds, as set forth.
2. An axle provided with a sand-board, C, bounds B, and clips E, all secured by said clips firmly to the neck *d* of the thimble-skein D, as set forth.

161,768. SELF-CLOSING FAUCETS. Patrick W. Doherty, Boston, Mass. [Filed Dec. 26, 1874.]

1. The combination, with a faucet having a valve provided with a vertical stem projecting through the cap of the faucet, of the two pivoted levers, both operating upon the stem, for raising the valve from its seat, and a spring encircling said stem, for closing the valve after the levers have been released, substantially as described.
2. The combination, with the pivoted levers E E, both operating upon the vertical stem of the valve, of the sliding clamping-ring, and a spring for closing the valve after it has been raised by the levers and clamp, substantially as described.

161,769. ICE-PITCHERS. Louis Evans, Pittsburg, Pa. [Filed Dec. 31, 1874.]

The ice-pitcher consisting of the outer case, having the bottom-ring-flange B, the detachable holder C, having perforations *c* and flange *c'*, and the detachable and perforated filter-holder D, all combined and arranged substantially as and for the purpose described.

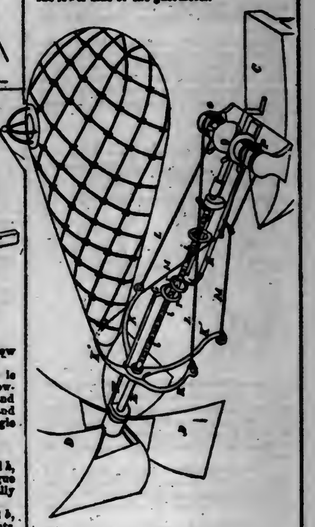
161,769.

161,770.

161,770. SULKY-PLOWS. John Fay, New Boston, Mich. [Filed Jan. 22, 1875.]

Brief.—A guide-frame for the beam is swivaled beneath the axle in which the plow-beam is held at work, by a notched bar and spring, or lifted by chains from the front and rear ends, connecting with a pulley and single lever.

1. The pulley G, lever H, ratchet *g*, pawl *h*, and chains I F, in combination with the tongue and plow-beam of a sulky-plow, substantially as and for the purpose set forth.
2. The combination of the bolt *a*, swivel *b*, guide-bars D D, set-screws *c c*, eyebolt *d*, nuts *e*, and braces E E', in combination with the axle and pole to receive and guide a plow-beam, substantially as described.

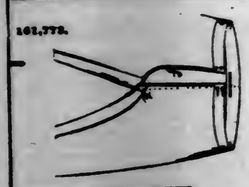


161,771. AERIAL TOYS. Peter B. Fernandez, San Francisco, Cal. [Filed Feb. 2, 1875.]

The apparatus consisting of the propeller D, with its driving mechanism, and the containing-case C, when mounted upon the arm B, so pivoted as to be susceptible of rotation in a horizontal plane, substantially as herein described.

161,772. AERIAL AND MARINE GYRATORS. Peter B. Fernandez, San Francisco, Cal. [Filed Feb. 2, 1875.]

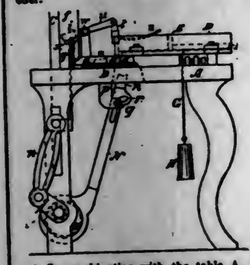
Brief.—The suspending-netting is so arranged that the balloon will stand with its major axis horizontal, and the car is suspended beneath the larger portion of the gas-holder. The propeller may be made in any suitable form, and mounted on a short rigid shaft, which turns in boxes upon a frame or bar. The rear end of this bar is connected by a hinge-link, admitting of motion in any direction, with the forward end of an inclined bar, which extends down to the car, and by means of which the whole device is suspended along the lower side of the gasometer.



1. The gasometer A, made conical, as shown, and having the car C suspended beneath the larger and more buoyant end, while the propeller D is placed in front of the smaller end, so that it can be turned to greater angles and control the movements of the balloon, substantially as herein described.
2. The propeller D, constructed as shown, and mounted upon the frame F, having a universal-joint connection, O, with the inclined bar H, so that it can be turned in any direction, substantially as herein described.
3. The arms K K', extending from the frame F, and provided with the cords L and M, together with the drums O and P, placed within the car for the purpose of turning the propeller, substantially as herein described.
4. The flexible shaft, consisting of the cylindrical jointed sections *f f*, united as shown, and passing through the guides *r r* at the joint G, so as to unite the rigid shafts E and J and rotate the propeller in any position, substantially as herein described.
5. An aerial machine, consisting of the gasometer A, having the car C and propeller D attached to it relatively, as shown, and united by the inclined bar H, said propeller being so mounted as to allow it to be turned in any direction, and rotated, by means within the car, through the medium of a flexible shaft, *f f*, substantially as herein described.

161,773. DRAWERS. John J. Fitz Patrick, Philadelphia, Pa. [Filed Nov. 21, 1874.]

A new article of manufacture a pair of drawers, one of the front sides of which from the crotch upward is cut in a curved line, while the other front side is cut in a diagonal or straight line, the latter overlapping the former in the crotch, substantially as and for the purpose set forth.

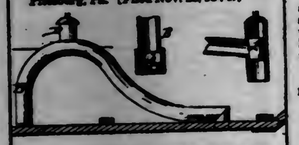


HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

161,773.

161,774. COUNTER-PRESSES. I. Frechette, St. Hyacinthe, Canada. [Filed Mar. 10, 1875.]

Brief.—The stock is cut into blanks of suitable form, which are placed in a box or trough, and automatically pressed forward to an aperture, through which they drop singly into a mold, when, by means of reciprocating dies, they are "struck up" into the form of a stiffener.



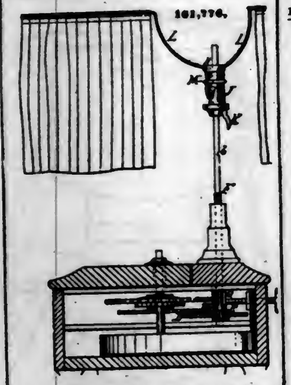
1. In combination with the table A, the bars *a b c*, grooves *d*, raised portion B, dies *e*, mold *q* and frame C, having projections *f f*, with beveled ends *f*, spiral springs *g' g'*, shaft *h*, cranks *i*, and connecting-rods *m*, substantially as and for the purposes described.

2. In combination with the table A and mold *q*, the die *n*, rod N, provided with the slot *r*, eccentric *s*, swage *p*, and guide-pin *q*, substantially as and for the purposes described.

3. In combination with the table A, the feeding-trough D, having slot *x*, board E, bar F, cord G, weight H, and spring *z*, substantially as and for the purposes described.

4. In combination with the trough D, the block *t*, lever *u*, pivot *w*, pin *v*, and spring *y*, substantially as and for the purposes described.

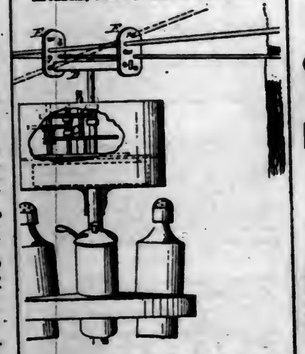
161,775. MEANS FOR DISCHARGING BILGE-WATER FROM VESSELS. Chas. M. Gearing, Pittsburg, Pa. [Filed Nov. 21, 1874.]



The combination, with a boat, of a siphon, B, leading from the well, with its upper part extended above the water-line, and passing through the bottom or side of the boat, substantially as set forth.

161,776. AUTOMATIC FANS. John Gilliford and John M. Hoffman, Spruce Hill, Pa. [Filed Mar. 12, 1875.]

Brief.—Relates to the fan-shaft, the adjustable casket, and the attachment of the fan-arms to the same.



1. The revolving shaft F, having notches *h*, in combination with the adjustable sleeve *i*, having spring-catch J and lever K, the clock-gearing, and the regulator, consisting of the screw P and the spring Q, substantially as and for the purposes described.

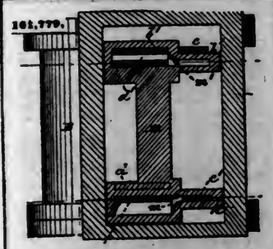
161,776.

2. The sleeve I, having rings M and N, holes *d* and *f*, and notches *e*, in combination with the arms L, having their ends bent at right angles, provided with notches *c*, and sprung outwardly, substantially as and for the purposes described.

161,777. TABLE-FANS. Christian Good, Arcanum, Ohio. [Filed Feb. 4, 1875.]

In combination with a table-fan operated automatically, the coupling described, consisting of the bar D and the perforated and plates E E, for adjusting the fans at various lengths, heights, and inclinations, substantially as set forth.

161,778. COMPOSITIONS FOR FILLING THE PORES OF PAPER. George H. Goodwin, Boston, and George W. Seaverns, Lawrence, Mass.; said Seaverns assignor to said Goodwin. [Filed Apr. 1, 1874.]



Brief.—Carbonate of lime is supposed to be surface-converted into sulphate by a quantity of acid too small to effect complete conversion, and in this state is used as a filling for fiber in the pulp.

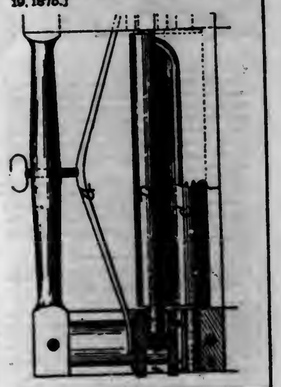
A filling for the fibers of paper, consisting of calcic carbonate treated with from three to twenty per cent. of sulphuric acid, substantially as and for the purpose described.

161,779. VALVES FOR COMPOUND ENGINES. Stephen B. Grosscup, Newark, N. J. [Filed Jan. 12, 1875.]

Brief.—The side extension of the valve serves to conduct the steam from the high-pressure to the low-pressure cylinder, the induction-ports being on a line transverse to the cylinders.

161,779.

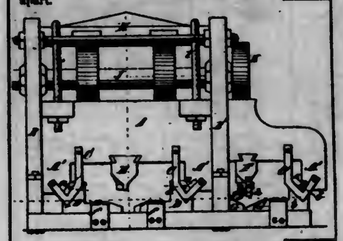
The valve D, constructed with connecting passages or apertures *n n'* between the cavities or hollow face portions *g g'* and *h h'* of the valve, in combination with the ports *b b'*, *c c'*, and *d d'* in the valve-seat, the whole being arranged for operation substantially as shown and described.



161,780. PERKING-MACHINES. Thos. Hagerty, New York, N. Y., assignor to John A. Pickersgill, same place. [Filed Dec. 2, 1874.]

Brief.—The cutting-blade and anvil are adjusted to any tension by means of the lever and adjusting-screw.

In a pinking-machine, the frame A having cutting-wheel D, in combination with the bifurcated lever C, anvil B, and adjusting-screw E, all constructed as and for the purpose set forth.

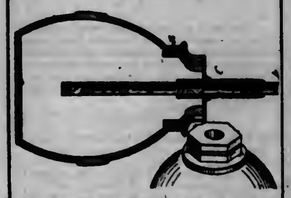


161,781. WRINGERS. Alex. W. Hall and Albert E. Hall, Adrian, Ohio. [Filed Feb. 19, 1875.]

The combination, with the standards A of a clothes-wringer, of the journal-boxes F for the upper roller, constructed with the recesses *f*, vertical portions *f'* of reduced thickness, and projecting guide-flanges *f''*, substantially as and for the purpose described.

161,782. MACHINES FOR MAKING OX-SHOES. Joseph Hall, Napanoch, N. Y. [Filed Feb. 27, 1875.]

Brief.—Chamfered pendants A' push the dies forward as the beam descends, while angular bars C engage with projections *c* on the dies as the beam ascends, and throw them apart.

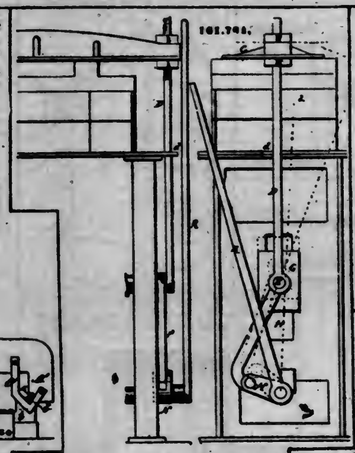


1. The die-beam A, with the projections or pendants A' A' and angular bars C C, in combination with the dies or presses D D, substantially as and for the purpose set forth.

2. The nail-hole marking and cutting or finishing die F, having the points or markers *g g* and the cutter *h*, in combination with the beam A and dies or presses G G F, substantially as and for the purpose set forth.

161,783. OIL-CUPS. James G. Hallas and William N. Weeden, Waterbury, Conn., assignors to Benedict & Burnham Manufacturing Company, same place. [Filed Dec. 31, 1874.]

Brief.—The tube is split at one or both ends, for the purpose of slightly griping at any point the rod placed within it, and thus prevent its coming in contact with the journal. The metallic ring is secured to the neck of the cup by a collar turning and locking into an annular groove formed in the neck.



1. In combination with an oil cup or reservoir, a tube, C, contracted at one or both ends, and the rod D held in suspension in said tube, substantially as and for the purpose specified.

2. The combination of the cap, its neck of other than cylindrical form, and constructed with the groove *d*, the metallic ring E, constructed to pass onto the neck above the groove, and the auxiliary collar *f* set onto the neck, and turned in said groove to interlock with the angles of the neck, substantially as described, to secure the neck to the cap.

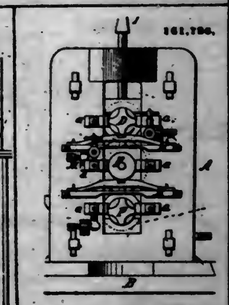
161,784. MOLDING-MACHINES. Thorvald P. Hammer, Branford, Conn. [Filed Feb. 25, 1875.]

Brief.—For banking a proper quantity of sand a thin hoop is provided, which fits inside the flask, so that it may be pressed down with the sand into the flask by the piston. The sprue-pattern is compressible, so that it yields with the pressure on the sand, and is provided with a spring, so as to rise above the surface of the sand on the withdrawal of the piston, thus forming a convenient handle for its removal.

161,785.

161,785. RIDING-SADDLES. Chas. H. Harris, Cedartown, Ga. [Filed Feb. 13, 1875.]

In a riding saddle the spring C, rising from the top of the bow B and terminating at F, and having a leather covering, C', ending in a loop, T, passing under the rod *d* and inclosing the curved rod *e*, to which is attached the seat D, all constructed as and for the purpose described.



161,786. THREE-HIGH ROLLS. Wm. Harris and J. M. Ayer, Chicago, Ill. [Filed Feb. 2, 1875.]

Brief.—The journals of the upper and intermediate rolls rest upon flat springs, and all of the rolls have lateral bearings against the blocks *a a*, secured in the frame. The intermediate roll is hollow, and is kept cool by water passing through it. The upper and lower rolls are cooled by jets of water thrown upon them—troughs, pressed against the rolls by springs, being provided to catch the water, and prevent its descending upon the metal being rolled.

1. The improved three-high rolls herein described, consisting of the top roll D, intermediate hollow roll E, and lower roll F, supported or journaled, one above the other, in a frame, A B, the top and intermediate rolls D E, supported upon flat springs H, and the central hollow roll E, being larger than the others, and adapted to receive through it a constant stream of water, as and for the purposes described.

2. The troughs for carrying off the water, and preventing the same from falling upon the metal, substantially as set forth, in combination with the spiral springs for pressing them against the rolls, and the pipes for supplying the water, as herein described.

161,787.

161,787. CURRY-COMBS. George Havell, Newark, N. J. [Filed Feb. 18, 1875.]

Brief.—The tooth-bar is formed with rib *a* along its base, which serves to strengthen the plate, and is left wide in order to find a broad base and seat upon the back of the curry-comb.

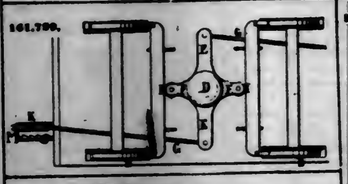
The tooth-bar D, formed with the head or rib *c* at its upper part, and provided with the rivet-prongs *a a*, as set forth.

161,788. BIRD-CAGES. Andw. B. Hendryx, Ansonia, Conn., assignor to Hendryx & Bartholomew, same place. [Filed Nov. 14, 1874.]

Brief.—Friction-rollers upon the arms of a cam-lever, for operating the brake-heads.

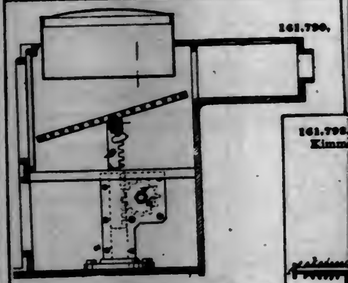
1. In combination with the pan A and lower ring or bar of a bird-cage, the radial bolts C, more or less in number, passing through the pan A, substantially as and for the purpose specified.

2. In combination with the wires centering at the top of a bird-cage, the doubled or grooved ring D inclosing the ends of said wires, and the flanges of said ring struck down outo and so as to bend all the wires at the ends, substantially as specified.



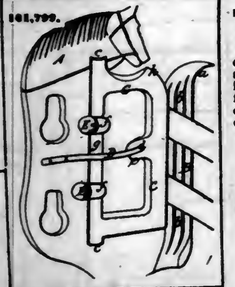
161,789. RAILWAY-CAR BRAKES. Gottlob Hiller, New York, N. Y. [Filed Sept. 11, 1874.]

1. The cam D, having arms E E for connecting with the brake rods or chains, and arms F F, having friction-rollers for operating the brake-heads, all combined for operation from either end of the car, substantially as and for the purpose specified.



2. The combination, with the arms E E and with the brake-heads, of anti-friction rollers I, substantially as specified.

3. The levers K K and detent O, in combination with the brake-rods G and the cam-lever D, substantially as set forth.



161,789.

161,790.

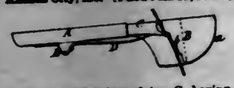
161,789.

161,790. GRATES FOR STOVES. Ambrose N. Hoysradt, New York, N. Y. [Filed Mar. 4, 1875.]

Brief.—The grate may be tilted as well as raised and lowered.

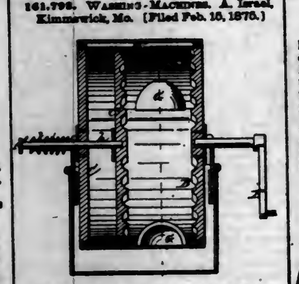
The combination, with a stove-grate provided with mechanism for raising and lowering the same, of a traverse connected at its ends with the said raising and lowering mechanism, and carrying the grate which is journaled thereon, substantially as described, whereby the grate can be turned to dump the contents, whatever the elevation of the same may be, as set forth.

161,791. UMBRELLA-RIB-TIP HOLDERS. A. G. Hubbell, Norwich, Conn., assignor of one-half his right to R. M. Hubbell, same place. [Filed Mar. 20, 1875.]



1. A parasol or umbrella rib-tip holder, consisting of the jointed ring-clasps C C, pivoted to the sliding ring *b* on a ferrule or thimble, B, secured in position on the staff or handle A, substantially in the manner and for the purpose herein shown and described.

2. A parasol or umbrella rib-tip holder, consisting of the oval clasp-ring C', pivoted to the ring *b* upon the ferrule or thimble B, substantially in the manner and for the purpose specified.

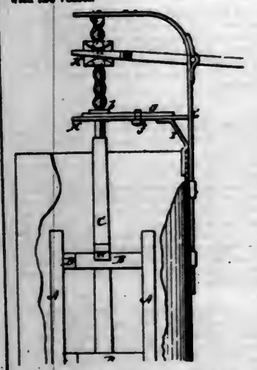


161,792. BEER-HOLDERS. Chas. Hutchings, Kansas City, Mo. [Filed Jan. 18, 1875.]

1. The vertically-hinged jaw C, having a beveled edge and a return upper end, in combination with the vertical branch B of the figure-head A, terminating in an under lip, *c*, and having a beveled and corrugated surface, *a*, substantially as and for the purpose set forth.

2. The combination, with the vertical branch B of the figure-head A, of the vertically-hinged jaw C, socket-bearings *c c*, finger-piece *e*, jockey-vivified guards E *f*, and the spring D, substantially as and for the purpose set forth.

161,793.

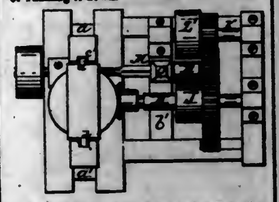


161,793. WASHING-MACHINES. A. Israel, Kimmswick, Mo. [Filed Feb. 10, 1875.]

In combination with the washing-cylinder, having interior corrugated and stationary rubber B, slots *a*, and cups O, the corrugated board C', connected to the rod A, and adjustable within the cylinder by means of the exterior spring *i*, as and for the purposes set forth.

161,794. CHURNS. Thos. B. Jewett, Lawrence, Kans. [Filed Apr. 5, 1875.]

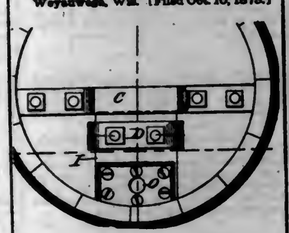
Brief.—The dasher has a reciprocating rotary motion, and, in connection with the operating mechanism, is adjustable to be accommodated to vessels of varying size. The dasher and mechanism are both detachably connected with the vessel.



1. The adjustable churn-dasher herein described, consisting of the vertical bars A A, with arms B B held and adjusted in catches *a a* on the central shaft or bar C, substantially as and for the purposes herein set forth.

2. The combination, with the adjustable churn-dasher A B C, of the screw D, adjustable plate J, nut K, and perforated arm H of the removable frame G H, substantially as and for the purposes herein set forth.

161,795. COTTON-PRESSES. William W. Knowlen, Bastrop, Tex. [Filed Oct. 21, 1874.]



Brief.—A friction-pulley is placed upon the end of an actuating-shaft, that is operated by a vibrating lever, whereby said friction-pulley is brought to bear against the larger pulley, for the purpose of running up the follower, or against the smaller pulley, for the purpose of running it down.

1. The combination of the pulley P on the horizontally-vibrating shaft M, the pulley *l'* on the shaft K, and the pulley J on the shaft H, all arranged in the same horizontal plane, the pulley *l'* being of greater diameter than the pulley J, substantially as and for the purpose set forth.

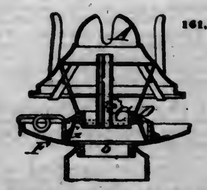
2. The combination, with the horizontally-vibrating actuating-shaft M, of the vertically-vibrating lever O, pivoted to the intermediate brace *b'*, substantially as and for the purpose set forth.

161,796. BEER-CASKS. Peter Knudsen, Weyauwega, Wis. [Filed Oct. 10, 1873.]

A beer-cask, having the cross-bar C secured to the outside of the head for holding the parts securely in place, in combination with the beveled removable section I, having the bar D secured to its outer face, all constructed and arranged to operate substantially as and for the purpose set forth.

161,797. COMBINED WATER-COOLERS AND REFRIGERATORS. John K. Korff, Georgetown, D. C. [Filed Feb. 23, 1875.]

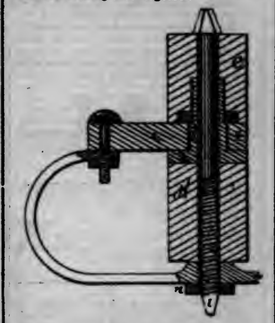
Brief.—A crescent-shaped vessel passes through a relatively small opening, and fits the wall of the cooling-chamber, and affords inner space for a circular vessel.



The combination of the refrigerating-chamber C, having an entrance and a circular perimeter, the crescent-shaped pan D, and inner circular dish, as and for the purpose described.

161,798. LAMP ATTACHMENTS. Theodore C. Lawrence, Ledoga, Ind. [Filed Feb. 6, 1875.]

Brief.—The cup-shaped shelf catches runff and drip. The conical flange makes a tight joint.



161,796.

The cup-shaped shelf F, having the conical flange G, and hinged base D, provided with a spring-catch, *c*, in combination with the elevated lamp-burner cone A, substantially as and for the purpose set forth.

161,799. KING-BOLTS. Cornelius G. Lasear, Chicago, Ill. [Filed Oct. 1, 1874.]

Brief.—A hollow sleeve upon the axle-plate fitting into a socket in the bolster-plate, with a bolt passing through both, and the bolster and axle locking them together.

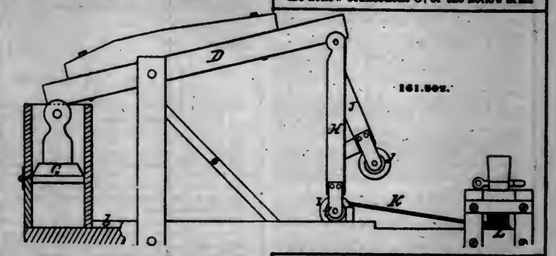
1. Combined with the bolster-plate *c*, having a socket, the axle-plate A, constructed with a sleeve, *i*, fitted to said socket, and a holding device to lock the parts together and prevent accidental displacement, as set forth.

2. The bolster-plate *c*, provided with a socket, and the axle-plate A, formed with a hollow sleeve, *i*, and a holding device to lock the parts together, combined with a tie-bolt, I, extending through said sleeve, and through the bolster and axle, as set forth.

161,800. CARRIAGE-SPRINGS. Cornelius G. Lasear, Chicago, Ill. [Filed Sept. 26, 1874.]

Brief.—Spring composed of side plates and cross-plates, hinged together, and resting upon the running-gear in elastic seats.

1. The side plates D D and cross-plates E E, connected at their ends by hinge-joints, said side plates being attached at their middle to the running-gear, and said cross-plates attached to the front and rear bed-pieces of the body A, all combined to form a body-spring flexible in every direction, all as set forth.



2. Combined with the carriage-spring and the parts of the frame to which it is attached, the interposed elastic cushions F, to absorb vibrations and prevent rumbling, as set forth.

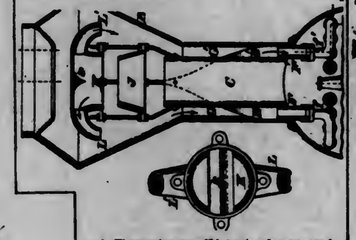
3. The shoe-plate G, combined with the elastic cushion F and spring D, to hold said cushion in place and conceal it from sight, as set forth.

161,801. BOILER-COVERINGS. A. Leydet, Marseilles, France. [Filed Nov. 6, 1874.]

The combination of the solution of gutta-percha or india-rubber with the composition of glycerine, charcoal, sawdust, broom, hair, powdered furnace-slag, and clay, to be used for the purpose set forth.

161,802. COTTON-PRESSES. W. W. Louis, Fresserant, Tenn. [Filed Oct. 8, 1874.]

161,802.



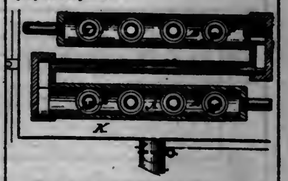
1. The combination, with the lever D and hinged arm H, of the secondary arm J, rigidly secured thereto, substantially as specified.

2. The combination, with the cable K and the lever D, of the arms H J, having pulleys I J upon their lower ends, substantially as specified.

161,803. SPARK-ARRESTERS. Matthew B. Mason, Kansas City, Mo., assignor to himself and Robt. H. Hunt, same place. [Filed Mar. 26, 1875.]

Brief.—The deflector is provided with downward-turned nozzles, which concentrate the volume of sparks, and force them in jets into conducting-tubes leading to the fire-box of the locomotive.

161,803.



1. The spark-crown K *k*, having down-turned nozzles L L' for concentrating the products of combustion in forced jets, in combination with concentrating-chambers G G' beneath said nozzles, and conducting-tubes leading from the latter, substantially as herein described, for the purpose set forth.

---

2. The combination, with the stack-shell B and central chimney C, of the cone J, the adjustable deflector K, having the lateral concentrating-nozzles L L', the helical flanges D D' E E', and conducting-pipes F *f* F' *f'* leading through two or more of the upper smoke-flues of the boiler to the fire-box, as herein shown and described, for arresting, concentrating, and carrying back the gravest emanations of the burning fuel, in the manner specified.

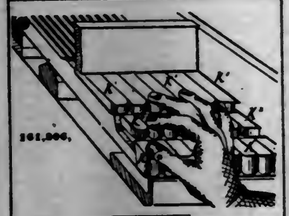
161,804. STEAM-RADIATORS. J. Mason, Paterson, N. J. [Filed Jan. 12, 1875.]

Brief.—The construction is designed to make effectual provision for the drainage of the water of condensation, and for the expansion and contraction of the parts without injury to the joints.

The combination, with two or more rows of steam-tubes, E F, their base-pipes A B, and the hollow connections G, of the hollow arms C C at reverse ends of the radiator, and the connecting-pipe D, substantially as and for the purposes herein set forth.

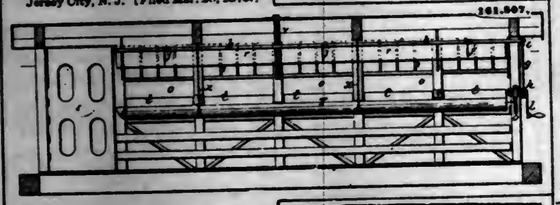
161,805. BRUSH AND MOP HOLDING DEVICES. Richard C. May, Sacramento, Cal. [Filed Dec. 28, 1874.]

Brief.—The clamp that holds the mop secures the brush in its seat, also. The arm that holds the mop along the handle carries a device for twisting it to wring it, and can be slid down the handle to be brought into use.



In combination with the handle A and head-block B, provided with the angle-plate, cross-bar, and spring-arm C, the T-rod *f g*, the loosely-attached arm J, provided with the tubular head *e*, and the rod *p*, substantially as and for the purpose set forth.

161,806. KEY-BOARDS FOR MUSICAL INSTRUMENTS. Martin H. McChesney, Pontiac, Mich. [Filed Oct. 21, 1874.]



Brief.—A row of double-faced keys, arranged in a whole-tone series, have, between said double faces, an alternating row of single-faced keys, also arranged as a whole tone series, but the two series being a half-step apart.

The improved key-board herein described, consisting of a series of keys having the inclined and double faces K K' and the inclined-faced keys K'', all combined and arranged as and for the purpose described.

161,806.

161,807. BOOT-CARS. John R McPherson, Jersey City, N. J. [Filed Mar. 20, 1875.]

1. Combined with a cattle-car, longitudinal hinged troughs, to be emptied outward from the car in the act of elevating them, substantially as set forth.

2. A car-body having longitudinal openings O in its sides, in combination with hinged troughs T beneath openings O, and to operate to close them when elevated, substantially as set forth.

3. Water-sheds n within openings O in the sides of the car, in combination with hinged troughs, adapted to empty outward when elevated, substantially as set forth.

4. The flanged water sheds n, in combination with the troughs T, having overlapping flanges t at their hinge edges, substantially as set forth.

5. The troughs T, having beveled ends s, in combination with a car-body having doorways D in the sides and at the ends, as and for the purpose set forth.

6. Spark and water proof cribs C, in combination with a stock-car body, substantially as set forth.

7. The sliding rack-covers r, in combination with the cribs C, having racks s within the car, substantially as and for the purpose set forth.

8. The supply-doors or covers q of the cribs, consisting of hinged sections of the car-roof, having overlapping edges, in combination with erect flanges p on the contiguous portions of the roof, to exclude sparks ~ water, as set forth.

9. The combination, with the hinged troughs T, of apparatus for depressing them by a positive force, substantially as set forth.

10. The combination, with the hinged troughs T, of the concentric cogged sectors e, shafts n, pinions m, and hand-cranks l, for operating the same from the car-platforms, in the manner and for the purposes set forth.

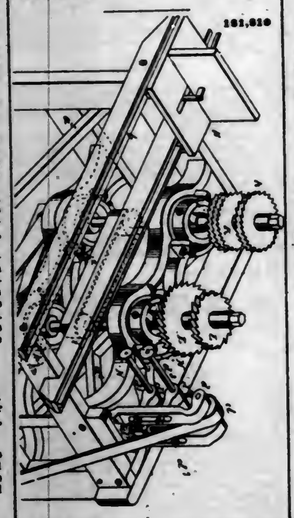
11. The combination of the hand-cranks l, shafts n, pulleys h i, bands g, windlass shafts k, and cords or chains j, for raising and lowering the sliding rack-covers from the platforms, substantially as set forth.

12. The shafts n, having hand-cranks l, pinions m, and pulleys h thereon, in combination with the cogged sectors e and the bands g, pulleys o, elevated windlass-shafts k, and cords or chains j, for simultaneously operating the hinged troughs and rack-covers, as set forth.

13. The combination, with the hinged troughs T, of the stay-chains s, as and for the purpose set forth.

161,808. WHIFFLETREE-COUPLINGS. Benj. H. Merriman, New Haven, Conn., assignor of one-half his right to C. A. Scranton, same place. [Filed July 20, 1874.]

The whiffletree-coupling consisting of the plate A, with its circular flange C and threaded flange D, combined with the plate B, with its circular flange E and threaded boss F, substantially as set forth.



161,809.

1. As a new article of manufacture, a leather outer sole for a boot or shoe, which extends from the toe to the heel, and is cut out at the heel, so as to encompass the same, substantially as described.

2. The outer sole D, cut out at *d* so as to leave an annular rim, *f*, in combination with the wooden heel and shank B, rabbeted at *a* and grooved at *b*, the insole *c*, and the upper and counter, substantially as and for the purpose described.

161,810.

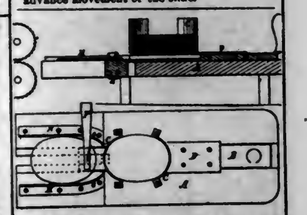
161,809. BOOTS AND SHOES. Wm. Meyer and Henry Freiburg, Quincy, Ill. [Filed Mar. 23, 1875.]

Brief.—A lift is punched from the sole at the heel portion, so that it may encircle the heel of the shoe.

161,810. MACHINES FOR RELISHING TENONS AND CUTTING WEDGES. J. H. Millspaugh, Williamsport, Pa. [Filed Feb. 9, 1875.]

Brief.—Two vertical saw-arbors carry each a series of saws, which, in connection with two horizontal arbors carrying relishing-saws, relish the tenons and cut the wedges.

1. The combination of the vertically-adjustable frames d^3, the vertically-slotted arms *d*, the pulley d^1, the shafts d^2, and the saws N, constructed and arranged substantially as described and shown.



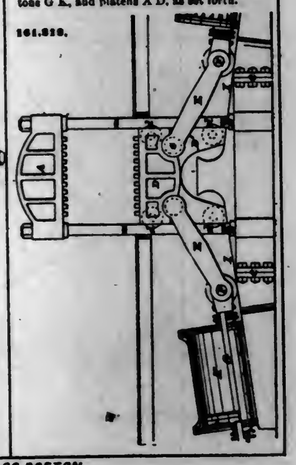
2. The adjustable arbors H and I, in combination with the gimbals *h* and slides h^1, constructed and arranged substantially as described and shown.

3. In a single machine, the combination of the adjustable arbors H and I carrying the saws K and L, the adjustable frame d^3 carrying the shafts d^2, and saws N, and carriage B, the several parts constructed substantially as described and shown.

161,811. MECHANISMS FOR FEEDING HEEL-STIFFENERS OR COUNTER-BLANKS. Stephn. Moore and Geo. F. Moore, Sudbury, Mass., assignors to Stephen Moore and H. Rogers, same place. [Filed Mar. 15, 1875.]

Brief.—The uncrimped blanks are placed in a pile in a receiver, and are moved forward singly by a reciprocating slide, which acts upon the lowermost blank in the pile at each advance movement of the slide.

161,812.

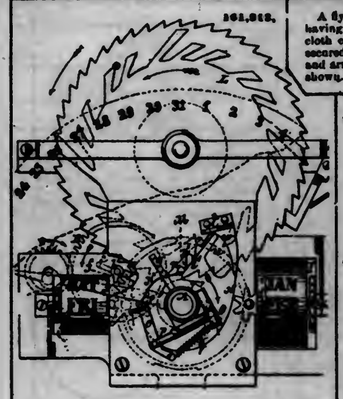


The combination of the slide B, provided with the plate D, and the spring or presser F with the table A, provided with the hopper C and the guides H H, all substantially as and for the purpose described.

161,813. PRESSES FOR COTTON-BALES. E. L. Morse, St. Louis, Mo., assignor of one-half his right to J. W. Branch, same place. [Filed Dec. 26, 1874.]

The inclined tracks J J, in combination with the push-bars E E, steam cylinders and pistons G K, and platens A D, as set forth.

161,813.



161,814.

161,814. WHIFFLETREE-COUPLINGS. Benj. H. Merriman, New Haven, Conn., assignor of one-half his right to C. A. Scranton, same place. [Filed July 20, 1874.]

The whiffletree-coupling consisting of the plate A, with its circular flange C and threaded flange D, combined with the plate B, with its circular flange E and threaded boss F, substantially as set forth.

161,812.

161,812. CALENDAR-MOVEMENTS OF CLOCKS. Thos. H. Mott, New York, N. Y. [Filed Dec. 10, 1874.]

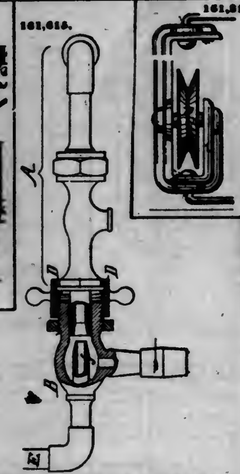
Brief.—A notched incline, a four-year wheel with teeth of varying length, and a spring-dog with downwardly-projecting pin, act in combination, so that in the longest months all the notches are left exposed for engagement with the pin, and in the shorter months one or more of the notches are covered by the longer teeth of the wheel, to permit the pin to pass directly to the notch representing the first of the month, preparatory to a new revolution.

1. The combination, with the notched incline M, of the mutilated covering-wheel L and a monthly revolving dog or device, O, for operation of and in connection with the spindle A, which carries the index used to show the dates of the month, substantially as and for the purposes herein set forth.

2. The monthly revolving wheel F, constructed to slip, as described, in combination with the single toothed driver *f*, the spring-dog or device O, the guide N, the notched incline M, the index-spindle A, and the monthly dial I, essentially as specified.

3. The combination of the incline *t*, the curved rib *u*, and the scroll-guide N with the notched incline M and the spring-dog or device O, constructed to operate as described.

4. The toothed driver *f*, constructed to lock the wheel F, with provision for slip of the latter at the end of the month, as described, in combination with the notched incline M and spring-dog or device O, substantially as specified.



5. The combination of the monthly revolving single toothed cam or projection *f*, the ratchet-wheel K, the notched incline M, and the mutilated covering-wheel L, essentially as described.

161,814. FLY OR INSECT TRAPS. Henry G. Nelson, Prairieville, Mich. [Filed Feb. 12, 1875.]

A fly-trap consisting of the opaque shell A, having the glass-top apertures *a*, and wire-cloth cone C, resting upon and removably covered to the depressed bottom D, constructed and arranged substantially as described and shown.

161,815.

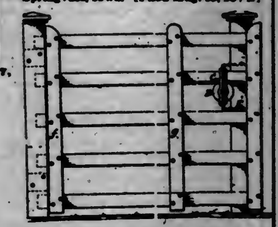
161,817.

161,815. INJECTORS. William H. Newell, Philadelphia, Pa. [Filed Mar. 6, 1875.]

Brief.—The injector consists of two main parts, coupled together by a nut, so that the adjustment of the steam-nozzle can be readily accomplished, and the injector taken apart for cleansing purposes.

1. An injector composed of two parts, A and B, combined with the coupling-nut D, substantially as and for the purpose herein described.

2. The two-part injector and coupling-nut D, in combination with steam and suction pipes E and F, arranged to yield in the manner and for the purpose described.



161,816. COMBINED FRUIT-PRESSES, FILTERS, AND FUNNELS. George A. Newman, Brooklyn, N. Y. [Filed Feb. 18, 1875.]

1. The lever C, hinged to the frame A, and provided with the removable plunger B, in combination with the removable perforated bowl B, fitting a recess in the supporting-frame, and the funnel F, fitting the grooves *e'* in said frame, all as and for the purpose described.

2. The combination, with the perforated bowl B, of the removable funnel F, arranged in the frame A beneath the said bowl, and the filter G, arranged within the funnel, as and for the purpose described.

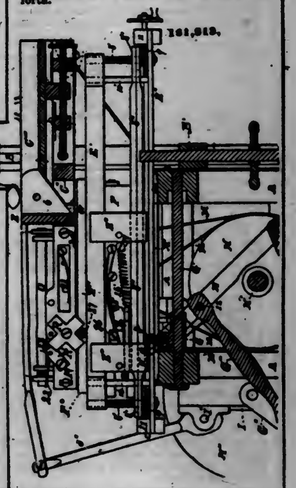
161,817. FARM-GATES. Le V. W. Noyes, Springville, Iowa. [Filed Aug. 16, 1874.]

1. A gate-hanger bent rectangularly at its lower end, so as to form journal-bearings for the groove-pulley D, and at its upper end bent at right angles and provided with perforations *a a*, for the reception of bent headed bolts E E', substantially as described.

2. The hanger C, supported above and below the center of the grooved pulley D by means of the bent bolts E E', substantially as described.

161,818. MACHINES FOR TURNING CHAIN-ROUNDS. Geo. W. Parker, Gardner, Mass. [Filed Oct. 13, 1874.]

Brief.—The rounds pass into the machine in succession, and are cut to the proper length, and tenons formed upon each end, by automatically-operating mechanism.



1. The combination of the feed-table proper O'''' with the side pieces O''', said feed-table and side pieces being adjustable in a horizontal plane, and operated to move simultaneously in opposite directions, for the purpose of varying the size of the feed-opening or throat, substantially as and for the purposes set forth.

2. The combination, with the vertically-adjustable frame B', of the horizontally-adjustable feed-table O'''' and side pieces O''', arranged and operating substantially as shown and set forth.

3. The combination, with rails E', of guide-bars $8''$, stock-supporting rail E', and intermediate right and left threaded adjusting-screws 5, by the rotation of which said stock-supporting rails and guide-bars are moved simultaneously in opposite directions, substantially as and for the purposes set forth.

4. The combination, with stock-supporting rails E', guide-bars $8''$, rails E'', screws 5, and shafts 10, of gears 9 and worm-gears $9'$, substantially as and for the purposes set forth.

161,818.

3. The combination of slide-plates F with the guide-pieces E'', guide-bars D'', and stock-supporting rails E', substantially as and for the purposes set forth.

6. The combination, with the slide-plates F, of the plates F' and arms F'', adjustable to and from one another, to vary the size of the stock-receiving openings between them, substantially as and for the purposes set forth.

7. The combination, with slide-plates F, plates F', and arms F'', of hinged yoke-piece b and adjusting-screw c, substantially as and for the purposes described.

8. The combination, with slide-plates F and arms F'', of springs 25 and pins or screws 26, substantially as described.

9. The combination, with the guide-rods g g and slide-plates F F, of the rods 16 and links n n' and 15, substantially as and for the purposes set forth.

10. The combination, with the slide-plates F, guide-rods g, and links n n' and 15, of the rods 16 and springs 16', substantially as and for the purposes set forth.

11. The combination, with the slide-plates F and tenoning-shafts l, of the guide-rods g, connected with the plates F, and provided with adjusting collars and screws g' g'' and arms h, connected with and adapted to impart endwise movement to the tenoning-shafts, at the times and in the manner set forth.

12. The combination, with the stock-holding plates F', of rock-shafts O, arms P P'', and adjusting-screws Q, substantially as and for the purposes stated.

13. The combination, with the adjusting-screws Q, of the slotted bearings P'' and turning bearings 18, substantially as and for the purposes set forth.

14. The combination, with the stock-supporting rails E', of the stock-holding plates F' F', plates F F, and arms F'', substantially as and for the purposes set forth.

15. The combination, with the stock-holding plates F', of the self-adjusting plates 19, substantially as and for the purposes set forth.

16. The combination, with stock-holding plates F' and self-adjusting plates 19, of springs 21, for the purposes set forth.

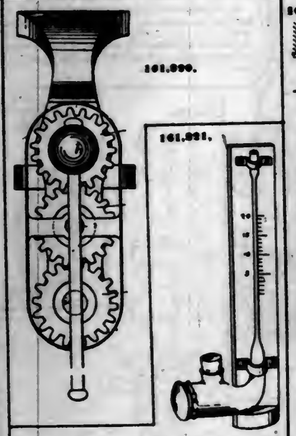
17. The combination, with stock-supporting rails E', and the sliding stock-carrying frame moving thereon, of the stock-holding plates, arranged above said sliding frame, and the star-wheels and holding-dogs, mounted on and carried by said plates, under the arrangement and for operation as set forth.

18. The combination, with sliding plates F, slide-rod G', and cranks G'', of pins or projections c, tubular sliding piece G c', rod c', pitman G''', coupling-pieces H, and hinged swinging piece H', substantially as and for the purposes set forth.

19. The combination of the laterally-projecting rod c with the plates F and sliding piece G c', substantially as described, whereby both slide-plates will be thrown forward and back the same distance each time, whatever the lateral adjustment of the sliding plates A' may be.

20. In combination with the reciprocating stock-carrying frame, the feeding, cutting-off, and tenoning mechanisms, mounted each side of the said reciprocatory frame, on frames adjustable in a horizontal plane at right angles to the path of movement of the said reciprocating stock-carrying frame, substantially as shown and described.

161,819. BALE-TIES. John W. Philp, Humboldt, Tenn. (Filed Mar. 29, 1875.)



The wire bale-tie, having the coil e at the end, in combination with the link l, to hold the tie end, and be itself secured in place by the turned-up end c, as shown and described.

161,820. VISES. Matthew Fisken and William Fisken, Birmingham, England. (Filed Nov. 20, 1874.)

Brief.—The fixed jaw is formed with elongated bearings, screw-threaded in rear and plain in front, for the reception and support of the screw-rods.

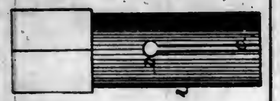
The combination, with the movable jaw carrying the geared screw-rods h i, having plain cylindrical front portions h' i', as described, of the fixed jaw formed with elongated bearings, screw-threaded in rear and plain in front, for reception and support of the screw-rods of the movable jaw, all constructed substantially as shown and set forth.

161,821. SPHYGMOSCOPES. Erastus A. Pond, Rutland, Vt. (Filed Mar. 23, 1875.)

Brief.—Membrane C applied to the pulse. The vibration thereof, caused by the pulse, is communicated through the body A of the liquid to a small column, b, the vibration being thereby multiplied and rendered visible.

1. A sphygmoscope having a liquid-receptacle provided with an opening, adapted to be applied over the pulsating part or body, in combination with a terminal tube, of small diameter, communicating with said receptacle, as set forth.

2. The combination of the liquid-receptacle provided with the open end for application over the pulsating part, as described, the membrane closing said end, and the terminal tube communicating with said receptacle, substantially as shown and set forth.

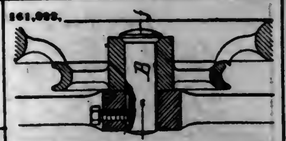


3. In combination with the liquid-receptacle of the sphygmoscope, a piston or its equivalent, as described, to regulate the normal height of the liquid column in the instrument, as set forth.

4. In combination with the liquid-receptacle of the sphygmoscope, the auxiliary reservoir, and the piston for regulating the supply of liquid from said reservoir to the receptacle, as set forth.

5. The terminal tube formed with a slender stem and enlarged ends, substantially as and for the purposes set forth.

161,822. CANNON-PINIONS FOR WATCHES. Sanford Ramey, Pataskala, Ohio. (Filed Aug. 6, 1874.)



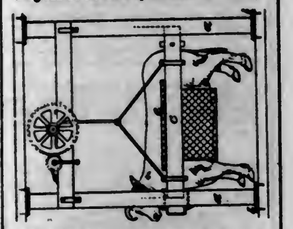
Brief.—A cannon-pinion is firmly united to the upper portion of a friction-sleeve, and the lower portion of the sleeve is split part of its length, to form a spring to clasp the arbor.

1. The combination of the arbor E, split friction-sleeve A, and cannon-pinion F, connected and operating substantially as and for the purpose specified.

2. The friction-sleeve A, with solid or unfractured head B, and having a single split, C, terminating in the cylindrical portion in an eye, D, substantially as and for the purpose specified.

161,823. JOURNALS FOR SEWING-MACHINE FLY-WHEELS. Geo. Rabbitt, Philadelphia, Pa., assignor to the American Button-Hole Overseaming and Sewing-Machine Company, same place. (Filed Feb. 16, 1875.)

The combination of the hub a of the balance-wheel, with the pin B, as fitted to the frame as to be adjustable therein, and having a conical head, f, and a longitudinal recess, h, adapted to the set-screw i in the frame, all as set forth.



161,824. RIDING-SADDLES. Robt. Reiman, Sullivan, Ill. (Filed Feb. 15, 1875.)

A saddle constructed of metal castles A B, metal plates C C, and wood filling-pieces D D, substantially as and for the purposes herein set forth.

161,825. CATTLE-SUPPORTS. F. H. Ralph, London, England. (Filed Feb. 6, 1875.)

Brief.—The device is for use upon cars or vessels for transporting stock. The stanchions or frame can be taken down when desired, and stored away. The side strips that hold the sling can be elevated by a windlass.

The upright stanchions a, shoes b, side bars c, and rollers c, supporting the sling d, with a windlass above connected to said side bars, all combined, arranged, and operating substantially as herein set forth and shown.

161,826. TRILL-COUPLINGS. Clark Robinson, Eau Claire, Wis., assignor of one-fourth his right to Charles Desilets, same place. (Filed Jan. 28, 1875.)

Brief.—Cylindrical head of shaft-iron slips into hollow cylindrical socket. Wings protect the slot from dust. Dovies locked by slots and lugs on reduced end of socket, and on cap with octagonal periphery. Spring attached to socket presses on latter.

1. In combination with the socket A, provided with the pawl c', groove c'', and notches c''', the cover C, having the flange e, and lugs f and f', substantially as and for the purpose set forth.

2. In combination with the cover C, having the periphery formed of a series of plane faces, the spring D attached to the socket A and pressed against said faces, substantially as and for the purpose set forth.

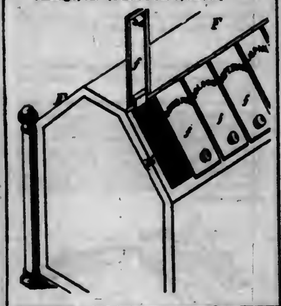
3. In combination with the thill-iron B and the slot a, of the socket A, the concentric flanges secured to the neck b to inclose said slot, substantially as and for the purpose shown and described.

4. The combination of socket A, having slot a, neck a', groove a'', and notch a''', the thill-iron B, provided with neck b, head b', and flanges b'' and b''', the cover C, having flange e and lugs e e', the spring D, and the rubber disks E and E, substantially as and for the purpose set forth.

161,827. FERTILIZERS. Saml. Seitz, Shrewsbury Township, York County, Pa. (Filed Mar. 10, 1875.)

1. The process of manufacturing a body for fertilizers, the same consisting in scorching and drying oyster-shells so as to render the same friable, without decomposing the nitrogenous matter connected with them, as and for the purpose set forth.

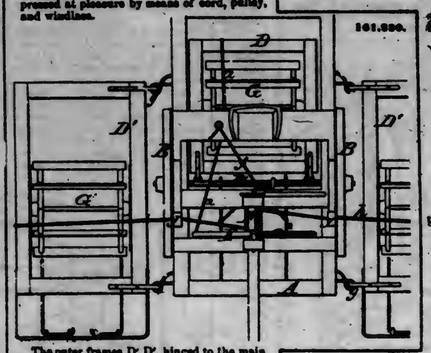
2. The base or vehicle described for fertilizers, consisting of oyster-shells scorched, dried, and ground, substantially as set forth.



161,828. TOBACCO-HANGERS. S. C. Shelton, Asheville, N. C. (Filed Mar. 8, 1875.)

Brief.—The leaves are strung upon a wire, which is fastened to a bar beneath it, and upon opposite sides of the latter the leaves are alternately arranged to separate them.

A tobacco-hanger, consisting of the beam or bar A, and rods or wires B secured thereto, substantially in the manner and for the purpose specified.

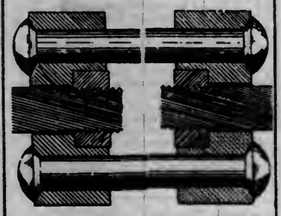


161,829. TEA-CADDIES. William T. Sherer, Chicago, Ill. (Filed Feb. 6, 1875.)

As a new article of manufacture, the beer-inbefore described caddy, containing a series of parallel compartments, G and G, inclosed upon their upper and opposite sides F and F by the sloping hinged covers f and f, substantially as and for the purpose specified.

161,830. CORNSTALK-CUTTERS. Casper B. Sights, La Harpe, Ill. (Filed Jan. 9, 1875.)

Brief.—A frame mounted on two wheels carries a revolving cutter between them, of the usual form of construction. Upon each side of the main frame is hinged a supplemental frame that carries another cutter, and these "cutrigged" frames can be elevated or depressed at pleasure by means of cord, pulley, and windlass.



The outer frames D' D', hinged to the main frame A, and carrying the choppers G' G', in combination with the elevating devices, substantially as described, and for the purpose set forth.

161,831. PROCESSES OF PURIFYING GALVANIZERS' DROSS. Wickham B. Speer and Jos. W. Richards, Philadelphia, Pa. (Filed Mar. 23, 1875.)

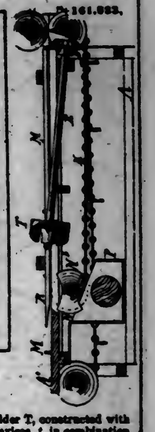
The improvement in the art of separating zinc from an alloy of iron and other impurities, consisting in the application of sulphur or sulphurous-acid gas to the alloy while the latter is in a state of fusion, substantially as set forth.

161,832. TURN-BUCKLES. Geo. H. Spencer, Jersey City, N. J. (Filed Apr. 6, 1874.)

Brief.—The end or cross pieces are thick blocks of malleable cast metal, recessed to receive hardened nuts for the rods to be tied, and united by side bars of wrought metal.

1. A turn-buckle consisting of cast-metal blocks A A and connecting-bars B B, the whole forming a rigid oblong frame, as set forth.

2. The blocks A A, connected together and having sockets for the reception of nuts y y, as specified.



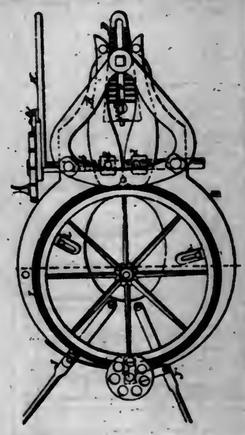
161,833. MACHINES FOR FOLDING AND PASTING COLLAR ENDS. Chas. Spofford, Boston, Mass., assignor to James H. Hoffman, New York city. (Filed Dec. 5, 1874.)

Brief.—Collar ends are pasted, turned under, and pressed, leaving button-hole flap extended.

1. The combination, in a machine for folding and pasting the ends of collars or other articles, of a carrying-table, A, carrying-chains K, pasters N, revolving folders T, folding-guides V, and compressing-rollers, substantially as described.

2. The combination of the table A', confining-frame E, revolving folders T, and pasters F, and carrying-chains, substantially as described.

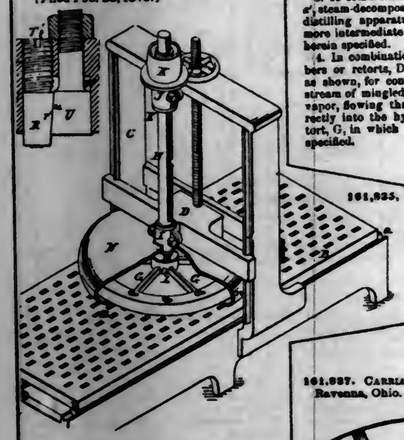
3. The revolving folder T, provided with a folding device, t, one or more, having an angular or retiring side, D, arranged substantially as set forth, so that the folders can operate without touching the head ends of the advancing collar.



4. The revolving folder T, constructed with one or more folding devices, t, in combination with the table, having a slot, Q, and a folding-guide, substantially as and for the purpose specified.

5. The combination of the pasting-device H and folding devices T t V, with the roller compressing devices F F', substantially as described.

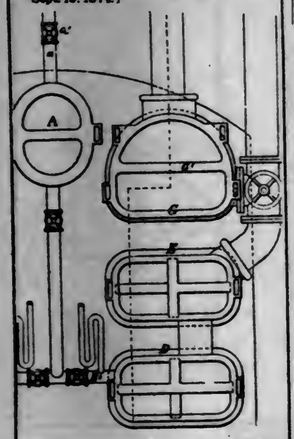
161,834. TIRE-SETTERS. Danl. Squier, Battle Creek, Mich. (Filed Aug. 12, 1874.)



Brief.—The tire is drawn tight upon the wheel by clamps, which act all around its periphery, through the medium of an iron strap, which is attached to the clamps, and passes around the wheel.

1. The combination of the pivoted levers J J', jaws K, and bands I I, substantially as and for the purposes herein set forth.

2. The combination of the bands I I, levers C C, and wedge-slide D, said slide being operated by means of the lever E and pawl *f*, substantially as and for the purposes herein set forth.

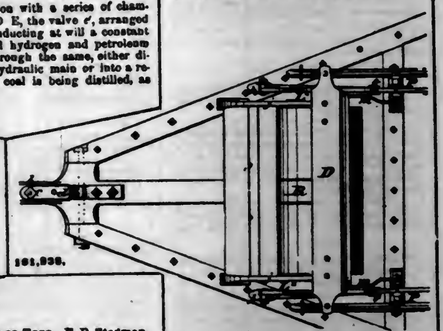


161,834. STONE-DRESSING MACHINES. J. J. Squire, St. Louis, Mo., assignor of one-half his right to Joseph W. Branch, same place. [Filed Feb. 23, 1875.]

1. The combination of rotary cutter-head G and shield W, substantially as and for the purpose set forth.

2. The combination, with a metallic cutter-head, of the holder R, with flattened side *e'*, locking-wedge U, with flattened side *u*, and set-screw T, substantially as set forth.

161,835. PROCESSES AND APPARATUS FOR THE MANUFACTURE OF GAS. Ira N. Stanley, Brooklyn, N. Y., assignor to himself and Edwd. D. White, same place. [Filed Sept. 10, 1874.]



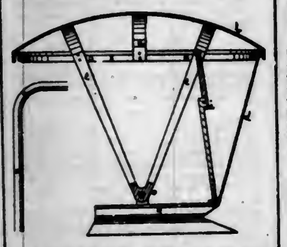
1. In the manufacture of illuminating-gas, the process of fixing the petroleum vapor and combining it with ordinary coal-gas, which consists in bearing the same to or near the temperature at which coal is distilled by conducting it successively through a series of chambers or passages moderately heated, and then conducting it through a retort in which coal is being distilled, as specified.

2. In the manufacture of illuminating-gas, the process of fixing the hydrogen gas and petroleum vapor, and combining them with ordinary coal-gas, which consists in passing the hydrogen and petroleum vapor together through a succession of passages or chambers of a gradually-increasing temperature, and finally through a retort in which coal is being distilled.

3. In combination with a controlling-valve, *e'*, steam-decomposing apparatus A, and coal-distilling apparatus G, a series of two or more intermediate connected retorts, D E, as herein specified.

4. In combination with a series of chambers or retorts, D E, the valve *e'*, arranged as shown, for conducting at will a constant stream of mingled hydrogen and petroleum vapor, flowing through the same, either directly into the hydraulic main or into a retort, G, in which coal is being distilled, as specified.

161,835.



161,836.

2. The combination, in a combined harrow and roller, of vertical bars or posts *k k*, mounted directly upon the journals of the roller, rigid posts P on the harrow-frame, and pivoted connecting-links *m*, for securely supporting a driver's seat, so as to leave the harrow unweighted, in the manner set forth.

3. The hand-levers L, attached by hinges A to the harrow-frame, and fulcrumed on the journals of the roller R, in combination with posts P on the harrow-frame, having retaining-notches *i*, substantially as herein described, for elevating the harrow-frame and supporting the same in elevated position.

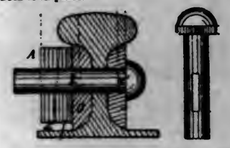
4. The supplemental hand-levers L', fulcrumed by attaching-bolts *a* at the sides of the seat-frame, and constructed with extended and slotted rear ends *o*, substantially as shown and described, in combination with the horizontal levers L, attached to the harrow-frame by hinges A, and fulcrumed on the journals of the rollers, for elevating the harrow from the driver's seat, in the manner set forth.

161,837. CARRIAGE-TOPS. E. P. Stedman, Ravenna, Ohio. [Filed Sept. 14, 1874.]

1. The rigid frame *c*, extending around horizontally on all sides of the top, in combination with the bows *c c*, substantially as and for the purpose set forth.

2. The combination of the cover *b* and the horizontal frame *c*, with its bottoms, on which to fasten curtains and quarters, substantially as and for the purpose set forth.

3. The combination of the prop *i*, bows *c c*, bow *a*, seat *g*, cover *b*, and frame *c*, substantially as and for the purpose herein set forth.



161,838. HARROWS AND ROLLERS. Allen M. Stratton, Ladoga, Ind. [Filed Jan. 26, 1875.]

Brief.—The harrow-frame is triangular, and provided with an adjustable tongue, that can be made flexible or rigid at pleasure. In the triangular space between the side bars of the harrow is mounted a sectional roller, upon the journals of which rests the driver's seat, so connected with the harrow-frame that the weight of the driver falls wholly upon the roller.

1. The tongue T, having a wedge-shaped and perforated rear end, and the drop-pin and washer *e f*, in combination with the central draft-bar *b*, draft-bolt *c*, and hasp or clevis *d*, substantially as herein shown and described, for the purpose set forth.

161,839. RAILWAY-RAIL-JOINT FASTENINGS. John B. Tapscott, Clarksville, Tenn. [Filed Mar. 12, 1875.]

Brief.—A rail-joint in which the bolt which secures the fish-plates is held in position by a double key, one part thereof having a shoulder, which takes into a slot in the bolt far enough to be prevented from rising by the overhanging edge of the fish-plate. The other part of the key is driven in beside the former, and when properly tightened it is upset to hold it in place.

In combination with the fish-bars and bolts, the key, made in two parts, A A', one having a shoulder, *c*, and one or both having an inclined face, when applied and operating substantially as and for the purposes set forth.

161,840. SEPARATING REFUSE FROM COAL. S. Thomas, Philadelphia, Pa. [Filed Jan. 23, 1875.]

Brief.—An inclined plane of slate or other stone retards slate or other refuse more than it retards coal, and, for this reason, refuse (chiefly slate) drops downward from the lower end of the inclined plane, while the coal jumps to a greater distance. One of the inclines rides on pins working in slots in frame F, and so may be placed near or far from the other incline.

1. The mode herein described of separating particles of slate and other refuse from a granular mass of anthracite coal—that is to say, by causing the mass to slide down an inclined plane of slate, marble, or other equivalent stone having a surface which has more of a retarding effect on the slaty and other refuse particles than on the coal, so that on leaving the said inclined plane the retarded particles will fall abruptly, while the coal, whose velocity has not been materially retarded, will be projected beyond the retarded refuse, all as set forth.

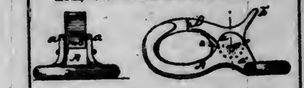
2. The within-described separating apparatus consisting of the adjustable frame E, with inclined planes F and G, separated from each other by an opening, *e*, the width of which can be altered by the adjustment of one or both of the planes, as specified.

3. The combination of the inclined plane F with the flexible apron *m*.

4. The combination of the inclined plane F with the curved platform I, which receives the mass to be separated before it reaches the said planes.

161,841. CORSETS. Isidor Ulman, Cairo, Ill. [Filed Mar. 11, 1874.]

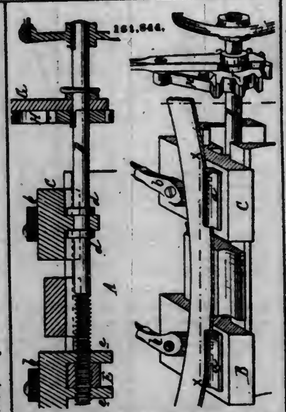
The interlocking steel clasps C and C, provided with the outwardly, rearwardly, and inwardly curving hooks *c* and *c*, in combination with the corset A, having the eyeleted openings *a* and *a*, substantially as and for the purpose specified.



161,842.

161,843. SCREW-THREADED WIRE FOR USE IN MANUFACTURE OF BOOTS AND SHOES. Albt. Van Wagenen, Boston, Mass. [Filed Feb. 11, 1875.]

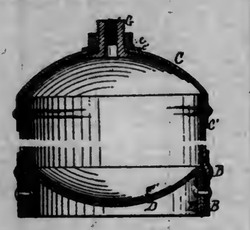
As a new article of manufacture, for use in the boot and shoe manufacture, the herein-described screw-threaded wire, made in long lengths, having a thread of slight pitch and considerable depth, as set forth.



161,843. SNAP-HOOKS. Arthur J. Vaughan, Lodi, Wis. [Filed Mar. 18, 1875.]

In a snap-hook, the jaws A B, provided with the legs *a a*, chambered or recessed projection *b*, and thumb-piece *b'*, and combined with a coiled spring, *s*, arranged around the pivot in the chamber of the part B, substantially as and for the purpose set forth.

161,844. TIRE-UPSETTING MACHINES. H. S. Vinton, Berrien Springs, Mich. [Filed Nov. 17, 1874.]



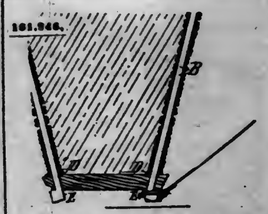
The combination, with the bed-plate A, of the stationary clamp-block B and movable clamp-block C, each having a rib, *a*, and serrated cam *b*, the screw D provided with the

legs *d d*, wheel F, pawl-lever G, reversible pawl H, and ratchet I, the lug *c* on the block C and nut E placed between the legs *e e* on the block B, all constructed and arranged as and for the purpose set forth.

161,845. SODA-FOUNTAINS. Frederick W. Wiesebrock, New York, N. Y., assignor to Henry W. Shepard and Robert Seaman. [Filed Jan. 30, 1875.]

Brief.—The outer cylinder and its ends are made of sheet-steel, and the inner cylinder of sheet-tin, the several parts being secured together by means of soldering, bead-joints, rivets, bung, and nut.

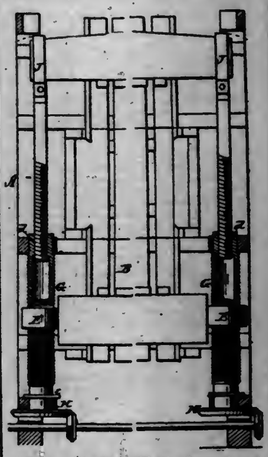
1. The outer cylinder A, constructed of steel or other suitable metal, and its end piece C, having a hoop, C', and the interior cylinder or lining F, constructed of tin, the bung G and the bead-joint C', which firmly unites the outer cylinder, lining, and flange of the end piece C and nut G', the whole being constructed, combined, and arranged substantially as described.



2. The cylinder A, having a base-hoop, B, secured by bead-joint B', and the tin cylinder or lining F, and its bottom F', having their lower section and flange soldered together in the groove of the bead-joint, and the bottom D having a hoop, D', and the hoop E, the whole being combined and arranged as and for the purpose specified.

161,846. BASKETS. Simon Weinstock, New York, N. Y. [Filed Jan. 14, 1875.]

1. The combination in a basket constructed of hurdle-work, and having a solid bottom, of stiffening-rods extending longitudinally through the meshes thereof, and projecting through the bottom, to form feet for the basket to rest upon, substantially as herein shown and described.



2. The combination of the stiffening-rods B, having projections E beneath the bottom of the basket, with the strap or straps F, having loops *b c*, substantially as described.

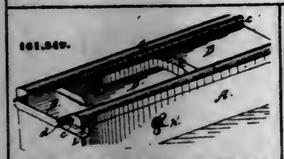
161,846.

161,847. COTTON AND HAY PRESSES. B. J. Wilson, Atlanta, Ga. [Filed Mar. 6, 1875.]

Brief.—Reciprocating followers are operated simultaneously in opposite directions by means of right and left hand screws, one being hollow, and forming receptacle for the other.

The combination, with the frame A and press-box B, of the upper follower U, hinged stirrups J J, screw-rods I I, lower follower O, nuts E E, and the hollow upright screws G G, the two followers being moved simultaneously toward each other, all constructed and operating substantially as set forth.

161,848. SHEET-METAL CANS. J. A. Wilson, Chicago, Ill. [Filed Mar. 22, 1875.]



1. A can for packing food, hermetically sealed and constructed of pyramidal form with rounded corners and offset ends to support the heads, said heads being secured as shown and described.

2. The perforated plate D in combination with head B or C, provided with protector A, substantially as and for the purpose set forth.

161,849. VEGETABLE-SLICERS. Joshua J. Winne and Wm. H. Kent, Lockport, N. Y., assignors of one-half their right to Remington James and F. A. Bowdoin. [Filed Feb. 16, 1875.]

Brief.—The table upon which the vegetable is pushed against the cutter is capable of vertical adjustment, for different thicknesses of the slices, and is held horizontally at different heights by a clamp-bolt.

161,849.

1. The combination of top section B', capable of parallel adjustment, vertically-movable slotted cross-brace F, and bolt h, passing through sides A A, substantially as shown.

2. The adjustable top section B', provided with attached cross-brace F, working in grooves f f, and end pieces I, having grooves fitted over said working upon tongues i i on the ends of the sides A A, substantially as and for the purpose set forth.

161,856. CAR-COUPLINGS. John Yeagly, Fredericksburg, Ohio. [Filed Feb. 4, 1875.]

The combination of the draw-head A, having a large slot in the upper side, a narrow opening in the under side, and having ears d d, and beveled shoulder i, with the bent pin C, having a narrow elongated and inclined slot, e, and shoulder h, all constructed substantially as set forth.

161,861. COMBINED UNDER WAIST AND SKIRT SUPPORTERS. Geo. Frost and Geo. Henry Phelps, Boston, Mass. [Filed Mar. 30, 1875.]

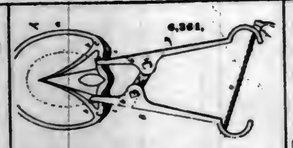
1. In an under waist for ladies' wear, the seamless yoke A, constructed substantially as herein described and shown.

2. In an under waist for ladies' wear, the combination of the yoke A, and the body or lower front parts E E', constructed and combined substantially in the manner herein specified.

3. In an under waist for ladies' wear, the combination of the yoke A, bosom-form D, and the body or lower front parts E E', the whole combined and arranged substantially as herein specified.

4. In an under waist for ladies' wear, the combination of the yoke A, bosom-form D, body or lower front parts E E', bones l l, and lacings m, substantially as herein shown and described.

5. In an under waist for ladies' wear, the combination of the yoke A, bosom-form D, body or lower front parts E E', bones l l, lacings m, and front fastenings a a, substantially as herein specified.

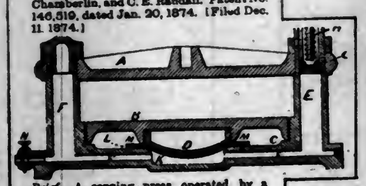


6. In an under waist for ladies' wear, the combination of the yoke A, bosom-form D, body or lower front parts E E', bones l l, lacings m, front fastenings a a, and short bones at the gore shape cut p, substantially as herein specified.

REISSUES.

9,344. HOOP-SPREADERS. T. Armstrong, Hamilton, Canada. Patent No. 136,660, dated Mar. 11, 1873. [Filed Dec. 14, 1874.]

Brief.—The device is applied to the inside of the shell of the hoof, and is capable of adjustment to bear on opposite or diagonally-opposite sides.



6,361.

1. The means provided for adjusting the direction of the levers, consisting of the curvilinear ends, provided with longitudinal apertures, the spring, and the tightening-rod, all combined as described.

2. The combination and arrangement of the levers b' b', middle bar c', tightening-screw d, spiral spring e, grooved washer f, hand-nut g, and thumb screws h h, as described, and for the purposes set forth.

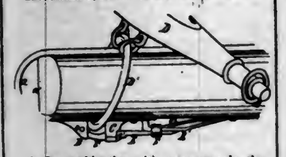
6,365. COPYING-PRESSES. W. U. Fairbairn, Boston, Mass., assignor to himself, W. S. Chamberlin, and C. E. Randall. Patent No. 146,519, dated Jan. 20, 1874. [Filed Dec. 11, 1874.]

Brief.—A copying-press operated by a pump, or by the pressure of the water in the main.

1. In a hydrostatic press, the basin K, flexible diaphragm L, and movable plate B, in combination with each other, and with a force-pump, E, or flow of water under pressure, substantially as described.

2. In a hydrostatic press, the combination of the flexible diaphragm L, water-way G, and pump E O, substantially as described.

3. In a hydrostatic press, the combination of flexible diaphragm L, water-way G', and cock N, communicating with a source of water-supply under pressure, substantially as described.



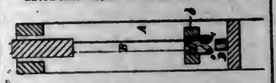
4. In a hydrostatic press, the combination of flexible diaphragm L, water-ways G G', pump E O, and cock N, substantially as described.

5. In a hydrostatic press, the combination of flexible diaphragm L, basin K, and inverted dome D, substantially as described.

6. In a hydrostatic press, the combination of piston O, screw H, and hollow standard E, substantially as described.

7. In a hydrostatic press, the combination of the base C, movable plate B, and diaphragm L, substantially as shown and described.

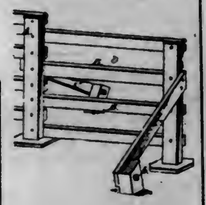
6,366. NECK-YOKE ATTACHMENTS. Benj. Folts, Rockford, Ill. Patent No. 85,519, dated Jan. 5, 1869. [Filed Jan. 20, 1875.]



1. In combination with a wagon-pole, the lugs B C, guard E, and locking devices, to retain the free end of the guard in contact with lug C, to inclose neck-yoke ring D', substantially as set forth.

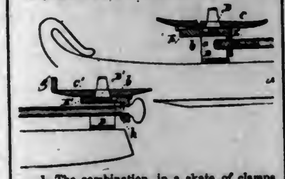
2. In combination with pole-strap A, having lugs B C, the guard E, provided with the shoulder or shoulders e', for clamping the lugs to each other, substantially as and for the purpose set forth.

3. In combination with the lugs B and C, the guard E, provided with the heel extension, substantially as and for the purpose described.



4. The combination of the lugs B C, guard E, rest or seat E', and spring e', substantially as and for the purpose described.

6,367. MACHINES FOR CUTTING THE HEADS AND BOTTOMS OF WOODEN BOXES. E. Hersey, Hingham, Mass. Patent No. 62,846, dated Mar 12, 1867. [Filed Mar. 1, 1875.]



The tubular cutter C, having its cutting-edge composed of two gouge-shaped parts, c c, and arranged to operate as herein set forth, whether said cutter is made in one or two pieces, substantially as shown and described.

6,368. FARM-FENCES. Lovren B. Hogue, Sandy Lake, Pa. Patent No. 158,941, dated Jan. 19, 1875. [Filed Mar. 24, 1875.]

The fence constructed as described, and resting directly upon the surface of the ground, and having the posts or slats and rails nailed together, said fence being anchored by the alternating inclined braces and the oblique ground-stakes, substantially as set forth.

6,369. SKATES. Mary Ann Lovatt and Thos. G. Swartwout, Tarrytown, N. Y., executors of John Lovatt, deceased. Patent No. 28,495, dated May 29, 1860; reissue No. 3,190, dated Nov. 10, 1868; extended seven years. [Filed July 7, 1874.]

1. The combination, in a skate, of clamps for grasping the sole, a plate or rest for the foot, and mechanism for moving and holding the clamps, substantially as specified.

2. The clamps for grasping the heel, and the clamps for grasping the sole, combined with mechanism operating and holding both sets of clamps, substantially as specified.

6,370. PROCESSES FOR PRESERVING AND PACKING COOKED MEATS. Wm. J. Wilson, Chicago, Ill., assignor, by mesne assignments, to the Wilson Packing Company. Patent No. 149,276, dated Mar. 31, 1874. [Filed Apr. 2, 1875.]

Brief.—Meat is cooked at 212° Fahrenheit, when, bone and gristle having been removed, and the meat being preferably warm, it is compressed into the can with sufficient force to expel air and superfluous moisture, and to form a solid cake. Can is then sealed air-tight.

1. The within-described process for packing cooked meats for transportation by compressing the same into an air-tight package, so as to preserve the meat in its integrity and retain all the natural juices and nutritious qualities of the meat, substantially as set forth.

2. As a new article of merchandise, cooked meat put up in solid form, in its natural state, without disintegration or desiccation, in hermetically-sealed packages, as set forth.

DECISIONS OF THE COURTS.

SUPREME COURT OF THE DISTRICT OF COLUMBIA.

THE UNITED STATES EX REL. HORACE H. BIGELOW *vs.* JOHN M. THACHER, COMMISSIONER OF PATENTS.

1. An application for a patent was put in interference with a party to whom a patent had been previously issued. On the testimony in the interference case it was contended that the applicant had abandoned his invention to the public use, and the Commissioner referred the question of such abandonment back to the Primary Examiner. And it was held that mandamus would not lie to compel the Commissioner to allow the patentee to take an appeal from the decision of such Primary Examiner to the Board of Examiners-in-Chief.
2. A writ of mandamus will not be allowed against the Commissioner of Patents where the law submits the subject to his opinion. (Cartter, *Ch. J.*)
3. Where an interference is declared in the Patent Office, the examination is to be confined to "priority of invention." (Wylie and Mac Arthur, *J. J.*)
4. It is not the intention of the patent law that, on a question of interference, the Examiner in charge of interferences should consider a question of abandonment. (Wylie and Mac Arthur, *J. J.*)
5. The Commissioner of Patents may suspend, temporarily, proceedings in interferences, when the evidence used therein tends to show that the first inventor, who is also the applicant, had abandoned his invention before applying for a patent, and to refer the application back to the Primary Examiner to ascertain the fact of such abandonment. (Mac Arthur, *J.*)

OLIN, *J.*, dissenting.

STATEMENT OF THE CASE.

This is an application for a mandamus to be directed to the Commissioner of Patents, requiring him to allow the relator an appeal from a decision made by one of the Primary Examiners in the Patent Office, and arises upon the following statement of facts:

A patent was granted to Bigelow, the relator, on the 5th of July, 1870, for an improved machine to make heels for boots and shoes. On the 8th day of August, 1871, Stephen W. Baldwin made application for a patent for a similar machine; and on the 12th of April, 1872, an interference was declared between this application and the unexpired patent to Bigelow.

The Examiner in charge of interferences decided that Baldwin was the prior inventor of the machine in controversy, which decision was made in July, 1874. From this decision Bigelow took an appeal to the Examiners-in-Chief, who, in October following, confirmed the decision of the Primary Examiner by awarding priority of invention to the said Baldwin; but they called attention to the fact that the testimony before them on the interference indicated that Baldwin had abandoned his invention, and recommended that the question of such abandonment be referred to the proper tribunal for decision. Their language on this subject is: "Upon this point we are not called upon to form a decision; but we are clearly of opinion that it should be considered by the proper tribunal." This recommendation was accepted by the Commissioner, and thereupon he referred Baldwin's application back to the Primary Examiner for further examination on the matter suggested by the Board.

The order of the Commissioner on that occasion reads as follows:

"In the matter of the interference between the application of Stephen W. Baldwin and patent of Horace H. Bigelow—improvement in machine for making boot and shoe heels.

"The Examiners-in-Chief have in their decision awarded priority of invention to Baldwin, but have recommended the reference of his application to the Principal Examiner for a determination of his right to a patent, in view of certain testimony affecting the question of abandonment by reason of public use. In accordance with this recommendation, the application of Baldwin is hereby remanded to the Primary Examiner for consideration in the matter referred to above, pending which, further proceedings in the interference case are suspended."

The Primary Examiner, to whom this reference was made, upon examination of the testimony, rendered his decision, on the 8th day of November, 1874, to the effect that said Baldwin had not lost or forfeited his right to a patent by reason of a public use of the said invention more than two years before making application therefor, and, consequently, that he was entitled to a patent.

On 2d day of December, 1874, the relator rendered an appeal from the last mentioned decision of the Examiner to the Examiners-in-Chief, which appeal the Commissioner of Patents refused to allow or entertain, and he now asks the court to compel the Commissioner to allow him such an appeal.

The relator sets forth in his petition that the invention is one of great value and importance, and has been in extensive public use by him, under his letters patent aforesaid, for over a period of four years, and that, unless he can have an appeal from said decision, letters patent will be issued to Baldwin for the same invention, and that he will have no opportunity to contest Baldwin's right to a patent before the Board of Examiners-in-Chief or the Commissioner of Patents, and that he will be liable to be sued by Baldwin if he continues to use said invention. He also alleges that he is without adequate remedy unless by the writ of mandamus.

The 42d section of the patent law of 1870 enacts: "That whenever an application is made for a patent which, in the opinion of the Commissioner, would interfere with any pending application, or with any unexpired patent, he shall give notice thereof to the applicants, or applicant and patentee, as the case may be, and shall direct the Primary Examiner to proceed to determine *the question of priority of invention*. And the Commissioner may issue a patent to the party who shall be adjudged *the prior inventor*, unless the adverse party shall appeal from the decision of the Primary Examiner or of the Board of Examiners-in-Chief, as the case may be, within such time, not less than twenty days, as the Commissioner shall prescribe."

The last clause of the 41st of the printed rules of practice in the Patent Office provides that, "in the trial of interference, the questions of priority of invention and of patentability may be inquired into, as well as the questions of abandonment and public use." And the 51st of said rules contains a similar provision.

It was argued on the hearing that the rules just mentioned were unauthorized by law, and void.

These are all the facts necessary to understand the points passed upon by the court.

J. J. COOMBS and A. POLLOK, for the relator, contended:

That it had always been the practice in the Patent Office to allow an appeal by either party in a case of interference. That an interference had been declared between the application of Baldwin and the patentee; and, upon the testimony used before the Examiners-in-Chief in such case, the Commissioner had referred the subject of abandonment by Baldwin of his invention, for a period of two years before he applied for his patent, to the Primary Examiner; but it was the same case, and the same testimony was used, which had been before the Examiner-in-Chief. That whenever an interference is declared the two parties are placed in opposition to each other, and either of them may show any good reason why the other should not have a patent; and the evidence taken in the interference case being referred to the Examiner, the decision of the latter was a decision in an interference case, and the law is explicit that in the matter of interference either party may appeal from the decision; and we ask that the Commissioner shall be compelled to allow our appeal, made in this interference case on a material question involved in it, and which was decided against us. If we are right, and of that we entertain not the slightest doubt, that this decision is made in an interference case, then the law is clear that we have a right to appeal, and there is no discretion or judgment to be exercised by the Commissioner in granting it. It is the purest ministerial act that can be imagined, as will be seen by reference to the 42d section of the patent law.

MARCUS S. HOPKINS, for Commissioner of Patents:

In the course of proceedings in the interference, testimony was taken which appeared to raise the question of abandonment of the invention by Baldwin. When the Board, in the course of their investigation of the question of priority in issue between the parties, noticed this testimony, which they could not decide upon, and which, as a matter of course, the Primary Examiner had not decided upon, for the reason that when he made his decision in favor of the patentability of Baldwin's application, (except as to priority,) it had not been taken, and was not before him, they very properly recommended that it be placed before him for his consideration and decision upon it. It was new light that might be sufficient to wholly defeat Baldwin's application, and render further proceedings in interference needless. If it had been in existence or available when the Examiner originally made his examination and decision, he would then have passed upon it, and, if he had passed favorably, that would have been an end of the matter, and the interference on the issue of prority would have proceeded undisturbed. Coming before the Office, as it did, as an incident connected with an interference, and having never had consideration by the Primary Examiner, it was proper that proceedings in interference be temporarily suspended to enable it to have such consideration. It was precisely as if an alleged new reference—an old English patent, for instance—had been discovered in the course of proceedings in the interference.

The Commissioner was obliged to take notice of it, and he did so in the only lawful and proper way he could. It was not addressed to the issue in the interference, and it could not be properly disposed of in the interference. If sufficient to prove abandonment on the part of Baldwin, it might, it is true, have caused the proceedings in interference to be quashed by destroying the standing of one of the parties. And the fact that it was developed in the course of an interference is of no consequence whatever. If it had been developed elsewhere, or in any other way, it would have had precisely the same force, and would have been treated by the Commissioner in the same manner.

It is the business of the Commissioner to take cognizance of any facts coming to his notice with the force of legal evidence, from any source whatever, tending to show that an alleged invention is old, or is not useful, or has been abandoned to rightful use by the public. No matter at what stage of proceedings short of the actual execution of a patent such facts or evidence may come to his attention, or from what source, it is his duty to refer them to the proper tribunal for consideration. They are newly-discovered evidence to the Office, warranting a new hearing. But the party who may furnish such evidence or direct attention to it does not thereby become entitled to be made a party to the proceedings upon it in the Office, because the law does not contemplate such a privilege to him.

Now, the relator, Bigelow, finding from the evidence introduced by Baldwin, upon whom rested the burden of proof, that Baldwin was the prior inventor, and that he, Bigelow, must inevitably fail in the issue of priority which was to be tried, determined to interpose the obstacle of abandonment, and prevent the issue of Baldwin's patent by that means, if possible.

Baldwin, apparently not fearing such an assault, and relying upon the rebutting testimony he could and did produce, made no objection to the testimony relating to abandonment, and so it was before the Office.

But not being, as I think I must have abundantly satisfied the court, pertinent to the issue of priority of invention, which is the only issue upon which the relator, Bigelow, can have any standing as a party litigant, and referring solely to the validity of the *ex-parte* application of Baldwin, how can it give the relator a right to appeal? I submit that because he has an interest to defeat Baldwin's application, and because he has furnished the Patent Office information which he hoped would accomplish that object, are no sufficient reasons for admitting him as a party to oppose that application before the Office, by way of appeal from a decision of the Primary Examiner on Baldwin's application, favorable to Baldwin.

The Commissioner, under the law and the established practice of the Office, correctly refused to entertain such an appeal. If allowed by the court, it will be a precedent for admitting contestants in *ex parte* cases, and will greatly add to the difficulties inventors must encounter in obtaining patents, which are already great enough.

That the question of abandonment raised upon facts developed in an interference case is purely an *ex parte* one has been established by recent decisions of the Commissioner, and by the decision of this court in the case of Joshua A. Gray.

In the case of *Jenkins* vs. *Barney and Berry*, (Commissioner's decisions, 1873, p. 21,) the Commissioner said the question of abandonment is "an *ex parte* question" upon which "an appeal may be taken to the Supreme Court of the District of Columbia." * * * "The questions of abandonment and priority of invention are entirely distinct and separate questions."

At the conclusion of the argument the judges delivered oral opinions to the following effect:

CARTTER, *Chief Justice:*

A majority of the judges are of opinion that we cannot issue this writ. If the matter referred back to the Primary Examiner is a separate examination into an application for a patent, clearly Mr. Bigelow has no right to appear there. The law makes it *ex parte*, and the only person that can be heard is the applicant for the patent. If the proceedings before the Examiner are without authority, there is no appeal, because that officer has no power in the premises. You do not ask the court to require the Commissioner to take up an appeal to himself from the decision of the Examiners-in-Chief, for they have already acted. If he refused to entertain such an appeal, the writ of mandamus would be an appropriate process to compel him. The application is not made in that connection. The argument is, that an interference has been declared, and that, therefore, the decision of the Primary Examiner is in an interference case, so that the court is asked to regard an *ex-parte* application as an application in interference. There has been some discussion as to what an interference means, and there is a wide discrepancy between the counsel on that subject, one side claiming that it embraced everything that entered into the right of an applicant for a patent, and on the other side that it is only an inquiry as to who is the prior inventor; but I think that point is not involved in this question. The trouble is that you have applied for a writ of mandamus, where the law submits the subject to the opinion of the Commissioner of Patents, and that is conclusive with me that the writ cannot issue.

Mr. Justice WYLIE said:

It is a settled principle that mandamus will issue requiring an officer to perform a ministerial duty which involves no exercise of discretion under the law. The conflict of opinion which we see exhibited in this case shows that the matter in controversy is one which requires not only the exercise of discretion, but is a subject of real difficulty in regard to how the duties of the Commissioner in the premises are to be performed.

The law says that the Commissioner of Patents, when in his opinion an application for a patent interferes with any pending application, or with any other patent already granted, may declare an interference. In such case the investigation is to be confined to priority of invention. It is conceded that Baldwin was the prior inventor; but Bigelow has got the patent, and he says that Baldwin ought not to have his, because he used his invention publicly, so as to abandon it to the public, and he wants an interference to show that Baldwin has so abandoned his invention.

Baldwin was the original inventor, and he is therefore entitled to a patent, and when that issues the contest will be transferred from the Patent Office to the courts, which is the exact position the law intended the parties should occupy in cases of this kind. I have no idea that it was the intention of the law makers that on a question of interference the Office should go into this question of abandonment. It is true that the 51st rule of the Patent Office allows that to be done; but it is still a matter of discretion, even under the rule. The Commissioner may permit it, or he may not. I do not think he has any right to establish such a rule; but even if he has such right, it is discretionary with him to allow evidence of this kind in a case of interference. If he has the right to enlarge the scope of inquiry, he can as well restrict it. He has a right to dissolve the interference, or any part of it; and if the examination on the question of abandonment has gone far enough, he can stop it there. Upon the whole, I have never seen an application for a mandamus which involves so many doubtful questions, and the exercise of so much discretion in regard to the patent law. The mandamus should be denied.

Mr. Justice MAC ARTHUR said:

I am of the same opinion, although I confess it is with considerable diffidence I approach the construction of the patent law. It is well established that a mandamus will not issue to control the judgment or discretion of the officer to whom it is to be directed, and it is quite apparent to my mind that the Commissioner of Patents, in suspending temporarily the proceedings in interference, and referring Baldwin's application back to the Primary Examiner, has exercised a prudent and discreet judgment. The decision of the Examiner was not made in the interference case, and could not be made in the interference case, for the simple reason that the law directs all decisions in that proceeding to be rendered by the Examiner in charge of

interferences. He is an officer designated for the very purpose by the statute. Now, an interference had been declared by the Commissioner between these two inventors, and the Examiner in charge of interferences, and afterward, on appeal, the Examiner-in-Chief, decided that Baldwin was the prior inventor. But in the testimony used in this proceeding some circumstances were developed calculated to show that Baldwin had abandoned his invention to the public use before he applied for a patent. The Commissioner is invested with the general superintendence of the Patent Office, and the Primary Examiners seem to be placed peculiarly under his direction; and he can assign to them any duty in the examination of patents which the exigencies of the Office demand. It appears that when the suggestion was made upon the testimony in the interference case, that Baldwin had abandoned his invention, he very properly sent that question back to the Primary Examiner. Whether Baldwin abandoned his invention is a question which belongs to his original application, and the Primary Examiner should see to and determine this point. It enters into the patentability of the improvement as much as its usefulness or novelty, and these matters ought to be settled before an interference is declared or a patent issues. And if it becomes apparent at any stage of the proceeding that the invention is defective in any of these particulars, the Commissioner, by virtue of his general power of managing the business of the Office, ought to direct a suitable examiner to inquire into that fact just the same as upon an original reference of an application for the patent, and to have it determined as a preliminary or *ex-parte* question. Bigelow claims that he is a party to the question of abandonment by virtue of this interference. He might as well say that he was a party to the original application. The Commissioner and the Examiners may avail themselves of all sources of information upon an application for a patent, but no one would claim that persons who have made useful communications to these officers would have a right to become parties, in the sense of a party as we understand the term.

I am, therefore, clearly of opinion that this proceeding before the Primary Examiner was *ex parte*, and that Bigelow had no right of appeal. The only case in which he was properly a party was on the question of priority of invention. I entirely agree with my brother Wylie that priority of invention is the only question that can be heard or determined upon an interference. The statute confines the inquiry to that point, and that is the only subject in the whole patent law that can be litigated in the Office by opposing parties, unless it is in application for extension. Abandonment of an invention is, in the nature of things, an entirely different affair, and cannot be confounded with "priority of invention" without disregarding the plainest distinctions both in language and law.

Mr. Justice OLIN, dissenting, said:

I cannot concur in the enunciation of the law that a mandamus cannot issue when an officer misunderstands the law. If the law be difficult of comprehension, the court is to construe it, and if the officer does not comply with the directions of the court a mandamus will issue. I think the rule of the Patent Office authorizing the Examiner to consider the question of abandonment was right and proper. An interference was declared in which it was right to consider whether, although Baldwin was the prior inventor, he had not abandoned his invention to public use, and thereby forfeited his title to a patent. In this question Bigelow had an interest, and the evidence shows that he had, probably, a right to his patent, and that Baldwin had not, by reason of his having abandoned his invention. To get rid of that testimony a reference is made to the Primary Examiner on a question of abandonment—an *ex-parte* proceeding in which nobody can be heard but Baldwin. That is an easy way to dispose of Bigelow's interest; but it looks to me like a mere dodge. That is the way it impresses itself upon my mind.

U. S. CIRCUIT COURT, DISTRICT OF NEW JERSEY.

WILLIAM M. WELLING *vs.* THE RUBBER-COATED HARNESS-TRIMMING COMPANY, ANDREW ALBRIGHT, AND LUTHER C. VOORHEIS.

[*In equity.—Before* NIXON, *J.—Decided May*, 1874.]

Where the fair interpretation of the words employed to describe an invention or discovery includes matters not in the mind of the patentee at the time, he is as fully authorized to claim the unlooked-for as he is the anticipated results.

Hence, where a patentee describes a martingale-ring formed by enveloping a metal ring, by means of dies, with a plastic composition known as "factitious ivory," or "any similar compound," the claim being for "the ring for martingales, &c., manufactured as set forth, with a metal ring enveloped in composition, as and for the purposes specified:"

***Held*, That the patent would include the application of hard rubber to a metal ring by means of dies.**

The fact that the rubber must necessarily undergo the additional process of vulcanization does not exempt it from the control of the patent. Though not the same substance, in its essence and constituents, as the "factitious ivory," it is a similar material as regards its capability of being adapted to the purposes for which the latter is used.

The Welling patent of March 17, 1863, for an "Improvement in Rings for Martingales," construed to be for a metal ring surrounded with some plastic composition like artificial ivory, capable of being compressed, solidified, and polished by the action of dies, and which is, in fact, subjected to such action, whereby a martingale-ring is produced with an exterior surface more durable and more highly polished than had before been obtained by different processes.

Such an invention is not anticipated by rings made of ivory, or of compositions known as artificial, factitious, or imitation ivory, or of metal coated with varnish, lacquer, japan, enamel, porcelain, or metallic plating, such coatings being applied with a brush or the fingers, or fused on by heat.

A patent for a combination is infringed by the use of a similar combination, although one of the elements is omitted and another substituted for it, unless the substituted device is a new one, or performs a function essentially different, or was not known at the date of the patent as a proper substitute for the one omitted.

[*Frederic H. Betts*, for complainant.
J. C. Clayton, for defendant.]

NIXON, *J.*:

This is a suit for an alleged infringement of letters patent No. 37,941, and bearing date March 17, 1863, granted to the complainant for "a new and useful improvement in Rings for Martingales;" and the questions in issue are determined by the construction and scope to be given to the specification and claim of said patent.

The schedule annexed is dated April 8, 1862, and the complainant therein states his invention as follows:

In letters patent granted to me August 4, 1857, a composition and mode of making factitious ivory is set forth, and out of said materials I have manufactured billiard-balls, rings of various kinds, &c. My present invention does not relate to any particular composition, as that in the aforesaid patent, or any similar compound, may be employed.

The nature of my said invention consists in the employment of a metallic ring within a ring formed of artificial ivory or similar materials, for giving strength to the same, thereby producing a new article of manufacture, and one that is stronger than an ivory ring, and possesses all the beauty of appearance, and can be afforded at a very much less cost. Ivory rings—particularly such as used for martingales—require to be made out of very solid ivory in order to be sufficiently strong, and hence are quite costly.

In order to make my improved rings, I take a ring of metal such as shown at A; or said ring may be formed by punching out a washer from a sheet of metal, or in any other suitable way. I take the amount of artificial-ivory composition, and, by dies or by hand, cause the said composition to completely envelop the said ring with as much uniformity as possible, and, to give the exterior finish to the same, press and solidify the mass of composition around the ring by means of dies, and, in so doing, any plain or more or less ornamental shape may be given to the said ring or the surface thereof. My ring is thus made of the desired ornamental appearance, while great strength is attained at very little cost.

What I claim, and desire to secure by letters patent, is, the ring for martingales, &c., manufactured as set forth, with a metal ring enveloped in composition, as and for the purposes specified.

It is insisted by the defendants that, if the patent is valid at all, it must be limited to a "martingale-ring intended to imitate ivory, and made by covering a metallic ring with artificial ivory, such as is described in complainant's patent of 1857, or some similar compound." Bearing in mind the established American rule that patents are to be construed liberally, and are not to be subjected to a rigid interpretation, I think that the construction is too narrow, and does not give to the patentee all that he is entitled to under the specifications and claims of his patent. It is quite clear, indeed, that factitious ivory was the composition uppermost in his thoughts. Having the partiality of a parent for his offspring, he naturally imagined that no superior compound could be formed or used. It may be conceded that the full extent of his invention had not then dawned upon him. Men often build better than they know; but where the fair interpretation of the words employed to describe an invention or discovery includes matters not in the mind of the patentee at the time, he is as fully authorized to claim the unlooked-for as he is the anticipated results.

The specifications are not well drawn, either as to the grammatical construction of the sentences or in the use of words to clearly convey the inventor's meaning. This is not adverted to because it is supposed that bad grammar or infelicitous methods of expression will avoid a patent, but because it is the duty of the court to ascertain the nature and the scope of the invention from the sense of the words which have been used in explaining it; and the same exact rule of interpretation is not to be applied at all times, but such, in each case, as will best enable the court to arrive at the meaning intended.

It is clear that the patentee had no thought of confining himself or others to the use of the factitious ivory; for, after referring to his patent of 1857, he says: "My present invention does not relate to any particular composition, as that (factitious ivory) or any similar compound may be employed. The nature of my invention consists in the employment of a metallic ring within a ring formed of artificial ivory or similar materials, for giving strength to the same," &c. He then claims "a ring for martingales, &c., manufactured as set forth, with a metal ring enveloped in *composition*, (generally,) as and for the purposes aforesaid."

To understand and correctly interpret the patent some reference may properly be made to the state of the art. The defendant's expert, Mr. Hedrick, who seems to be an intelligent witness, says that prior to 1862 martingale-rings were made in a variety of ways, and of different materials—of ivory, of compositions known as artificial, factitious, or imitation ivory, of metal coated with varnish, lacquer, japan, enamel, porcelain, metallic plating, and compounds of rubber and gutta-percha and leather. The only known methods of applying the coatings to the iron ring were by a brush, or the fingers, or fusing onto it by heat. The ring gave the strength to the manufactured article and the coating the exterior finish.

The object of the complainant, by his invention, was to introduce an improvement upon the known methods of coating, whereby he would impart strength, durability, and greater polish to the surface, thus producing a more valuable, useful, and beautiful result. His instrumentalities were all old—an iron ring, a plastic composition, and a die; but, so far as appears in the case, they were new in combination. If his patent had been simply for a metallic ring covered with any compound capable of being molded, or with factitious ivory or similar materials, it would have been void for want of novelty. If it had been for the use of the die in pressing or solidifying plastic substances generally, it would have been, probably, anticipated in this regard in the English letters patent to Barnwell & Rollason of 1860, in which such use of dies is plainly indicated. But the invention is for a combination, and the combination is a metal ring surrounded with some plastic composition like artificial ivory, of such a nature that it is capable of being compressed, solidified, and polished by the action of the dies, and which is, in fact, subjected to such action, whereby a martingale is produced with an exterior surface more durable and more highly polished than had before been obtained by different processes of manufacture, and at greater cost.

Have the defendants infringed the patent of the complainant thus interpreted?

Mr. Albright frankly tells us what they have been doing. He is called as a witness by the complainant, and is asked to detail the process by which certain rubber rings of their manufacture are made. He says (C. R., p. 17): "We take an iron ring, sheet or sheets of rubber rolled to the proper thickness, cut from the sheet a piece in the proper form, and envelop the iron ring with the covering of rubber, pressing the edges in the form of a lap with the fingers, causing the rubber to adhere and to become a homogeneous piece or cover. * * * The ring, when covered, has this outer coating of rubber in a plastic state. The ring is then placed in an oven and vulcanized. After the ring is taken from the vulcanator after vulcanization it is of irregular form or shape. We, to make the regular form or shape desired, put it in a lathe-chuck and turn it up in the form or shape desired, or by the use of a steel die, engraved in certain form to produce a ring, with such ornamentations on the outer ring as may be desired. The seam or imitation stitch is made by impressions from the die," &c. He further states that he manufac-

sured the rings produced under letters patent bearing date October 9, 1866, February 12, 1867, February 13, 1872, and December 3, 1872; that he commenced the use of dies over two years ago to save expense in the production of the rings; that he claims to have been the inventor of the use of dies for such purpose; and that their use for shaping and ornamenting the articles is a valuable improvement.

The letters patent under which he justifies his action and claims protection have been issued or reissued to him, as inventor or assignee, several years since the date of the complainant's invention, and have been exhibited in the case. I have examined their specifications and claims with some care, and am unable to find anything in them essential to the result which is not anticipated by the Welling patent. For instance, in the specifications to the letters patent granted February 13, 1872, and reissued November 26 of the same year, he states that he takes a metallic ring, a composition of vulcanizable gum of a consistency about equal to stiff dough, rolls it into sheets of uniform thickness, and applies it to the ring, working or pressing it to the metal by the hand or otherwise. It is then placed in molds of proper shape, and vulcanized by the usual process, after which the article is ready for the action of the dies. "The dies to be used should be a very little smaller than the article to be pressed, so that they may thoroughly compress and densify the coating upon the metal. They should have cutting-edges, so as to shear off the superfluous coating, and should be provided with suitable indentations or engravings, so as to produce the desired ornamentations. * * * The dies, now being ready, are slightly heated, and the vulcanized articles are put, one at a time, in the lower die, while the upper die is pressed or dropped down upon it with great pressure. As the dies act upon the coating with equal pressure in all directions, the coating is made homogeneous, dense, hard, tough, and susceptible to high polish, and is rendered more durable and better than if it were not so pressed. The dies, at the same time, cut off the superfluous coating, apply ornamentation, if desired, and impart a considerable polish, thus doing away with much labor in 'tumbling,' 'finishing,' and 'polishing.'"

We have only to compare this description with the specification of the complainant's patent to ascertain the substantial identity of the two methods. He, also, takes a metallic ring, the necessary amount of artificial-ivory composition to form the covering, and, by dies or by hand, causes the said composition to completely envelop the ring with as much uniformity as possible, and, to give the exterior finish to the same, presses and solidifies the mass of composition around the ring by means of dies, and, in so doing, any plain or more or less ornamental shape may be given to the ring, or the surface thereof. The ring is thus made of the desired ornamental appearance, while great strength is attained at very little cost.

It will be perceived that the only change made by the defendants' patent is the substitution of a plastic composition known as rubber or gutta-percha, which necessitates the additional process of vulcanization for the plastic composition called factitious ivory; not the same substance, indeed, as to its essence and constituents, but a similar material in regard to its capability of being adapted to the purpose for which the former is used. It has not even the merit of novelty, for the English patent of Newton, granted in 1851, which was first exhibited in the case by the defendants, and, being withdrawn by them, was afterward marked as an exhibit for the complainant, clearly suggests this precise use of the material without the application of dies. In his specication he says:

When it is desired that the compound of caoutchouc or gutta-percha shall serve as a covering to the iron or other substance, a thin sheet of the compound is pressed with great care upon the iron or other substance, so as to expel all air from between the adjoining surface and to cause the most perfect union and adhesion; the coated article is bound with strips or ribbons of cloth, whereby the compound is kept in close contact with the article during the process of hardening. The combined materials thus treated will be found to possess the qualities desired, the iron or other substance giving strength, and the compound giving a hard and durable surface. In this way may be produced many articles used in and about harness or carriages, such as saddle-trees, buckles, martingale-rings, dasher-irons, &c.

It was held in a recent case in this court, (*Webster* vs. *The New Brunswick Carpet Company*, 5 OFFICIAL GAZETTE, 522,) that a patent for a combination is infringed by the use of a similar combination, although one of the elements is omitted and another is substituted for it, unless the substituted device is a new one, or performs a function essentially different, or was not known at the date of the patent as a proper substitute for the one omitted.

It would seem, therefore, that the defendants are not permitted to shield themselves from the consequences of infringement by incorporating into a patent the inventions of others, without, at the same time, so changing and adjusting the relations of the constituents thus taken as to produce a new and useful result. They have failed to show that this has been done.

But, irrespective of this view, I am of the opinion on the whole case, that the claim of the complainant's patent, fairly construed, is not to be limited to the use of factitious ivory; that it is broad enough to include the composition of rubber or gutta-percha, and that there should be a decree for the complainant according to the prayer of his bill.

U. S. CIRCUIT COURT, DISTRICT OF NEW JERSEY.

WILLIAM M. WELLING *vs.* THE RUBBER-COATED HARNESS TRIMMING COMPANY, ANDREW ALBRIGHT, AND L. C. VOORHEIS.

[*In equity.—Before* NIXON, *J.—Decided February*, 1875.]

Both the process and the product may be included in one patent; but in such case the description of the invention in the specification and claims should disclose that the inventor had both results in his mind.

Whether the Welling patent of March 17, 1863, for an "improvement in rings for martingales," which claims "a ring for martingales, &c., manufactured as set forth, with a metal ring enveloped in composition, as and for the purposes specified," is broad enough to cover the process as well as the product, and thus in effect to include terrets, buckles, and hooks for harness and carriage trimmings, as well as rings, *quære*.

An injunction having issued against the defendants because of their manufacture of rings, a motion for an attachment against them for the manufacture of *terrets, buckles, and hooks* was denied; but the master, notwithstanding, was instructed to state a separate account of such trimmings, with view to a reconsideration of the questions involved upon the hearing of the exceptions to the report.

[*F. H. Betts*, for complainant.
J. C. Clayton and *A. Q. Keasbey*, for defendants.]

[This was a motion for an attachment for an alleged violation of an injunction restraining the defendants from making, using, or vending any harness or carriage trimmings containing the invention of the plaintiff, to wit, "a ring, manufactured as set forth substantially," with "a metal ring enveloped in composition, as and for the purposes specified."

The injunction had been obtained upon proof that the defendants had made *rings* for harness by coating metal with hard rubber by the use of dies. It was now charged, upon the motion for an attachment, that the manufacture of *terrets, buckles*, and *hooks*, by a similar process, was an infringement of the patent, and therefore an infraction of the injunction.

The court denied the attachment asked for; but ordered the master to state a separate account of the terrets, buckles, and hooks made by defendants, in order to a fuller consideration of the question involved on the hearing of exceptions to the master's report.]

NIXON, *J.*:

This is an application for an attachment against the defendants for violating an injunction issued by this court, June 12, 1874, restraining them from making, using, or vending to others to be used, any harness or carriage trimmings containing the invention of the plaintiff, and secured to him by letters patent, to wit, "a ring manufactured as set forth substantially," with "a metal ring enveloped in composition, as and for the purposes specified."

The injunction followed the decree of the court, sustaining the validity of the complainant's patent, No. 37,941, for "an improvement in rings for martingales;" and the question now suggested is the scope of the said patent.

In the course of the accounting before the master, it was insisted by the defendants that the patent of complainant referred only to the use of certain compositions in the manufacture of rings for martingales, and hence that the decree compelled them to account only for the manufacture of rings; whereas the complainant claimed that all the articles used in harness and carriage trimmings which have been treated by the process described in his letters patent, such as terrets, buckles, and hooks, should be included by the master.

I have examined the bill, answer, proofs, arguments of counsel, and the opinion heretofore given in the case, and this examination has confirmed the strong impression in my mind, when this application was made, that the complainant is asking that a wider scope be allowed to the claims of his patent than has yet been distinctly given to it by the court.

I do not mean to be understood as saying that it will not admit of such scope and meaning; but that the question has not yet been presented, and that the patent has not been considered in reference to such construction.

The principal question thus far presented was, whether the complainant, in the manufacture of rings for martingales, should be confined to a composition known as factitious ivory, or whether a ring coated with hard rubber, as prepared and used by the defendants, was the infringement of the complainant's patent? That such was the view of the court is obvious from a few extracts from the opinion delivered after the final hearing:

"It is insisted by the defendants," says the opinion, "that if the patent is valid at all, it must be limited to a martingale-ring, intended to imitate ivory, and made by covering a metallic ring with *artificial* ivory, as is described in the complainant's patent of 1857, or some similar compound." * * * * * "I think that such construction is too narrow, and that it does not give to the patentee all that he is entitled to under the specifications and claims of his patent. It is quite clear, indeed, that factitious ivory was the composition uppermost in his thoughts. Having the partiality of a parent for his offspring, he naturally imagined that no superior compound could be formed or used." * * * * "It is clear that the patentee has no thought of confining himself or others to the use of factitious ivory; for, after referring to his patent of 1857, he says: 'My present invention does not relate to any particular composition, as that (factitious ivory) or any similar compound may be employed. The nature of my invention consists in the employment of a metallic ring, within a ring formed of artificial ivory or similar materials, for giving strength to the same, &c.' He then claims, 'A ring for martingales, &c., manufactured as set forth, with a metal ring enveloped in *composition*, (generally,) as and for the purposes aforesaid.' * * * * I am of the opinion, on the whole case, that the claim of the complainant's patent, fairly construed, is *not to be limited to the use of factitious ivory;* that it is broad enough to include the composition of rubber or gutta-percha; and that there should be a decree for the complainant, &c."

All that the complainant is permitted to claim, under the decision of the court as it stands, is a specific article of manufacture, to wit:

A metal ring, coated with any plastic composition capable of being compressed and solidified by the use and action of dies, whereby a ring is produced with an exterior surface more durable and more highly polished than has before been obtained by different processes of manufacture and at greater cost.

Such a construction, obviously, relates to the *product*. The complainant's patent is held to be good for the product resulting from a new combination of old instrumentalities. His claim on *this* application is understood to be for the *process*, and that the invention includes that as well as the product. Doubtless both may be covered by one patent, as was held by Judge Grier, in this court, in the case of *Goodyear* vs. *The Railroads*, (2 Wall, p. 356;) but in such a case the description of the invention in the specification and claims should disclose that the inventor had both results in his mind.

But the grave doubt here is, whether the specification and claim of the complainant's patent are broad and full enough to cover a new process as well as a new product.

It is a well-settled principle that a patentee may so limit his claim as to deprive himself of the full benefit of his invention or discovery. It was to remedy such a difficulty or omission that the privilege of surrender and reissue was granted in the patent laws. Patentees often fail to realize any substantial advantage from some of the most useful inventions, owing to their too narrow claims, until such surrender, amendments, and reissue have been made.

The complainant is entitled to be protected only in the rights which the letters patent cover and secure to him. I incline to the opinion that the specification and claim of the patent under consideration will be found too limited in their scope to admit of the construction now claimed for them by the able counsel for the com-

plainant; but, without expressing any decided conviction on the subject, I shall, at this stage of the case, deny the application for an attachment, and direct the master to proceed with the accounting.

Under the reference already ordered he may take an account—

1. Of the rings coated and finished by the defendants, according to their methods as described in the proofs.

2. Of the terrets, buckles, and hooks, as claimed by the complainant.

He will make up the two accounts separately, so that the aggregate of each may be readily distinguished; and when his report is made, the parties will have the opportunity of obtaining the judgment of the court in this new, and as yet unconsidered, construction of the specification and claim of the patent, after their views are more fully presented, as they may be, on exception to the report.

DISCLAIMERS FILED.

82,429.—Improvement in Preserving Fruit.—DAVID M. MEFFORD, of Norwalk, Ohio. Patent granted September 22, 1868. Disclaimer filed February 25, 1875. Disclaims:

"Your petitioner hereby disclaims the scalding process claimed in said patent, and all the words and paragraphs in said patent descriptive of, relating to, or introduced into said patent because of said claim therein.

"The words and paragraph which the American Fruit Company hereby disclaims are the following, to wit: In paragraph five (5) of the patent descriptive of the nature of the invention, in the first line word 'first,' and the second line the words 'and, secondly, scalding or heating them to the boiling-point,' and in the third line, the words 'and to elliminate any excess of sulphurous-acid gas which may be combined with the fruit.' Said paragraph thus amended will read: 'The nature of my improvement relates to subjecting fruits, in their raw or uncooked condition, to the action of sulphurous-acid gas, in order to prevent fermentation, although exposed to the atmosphere.' Said company also hereby disclaims all the 14th and 15th paragraphs of said patent, which are as follows, viz:

"'The heating subsequent to treatment elliminates all the gas that is not incorporated with the properties of the fruit, thus preventing the gaseous sulphurous taste, and the acid incorporated with the fruit is merged in its acid.'

"'The heating process, after the action of the sulphurous-acid gas, serves to expel the incipient elements of fermentation. It also diffuses the gas still more throughout the tissues of the fruit.'

"Said company also hereby disclaims, in the first and second lines of paragraph 20, the words 'and then subjecting it to heat in the manner set forth.' With these words omitted, the first clause of the claim will be as follows, viz:

"'1. Preserving fruit by treating or charging the same with sulphurous-acid gas.

"Said company also hereby disclaims, in the first line of paragraph 21, the words 'preparatory to its being heated.' With these words disclaimed, the second claim will be—

"'2. Charging raw fruit with sulphurous-acid gas by means of air-pumps or bellows, substantially as set forth.'"

DESIGNS PATENTED DURING THE WEEK.

[Each Design bearing date April 13, 1875.]

8,260 and 8,261.—Backs of Leather Brushes.—WILLIAM H. HUMPHREY, Lansingburg, N. Y. Applications filed March 30, 1875. Term of patents 3½ years each.

8,262.—Reflector.—CHAUNCEY M. MURCH, Cincinnati, Ohio. Application filed March 20, 1875. Term of patent 7 years.

8,263 and 8,264.—Fancy Cassimero Fabric.—FREDERICK SNOW BOSWORTH, Providence, R. I., assignor to THE WEYBOSSET MILLS, same place.—Nos. 1 and 2. Applications filed March 29, 1875. Term of patents 3½ years each.

8,265 to 8,268, inclusive.—Embroidery-Patterns.—EMIL CHIRARD, New Haven, Conn., assignor to HENRY ST. JOHN, same place.—Cases R, S, T, and U. Applications filed April 7, 1875. Term of patents 3½ years each.

8,269.—Pipe.—ALEXANDER J. D. HENSZEY, Ashland, N. J. Application filed April 2, 1875. Term of patent 7 years.

8,270 and 8,271.—Oil-Cloths.—CHARLES T. MEYER and VICTOR E. MEYER, Bergen, N. J., assignors to EDWARD C. SAMPSON, New York, N. Y. Applications filed April 5, 1875. Term of patents 3½ years each.

TRADE-MARKS REGISTERED DURING THE WEEK.

[Each Certificate bearing date April 13, 1875.]

2,362.—Mowing and Reaping Machines.—ADRIANCE, PLATT & CO., Poughkeepsie and New York, N. Y. Application filed November 21, 1872.

"word 'Buckeye.'"

2,363.—Soap.—R. W. BELL & CO., Buffalo, N. Y. Application filed March 22, 1875.

"word 'DEUTSCHE.'"

2,364.—Soap.—R. W. BELL & CO, Buffalo, N. Y. Application filed March 8, 1875.

"word 'Favorite.'"

2,365.—Builders' Hardware.—CLARK & CO., Buffalo, N. Y. Application filed March 4, 1875.

"words and letters 'Clark's Pattern,' which are arranged upon and used in connection with articles manufactured by us, so as to enable the public to distinguish our goods from those of other manufactore.

2,366.—Whisky.—ALLEN H. GILLETT, Syracuse, N. Y. Application filed April 3, 1875.

"words 'GOLDEN PHEASANT.'"

2,367.—Writing-Paper.—ROBERT J. HARP, New Orleans, La. Application filed April 3, 1875.

"words 'DIXIE MILLS.'"

2,368.—Stomach-Bitters.—JAMES A. JACKSON & CO., St. Louis, Mo. Application filed August 23, 1870.

"a picture representing a woman bound by hands and feet to a rock. In the sea, which rolls at the base of the rock and touches the feet of the woman, is represented a huge hydra, or monster, with distended jaws, about to devour the woman. Above, and near the monster, a helmeted and mail-clad warrior is in the act of piercing the shoulders of the monster with a spear, the whole being an illustration of the ancient legend of Perseus rescuing Andromeda."

2,369.—Medicines.—EDWIN F. KUNKEL, Philadelphia, Pa. Application filed March 27, 1875.

"a representation of the head and bust of E. F. Kunkel."

2,370.—Corset-Steels.—LESLEY & YOUNG, Philadelphia, Pa. Application filed March 29, 1875.

"word 'VULCAN.'"

2,371.—Whisky.—THOMAS E. MOORE, Shawhan, Ky. Application filed December 21, 1871.

"the figure of a man in laboring dress, standing beside a mash-tub, the contents of which he is supposed to be stirring or breaking up with a mash-rake, the whole partly encircled by the words 'Pure Sour-Mash Copper Whisky.'"

2,372.—Whisky.—THOMAS E. MOORE, Shawhan, Ky. Application filed December 21, 1871.

"a mash-tub and rake, partially encircled by the words 'Pure Sweet Mash Bourbon Whisky.'"

2,373.—Rye-Whisky.—THOMAS E. MOORE, Shawhan, Ky. Application filed February 15, 1872.

"a sheaf of rye partially encircled by the words 'Pure Old Rye Whisky.'"

2,374.—Paper, Envelopes, and Cards.—PORTER & BAINBRIDGE, New York, N. Y. Application filed April 1, 1875.

"word 'CENTENNIAL.'"

2,375.—Medicine.—FRED SPREEN, Pittsburg, Pa. Application filed March 31, 1875.

"words 'Man's Friend; Family Gem.'"

2,376.—Jewelry.—THAYER MANUFACTURING JEWELRY COMPANY, Astoria, N. Y. Application filed April 2, 1875.

"word 'LOSAIC.'"

2,377.—Corsets.—UNITED STATES CORSET COMPANY, New York, N. Y. Application filed March 29, 1875.

"word 'Beauty.'"

2,378.—Corsets.—UNITED STATES CORSET COMPANY, New York, N. Y. Application filed March 29, 1875.

"letters 'A. A.'"

2,379.—Cutlery.—WILLIAM BROKHAHNE, New York, N. Y. Application filed April 3, 1875.

"figure of a hare, represented as running, and used in connection with the word 'Speed.'"

2,380.—Medical Compound.—EDWIN R. BURNHAM, Chicago, Ill. Application filed March 16, 1875.

"words or name 'Guarana Bitters,' in connection with the representation of a leaf."

2,381.—Preparation of Magnesia.—CHARLES H. PHILLIPS, New York, N. Y. Application filed April 1, 1875.

"words 'CREAM OF MAGNESIA.'"

2,382.—Preparation of Magnesia.—CHARLES H. PHILLIPS, New York, N. Y. Application filed April 1, 1875.

"words 'MILK OF MAGNESIA.'"

The OFFICIAL GAZETTE of the United States Patent Office is published weekly by the Patent Office. It is printed by authority of an act of Congress, which provides for its gratuitous distribution to libraries at the rate of eight for each congressional district.

The GAZETTE contains the decisions of the Commissioner of Patents, and such decisions of the courts in patent causes as are believed to possess general interest to inventors and patentees.

During the past year a complete synopsis of foreign patent laws, prepared by members of the British Legation in foreign countries, has been printed in the GAZETTE. Also an epitome of the proceedings of the Vienna International Patent Congress, with the action of that body to perpetuate itself. Matters of this character will receive further attention in the GAZETTE.

The claims of all patents granted are printed in the GAZETTE, bearing the same date as the issue of the patent, accompanied by a brief synopsis of the invention and a portion of the drawing.

The illustrations are photographic reproductions on a reduced scale of the drawings accompanying the original application, and preserve their fidelity, which was sometimes lost under the old plan of drawing or tracing and engraving.

Application for extension of patents, and the action of the Office in such cases, have their earliest publication in the GAZETTE. Disclaimers filed in the Office are nowhere else published.

Changes in the rules of practice of the Office are announced in the GAZETTE, which affords a much readier mode of communication with parties interested than to await a new edition of the Rules of Practice.

Finally, any matter believed to be of interest to inventors in their official intercourse with the Office, will receive in the GAZETTE the attention the subject warrants.

APPLICATION FOR EXTENSION.

UNITED STATES PATENT OFFICE,
Washington, D. C., March 22, 1875.

On the petition of JOHN HASELTINE, of Boston, Mass., authorized by act of Congress approved February 18, 1875, praying for the extension of a patent granted to him on the 25th day of March, 1856, for an improvement in Water-Wheels,

It is ordered that the testimony in the case be closed on the 11th day of May next; that the time for filing arguments and the Examiner's report be limited to the 21st day of May next; and that said petition be heard on the 26th day of May next.

Any person may oppose this extension.

J. M. THACHER, *Commissioner.*

INDEX OF INVENTIONS PATENTED APRIL 13, 1875.

	Class No.	No. of Patent.
Air compressors, check valve for, E. S. Winchester	12	161,999
Alarm box, fire, McCullough and Anderson	50	162,085
Annunciator, electric, E. Gray	50	162,057
Arbor, elastic, B. Bannister	131	162,010
Bale tie, M. T. Brown	7	162,023
Bale tie, J. M. Goldsmith	7	162,054
Barrels, vent for beer, Hindemyer and Beinkampen	167	162,066
Bath, electro-therapeutic, J. W. Moliere	50	162,091
Bed bottom, J. B. Henion	62	161,960
Bed bottom, Owens and Chamberlin	62	162,096
Bedstead, cot, S. C. Lusk	62	162,083
Bedstead fastening, E. Deetz	62	162,039
Billiard cushion, Held and Bensinger	143	161,860
Boiler, steam, F. Hungerford	148	161,964
Boilers, man hole cover for steam, H. Collinson	148	161,934
Bolt, door, W. H. Birge	24	162,017
Boot and shoe heels, &c., machine for trimming and burnishing the edges of, G. H. Bliss	16	161,857
Boot and shoe soles, metallic fastening for, G. McKay	16	162,087
Bottle, T. W. Synnott	68	162,117
Bottle stopper, A. Christin	1	161,863
Brick machine, J. F. Clark	20	162,030
Brick machine, I. Gregg, Jr.	20	162,053
Bridge, iron, J. B. Eads	21	162,045
Bridges, construction of iron truss, C. Kellogg	21	162,077
Bridle bit, H. Lockard	72	162,081
Bridle winker, J. D. Reid	72	161,900
Broiler, G. H. Bliss	154	161,856
Broiler, G. D. Dudley	154	161,937
Buggy top, C. Miller	31	162,089
Burial casket, O. M. Allen	39	161,852
Burner for heating purposes, gas, A. Ehret	65	161,939
Burner, lamp, L. J. Atwood	90	162,004
Burner, vapor, J. Benson	90	162,016
Burner, vapor, J. Q. Jaynes	90	162,076
Burners, lens attachment for gas, M. C. Meigs, (reissue)	90	6,373
Butter pail, C. B. Sheldon	45	161,906
Can, oil, A. Wood	107	162,134
Cap, J. C. Goebel	76	161,876
Car axle box, K. S. Austin	122	161,922
Car axle box, J. P. Garton	122	162,051
Car axle box, J. D. Imboden	122	162,073
Car brake, S. Glizinger	123	161,946
Car brake, J. M. Kelly	123	161,884
Car coupling, W. Dorr	122	161,936
Car coupling, C. Holzner	122	162,067
Car coupling, D. C. Morris	122	161,978
Car coupling, A. E. Rowley	122	162,103
Car coupling, W. G. Smoot	122	162,111
Car heater, railroad, W. B. Hayden	154	161,879
Car, safety passenger, J. T. Worley, (reissue)	121	6,375
Car safety step, J. A. Haase	121	162,060
Car truck, W. Swarthout	122	161,989
Carbureting apparatus, E. J. Fraser, (reissue)	27	6,376
Carpet rag looper, Naylor and Jefferis	95	162,093
Carriage axle box, H. Hammond	31	161,955
Carriage, child's, Stratton and Noyes	31	161,987
Carriage jack, J. G. Baker	79	162,009
Carriage spring attachment, C. S. Caffrey	31	162,027
Carriage springs, machine for setting, T. B. De Forest	31	162,040
Carriage wheel boxes, shearing die for, H. Hammond	31	161,956
Cartridge belt and holder, N. S. Goss	32	162,055
Caster, table, W. F. Collier	88	161,933
Casting, making molds for, C. Grasseor	33	162,056
Chair, B. F. Allen	62	162,001
Chairs, foot rest for easy, P. L. Lambert	62	161,887
Cheese vat, A. B. Armstrong	45	162,003
Churn, V. W. Pickett	45	162,096
Clock striking mechanism, G. H. Blakesley	36	162,018
Cloth measuring instrument, J. J. Greenough	42	161,877
Cloth measuring machine, J. S. Gold	42	161,947
Clutch mechanism for operating treadles, A. W. Cram	67	162,035
Commode, portable, I. S. Williams	8	162,131
Cooking and washing apparatus, steam, W. Cooper	154	162,033
Cooler, beer, F. Kranz	19	162,078
Cooler, milk, D. Gurnsey	45	161,952
Cooler, milk, A. P. Myers	45	161,979
Copying presses, damping box for, W. J. Purcell	146	161,898
Cornice, window, T. H. Dibble	62	161,869
Corsets, manufacture of, C. Gahren	80	162,050
Cotton cleaner, McCauley and Crowson	28	162,086
Cotton gin rib, E. R. Trammell	41	162,125
Cotton openers, beater for, J. E. Crane	28	161,868
Cultivator, J. N. Bashaw	43	161,855
Cultivator, J. T. Henderson	43	161,882
Cultivator, R. M. Melton, (reissue)	43	6,379
Cut-off, rain water, M. Gneiner	126	162,053
Cutter, matching, A. Streit	173	162,114
Cutting instrument, J. G. Baker	160	162,007
Dental articulator, C. D. Cheney	46	161,931
Dental flask, C. A. White	46	162,129
Dental pot, C. A. White	46	162,128
Desk for chairs, writing, Park and Woodhouse	146	162,097
Desks, hinge joint for school, C. H. Presbrey	61	162,099
Dividers, lead holder for, S. L. Fox	97	162,048
Domino, C. M. Hyatt	143	162,072
Door, W. C. Hurd	30	161,965
Door and shutter fastener, D. W. Barr	24	162,011
Drawing board, W. B. O. Peabody	54	161,982
Dredge box, E. Mather	98	161,891
Drill, rock, W. W. Goodwin	124	161,948
Drying apparatus, S. T. Swasey	48	161,990
Ear-ring, A. S. Baker	86	161,853
Earth closet, M. H. Synge	8	162,116
Electric machine, magneto, M. G. Farmer	50	161,874
Elevator, J. W. Melkle	79	161,892
Emery grinding machine, Gunn and Wells	70	161,951
Engine and meter, rotary, J. A. Stenberg	150	161,909
Engine cylinder, steam, J. E. Taylor	150	162,120
Engine, portable steam, F. F. Landis	94	161,970
Engines, valve gear for steam, G. H. Reynolds	152	162,101
Eyeglass, S. D. Burbank	157	162,025
Eyeglass, S. D. Burbank	157	162,026
Fabrics, Machine for tentering and straightening, I. E. Palmer	37	161,896
Feed-cutting-machine spike, G. W. Lee	59	162,079
Fire brick, compound for, H. M. Thompson	20	162,123
Fire extinguisher, C. L. Delmage	118	162,041
Flat iron heater, W. Cooper	91	162,034
Flooring tile, ornamental wood, R. Fenn	30	162,046
Flour and sugar packer, S. Taggart	57	162,118
Fluting irons, C. C. Savery	91	162,104
Food, composition for preserving, H. Gahn	58	161,944

	Class No.	No. of Patent.
Furnace grate, C. H. Harrison	149	162,064
Furnace, heating, W. E. Wood	154	162,135
Game apparatus, D. J. Pierce	143	161,963
Garments, elastic seam for, H. A. Blanchard	38	162,019
Gas by electricity, lighting, S. Gardiner, Jr., (reissue)	50	6,377
Gas regulator, M. C. Fisher	64	161,941
Gas stove, E. L. Vergurson	65	161,916
Gate, farm, M. Gunshenan	52	162,059
Glass, apparatus for working, B. F. Chase	68	161,861
Grate bar, G. D. Patnam	149	161,899
Grate for stoves, J. Young	154	162,136
Grate for stoves, furnaces, &c., W. Stout	154	161,911
Hammer, drop, H. Hammond	60	161,954
Harvester, J. P. Manny, (reissue)	74	6,382
Harvester, J. P. Manny, (reissue)	74	6,383
Harvester rake, J. T. Appleby	74	162,002
Harvester rake, A. Palmer	74	161,981
Harvester wheel, M. L. and J. M. Kellar	74	161,966
Hat bodies, machine for stretching the tips of, F. C. Taylor	76	161,992
Hat holder for seats, Shaw and Yaeger	62	162,109
Head block, Perry and Dwight	31	161,897
Heater and drier, T. Cook	147	161,865
Heater, railroad car, W. B. Hayden	154	161,879
Heel and sole trimming machine, G. H. Bliss	16	161,858
Hook for advertising display boards, &c., clasp, N. O Wilcox	23	161,919
Horse collar, T. Cheal	72	161,930
Horse yoke, Stratton and Olmsted	144	161,988
Horses, combined quarter boot and toe weight for, J. P. Gilbert	72	162,052
Horses from vehicles, device for detaching, J. Weikert	72	161,998
Horseshoe, D. Carey	60	161,860
Ice manufacture and machine, Martin and Beath	83	161,976
Ink well, C. H. Brown	146	161,926
Insects, metal switch for killing, S. A. Dorrison	170	161,870
Iron articles into steel, converting cast, S. G. Flagg	85	162,047
Jack, hydraulic, E. M. Dodgeon	79	162,044
Jack, lifting, H. Brockamith	79	161,925
Jack screw, C. K. Marshall	79	161,974
Jewelry, die for forming bezels on metallic backs for, C. Knapp	86	161,969
Journal for balance wheels, T. Van Dyke	87	161,915
Kiln, brick, S. D. Rader, (reissue)	20	6,380
Knife, welt, W. R. B rton	16	162,013
Ladder, step, Isaacs and Halliday	30	162,075
Lamp, S. C. Moore, (reissue)	90	6,371
Lantern, S. H. Miller	50	162,090
Lens attachment for gas burners, M. C. Meigs, (reissue)	90	6,373
Logs, machine for moving, A. Rodgers	130	161,903
Loom let-off mechanism, H. A. Remington	95	161,901
Loom let-off mechanism, J. Turner	95	161,996
Loom shuttle, J. H. Le Moyne	95	161,972
Meat cutter, J. H. Hollinger	25	161,961
Meat, fish, and vegetables, apparatus for preserving, A. H. Talt	58	162,119
Metal, anti-friction, T. Harrington	87	162,065
Milk conductor, E. Macy	45	161,889
Mill burrs, manufacture of Irvn. J. G. Baker	57	162,008
Mills, feed regulator for, Kenworthy and Vanmeter	57	161,885
Molding machine, J. Hartzheim	173	161,959
Mowing machine, W. Lorey	74	162,062
Mowing machine, J. P. Manny, (reissue)	74	6,381
Nut lock, R. Cramer	14	162,036
Nut lock, W. C. Gould	14	161,949
Organ action, reed, P. J. O'Neill	106	161,894
Pail and lamp, dinner, G. W. Aldrich	88	161,921
Paper pulp, bleaching jute for, G. W. Dubuisson	108	162,043
Peg cutter handle, W. R. Barton	16	162,014
Pen, fountain, G. Baader	146	161,923
Pencil and crayon holder, P. D. Richards	146	161,902
Pencil sharpener, slate, G. W. Choate	146	161,863
Piano stool, S. S. Schindler	62	162,105
Planing machine, D. L. Toppan	173	161,995
Planter, corn, J. Campbell, (reissue)	133	6,372
Planter, corn, L. Scofield	133	162,106
Planter, hand corn, J. W. Cleland	133	161,932
Plate and cutter, combined pie, W. H. Manning	88	161,890
Plow, B. S. Benson	114	162,015
Plow, gang, T. M. Nichol	114	162,094
Plow, gang, J. A. Sutherland	114	162,115
Plow, sulky, L. W. True	114	162,126
Poker and tongs, combined, J. C. Libe	154	162,080
Portfolio, J. W. Eastwood	146	161,872
Press for forming concrete paving and building blocks, T. Cook	110	161,867
Press, hay, J. Dugan	7	161,871
Presses, platen for lever and toggle, J. F. Taylor	7	162,121
Printer's type case, L. A. Martin	117	162,064
Propeller, screw, J. Harrington	139	162,063
Pulley or gear wheel, reversing, H. W. Sherrill	87	161,986
Pump, air, W. H. B. Bowers	13	162,021
Pump, steam, J. Teeseyman	118	162,122
Pumps, bucket for chain, J. G. Henderson	118	161,881
Pumps, bucket for chain, W. B. Kelly	118	161,967
Pumps, pitman connection for, J. M. Langley	118	161,971
Punch, conductor's, O. T. Hungerford	146	162,071
Punch, metal, D. L. Kennedy	119	161,968
Purifier, middlings, L. Gathmann	57	161,875
Radiator, J. Reynolds	147	162,100
Radiator, steam, W. H. Shock	147	161,907
Rafting crib, C. W. Tobey	13	162,124
Railway switch, W. A. Weant	120	161,918
Rain water cut-off, M. Gmeiner	126	162,053
Rake, horse hay, J. E. Wisner	77	162,132
Refrigerator, W. P. Butler	58	161,928
Regulator, steam or water pressure, J. E. Watts	146	161,917
Rocker, child's, A. Schoeninger	143	161,905
Roundabout, J. C. Clime	38	162,032
Saddle, gig, A. Ortmayer	72	162,095
Sash fastener, T. J. Carroll	24	161,929
Sash fastener, J. K. Clark	24	162,031
Sash fastener, I. D. Woolf	24	162,000
Saw mill, circular, F. M. Covell	130	161,935
Saw mill, circular, J. W. Miles	130	162,088
Saw set, R. J. Granville	131	161,950
Saw teeth, W. P. Hale	131	162,061
Saws, handle for cross-cut, W. J. Boynton	131	162,022
Scales, H. T. Budge	132	162,024
Sewing machine, C. H. Palmer	134	161,895
Sewing machine cover, R. W. Whitney	134	162,127
Sewing machine hemmer, J. W. Robards	134	162,102
Shears, button hole cutter, &c., combined, Carter and Rhoades	44	162,029
Sheet metal measures, pouring lip for, A. Cummings	136	162,037
Sheet metal threaded collars, forming, A. Taplin	136	161,912
Shoe lasts, block lock for, F. J. Davis	16	162,038
Shoe shave, D. Harrington	16	161,958
Shoes, cork sole for, C. Thackerey	16	161,994
Signals, apparatus for operating and locking switch, S. H. Finch	120	161,940
Skate, J. D. Kellogg, Jr.	143	161,883
Sower, seed, J. W. Talley	133	161,991
Spark arrester, Hmphreys and McCleary	94	162,070
Spice box, W. A. Wicks	88	162,130
Spike, C. K. Marshall	103	161,975
Spinning machines, spindle for, J. H. Le Moyne	142	161,888
Spinning rings, blank for, Forehand and Wadsworth	142	161,943
Stalk cutter, J. Y. Eckman	73	161,873
Steam and air brake, Burt and Little	122	161,927
Stocking heels, machine for re-enforcing, A. C. Carey	89	162,028
Stone, machine for manufacturing blocks of artificial, T. Cook	133	161,866
Stove, cooking, J. D. Smedley	154	161,908
Stove, gas, E. L. Vergurson	65	161,916
Stove grate, J. Young	154	162,136
Stove, magazine fire-place, S. B. Sexton	154	162,107
Stove, magazine fire-place, S. B. Sexton	154	162,108
Stove pipe shelf, M. H. Harman	88	161,878
Stoves, cross-piece for cooking, W. Stout	154	162,113
Sugars, refining, F. O. Matthiessen, (reissue)	155	6,378
Table and slicer, combined, T. Witmer	88	161,920
Table, ironing, E. J. Wolfrom	91	162,133
Table slide, extension, J. O. Frost	62	162,049
Thill coupling, H. A. Luttgens	31	161,973
Thill coupling, D. W. Thomas	31	161,913
Tile, ornamental wood flooring, R. Fenn	30	162,046
Toaster or broiler, wire, Ayres and Chamberlin, (reissue)	154	6,371
Toilet caster, S. W. Babbitt	161	162,006
Tongs, fire, L. Holmes	154	162,068
Tool handle fastening, W. M. Fisk	29	161,948
Toy gun, Shaw and Smith	143	162,110
Toy gymnast, W. L. Hubbell	143	161,963
Toy watch, P. Bonfils	143	162,020
Trap, animal, G. W. Brown	143	161,859
Trunk fastening, I. W. Valance	93	161,914
Tuyeres, blacksmith's, V. R. Taylor	12	161,993
Type case, printer's, L. A. Martin	117	162,084
Umbrella, W. D. Horton	165	161,962
Valve for air compressors, check, E. S. Winchester	12	161,999
Vehicle wheel, E. Hall	31	161,953
Vehicle wheel, G. Nelson	31	161,980
Vehicle wheel clamp, D. H. Tuxworth	31	161,997
Vehicle wheel hub, Rouse and Stoddard	31	161,904
Vehicles sled runner for, T. W. Porter	31	161,985
Velocipede, J. J. Bally	31	161,924
Ventilator, Stevens and Morse	166	161,910
Vermin, killing, T. S. Church	98	161,864
Vessel, marine grain, W. and J. Inglis	137	162,074
Vise, W. Horton	100	162,069
Vise, bench, J. M. Poore	29	161,984
Wagon axle skein, R. I. Asbill	31	162,005
Wagon brake, W. H. Barrowe	31	162,012
Wagon brake, L. B. Morgan	31	162,092
Wagon seat, S. Glizinger	31	161,945
Washing list, G. Lamb	146	161,886
Washing machine, J. R. Barnes	91	161,854
Washing machine, S. J. Morey	91	161,893
Washing machine, Spangler and Reich	91	162,112
Watch spring equalizer, C. Hanson	36	161,957
Water closet valve, G. R. Moore	8	161,977
Wind wheel, Edwards and Huntoon	118	161,938
Windmill, J. Hall	118	162,062
Wire twisting machine, A. De Mestre	170	162,042
Yoke, horse, Stratton and Olmsted	144	161,988

INDEX OF PATENTEES TO WHOM PATENTS WERE GRANTED APRIL 13, 1875.

	Patent No.
Agens, T., assignee	162,081
Aldrich, G. W., Dinner pail and lamp	161 921
Allen, B. F., Chair	162,001
Allen, O. M., Burial casket	161,852
Am Ende, C. G., assignee	161,944
American Art Foundry, assignee	162,056
Anderson and McCullough	162,085
Anthes, F. C., assignee	161,926
Appleby, J. T., Harvester rake	162,002
Armstrong, A. B., Cheese vat	162,003
Atwood, L. J., Lamp burner	162,004
Austin, K. S., Car axle box	161,922
Ayres, S., and H. J. Chamberlin, Wire toaster or broiler, (reissue)	6,371
Azbill, R. I., Wagon axle skein	162,005
Baader, G., Fountain pen	161 923
Babbitt, S. W., Toilet caster	162,006
Baily, J. J., Velocipede	161,924
Baker, A. S., Ear ring	161,853
Baker, J. G., Cutting instrument	162,007
Baker, J. G., Manufacture of iron mill burrs	162,008
Baker, J. G., Carriage jack	162,009
Bannister, B., Elastic arbor	162,010
Barnes, J. R., Washing machine	161,854
Barr, D. W., Door and shutter fastener	162,011
Barrows, W. H., Wagon brake	162,019
Barrows and Boyd, assignees	161,994
Barton, W. R., Welt knife	162,013
Barton, W. R., Peg cutter handle	162,014
Bashaw, J. N., Cultivator	161,855
Beath and Martin	161,976
Beinkampen and Hendemyer	162,066
Benedict & Burnham Manufacturing Company, assignee, (reissue)	6,374
Bensinger and Held	161,880
Benson, B. S., Plow	162,015
Benson, J., Vapor burner	162 016
Benther's Railway Axle Box Company, Limited, assignee	161,922
Birge, W. H., Door bolt	162,017
Bishop, E. D., assignee	162,002
Blakesley, G. H., Clock striking mechanism	162,018
Blanchard, H. A., Elastic seam for garments	162,019
Bliss, G. H., Broiler	161,856
Bliss, G. H., Machine for trimming and burnishing the edges of boot and shoe heels, &c	161,857
Bliss, G. H., Heel and sole trimming machine	161,858
Bond, W. H., assignee	161,921
Bonfils, P., Toy watch	162,020
Bowers, W. H. B., Air pump	162,021
Boynton, W. J., Handle for crosscut saws	162,022
Brintnall, T. M., assignee	161,889
Brocksmith, H., Lifting jack	161,925
Brown, C. H., Ink well	161,926
Brown, G. W., Animal trap	161,859
Brown, M. T., Bale tie	162,023
Budge, H. T., Scales	162,024
Buell, T. W., assignee	161,991
Burbank, S. D., Eyeglass	162,025
Burbank, S. D., Eyeglass	162,026
Burt, W. L., and G. H. Little, Steam and air brake	161,927
Butler, W. P., Refrigerator	161,928
Cady, M. M., assignee	161,960
Caffrey, C. S., Carriage spring attachment	162 027
Campbell, J., Corn planter, (reissue)	6,372
Carey, A. C., Machine for re-enforcing stocking heels	162,028
Carey, D., Horseshoe	161,860
Carroll, T. J., Sash fastener	161,929
Carter, P. L., and J. W. Rhoades, Combined shears, button hole cutters, &c	162,029
Chamberlin and Ayres, (reissue)	6,371
Chamberlin and Owens	162,006
Chapin, G. B., assignee	161,995
Chase, B. F., Apparatus for working glass	161,861
Cheal, T., Horse collar	161,930
Cheney, C. D., Dental articulator	161,931
Choate, G. W., Slate pencil sharpener	161,862
Christin, A., Bottle stopper	161,863
Church, T. S., Killing vermin	161,864
Clark, J. F., Brick machine	162 030
Clark, J. K., Sash fastener	162,031
Cleland, J. W., Hand corn planter	161,932
Clime, J. C., Roundabout	162,032
Clinch, J. M., assignee	161,862
Colburn, G. W., assignee	161,936
Collier, W. F., Table caster	161,933
Collinson, H., Man-hole cover for steam boilers	161,934
Colvin, S., & Co., assignees	161,901
Cook, T., Heater and drier	161,865
Cook, T., Machine for manufacturing blocks of artificial stone	161,866
Cook, T., Press for forming concrete paving and building blocks	161,867
Cooper, W., Steam cooking and washing apparatus	162,033
Cooper, W., Flat iron heater	162,034
Covell, F. M., Circular saw mill	161,935
Cram, A. W., Clutch mechanism for operating treadles	162,035
Cramer, R., Nut lock	162,036
Crane, J. E., Beater for cotton openers	161,868
Crosby, A. A., assignee	161,945, 161,946
Crowson and McCauley	162,066
Cummings, A., Pouring lip for sheet metal measures	162,037
Cutter, Tower & Co., assignees	161,902
Dalamater, C. H., assignee	162,101
Davis, F. J., Shoe last block lock	162,038
Deets, E., Bedstead fastening	162 039
De Forest, T. B., Machine for setting carriage springs	162,040
Delmage, C. L., Fire extinguisher	162,041
De Mestre, A., Machine for twisting wire	162 042
Dibble, T. H., Window cornice	161,869
Donn, W. C., administrator	161,944
Dorr, W., Car coupling	161,936
Dorrison, S. A., Metal switch for killing insects	161,870
Dos Passos, J. R., assignee	161,865, 161,866, 161,867
Dubuisson, G. W., Bleaching jute for paper pulp	162 043
Dudgeon, E. M., Hydraulic jack	162 044
Dudley, G. D. Broiler	161,937
Dugan, J., Hay press	161,871
Dwight and Perry	161,897
Eads, J. B., Iron bridge	162,045

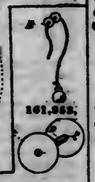
TITLES, DRAWINGS, AND CLAIMS

OF

PATENTS GRANTED APRIL 13, 1875.



161,859. BURIAL-CASKETS. O. M. Allen, Kalamazoo, Mich. [Filed Feb. 24, 1875.]

Brief.—The covers are arranged to meet on a central line, and to be rotated away from the top over upon the outside of the side portions of the coffin. Each cover is of a form approaching to that of a quarter longitudinal section of a cylinder. Each cover has a portion at right angles at each end, which serves to pivot them upon the outside of the burial-case.

The two sections A and B of the cover, pivoted and operating on the outside of the casket, as herein described and set forth.

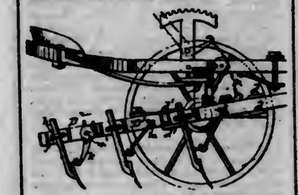
161,859.

161,859.

161,860. EAR-RINGS. Albt S. Baker, Somerville, Mass. [Filed Mar. 18, 1875.]

Brief.—Two plates, each provided with a tubular body, one passing inside the other, and through which the supporting-wire of the pendant passes.

As a new article of manufacture, the earring guard or re-enforce described, consisting of the head A provided with the hollow tubular body D, and the head B, provided with hollow tubular body C, substantially as and for the purpose specified.

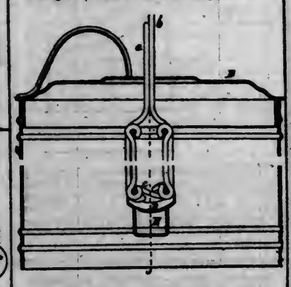


161,861. WASHING-MACHINES. Josiah R. Barnet, Elizabeth, N. J. (Filed Jan. 2, 1875.)

In a washing-machine, the beater or pounder consisting of thin slats of wood and metal, as shown and described, for the purpose specified.

161,862. CULTIVATORS. John N. Beahow, Geneva Lake, Wis. [Filed Mar. 1, 1875.]

Brief.—Two additional beams are attached to the outer sides of the main plow-beams, and made adjustable in distance.



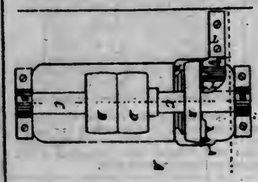
1. In a cultivator, the combination of the beams D, D', and D², hinged as described, whereby the beams D' and D² may be adjusted in relation to each other, and in relation to the beam D, all constructed as and for the purpose set forth.

2. The split tongue A, hinged beams D D, each having adjustable beams D' D², in combination with the flexible brace E, chains e e, rollers l l, and T joint a, all as and for the purpose set forth.

161,863. BROILERS. George H. Bliss, West Stockbridge, Mass. [Filed Feb. 10, 1875.]

Brief.—The air-passage prevents undue heating of the field within the drip-channel.

1. In a culinary apparatus for broiling steaks and cooking other articles, the combination of the vessel A, closed at the top by a suitable cover, and open at the bottom, and adapted to be heated upon the top of a stove or range, by being placed over an opening therein, directly over the fire, and a double-leaved folding gridiron or skeleton food-holder C supported vertically therein, in a position to admit of a free and equal access of the heat from the fire to both sides thereof, to cook both sides of the food contained therein, without turning, substantially as described.



2. In combination with the bottomless vessel A, adapted to be used upon the top of a stove or range, by placing it over an opening therein, directly over the fire, and the gridiron or food-holder C, supported vertically therein, as set forth, the trough or spout D provided with the air-tube or space E beneath it, substantially as described.

3. In combination with the bottomless vessel or casing A, adapted to use upon the top of a stove or range, by placing it over an opening therein, directly over the fire, as set forth, and the gridiron or food-holder C, supported vertically therein, in position to admit of a free and equal access of the heat of the fire to both sides thereof, the detachable trough or spout D arranged to form the upper side or cover of the air-passage E, substantially as described.

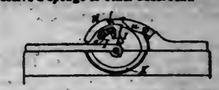
4. The combination of the bottomless vessel or casing A, adapted to use upon the top of a stove or range, as set forth, the double-leaved gridiron or skeleton food-holder C, supported vertically therein, the inclined trough or spout D, projecting through the side of the casing A, and the detachable drip-pan F, suspended from said projecting spout, substantially as described.

161,867. MACHINES FOR TRIMMING AND BURNISHING THE EDGES OF BOOT AND SHOE HEELS, &c. George H. Bliss, West Stockbridge, Mass. [Filed Feb. 6, 1875.]

Brief.—The cutters are attached to the outer radial or end surface of a combined heel trimming and burnishing cylinder, whose periphery is adapted to burnish the heel-edge of a boot or shoe.

1. In machines for trimming or burnishing the edges of boot and shoe heels or soles, the burnishing and trimming cylinder or disk F, provided with a smooth periphery, and one or more curved cutters, k, projecting from its outer radial or end surface, all substantially as and for the purposes described.

2. In combination with the cutter-head E and one or more cutters, k, the curved gage-stand L, provided with the guard-lip i, all arranged and operating as and for the purposes described.



3. In combination with the cutter-head E, having a smooth periphery, and one or more cutters, k, formed upon or secured to its radial surface, with that portion of their cutting-edges next to the head equidistant with its periphery from the axis of said head, and their points or outer ends curved toward the axis, as set forth, the stand L, provided with the guard-lip i, and the adjustable guide-rest L', all adapted to operate as and for the purposes described.

4. In a machine for trimming the edges of boot or shoe heels or soles, the combination of the cutter-head E and one or more cutters, k, fitted to recesses formed in the outer radial or end surface of said head, with the outer surface of the cutting portion thereof convex to the radial face of said cutter-head, and the cutting-edge thereof radial to the axis of revolution, substantially as described.

5. In combination with the cutter-head E and one or more cutters, k, constructed and applied thereto as described, the guide-stand M, provided with the rest-arm m and the adjustable rand-guide n, all arranged and operating substantially as herein set forth.

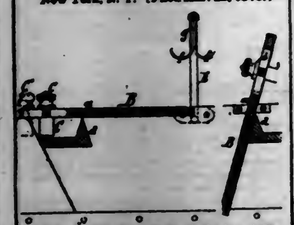
161,868. HEEL AND SOLE TRIMMING MACHINES. George H. Bliss, West Stockbridge, Mass. [Filed Feb. 6, 1875.]

Brief.—The cutter-head is a cylinder having an outer endless cutting-edge; its periphery is employed as a burnishing-surface. Beneath is a receptacle or chamber, in which the cylinder rotates, which may be supplied with oil or coloring material, and which is adapted to receive a sponge or other absorbent.

1. The combination of the tread-guide H and spring g, arranged to operate as and for the purposes described.

2. The combination of the guide H, arranged to be adjusted parallel to the cutting-edge of the knife, and the gage-rest I, arranged to be adjusted in a radial direction toward or from the cutting-edge of the knife, as and for the purposes described.

3. In combination with a rotary cutter for trimming the edges of heels or soles, or a revolving burnishing-wheel, a receptacle for oil, blacking, or other suitable lubricating or coloring material, in which said cutter or burnishing-wheel revolves, as and for the purposes described.



4. The combination of a revolving cutter-head or burnishing-wheel, a receptacle in which a portion of said cutter-head or burnishing-wheel revolves, and a packing of sponge or other absorbent material, which may be saturated with oil, blacking, or other suitable lubricating or coloring material, all as and for the purposes described.

5. The combination of the ring or hoop knife F, receptacle J, and shield or guard-plate K, all arranged as and for the purposes described.

6. A combined rotary cutter and burnishing-tool, having a smooth and polished exterior surface, arranged to revolve in a suitable lubricating-receptacle, and to trim, to form, and polish at the same time the edge of a boot or shoe heel or sole by revolving past it in the direction of its thickness, while the heel or sole is being fed toward said tools in the direction of its length, and parallel to the axis of motion of said cutters, substantially as described.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

161,859. ANIMAL-TRAPS. Geo. W. Brown, New York, N. Y. [Filed Mar. 22, 1875.]

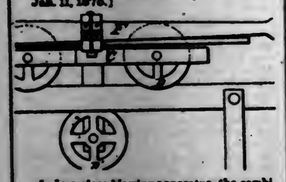
1. In combination with the body A and tilting covers B, the adjustable pieces C, adapted to not only regulate the balance of the covers, but also to lock them in the closed position, as herein specified.

2. In combination with the body A and tilting covers B, the stiff bail E, arranged to ship and unship in the holes *e e* and grooves *e e*, as and for the purposes specified.

3. The spring-hooks *f f*, their shanks *g* clasping the bail E, in combination with the box A, bail E, and hinged cover or covers B, as before described.

161,860.

161,862.



161,860. HORSESHOES. Dennis Carey, Lynn, Mass. [Filed Mar. 8, 1875.]

Brief.—The calk-tenon is T-shaped in cross-section, one part of which is even with the lower face of the shoe, so that a button pivoted to the shoe and turned over it holds the calk in place.

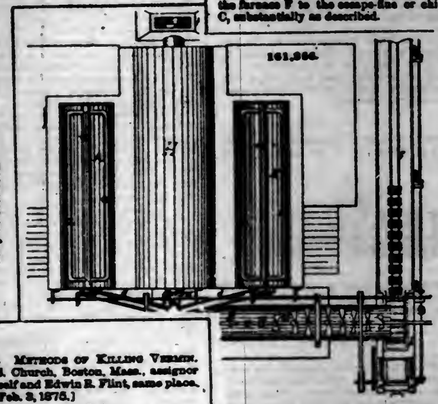
The calk constructed with a T-shaped tenon, and secured to the shoe B by the button *b*, substantially in the manner described.

161,861. APPARATUS FOR WORKING GLASS. Benj. F. Chase, Jonesborough, Tenn. [Filed Jan. 11, 1875.]

1. In a glass-blowing apparatus, the combination, with a mechanically-supported vibrating blowing-tube, F, of a pipe, I, communicating with a mechanical blower, substantially as specified.

2. The combination, with the blowing-tube F, arranged in and communicating with the tubular end of a horizontally-rotating rod, E, of the sectional coupling H of tube I, substantially as specified.

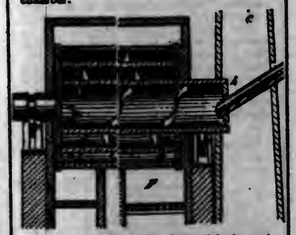
3. The combination, with the rod E, supporting blowing-tube F, of a transporting-carriage, G, substantially as specified, and for the purpose set forth.



4. The combination, with the rotating rod E, supporting blowing-tube F, of the adjustable counterpoised J, substantially as specified.

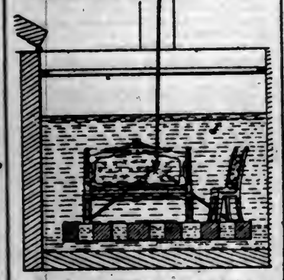
5. The combination, with a blowing-tube, F, and a blast-pipe, I, communicating with a mechanical blower, of a regulating-valve, A', substantially as specified.

6. The combination, with the rod E and blowing-tube F, of the hinged plate G and spring *g*, substantially as specified.



161,862. BOTTLE-STOPPERS. A. Christie, Chicago, Ill. [Filed Dec. 21, 1874.]

Brief.—A tapered stopple provided with sockets, in combination with a bottle whose diameter is less than the length of the stopple, and is provided with a collar.



161,863. HEATERS AND DRIERS. Thomas Cook, Sing Sing, N. Y., assignor to J. R. Dos Passos and Zachariah B. Simmons, New York city. [Filed Feb. 24, 1875.]

Brief.—The material to be heated and dried is received at the open end *h* of the central chamber, and discharged at *i* of the outer chamber, while the products of combustion are received at *i* of the outer chamber, and discharged at the open end *h* of the central chamber.

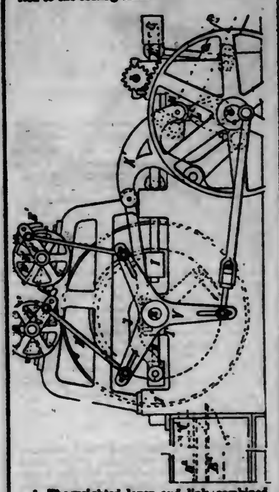
In an apparatus for heating and drying pulverulent and granular substances, the combination of the furnace F, inclosing arch or jacket A, escape-flue C, and feed-chute K with the rotary cylinder H, operating within the jacket A, said cylinder being divided into several compartments, *h' h' h'*, provided with screw-threads *o o'*, and with openings *n n' i*, arranged at opposite ends of the compartments, and forming, with the said compartments, the passage through which the material to be dried passes from the feed-chute to the inside *i*, and through which, also, the smoke and products of combustion pass from the furnace F to the escape-flue or chimney C, substantially as described.

161,864. METHODS OF KILLING VERMIN. Titus S. Church, Boston, Mass., assignor to himself and Edwin R. Flint, same place. [Filed Feb. 3, 1875.]

The process of killing vermin in furniture, upholstery, or carpets, consisting in immersing the same in naphtha or other light products of distillation from petroleum or coal oil, substantially as described.

161,865. MACHINES FOR MANUFACTURING BLOCKS OF ARTIFICIAL STONE. Thomas Cook, Sing Sing, N. Y., assignor to J. R. Dos Passos and Zachariah B. Simmons, New York city. [Filed Feb. 24, 1875.]

Brief.—The pulverized stone and asphalt are heated in separate compartments, then discharged through pipes into a mixing-vessel. The mixed material then passes to the press, from which the completed blocks are conveyed to a suitable receptacle.



1. The combination of the furnace F, heater H, furnace F' or F'', vessel A, pipes D *d*, vessel G, agitators *e* E, and press I, with the driving mechanism, substantially as and for the purposes herein set forth.

2. The two vessels A A', provided with separate agitators *e* and discharge-pipes *d*, and heated by separate furnaces, in combination with the heater H and mixing-vessel G, and its appliances, substantially as described, for the purposes set forth.

3. The process of heating the stone, heating and stirring the asphalt, delivering the stone and the asphalt into the same mixing vessel, mixing them thoroughly therein, discharging them, thus mixed, into the press, and molding and compressing them into blocks, and delivering the blocks from the press, finished and ready for use, by the operation of machinery, as above described, and without the intervention of hand-labor at any stage, substantially as herein set forth.

161,867. PRESSES FOR FORMING CONCRETE PAVING AND BUILDING BLOCKS. Thomas Cook, Sing Sing, N. Y., assignor to J. R. Dos Passos and Zachariah B. Simmons, New York city. [Filed Feb. 24, 1875.]

Brief.—The plunger and platen are mounted upon two parallel rods, and are operated by a toggle-joint, to press the material between them within an intermittingly-rotating mold-wheel. The pressed block is received upon a rising and falling plate, upon which it is carried to the cooling-tank.

1. The weighted lever and link, combined with the crank-shaft and toggle-joint, to operate the platen and plunger upon the parallel tension-rods B B, substantially as described, for the purpose specified.

2. The moving pawls upon the rock-shaft S, adapted to move the mold-wheel intermittingly by means of an oscillating spider, V, operated from the main driving-shaft of the press, substantially as described.

3. The discharger or follower operated from the counter-shaft through the medium of connecting-arms J', double bell-crank levers K', and cams L', substantially as described.

4. The discharger or follower adapted to be withdrawn from the molds with a positive motion by means of a cam on the counter-shaft, combined with an arm on each of the bell-crank levers, substantially as described.

5. The release-lever Q, to relieve the pressure of the plunger and platen, and prevent the press from breaking when the movements of the plunger and platen are varied by a difference in the size of the blocks or the presence of any unyielding substance therein, substantially as described.

6. The release motion produced by the weighted lever and connecting-link, pivoted to each other, and connected to the toggle-joint and counter-shaft, substantially as described.

7. The weight upon the lifting-lever adapted for adjustment to regulate the pressure of the plunger and platen, substantially as described.

8. The weighted lever, suspended from the toggle-joint by means of the rod P', substantially as described.

9. The ejector-ribbon, in combination with the suspending-rod and releasing-lever, substantially as described, for the purpose specified.

10. The two feed rollers or wheels, provided with radially-projecting blades for feeding the material into the mold-wheel, substantially as described.

11. The feed-blades, having their points of projection and retraction adjustable with respect to the space between the feed-rollers, for the purpose of regulating the force of the feed into the molds, substantially as described.

12. The arrangement of the grooved cams for separately retracting the feed-blades completely within the feed-rollers, substantially as described, for the purpose specified.

13. The open-ended feed-hopper X, constructed with two parallel faces, Y Y, having sharpened upper edges extending up between the two feed-rollers, substantially as described, for the purposes specified.

14. The feed-rollers, having an intermittent rotation toward each other, substantially as described, for the purpose specified.

15. The combination of the grooved cam-plates with the feed-rollers and reciprocating blades, substantially as described, for the purposes specified.

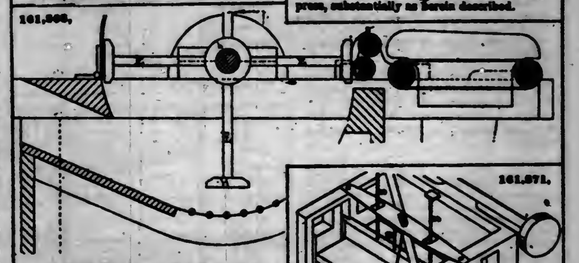
16. The grooved cam-plates, provided with radial slots for the application and removal of the feed-blades, substantially as described.

17. The spider V upon the rock-shaft, combined with the center-shaft and rotating wheels of the feed-rollers, by the means substantially as described, for the purposes specified.

18. The carrying-plate E', adapted to receive the pressed blocks from the mold-wheel, and deposit them upon a reciprocating carrier in rear of the mold-wheel, substantially as described.

19. The feed-plate E', operated by the pivoted connecting-arms V' and the cams A' from the cross-shaft X', substantially as described.

20. The carrying-plate E', guided in its vertical movements by the upright rods T', substantially as described.



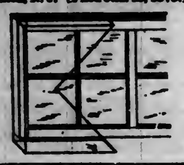
21. The carrier, composed of three reciprocating parts, D' D' D', operating as described, to feed the pressed blocks intermittingly, substantially as described.

22. The combination, with the mold-wheel, of the feeding rollers and blades, the plunger and platen, the discharger, the dropping-plate, and the carrier, substantially as described, for the purposes specified.

23. The mold-wheel and carrier adapted to rotate within reservoirs of water, substantially as described, for the purposes specified.

24. The pressing-plunger and platen, adapted to receive a stream of water within them, to prevent their pressing-faces from becoming heated, substantially as described.

161,868.



161,868. BEATERS FOR COTTON-OPENERS. John R. Crane, Lowell, Mass. [Filed May 11, 1874.]

Brief.—The beaters are attached to hubs or sleeves, which are applied loosely to the beater-shaft, and are held in proper radial position by springs attached to the shaft and beater-arms.

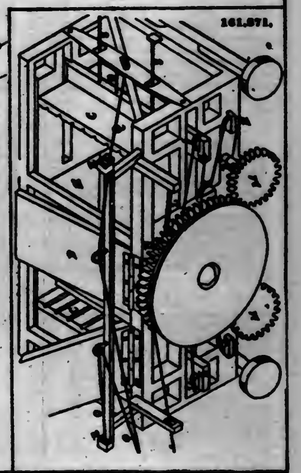
The yielding cotton-beater, combined with the shaft A, as an axis of rotation and an axis upon which the beater is made to yield, substantially as described.

161,869. WINDOW-GUARDS. T. H. Dibble, Trenton, N. J. [Filed Jan. 18, 1875.]

1. A window-cornice, of wire or other equivalent material, having substantially the contour, *c'*, described, and provided with the parts or pieces *c* and *b*, all united and adapted to receive an outer covering or ornamental design, in the manner substantially as described and set forth.

2. In combination with the above-described cornice, the wires *d d*, secured to the upper part thereof, and extending downward and inward, and having eyes at their ends to receive the journals of a curtain-roller, in the manner substantially as described and set forth.

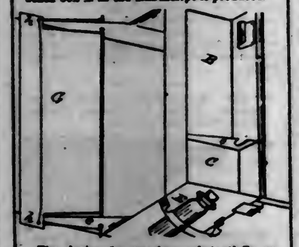
161,870. METAL SWITCHES FOR KILLING INSECTS. Samuel A. Derrison, Clinton, Mass. [Filed Mar. 10, 1875.]



As a new article of manufacture, a switch, for killing insects, composed of fine metal wires, as specified.

161,871. HAY-PRESSES. John Dupas, San Francisco, Cal. [Filed Mar. 1, 1875.]

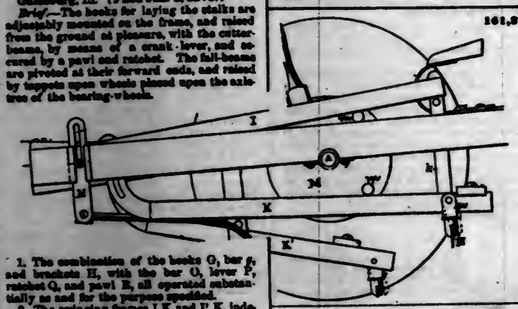
Brief.—The followers are operated simultaneously by ropes passing around shafts bearing pinions meshing into a spur-wheel, to the side of which the drum receiving the ropes for applying the power is secured. The followers are returned to the end of the press by a rope attached to the middle of each of the followers at the back end, and led through the end of the press and over suitable pulleys.



1. A press, consisting of the horizontal body A, having the two followers C C, with their guides B, in combination with the horizontal shafts F, with the gears M and K, pulleys H, I, and J, and chains G, for moving the followers toward each other simultaneously, substantially as herein described.

2. In combination with the two horizontally-moving followers F F, the ropes Q, with the pulleys R, so constructed as to withdraw the followers simultaneously to the ends of the press, substantially as herein described.

161,872. PORTFOLIOS. John Wesley Eastwood, Monroe Township, Wyoming County, Pa. [Filed Mar. 16, 1875.]

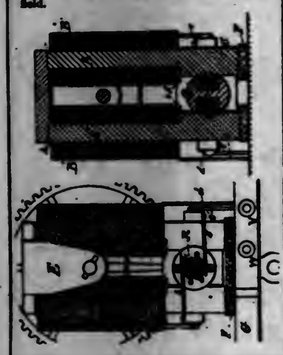


Brief.—Copies are placed upon the hinged rest G, and held by the elastic cord *g*. Blank sheets are interposed between the hinged rest and base F, and fed forward toward and beneath box A as the manuscript is produced.

The device for copying, substantially as herein described, consisting of the box A, having compartments B C, and the rack composed of the stripe H H I, writing-plate F, and the folding copy-rest G, for the purpose specified.

161,873. STALK-CUTTERS. J. Y. Bokman, Galesburg, Ill. [Filed Jan. 2, 1875.]

Brief.—The hooks for laying the stalks are adjustably mounted on the frame, and raised from the ground at pleasure, with the cutter-beams, by means of a crank-lever, and secured by a pawl and ratchet. The fall-beams are pivoted at their forward ends, and raised by supports upon wheels placed upon the eccentrics of the bearing-wheels.



1. The combination of the hooks G, bar *g*, and brackets H, with the bar O, lever P, ratchet Q, and pawl R, all operated substantially as and for the purpose specified.

2. The swinging frames I K and I' K, independently hinged to the frame, and alternately operated by means of the impost-wheels M M, substantially as and for the purpose specified.

161,874. MAGNETO-ELECTRIC MACHINES. Moses G. Farmer, Salem, Mass. [Filed June 21, 1873.]

Brief.—Cores of magnets of cast-iron; initial magnetism therein induced by earth currents; by rotation of helixed armature currents are produced therein, which are led around cast-iron magnets, strengthening the magnetic field.

1. A dynamo-electric machine, constructed substantially as set forth, in which the electro-magnetic field is sustained solely by the magnetism produced by currents which, circulating in it, are created from the armature which rotates in this field.

2. The combination of the non-magnetic plate F, provided with legs H H', having bushings n n' thereon, the pivots P P', the armature O, the plates A A', the coils B B', and the cross-piece D, substantially as and for the purpose set forth.

3. The combination of the cross-piece D, having legs or ears E E' attached thereto, the shaft I, wheel K, the pinion L, pivot P, armature O, and commutator R, substantially as set forth.

4. The arrangement of the coils B B', armature O, segments *a a'* of the commutator-springs *b b'*, screw-cups W V, connecting wires *c c' d*, and the external wire connecting the screw-cups in one and the same electric circuit, substantially as set forth.

5. A dynamo-electric machine having the cores A A', and connecting cross-piece D of the electro-magnet, and the armature O, constructed of cast-iron, substantially as and for the purpose set forth.

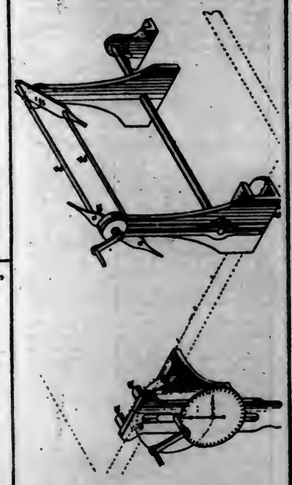
161,875. MIDDLINGS-PURIFIERS. L. Gathmann, Chicago, Ill. [Filed Oct. 19, 1874.]

Brief.—The reciprocating scrapers, for keeping the meshes of the screen clear, are attached to and operated from a single vertical reciprocating bar arranged outside of the machine.

161,875.

1. The series of scrapers H H H, secured to arms G G G, which are attached to and operated by a reciprocating bar, F, outside of the machine, in combination with the screens B B' B², substantially as described and shown.

2. The combination of a series of scrapers, H H H, secured to arms G G G, which are attached to and operated by a reciprocating bar, F, outside of the machine, with the screens B B' B², carrier-boards *c c' d*, inclined boards *d d*, spouts *e e'*, contained in the vibrating frame C, and the casing A, valves B, and a ventilator, substantially as and for the purpose set forth.



161,876. CAPS. John C. Goebel, Chicago, Ill. [Filed Mar. 15, 1875.]

The combination, with a cap, of a crimped wire ring, A, placed around the inside of the top of said cap, and supported at intervals by the crimped wire braces B, constructed and arranged substantially as described and shown, for the purpose set forth.

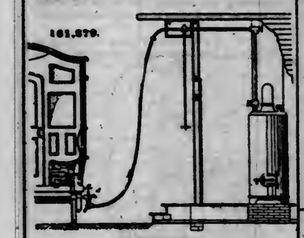
161,876.

161,877. CLOTH-MEASURING APPARATUS. John James Greenough, Syracuse, N. Y. [Filed Sept. 9, 1874.]

1. The frame c, supporting the measuring-wheel, by means of which the said wheel is affixed to a table or counter, with its upper part just above the level thereof, and the slide *c* connected therewith, bearing steel-rollers *c* above, and resting upon said measuring-wheel constructed and arranged as and for the purposes specified.

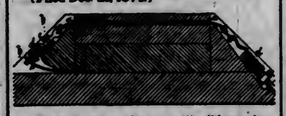
2. The reel composed of metal head s s and removable bars *t t*, by which the reel is collapsed, as herein described.

161,878. STOVE-PIPE SHELVES. Miles H. Harman, Andover, N. Y. [Filed Jan. 20, 1875.]



The clasp C, constructed of a piece of spring-metal, having at one end a handle, b, and at its opposite end a hinged metallic strip, D, constructed with a series of open notches, *d d*, and a handle, *c*, in combination with a shelf or tray, having a rim provided with openings *a* for the passage of the clasp in order to secure the tray to a stove-pipe, as and for the purpose described.

161,879. RAILROAD-CAR HEATERS. William B. Hayden, Columbus, Ohio. [Filed Feb. 27, 1875.]



Brief.—A close vessel containing water is placed within the car. Into this, at the stations, steam from a stationary boiler is discharged until the water is brought to a temperature of 212° Fahrenheit, or thereabout.

A stove, A, supplied with a liquid and placed upon a car or other vehicle, and provided with a steam-distributing pipe leading into it, in combination with a stationary detachable and attachable steam-conducting hose-pipe, which is provided with a suitable coupling for connecting it temporarily with the steam-pipe of the stove, whereby the temperature of the liquid in the stove is raised to the proper degree by steam passed through the detachable pipes into it from a stationary boiler, substantially as described.

161,879.

161,880. BILLIARD-CUSHIONS. Frederick H. Heid and Moses Bensinger, Chicago, Ill. [Filed Dec. 21, 1874.]

The combination of the metallic ribbon *a*, inserted in a billiard-table cushion, having one end attached to a bolt, *b*, which passes through a guide-plate, *c*, and has a nut, *b'*, spiral spring *d*, and leaf-spring *e*, for preserving an equal tension on the ribbon, and the other end attached to a spiral spring, *d'*, having a nut, *f*, and screw *g* inserted through the table-cushion frame for changing the tension of the ribbon, substantially as described and shown.

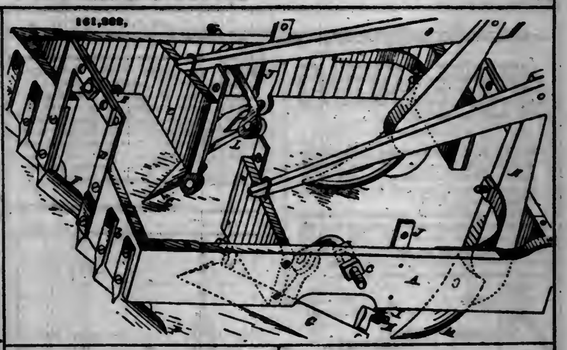
161,881. BUCKETS FOR CHAIN-PUMPS. J. G. Heiderson, Keokuk, Iowa. [Filed Feb. 6, 1875.]

Brief.—The rubber disk or sucker has four holes, two of which are connected by a cut or slit, to enable the disk to be forced over the loop or link. The other two serve as leak-holes when the pump is not in operation, but when in operation they are closed by the bucket or disk below the rubber sucker.

161,881.

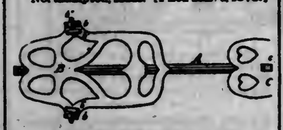
1. The elastic sucker I, with holes connected by a cut, T, as arranged as to pass over and close up on link E, substantially as set forth.

2. The elastic sucker I, with opening I, in combination with lower disk A, arranged so that the opening will be closed when in operation, and open when stationary, substantially as set forth.



161,882. CULTIVATORS. J. T. Henderson, Woodbury, Tenn. [Filed Mar. 19, 1875.]

Brief.—A variety of cultivating devices combined in flexibly-connected frame with novel modes of adjustment.



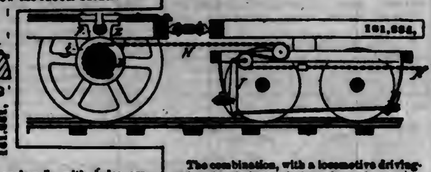
1. The combination, in a cultivator composed of two flexibly-connected sections, of a series of pulverizing-teeth, F, a pair of scrapers, G, and a pair of hilling-plows or cultivator-shovels, M, substantially as and for the purpose set forth.

2. The pivoted or adjustable scrapers G, hinged to the standards J, in combination with the adjusting-screw K, hinged to the arm I, substantially as and for the purpose described.

161,882.

161,882. SKATES. J. Dwight Kellogg, Jr., Northampton, Mass. [Filed Mar. 1, 1875.]

1. A skate composed of the runner A, risers *a*, plate B, with ears *b*, and plate C, with catch *c*, all cast in a single piece, substantially as described.



2. The adjustable clamp-jaws *b' b'*, having a toothed or serrated face and tangs, *b'*, one having a right and the other a left hand screw-thread cut thereon, in combination with the screw-tapped ears *b*, substantially as and for the purposes described.

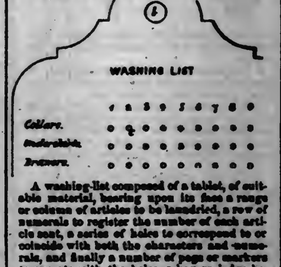
3. The removable and adjustable clamp-jaws *b' b'*, having the serrated or toothed faces and smooth tangs, in combination with the fixed ears *b*, substantially as and for the purposes described.

161,883. CAR-BRAKES. Jas. M. Kelly, Austin, Ill. [Filed Dec. 21, 1874.]

Brief.—Brake-chain wound on spool, which may be made rigid with locomotive-axle or set free at will.

161,883.

The combination, with a locomotive driving-axle, of a chain-spool sleeved on the same, a friction-clutch at each end of said spool feathered on said axle, a lever, a rock-shaft, two eccentrics, and two ball-cranks, substantially as described.

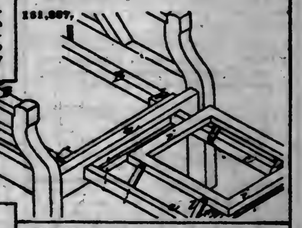


161,883.

161,884. FEED-REGULATORS FOR MILLS. S. B. Kenworthy and J. R. Vanmeter, Van Metre, Iowa; said Kenworthy assignor to said Vanmeter. [Filed Feb. 15, 1875.]

The fingers or scrapers Nos. 1 and 2 on the rotating shaft *d*, the bottom or base C, having a slot, *a*, slot-cover *b*, and valve *g*, when combined and operated substantially as and for the purposes shown and described.

161,885. WASHING-LISTS. George Lamb, Boston, Mass. [Filed Feb. 23, 1875.]



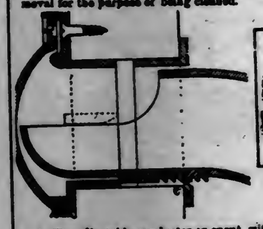
A washing-list composed of a tablet, of suitable material, bearing upon its face a range or column of articles to be laundried, a row of numerals to register the number of each article sent, a series of holes to correspond to or coincide with both the characters and numerals, and finally a number of pegs or markers to operate with the holes, a box or ledge being added to the tablet to receive these pegs, and the whole being substantially as and for purposes stated.

161,886. FOOT-RESTS FOR BAST-CHAIRS. Peter L. Lambert, Boston, Mass. [Filed Aug. 2, 1874.]

The combination, with the sliding frame *a*, adapted to be moved within a chair-seat, of the rest *f* and links *f i*, whereby the said rest may be raised and held in a horizontal position, substantially as and for the purpose set forth.

161,887.

161,888. SPINDLES FOR SPINNING-MACHINES. Joel H. Le Moyne, Boston, Mass. [Filed Feb. 20, 1875.]

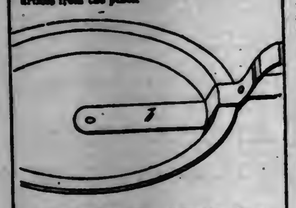


Brief.—For holding securely together the two parts of which the spindle is composed, and allowing the upper part, on which the cop is spun, to be readily detached from the lower and attached to a spindle in a loom-shuttle, constructed similarly to the upper end of the lower division of the spindle in this case.

In combination with the parts a b of a male spindle, the locking device, consisting of the shank a', projection i, springs k k, bored-out sleeve in the part b, and the check-nut k', as herein shown and described.

161,889. MILK-CONDUCTORS. Egbert Macy, Brooklyn, N. Y., assignor of two-thirds his right to Franz Samuelson, Jersey City, N. J., and Thos. M. Bristnall, New York city. [Filed Dec. 10, 1874.]

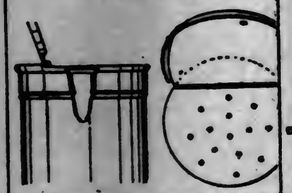
Brief.—An apparatus attached to a door, gate, or partition, in such a manner that the customer may be served with milk without being in attendance to receive it. The spout or conductor is easy of adjustment and removal for the purpose of being cleaned.



1. The adjustable conductor or spout, with compensating device, substantially as described.

2. The removable conductor or spout, in combination with the outer and inner door-plates, substantially as described.

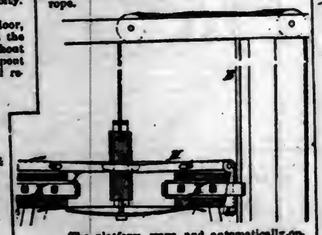
3. The notched projection on the under side of the conductor or spout, in combination with the sharp edge of the inner door-plate, and the ribs or steps on the outer door-plate, substantially as and for the purpose set forth.



161,890. COMBINED PIE PLATES AND CUTTERS. Walter H. Manning, Boston, Mass. [Filed Oct. 1, 1874.]

Brief.—The cutter swings around the pivot, and separates the bottom of the pie or other article from the plate.

In combination with a bake-plate, the rotating knife b, substantially as and for the purpose set forth.



161,891. DREDGE-BOXES. H. Mather, Chicago, Ill., assignor to Frank Sturges & Co., same place. [Filed Dec. 4, 1874.]

A dredge-box provided with a perforated cap, having hinged thereto the vertically-vibrating lid C, the said cap and lid being constructed for engagement with each other, substantially as specified.

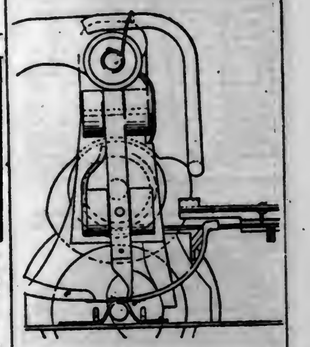
161,892. ELEVATORS. James W Meikle, Louisville, Ky. [Filed Feb 17 1875.]

Brief.—As the wedges rise and become jammed between the platform-frame and the ways for stopping descent of the platform, they push the sliding blocks at the same time inward, causing their stirrups, secured to the said blocks, to clamp or bind firmly on the ways, thus providing for greater security against accident from breaking of the hoisting rope.

The platform, ways, and automatically-operating wedges G of an elevator, in combination with the sliding blocks I and stirrups K, substantially as and for the purpose specified.

161,893. WARMING-MACHINES. S. J. Morey, Clayton, Ill. [Filed Sept. 29, 1874.]

Brief.—Within a cylinder having a door is a perforated cylinder, which has a door, and arranged to rotate, the ends being crossed by frames, and the sides by longitudinal ribs.



The water-tight cylinder C, with lid D, in combination with the perforated cylinder E, with lid F, cross-frame H, ribs l, spindles J and J', substantially as and for the purpose hereinbefore set forth.

161,894. REED-ORGAN ACTIONS. Peter J. O'Neill, Boston, Mass. [Filed Feb. 10, 1875.]

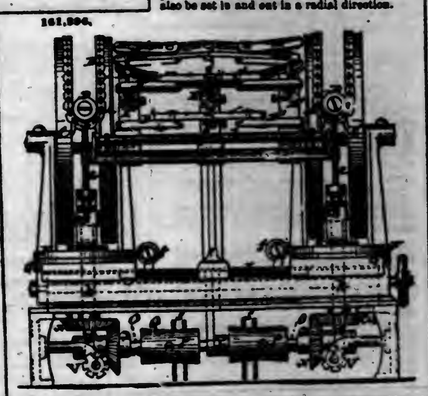
The lever D, having its fulcrum at one end near the front of the reed-board, and having attached to its opposite end the pallet *i*, in combination with the pallet B, by which it is operated, substantially in the manner and for the purpose set forth.

161,895. SEWING-MACHINES. C. H. Palmer New York, N. Y. [Filed Feb 25, 1874.]

Brief.—Specially adapted for straw braid sewing. The braid is beat partially around the supporting and feeding roller. The needle carries its thread through the beat material, and its loop is caught by the looper, which is so supported as to have movement in direction of the length of the needle, and also across the path of the needle. The loop is held until entered by the needle in its next movements

1. The combination, substantially as before set forth, of the holding and feeding mechanism, the loop catcher and holder, and the pendulum-plate with the needle-lever swinging in the arc of a circle, and arranged to give the needle a movement nearly parallel with the surface of the table, all operating together to form a chain-stitch single-thread seam, as set forth.

2. The combination of the adjustable gage, attached to the guide-frame above the table, substantially as described, and the guide, extending from said frame to the feed-roll, both for directing and controlling the straw-braid, as set forth.



161,896. MACHINES FOR TEMPERING AND STRAIGHTENING FABRICS. Isaac B. Palmer, Middletown, Conn. [Filed Aug 16, 1874.]

Brief.—The endless selvage-holding chains are carried on diverging wheels and loose side wheels, and around front and beat guide-rolls. The feeding wheels are mounted on slides provided with turn-tables, and each is operated by independent gearing, so that they can be driven at different velocities when required. The friction-frame consists of stringers made of sliding and jointed sections, and can be expanded and contracted longitudinally, and also be set in and out in a radial direction.

161,894.

161,896.

1. The combination, with the oblique or divergingly arranged selvage-carrying wheels A A of the loose side wheels or idlers C C, the chains or bands B B and the front and back guides or rolls D E, substantially as specified.

2. The combination, with the selvage-holding chains or bands B B and the selvage-carrying wheels A A of the transverse delivery and drag-roller A', arranged at the foot of said chains, in rear of them, essentially as and for the purpose herein set forth.

3. The turn-tables F, in combination with the slides G and selvage carrying and stretching devices, mounted on or carried by said tables, substantially as specified.

4. The combination, with the turn-tables F and the slides G, of the upright shafts I, arranged to occupy a concentric relation with said tables, the pinions K, and the miter-wheels or surfaces L, attached to the selvage-carrying wheels A, substantially as described.

5. The combination, with separately-hung and independently-operating selvage-carriers on opposite sides of the machine, of means, substantially as described, for positively driving said carrying devices at different velocities relatively with each other, essentially as and for the purposes herein set forth.

6. The combination of the conical driving-pulleys Q Q with the conical secondary pulleys P P, the independent shafts O O, the belt-shifters S S, and gearing connecting the independent shafts O O with the selvage-carrying wheels A A, essentially as and for the purpose herein set forth.

7. The combination of the foot-rolls V V and their shafts U with the belt-shifters S S, the conical driving-pulleys Q Q, and the secondary independently-operating conical pulleys P P, substantially as specified.

8. The friction frame or drag constructed of stringers composed of sliding and jointed sections, substantially as described, whereby said frame may not only be expanded or contracted longitudinally, but may also be set in or out and bowed in a radial direction relatively with the selvage carrying and stretching wheels or devices, essentially as herein set forth.

161,897. HEAD-BLOCKS. Reva A. Perry, Jr., and Geo. M. Dwight, Oregon, Ill. [Filed Sept. 26, 1874.]

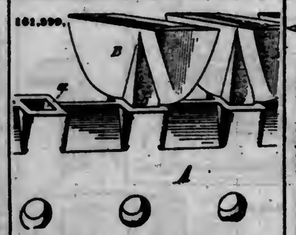
Brief.—A head-block in two pieces, with central groove, in which is confined a standard fixed upon the axle-plate.

1. The metallic head-block made in two pieces, A A, held together by screws B B, having a recess, C, for the spring-bolt to rest in, and having in the center a groove, J, in combination with the standard D, as and for the purpose set forth.

2. The T-shaped standard D, fitted to and working in the corresponding groove J in the head-block A, and in combination therewith, as set forth.

161,898. DAMPING-BOXES FOR COPYING-PRESSES. William J. Purcell, Rochester, N. Y. [Filed Sept. 17, 1874.]

Brief.—The pad covered with felt absorbs water from the box. The damping-cloths are spread on the pad until moistened, then spread between the sheets of a letter-book, on the side of the leaf opposite the written sheet, when the book is pressed.

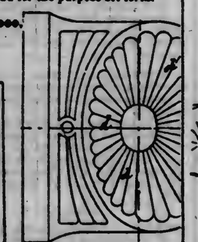


A damping-box for copying-presses lined with non-corrosive material, and having a loosely-hinged cover with projection A, a damping-pad, C, and damping-cloths D E, all constructed in the manner herein set forth.

161,899. GRATE-BARS. Geo. D. Putnam, Salem, Mass. [Filed Sept. 23, 1874.]

Brief.—The shanks of the fuel-points project into sockets in the web of the bar, which has transverse openings for admitting air. As the points are destroyed new ones can be supplied.

161,899.

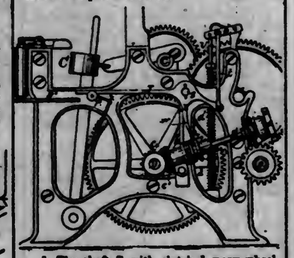


In combination with the web A, constructed with the sockets a passing through it, the points or teeth B, constructed with shanks b fitting said sockets, substantially as set forth.

161,900. BRIDLE-WINKERS. Jas. D. Reid, St. John, Canada. [Filed Aug. 6, 1874.]

A molded solid leather bridle-winker, provided with a concave cup or shield, B, ornamented on the outside, but perfectly smooth on the inside, and having the flat part c, substantially as and for the purpose set forth.

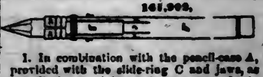
161,900.



161,897.

161,901. LET-OFF MECHANISMS FOR LOOMS. E. A. Remington, Anthony, R. I., assignor to S. Colvin & Co., same place. [Filed Oct. 19, 1874.]

Brief.—By means of intermediate levers and a sliding clutch the let-off mechanism is controlled by the whip-roll, and also by the stop mechanism, and at the beat-up of the lay the sliding clutch is held in such position that no warp can be let off.



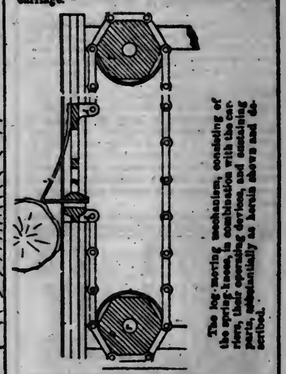
1. The shaft S, with clutch *d*, worm-wheel *c*, and eccentric *d'*, in combination with the lathe, angle-lever J, whip-roll N, and worm-gear wheel on the end of the shaft *c*, substantially as and for the purpose specified.

2. The rocker-shaft *y*, provided with arms *l* and *e'*, in combination with the lever *h*, lever J, clutch *d*, and whip-roll N, substantially as and for the purpose set forth.

3. The curved arm *e*, attached to the lathe, in combination with the lever J, clutch *d*, and whip-roll N, substantially as described, and for the purpose specified.

161,902. PENCIL AND CRAYON HOLDERS. F. D. Richards, West Medford, assignor to Ostler, Tower & Co., Boston, Mass. [Filed Jan. 27, 1875.]

161,902.



1. In combination with the pencil-case A, provided with the slide-ring C and jaws, as described, a retaining-spring, *c*, arranged substantially as explained, and constructed for holding the pencil in the case, as set forth.

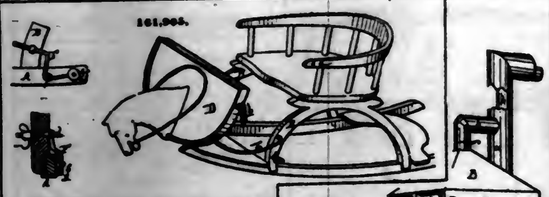
2. A pencil-case, substantially as described, consisting of a tube, A, provided with elastic jaws *a b*, finger-openings D D', a slide-ring, C, and a spring, *c*, all as and arranged as explained and represented.

161,903. MACHINES FOR MOVING LOGS. Alex. Rodgers, Muskegon, Mich. [Filed Sept. 27, 1873.]

Brief.—Two or more spring-knees are attached to chains, which are put in motion by suitable gearing, thus imparting a reciprocating movement to the knees, and causing them to pass back beneath the log; then, by a reverse movement, bringing it forward to the log-carriage.

The log-moving mechanism, consisting of the spring-knees, in combination with the carriage, their operating devices, and sustaining devices, substantially as herein above and described.

161,904. HUBS FOR VEHICLE-WHEELS. G. L. Rouse and M. W. Stoddard, Cincinnati, Ohio. [Filed May 16, 1874.]

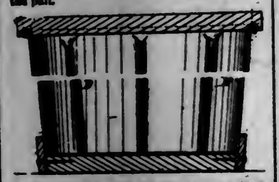


1. A wooden wheel-hub, combined with metallic bands extending over the body part of the hub, upon both sides of the spokes, and brought into close proximity with the spokes, but not impinging against the same, the wooden hub adapted to receive the metallic bands flush with the portion of its surface which is left exposed, and the metallic bands constructed to be driven securely into their place on the hub by pressure, and held there without extraneous fastening, substantially as set forth.

2. A wooden wheel-hub, combined with metallic bands, extending over the body part of the hub, upon both sides of the spokes, said bands constructed with beveled edges, and the wood of the hub adapted to receive said bands, substantially as and for the purposes set forth.

161,905. CHILDREN'S ROCKERS. Adolph Schoenings, Chicago, Ill. [Filed Jan. 29, 1875.]

161,905.

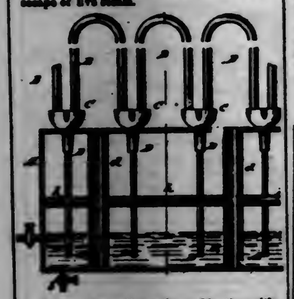


1. The swinging table D and arms E E, in combination with the seat and standards of a child's rocker, substantially as described.

2. The combination, with the rockers A of a child's rocking-horse or chair, of a pair of rollers, *f*, secured to said rockers by the bell-crank F, which has the screw-bolt S and nut *s*, and adjustable below the edges of said rockers, substantially as and for the purpose set forth.

3. The combination of the rockers A, having the adjustable rollers *f*, with the segments B, seat C, and swinging table D, constructed and arranged substantially as described and shown.

161,906. BUTTER-PAILS. C. B. Sheldon, New York, N. Y. (Filed July 14, 1874.)



Brief.—The metallic body of the pail is made of a downward-tapered form, and strengthened by vertical ribs or corrugations, extending nearly to the top and bottom. The vessel is further strengthened by a wooden bottom and a wooden cover, which last is grooved to receive the beaded upper edge of the pail.

A butter-pail consisting of a downward-tapered metallic body, a wooden cover, and a wooden bottom, the cover and bottom adapted to fit into the body, as shown and described.

161,907. STEAM-RADIATORS. W. H. Shock, Baltimore, Md. (Filed Mar. 6, 1875.)

Brief.—The parts D, extending below the surface of the water, permit the descent of the water of condensation, while preventing the escape of live steam.

1. In a steam-radiator, the combination, with the base or box A and tubes B B, of the U-shaped connections C C, provided with the stems D D, having passages *a a*, and extending down into the box below the connection of pipe E therein, substantially as and for the purposes herein set forth.

2. The box A, tubes B B, and U-shaped connections C, with stems D, having passages *a*, in combination with vertical air-tubes *d* and pipes E and *b*, all as and for the purposes set forth.

161,908.

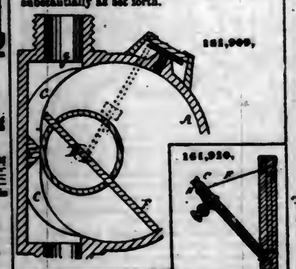
161,908. COOKING-STOVES. J. D. Smedley, New York, N. Y. (Filed Dec. 14, 1874.)

Brief.—The folding doors of the canopy permit access to the front and sides of the stove. When closed the same doors prevent escape of odor into the room.

1. The chamber *B*, as and for the purposes described, furnished with folding doors *c c*, substantially as specified, and for the purposes set forth.

2. The perforated partition *d*, as specified, in combination with the chamber B, as and for the purposes described.

3. In combination with the above-named chamber B, provided with surrounding doors, the shelves *e*, as and for the purposes specified.



161,909. ROTARY ENGINES AND METERS. J. A. Stenberg, Chicago, Ill. (Filed Nov. 23, 1874.)

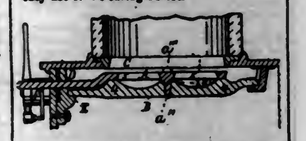
Brief.—Makes a chamber of true cylindrical form, having a cavity or recess at one side, which contains the ingress and egress apertures, and acts as a sand-trap. Within the recess is fixed a removable guide piece or pieces. The diametric wing is made of hard rubber, or material of very nearly the specific gravity of water, so that the apparatus may at no time be rotated by reason of the weight of the wing.

1. The cylindrical chamber A, constructed with the recess B at one side, to receive the guide piece or pieces C C, and the bearing-strip C', and to act as a sand-trap, substantially as specified.

2. The diametric wing F, constructed of hard rubber, or material approximately of the specific gravity of water, to avoid movement of the parts by reason of momentum or preponderance of weight on one side of the axis, substantially as set forth.

161,909.

161,910.



161,910. VENTILATORS. Hiram K. Stevens and C. F. Morse, Providence, R. I. (Filed Feb. 24, 1875.)

Brief.—A frame covered on one side with wire-netting, and provided with a door operated by a knob with a cord attached, for admitting more or less air.

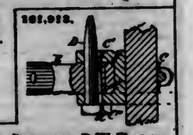
As a new article of manufacture, a ventilator constructed substantially as described, having the combination of the door C, knob E, cord F, springs G, or their equivalents, pulley H, and butts I, all constructed and operating substantially as and for the purpose set forth.

161,911. GRATES FOR STOVES, FURNACES, &c. W. Stout, Philadelphia, Pa. (Filed Jan. 26, 1875.)

Brief.—The grate is eccentrically pivoted, and has lateral as well as vertical movement. The spur *a*''' prevents further upward movement of the grate at that point. The bearing-bar is beveled toward its upper surface, to insure free discharge of ashes, and afford easy use of a clearing device.

1. The combination, consisting of the grate A, provided with the eccentrically-fixed pivot or stem *a*''', as described, the supporting-bar B, provided with end journals rocking in the fixed bearings E and *e*', as described, and the ring C provided with the downward-projecting flange *c*', as described, the said parts being arranged to operate in the manner and for the purposes hereinbefore set forth.

2. The combination, with the upper surface of the rim of the downwardly-tilting portion of the grate A, of the raised projection *a*''', as described, for the twofold purpose of arresting the upward or return motion of that side of the grate after it has reached its normal horizontal position, and affording an open space between the rim of the grate and the under side of the ring C of said side of the grate.

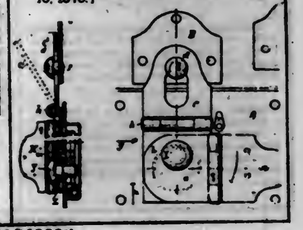


161,912. MODES OF FORMING SHEET-METAL THREADED COLLARS. Alvin Taplin, Forestville, Conn. (Filed Jan. 11, 1875.)

The improvement in the art of forming threaded sheet-metal collars which consists of first threading the blank in the flat, and afterward forming said threaded parties into a collar, substantially as described.

161,912.

161,912.



161,913. TRILL-COUPLINGS. D. W. Thomas, Galesburg, Ill. (Filed Aug. 10, 1874.)

Brief.—A tapering bolt adapted to be driven into the eye of the coupling in such a way as to draw the parts together and lock them.

In a thill-coupling, the tapering bolt D, having spline *d*, arranged to operate in combination with the shaft-iron E, jaws C', clip C, and rubber F, substantially as and for the purpose specified.

161,914. TRUNK-FASTENINGS. Isaac W. Valance, Lassingburg, N. Y. (Filed Mar. 10, 1875.)

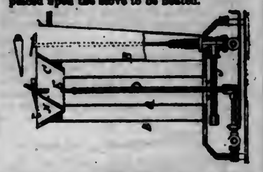
1. In combination with the body-piece A and lid-piece B, the fastening-strap C, pivoted upon or by the cam or eccentric H, which is pivoted upon the said body-piece, and so as to turn in a plane substantially parallel to the latter, and thereby move the said fastening-strap into and out of engagement with the said lid-piece, substantially as described.

2. In combination with the body part A and lid-piece B, the fastening-strap C, mounted upon the cam or eccentric H, which is pivoted so as to turn upon the said body part, and thereby move the said fastening-strap into and out of engagement with the said lid-piece, and an adjustable stop, by which the said cam or eccentric is secured so as to retain the fastening-strap in engagement with the lid-piece, substantially as shown and described.

3. In combination with the body-plate A and lid-piece B, the fastening-strap C, mounted upon and movable by the cam or eccentric H, which is pivoted to the said body-plate, and has an arm, K, with a hinge-joint, *g*, and a staple or catch, *h*, the aperture *e* in the body-plate, and the locking-bolt J in rear of that plate, all substantially as shown and specified.

4. The combination of the fastening-strap C, having a tapering socket, *i*, therein, the eccentric H having the tapering rim *j* in the tapering socket, the arm K having a cap-piece of greater radial extent than, and secured to, the smaller side of the said eccentric, and the headed pivot-bolt I extending through the said cap-piece and eccentric, and secured to the part A, substantially as described.

161,915. JOURNALS FOR BALANCE-WHEELS. Thomas Van Dyke, New York, N. Y. (Filed Feb. 1st 1875.)

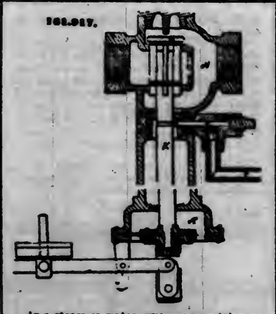


1. The fly-wheel B, mounted upon the conical stud A, in combination with the washer D and spring E, for the purpose of pressing the hub forward upon the stud, and automatically compensating for wear, as specified.

2. The hub B, reamed or rounded off at its larger aperture K, to prevent cutting or defacing the conical stud A, upon which said hub revolves, substantially as set forth.

161,916. GAS-STOVES. Ezra L. Vergueras, Chicago, Ill. (Filed Mar. 23, 1875.)

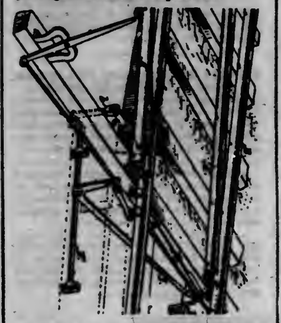
Brief.—The flow of gas and the quantity of flame are regulated by the weight of the tools placed upon the stove to be heated.



The combination of the shells B Q, pipes D G K, top O, damper-plate N, hinged plate M, and check-valve H, operated as and for the purpose specified.

161,917. STEAM OR WATER PRESSURE REGULATORS. Jos. R. Watts, Lawrence, Mass. (Filed Mar. 1, 1875.)

Brief.—A pipe is connected at one end with the orifice in the wall-tube, and at the other with the interior of the supply pipe or drum, to which the various branch pipes that supply the driers with steam are attached. Should the pressure in the service-pipe fall below the maximum, the pressure upon the column of water in the wall and the diaphragm will be lowered to such an extent that the lever partially overcomes the pressure, and raises the valve, and admits an increased amount of steam to the drum, until the maximum pressure is restored. Should the pressure exceed the proper point, steam will enter the wall and produce the reverse motion upon the valve.



161,917.

In a steam or water pressure regulator, as described, the combination, with the regulating-valve, the field-chamber A, and the wall-tube H, of the closing diaphragm or partition *a* and the pipe *c*, leading from the distributing pipe or drum, and entering the wall-tube below the diaphragm *a*, substantially as and for the purposes set forth.

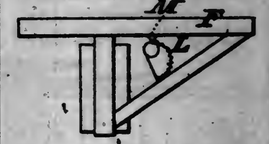
161,918. RAILWAY-SWITCHES. William A. Weant, Salisbury, N. C. (Filed Feb. 27, 1875.)

Brief.—The switch is operated by the train through a vertical plate pivoted in a slot in one of the rails, and connected by rods and bell-cranks to the movable rails. A shaft in this train of mechanism carries a locking lever-arm, which is actuated by the same movement, and serves to hold the rails in place against accidental displacement.

1. The plate E, pivoted between the two rail-sections, and having the laterally-projecting arm *a*, in combination with the rock-shaft F, vertical arm or link *b*, attached to the lateral arm of the movable plate, and the vertical arm G, connected with the switch-rails by a link, *d*, and to a switch-moving lever, H, by a rod, G', all substantially as and for the purpose described.

2. The combination of the hook K, catch-plate *i*, and disengaging-arm J with the rock-shaft F and switch-shifting mechanism, substantially as described.

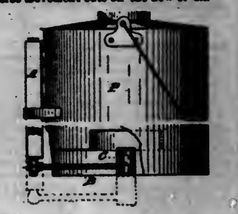
161,919. CLASP-HOOKS FOR ADVERTISING DISPLAY-BOARDS, &c. Nelson C. Wilcox, Bennington, Vt. (Filed Jan. 2, 1875.)



Brief.—A clasp-hook pivoted at its lower end, and actuated by a spring which encircles a curved stem near its center. The stem passes through a slot in the board or frame to which the hook is attached. The device is designed to be used as a retainer for shoe-laces and analogous articles, so that one may be withdrawn without disturbing the package.

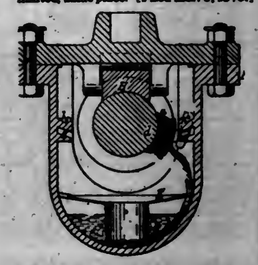
The hook A, having the lip *m*, curved space *n*, stem *o*, and spring *i*, pivoted as shown, in combination with the slotted socket-plate B, for the uses set forth, and operating as described.

161,920. COMBINED TABLES AND SLICERS. Tobias Wilmer, Buffalo, N. Y. (Filed Nov. 29, 1873.)



Brief.—The gage-board is kept in a horizontal position by a vertical piece sliding between guides, and adjusted by means of a notched cam, turned by a thumb-screw, which cam engages with a metal point on the under side of the gage-board, thus preventing a backward movement of the cam.

The cams L, notched as described, in combination with the downward-projecting piece M and horizontally-adjustable gage-board F, substantially in the manner and for the purpose set forth.

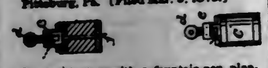


161,921. DINNER-PAILS AND LAMPS. Geo. W. Aldrich, Syracuse, N. Y., assignor of one-half his right to Wm. H. Bond, same place. (Filed Jan. 12, 1875.)

Brief.—The lamp being moved from under the pail, oil flows to it from the reservoir. A reverse movement cuts off the flow of oil.

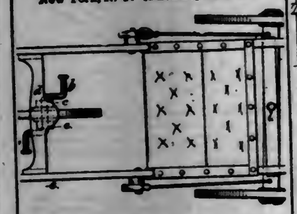
The reservoir A, tube B, cap C, and cut-off E, combined with the dinner-pail, P, and operated and constructed substantially as described.

161,922. CAR-AXLE BOXES. Kenneth S. Austin, Birmingham, England, assignor to Souther's Railway-Axle-Box Company, limited, same place. (Filed Mar. 9, 1875.)



1. The projections or lugs A A on the interior sides of an axle-box, having inclined slots or grooves *g g* and notched and inclined upper faces *f f*, to receive and retain the bay A, constructed and combined substantially as and for the purposes set forth.

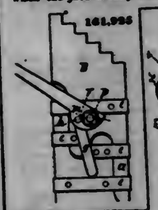
2. In combination with a side-lubricating pad, *a*, having lugs *e e*, the bracket hinged to said lugs, and consisting of end pieces or cheeks *c c* and lips *f f* and a bay, A, all to operate as specified.



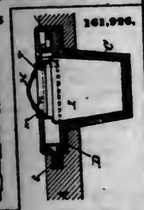
3. The combination of the notched, slotted, and inclined projections A A in the axle-box with the brackets, having cheeks *e e* and lips *f f*, the key h, and the pad *a*, to which said bracket is hinged, substantially as shown.

161,922. FOUNTAIN-PENS. Georg Baader, Pittsburg, Pa. [Filed Mar. 9, 1875.]

In combination with a fountain-pen plunger, C, having a vent-hole, *f*, the valve h, arranged on a screw-bolt, *d*, arranged in cap *e*, substantially as and for the purposes described.



161,924. VELOCIPEDES. John J. Bally, New York, N. Y. [Filed Sept. 10, 1874.]



The velocipede with the sides *c* and cross-bar *d*, sustaining the jaws *e* of the front wheel *a*, having crank-arms *b*, and with the hand-wheels *h* and axle *i*, movable for steering, all combined substantially as set forth.

161,925. LIFTING-JACKS. Herman Brockmeith, St. Louis, Mo., assignor of one-half his right to Ernest Quast, Jerseyville, Ill. [Filed Dec. 4, 1874.]

The lifting-jack described, having the parts A B, with overlapping tongues *a b*, securing-links *c c*, lever C, and link *g*, the lever being provided with a limiting-shoulder, *m*, by means of which the position of the link is determined when the jack is fully raised, as described.

161,926.

161,926. INK-WELLS. Charles H. Brown, Boston, assignor of one-half his right to F. C. Anthon, Melrose, Mass. [Filed Feb. 10, 1875.]

Brief.—The "well" is let into and flush with the desk-top by a countersink formed therein. At a point upon the outer periphery of the flange of the cover an elongated lug is formed, which passes through an opening in the rim or flange of the well, and also into an orifice coincident with the former one formed in the desk-top, to secure the well, cover, and ink-pot to the desk. The device is provided with a lock and key, to secure the cover to the well, and by which, also, the whole may be removed from or finally secured to the desk.

1. An ink-well, provided with a lock, adapted to engage with and secure a suitable cover, said cover being suitably engaged with the desk that holds the ink-well, thereby locking the well and cover to the desk, substantially as and for the purpose specified.

2. An ink-well for desks, having a slotted rim and a flanged cover, the latter provided with a projection adapted to pass through said slotted rim and engage with a recess in the desk, thereby locking the well and cover to the desk, said well and cover being adapted to be locked together, substantially as described.

3. The ink-well B, having the shoulder D, slotted rim E, and locking devices *a a' d a*, in combination with the cover G, having a suitable key-hole, and having the segmental rim or flange G', projections *p p'*, projection *s*, and stud *t*, the latter engaging with a recess in the desk A, substantially as and for the purpose specified.

161,927. STEAM AND AIR BRAKES. W. L. Burt, Boston, and Geo. R. Little, Peabody, Mass. [Filed Mar. 11, 1875.]

1. In a vacuum car-brake, the combination of a metallic cylinder with flexible cylinders of nearly the same length of the metallic cylinder, and a piston, substantially as and for the purposes set forth.

2. In a vacuum car-brake, the combination of a metallic cylinder with flexible cylinders of nearly the same length of the metallic cylinder, and a rigid piston having a yielding periphery, substantially as and for the purposes set forth.

3. The combination of the metal cylinder, the flexible cylinders, and the bands or clamps *g''*, for forming the joint and holding the cylinders together, substantially as and for the purposes set forth.

4. The combination of an air-ejector, the metallic cylinder, the flexible cylinder, the piston, and brake-levers, substantially as shown and described.

161,928. REFRIGERATORS. Wm. P. Butler, Syracuse, N. Y. [Filed Feb. 15, 1875.]

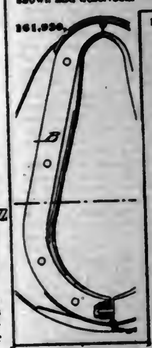
Brief.—A removable water-cooler receives the drip which falls down its cover and sides onto inclined planes leading to a trough and pipe, and finally into a depending basin having a removable and perforated cover.

1. The movable tank or cooler *c*, having a convex cover, constructed as described, in combination with the ice-pan *a*, water-sheds *e e*, and trough V, substantially as specified and shown, for the purpose set forth.

2. The reservoir *r*, provided with waste-pipe *s*, and covered by the removable perforated plate *a*, forming part of the bottom of the refrigerator, constructed as described, and combined with a refrigerator, substantially as and for the purpose specified.

161,928.

161,929.



161,929. FASTENERS FOR MEETING-RAILS OR SASHES. Thos. J. Carroll, Bridgeport, Conn., assignor to J. M. Johnson and Peter Ring, same place. [Filed Feb. 8, 1875.]

Brief.—A pivoted lever swings freely between opposite guard-flanges of the two plates, the button carrying a locking-pin, which, when raised, frees the device, while an interposed spring automatically closes the lever.

The plate *c*, with its guard *c'*, the plate *d*, the lever *a*, pivoted upon the plate *d*, the spring *f*, and the locking-pin *p*, all combined and arranged to operate substantially in the manner and for the purpose set forth.

161,930. HORSE-COLLARS. Thomas Cheal, St. Paul, Minn. [Filed Dec. 19, 1874.]

A wooden horse-collar, consisting of two back pieces, C C, hinged at top, front pieces B B, beveled to receive the hames, and a padding, D, secured between the parts B C, as shown and described.

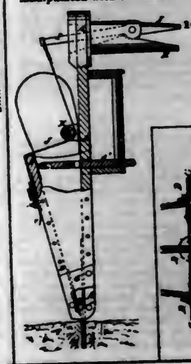
161,930.

161,931.

161,931. DENTAL ARTICULATORS. Chas. D. Cheney, Canandaigua, N. Y. [Filed Mar. 6, 1875.]

Brief.—A serrated projection upon short end of one of the jaws is held by a pin, which is forced against it by a set-screw. The second movable jaw rocks upon a journal at right angles to the line of the first-mentioned arm.

1. Combined with an articulator the serrated projection C pivoted in the slotted end of the shaft B, and the long set-screw F, for the purpose described.



2. The jaw or plate O in combination with the pivot-rod I and basket N, for the purpose described.

3. The saddle G and collar *m*, with nick K and point L, for the purpose described.

161,932. HAND CORN-PLANTERS. John W. Cleland, Nevada, Mo. [Filed Feb. 20, 1875.]

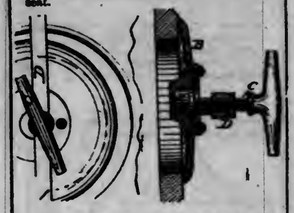
Brief.—To the rear of the upright is attached a handle, that is grooved longitudinally to receive a lever, that is pivoted about midway of its length, and passes through and is widened at the rear to conform to the handle. To the front of the lever is fastened a cord, which passes down under a pulley and a cross, and is secured to the pivoted half of the planter, to which the seed-slide is secured. By compressing the handle the front end is raised, carrying with it the cord, the pivoted half, and the seed-slide, which is retracted by a spring.

As an improvement in hand-planters, the pivoted handle I, combined with a grooved fixed handle, H, cut away at the rear, and a cord, J, passing under the pulley K, as shown and described, to enable the planter to be manipulated with one hand.

161,932.

161,933.

161,933. TABLE-CASTERS. W. F. Collier, Worcester, Mass. [Filed Feb. 6, 1875.]



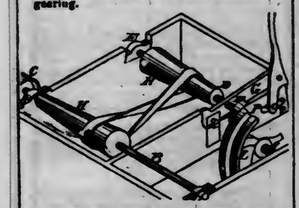
1. The combination, with the ring or handle B, legs A, bottle-rings C, and clamping-plates *a*, of the separate and independent combined rosette and tongue-piece D, substantially as and for the purposes set forth.

2. The combined rosette and tongue-piece D, provided with a hole, 2, and consisting of the tongue marked *b*, cam *c*, and notched rosette *d*, substantially as shown and described, and for the purposes set forth.

3. The combination, with the bottle-rings C, clamping-plates *a*, and legs A, of the separate and independent connecting-tongues *b*, substantially as and for the purposes set forth.

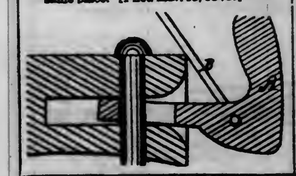
161,934. MAN-HOLE COVERS FOR STEAM-BOILERS. Henry Collinson, Boston, Mass., assignor of one-half his right to J. B. Kendall, same place. [Filed Mar. 13, 1875.]

Brief.—The cover is moved eccentrically in closing, to remove any matter adhering to the seat.



1. In combination with a seat or bearing, A, a plate or cover, B, fitting against the face of the same, and having a sliding and rotating movement, substantially as shown and described.

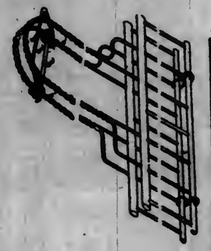
2. In combination with the flat seat A and the plate or cover B, the screw C, or its equivalent, mounted in a support, D, and provided with the eccentric head seated in the center of the plate, substantially as shown and described.



161,935. CIRCULAR-SAW MILLS. Frank M. Covell, Los Gatos, Cal. [Filed Nov. 26, 1874.]

Brief.—The speed of the feed-pinion is regulated by a pair of cone pulleys, which impart motion to it through the agency of frictional gearing.

In combination with the pulleys K and L, mounted upon one shaft, and the movable shaft D, with its pulley F, the cone-pulleys H H, the arm G, pivoted as shown; together with the lever O, with its pin Q, moving in the slot P, substantially as and for the purpose herein described.

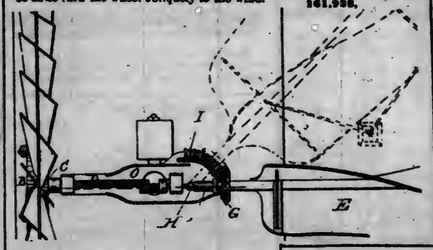


161,936. CAR-COUPLINGS. Warren Dorr, Gardner, Me., assignor of part of his right to Joseph L. Mitchell and G. W. Colburn, same place. [Filed Mar. 16, 1875.]

The railway-carriage coupling, consisting of the link B and the slotted hook A, combined to operate with a draw-bar and pin, all essentially as set forth.

161,937. BROILERS. Geo. D. Dudley, Lowell, Mass., assignor to Edward P. Woods, Daniel Sherwood, and Cyrus H. Latham. [Filed Feb. 26, 1875.]

Brief.—The loop secures the sections in whichever direction they may be folded.



1. The reversible slide D, in combination with the broiler-handles, the slide being constructed with eyes or guides *g*, which are movable as one handle, and a bail, *b*, moving over and securing the opposite handle, substantially as described.

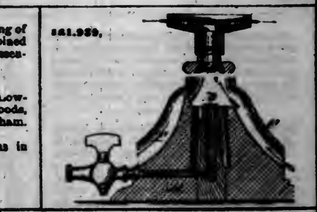
2. The reversible slide, in combination with the broiler-handles, and having a bar, B, connecting its guides *g*, substantially as described.

3. In combination with the swinging reversible slide having eyes or guides *g*, and a bail, *b*, for securing one handle to the other, as set forth, broiler-handles of equal length, substantially as described.

161,938. WIND-WHEELS. Charles T. Edwards and Geo. H. Huntoon, Moline, Ill.; said Huntoon assignor to said Edwards. [Filed Feb. 26, 1875.]

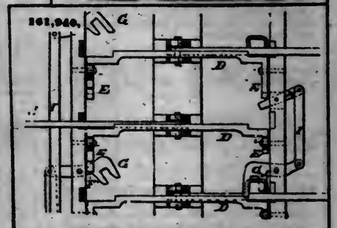
Brief.—The wheel is provided with a spiral tail-vane, arranged so that it will be rotated by a strong wind, and caused to swing laterally, so as to turn the wheel obliquely to the wind.

1. In combination with a rotating frame, O, having a wind-wheel mounted on its forward end, a spiral vane, E, arranged substantially as shown, so that the force of the wind will cause it to rotate about its longitudinal axis, and at the same time swing laterally.



2. In combination with the frame O, provided with the post H and pinion I, the spiral vane, provided with the pinion G and the weight J, as shown.

161,939. GAS-BURNERS FOR HEATING PURPOSES. Anatole Ehret, San Francisco, Cal. [Filed Jan. 25, 1875.]



Brief.—The mixing-chamber has a small neck surmounted by a chamber having side perforations.

As an article of manufacture, the heater A B C D E F, constructed substantially as and for the purpose specified.

161,939.

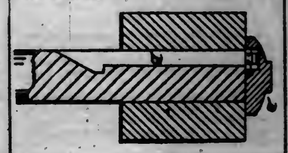
161,940.

161,940. APPARATUS FOR OPERATING AND LOCKING SWITCH-SIGNALS. S. H. Finch, New York, N. Y. [Filed Mar. 1, 1875.]

The locking-bars D, latches G and H, bars I, and levers B C, in combination with a suitably-constructed frame for the purposes described.

161,941. GAS-REGULATORS. M. C. Fisher, Philadelphia, Pa. [Filed Mar. 10, 1875.]

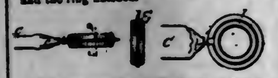
Brief.—For filtering gas as well as regulating its flow.



The wire D, with its circular end B and spiral C, the said spiral being wrapped with raw cotton, wool, or other porous material, in combination with a section of gas-pipe, substantially as and for the purpose herein shown and described.

161,941.

161,942. FASTENINGS FOR TOOL-HANDLES. William M. Fisk, Lancaster, Pa. [Filed Jan. 30, 1875.]



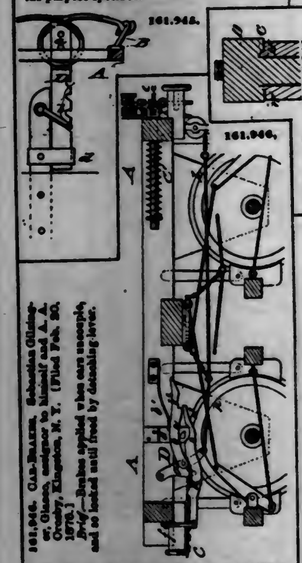
Brief.—The tool is attached to the handle by means of a fastening-bar, provided at its upper end with a button for engaging with a recessed cap, and a spring for preventing the cap from turning, and at its lower end with a shoulder, which fits in a suitable notch in the handle. The tool is locked in position by turning the cap around and parallel with the eye, so that the button will enter the recess in the cap.

The combination, with a tool and handle constructed substantially as described, of the shouldered bar B, the mortised and recessed cap D, the button E, having shoulders H, and the spring F, all constructed and arranged substantially as and for the purpose specified.

161,942. BLANKS FOR SPINNING-RINGS. Sullivan Forehand and H. C. Wadsworth, Worcester, Mass. [Filed Feb. 20, 1875.]

Brief.—In finishing the blank up into a double ring, the central web *b* is punched out, and the rest of the blank finished off, retaining the flange *f* as a support to the ring in the spinning-frame. When a single ring is to be made, both the web and flange are removed and the ring finished.

A spinning-ring blank, C', having a flange, *f*, and made from a single bar of metal, C, substantially as shown and described.



161,944. COMPOSITIONS FOR PRESERVING FOOD. W. C. Dunn, Washington, D. C., administrator of Henrik Gahn, deceased, assignor to C. G. Am Ende, Hoboken, N. J. [Filed Oct. 14, 1874.]

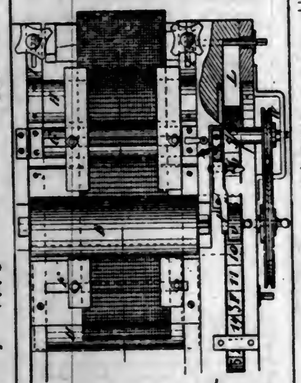
The composition of boracic acid and alum, as and for the purpose described.

161,945. WAGON-SEATS. Sebastian Gilsinger, Glasco, assignor to himself and A. A. Crosby, Kingston, N. Y. [Filed Feb. 20, 1875.]

The combination, with seat A and supporting-standards D D, of the spiral springs C C and corner-rods B, all substantially as and for the purpose specified.

161,946.

161,946. CAR-BRAKES. Sebastian Gilsinger, Glasco, assignor to himself and A. A. Crosby, Kingston, N. Y. [Filed Feb. 20, 1875.]



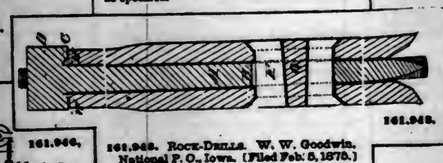
Brief.—Brakes applied when cars uncouple, and so locked until freed by detaching lever.

1. The combination of the recessed locking rear link, spring, stop on the supporting-standard, brakes, and shortened main link, substantially as and for the purpose set forth.

2. The detaching and braking mechanism *a*, *b*, *b'*, *b''*, *d*, *e*, *e'*, and *f*, and connecting-chains, in combination with the car-brakes for applying the same on the separation of cars, substantially as set forth.

161,947. CLOTH-MEASURING MACHINES. Joseph S. Gold, Washington, C. H., Ohio. [Filed Oct. 17, 1874.]

Brief.—The measuring-roller is extended into a tape-chamber, where a tape-measure is so arranged that as much of it is wound from one roll to another as there is cloth measured.



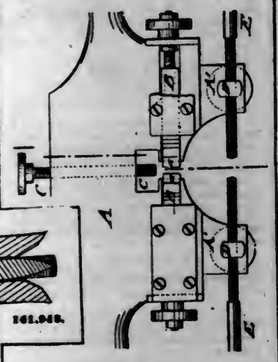
1. The combination, with stationary tension G, of the tension H, having slotted projection I and screw K, as and for the purpose described.

2. The combination of the extension of the cloth-roll through the tape-chamber L, the tape C, and the pressure-roller O, substantially as specified.

161,948. ROCK-DRILLS. W. W. Goodwin, National P. O., Iowa. [Filed Feb. 5, 1875.]

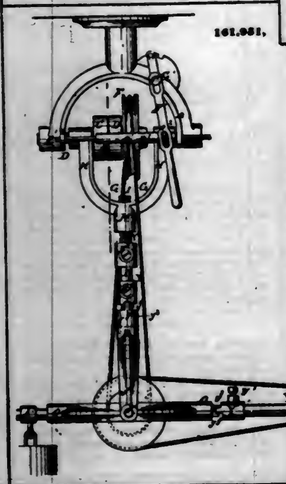
The blade A, having collar D, socketed at C, and combined with trimmers having tenons E, substantially as and for the purpose specified.

161,949. NUT-LOCKS. William C. Gould, New York, N. Y. [Filed Aug. 11, 1874.]



Brief.—A recess is formed in the washer by the side of the nut, and a plate placed therein having projections, which prevent the nut from turning backward.

The combination of the washer *c*, having the recess *b*, with the locking-plate *e*, slitted and turned up, as shown at *d*, for locking a nut at several points of its revolution, substantially as described.

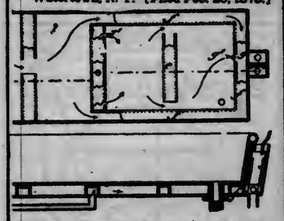


161,950. SAW-SETS. Robert J. Granville, Astoria, Oreg. [Filed Mar. 1, 1875.]

Brief.—The teeth of the saw are alternately set in opposite directions, the degree of set being determined by the screws E E.

A saw-set constructed of main piece A, symmetrically-adjustable tooth-guiding slide-jaws B, and set-screw C, and adjustable set-screws E, defining amount of set of teeth, the whole being arranged and operated substantially in the manner and for the purpose set forth.

161,951.



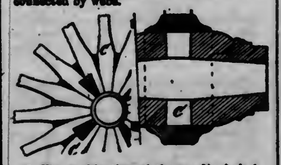
161,951. EMERY GRINDING-MACHINES. E. William Gunn, New Woodstock, and Geo. D. Wells and Harrison Wells, Brieville, N. Y. [Filed Jan. 26, 1875.]

1. The combination, with the yoke specified, of one or more connecting-rods, having a right-hand screw-thread on one end, and a left-hand screw-thread on the other, as shown and described.

2. The combination of the adjustable collars Y, and the toes or projections and notches *y'* *y²*, with the screw-rods I P, either or both, and the pivoted yoke, substantially as herein shown and described.

3. The combination of the adjustable yoke-handle V W, provided with pivots and a stop-pin, the nut-handle X, and the lugs U, provided with pivot and stop-pin holes, with the yoke Q, that carries the emery-wheel, substantially as herein shown and described.

161,952. MILK-COOLERS. Daal Gurnsey, Watertown, N. Y. [Filed Feb. 20, 1875.]

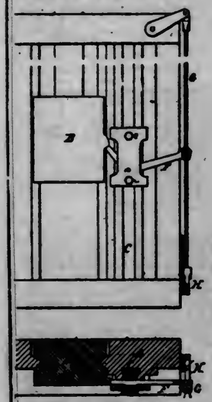


1. In milk-coolers, the water tank or vat, provided with a bottom tube, connecting the entrance-chamber of the water with any lateral issuing-channel at the central part of the vat, for distributing the cool water simultaneously over separate sections of the same, substantially as shown and described.

2. The end channel *f* of the vat, provided with apertures *f'*, for conveying water of section supplied from the central issuing-channel to exit-aperture, as specified.

161,953. WHEELS FOR VEHICLES. B. Hall, Wallingford, Conn. [Filed Feb. 19, 1875.]

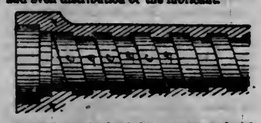
Brief.—The wood part is in two sections, connected by webs.



1. The combination of the wooden hub A, webs *c*, and clusters of spokes C, substantially as and for the purpose set forth.

2. The combination of the wooden hub A, webs *c*, clusters of spokes C, and mortise-ring B, substantially as and for the purpose set forth.

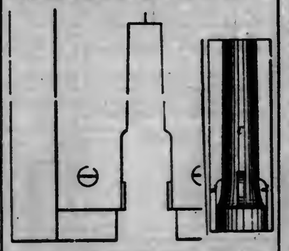
161,954. DROP-HAMMERS. H. Hammond, Hartford, Conn. [Filed Oct. 26, 1874.]



Brief.—The block, to which the catch or trigger for holding and releasing the hammer is pivoted, fits in a dovetailed groove, and is adjustable to different heights, to vary the distance the hammer shall fall.

The dovetailed block D and groove C, in combination with the lever F, the connecting-rod G, and the lever-treadle H, the whole forming an adjustable device for releasing the drop B at any desired height, substantially as herein described.

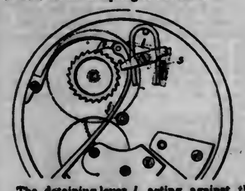
161,955. CARRIAGE-AXLE BOXES. H. Hammond, Hartford, Conn. [Filed Oct. 8, 1874.]



Brief.—To secure an even wearing-surface, and even distribution of the lubricant.

A carriage-wheel axle-box, constructed with an internal spiral, B, of steel or other hard metal, forged into a wrought-iron casing, A, substantially as and for the purpose described.

161,956. SHEARING-DIES FOR CARRIAGE-WHEEL BOXES. H. Hammond, Hartford, Conn. [Filed Sept. 21, 1874.]



Brief.—The dies are so formed as to shear off the entire tin, with the exception of two small portions, which are left upon the box to prevent it from turning within the hub.

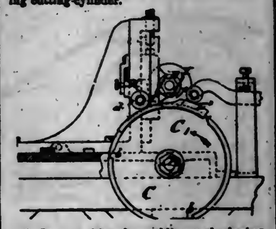
The herein-described dies for shearing wheel-boxes and forming the projections *d*, substantially as specified.

161,957. WATCH-SPRING EQUALIZERS. C. Hanson, Huddersfield, England. [Filed Feb. 24, 1875.]

Brief.—A spring-pawl, acting through suitable mechanism upon a lever, presses it upon the barrel with greatest force when the spring is fully wound, the pressure being gradually diminished as the spring is unwound.

The detaining-lever *i*, acting against the spring-barrel, in combination with the spring-arm *f*, pawl *e*, and stud *s*, substantially as set forth.

161,958. BRICK-SHAVES. D. Harrington, Southbridge, Mass. [Filed Mar. 20, 1875.]

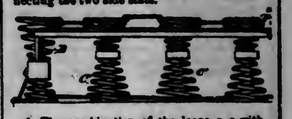


1. The combination, with the frame part A, knife-supporting parts A' A', and return handle parts B' B' of knife-edge adjusting-pieces *b* and holding-screws *a* *c*, substantially as shown and described.

2. The combination, with the notched ends of knife C, of the return handle ends B' B', and holding-screws *a* *c*, whereby the knife C can be reversed, and securely held for grinding its edge C', substantially as and for the purposes set forth.

161,959. MOLDING-MACHINES. Jno. Hartsheim, New York, N. Y. [Filed Jan. 28, 1875.]

Brief.—The material is secured upon a rotating carrier, and the desired form given to the molding by a vertically-adjustable rotating cutting-cylinder.

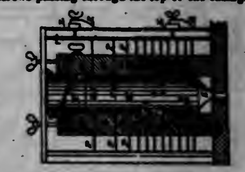


1. In a machine for molding and planing wood having carved inner and outer edges, the combination of the perpendicular rotary feed-drum O, carrying the projecting feed-lugs *b* *b* on its periphery, with the parallel rotary cutter-head I, and with the parallel friction-roller *d* in front of, and the friction-roller *e* behind, the cutter-head, all arranged to operate substantially as herein shown and described.

2. The sickle-plate J, combined with the rotary feed-drum O on the circular-feed planing and molding machine, substantially as and for the purpose herein shown and described.

161,960. BED-BOTTOMS. Geo. J. Henion, Dubuque, Iowa, administrator of John B. Henion, deceased; said administrator assignor to himself and M. M. Cady, same place. [Filed Oct. 13, 1874.]

Brief.—The ends of the wires of the large portion of the upper springs are formed into hooks, which are connected by loops embracing the second coil of the spring. Lateral expansion is prevented by transverse bars, connecting the two side slats.

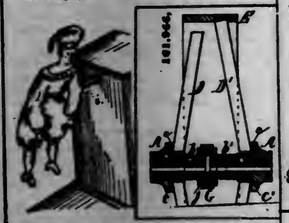


1. The combination of the loops *a* *a* with the springs B B, the parts being tied together, as described.

2. The combination of the lower frame, the intermediate springs O' C', and the independent bars A, united by the bars C, interlocked springs, and loops, as described.

161,961. MEAT-CUTTERS. J. H. Hollinger, Lancaster, Pa. [Filed Jan. 9, 1875.]

Brief.—Rectangular knives are held against shoulders on the interior faces of the casing by followers and clamps, and are separated by means of intermediate blocks, gradually decreasing in thickness from top to bottom, set between flanges, and compressed by set-screws passing through the top of the casing.



The combination of a vertical series of alternating, graduated, right-angled blocks, O, and knives F, when set against and between flanges or shoulders Q *d*, formed on the inner faces of the two parallel sides A of the case, which are prolonged on the sides of the central shaft, to form right-angled open chambers for the reception of the follower or cut piece M, clamps L, catches K, and lugs J, the whole substantially mounted, connected, and arranged as and for the purpose specified.

161,962. UMBRELLAS. William D. Horton, Nashville, Tenn. [Filed Feb 20, 1875.]

The combination, with an umbrella frame and cover, of the top or cap E, and rubber collar d, arranged to operate substantially as described, to give a yielding pressure on the center of the cover for the purposes herein set forth.

161,963. TOY GYMNASTS. WM. L. Hubbell, New York, assignor to Raymond Jenkins, Brooklyn, N. Y. [Filed Mar. 16, 1875.]

1. The toy gymnast or figure, made with arms, connected to each other, and passing loosely through through the figure, in combination with a shaft attached to one of the arms near the elbow, and which acts to raise the figure and turn it over, as set forth.

2. The shaft *i*, attached at or near the elbow of the toy figure, in combination with the pinion *n*, segmental gear *t*, link *s*, crank *r*, and its actuating gearing, substantially as set forth.

161,964. STEAM-BOILERS. Fayette Hungerford, Rochester, assignor to A. C. Stearns, Corning, N. Y. [Filed July 27, 1874.]

Brief.—The detachable hollow head, provided with a hollow door, is attached to the rear end of the boiler. Through pipes which connect them, and by which the head is secured to the boiler, and the door is hinged, circulation of the water in the boiler is maintained.

1. The combination, with the boiler A, of the detachable hollow head H, provided with the hollow door K, having condducting-pipes extending from the same through the hollow head and into the boiler, substantially as and for the object specified.

2. The removable water-head H, provided with the offsets *e e*, abutting against the boiler, whereby the fire-space B is formed between said water-head and the fires G, in combination with the pipes I, for producing the circulation between the water-head and boiler, substantially as and for the purpose described.

3. The combination, with the water-head H, of the water-door K, pipe-elbows *h h*, nuts *l l*, and sockets *m m*, for the purpose specified.

161,965. DOORS. William C. Hurd, Watertown, Conn. [Filed Mar. 13, 1875.]

A wooden door containing between the exterior surfaces of the sashing a sheet of chilled iron, substantially as and for the purpose specified.

161,966. HARVESTER-WHEELS. Martin L. Kellar and James Mickel Kellar, Luzerne, Iowa. [Filed Jan. 7, 1875.]

In combination with the hubs A and A', having stems *b* and *b'*, nut G, spokes D D', and felly E, substantially as and for the purpose set forth.

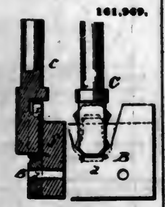
161,967. BUCKETS FOR CHAIN-PUMPS. W. H. Kelly, Terre Haute, Ind. [Filed Sept. 18, 1874.]

Brief.—The conical core is provided with a jacket made larger than the bore of the pump, and extending beyond the core or holder. Wedge-shaped leak-passages are formed in the jacket, through which the water passes when the pump is not in operation.

In chain-pumps, the holder B, as constructed, in combination with conical jacket A, having wedge-shaped leak-passages *d*, substantially as and for the purposes described.

161,968.

161,968. METAL-PUNCHES. De L. Kennedy, New York, N. Y. [Filed Oct. 22, 1874.]



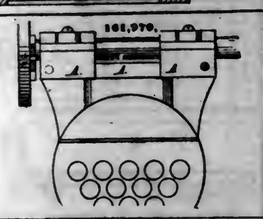
Brief.—A shear-cut is produced by giving a spiral direction to the cutting-edge of the punch.

The herein-described punch, constructed with a cutting-edge extending from the point A in a spiral direction to B, and from the salient point of the spiral to the longitudinal center, as and for the purpose set forth.

161,969. DIES FOR FORMING BEZELS OR METALLIC BACKS FOR JEWELRY. C. Knapp, New York, N. Y. [Filed Mar. 20, 1875.]

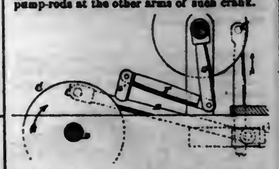
Brief.—A blank of the desired outline is stamped from a plate, and at the same time a rim turned up. The edges of the rim so formed are bent inward by the dies claimed, the upper die C having a projecting flange that carries the rim down into a groove in the lower die. A part only of the rim is operated upon at once.

161,969.



The combination of the die B, having the face-plate *d*, and the rabbet *c* on the edge of said face-plate *d*, with the punch C, which has the lower bending-lip *f* and the upper lifting-lip *f'*, substantially as and for the purpose described.

161,970. POTABLE STEAM-ENGINES. F. F. Leadle, Lancaster, Pa. [Filed Oct. 1, 1874.]



In a portable steam-engine, the water-reservoir A, located between the boiler and the crank-shaft, and supporting the bearings of the latter, substantially as and for the purpose specified.

161,970.

161,971. PITMAN-CONNECTIONS FOR PUMPS. James M. Langley, Double Bridges, Tenn., assignor of one-third his right to J. C. Sawyer, same place. [Filed Mar. 13, 1875.]

Brief.—A stud on the side of the connecting-rod of the power is linked to an arm of a bell-crank on a shaft, which works a series of pump-rods at the other arms of such crank.

The combination of the stud *b'*, the pitman F, and arm G with the crank C and pitman B, operated by the piston-rod A of the engine, and with the rock-shaft H and crank I, that operate the pumps, substantially as herein shown and described.

161,972. LOOM-SHUTTLES. J. H. Le Moyne, Boston, Mass. [Filed Mar. 8, 1875.]

The combination of the loom-shuttle *a*, hinged head *b*, shank *d*, nut *g*, and the detachable spindle *f*, as herein shown, and for the purpose set forth.

161,973. TELL-COUPLINGS. Henry A. Luttgens, Paterson, N. J. [Filed June 4, 1874.]

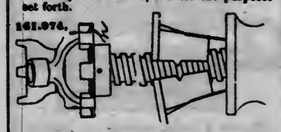
Brief.—A coupling-box and axle-clip forming a continuous band around the axle; a packing-cover hinged within the coupling-box, and a hooked shaft-iron.

1. The coupling-box B in combination with axle-clip C D, forming a continuous band and clamp around the axle A, secured by a single bolt at the rear of the axle, as set forth.

2. Packing-cover *h*, interposed between thill-iron E and packing *h*, in combination with projection *i*, axle A, and bottom web B of coupling-box B, substantially as and for the purpose described.

161,974. JACK-SCREWS. C. K. Marshall, Vicksburg, Miss. [Filed Sept. 17, 1874.]

Brief.—The nut within which the screw revolves is made of sections, and is adjustable, so that the screw can be lifted without turning it backward.



1. In the lifting-jack, a divided or sectional nut, *f f*, Fig. 2, attached by elastic connections to the cylinder *d d*, Fig. 1.

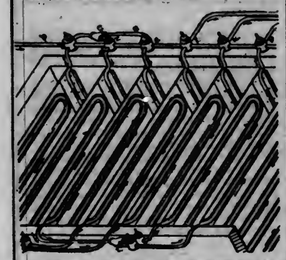
2. The combination of the divided nut, shown also at *b b*, Fig. 1, springs *c c* and *d d*, and screw P P, Fig. 1.

3. The ratchet *e*, in combination with the lever-head *i*, having a yoke to fit the trunnions or upon the shaft of the screw, or its equivalent, Fig. 3.

4. The combination of the nut *f f*, Fig. 2, screw P, ratchet *e*, lever *i*, and barrel A, substantially as described, and for the purposes set forth.

161,974.

161,975. SPIKES. C. K. Marshall, Vicksburg, Miss. [Filed Sept. 17, 1874.]



Brief.—The body of the spike is thicker from front to back than from side to side, and is bent in curves from front to back, and vice versa. It is also gradually increased in thickness from a point about one and three-quarter inch from the head to the head at the back, this increase being beveled off at the front.

An improved spike for railroad cross-ties and other purposes, as set forth in the foregoing description and the drawings annexed.

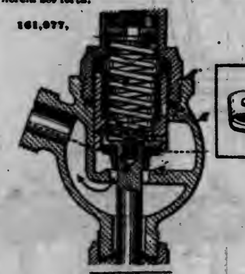
161,976. ICE MANUFACTURES AND MACHINES. S. B. Martin and J. M. Beath, San Francisco, Cal. [Filed July 6, 1873.]

Brief.—The pipe feeding the gas to the refrigerating-coils has two branches to feed each successive pair of refrigerating-coils. The condensed fluid is returned at will into any one or more of the coils by use of a two-way cock, in order to detach the ice.

1. The described method of distributing the fluid through the congealer—that is, by branching or doubling the pipe as the vapor increases in volume—for the purpose of preventing the pipes from clogging, as described.

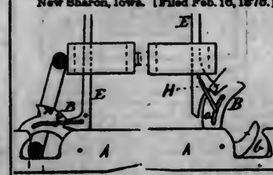
2. The combination, with the pipe *p*, of the two-way cocks *q r s t u v w*, as and for the purpose described.

161,977. WATER-CLOSET VALVES. Geo. R. Moore, Philadelphia, Pa., assignor of one-half his right to Richard McCambridge, same place. [Filed Dec. 31, 1874.]



Brief.—When the main valve is opened, the automatic valve opens to allow the water in the retard-chamber to flow out. When the valve closes, the two forces coact—viz., the pressure of the spring and the re-establishing water-force—in filling the retard-chamber. The time in which the main valve closes is regulated by increasing or diminishing the tension of the spring. To prevent leakage around the screw the spring-seat is provided with packing.

1. A retard-valve, having in combination with the retard-chamber E, and spring G, located within the retard-chamber, a regulating-screw H, as and for the purpose herein set forth.



2. The small chamber *n*, furnished with the valve *f*, and the spring *k*, all in combination as and for the purpose herein set forth.

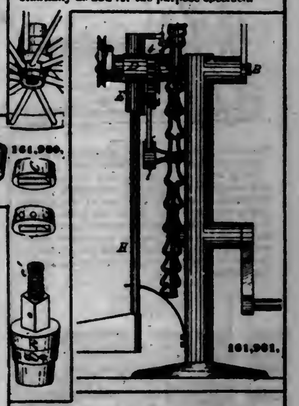
3. The movable spring-seat O, with annular water-tight packing within the valve-case A, in combination with the spring G, screw H, and retard-valve, as and for the purpose herein set forth.

161,977.

161,978. CAR-COUPLINGS. D. C. Morris, New Sharon, Iowa. [Filed Feb. 16, 1875.]

The bumper-heads A, provided with a transverse groove, *b*, and longitudinal aperture *c*, the locking device B, provided with aperture *c*, the rod E, provided with a leg, *a*, and the link H, all combined to set together, as described.

161,979. MILK-COOLERS. A. P. Myers, Prattsville, N. Y. [Filed Mar. 13, 1875.]



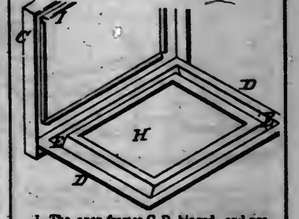
1. In milk-coolers, the water tank or vat, provided with a longitudinal rubber-lined partition-strip, extending nearly the full length of the same, and vertically along the partition-wall of the water-chamber, in combination with the milk-pan seated thereon, for securing the regular flow of water from the entrance section to the exit section, substantially as and for the purpose set forth.

2. The combination of the flanged elastic sleeve or thimble E with the water-pan A, having a short tube, *h'*, and the milk-pan C, provided with a bottom exit-tube, *h*, as and for the purpose described.

161,980. WHEELS FOR VEHICLES. George Nelson, Livingston, assignor of one-half his right to Henry C. Pedigo, Woodville, Tex. [Filed July 27, 1874.]

Brief.—The spokes are dished in opposite directions, and the hub is easily taken apart for repairs.

The combination of the sets of spokes *a* and *b*, part O *o o'* of the hub, elastic washer or ring E, and adjustable socketed ring B, substantially as and for the purpose specified.



161,981. HARVESTER-RAKES. A. Palmer, Rochester, N. Y. [Filed Aug. 6, 1874.]

Brief.—The rake has two separate movements, one on a horizontal axis and the other at right angle to it, to give a rotating and a sweeping movement to said rake.

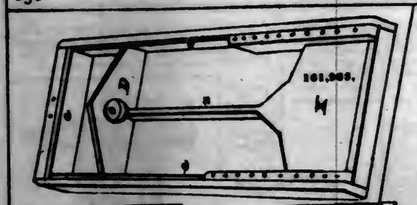
The combination of the rake-arm H, lever J, link *i*, ear *p*, sleeves D and E, wheel F, segment *b*, lever *k*, arm *d*, and detent I, for producing an alternate sweeping and rotating motion in the rake, substantially as herein described.

161,982. DRAWING-BOARDS. W. B. O. Peabody, Boston, Mass. [Filed Jan. 5, 1875.]

1. The open frames C D, hinged, and provided, respectively, with grooves E and projections I, substantially as and for the purpose set forth.

2. In combination with the frames C D, having grooves E and projections I, the removable board H, substantially as specified.

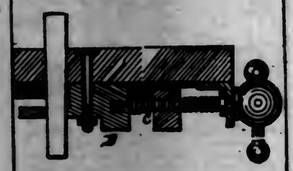
3. The hinged frames C D, with grooves E and projections I, the frame C being provided upon its upper surface with measuring-scales, as and for the purpose set forth.



4. The hinged frames C D, with measuring-scales, grooves E, projections I, and the removable drawing-board H, all constructed and arranged substantially as shown and described.

161,983. GAME APPARATUS. D. J. Pierce, New Haven, Conn., assignor of one-half his right to C. A. Scranton, same place. [Filed Mar. 5, 1875.]

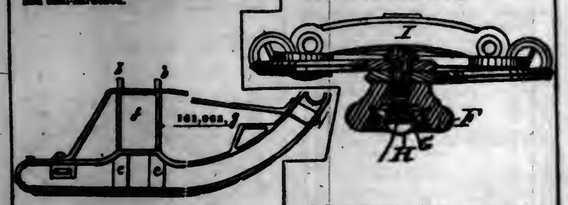
1. The game-board herein described, having the pieces *a x a*, the bottom piece X *x*, and the cross-piece D, provided with the hole *c*, all substantially as and for the purpose set forth.



2. A game-cue, consisting of the slotted cylinder *m*, rod *n*, provided with the finger-piece *o*, and piece *p*, and spiral spring, all said parts being constructed and arranged to operate in the manner described.

161,986.

161,986. BENCH-VISES. James M. Peers, Barnett, Wis. [Filed Mar. 6, 1875.]



Brief.—Suitable articles may be clamped and held upon the face of a carpenter's bench by means of a pin in the top of the bench, and a corresponding pin in the inner end of a closely-fitting slide, adjustable in an opening in the top of the bench by a screw upon a sliding plate operating in guides secured to the under side of the top of the bench, below the aforesaid opening.

The clamping device for work-benches, consisting of the frame A, slide B, and screw C, constructed and arranged to operate substantially as shown and described.

161,986. SLED-RUNNERS FOR VEHICLES. Thomas W. Porter, Revere, Mass. [Filed July 29, 1874.]

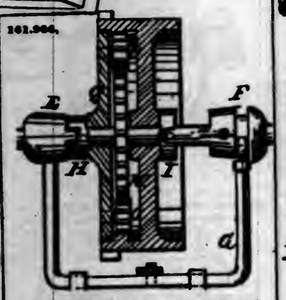
Brief.—Cast-metal runners with bar-bolts inserted therein, and held by the metal melted around them; also a projection cast thereon and chill-hardened.

1. A cast-metal sled-runner, provided with the wrought-iron bar-bolts *b b*, substantially as described and shown.

2. A cast-metal runner in which the bolts *b b* are inserted and secured in the bosses *c c* by means of flowing the melted metal around and clutching it upon the bolts, as described.

3. A cast-metal runner formed to receive the wheel in rest *i*, and with apertures *l l*, in which to insert the clamping-bars, whereby the wheel is secured in position by clamps connecting with the runner directly beneath the wheel-rest, as set forth.

4. A cast-metal hub-runner formed with the raised part *n* for the support of the axle, substantially as described and shown.



5. The incurvible box *o*, in combination with a hub-runner, substantially as described and shown.

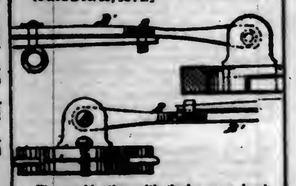
6. The bracket *p*, formed as part of the runner, substantially as and for the purpose specified.

7. The coupling *f*, formed to receive the bar *e* and the bar-bolts *b*, substantially as described and shown.

8. A cast-metal runner having the chill-hardened projection *h* formed thereon, as and for the purposes specified.

161,986.

The combined feed, loose, and reversing pulley or wheel herein described, consisting of the shell or wheel D, having a clutch, I, and inner gear or friction surface E, the independent face-plate Q, carrying gear or friction wheels O, and provided with the notched hub or clutch H, all combined with the shaft *A*, fixed gear or friction wheel M, the sliding clutches E F, and the shifting mechanism G G', as and for the purpose specified.



161,987. CHILDREN'S CARRIAGES. Oscar G. Stretton and Baxter B. Noyes, Greenfield, Mass. [Filed Oct. 16, 1874.]

1. In combination with the screw or bolt E and the thumb-nut F, the head or nut G, applied as and for the purpose set forth.

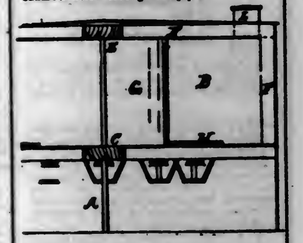
2. In combination with the recessed nut F, the cap or cover H, mounted therein, as and for the purpose described.

3. In combination with the standard or base C of a carriage-top, the detachable base-plate I, substantially as and for the purpose described.

161,988. HORSE-YOKES. Burke Stratton and George Olmsted, Hazardville, Conn. [Filed Dec. 10, 1874.]

The combination, with the hames and collars, of the yoke B B with the adjusting-bars B' B', substantially as and for the purposes herein described.

161,989. CAR-TRUCKS. Wm. Swarthout, Quincy, Ill. [Filed Jan. 2, 1875.]



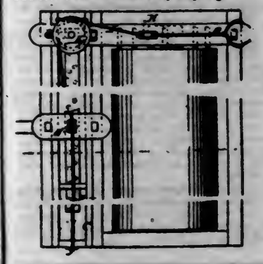
Brief.—Box for inner ends of divided axles provided with separated plate and bearings, upheld by transverse trusses, and so constructed that the apparatus can easily be taken apart.

The box I, having openings *i' i'*, plate J, and brasses *a a*, in combination with the axles B', substantially as and for the purpose set forth.

161,990. DRYING APPARATUS. Samuel T. Swasey, Salem, Mass. [Filed Mar. 20, 1875.]

Brief.—The fan-wheels force air into the space occupied by the distributing-fan. The upper gets a supply of air from the hot-air chamber below through the pipes

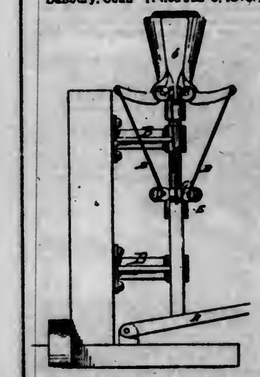
1. A drying apparatus consisting of heated-air chambers A B, fan-wheels C E, and pipes F, in combination with the ventilators L, substantially as described.



2. A drying apparatus consisting of chambers A B, fan-wheels C E, pipes F, and distributing-fan G, in combination with the ventilators L, substantially as described.

3. In a drying apparatus, the revolving frames H, in combination with the distributing-fan G, substantially as herein set forth.

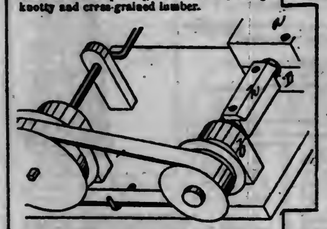
4. In a drying apparatus, the revolving frames or platforms H, distributing-fan G, fan-wheels C and E, pipes F, and ventilators L, arranged in combination with the heated-air chambers A B, substantially as, in the manner, and for the purpose described.



161,991. SEED-SOWERS. John W. Talley, Paxton, Ill., assignor to himself and T. W. Buell, same place. [Filed Jan. 20, 1875.]

Brief.—To a lever, whose lower end is struck by tappets on the roller, is attached a connecting-cord, which, passing around a pulley, imparts reciprocating movement to the transverse seed-slide by means of an intermediate lever, whose lower end engages with the slide. The seed-slide is retracted by a spring.

The combination, with the seed-slide and roll having end tappets, of the cord connected levers G H, intermediate pulley L, and vertical end spring U, as and for the purpose specified.

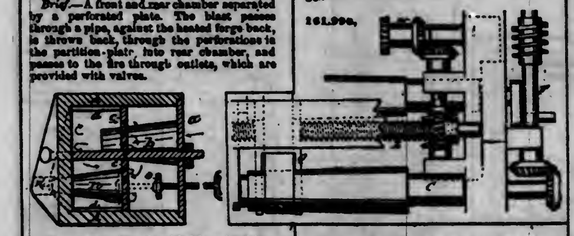


161,992. MACHINES FOR STRETCHING THE TIPS OF HAT-BODIES. FRANCIS C. TAYLOR, Danbury, Conn. [Filed Jan 5, 1875.]

The expanding jaws *b*, provided with recesses *a*, and spring *d*, and arms *b'*, the same being pivoted to the support C, and connected to the sliding support E by rods D, the hangers B B, rods O, and foot-lever R, combined to operate substantially as specified.

161,993. PLANING-MACHINES. Daniel L. Toppan, Somerville, assignor to himself, David C. Meloon, and Hopkins H. Meloon, East Cambridge, and Gardner B. Chapin, Medford, Mass. [Filed Feb. 23, 1875.]

Brief.—A simultaneous lateral and rotary motion is imparted to the cutter-shaft, causing the knives to revolve in constantly-changing vertical planes, by means of a friction-roller provided with a stud, which gears in a cam groove in one of the bearings of the cutter-shaft, for preventing the knots from being removed and displacing the fibers in planing knotty and cross-grained lumber.

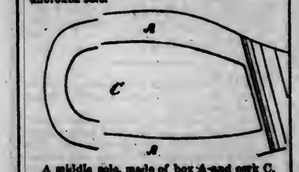


The cutter-shaft B, provided with the stud *e*, in combination with the boxes *c c*, provided with cam grooves *c c*, and bearing *b*, substantially as described.

161,994. LET-OFF MECHANISMS FOR LOOMS. John Turner, Lonsdale, R. I. [Filed Oct. 24, 1874.]

Brief.—The let-off motion is graduated positively by means of cone-pulleys and a slowly-shifting belt, the belt-shifting block being operated by a rotating screw-shaft driven by the warp-beam.

The combination, with the belt-shifting screw L and the driving-shaft C, of the intervening shafts F H M, connected and arranged as shown and described, for the purpose specified



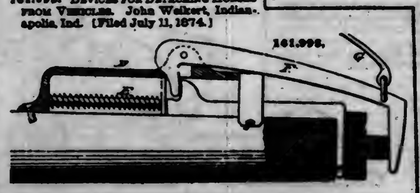
161,995.

The improved blacksmiths' forge-back herein described, consisting of the chamber A, having a beveled projecting front, the cover *a*, having attached thereto the inward-projecting inlet-tube *b*, the intermediate perforated plate *c*, having attached thereto the outlets *s s*, the valve *e*, and bolts *e e*, constructed and operating substantially as described, for the purpose specified.

161,996. CONE SOLES FOR SHOES. Charles Thackeray, New York, N. Y., assignor to Barrows & Boyd, same place. [Filed Mar. 6, 1875.]

Brief.—The rim or box is secured to the cork by adhesive substance, forming a single unbroken sole.

A middle sole, made of box A and cork C, the former in one piece and surrounding the latter, as shown and described.



161,997. CLAMPS FOR VEHICLE-WHEELS. D. H. Tuxworth, Baltimore, Md. [Filed Jan. 27, 1875.]

The clamp, consisting of the piece A, having the double pair of ears B B', clamp-pieces C C, and screws D D, all combined as and for the purpose set forth.

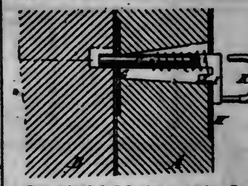
161,998. DEVICES FOR DETACHING HORSES FROM VEHICLES. John Wallcott, Indianapolis, Ind. [Filed July 11, 1874.]

161,998.

The detaching device composed of the elements C D E F G, combined to operate substantially as set forth.

161,999. CHECK-VALVES FOR AIR-COMPRESSORS. Edwd. S. Winchester, Boston, Mass. [Filed Mar. 13, 1875.]

Brief.—The valve-stem and guide are constructed in telescopic sections, with a spiral spring interposed between them. The valve-head has a depending flange, to prevent oil from dripping upon the sliding joint.



1. The valve-head *c*, provided with the tubular stem *b*, constructed to work upon the outside of the guide or stud *d*, substantially as and for the purpose set forth.

2. In combination with the valve-head *c*, arranged to seat itself within an opening, as shown, the depending flange or rim *c* to deflect the drip or sediment, and prevent it from coming in contact with the bearing-surface of the guide *d*, as set forth.

3. The combination of the valve-head *c*, provided with the tubular stem *b*, and the tubular guide *d*, with the spring *a*, all constructed and arranged to operate substantially as shown and described.

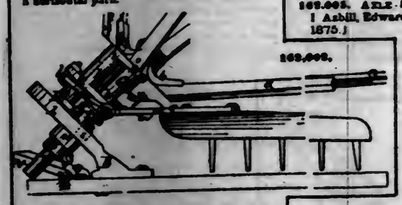
162,000. SASH-FASTENERS. Ira D. Woolf, Oneonta, N. Y. [Filed Mar. 13, 1875.]

Brief.—Sufficient play being given in mortising the sash, the stop-leg slips down into the recess and locks the spring-bolt; but when retracted and pressed slightly downward, again locks the bolt in withdrawn position.

The spring-bolt C, having a stop-leg, J, cap I, finger-piece K, and plates G and H, in combination with a suitably-recessed window-sash, for the purpose described.

162,001. CHAIRS. Benj. F. Allen, Boston, Mass. [Filed Apr. 10, 1874.]

A socket-and-tenon joint, substantially as described, for the manufacture of chairs and other articles, the socket being formed with two of its sides parallel, but widening in a transverse direction, so as to form an oval at its bottom, for the purpose set forth.

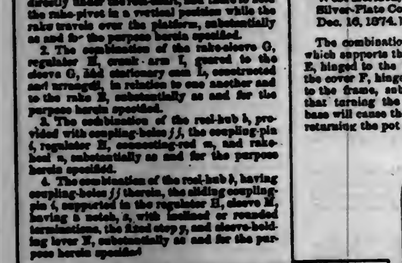


161,998.

162,001.

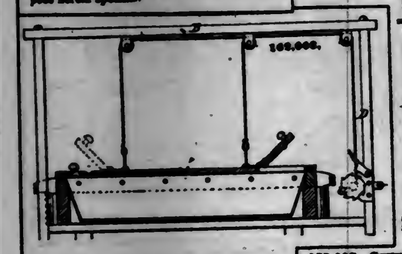
162,002. HARVESTER-RAKES. John F. Appleby, Mazomanie Wis., assignor of one-half his right to E. D. Bishop, same place. [Filed Sept. 4, 1874.]

Brief.—The rake is pivoted to a sleeve in the inclined reel shaft, the sleeve having an intermittent motion, whereby the rake rotates with the reel, and also sweeps the platform in a horizontal path.



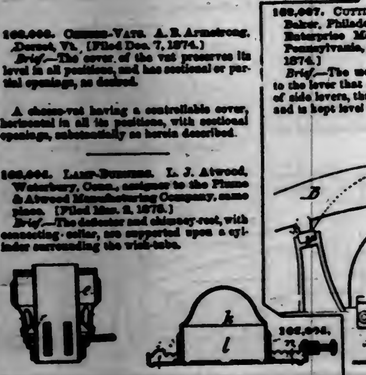
162,002.

1. In combination with the reel C, reel shaft D, and rake F, arranged to have the inclinations in relation to one another and to the platform substantially as herein set forth, the rake-carrying sleeve G, constructed as described, and arranged to have its revolving motion intermitted when its rake-bearing is directly under the reel-shaft, and there to hold the rake-pivot in a vertical position while the rake travels over the platform, substantially as and for the purpose herein specified.

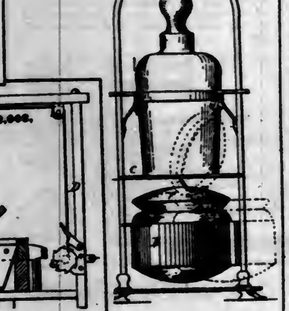


2. The combination of the rake-sleeve G, regulator H, crank-arm I, geared to the sleeve G, fixed stationary cam L, constructed and arranged, in relation to one another and to the rake D, substantially as and for the purpose herein specified.

3. The combination of the reel-hub *b*, having coupling-holes *jj* therein, the coupling-pin *i*, regulator H, connecting-rod *m*, and rake-head *n*, substantially as and for the purpose herein specified.



4. The combination of the reel-hub *b*, having coupling-holes *jj* therein, the sliding coupling-pin *i*, supported in the regulator H, sleeve K, having a notch, *s*, with inclined or rounded terminations, the fixed stop *y*, and sleeve-holding lever F, substantially as and for the purpose herein specified.



162,003.

162,004.

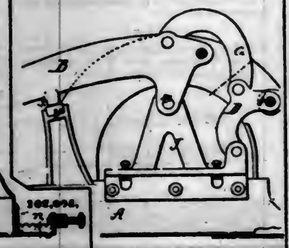
162,006.

162,005.

The cylinder *e*, surrounding the wick-tube, and extending nearly to the top of the same, and containing the air-distributer, in combination with the removable cylinder *l*, deflector *k*, and chimney-holder *n*, which are supported, when in place, upon the upper end of the cylinder *e*, substantially as specified.

162,005. AXLE-SKEINS FOR WAGONS. R. I. Ashill, Edwardsport, Ind. [Filed Feb. 4, 1875.]

The skein A, having exterior oil-reservoir, B, exterior longitudinal groove *b*, and exterior cross-groove *d*, all substantially as set forth.



162,006. TOILET-CASTERS. S. Wm. Babbitt, West Meriden, Conn., assignor to Wilcox Silver-Plate Company, same place. [Filed Dec. 16, 1874.]

The combination, in a caster, of the base which supports the bottle or bottles, the pot E, hinged to the frame below the said base, the cover F, hinged to the pot, and connected to the frame, substantially as described, so that turning the said pot from beneath the base will cause the opening of the cover, and returning the pot will close the cover.

162,006.

162,007. CUTTING-INSTRUMENTS. John G. Baker, Philadelphia, Pa., assignor to the Enterprise Manufacturing Company of Pennsylvania, same place. [Filed Dec. 24, 1874.]

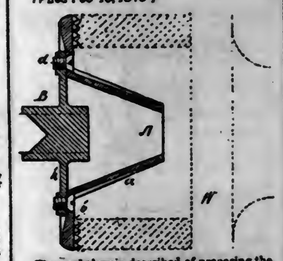
Brief.—The movable knife is so connected to the lever that operates it, and to a system of side levers, that the former has a draw-cut, and is kept level at all times.

162,007.

162,008. CHURN-VATS. A. B. Armstrong, Dayton, Va. [Filed Dec. 7, 1874.]

Brief.—The cover, of the vat preserves its level in all positions, and has sectional or partial openings, as desired.

A churn-vat having a controllable cover, horizontal in all its positions, with sectional openings, substantially as herein described.

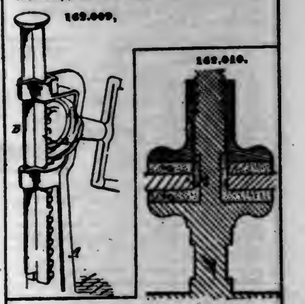


162,009. LAMP-BURNERS. L. J. Atwood, Waterbury, Conn., assignor to the Plume & Atwood Manufacturing Company, same place. [Filed Mar. 2, 1875.]

Brief.—The deflector and chimney-rest, with connecting-collar, are supported upon a cylinder surrounding the wick-tube.

162,009.

The combination of the knife *i*, the operating lever B, pivoted to the knife and to the frame, the radius-arm D, also pivoted to the knife and frame, and the connecting-rod G, pivoted to the said operating-lever and to the radius-arm, all substantially as and for the purpose described.



162,009. MANUFACTURE OF IRON MILL-BURRS. John B. Baker, Philadelphia, Pa., assignor to the Enterprise Manufacturing Company of Pennsylvania, same place. [Filed Feb. 16, 1875.]

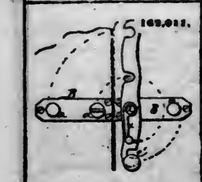
The mode herein described of preparing the hard-metal burr of a grinding-mill for attachment to the mill-spindle—that is to say, first securing the burr to a soft-metal hub, B, and then boring the latter while the burr is confined to a chuck of a lathe or bed of a drilling-machine adapted to the grinding-surface of the said burr, all as set forth.

162,009. CARRIAGE-JACKS. Jno. G. Baker, Philadelphia, Pa., assignor to the Enterprise Manufacturing Company of Pennsylvania, same place. [Filed Mar. 4, 1875.]

The within-described carriage-jack, consisting of the stand A and its guides *a a'*, the lifting-bar B and its rack adapted to the said guides, the inclined shaft, adapted to a bearing on the stand, and carrying an inclined disk with a spiral rib adapted to the teeth of the rack, all as set forth.

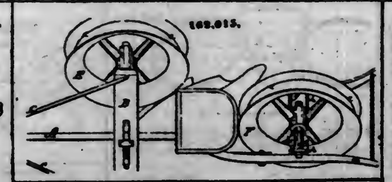
162,009.

162,010.



162,010. ELASTIC ARBORS. S. Bannister, Kalamazoo, Mich. [Filed Oct. 17, 1874.]

1. The grooved arbor A, provided with an elastic bearing, *b*, to receive a wheel or a saw, as described.



2. The collar or flange *b'*, formed in one piece with the elastic bearing *b*, which is permanently applied on arbor A, in combination with the removable collar *b'*, as and for the purposes described.

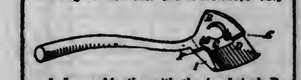
162,011. FASTENERS FOR DOORS AND SHUTTERS. Daniel W. Barr, Reading, Pa. [Filed Sept. 23, 1874.]

Brief.—A latch-bar is pivoted to one of two horizontal plates, each of which has a button or projecting stud near its outer end. The latch-bar is notched at its upper end, and alternately near the edge at its lower end, the bar swinging over and double-locking when in closed position.

162,011.

162,015.

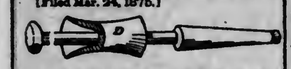
The combination, with the doors or shutters A A, of the two plates B B, each provided with a button-bolt, *a*, near its outer end, and the latch-bar C pivoted to one end of the plate, and provided with a notch, E, at its upper end, and a notch, E', at its lower edge, near the other end, substantially as set forth.



162,012. WAGON-BRAKES. W. H. Bartows, Iron Hills, Iowa. [Filed Jan. 9, 1875.]

1. In an automatic wagon-brake, the draft-pole H having slots *f* for the play of the rod J, and connected to the vibrating lever G by rod A, in combination with the rod E, adjustable plate F, brake-bar levers C C', and brake-bar D, substantially as set forth.

2. In combination with the slotted draft-pole H, levers C C', brake-bar D, and its operating mechanism, the hooks *d d*, and staples *d' d'*, whereby the brakes are inoperative in backing, substantially as set forth.



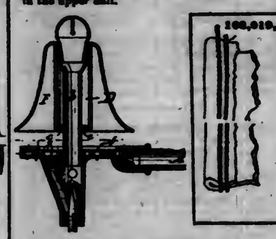
162,013. WELT-KNIVES. Wm. R. Barton, Georgetown, Mass. [Filed Mar. 16, 1875.]

1. In combination with the head-stock B, provided with the finger I and guard J, the clamp or holder G provided with the lip F, all substantially as and for the purpose described.

2. In combination with the head-stock and clamp, the knife D, provided with the flange E, and having a curved cutting-edge, K, and point *i*, all substantially as set forth.

162,014. PEG-CUTTER HANDLES. Wm. R. Barton, Georgetown, assignor of one-third his right to C. H. Barton, Cambridge, Mass. [Filed Mar. 24, 1875.]

A peg-cutter handle provided with the sliding rest D, substantially as and for the purpose specified.



162,015. PLOWS. Benjamin S. Benson, Baltimore, Md. [Filed Jan. 16, 1875.]

Brief.—Two oblique-grooved wheels. One, upon the axle, runs up on the land side of the preceding furrow. The other, set in rear of the plow, rides upon the land edge of the present furrow, and relieves the plow of sliding friction of the land-side.

1. The combination, with a plow, of an inclined wheel, provided with a circumferential groove that receives and runs upon the projecting edge of the unplowed ground, substantially as and for the purpose described.

2. The combination, with the plow-beam A and the axle B, of the inclined grooved wheel E, for the purpose of regulating the furrow, substantially as described.

3. The combination, with a plow, having a detachable heel-piece, of the rear wheel F, inclined to the vertical plane, and constructed as described, with a circumferential groove for the purpose of lightening the draft and rendering the plow self-guiding, substantially as described.

162,015.

1. In a rack and snail striking mechanism, the combination of the snail A, stop-pin *a*, rack B, cam-pin *b*, and cam D, all operating together substantially as described, and for the purpose set forth.

2. The combination of lift-lever E, hollow shaft *m*, dog F, and lift-pin *h*, the lever E being arranged upon the front or exterior of a front plate, C provided with opening *k*, the dog F and lift-pin *h* being upon the inside or interior of said plate, the dial-wheels being thereby removed from out of the way of the rack and snail, substantially as described.

162,016. VAPOR-BURNERS. Jos. Benson, South Boston, Mass. [Filed Feb. 8, 1875.]

Brief.—The chambered disk is in two parts, and the chambers are formed by depressions in the upper half.

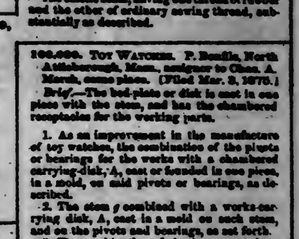
162,016.

1. The combination, with the tube *b* and surrounding chamber D, having the supplementary holes *c* at its bottom, of the chambered disk E, communicating with the naphtha feed-tube, substantially as described, whereby jets are caused to play against the upper surface of the chambered disk, as and for the purpose set forth.

2. The combination, with the outer chamber F, having the vent-holes *f*, of the tube *b* and its surrounding chamber D, having its lower portion provided with the jet-holes *c*, as and for the purpose described.

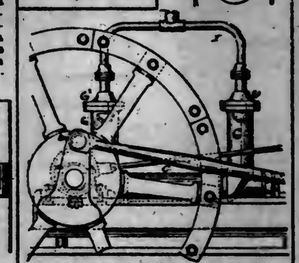
162,017. DOOR-BOLTS. William H. Bryce, Hartford, Conn. [Filed Dec. 7, 1874.]

Brief.—A sliding bolt is provided with a recessed spring, which carries an upwardly-projecting spur, for locking the bolt in position. This concealed spring is operated by a presser-pin, which comes up alongside of the clamp-guide, and apparently forms a portion thereof, the construction disguising its locking capabilities.



The combination of the plate *b*, guides *d c*, and bolt *c*, locked in position by the concealed spring *g*, bearing the spur *i*, and operated by the presser-pin *e*, all substantially as shown and described.

162,018. CLOCK STRIKING MECHANISM. Gilbert H. Blakesley, Bristol, Conn. [Filed May 26, 1874.]



162,019.

162,020.

162,021.

162,022.

162,019. ELASTIC SEAMS FOR GARMENTS. Helen A. Blanchard, Boston, Mass. [Filed Mar. 11, 1875.]

The elastic seam, having one thread of rubber and the other of ordinary sewing thread, substantially as described.

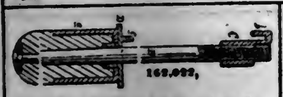
162,020. TOY WATCHES. P. Bonfils, North Attleborough, Mass., assignor to Chas. A. Marsh, same place. [Filed Mar. 3, 1875.]

Brief.—The bed-plate or disk is cast in one piece with the stem, and has the chambered receptacles for the working parts.

1. As an improvement in the manufacture of toy watches, the combination of the pivots or bearings for the works with a chambered carrying-disk, *A*, cast or founded in one piece, in a mold, on said pivots or bearings, as described.

2. The stem *g* combined with a works-carrying disk, A, cast in a mold on such stem, and on the pivots and bearings, as set forth.

3. The combination of the bars or springs *p q r*, as described, with works-carrying disk A, cast in one piece, and provided with wheel pivots and bearings, arranged therein as specified.



162,021. AIR-PUMPS. Wm. H. H. Bowen, Franklin, Ky. [Filed Mar. 4, 1875.]

Brief.—The vertical cylinders have a quarter-circle connection with the main horizontal cylinder. The caps containing the check-valves are conical in form. Both features avoid "pounding" by the columns of water.

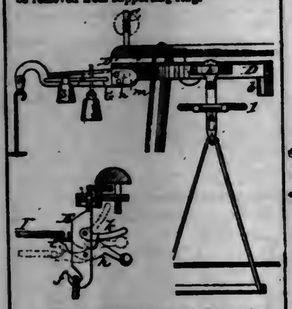
The main cylinder G, provided at each end with cylinders G', curved or turned upward on a true circle, and having cone-shaped top G', in combination with valves *e* and *d*, pipes I H, and plunger J, all constructed as and for the purpose set forth.

162,022. HANDLES FOR CROSSCUT-SAWS. William J. Boynton, Battle Creek, Mich. [Filed Jan. 30, 1875.]

Brief.—The saw is attached to the handle by means of a hooked rod, adjustable upon a screw-threaded tang, in connection with an oval slip-plate secured on the tang above the rod, and provided with one or more ribs. The saw is clamped firmly in place by rotating the handle.

No. 162,022.

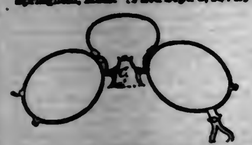
The nut C having the hook *b*, and the clip-plate D having the rib *c*, in combination with the screw-tang B, handle A, and ferrule *a*, constructed and arranged substantially as described and shown.



162,023. BALE-TIES. Maurice T. Brown, Tyler, Tex. [Filed Mar. 17, 1875.]

A bale-tie fastening consisting of the locking device D, riveted projection *c* at one end, and key-bit projection *c* at the other, in combination with the tie-ends A A', slotted as described, substantially as set forth.

162,024. SCALES. Henry T. Budge, Cedar Falls, Iowa. [Filed Feb. 24, 1875.]



Brief.—Can be used as ordinary platform-scale or sack-scale, the edges of sack being folded over the ring I, and held in position by lever A and locking-piece K. After weighing is completed the lock-piece is raised, and lever returns to original position, allowing sack to be removed from supporting-ring.

1. The combination of the slotted pendant E with hook *f*, weighted lever A, with toothed bar *i* and ring I, and lock K, all constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The combination of the circle-beam D, with extension D', having ears *m m*, the folding beam G, with slot *n* and hooks *f*, rod *p*, and poise *s*, substantially as herein set forth.

162,025. EYE-GLASSES. Saml. D. Burbank, Springfield, Mass. [Filed Sept. 8, 1874.]

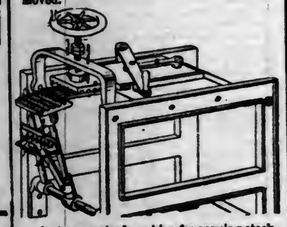
1. The above-described separate bearings *a* and *a'*, with the depression between them, substantially as and for the purposes set forth.

2. The above-described yoke-formed nose-piece C, substantially as set forth.

162,026. EYE-GLASSES. Saml. D. Burbank, Springfield, Mass. [Filed Apr. 9, 1875.]

The self-adjusting nose-piece C, pivoted at or near its center, or vibrating in a single plane, substantially in the manner and for the purposes set forth.

No. 162,026.



162,027. CARRIAGE-SPRING ATTACHMENTS. Charles S. Caffrey, Camden, N. J. [Filed Jan. 4, 1875.]

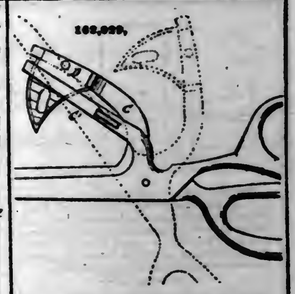
The combination of the cylindrical bearing B with the side bar of a wagon, square bolt C, flanged thimbles D E, and the body-supporting cross-spring A, having flanged end head *c*, substantially as and for the purposes set forth.

162,028. MACHINES FOR RE-ENFORCING STOCKING-HEELS. Augustus C. Carey, Malden, Mass. [Filed June 15, 1874.]

Brief.—The stocking-heel is placed between the crimping-plates, which, being brought together, press it in ridges. The gang of needles is then passed through and across the ridges, and a single yarn passed through all the eyes. The yarn between the needles is then drawn down and looped upon the pins below, thus obtaining a sufficient quantity for running through the heel. The loops are then removed from the pins by the disengaging-plate, and the needles drawn back, carrying the yarn through the heel. The yarn is then cut at the needle-eyes, and the stocking removed.

1. An organized machine for running stocking-heels, comprising the combination, with crimping devices adapted to hold and crimp the fabric in ridges, as described, of a gang of reciprocating needles, moving in fixed guides in the plane of the needle-passages in the crimping devices, substantially as and for the purposes set forth.

2. The combination, with the reciprocating gang of needles, moving in fixed guideways, and the crimping devices, operating together as described, of means, substantially as specified, for obtaining a measured supply of thread for each needle.



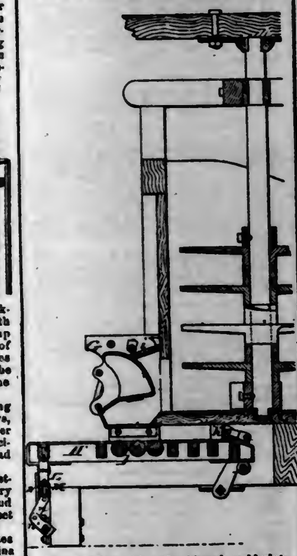
3. In combination with the vertically-adjustable upper crimping-plate, the lower vibratory crimping-plate, its supporting-standard, and rock-shaft, substantially as shown and set forth.

4. In combination with the crimping-plates and reciprocating needles, the looping-pins and their supporting-plate, for operation substantially as shown and set forth.

5. In combination with the looping-pins and their supporting-plate, the perforated loop-disengaging spring-plate, arranged and operating substantially as shown and set forth.

162,029. COMBINED SHEARS, BUTTON-HOLE CUTTERS, &c. Phebe L. Carter and James W. Rhoades, Clyde, Ohio. [Filed Feb. 23, 1875.]

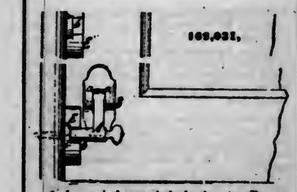
Brief.—Two supplemental arms or blades spring from the ordinary blades of a pair of shears. One of these supplemental arms carries a triangular button-hole cutter, which passes through a slot formed by a spring-arm and the lower supplemental arm. The end of the triangular cutter has an eye-hole for tying carpet-rags.



No. 162,029.

In combination with a pair of shears or scissors, the arm C, with slotted knife-blade D, and the arm C', with spring-arm E, substantially as and for the purposes herein set forth.

162,030. BRICK-MACHINES. Jas. F. Clark, Morenci, Mich. [Filed Mar. 27, 1875.]

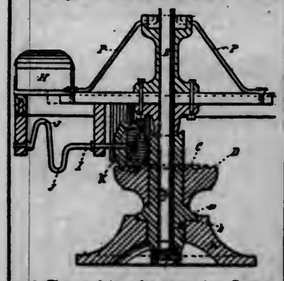


Brief.—Mold-box table hinged and capable of being pressed up by toggle-joint against clay-box, so that surplus clay is scraped off mold as it is forced from beneath clay-box.

In a brick-machine, the hinged mold-platform H', spring I, bar M, toggles *n n'*, shaft O, and lever P, combined substantially as specified.

162,031. SASH-FASTENERS. Jno. K. Clark, Buffalo, N. Y. [Filed Mar. 4, 1875.]

Brief.—An angular gravitating latch is hinged by gudgeons in a slotted socket-piece, in such manner as to allow of reversing the latch, so that it can be used on either side of the sash. This latch is combined with a peculiar stop, having double inclines and suitable recess, and attached by a single screw to the window-frame; the construction permitting the latch to slide up and down over the inclined sides of the stop, while it drops in gear with the recess, to lock the sash automatically in desired position.

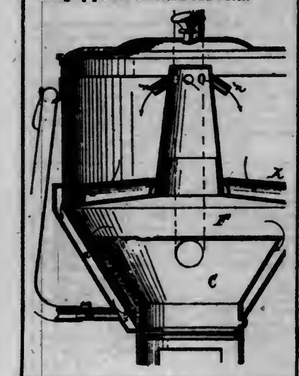


No. 162,031.

1. In a window-sash lock, the stop E, provided with double inclines, and with a recess, *b*, attached by a single screw, or its equivalent, substantially as shown and described.

2. The combination of a reversible angular gravitating latch, A, having gudgeons *a*, with a slotted or recessed socket-piece, B, substantially as and for the purposes specified.

162,032. ROUNDABOUTS. John C. Clime, Philadelphia, Pa., assignor of two-thirds his right to J. C. Clime and Joseph Ling, same place. [Filed Jan. 9, 1875.]

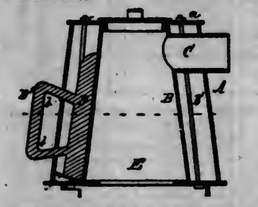


1. The revolving pleasure-carriage G, permanently connected with the upper end of the revolving shaft E, in combination with the base A, having a central hub, B, in which the lower end of the shaft E revolves, the said hub being provided with a bevel-gear wheel, C, having a circular railway, D, cast therewith for the support of the carriage, substantially as set forth.

2. The combination of the revolving pleasure-carriage G, having shafts I, provided with treadles J and pinions K, with the bevel-gear wheel C and circular railway D, substantially as and for the purpose set forth.

162,033. STEAM COOKING AND WASHING APPARATUS. William Cooper, Ypsilanti, Mich. [Filed Feb. 18, 1875.]

Brief.—The furnace is fed through a door in the smoke-pipe. Steam for heating or cooking food is conducted away as desired. Communication between the two chambers is kept up through pipes for the steam and water.

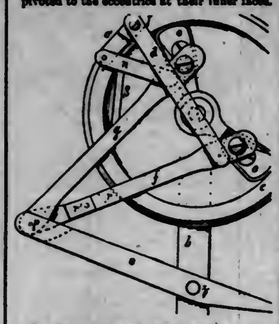


1. The combination of the boiler F and its pipe G, as arranged with the fire-chamber C, and the pipe D with feed-door E, all constructed as and for the purpose specified.

2. The pipe H, as constructed, and the hose L, in combination with the pipe G of the boiler, as and for the purpose set forth.

3. The combination, with the boiler F, fire-chamber C, pipe D, and pipe G, of the vessel J, perforated removable diaphragm K, and the removable pipe M, having downward-projecting tubes *n*, and the connecting-pipe *o*, all constructed substantially as and for the purpose set forth.

162,034. FLAT-IRON HEATERS. W. Cooper, Ypsilanti, Mich. [Filed Feb. 18, 1875.]



Brief.—The top, being flat, and without an exit-pipe, may be used for warming the irons or other articles.

The combination of the casing A, having notches *b b* and hinged doors C C, the inner polygonal tapering shell B, air-chamber B', inclines G, grate K, pipe C, extending through the side of the body, and removable cap F, all constructed substantially as and for the purpose set forth.

162,035. CLUTCH MECHANISMS FOR OPERATING TREADLES. Alonzo W. Oram, Litchfield, assignor of one-half his right to H. O. Goodrich, Jerseyville, Ill. [Filed Dec. 17, 1873.]

Brief.—To the axis of the flanged motor-wheel are secured radial arms, to the outer extremities of which are pivoted eccentrics, that are connected to the treadle by pitman-arms, pivoted to the eccentrics at their inner faces.

The flanged wheel *c*, radial arms *f f*, eccentrics *e e*, treadle-levers *f g*, arms *d*, *n*, and *o'*, and spring S, the whole being so combined and arranged as to prevent the striking or meeting of the dogs, substantially as described.

162,036. NUT-LOCKS. Reuben Cramer, Pittsburg, Pa. [Filed Mar. 2, 1875.]

Brief.—The locking-plate embraces two bolts, and is provided with a Z-shaped slit, extending from one nut to the other, the raised portions forming stops.

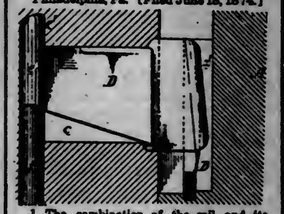
The plate A, provided with openings C and a Z-shaped cut through it, in combination with the bolts, nuts, and fish-bars of railway-joints, substantially as herein described, and for the purpose set forth.

162,037. POURING-LIPS FOR SHEET-METAL MEASURES. Allan Cummings, New York, N. Y. [Filed Feb. 16, 1875.]

Brief.—Dispenses with the usual channel or groove between the pouring-lip and the body of the measure, and returns into the measure the liquid which ordinarily collects in this channel or groove.

The pouring-lip *a* and body *b*, made of the same piece of sheet metal, said body *b* extending within or forming the measure, as set forth, so as to avoid a joint at the inner surface of the lip and measure, as and for the purposes specified.

No. 162,037.



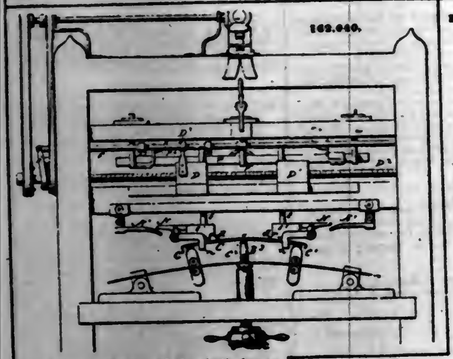
No. 162,038.

162,038. BLOCK-LOCKS FOR SHOE-LASTS. Frederick J. Davis, Newport, Vt. [Filed Feb. 20, 1875.]

Brief.—The spring in which the tumbler is journaled permits the last-block to be vertically adjusted without detachment.

In combination with the last A and block B, the tumbler D, journaled in the spring C, and having its upper portion twisted out of line with the lower portion, the hook E, springs G G, and pin F, all constructed and arranged to operate as set forth.

162,039. BEDSTEAD-FASTENINGS. E. Deets, Philadelphia, Pa. [Filed June 18, 1874.]



1. The combination of the rail and its flanged projection D, and the post A, having a recess, *a*, a chamber, *a'*, constructed at the front and forming a continuation of the recess, and a casting, B, fitting the chamber, and provided with inclines *m m* and flanges *b b*, all as and for the purpose described.

2. The rail, having a mortise, *c*, and a recess extending above and below the mortise, at right angles thereto, in combination with the casting D, extending into the mortise and having a projection, *c'*, which is maintained within the upper portion of the recess by a plug, *f*, fitting the lower portion, as set forth.

162,040. MACHINES FOR SETTING CARRIAGE-SPRINGS. Thomas B. De Forest, Birmingham, Conn. [Filed Jan. 7, 1875.]

Brief.—A pair of elastic bars, the ends of which are supported in sliding carriages, and a former, which has its ends supported in the heads. The curvature of the bars, and thereby the curvature of the former, may be increased or diminished by the raising or lowering (by a screw) of the central spindle, upon which they rest. Sliding carriages, movable toward and from each other by a right-and-left-hand screw, carry spindles, the lower ends of which terminate in heads provided with fingers. When the carriages are at their extreme central positions, the fingers are lowered, and, the clevis being shipped, are made to escape along the "back," resting upon the former as the carriages recede.

162,640.

1. The combination of the elastic bar or bars B, secured at both ends, the heads C^1, for holding the ends of the former, and the central adjusting-spindle B^1, substantially as and for the purpose specified.

2. The combination of a former, supported at both ends, the central adjusting-spindle B^1, and the auxiliary adjusting-spindle C^1, substantially as and for the purpose specified.

3. In combination with a former to support the part of the spring to be set, the fingers *d*, having a reciprocating movement from the center to bend the part of the spring to be set down upon the former, substantially as described.

4. The combination of the former, the fingers *d*, the spindles E, and the locking-arms F^2, to hold the said fingers down upon the spring at its extremes, substantially as described.

5. The combination of the carriages D D^1, the spindles E, each carrying one of the fingers *d*, the said fingers having a vertical movement independent of said carriages, and the right and left hand leading-screws D^2, substantially as described.

6. The combination of the former, the fingers *d*, the spindles E, the lifting-bar P, and lever P^3, whereby both fingers are simultaneously raised or lowered, substantially as described.

7. The combination of the former, the fingers *d*, the spindles E, the lifting-bar P, lever P^3, and pawl R, substantially as and for the purpose described.

8. The combination of the fingers *d*, the spindles E, the lifting-bar P, and the incline S on the shifting-bar F, substantially as described.

9. The combination of a former, the fingers *d*, and the side or guiding fingers *e*, substantially as described.

10. The combination of a former, the fingers *d*, side fingers *n*, and the stationary inclines F^1, for automatically raising the side fingers *e*, substantially as described.

11. The herein-described automatic pinching, consisting of a pair of jaws, one or both of which have a reciprocating movement, combined with a mechanism, substantially such as described, for imparting automatically such reciprocating movement to the said jaw or jaws.

12. In combination with a former for setting carriage-springs, automatic pinchers, substantially such as described, for giving the set to the spring, substantially as specified.

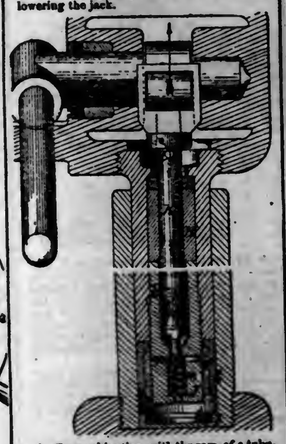
162,641. FIRE-EXTINGUISHERS. Christopher L. Delmage, Woonsocket, R. I. [Filed Dec. 12, 1874.]

Brief.—A transverse slit is cut in the radial nozzle, on opposite sides thereof, the slits being oblique to the length of the nozzle, and inclining outward from the head, whereby the leverage of the ejecting-nozzle is increased, and a fan-shaped sheet of water is thrown. Slots are cut in the closed end of the nozzle, whereby a number of sheets of water is thrown during the rotation of the head into every part of the room.

In a fire-extinguisher, the combination, with a rotating head, A, of the radial arms or nozzles C, having spaced transverse partitions *c*, forming flat water-passages *f*, and oblique slits *n* in their ends, substantially as specified.

162,641.

162,642. BLEACHING JUTE FOR PAPER-PULP. George W. Dubuisson, Tom's River, N. J. [Filed Sept. 29, 1874.]



Brief.—Submits jute to the action of salts of potash, under low steam-pressure, from eight to twelve hours. Eight pounds potash to one hundred pounds jute are proportions mentioned.

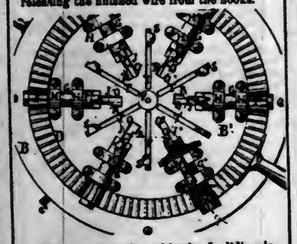
1. The method or process herein described of disintegrating the fibers of jute, gunny, and manila, and preparing them for bleaching by the use of potash, substantially as specified.

2. The method herein described of repeatedly using the potash solution in the treatment of jute, gunny, and manila after such solution is restored by leaching through leached ashes, substantially as specified.

162,644. HYDRAULIC JACKS. Enoch M. Dudgeon, San Francisco, Cal. [Filed Dec. 30, 1874.]

Brief.—Contained within the ram is a tubular pump-plunger and valves, operating to pass the water below the ram by the reciprocating action of said plunger. The plunger is made to trip the lower valve, to return the water to the upper portion of the ram when lowering the jack.

1. The combination, with the ram, of a tubular pump-plunger, contained within the ram, whereby the operating fluid is passed through said plunger to opposite ends of the ram, as required.



2. The combination, with the hollow pump-plunger K and pump-barrel E, within the ram, of the valves L M, the pump chamber or space *k*, and the apertures or passages *o i l n*, substantially as specified.

3. The hollow pump-plunger K, constructed to extend below or through the bottom of the pump-barrel, in combination with the lower valve M, essentially as and for the purpose herein set forth.

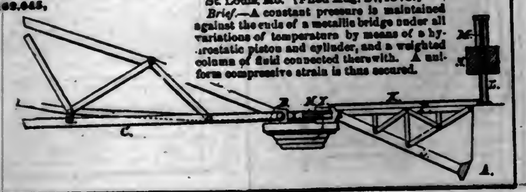
4. The combination of the lower valve-box J, with its valve M and one or more passages *n*, the nut or screw coupling F, the packing G, the pump-barrel E, and the shell C of the ram, essentially as described.

162,643. MACHINES FOR TWISTING WIRE. A. de Mestre, Bordeaux, France. [Filed Sept. 20, 1874.]

Brief.—Hooks attached to the inner ends of radial shafts first receive the wire, giving it the form of a hexagon. Levers whose ends extend upward through the plate, being operated from below, and which move in radial slots in said plate, intermediate to said hooks, bend inwardly the portions of the wire between the hooks, giving it the form of a star. The rotation of the hooks by their shafts and pinions twists the portions of doubled wire thus formed. By a ring beneath the master-wheel, and a system of levers attached thereto, the hooks receive a motion sidewise, when the twisting is completed, the shanks of the hooks having hinge-joints for the purpose, so releasing the finished wire from the hooks.

1. The combination of hooks J, sibling in radiating shafts G, with levers S, moving in radiating slots T, and with a master-wheel, D, constructed and operating substantially as shown and described.

2. The grooved shaft G^2 and hook J^2, composed of pins O O, in combination with hooks J, shafts G, slides F F^2, jaws N^1, pinions F F^2, and master-wheel D, substantially as set forth.



3. The combination of jaws N^1 with the grooved shaft G^2 and hook J^2, substantially as specified.

4. The combination of the ring *d*, carrying friction-rollers *c*, with a treadle, Y, levers S, hooks J J^2, and radiating shafts G G^2, substantially as described.

5. The ring *d* and levers *f*, in combination with slides F, hooks J, hinged shanks I, and recesses R in the guide-slots Q, substantially as set forth.

162,645. IRON RAILROAD. James B. Eads, St. Louis, Mo. [Filed Aug. 27, 1873.]

Brief.—A constant pressure is maintained against the ends of a metallic bridge under all variations of temperature by means of a hydrostatic piston and cylinder, and a weighted column of fluid connected therewith. A uniform compressive strain is thus secured.

1. The combination of the metallic chord C, skew-back D, plunger H, cylinders I and L, weighted piston M N, and abutment A, all substantially as herein set forth.

2. In combination with the chord C, skew-back D, plunger H, cylinders I and L, pipe K, weighted piston M N, and abutment A, the struts O, substantially as and for the purpose set forth.

162,646. ORNAMENTAL WOOD FLOORING-TILES. Robert Fenn, Rochester, N. Y., assignor to George H. Mellen, same place. [Filed Aug. 4, 1874.]

Brief.—A composite log is formed by gluing together planks and strips of differently-colored woods, and the tiles are formed by sawing the log perpendicularly to the grain, so that the end of the grain forms the wearing-surface.

A wood-tile for floors and other purposes, formed by cutting slices of wood from the composite log across the grain, and then attaching together the slices by gluing or otherwise, so that when laid the end of the grain will be presented to the surface, as set forth.

162,647. CONVERTING CAST-IRON ARTICLES INTO STEEL. Stanley G. Flagg, Philadelphia, Pa. [Filed Sept. 23, 1874.]

Brief.—Uses charcoal, iron scales from rolling-mills, and chloride of ammonium in converting iron into steel by cementation.

The process of converting cast-iron objects into steel by subjecting them to heat while they are enveloped in a composition of scales or other particles of iron, charcoal, and sal-ammoniac, as set forth.

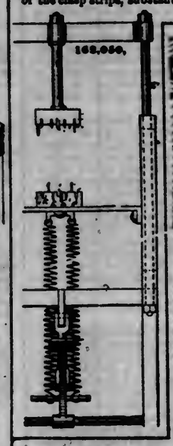
162,648. LEAD-HOLDERS FOR DIVIDERS. Samuel L. Fox, Philadelphia, Pa. [Filed Dec. 8, 1874.]

Brief.—A split tube for holding the lead crayon, and adapted to be secured in the clamp ordinarily attached to one of the divider-legs.

The lead-holder for drawing-dividers, herein described, consisting of a split metallic tube having a tapering point terminating in a shoulder, *c*, said lead-holder constituting a new article of manufacture, substantially as set forth and illustrated.

162,649. EXTENSION-TABLE SLIDES. J. O. Frost, Towanda, Pa. [Filed Mar. 12, 1875.]

The plate A, having hooks *a*, tongue *b*, and dovetail-extension *c*, in combination with the frame-pieces B, having holes *e*, in which said dovetail-extensions are fastened by plugs, substantially as and for the purpose described.



162,650. MANUFACTURE OF CORSETS. Chas. Gabrea, New York, N. Y. [Filed Dec. 1, 1874.]

1. The described method of making woven corsets, or for preparing them for the reception of the clasp-strips, the same consisting in starching and pressing the corset as it comes in a single piece from the loom, and then dividing and creasing it, as herein set forth, for the object specified.

2. The combination, with a single pair of dies, of knives for cutting the woven corset in two, and of blades for creasing the corset sections or halves, substantially as specified.

3. The combination, with the dies, of attached creasers to form the folds and cutters for puncturing the holes for the eyes and buttons of the clasp strips, substantially as described

162,650.

162,651.

162,651. CAR-AXLE BOXES. Jas. P. Gorton, Jersey City, N. J. [Filed Feb. 16, 1875.]

Brief.—Bearings attached to axle-box by dovetail connection between box and flange on bearing. Lubricant applied from outer face through perforations in protecting-plate, flange, and packing.

1. The bearing-blocks C C, provided with perforated flanges *a a*, having dovetailed slots, in combination with the dovetailed legs *b b*, formed on the inside of the journal-box, substantially as and for the purposes set forth.

2. The combination of the journal box A with interior dovetailed legs *b b*, the bearing-blocks C C, having perforated flanges *a a* with dovetailed grooves, the journal B, plate D with inclined grooves *d*, and the disk D', all substantially as and for the purpose set forth.

162,652. COMBINED QUARTER-BOOTS AND TOE-WEIGHTS FOR HORSES. J. P. Gilbert, New York, N. Y. [Filed Feb. 18, 1875.]

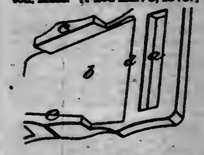
1. The combination of the quarter-boot B, constructed as described, the strap C, having its rear portion of double thickness and tapering upward, the toe-clip E, provided with the loop *e'* and downwardly-projecting hook or spur *e''*, and the straps *f* and *g*, substantially as and for the purpose herein shown and set forth.

2. The combination of the toe-weight or weighted pad H, provided with the spur *h'* and downwardly-projecting hooks *h''*, and the strap C, constructed as described, substantially as and for the purpose herein shown and set forth.

3. The combination of the quarter-boot B, the toe-weight H, the strap C, and the straps *f* and *i*, forming a combined but detachable quarter-boot and toe-weight, substantially as herein shown and described

---

162,653. RAIN-WATER CUT-OFFS. Mathias Gmeiner, St. Louis, Mo., assignor to himself and Henry Pins. [Filed Feb. 23, 1875.]



Brief.—In a spout is pivoted a trough in such a manner that a portion of it will project beyond the opening in the spout. To the trough is pivoted a bent piece of sheet-iron, which controls the upper part of the opening in the spout. The trough and bent piece operate conjointly to open and close the face-opening in the spout.

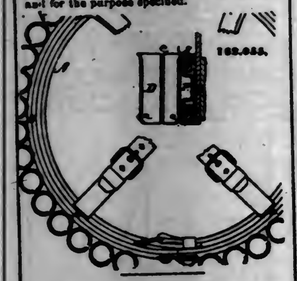
1. A rain-water cut-off, being a discharge-trough, B, and top slide C arranged to operate in a spout, in the manner herein shown and described, and for the purpose set forth.

2. The discharge-trough B, top slide C, pivoted with relation to each other, as herein shown and described, in combination with a spout, A, having face-opening *a* and inner spouting *c'*, to operate as and for the purpose set forth.

162,654. BALE-TIES. J. M. Goldsmith, Boston, Mass. [Filed Mar. 6, 1875.]

1. In a bale-tie, the combination, with a strap-iron binder having a trapezoidal end, *c*, of the plate A, having slot *a*, recess *b*, and lateral lugs *c*, substantially as specified.

2. The buckle-plate A, having a rearwardly inclined slot, *a*, recess *b*, and lugs *c*, adapted for use substantially as and for the purpose specified.



162,655. CARTRIDGE BELTS AND HOLDERS. Nathaniel S. Goss, Neosho Falls, Kans. [Filed Mar. 1, 1875.]

1. The combination of the strips *d d* with the metallic sockets D, arranged to form a groove for the reception of slides attached to an inner belt, upon which the outer rotates, whereby an economy in the amount of leather required is secured, substantially as described, and for the purpose specified.

2. In a revolving cartridge-belt, the slides P, attached to an inner belt and extending outwardly, so that they shall fit into a groove on the under side of the outer or rotating belt, and be inclosed or covered, whereby the danger of injury to the clothes of the wearer is obviated, substantially as described, and for the purpose specified.

3. The metallic cartridge holder D, having the slot *c* and groove *a*, substantially as described, and for the purpose specified.

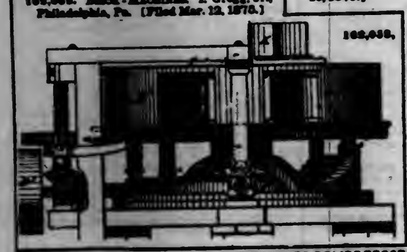
4. In a revolving cartridge belt, the combination of the belt B, having the stripe *i i*, forming a groove, and the belt A, having the clasps P, arranged substantially as described, and for the purpose specified.

162,055.

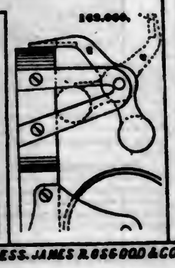
162,056. MODES OF MAKING MOLDS FOR CASTINGS. C. Greener, Somerville, Mass., assignor to the American Art Foundry, same place. [Filed Aug. 21, 1874.]

The process, substantially as herein described, of constructing molds for casting metals by the application to the patterns of the inner material of the mold, in a soft, wet state, drying the same by the application of an absorbent material and the subsequent application of the more dry and plastic coat or mantle, substantially as set forth.

162,057. ELECTRIC ANNUNCIATORS. Elisha Gray, Chicago, Ill. [Filed Sept. 24, 1874.]



Brief.—The spindles carrying the pointers have attached to them, on the inside of the case, irregularly-shaped arms having two projections. In restoring the pointers to their normal position, one of these projections catches upon a hook-shaped arm extended from the armature, and the other serves to push the armature away from its pole, across the face of which it vibrates.



1. The armature D, provided with the hooked levers D', in combination with the tilting piece G, rigidly connected to the index, and constructed and arranged substantially as shown and described, to be struck by the restoring mechanism, to strike the said armature, and to be engaged by the said lever, as and for the purpose set forth.

2. The combination of the pivoted armature D, provided with the hooked lever D', the tilting piece G, rigidly attached to the spindle or sleeve of the index, and the sliding bar H, provided with the extensions *h h*, the piece G being constructed and arranged to be struck by the said extensions, to strike the said armature, and to be engaged by the said lever, all substantially as and for the purposes specified.

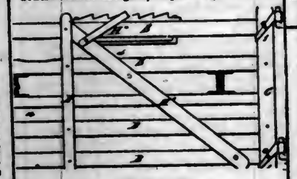
162,058. BRICK-MACHINES. I. Gregg, Jr., Philadelphia, Pa. [Filed Mar. 12, 1875.]

162,058.

162,059.

1. The mode, substantially as described, of manufacturing bricks, the same consisting in supplying the clay to the mold, removing the surplus portion, then automatically subjecting the clay within the molds to a series of successive increasing pressures, and finally discharging the finished brick from the mold, the various steps being effected in connected progressive movements of the mold, in the manner substantially as described.

2. The combination, in a brick-machine, of an intermittently-revolving mold-table, a stationary pressure-plate, and a series of intermittently rotating pressure-cams, substantially as set forth.



3. The combination, with the mold-carrying table and its gear-wheel of a brick-machine, of a series of shafts carrying gear-wheels and cams, substantially as described, whereby motion is imparted to the mold-table, and successive increasing pressures exerted upon the clay in the mold as the follower of the mold is successively acted upon by the cams, as specified.

4. The combination, in a brick-machine, of the intermittently-revolving mold-table, the mold-boxes and their followers, the inclined segmental bearing-pieces, the cam-yokes interposed between the bearing-pieces, and a series of rotating cams for operating the cam-yokes, substantially as set forth.

5. The combination, in a brick-machine, of a driving-shaft, which communicates an intermittent rotating movement to the mold-table, with a series of continuously-rotating cam-shafts, which impart successive increasing pressure to the clay in the molds during the intervals of rest of the mold-table, substantially as set forth.

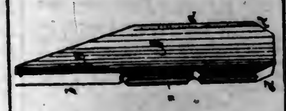
162,060. FARM-GATES. Michl. Gunsheman, New York, N. Y. [Filed Nov. 25, 1874.]

Brief.—The latch end of the flexible gate is elevated by a lever, which is pivoted at its lower end to the lower rear end of the gate, and extends diagonally forward to and against a batten thereon. A loop attached to the upper end of the pivoted lever engages with a rack on top of the gate, to hold the gate in an elevated position, or may be swung over the upper end of the batten, to prevent small stock from raising the gate. Extending from the socket part of the hinges are downwardly-inclined side pieces, which clasp the rear vertical bar beneath the top and bottom horizontal bars of the gate, respectively.

1. The bead-hinges F, formed with upwardly and rearwardly inclined side pieces *f*, in combination with the battens C and rails B of a farm-gate, substantially as herein specified.

2. The combination of the pivoted diagonal bar or brace H^1, loop H^2, rack H, and battens or steps D, substantially as described and shown.

162,061. SAFETY-STEPS FOR CARS. John A. Hosen, Philadelphia, Pa. [Filed Jan. 16, 1875.]



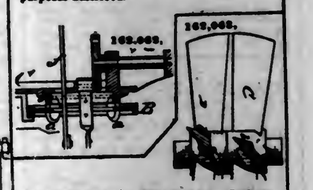
162,061.

162,062.

The combination of the supporting-plates with the lever *a*, pivoted thereto, and provided at one end with a step, and at the other end with a retracting-weight, for automatically raising the step and lever out of the way when not in use, all substantially as set forth.

162,063. SAW-TEETH. Wm. P. Hale, Port Huron, Mich. [Filed Feb. 12, 1876.]

Brief.—The front edge of the tooth is spread and sharpened, so as to plane the lumber.



The insertable saw-tooth A B, provided with grooves *a a*, projecting flanges *b b* along the front or cutting edge, and miter corners *d d* at the heel, constructed substantially as shown and described, as and for the purpose set forth.

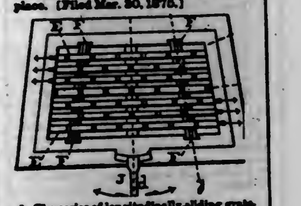
162,064. WINDMILLS. Jos. Hall, Ligonier, Ind. [Filed Dec. 10, 1874.]

Brief.—The turn-table is mounted upon conical anti-friction rollers, which impinge against a beveled track of circular form, applied to the bottom of the turn-table; the construction being such as to prevent displacement of the turn-table, and allow it to rotate with very little friction.

In a windmill, the turn-table C, having a beveled track, *b*, shouldered at *t*, in combination with the conical anti-friction rollers a and annular supporting-bracket B, as and for the purposes described.

162,064.

162,065.



162,066. SCREW-PROPELLERS. Jackson Harrington, Groton Bank, Conn., assignor of one-half his right to Franklin F. Remyon. [Filed Dec. 19, 1874.]

1. A propeller-wheel consisting of two separate and independent hubs, each provided with a series of radiating blades set at an angle, and so arranged that the edge of the forward blades shall be in advance of the rear ones, substantially as herein shown and described.

2. The blades C C, constructed, as described, with the inclined sides *b d*, of unequal length, and bevel *f*, as herein set forth.

3. The blades D D, constructed, as described, with inclined side *b*, concave side *d'*, and bevel *f*, as herein set forth.

162,067. FURNACE-GRATES. Chas. H. Harrison, Philadelphia, Pa., assignor of one-half his right to Wm. H. Harrison, same place. [Filed Mar. 30, 1875.]

1. The series of longitudinally-sliding grate-bars B and stationary bar C, in combination with the transversely-arranged operating-lever *J*, substantially as and for the purpose set forth.

2. The outer bed-plate A, in combination with the inner bed-plate B, formed with pendent sockets D, the supports F, suspended in said sockets, and sliding grate-bars E, removably fitted to said supports, substantially as and for the purpose set forth.

3. The combination, with the grate-bars E and bed-plate B, of the grooved supports F and center bar G, cast together and made removable, said center bar forming the axis of the operating-lever J, substantially as and for the purpose set forth.

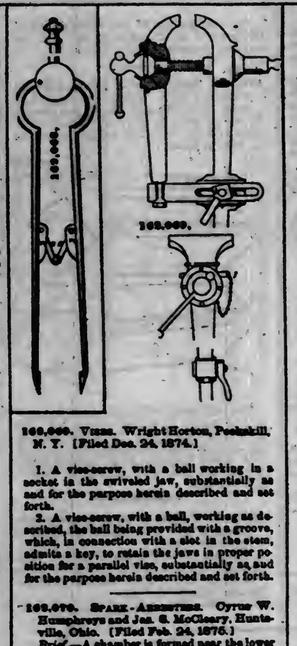
4. The lever J, jointed to the sliding bars E, fitted at its rear end *e* in the slot *b* of the inner bed-plate, and projecting at its forward end *d* between the outer and inner plates, and in front of said plates, substantially as and for the purpose set forth.

5. The grate consisting of the outer bed-plate A, with ledges C, the inner bed-plate B, with grooved supports F, sliding grate-bars E, center bar G, and oscillating lever J, substantially as and for the purpose set forth.

162,068. ANTI-FRICTION METALS. Thomas Harrington, Philadelphia, Pa., assignor of one-half his right to Jos. J. Solomon and Andrew J. Loesher, same place. [Filed Mar. 16, 1875.]

The hard anti-friction metal consisting of tin, nickel, zinc, copper, and plumbago or pure carbon, substantially as and for the purpose set forth.

162,069. VISES FOR BEER-BARRELS. Jos. Hindemeyer and Edwd. Reinkampen, Philadelphia, Pa. [Filed Jan. 11, 1875.]



1. The vent apparatus, consisting of the body A, having the vertical stem B and cocking E, and surmounted by the cap D containing the check-valve *d'* and air-passage *d''*, said cock-spring being constructed and arranged as shown, to close and open communication between the cap and stem, substantially as described.

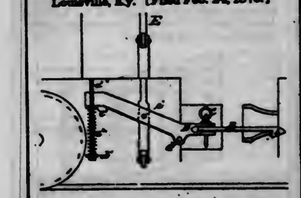
2. A vent for beer-barrels, having a check-valve to prevent the escape of liquor, and a cock to regulate the flow of air, substantially as shown and described.

162,070. SPARK-ARRESTERS. Oyrus W. Humphreys and Jas. S. McCleary, Huntsville, Ohio. [Filed Feb. 24, 1875.]

Brief.—A chamber is formed near the lower end of the uptake, in which is placed a flaring-mouthed pipe, carved to pass through the side of said uptake, by which means the sparks are trapped and conveyed to a receptacle.

The combination of the stack A, having a catch-chamber at or near its lower end, and constructed above the same, the catch-funnel F, arranged within the catch-chamber, and the spark-pipe P, extending from the central apex of the catch-funnel by an easy curve, substantially as herein illustrated and described, for the purpose specified.

162,069.



162,070.

162,071. VISES. Wright Horton, Peekskill, N. Y. [Filed Dec. 24, 1874.]

1. A vise-screw, with a ball working in a socket in the swiveled jaw, substantially as and for the purpose herein described and set forth.

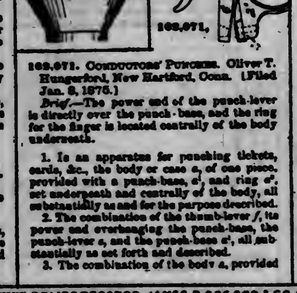
2. A vise-screw, with a ball, working as described, the ball being provided with a groove, which, in connection with a slot in the stem, admits a key, to retain the jaws in proper position for a parallel vise, substantially as and for the purpose herein described and set forth.

162,072. CAR-COUPLINGS. Chas. Holmes, Louisville, Ky. [Filed Feb. 24, 1875.]

1. The combination, with hook B, of the lever D, pivoted at *d*, and upheld at its rear end by spring-support, as and for the purpose set forth.

2. The combination, with lever D, of the push-bar B, having cross-rod *d'*, supported by springs *d''*, as and for the purpose specified.

3. The combination of the hook B, lever D, push-bar B, and hand-levers F G, to enable the hook to be uncoupled from the car from either side thereof.



162,073. FIRE-TRUCKS. Lucien Holmes, Tallahoma, Tenn. [Filed Feb. 24, 1875.]

Brief.—The bars limit the opening of the tongs. They are guided by the cam.

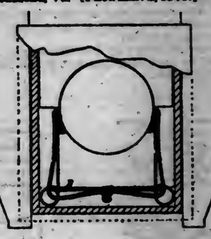
In combination with the legs of the tongs, the bars B B, pivoted together and to the cam B B, formed on the legs, as shown and described.

162,074.

162,070.

162,071.

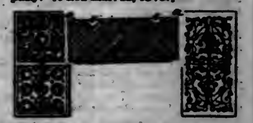
162,074. MARINE GRAIN-VESSELS. Wm. Inglis, Bolton, England, and James Inglis, Montreal, Canada. [Filed Jan. 9, 1875.]



In combination with the boat or raft E, the disconnected and independently-floating tanks or bins A, held separated, so that the immersed portion of each will be surrounded by water on all sides, substantially as and for the purpose specified.

162,075. STEP-LADDERS. Jacob L. Isaacs and Richd. Halliday, St. Louis, Mo. [Filed Feb. 23, 1875.]

Brief.—Loops or bearings are secured to the top and rear of the ladder, and a series of loops are secured to the supporting prop, so that when they are brought alongside of the loops on the ladder proper, they can be secured together by passing a bar through them, thus adjusting the prop supports to any inequalities of surface. The top step is provided with a sliding section, on which hooks for securing buckets, paint-pots, &c., are attached. The stay ropes are secured to the supporting-props, and pass through loops on the under side of the lower step, which can be drawn through the opening in the side rail and secured to hooks.



1. The hook support B, having journal-bearings *d*, in combination with connecting-bar *b'* and journal-bearing *a* of a ladder, as and for the purpose set forth.

162,076. CAR-AXLE BOXES. J. D. Imboden, Richmond, Va. [Filed Mar. 2, 1875.]

As an article of manufacture, the detachable spring-frame B, for the purpose of holding a lubricating-fabric pressed against a car-axle journal, as set forth.

162,077. DOMICS. Chas. M. Hyatt, Albany, N. Y., assignor to the Embossing Company. [Filed Mar. 13, 1875.]

1. A domice, the spots *c* of which are provided with raised rims, substantially as described.

2. A domice provided with a raised rim, *c*, raised cross-bar *b*, and raised rims round its spots *c*, all as shown and described.

3. A domice, provided on its face with arabesques or other embossed ornamental lines or figures between and around its spots, substantially as shown and described.

4. A domice, provided on its back or sides with embossed ornamental lines, substantially as described, for the purpose specified.

162,078. CAR-AXLE BOXES. J. D. Imboden, Richmond, Va. [Filed Mar. 2, 1875.]

As an article of manufacture, the detachable spring-frame B, for the purpose of holding a lubricating-fabric pressed against a car-axle journal, as set forth.

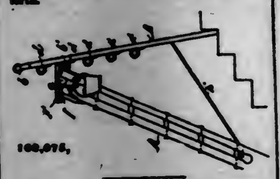
162,079. MARINE GRAIN-VESSELS. Wm. Inglis, Bolton, England, and James Inglis, Montreal, Canada. [Filed Jan. 9, 1875.]

In combination with the boat or raft E, the disconnected and independently-floating tanks or bins A, held separated, so that the immersed portion of each will be surrounded by water on all sides, substantially as and for the purpose specified.

162,080. STEP-LADDERS. Jacob L. Isaacs and Richd. Halliday, St. Louis, Mo. [Filed Feb. 23, 1875.]

Brief.—Loops or bearings are secured to the top and rear of the ladder, and a series of loops are secured to the supporting prop, so that when they are brought alongside of the loops on the ladder proper, they can be secured together by passing a bar through them, thus adjusting the prop supports to any inequalities of surface. The top step is provided with a sliding section, on which hooks for securing buckets, paint-pots, &c., are attached. The stay ropes are secured to the supporting-props, and pass through loops on the under side of the lower step, which can be drawn through the opening in the side rail and secured to hooks.

1. The hook support B, having journal-bearings *d*, in combination with connecting-bar *b'* and journal-bearing *a* of a ladder, as and for the purpose set forth.



2. The combination of the ladder A, having the movable plate a, journal-bearing a, with connecting-bar b', journal-bearing b or d, and hook support B, to operate as and for the purpose set forth.

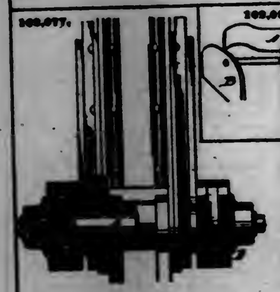
3. The cord attachment E, when united to the hook support, and arranged to pass through staples a, and hinged to side hooks c', in the manner herein shown and described, and for the purposes set forth.

4. In combination with the top f of a ladder, the sliding top F, hand f', to operate as and for the purposes set forth.

5. In combination with the top f of a ladder, the sliding top F, its hand f', and hooks f', as and for the purposes set forth.

6. The sliding top F, hand f', hooks f', movable plate a, in combination with the top f of a ladder, to operate as and for the purposes set forth.

160,076.



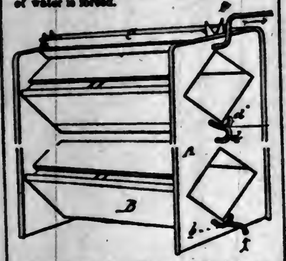
160,076. VAPOR-BURNER. Jno. Q. Jayson, Cincinnati, Ohio, assignee of one-half his right to S. B. Meyer, same place. [Filed Apr. 5, 1875.]

Brief.—The disk, and hems upon the top of the bowl, cause the same to form the heating-chamber.

The combination, with the mixing and conducting tube I, of the disk A beneath the tip bowl B, having the jet-orifices D therein, and the cup C, surrounding and inclosing the jet-orifices, said parts being constructed substantially as herein shown and specified, and operating to form the supply-chamber of the vaporizing-jets or burners, and to deflect and shield the latter, and to prevent these jets from leaping into contact with the main flame, in the manner herein set forth.

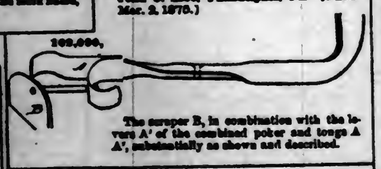
160,077.

160,077. CONSTRUCTION OF IRON TRUSS-BRIDGES. Charles Kellogg, Altoona, Pa. [Filed Dec. 2, 1874.]



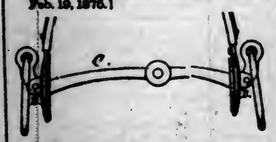
Brief.—The bolts for securing the parts of the wrought-iron truss together, instead of being screw-threaded on their ends, in the usual way, whereby the threads are liable to be cross-battered and injured by driving, are simply tapered, and the hollow cap-nut is attached by a set-screw working into the end of the tapered bolt.

160,078.



The spike herein described, having its end A outwardly increasing in width, the front or face B rounded, and the back C made narrow, as than the front, substantially as shown and described, and for the purposes set forth.

160,079.

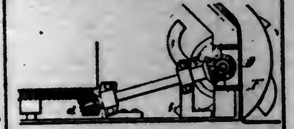


The combination of the standards A A, perforated trough C, inclined vessels B B', and connecting-pipes b c d d', whereby liquor passing downward on the outsides of the vessels B B' is cooled by water forced upward within and through said vessels, as and for the purpose set forth.

160,080.

The scraper B, in combination with the lever A' of the combined poker and tongs A A', substantially as shown and described.

160,081.

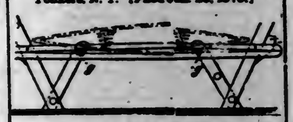


160,081. BRIDLE-BIT. Hiram Lockard, Newark, N. J., assignor of one-half his right to Thos. Agens, same place. [Filed Feb. 19, 1875.]

1. In a bridle-bit, the nose-band A, having the lips D of its cheek-pieces secured to the mouth-piece C, substantially as and for the purpose specified.

2. The mouth-piece, with the lever-arms E, in combination with the cheek-pieces of the nose-band, substantially as set forth, and for the purpose named.

160,082.

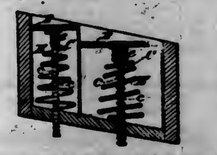


160,082. MOWING-MACHINES. Wm. Leavy, Philadelphia, Pa. [Filed Jan. 26, 1875.]

1. The combination, in a mowing-machine, of the revolving cutters f and a plate or guard, one portion, D, of which is above the cutters, while the end D' extends beyond the cutters at one side and toward the rear, so as to deflect the grass or grain to such side as soon as severed, all as set forth.

2. The guard for mowing-machines, consisting of the bent plate D D', projecting end E, and inclined flange F, all as specified.

160,083.



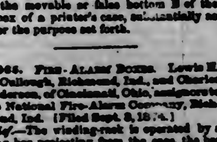
160,083. COT-BEDSTEADS. Stephn. G. Lamb, Yonkers, N. Y. [Filed Jan. 22, 1875.]

1. The combination, in a folding cot, of the side bars, each constructed of two swing-plates, connected at their ends and separated in their center to form springs, and the end cross-bars connecting the side plates together, substantially as described.

2. The combination, with the side plates of a cot connected together by the end cross-bars, of the head and foot board sections, and leg-sections, connected together at their lower ends, and adapted to support the side plates in an elevated position, or be brought in a line parallel to the side plates, substantially as and for the purposes described.

3. The leg-sections C D, having their upper rounds extended beyond the sections, as at g, in combination with the side spring-plates, between which the extensions of the rounds are placed, substantially as described.

160,084.



160,084. PRINTERS' TYPE-CASES. Lorden A. Martin, San Francisco, Cal. [Filed Dec. 26, 1874.]

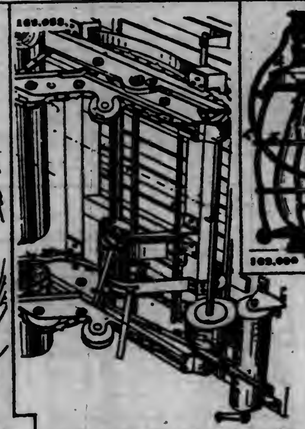
Brief.—The false bottoms are arranged to slide vertically in deep boxes of the case, being supported on spiral springs, the upper ends of which are closely coiled to screw upon threaded mandrels, which are attached to the said bottoms, and work through guide-holes in the stationary bed of the case. The tension of the springs and the height of the bottoms are adjusted by screwing the springs higher or lower upon the mandrels.

160,085.

The mandrel C, with the spiral thread or groove a a and spring E a, in combination with the movable or false bottom B of the type-box of a printer's case, substantially as and for the purpose set forth.

160,086.

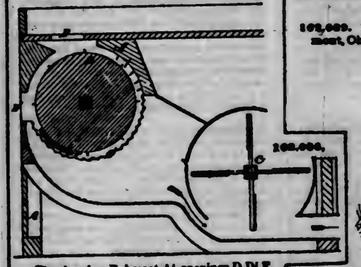
160,086. FIRE-ALARM BOXES. Lewis H. McCullough, Richmond, Ind., and Charles Anderson, of Cincinnati, Ohio, assignors to the National Fire-Alarm Company, Richmond, Ind. [Filed Sept. 8, 1874.]



Brief.—The winding-rack is operated by a sliding bar projecting from the case, the bar having in its side a notch, in which engages a pin on an arm pivoted to the rack-bar. When the pressure is removed from the sliding bar the pin is thrown out of engagement by a spring bearing against its arm, and cannot again engage until the rack-bar has returned to its normal position, and a pin in the path of the arm throws it to one side.

160,085.

The combination of the concealed winding-rack A, spring E, arm D d, fixed finger D', posts G and H, and notched slide-rod C c, substantially as and for the purpose specified.



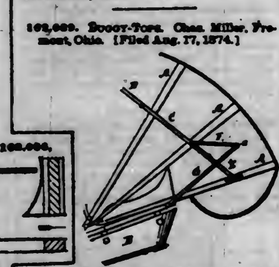
160,086.

160,086. COTTON-CLEANERS. George W. McAnulty, Pleasant Plains, Ark., and W. L. Orewson, Memphis, Tenn. [Filed Feb. 5, 1875.]

Brief.—Cotton introduced at the top of the machine is picked by the teeth on the cylinder and breast, and discharged clean at the front, the dust being drawn through the screen by the fan, and discharged at the rear through a spout.

160,087.

The thresher B, breast A', openings D D' F, and screen C', combined, as described, with the suction-fan C and dust-spout D', as and for the purpose specified.



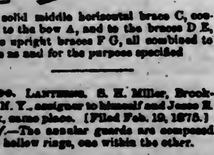
160,087. METALLIC FASTENINGS FOR SOLES OF BOOTS AND SHOES. Gordon McKay, Cambridge, Mass. [Filed Feb. 27, 1875.]

1. A blank, composed of nails united by thin webs and grooved longitudinally near the points of such nails, as at c, substantially as described.

2. In a nail or metallic fastening the groove c, in combination with a nail-point, made symmetrically tapering on the sides that are at right angles, or nearly so, to the side in which the groove c is made.

160,088.

160,088. CIRCULAR-SAW MILLS. Jas. W. Miles, Hubbardston, Mich. [Filed Jan. 22, 1875.]



Brief.—The log is turned by means of a toothed chain running over suitable pulleys upon the head-block, and put in motion by frictional gearing.

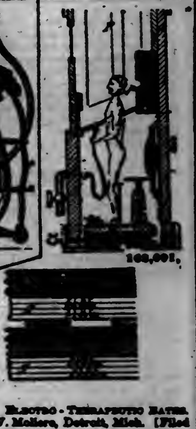
160,089.

160,089. SCOOT-TOPS. Chas. Miller, Fremont, Ohio. [Filed Aug. 17, 1874.]

The solid middle horizontal brace C, connected to the bow A, and to the braces D E, and the upright braces F G, all combined to operate as and for the purpose specified.

160,090.

160,090. LANTERNS. S. H. Miller, Brooklyn, N. Y., assignor to himself and Jesse R. Folk, same place. [Filed Feb. 19, 1875.]

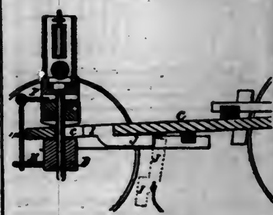


Brief.—The annular guards are composed of two hollow rings, one within the other.

1. The combination, with the cap or ring C, having a flange, b, and rigidly supported at the top of the shade of a lantern by vertical wires F, of the ventilating cap G hinged to said cap or ring, and provided with the spring catch H, constructed with the hollow A and bead g, for engaging with the fixed cap or ring, substantially as and for the purpose described.

2. The combination of the lantern-body, having the hinged lid G and the cap-ring C, provided with a bead, b, and series of notches d, with the uprights F, having the hooked ends e passing through the notches in the cap-ring, for engaging with the bead b, as and for the purposes described.

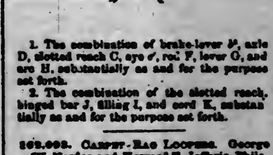
3. The annular guards E, constructed of a hollow outer ring having its joint concentric with its circumference, and an inner ring inclosed by the outer ring, substantially as described.



160,091.

160,091. ELECTRO-THERAPEUTIC BATHS. James W. Mallers, Detroit, Mich. [Filed July 29, 1874.]

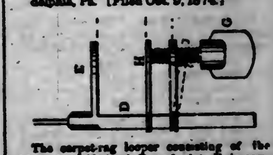
The combination of the metallic-lined chamber A, having a lid composed of the sections M N O, slide P, coiled pipe F, and electric pile-plates s, substantially as herein shown and described.



160,092.

160,092. WAGON-BRAKES. Lewis R. Morgan, West Liberty, W. Va. [Filed Mar. 6, 1875.]

Brief.—Ordinary brake operated automatically by sliding perch. The action is unaffected by the turning of the front axle. A sling may be raised into the slot, so as to lock the perch and brakes; but, normally, gravity keeps it below and out of the way.

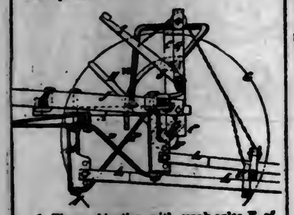


160,093.

1. The combination of brake-lever b^1, axle D, slotted reach C, eye c', rod F, lever G, and arc H, substantially as and for the purpose set forth.

2. The combination of the slotted reach, hinged bar J, filling I, and cord K, substantially as and for the purpose set forth.

160,094.



160,094. CARPET-RAG LOOPERS. George W. Naylor and Howard T. Jaffaris, Philadelphia, Pa. [Filed Oct. 9, 1874.]

The carpet-rag looper consisting of the blade A, rigid shank D, and plate E, in combination with the sliding plate F, carrying the short screw G, and the sliding plate H, the two plates F H adapted to slide on the shank D, and all constructed, arranged, and operating substantially as and for the purpose set forth.

162,094. GANG-PLOWS. Thos. M. Nichol, Sparta, Ill. [Filed Oct. 24, 1874.]

Brief.—The arched axle is secured between double frame-bars, and on either side short bars bent at right angles branch from it and extend downward. Between these the blocks forming crank-axles are journaled, having rigid levers. Upon blocks sliding upon cross-bars, other blocks are pivoted to receive the plow-beams, and permit the requisite motion to the plows.

1. The combination, with crank-axles F, of the bent bar G, leg plates D, and bolts E, as and for the purpose described.

2. The combination, with the swiveled plow-beam holders or blocks M, of blocks O and braces P, having a lateral adjustment, as and for the purpose set forth.

162,096. GIG-SADDLES. Andw. Ortmayer, Chicago, Ill. [Filed Mar. 6, 1875.]

In a gig-saddle, the combination, with the metal jockey, of the skirts A A, provided with pockets F F, to secure the plates a a, the said plates each having a screw-threaded hole for the reception of the turret-ring bolts, substantially as described and shown.

162,098. BED-BOTTOMS. Madison R. Owens and Geo. Chamberlin, Chase, N. Y. [Filed Jan. 7, 1875.]

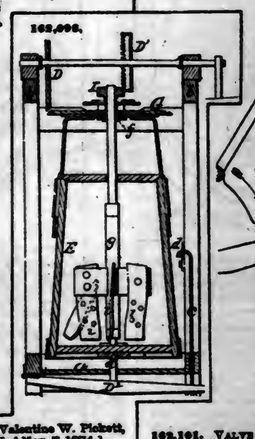
Brief.—The pivoted spring can be turned upon its pivot, and its free end adjusted to any point under the cross-bar, to resist unequal pressure on the bed-bottom.

The springs A A and pivoted spring B, in combination with the cross-pieces b b and c c, substantially as and for the purpose set forth.

162,097. WRINGER-DRIERS FOR CHAIRS. J. A. Park, Lansing, and Wm. Woodhouse, Mason, Mich. [Filed Apr. 2, 1875.]

1. A desk divided into compartments, and provided with a connecting device folding therewith, whereby it can be attached to a chair, substantially as set forth.

2. In a desk attachment for chairs, the desk-box A, divided into suitable compartments, and provided with the hinged top C, stationary top B, and sliding paper-holder D G, substantially as and for the purposes herein set forth.



3. The combination of the perforated arm H, hinged brace I, provided with the pivots h h, and a casting, J, provided with the holes or sockets i i and pin m, substantially as and for the purposes herein set forth.

4. The combination, with a desk, A B C, of the perforated arm H, hinged brace I, provided with the pivots h h, and a casting, J, attached to a chair, and provided with the holes or sockets i i and pin m, and a brace, L, for supporting the desk, substantially as and for the purposes herein set forth.

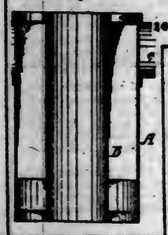
162,097.

162,098.

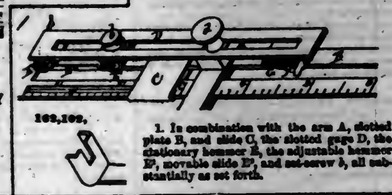
162,102. CHURNS. Valentine W. Pickett, Baldwin, Iowa. [Filed Nov. 7, 1874.]

The lever D', having the stud d', and connected with the lever d, by the rod e, in combination with the churn E, provided with plates I, and bevried wheel G, and gear-wheels D D', whereby the dasher and churn may be made to revolve in opposite directions, or the dasher only be made to rotate, substantially as described.

162,099. HINGE-JOINTS FOR SCHOOL-DESKS. Chas. H. Presbrey, Sterling, Ill., assignor to the Sterling School-Furniture Company, same place. [Filed Feb. 12, 1875.]



Brief.—The tapering bearing for the seat-arm is formed on the bolt, thereby dispensing with the ordinary trunnion formed on the seat-arm.

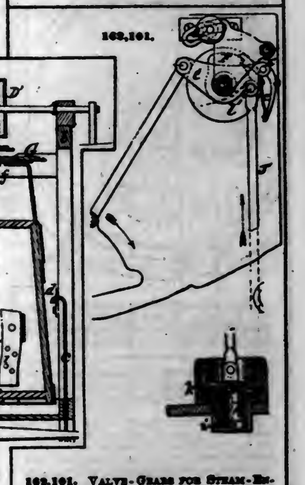


The tapering bolt D, having the screw h, in combination with the part B of the standard, the seat-arm C, washer E, and nut i, all substantially as set forth.

162,100. RADIATORS. Jesse Reynolds, Philadelphia, Pa. [Filed Apr. 9, 1874.]

Brief.—The smoke passes through the flues formed by the vertical plates between the outer and inner casing. The air to be warmed rises through the open flue formed by the inner casing.

162,100.



162,102.

The combination, in a radiator, of an inner casing, B, open at both ends, an outer casing, A, forming, with the inner casing, a chamber for the passage of the products of combustion, an inlet-pipe, c, and outlet-pipe d, and a series of partitions arranged between the casings, to direct the gases in a circuitous course from the inlet to the outlet, all as set forth.

162,101.

162,101. VALVE-GEARS FOR STEAM-ENGINES. Geo. H. Reynolds, New York, N. Y., assignor of one-half his right to C. E. Delamater and G. H. Robinson, same place. [Filed Mar. 4, 1875.]

Brief.—A spring-pawl is pivoted between two levers, which are actuated by the rock-shaft. The pawl operates the valve-stem, and is tripped at the proper time to cut off steam by an adjustable pin. A vacuum under the dash-pot is used instead of a weight.

1. The combination of the pair of connected levers U C, arranged loosely upon the valve-stem D, the hook E, carried by and between the pair of levers, and the cam or notched plate F, connected with the valve-stem between the levers, substantially as described, and for the purposes set forth.

2. The combination, with the hook-carrying lever or levers C, of the stud l, connected with the plunger-rod J of the dash-pot, substantially as described, whereby in case of the valve sticking it is started in its closing motion by a positive motion from the engine, as specified.

3. The dash-pot H, of different diameters, as described, and provided with an air-inlet, K, and aperture i, leading to the condenser, in combination with the plunger I, of different working diameters to correspond with the dash-pot, substantially as shown and described.

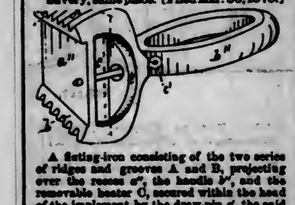
162,103. SEWING-MACHINE HEMMERS. J. W. Roberds, Richmond, Va. [Filed Jan. 20, 1875.]

Brief.—Improvement on Patent No. 158,976. An adjustable extension attachment used for hemming, or for putting on binding or trimming of different widths, either plain or raw edge.

162,103.

1. In combination with the arm A, slotted plate B, and slide C, the slotted gage D, the stationary hammer E, the adjustable hammer F, movable slide F', and set-screw b, all substantially as set forth.

2. The combination of the arm A, the slotted plate B, having holes x y, the slotted adjustable gage D, the hammer E, having test i, and the hammers G¹ H, arranged as described, whereby either of the hammers may be brought in proper position for use, all substantially as set forth.



162,105. CAR-COUPLINGS. A. H. Bowley, Corning, N. Y. [Filed Feb. 13, 1875.]

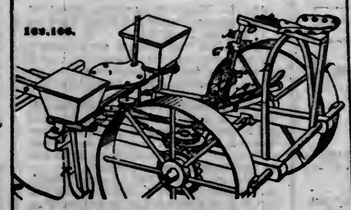
1. The vertically-vibrating bifurcated uncoupler D, recessed into the floor of a draw-bar, in combination with hook J, link L, and spring-plate F, substantially as specified.

2. The vertically-vibrating bifurcated uncoupler D, to be operated by rod E e', in combination with connection f and brake-rod G, substantially as specified.

162,104. PLUTING-IRONS. Chas. C. Savery, Philadelphia, Pa., assignor to Purves & Savery, same place. [Filed Mar. 30, 1875.]

A fatting-iron consisting of the two series of ridges and grooves A and B, projecting over the recess a'', the handle b'', and the removable bezel C, secured within the head of the implement by the draw-pin c', the said parts being constructed and arranged to operate in connection with any suitably-constructed bearing-plate, for the purpose specified.

162,106. PIANO-STOOLS. S. S. Schindler, West Meriden, Conn. [Filed Dec. 16, 1874.]



The combination of the seat C, center screw D, principal nut B, and auxiliary nut E, provided with radial projection F, substantially as and for the purpose specified.

162,108. CORN-PLANTERS. Levi Scofield, Grand Haven, Mich., assignor of one-half his right to Justin R. Wait, same place. [Filed Oct. 17, 1874.]

Brief.—Main frame and seeder-frame pivoted together. Toothed seed-disks operated by endless chain, reciprocating bar, and hand-lever. Machine convertible into a corn-drill by lengthening the chain, and connecting it to the driving-wheels by gearing, the reciprocating bar being meanwhile fixed in position. The frames are connected by a compound coupling, and the pressure of the runners regulated by a spring device. The seed-tubes and conductors allow the seed to be examined by the attendant.

1. The compound coupling for connecting the runners and their attachments to the main frame of the machine, consisting of the long eyebolts W, jointed to the runner-beam, and pivoted to the inner faces of the side bars R, after passing through the guide-loops X thereon, substantially as described, for the purpose specified.

162,106.

2. The lifting-levers Z, combined with the front seat-leg by means of an adjustable pivot-bar, to regulate the depth at which the seed shall be planted, substantially as described, for the purposes specified.

3. The spring B³, supported upon the front seat-leg by the adjustable pivot-bar of the lifting-levers, for the purpose of insuring a uniform action of the spring when the runners are set for either deep or shallow planting, substantially as described.

4. The adjustable foot-bar F', in combination with the reach-rod, substantially as described, for the purposes specified.

5. The combination of the adjustable lifting-levers and spring with the front seat-leg, the hounds, and the reach-rod, substantially as described, for the purposes specified.

6. The combination of the adjustable lifting-levers and pivot-bar, arranged to raise the runners of the machine, and the adjustable foot-bar and reach-rod, arranged to press them down upon the ground, substantially as described.

7. The arrangement of the adjustable pivoted catch G' on the seat-leg, for automatically engaging with the sliding reach-rod, to hold the runners out of contact with the ground, substantially as described.

8. The sliding bar and the endless chain, combined with the toothed seed-plates of a corn-planter, substantially as described, for the purposes specified.

9. The sliding bar, the stops S', and the endless chain, combined with the toothed seed-plates of a corn-planter, substantially as described, for the purposes specified.

10. The sliding bar, the endless chain, and the brush-plate T', combined with the toothed seed-plates and pivoted seed-conductors, substantially as described, for the purposes specified.

11. The notched brackets T', adapted for adjustment upon the sliding bar, to compensate for variations in the castings and facili tate their fitting together, substantially as described.

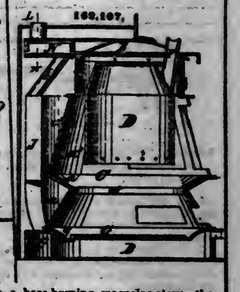
12. The combination of the sliding bar, the adjustable brackets, and the stops with the seed-plates, the endless chain, and the seed-conductors, substantially as described, for the purposes specified.

13. The spring cut-off, consisting of the bar D' and plate d', screwed or bolted together within the hopper, with the pivoted spring-plate f' between them, the bar D' being formed with an enlarged center, a flat arm, b', and a curved arm, g', and the plate d' being formed with an inverted cup to receive the spring of the plate f', substantially as described, for the purpose specified.

14. The metal plates F' and X', constructed and arranged together so as to form openings on opposite sides under the bottom plate of the hopper for the passage of the chain, substantially as specified.

15. The open-backed seed-tube R, formed by the upper chocks, the runners, and the back plates, substantially as described, for the purpose specified.

16. The back plates F', constructed with the curved side wings D', substantially as described, for the purpose specified.



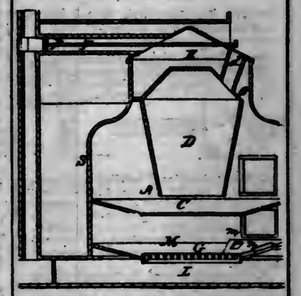
17. The planetary seed-selector constructed with the double parallel channels and the lower compartments or holding-chambers g', substantially as described, for the purposes specified.

18. The seed-conductor combined with the seed-tube and its side wings, to form the open lower drop, substantially as described, for the purpose specified.

162,107. MAGAZINE FIRE-PLACE STOVES. Samuel B. Sexton, Baltimore, Md. [Filed Jan. 16, 1875.]

Brief.—The surrounding flange forms a portion of the fuel-bearing surface.

162,107.



1. In a base-burning magazine-stove, the combination of the horizontally-contracted walls a a', the magazine D, the grate G, the surrounding flange g, and the two rows of illuminating-windows, one above and one below the contracted part of the wall, substantially as and for the purposes specified.

2. In a fire-place heater, the combination of the hinged doors c c with the top E and surrounding face-plate K, said doors being arranged to shut over and close the angular spaces between the plate r', the top, and the face-plate, substantially as and for the purpose specified.

162,109. MAGAZINE FIRE-PLACE STOVES. Samuel B. Sexton, Baltimore, Md. [Filed Dec. 3, 1874.]

Brief.—The coals spread out both upon the plate which surrounds the grate and upon the overhanging plate.

1. The grate G and flat or slightly-inclined surrounding flange M, combined with the overhanging flange C and double row of windows W W', substantially as described, for the purposes specified.

2. In a base-burning stove, the combination of the suspended magazine D, the flat or dishing surface G M, which mainly supports the weight of the burning coals, and allows them to spread out nearly or quite to the walls of the stove, the dishing-flange C, projecting inward from the walls of the stove slightly below the level of the lower end of the magazine, for the purpose of supporting the weight of a portion of the coals at the upper part of the incandescent mass, and allowing them to spread out at that point nearly or quite to the walls of the stove, and the double row of illuminating-windows, one above and the other below the flange C, substantially as and for the purposes described.

162,109. HAT-HOLDERS FOR SEATS. Chas. Shaw and B. Yeager, Henry, Ill. [Filed Mar. 15, 1875.]

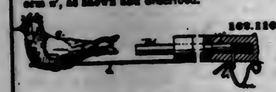
1. A hat-holder made of wire, and arranged under a seat, to be thrown out and in as required, and held in each position by the spring of the wire, substantially as herein set forth.

2. The wire hat-holder E, formed with arms a a, having its ends b bent at right angles and inserted in the plates D D, attached to the vertical rod C, under a seat, all substantially as and for the purposes herein set forth.

162,109.

162,110. TOY GUNS. Saml. J. Shaw and H. Eugene Smith, Marlborough, Mass. [Filed Mar. 9, 1875.]

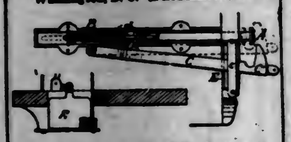
1. In combination with a toy pistol or gun, the game-target *c* attached to the weapon and arranged to fall or be hit as every shot, substantially as described.



2. The detachable game-target *c*, in combination with the weapon, constructed substantially as described, and provided with the supporting-arms *b*.

3. In combination with the toy weapon described, the hollow arm *b'*, and the extension-arm *f*, substantially as and for the purpose set forth.

4. The combination of the hollow arm *b'*, the coiled spring, and the extension-arm *f*, with the sleeve *d* and the trigger *m*, as shown.



5. The combination of the game-target, provided with the heel arm *n'*, with the muzzle of the gun, having the slot *o*, for supporting the game in an upright position, as described.

6. In combination with a toy gun or pistol, the game-target *c*, provided with the extended arm *n'*, as shown and described.

162,110.

162,111. CAR-COUPLINGS. Wm. G. Smoot, Washington, D. C. [Filed Mar. 23, 1875.]

1. The combination of a sliding bumper, A, operated by a spring, B, with a coupling-stem, C, pivoted to the bottom of the car, substantially as and for the purpose set forth.

2. The combination of the coupling-stem C, pivoted at *a*, with the vertically-sliding lock-plate E, substantially as and for the purpose set forth.

3. The combination of the vertically-sliding lock-plate E with the bent lever F and the coupling-stem, substantially as and for the purpose set forth.

4. The combination of the sliding bumper, operated by the spring B, and having the downward-projecting arms *a a*, with the coupling-stem C pivoted at *a*, and the vertically-sliding lock-plate E, operated by the bent lever F, all to operate substantially as and for the purpose set forth.

162,112. WASHING-MACHINES. Jacob W. Spangler and Benjamin F. Reich, York, Pa. [Filed Dec. 19, 1874.]

Brief.—Two wash-boards are pivoted to hinged levers, one of them being connected to a rubber cushion by bolts and nuts at the side of the tub, and the other operated by a lever.

1. The combination, with the wash-board D, the hinged levers G, provided with fulcrums *h*, the stationary recessed plates H, rubber springs I, bolts *d*, and nuts *f*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The combination, with the wash-board C, of the bifurcated lever E, support J, and end bars K K with caps *h h*, all substantially as and for the purposes herein set forth.

162,113. GROSS-PIECES FOR COOKING-STOVES. Watson Stout, Philadelphia, Pa. [Filed Mar. 20, 1875.]

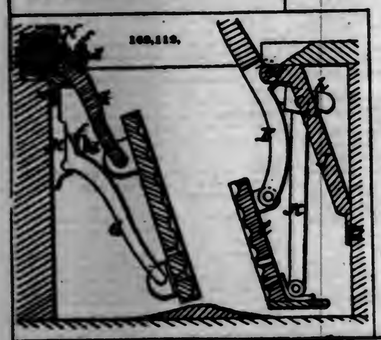
Brief.—Air circulates through the slotted tube.

1. The hollow slotted shield B, open at its ends, and secured to the bottom of the slotted bridge A, substantially as described.

2. The shield B, slotted at *c c* and recessed at *f f*, in combination with the screws *d d* and nuts *e e*, and the bridge A, substantially as described.

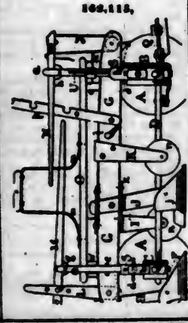
162,114. MATCHING-CUTTERS. A. Strutt, Cincinnati, Ohio, assignor to J. A. Fay & Co., same place. [Filed Nov. 12, 1874.]

Brief.—For reducing the number of bits usually accompanying a planing-machine, the bit is formed of a single piece of steel, provided with a tonguing-cutter at one end, and a grooving-cutter at the other, and grooves running throughout its mid-length only. The entire bit is of no greater length than the ordinary single-edged bit.



A cutting-bit, having cutting-edges at both ends, and grooves extending from the opposite ends to the middle of the bit, substantially as and for the purpose specified.

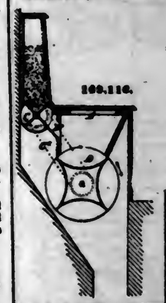
162,115. GANG-PLOWS. J. A. Sutherland, Elmwood, Ill. [Filed Dec. 5, 1874.]



Brief.—The plow-frame is vertically adjustable, and is supported upon four wheels, the axle-tree of the forward pair being longer than the hind one. The wheels are all vertically adjustable.

1. In a four-wheel gang-plow the axle-trees B C, having standards *a*, provided with pins *d*, in combination with bolsters T *w* and adjustable plow-frame G, constructed to operate substantially as and for the purpose set forth.

2. The combination of the adjustable plow-frame G, carrying the plows J J, and coulters I K, seat-frame O, bolsters T *w*, bolt-rods E F, springs *f f*, standards *a a*, pins *d*, and axle-trees B C, substantially as and for the purposes set forth.



162,115.

162,116. EARTH-CLOSETS. Millington H. Synge, United Service Club, Pall Mall, England. [Filed Apr. 9, 1873.]

Brief.—In connection with a measuring-instrument for supplying a deodorant, a series of intercepting pans applied to a closet, and capable of receiving an intermittent axial motion, by means of which empty pans are brought in succession into position, and when filled are caused to discharge their contents into a receptacle below.

The combination of the rotating pans with the measuring instrument for supplying the charcoal or other deodorant to the pans, as the same are brought up into position for use, substantially as specified.

162,116.

162,117.

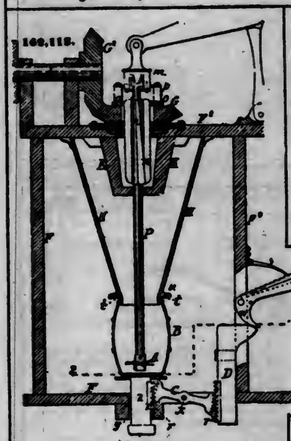
162,117. BOTTLES. Thomas W. Synnott, Wenonah, N. J. [Filed Mar. 20, 1875.]

The pear-cut B, formed on the inner face of the collar portion of the neck of the bottle, and extending from near the upper outer edge *c* of the collar to the inner face *b* of the neck, thus leaving unbroken both the upper edge *a* and the outer periphery of the collar, substantially as and for the purpose set forth.

162,118. FLOUR AND SUGAR PACKERS. S. Taggart, Indianapolis, Ind. [Filed Mar. 24, 1875.]

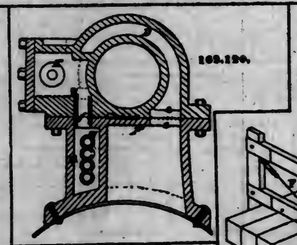
1. The combination, with the barrel-support, of the double spur-sector C, the racks *r r'*, the vertical slide D, the cam-lever E, or its equivalent, arranged and operating substantially as described, for raising, supporting, and lowering a sliding barrel-lifter, in the manner set forth.

3. The rubber-gasket *t*, applied to the abutment-flange *u* of the barrel tube or funnel, and held in a groove, so as not to be accidentally displaced, substantially as herein described, for forming a tight or complete joint at the top of the barrel during the packing operation.

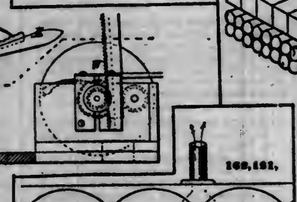


3. A packing-auger, constructed in two sections, each having a blade and an attaching hub or collar, with shoulders *q* complete in themselves for locking the sections together on the packing-shaft, substantially as herein illustrated and described, for the purpose set forth.

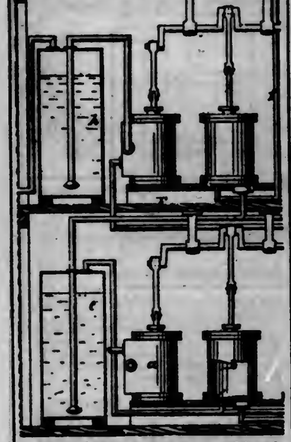
4. The combined support and shield or case K, constructed and operating in combination with the packing-shaft P, and its winged clutch section *a*, substantially as described, to form an inclosed bearing for the latter, and to exclude floating flour from the bearing of its driving-wheel.



5. The swinging fulcrum-post Q, having a pivot at each end, in combination with the walking-beam M, packing-shaft P, and brake-rod R, for permitting the former to yield horizontally, so as to avoid binding or undue friction between the packing-shaft and the weighing or pressure-controlling brake in the manner set forth.



162,115.



162,120.

162,121.

162,119. APPARATUS FOR PRESERVING MEAT, FISH, AND VEGETABLES. Augustus H. Tait, Jersey City, N. J. [Filed Nov. 13, 1874.]

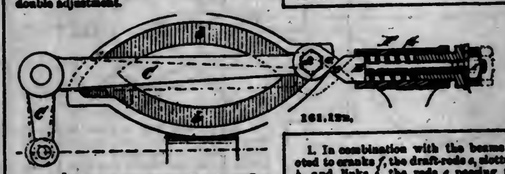
An apparatus for preserving meat, fish, and vegetables, composed of one or more air-pumps, *b b'*, tanks *c c'*, each containing a quantity of salt water, one or more expansion air-cylinders, *d d'*, air-pumps *e e'*, and drums *h h'*, each containing crude pyroligneous acid, the air escaping from these drums being passed through the provision-chambers O O, all combined and operating substantially in the manner and for the purpose herein shown and described.

162,120. STEAM-ENGINE CYLINDERS. Jos. R. Taylor, Westminster, Md., assignor to the Taylor Manufacturing Company, same place. [Filed Mar. 12, 1875.]

Brief.—The top of the dome and bottom of the cylinder are covered with plates having corresponding apertures, which diminish the strain on the bolts.

The steam-dome A, having a top, F, provided with an opening, *e*, in combination with a steam-jacketed cylinder, having a bottom plate, *d*, and a corresponding opening, *c*, substantially as and for the purpose described.

162,121. PLATENS FOR LEVER AND TOGGLE PRESSES. John F. Taylor, Charleston, S. C. [Filed Feb. 24, 1875.]



Brief.—The stationary platen is made adjustable by being composed of two parts, the fixed part containing cylinders and water-ways, and the adjustable part carrying rams.

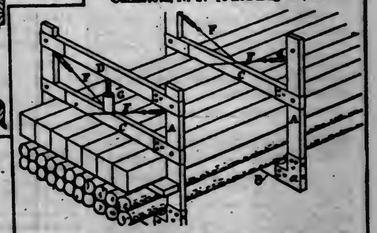
1. In a progressive-lever or toggle-arm press, one of the platens composed of two parts, one part having cylinders and water-ways, the other part having rams or plungers, with suitable packing.

2. The herein-described method of regulating the space between the platens of lever or toggle-arm presses, by forcing water in or letting the same out from between the stationary and movable parts of a compound platen, substantially in the manner and for the purpose described.

162,122. STEAM-PUMPS. John Tennyman, Dayton, Ohio, assignor to P. Smith. [Filed Nov. 9, 1874.]

Brief.—The cam, near the termination of the stroke, brings the end of the lever against the end of the plunger, and forces it just past the center. The retraction of the spring moves the lever and its valve sufficiently to partially open the steam-port for the return stroke, and enable the cam to return and carry the stud in the opposite groove. The spring has a double adjustment.

162,122.



1. The combination of cam *D b*, lever O *c*, plunger E *e*, and spring G, substantially as and for the purpose specified.

2. In combination with the plunger E *e*, valve-moving lever O *c*, and fixed support F, the adjustable head *f*, adjustable nut *l*, and spring G, operating substantially as and for the purpose specified.

162,123. COMPOUNDS FOR FIRE-BRICKS. Hugh M. Thompson, St. Louis, Mo. [Filed Sept. 1, 1874.]

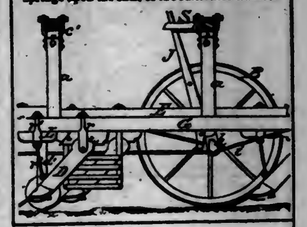
The combination of tripoli with either fire-clay, or plumbago, or steatite, or asbestus, or coke, or all of said-named ingredients, substantially as and for the purposes set forth.

162,124. RAFTING-CRIBS. Chas. W. Tobey, Canastota, N. Y. [Filed Aug. 20, 1874.]

1. A raft-crib having an under beam, B, and upright posts A, and adjustable beam C, substantially as and for the purposes described.

2. In combination with the raft-crib A B C, the adjustable brace-beam D, substantially as and for the purposes described.

162,125. COTTON-GIN RIBS. Brannon R. Trammell, Clough's Store, Ala. [Filed Nov. 21, 1874.]



Brief.—The plates, which are attached to the wearing-surface of the ribs, fit in recesses on the face of the ribs, and have side flanges turned downwardly into spaces formed on the sides of the ribs.

The combination of the rib A, having top set-off *a* and side grooves *a' a'*, and the detachable metallic plate B, having the downward-projecting ears *b b*, all substantially as set forth.

162,126. SULKY-PLOWS. Lorenzo W. Free, Talladega, Ala. [Filed Feb. 27, 1875.]

Brief.—Draft and lifting devices; also springs upon the ends of the cultivator-frames.

162,122.

162,123. COMPOUNDS FOR FIRE-BRICKS. Hugh M. Thompson, St. Louis, Mo. [Filed Sept. 1, 1874.]

1. In combination with the beams E, pivoted to cranks *f*, the draft-rods *o*, slotted arms *h*, and links *i*, the rods *o* passing through slotted standards *S* of caster-wheels *d*, substantially as described.

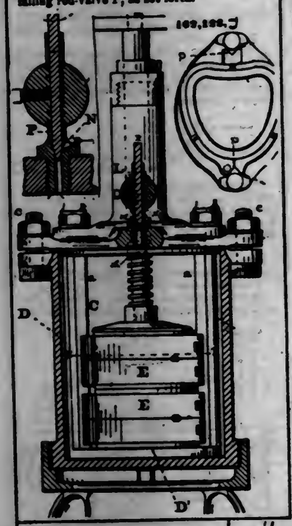
2. Plow-standards D, having rounded ends *a*, secured to their beams by means of studded blocks *p l*, clips *p r'*, and rods *r'*, substantially as described.

3. Springs *g*, applied to the ends of plow-beams E, as and for the purpose described.

4. The levers J, having lifters *l l'* on their lower ends, and connected to arms *n* on cranks *f*, in combination with the plow-beams E, pivoted to said cranks, substantially as described.

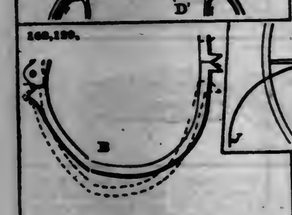
162,127. SEWING-MACHINE COVERS. Ruel W. Whitney, Cleveland, Ohio, assignor to Wilson Sewing-Machine Company, same place. [Filed Jan. 12, 1875.]

1. The cover of a sewing-machine table, secured thereto by hinges C D C D, inserted through said table and attached to the cover, substantially as shown and described.



2. The combination of cover B, table A, and a hinge composed of stud C and bar D, substantially as described.

162,128. DENTAL POTS. Charles A. White, Philadelphia, Pa. [Filed Dec. 21, 1874.]



1. The flask-carrying frame C, suspended from the top plate of the dental pot by means of the nuts B', substantially as and for the purpose set forth.

2. The combination, with a dental pot, of the flask-carrying frame C, having its side bars D formed with tongues or grooves a, for engagement with the flask, substantially in the manner and for the purpose set forth.

3. The combination, with a dental pot, of the safety-valve L, constructed of the stem M, formed with a vertical opening, M', with lateral extension N, and automatically rising and falling rod-valve P, as set forth.

162,129.

162,129. DENTAL FLASKS. Chas. A. White, Philadelphia, Pa. [Filed Mar. 18, 1875.]

1. The combination, with a dental flask, A, of the jointed or hinged walls B B, substantially as and for the purpose set forth.

2. The lock D, in combination with the jointed parts B B, formed with projecting pieces O C, substantially as and for the purpose set forth.

3. The removable overflow-frame F, in combination with a dental flask, substantially as and for the purpose set forth.

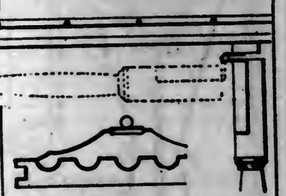
162,127.

162,130. SPICE-BOXES. Wm. A. Wicks, Baltimore, Md. [Filed Feb. 20, 1875.]

162,130.

The perforated top B, having the finger-ridges c, and its sides turned down between the cut points b, as shown, in combination with the perforated box-top A, having the slots a, admitting of the entrance and sliding movement of the turned-down parts of the top B, substantially as specified.

162,131. PORTABLE COMMODES. Isaac S. Williams, Philadelphia, Pa. [Filed Mar. 11, 1875.]

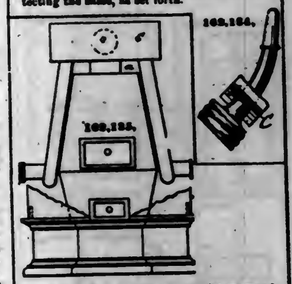


Brief.—A commode which can be readily folded into a small compass. There is a supporting-frame, which consists of three legs, to each of which an arm is secured by hinges. The top is made in two parts, hinged together on the under side. There are three holes for receiving the upper ends of the three legs.

The combination of the supporting-frame, consisting of the legs A and arms B, hinged together as described, with the top D, made in two parts, hinged together, as specified.

162,132. IRONING-TABLES. Eli J. Wolfrom, Washingtonville, Ohio, assignor to himself and Marie E. Whiteside, Marengo, Ill. [Filed Dec. 16, 1874.]

Brief.—On the edge of the board are grooves, over which the ironing cloth or blanket is spread, and strips of wood are placed in the grooves, which are held by an elastic band.



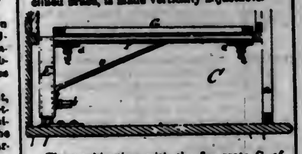
162,132.

In an ironing-board having grooved edges, the combination, with the accompanying elastic band, of solid non-compressible border strips, for the purpose of affording greater frictional resistance for securing the cover, and to prevent the wrinkling of the same, substantially as described.

162,134. OIL-CANS. Abiel Wood, Brooklyn, N. Y. [Filed Jan. 4, 1875.]

An oil-can provided with a removable spout and a rigid handle, C, the body of which is constructed with an opening, *d*, substantially as described, whereby the said spout can be removed from its nipple and inserted into the opening in said handle, for retaining and protecting the same, as set forth.

162,134.

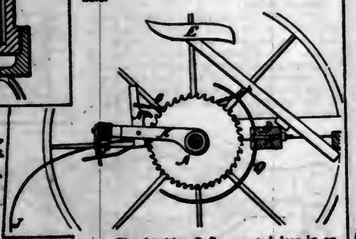


162,135. HEATING-FURNACES. W. R. Wood, Baltimore, Md. [Filed Feb. 20, 1875.]

Brief.—The products reach one apartment of the circular chamber through the central pipe, and, entering the return draft-pipes from the same apartment, are conducted into and through the other apartment.

In a portable or stationary heating-furnace, the drum C, divided by the partition *b* into two compartments, as shown, in combination with the return draft pipe or pipes, substantially as specified.

162,136. GRATES FOR STOVES. J. Young, Brooklyn, N. Y. [Filed Apr 2, 1875.]



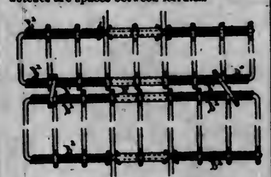
Brief.—But a single support is used, and on this the tilting grate, supported by the inclined brace, is made vertically adjustable.

The combination, with the fire-grate C, of a single standard, D, sleeve or slide E, supporting-rod F, brace *c*, and set-screw *b*, substantially as and for the purpose above and described.

162,139. HORSE HAY-RAKES. J. B. Wismer, Friendship, N. Y. [Filed Aug. 1, 1874.]

Brief.—A ratchet-wheel is attached centrally on a rake-head axle, and shielded by a concentric guard, which serves also for an adjustable stop or dumping-tappet, the teeth being raised by locking them with the revolving axle.

1. The thimbles S S, mounted loosely on the axle, and provided with the grooved U-shaped ribs T, having legs V V, in combination with the rake-teeth J and bolts U, substantially as described, and for the purpose set forth.

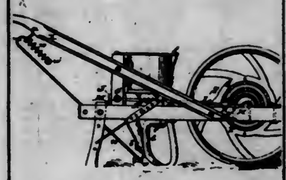


2. The combination of a hooked detent, connected to the lifting-bar, with the ratchet-wheel on the revolving rake-axle, and the adjustable tripping device on the frame of the rake, substantially as described, for the purpose specified.

3. The curved plate Q, adapted to form a guard for the ratchet-wheel, and an adjustable trip for the lifting device, substantially as described.

REISSUES.

6,271. WIRE TOASTERS OR BROILERS. Saml. Ayres and H. J. Chamberlin, Worcester, assignors, by mesne assignments, to E. F. Woods, D. Sherwood, and C. H. Latham, Lowell, Mass. Patent No. 44,500, dated Oct. 11, 1864. [Filed Mar. 31, 1875.]



Brief.—The shouldered depressions or notches are spaces between ferrules.

The broiler ends B', having shouldered depressions, with which the bars A are combined, and secured in position, substantially as described.

6,272. CORN-PLANTERS. James Campbell, for himself, and James A. Campbell, Harrison, Ohio, administrator of Wm. Campbell, deceased, (assignee of one-half interest.) Patent No. 133,190, dated Nov. 19, 1872. [Filed July 16, 1874.]

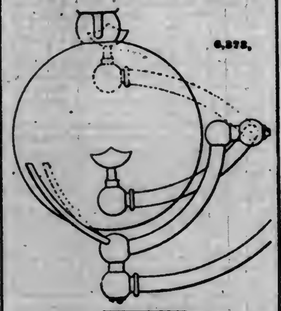
Brief.—Pilot marking-wheel, shield-brace upon furrow-tooth, spring pull-rod, adjusting-nut, and hand-strap for operating hiller-valve. Floating wire for guiding loose grain back into the seed-box.

1. In a corn-drill, mounted upon and guided by a front driving pilot-wheel, the shield-brace E, with its hook F rigidly secured to the furrow-tooth, and the frame of the planter between the tread of the driving-wheel and the seed-tooth, as and for the purpose described.

2. The furrowing-tooth A, with forwardly-projecting head or lip A', and constructed with a continuous transverse curvature, as herein described, to render the head elastic, and to improve its hold, and to strengthen the angle of the tooth, as set forth.

3. The shield and brace E, constructed with the hook F and screw-shank G, and the collar or shoe H and nut I, in combination with the furrowing-tooth A, as herein shown and described, for stiffening and bracing the same, as set forth.

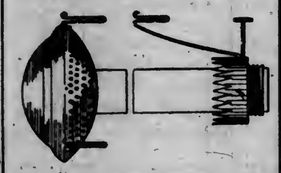
4. The direct pull-rod W, spring *w*, adjusting-nut *w'*, and hand-strap Y, combined and arranged, as set forth, for operating the hiller-valve B'.



5. In combination with the seed-box, the floating wire T, for reconducting grain into the box, substantially as herein set forth.

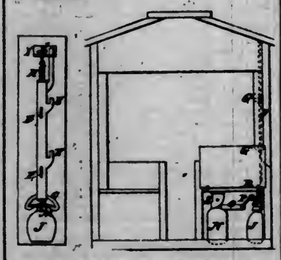
6,273. LENS ATTACHMENTS FOR GAS-BURNERS. Montgomery C. Meigs, Washington, D. C. Patent No. 150,190, dated Jan. 26, 1875. [Filed Mar. 11, 1875.]

Brief.—By means of the lens and adjustable burner the light can be concentrated at various points, as desired.



1. The combination of a supplementary bracket, adapted to be mounted on an ordinary gas-burner, gas-branch, or gas-pipe, a glass lens-shaped bottle mounted on the supplementary bracket, and adapted to contain transparent liquid, and a burner also mounted on said bracket, these members being constructed and operating substantially as set forth.

2. The supplementary bracket, provided with a coupling adapted to fit on an ordinary gas-burner, gas-branch, or gas-pipe, a support for a dioptric lens, and a burner, adjustable both vertically and horizontally, combined, substantially as and for the purpose set forth.



6,273.

6,274. LAMPS. Samuel C. Moore, Boston, Mass., assignor, by mesne assignments, to the Benedict & Burnham Manufacturing Company, Waterbury, Conn. Patent No. 83,674, dated Nov. 10, 1868. [Filed Aug. 28, 1873.]

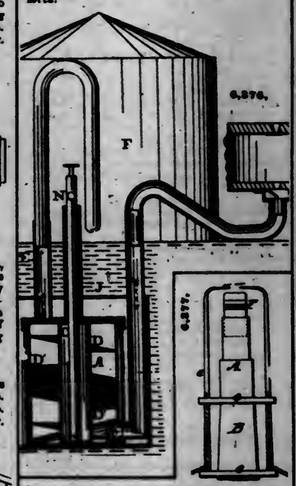
The connected air-distributing plate and cap, or deflector, and the chimney-rests or supports forming rests for the lower edge of the chimney below the air-distributing plate, in combination with an elastic device for supporting the chimney laterally at or near the periphery of the connected deflector and air-distributing plate, substantially as specified.

6,275. SAFETY PASSENGER-CARS. James T. Worley, Cleveland, Ohio. Patent No. 122,206, dated Dec. 26, 1871; reissue No. 6,020, dated Aug. 18, 1874. [Filed Mar. 23, 1875.]

1. In combination with a railroad-car, mechanism to open the doors or windows therein automatically, when the car is thrown out of its proper position, for the purpose specified.

2. In combination with a railroad-car, mechanism to open the doors or windows therein automatically upon the upper side of the car, when the latter is thrown or tipped over, for the purpose specified.

3. In combination with a railroad-car a weight adapted to open the doors or windows automatically, when the car is thrown out of its proper position, for the purpose specified.



6,276. CARBURETING APPARATUS. E. J. Fraser, San Francisco, Cal., assignor to S. A. Stevens, Philadelphia, Pa. Patent No. 67,971, dated Aug. 20, 1867. [Filed Mar. 11, 1875.]

Brief.—The carbureter-tank is placed within a larger tank under ground. A cylinder for warm water extends vertically through the center of the carbureter. Spiral passages provided with transverse curtains of wire-gauze pass around the water-cylinder.

1. The vessels A and B, the water-cylinder C, the plate-coil D, and the retarding-curtains D', constructed and combined substantially as shown and described, for the purposes set forth.

2. In combination with the vessels A and B, water-cylinder C, plate-coil D, and retarding-curtains D', the air-pipe G, substantially as and for the purposes described.

3. The combination of an air-forcing apparatus, an air-pipe, a carbureting-vessel, and a delivery-pipe, said air-forcing apparatus and said carbureting-vessel being separated by impervious material, through which said air-pipe, to connect the last-mentioned two parts, is passed, said carbureting-vessel being located by itself in a vault under ground, outside the place of delivery of the carbureted air, said delivery-pipe being passed from said carbureting-vessel through the ground to the place of delivery of the carbureted air, in the manner and for the purposes substantially as set forth.

6,276.

6,276.

6,277. LIGHTING GAS BY ELECTRICITY. S. Gardiner, Jr., Washington, D. C. Patent No. 45,241, dated Nov. 29, 1864. [Filed Feb. 23, 1875.]

Brief.—For insulating the platinum coil and the conducting-wires.

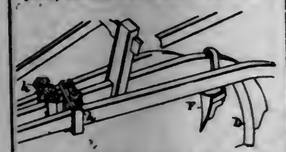
1. A tip of lava or other non-conducting material, in combination with an apparatus for lighting gas by electricity.

2. In apparatus for lighting gas by electricity, a non-conducting pillar-burner, whereby the conducting-wires are isolated from the gas-fixtures.

3. The combination, in a burner for lighting gas by electricity, of a non-conducting burner-pillar, B, with a lava tip, F, substantially as and for the purpose set forth.

4. The combination, in apparatus for lighting gas by electricity, of the lava tip with the conducting-wires *e e* and their supporting-insulators *c c*, substantially as described.

5. The combination, in a burner for lighting gas by electricity, of a lava tip with a platinum coil and a metal pillar, substantially as and for the purpose herein set forth.



6. The combination, in a burner for lighting gas by electricity, of a non-conducting pillar, B, with a lava tip, D, and an intervening metallic pillar or nipple, A, substantially as and for the purpose herein set forth.

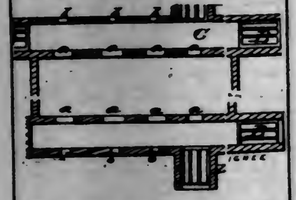
6,378. REFINING SUGARS. F. O. Matthiessen, New York, N. Y. Patent No. 160,926, dated Mar. 16, 1875. [Filed Apr. 8, 1875.]

The improved process of refining sugar herein described, which consists, in addition to the ordinary boiling of the clarified sugar liquor in the vacuum-pan, in dividing the hot sirup and crystallized sugar discharged from the vacuum-pan into small masses or thin layers, and subjecting such small masses or thin layers to a process of gentle evaporation in ovens, prolonged until sufficient water has been expelled from the material operated upon to convert it into a granular mass, as set forth.

6,379. CULTIVATORS. Reuben M. Melton, Criglersville, Va. Patent No. 24,227, dated May 31, 1859; reissue No. 4,876, dated Apr. 16, 1872; extended seven years. [Filed Jan. 4, 1875.]

Brief.—The beams are adjustable laterally by means of links, and by slides keyed to the beams, which are curved and receive adjustable plows. A colter of novel form is attached to the center beam, and serves to steady the plows, and hold them to their work.

1. The adjustable links A and adjustable slides *c*, constructed substantially as described, and arranged to operate with, and for the purpose of adjusting the distance between, the plow-beams, as set forth.



2. The shovels F, freely adjustable to any point up or down on the curved beams, so as to run deep or shallow or at different depths, as set forth.

3. The colter attachment D, constructed substantially as described, and adjustable up or down the curved beams, for the purpose specified.

4. The colter attachment D and shovels F, operating in combination with the curved beams, substantially as and for the purpose specified.

6,380. BRICK-KILNS. Stephen D. Rader, Williamsport, assignor, by mesne assignments, to H. V. Winegard, Philadelphia, Pa. Patent No. 66,943, dated June 18, 1867. [Filed Mar. 27, 1875.]

Brief.—The combustion-chamber is outside of the body of the kiln, and separated therefrom by a wall provided with passages.

1. The combination, with the kiln A, of the furnace B and the air-combustion chamber C, arranged substantially as specified.

2. A combustion-chamber, C, provided with passages *c*, leading into the burning-chamber of the kiln, in combination with a furnace, substantially as described.

3. A combustion-chamber, C, provided with air inlets and passages *c*, in combination with a furnace, substantially as described.

6,381. MOWING-MACHINES. John P. Manny, Rockford, Ill. Patent No. 18,510, dated Oct. 27, 1857; extended seven years. [Filed Apr. 7, 1875.]

Brief.—Devices for simultaneously lifting both ends of the finger-bar.

1. The combination, in a harvester, of a carrying-frame, a cutter-bar flexibly connected therewith through the medium of a supplementary frame arranged below such carrying-frame, and vertically adjustable relatively thereto, and a lever mounted upon or supported by such cutter-bar, the combination being constructed to operate substantially as described, so that the driver from his seat may raise and lower the cutters at will while the machine is in motion.

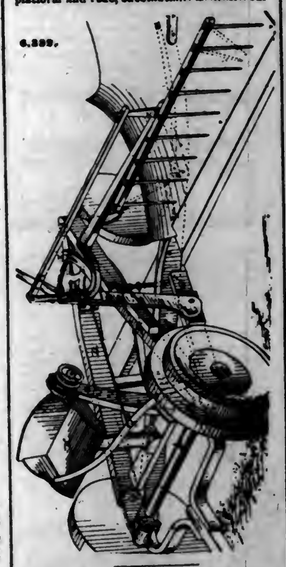
2. The combination, in a harvester, of a carrying-frame, a supplementary frame vertically adjustable relatively thereto, and supported therefrom by flexible connections, a cutter-bar hinged to such supplementary frame, and a lever mounted upon or supported by the cutter-bar, the combination being constructed to operate substantially as described, so that the driver from his seat can raise and lower the cutters at will while the machine is in motion, and so that the cutters will rise and fall automatically in passing obstructions.

3. The combination, in a harvester, of a grain-wheel, an adjustable support for such wheel, having free vertical movement relatively to the cutter-bar, and lifting devices located near the driver's seat, and connected, by flexible connections at the divider end of the cutter-bar, with the grain-wheel support, substantially as described, so that the driver may thereby raise and lower the outer end of the cutter-bar while the machine is in motion.

4. The combination, substantially as described, of a grain-wheel, a lever for supporting such wheel, pivoted forward of the line of the cutter-bar, and a rod, cord, or chain passing in rear of the cutters, and connected with a lever near the driver's seat, so that the driver can regulate the outer end of the cutters while the machine is in motion.

6,382.

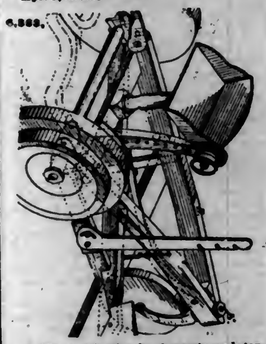
6,382. HARVESTERS. John P. Manny, Rockford, Ill. Patent No. 17,796, dated July 14, 1857; reissue No. 3,561, dated Aug. 3, 1869. [Filed Mar. 18, 1875.]



1. The combination, in a combined reaper and mower, of two main wheels, a carrying-frame, a finger-beam projecting laterally at the side of the carrying-frame and the path of the main wheels, a hinge-connection between the finger-beam and the carrying-frame, for the purpose hereinbefore described, a grain-platform attached to the finger-beam, a rake moving over the platform in a curved path, and a cam-guide for regulating the movements of the rake, such cam-guide and rake vibrating in unison with the vertical movements of the finger-beam and platform, so as to preserve the relative adjustment of the rake and platform, substantially as and for the purpose described.

2. The combination, in a combined reaper and mower, of two main wheels, a carrying-frame, a finger-beam projecting laterally at the side of the carrying-frame and the path of the main wheels, a hinge-connection between the finger-beam and the carrying-frame, for the purposes hereinbefore described, a grain-platform attached to the finger-beam, a rake moving over such platform in a curved path, and conforming automatically to the vertical movements of the same, and a lever pivoted on the carrying-frame, by means of which the driver may at will change the height of the finger-beam and its connected parts, in either mowing or reaping, from his seat, and without stopping the machine, substantially as and for the purposes described.

3. The combination, in a harvester, of a carrying-frame, a finger-beam vertically adjustable relatively thereto while the machine is in motion, a grain-platform attached to such finger-beam, and a sweep-rake moving over such platform in a curved path, and conforming automatically to its different elevations, the combination being and operating substantially as set forth.



4. The combination, in a harvester, of a carrying-frame, a finger-beam and platform connected with the carrying-frame by a hinge-connection, mechanism for suspending the finger-beam from the carrying-frame at different heights, a rake moving over the platform in a curved path, and a cam-guide for regulating the movements of the rake, such cam-guide and rake vibrating in unison with the vertical movement of the finger-beam and platform, so as to preserve the relative adjustment of the platform and rake, substantially as described.

6,383.

6,383. HARVESTERS. John P. Manny, Rockford, Ill. Patent No. 17,779, dated July 14, 1857; reissue No. 3,526, dated June 29, 1869; extended seven years. [Filed Apr. 9, 1875.]

6,383.

1. The combination, in a harvester, substantially as and for the purpose described, of two main wheels mounted upon the main axle, a main frame carrying the driver's seat and supporting the finger-beam when raised from the ground, a finger-beam projecting laterally at the side of the carrying-frame, and the path of the main wheels, a platform and reel-supports connected with such finger-beam and partaking of its vertical movements, and a hinge-connection between the finger-beam and the carrying-frame, whereby the finger-beam and its connected parts may be lifted to and held at any desired height in reaping.

2. The combination, substantially as set forth, in a two-wheeled harvester, of a laterally-projecting finger-beam vibrating about the main axle, with reel-supports and a platform, both vibrating in unison with the finger-beam.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

OFFICIAL GAZETTE

OF THE

United States Patent Office.

VOL. 7.—NO. 16. TUESDAY, APRIL 20, 1875. PRICE { $6,00 per year—single. $5,00 per year in clubs.

The OFFICIAL GAZETTE is published on Tuesday of each week, from the United States Patent Office. The subscription price for 1875 is six dollars per year for single subscribers; five dollars per year to clubs of not less than five sent at one time, and which will be mailed free of postage to separate addresses if desired. Subscriptions will commence and terminate with the year. All orders should be addressed to the Commissioner of Patents, Washington, D. C.

DECISIONS OF THE COURTS.

U. S. CIRCUIT COURT, DISTRICT OF MASSACHUSETTS.

CHANDLER NEEDHAM *vs.* NATHAN WASHBURN *et al.*

[*In equity.—Before* CLIFFORD *and* LOWELL, *J. J.—Decided October* 1874.]

Patents granted by the Commissioner pursuant to the provisions of the statute relating thereto offered a *prima facie* presumption, when introduced in evidence, that the patentee is the original and first inventor of what is therein described as his invention or discovery.

Whether, in a suit brought against the respondents *as copartners* but in which the proofs fail to show a partnership, but do show that the respondents with others were organized into a corporation, with the same name as the alleged copartnership, it would be competent for the court to enter a decree against the *corporation, quære.*

In such case the court will not delay the hearing of the cause; since the defect, if it be one, may be cured by an amendment.

Car-wheels having been made by placing a heated tire of cast-steel in a mold, and then pouring in molten cast-iron *at the center of the mold*, thus producing a weld or union between the iron and the steel, it did not require invention, and was not patentable to introduce the molten iron through openings or "sprues" *just inside the heated rim or tire.*

Nor can it make any difference that a *series* of such openings or holes are used, instead of a *single* opening.

It being a matter of common knowledge among mechanics that iron, or iron and steel, may be successfully welded without flux, there is no invention in simply omitting, in the casting of car-wheels, the flux previously used between the steel tire and the molten iron which forms the body of the wheel.

Much reason exists for holding that the second feature in the claim of the patent, which is for "The process or mode above described for making a combined cast-steel and cast-iron car-wheel, whereby the cast-iron is introduced through a series of holes into the mold directly upon the inner *unfluxed* surface of the cast-steel tire, and a perfect union and weld of the metals are produced" is invalid, because not embraced in the description, in the body of the specification, of the method used by the complainant.

The patent in question pronounced invalid.

[*James B. Robb*, for complainant.
A. K. P. Joy, for defendants.]

Opinion of the Court by Mr. Justice CLIFFORD.

Letters patent may be granted for the invention or discovery of any new and useful art, machine, manufacture, or composition of matter, or of any new and useful improvement of the same, upon the conditions specified in the patent act. Unless the thing claimed as the invention is new and useful, the claim is wholly without merit, as that is the primary and indispensable condition annexed to the right to claim the protection which the patent act is intended to secure. Application in writing must be made to the Commissioner, and the requirement is that the applicant shall file in the Patent Office a written description of the invention or discovery, and of the manner and process of making, constructing, compounding, and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, compound, and use the same. (16 Stats. at Large, 201.)

Patents granted by the Commissioner, in pursuance of those conditions, afford a *prima facie* presumption when introduced in evidence that the patentee is the original and first inventor of what is therein described as his invention or discovery. Such a presumption, however, may be controlled by evidence of a prior knowledge or use by others in this country, or that the invention or discovery had been described in any printed publication, before his invention or discovery thereof, in this or any foreign country; or that it had been in public use or on sale for more than two years prior to his application for a patent.

Damages are claimed by the complainant for an alleged infringement by the respondents of certain letters patent granted to him, in which it is represented that he is the original and first inventor of a certain new and useful improvement in casting car-wheels, as more fully described in the specification of the letters patent. Process was served, and the four persons named as respondents in the bill of complaint appeared and filed separate answers. They are described in the bill of complaint as copartners, under the name of the N.

Washburn Steel Tire Works, and the charge is, that the respondents, without consent, and in violation of the complainant's exclusive rights, have made, sold, and used a large number of said patented car-wheels, in infringement of the exclusive rights secured to the complainant by said letters patent. Appearance was entered by each of the respondents, and they severally set up the following defenses:

1. That they are not, and never were, copartners doing business at Worcester, as alleged in the bill of complaint.

2. That the complainant is not the original and first inventor of the improvement.

3. That the alleged improvement was well known and in public use by various persons, and at various places, before the alleged invention thereof by the complainant.

Proof to show that the respondents are copartners is entirely wanting; but inasmuch as that defect, if it be one, may be removed by a proper amendment, the court is inclined to examine the merits of the controversy.

Before doing so, however, it may be well to examine the proposition of the complainant, that he is entitled to a decree against the respondents as individuals, even though he has utterly failed to prove that they are copartners as alleged. Partnership is certainly not proved. On the contrary, the respondents offer proof tending to show that they are a corporation duly established under the laws of the State in which their business is transacted; but the complainant denies that proposition, and insists that, as they were never duly incorporated, he may well maintain the present suit against them as individuals.

Besides the claim for damages, the complainant also prays for an account of gains and profits, and also for an injunction. Having sued the respondents as a partnership, it may be doubtful whether it would be competent for the court to enter a decree against the corporation; but as that defect, if it be one, may be cured by an amendment, the court will proceed to examine the merits of the controversy. *Goodyear* vs. *Phelps*, 3 Blatch., 91; *Poppenhusen* vs. *Falke*, 4 id., 494.

Taken as a whole, the proofs in the case show to the satisfaction of the court that the persons sued as partners were with others organized as a corporation, in November, 1869, under the general statutes of the State, by the corporate name set forth in the pleadings; and it appears that all the corporators were made directors, and that the business of the corporation was conducted by the directors. Opposed to this is the uncontradicted proof that no certificate setting forth the corporate name and purpose of the association was ever filed with the Secretary of State; but the better opinion is that the statutes of the State in force at the time the organization was made did not contain any such requirement, and consequently that the organization is not rendered illegal by that omission. (Gen. Stats. 341.) Such a requirement was enacted the next year, but the new provision is not retroactive. (Supp. Gen. Stats., 806.)

The principal defenses upon the merits are as follows: 1. That the alleged improvement is not new in the sense of the patent law, because the patentee was not the original and first inventor of it, and because the process was well known and in public use long before the date of the supposed invention. 2. Because the respondents have never infringed the patent as alleged.

Both of these defenses make it necessary to ascertain what the invention is when the patent which secures it is properly construed. Enough may be learned from the description given by the patentee in the specification of the process which he pursues to manufacture the patented car-wheel, when weighed in connection with the claim of the patent, to furnish a satisfactory answer to the inquiry as to the true nature and scope of the alleged improvement.

His first step, as pointed ont in the specification, is to cast a suitable quantity of steel to form the tire of the wheel into an annular ingot, about fifteen inches in diameter, with an opening at its center of the diameter of four inches. He then hammers the ingot upon an anvil by means of a steam-hammer, by which its diameter is extended to eighteen inches; and he gives a description of the anvil which he uses, and of the manner of conducting the hammering. Forming-rolls are then employed, by which the ingot is enlarged to the proper size and shape to form the tire of the wheel. Having formed the tire, he then places it in a heated furnace and heats it to a bright cherry red, when it is taken from the furnace, and, having removed every foreign substance from its surface, he places it within the mold in which the body of the car-wheel is to be cast, said mold having previously been formed and prepared for the purpose. Care, it is said, should be taken that the heated tire should be properly adjusted in the mold; and, when that is accomplished, the direction is that the flask shall be immediately closed, and the molten iron be poured into the mold, which, as it comes in contact with the highly-heated steel, fuses the surface of the latter, thereby forming a perfect union between the two, and, as the metal cools, the body of the wheel and the tire are welded into one solid mass. Extended remarks upon that part of the described process is unnecessary, as nothing there described is embraced in the claim of the patent, and if it had been, it would not have benefited the complainant, as every part of the process there described is substantially the same as that set forth in the patent granted to Zadoc Washburn, which was introduced in evidence, and is of prior date.

Two matters are then introduced into the specification of the patent in question, which, it is insisted, distinguish it from the invention of Zadoc Washburn, which, it is admitted, is the older of the two: 1. That the molten iron is introduced into the mold through a series of openings at the rim of the wheel, just inside the tire, and that it flows from thence to the center, carrying away from the inner surface of the steel tire all dirt and dust, if any, which might otherwise prevent the welding of the parts. 2. Nothing is expressly set forth under the second head as a matter pertaining to the described improvement, but the patentee points ont what he represents as a defect in the process of the other patent, which is that the cast-iron, instead of lying still in the mold and forming a perfect weld, is agitated and caused to bubble by the gas generated by the molten iron as it comes in contact with the flux used in the process, whereby, as he states, the perfect and desired union of the iron and steel is prevented. Everything described in the patent to Zadoc Washburn is disclaimed by him in express terms. What he claims is the described method of introducing the molten cast iron into the mold, through a series of holes, directly upon the inner unfluxed surface of the cast-steel tire, by which a perfect union and weld of the metals are produced.

Car-wheels manufactured by first forming a rim of cast-steel, and then heating and placing it in a mold previously prepared for the purpose, and by pouring molten cast-iron into the mold to complete the manufacture of the wheel, by the union or weld between the two, into one solid mass, are certainly old. Nor is that proposition denied. Nothing, therefore, but a new and useful improvement in the method or process of such a manufacture can be regarded as the proper subject of a patent. Doubtless it may be true that the molten iron was formerly poured into the mold at the center of the mold, and it may be that it is better to construct the openings in the mold for the purpose—whether they are called by that name or are called "sprues" or conduits—just inside the inner surface of the heated rim when placed in the mold; but the court is not satisfied from an examination of the product, or from any evidence in the case, that such a change, without more, (even if new, which is not admitted,) is the proper subject of a patent, as it is scarcely possible that it could have required any invention to make it. Changes of the kind are nothing more than common knowledge and experience would suggest, and every workman, whether skilled in the art or not, would know how to apply the suggestion. Nor can it make any difference that the patentee uses a series of such openings or holes in his method or process, as the proofs are full and satisfactory that a series of holes had been used in making such castings at a much earlier period than the date of the complainant's invention, and on several occasions, as appears by the testimony of an unimpeached witness.

2. Suppose that is so, still it is insisted by the complainant that his method or process is new and useful, because he does not use flux in making the described weld; which, as he insists, distinguishes his method or process from the invention described in the Zadoc Washburn patent, and from all others known at the date of his invention. Much reason exists for holding that the second feature of the claim is invalid, because not embraced in the description of the method or process used by the complainant, as required by the act of Congress; but, inasmuch as the alleged invention consists merely in omitting an ingredient often employed in welding steel and iron, or two pieces of iron, the court is not inclined to rest the decision entirely upon that ground. Nor is it at all necessary to do so, as the court, in view of the facts and circumstances of the case, is of the opinion that it is matter of common knowledge, that iron, or iron and steel, may be successfully welded with or without the use of flux, and that such knowledge has existed among mechanics accustomed to work at the ordinary forge, for a very long period, whereof the memory of man runneth not to the contrary. Axes, scythes, hoes, and other farming utensils were formerly made on the common anvil; and it is believed that mechanics formerly engaged in manufacturing such articles knew full well that flux was often omitted in effecting a weld of iron, or iron and steel. Horseshoes were made in the same manner, and many larger articles, such as plowshares, and mill-cranks. Differences of opinion, it is known, have at times existed among mechanics of that class upon the subject; some maintaining that flux was useful and even necessary, and others maintaining the opposite opinion with equal earnestness and confidence. All of these suggestions, it is believed, are supported by common experience and knowledge, but it is not necessary to go out of the record to find convincing proof to the same effect. Even the complainant, in his deposition filed in the Patent Office, testified in his cross-examination, that he was aware that iron and steel had been so welded, and, when asked if he knew as matter of fact that iron and steel had for a long time been welded with and without flux, stated that it was said to have been so welded for a long time. Support to that view is also derived from one of the respondent's witnesses, in which he says that in making four or five car-wheels, they used four sprue-holes, and that some of them were made with flux, and some without; which statement is also confirmed by other witnesses.

Having come to the conclusion that the alleged improvement is not new or patentable, it is not necessary to examine the question of infringement.

Bill of complaint dismissed with costs.

DESIGNS PATENTED DURING THE WEEK.

[Each Design bearing date April 20, 1875.]

8,272.—Stoves.—BENJAMIN M. ANTHONY, Detroit, Mich., assignor to MICHIGAN STOVE COMPANY, same place. Application filed April 6, 1875. Term of patent 7 years.

8,273.—Oil-Cloths.—JOSEPH BARRETT, New York, N. Y., assignor to SAMUEL W. DUNN. Application filed March 15, 1875. Term of patent 3½ years.

8,274 and 8,275.—Breastpin.—LEONARD S. BEALS, Astoria, N. Y.—Cases A and B. Applications filed April 9, 1875. Term of patents 7 years each.

8,276.—Dish of Pottery-Ware.—JONATHAN COXON, Trenton, N. J., assignor to GREENWOOD POTTERY COMPANY, same place. Application filed April 15, 1875. Term of patent 3½ years.

8,277.—Coffin-Screws.—NEHEMIAH HAYDEN, Essex, Conn. Application filed March 27, 1875. Term of patent 7 years.

8,278.—Badge.—HENRY C. LEES, Philadelphia, Pa. Application filed March 29, 1875. Term of patent 7 years.

8,279.—Hitching-Posts.—LOUIS SCHAEFER, Cleveland, Ohio. Application filed March 4, 1875. Term of patent 3½ years.

8,280.—Picture-Mounts.—RALPH TRAUTMANN, New York, N. Y. Application filed March 2, 1875. Term of patent 7 years.

8,281.—Vase.—WILLIAM TWEEDDALE, Brooklyn, N. Y. Application filed March 20, 1875. Term of patent 14 years.

8,282.—Pitcher.—HERMAN VASSEUR, Wallingford, Conn., assignor to SIMPSON, HALL, MILLER & CO., same place. Application filed March 9, 1875. Term of patent 3½ years.

8,283.—Spoons or Forks.—CHARLES WITTECK, New York, N. Y. Application filed March 13, 1875. Term of patent 7 years.

TRADE-MARKS REGISTERED DURING THE WEEK.

[Each certificate bearing date April 20, 1875.]

2,383.—Sheet-Metal Cans and Boxes.—THEODORE W. BURGER, Plainfield, N. J. Application filed April 5, 1875.

"a series of numerals in regular order or succession, from '1' to '31,' inclusive, arranged in circular form, and concentric with the names of the months of the year, arranged also in regular series and succession, and on a circular line."

2,384.—Medical Compound.—EDWIN R. BURNHAM, Chicago, Ill. Application filed March 16, 1875.

"'Eucalyptus Bitters,' in connection with the representation of a leaf."

2,385.—Soap.—WILLIAM CONWAY, Philadelphia, Pa. Application filed April 9, 1875.

"a picture representing a log of wood, upon which are inscribed the words 'WOOD ASH.'"

2,386.—Medicine.—WILLIAM M. CLARKE & CO., Boston, Mass. Application filed April 5, 1875.

"'CEPHALOGENE.'"

2,387.—Shirts.—E. JENNINGS & CO., Chicago, Ill. Application filed March 22, 1875.

"'E. Jennings & Co., Oriental Shirts.'"

2,388.—Watch-Movements.—L. & M. KAHN, New York, N. Y. Application filed April 8, 1875.

"an eagle with outspread wings, above which a band is arranged containing the words 'Trade Mark.' Radiating lines are arranged in the background, representing rays of light."

2,389.—Refined Lard.—A. & J. M. MOSES, New York, N. Y. Application filed April 3, 1875.

"the figure of the Goddess of Liberty."

2,390.—Lard.—GEORGE C. NAPHEYS & SON, Philadelphia, Pa. Application filed April 12, 1875.

"the picture of a pail, shaped like a section of an inverted cone, being broadest at the top, and tapering downward to a less circumference at the bottom, on the side of which is a disk bearing the inscription 'Geo. C. Napheys & Son, Pure Leaf Lard, Pail Patented April 23rd, 1872, Philadelphia.'"

2,391.—Petroleum.—POWER BROTHERS & CO., London, England, and WILLIAM H. POWER & CO., New York, N. Y. Application filed April 10, 1875.

"'SILVER LIGHT.'"

2,392.—Medicine.—JOHN HARVEY RUTTLEY, San Francisco, Cal. Application filed April 9, 1875.

"a portrait of myself, as shown in the fac-similes, in conjunction with the words 'Dr. Ruttley's Great Remedies.'"

2,393.—Jams, Jellies, Marmalades, and Preserved Fruits.—PHILIP J. RITTER, Philadelphia, Pa. Application filed April 7, 1875.

"'Pomona.'"

2,394.—Smoking-Tobacco.—J. P. SARRAZIN, New Orleans, La. Application filed April 6, 1875.

"'Delight.'"

2,395.—Smoking-Tobacco.—J. P. SARRAZIN, New Orleans, La. Application filed April 6, 1875.

"'Ne Plus Ultra.'"

2,396.—Smoking-Tobacco.—J. P. SARRAZIN, New Orleans, La. Application filed April 6, 1875.

"'The Perfumes of the South Smoking Tobacco.'"

2,397.—Smoking-Tobacco.—J. P. SARRAZIN, New Orleans, La. Application filed April 6, 1875.

"'THE RELIANCE.'"

2,398.—Stoves.—THE SUMMER KING STOVE COMPANY, Pittsburg, Pa. Application filed April 5, 1875.

"'SUMMER KING STOVE.'"

2,399.—Copyable Printing and Writing Inks.—FRANCIS DE B. BERTOT, New York, N. Y. Application filed April 14, 1875.

"an English shield, shaded by perpendicular lines, divided by a central band of white into two fields, the upper one having two rings equidistant from the center, and the lower one a single central ring. The band bears a marching lion, and on each side of the same four *fleurs de lis*, placed two above and two below, not in the same perpendicular, the whole surmounted by a marching lion, bearing in his mouth a flying scroll with the following device: '*Noli irritare leones*,' and encircled by a laurel wreath."

2,400.—Black Silk Dress-Goods.—A. DE GREIFF & CO., New York, N. Y. Application filed April 12, 1875.

"the figure of an elephant."

2,401.—Coffees, Teas, and Spices.—D. FOCHT & CO., Philadelphia, Pa. Application filed April 10, 1875.

"the letters 'D. F. & Co.,' arranged in a monogram, and inscribed on a disk of solid color."

2,402.—Distilled Spirits.—FAHRENBERG & WORKUM, Cincinnati, Ohio. Application filed March 29, 1875.

"words 'CYRUS NOBLE.'"

2,403.—Starch.—GLEN COVE STARCH MANUFACTURING COMPANY, New York, N. Y. Application filed March 6, 1875.

"the figure of a package of starch in the form in which we put it up for market, the figure being a perspective view, showing two sides and the top; the color of one side and the top being yellow with a blue border, and the other side being all in blue."

2,404.—Preparation of Corn-Flour.—GLEN COVE STARCH MANUFACTURING COMPANY, New York, N. Y. Application filed April 10, 1875.

"word 'MAIZENA.'"

2,405.—Rasps and Files.—HELLER & BROTHERS, Newark, N. J. Application filed April 5, 1875.

"the figure of a horse and a man with a hammer in his hand in the act of nailing a shoe on the horse, and the words 'Heller & Bros.'"

2,406.—Soap.—LINCOLN MANUFACTURING COMPANY, Providence, R. I. Application filed April 6, 1875.

"words 'Fruit of Industry.'"

2,407.—Gloves, Embroideries, and Ribbons.—PASSAVANT & CO., New York, N. Y. Application filed April 10, 1875.

"'Bon Marché.'"

2,408.—Toys.—RAYMOND JENKINS, Brooklyn, N. Y. Application filed April 6, 1875.

"'Jubilee.'"

2,409.—Corsets.—SIGISMUND KLEINBERGER, New York, N. Y. Application filed April 10, 1875.

"THE SANITARY."

2,410.—Preserved Fish.—THE EAGLE PRESERVED FISH COMPANY, New York, N. Y. Application filed April 10, 1875.

"the figure of a double-headed eagle."

COPIES OF SPECIFICATIONS AND DRAWINGS.

Persons desiring copies of all specifications and drawings of any particular class of patents can purchase them at the rate of ten cents each, and have them mailed, free, to their address, as soon as possible after the patents are issued, by leaving a deposit of not less than three dollars with the Commissioner of Patents. The index of classes for subscribers, date of September, 1871, is furnished gratis to any applicant.

In ordering copies of any drawing or specification, the name of the inventor and patentee, the title of the invention, and the date of the patent must be given; and for any search required in consequence of the omission of any of these data a charge of one dollar may be made. So in ordering a copy of an assignment, the liber and page of the record, as well as the name of the inventor, must be given; otherwise an extra charge will be made for the time consumed in making any search that may become necessary.

Copies of the specifications and drawings of design patents will be furnished by the Patent Office at the cost of making them. All orders should be addressed to the Commissioner of Patents, Washington, D. C.

APPLICATION FOR EXTENSION.

UNITED STATES PATENT OFFICE,
Washington, D. C., March 22, 1875.

On the petition of JOHN HASELTINE, of Boston, Mass., authorized by act of Congress approved February 18, 1875, praying for the extension of a patent granted to him on the 25th day of March, 1856, for an Improvement in Water-Wheels,

It is ordered that the testimony in the case be closed on the 11th day of May next; that the time for filing arguments and the Examiner's report be limited to the 21st day of May next; and that said petition be heard on the 26th day of May next.

Any person may oppose this extension.

J. M. THACHER, *Commissioner.*

INDEX OF INVENTIONS PATENTED APRIL 20, 1875.

	Class No.	No. of Patent.
Alarm, burglar, L. M. Johnson	24	162,235
Alarm, burglar, Kennoch and Gilliland	24	162,279
Ash pan for stoves, detachable, A. T. Bleyley	154	162,267
Asphaltam to a liquid, reducing, A. K. Lee	35	162,394
Awning, J. Eller	162	162,361
Baby walker, L. D. Clark	143	162,153
Bale tie, J. W. Deyo	7	162,354
Barrel head adjuster, Granger and Smith	40	162,230

	Class No.	No. of Patent.
Barrel stave adjuster, E. J. Granger	40	162,231
Barrel tap and faucet, A. C. Springer	167	162,427
Basins, &c., trap for, Adee and Foley	8	162,331
Basket stuff, machine for shaving, R. J. Brooks, Jr.	173	162,148
Bed bottom, spring, G. L. Shepard	62	162,316
Bird cage, H. Belmer	170	162,142
Bird cage, J. Maxheimer	170	162,400
Bit for enlarging blast holes, expanding, G. Frisbee	124	162,163
Bit stock, E. R. Charles	29	162,271
Blast holes, expanding bit for enlarging, G. Frisbee	124	162,163
Bolt threading machine, E. Schlenker	14	162,194
Bolting reel, A. H. Nordyke	57	162,408
Boot and shoe box toes, machine for making, G. S. Heaton	16	162,381
Boot and shoe soles, machine for edge setting, B. J. Tayman	16	162,206
Bottle, L. F. C. Schmidt	68	162,314
Bottle stopper, R. and D. L. Bollermann	1	162,346
Bottle stoppers, wire fastening for, H. W. Yerington	1	162,451
Box for packing lamp chimneys, N. Harris	90	162,285
Bridge, iron, J. B. Eads	21	162,357
Bridle bit, A. Buermann	72	162,348
Broiler, H. J. Chamberlin	154	162,152
Bronzing machine, Forbes and Hallock	54	162,161
Buckle, B. C. Young	23	162,211
Bull's eye, W. W. Wilcox	138	162,445
Burner, lamp, J. Pigot	90	162,303
Can, stand oil, J. D. Gray, (reissue)	107	6,396
Cans, nozzle for oil, W. Doe	107	162,223
Cap box, A. Huskamp	55	162,387
Car brake, A. Barker	122	162,340
Car brake, D. D. Kimel	122	162,290
Car brake, Laauwe and Wynkoop	122	162,177
Car coupling, O. T. Baker	122	162,336
Car coupling, G. C. Schow	122	162,197
Car coupling, J. G. Wilson	122	162,449
Car coupling, S. T. Young	122	162,452
Car for elevated railways, R. Stone	121	162,323
Car for inclined planes, J. Earnshaw	121	162,358
Car, ore, S. L. Pierce	121	162,189
Car pole coupling, street, J. S. Hagerty	122	162,379
Car starter, H. W. Baltz, Sr	122	162,339
Car wheel, W. A. Miles	122	162,196
Carburetors, air pump for, H. Seyter	27	162,255
Carpet fabric, S. Horner, Jr	95	162,385
Carriage, Scherb and Doland	31	162,313
Carriage axle lubricator, J. M. Witmer	31	162,209
Carriage jump lubricator, C. K. Mellinger	31	162,297
Carriage jump seat, C. K. Mellinger	31	162,278
Carriage spring, W. F. Dusenbury	55	162,431
Cartridge loading implement, T. L. Sturtevant	24	162,433
Casters, knobs, &c., fastening for, Thinnes and Schueler	23	6,387
Chain, drive, W. D. Ewart, (reissue)	62	162,447
Chair, adjustable iron, G. Wilson	62	162,179
Chair, rocking, A. List	172	162,137
Chuck for screw threading, W. Aiken	45	162,308
Churn, B. F. Price	160	162,284
Cigar box, C. Gluud	109	162,342
Cigar box, paper, G. A. Beidler	29	162,261
Clamp, joiner's, D. A. Fisher, Jr	29	162,180
Clamping device, Maxwell and Scott	36	162,430
Clock, R. H. Strong	37	162,438
Cloth winding and measuring machine, J. Wayland	154	162,367
Coal scuttle, Feldmeier and Stoeppelwerth	152	162,335
Cock, stop, P. Ball	175	162,241
Corks, machine for tapering, Z. M. Lane	59	162,429
Corn sheller, W. Stover	41	162,371
Cotton gin feeder, F. W. Flynn	133	162,322
Cotton seed drill, H. Steckler, Jr	115	162,325
Crucible mold, J. C. Wallace	43	162,273
Cultivator, A. B. Colver	144	162,299
Curry comb, A. F. Migeon	46	162,170
Dental bib, R. Horton	46	162,154
Dental mallet, J. T. Codman	24	162,217
Door check, G. Burt	93	162,418
Door knob, C. Rebstock	88	162,187
Dough mixer, E. G. Morrison	100	162,315
Drill for drilling metal, Shaw and Lucas	124	162,419
Drill, rock, G. H. Reynolds	124	162,302
Drills, tripod for steam rock, Nutting and Githens	79	162,389
Elevator, hay, J. Jones	79	162,307
Elevator, hay and grain, T. Powell	118	162,262
Elevator, hydraulic, C. W. Baldwin	79	162,252
Elevators, safety catch for, F. B. Perkins	54	162,291
Embossing or printing stamp, J. A. Smart	69	162,401
Engine governor, steam, G. L. McCahan	69	162,446
Engine governor, steam, J. D. Willoughby	87	162,160
Engine lubricator, steam, J. Farnan	152	162,196
Engine valve, steam, R. Schmidt	150	162,192
Engines, cushion for pistons of steam, G. H. Reynolds	107	162,332
Fabrics, machine for coating, L. L. Allen	165	162,320
Fan, automatic, L. D. Stamps	42	162,420
Fare box, R. M. Robinson	146	162,184
Fastener, metallic, G. W. McGill	167	6,394
Faucet, J. G. Bickel, (reissue)	52	162,411
Fence, farm, T. W. Owens	167	162,294
Filter rack, M. Leiner	18	162,224
Fire arm, breech loading, F. W. Freund	123	162,162
Fire arm, revolving, Forehand and Wadsworth	123	162,208
Fire arm, revolving, R. White	18	162,374
Fire arms, guard lever and means for operating the breech block of breech loading, F. W. Freund	55	162,373
Fire arms, pistol grip attachment for the stocks of, F. W. Freund	30	162,398
Fire escape, E. Matteson	118	162,232
Fire extinguisher, J. T. Hall	30	162,250
Fire shield, T. T. Moore	57	162,157
Flour, manufacturing middlings, R. L. Downton	60	162,378
Forging file blanks, device for, T. L. Grover	61	162,362
Fuel, artificial, J. J. Endres	61	162,363
Fuel, machine for manufacture of artificial, J. J. Endres	149	162,333
Furnace door, J. Ashcroft	149	162,334
Furnace door, J. Ashcroft	149	162,335
Furnace door, E. H. Ashcroft	154	162,436
Furnace, hot air, G. E. Wallis	138	162,291
Gaffs, throat gear for, C. H. Kingston	143	162,141
Game board, G. Bayles	66	162,309
Gas retort, S. S. Putnam	65	162,150
Gas stove, Burnham and Taite	52	162,223
Gate, automatic, C. E. Gillespie	52	162,421
Gate, farm, G. O. Ross	52	162,448
Gate, farm, J. N. Wilson	109	162,404
Gilding, passe-partout base for, H. McHugh	68	162,234
Glass flower and fruit stands, manufacture of pressed, Hobbs and Brockunier	68	162,233
Glass mold, Hobbs and Brockunier	68	162,330
Glassware, manufacture of, A. A. Adams	68	162,216
Glassware, manufacture of, C. W. Brocknnier	69	162,219
Governor, D. L. F. Chase	57	162,213
Grain scourer, M. D. Beardslee	73	162,295
Harrow, J. McPherson	73	162,306
Harrow, G. H. Pounder	73	162,205
Harrow, C. W. Strombeck	74	6,395
Harvester, J. H. Elward, (reissue)	75	162,139
Harvester, bean, Barber and Amis	74	162,405
Harvester rake, J. H. Myers	74	162,329
Harvester reel, F. Wyman	74	162,328
Harvesting machines, pitman holder for, C. Wheeler, Jr	76	162,390
Hat brushing machine, A. S. Joyce	30	162,195
Hatchways, safety guard for, E Schlenker	77	162,221
Hay loader, P. L. Craig	16	6,388
Heel stiffener, J. W. Hatch, (reissue)	79	162,311
Hoisting apparatus, hydraulic, F. Rochow	144	162,251
Horses, interfering pad for, H. S. Nichols	60	162,240
Horseshoe, J. D. Felthousen	81	162,388
Hose pipe nozzle compound, C. L. Jones	167	162,351
Hydrant, H. H. Clover	167	162,370
Hydrant, street, J. Flower	83	162,397
Ice machine, S. B. Martin	83	162,432
Ice machine, A. H. Tait	148	162,368
Injector, steam, D. Fergus	125	162,159
Iron, pile for bar, W. F. Durfee	19	162,147
Jelly press, W. W. Bostwick	154	162,305
Kettle handle, tea, W. S. Fetwin	93	162,282
Key fastener, R. F. Gibson	93	162,259
Key fastener, J. Thornton	20	162,425
Kiln, brick, P. E. Smith	44	162,415
Knife cleaner, F. A. Phillippi	44	162,265
Knife, pocket, C. P. Benedict	89	162,412
Knitting machine needle, S. Peberdy	30	162,364
Ladder, I. and C. Erkskine	90	162,171
Lamp bracket, H. G. Hubon	90	162,285
Lamp chimneys, box for packing, N. Harris	93	162,272
Latch, door, J. A. Colby	93	162,275
Latch, door, J. H. Crane	93	162,423
Latch, locking, C. Seymour	172	162,229
Lathe for turning wood, gage, F. Goulet	100	162,444
Lathe, metal turning, T. Wilbraham	92	162,424
Leather work, seam for, S. W. Shorey	157	162,263
Light and heat, apparatus for collecting the rays of, P. Balestrieri	94	162,410
Locomotive running gear, F. S. W. Nowotny	93	162,164
Lock, combination, W. Gilfillan	95	162,238
Loom harness motion, O. W. Kenison	95	162,191
Loom heddle frame, F. S. Pratt	95	162,176
Loom pattern chain, L. J. Knowles	95	162,188
Loom warp beam, E. Oldfield	87	162,160
Lubricator for steam engines, J. Farnan	153	162,253
Marble and tile, machine for grinding, Robinson, Smith, and Campbell	19	162,248
Mashing machine, J. A. Miller	50	162,422
Metal bars, enlarging the ends of, G. H. Sellers	57	162,143
Millstone balance, S. Berusheisel	25	162,247
Mincing machine, J. A. Miller	173	162,343
Molding machine, J. H. Blaisdell	29	162,274
Nail extractor, M. D. Converse	38	162,287
Neck tie holder, M. A. Head	104	162,175
Needles, machine for punching the eyes of machine, S. C. Kingman	14	162,270
Nut lock, S. Brunson	14	162,167
Nut lock, C. L. Holland	56	162,440
Oil cloth, machine for polishing, J. Webber, Jr	47	162,377
Oils, manufacturing lubricating, Gordon and Bumpus		

	Class No.	No. of Patent
Ore crusher, G. E. Noyes	3	162,301
Organs; pneumatic action for, T. Winans	112	162,450
Oven, baker's, D. McKenzie, (reissue)	6	6,397
Paper barrel, N. Keely	109	162,237
Paper box machines, feeding mechanism for, E. B. Beecher	109	162,341
Paper calendering rolls, operating, N. H. Whitten	108	162,260
Paper cigar box, G. A. Beidler	149	162,342
Paper fastener, G. W. McGill	146	162,182
Paper fastener, metallic, G. W. McGill	146	162 183
Paper feeding machine, D. Colbock	117	162,352
Paper tube machine, J. F. Jones	109	162 236
Pavement wood, Carr and Phillips	110	162,212
Pavements in blocks, apparatus for laying cement, J. B. Hurlbut	110	162 172
Pavior's rammer, G. Hitchcock	110	162 324
Pen holder, J. Larru	146	162,303
Photograph burnisher, E. R. Weston	111	162,442
Piano keys, device for shaping, M. Pratt	112	162 417
Piano forte pedal attachment, L. C. Whiting	112	162,443
Pipe or hose coupling, G. M. Hopkins	81	162,169
Pipes, automatic closing attachment for waste, F. P. Bonrne	8	162,268
Planter, corn, C. Hutchins	133	162,173
Planter, corn, J. Stoll	133	162,428
Planter, seed, G. W. Brown, (reissue)	133	6,384
Planter, seed, G. W. Brown, (reissue)	133	6 385
Plate lifter, D. M. Skinner	88	162,199
Plow, C. L. Carter	114	162 151
Plow, J. Lane	114	162,240
Plow attachment, E. N. Yardley	114	162,210
Plow, gang, L. O. Rockwood	114	162 254
Pocket fastener, D. Neustadter	38	162 300
Pot, coffee, J. Boyers	136	162,347
Pots spout for sheet metal, P. Lesson	136	162,395
Press, cider, D. C. Starks	19	162,257
Press, lard and cheese, A. J. Noe	96	162,407
Press, steam drop, W. H. H. Sisum	150	162,200
Presses, oil and other, A. Shedlock	96	162,198
Presses, pump for hydraulic, D. C. Starks	118	162,256
Printing presses, feed gage for, J. Turner	117	162 207
Propeller, steering, W. H. Mallory	139	162,396
Pump, R. A. McCauley	118	162,181
Pump, McCoy and Harper	118	162 402
Pump, air, G. E. Barker	12	162 264
Pump for hydraulic presses, D. C. Starks	118	162 256
Pump, steam, J. North	150	162,409
Pump, steam, W. Wright, (reissue)	150	6,393
Punch, conductor's, H. Johnson	146	162,289
Purifier, middlings, J. Brown	57	162 269
Purifier, middlings, Crittenden and Waters	57	162,276
Purifier, middlings, R. L. Downton	57	162 158
Railway, elevated, J. B Church	120	162 220
Railway signal, H. Flad	120	162,369
Railway signal, J. Gordon	120	162 376
Railway switch, E. A. Trapp	120	162,434
Rain water cut-off, J. F. Hess	126	162,382
Rain water cut-off, automatic, T. C. Fawcett	126	162,366
Rake, vine, J. W. Dunn	63	162,277
Ring or fastener, suspending, G. W. McGill	23	162,185
Roll for rounding and smoothing metallic rods and bars, T. S. Cook	125	162 155
Saw filing machine, T. Doyle	131	162,356
Saw mill, circular, C. M. Fairbanks	130	162 279
Saw sharpening machine, J. L. Knowlton	131	162,392
Saw teeth, insertible, E. Smith	131	162,319
Separator, grain, E. Knapp	159	162,292
Sewer inlet trap, J. McGuire	8	162,403
Sewing machine, J. L. Follett	134	162,372
Sewing machine, G. W. Hoffman	134	162,288
Sewing machine bobbin winder, Rhoades and Redmond	134	162,193
Sewing machine power, J. K. Welter	134	162,441
Sewing straw braid, W. F. Sprague	76	162,426
Shawl strap handle, H. Edwards	102	162,360
Shoe, L. Heath	16	162,166
Shot boxes, cut-off for, H. C. Wey	55	162,326
Shot charges, G. A. Capewell	55	162,349
Shovel, C. H. Sayre	141	162,312
Shovel blanks, casting, Binns and Barnes	141	162,145
Shovels, manufacture of, T. J. Blake	141	162,146
Sight protector, M. H. Mendenhall	90	162,298
Sign, F. Billingham	146	162,144
Signs and banners, frame for open work, E. F. Southward	146	162,393
Skate, L. S. Ingraham	143	162 174
Sled runner, R. B. Bird	31	162,266
Soda water generator, J. Anderson	1	162 212
Spinning machine, C. Z. Matteson	142	162,246
Spinning ring, W. T. Carroll, (reissue)	142	6,386
Stair rod, A. W. Porter	24	162,416
Steam trap, G. M. Hopkins	150	162,168
Stove and steam heater, cooking, T. Penton	154	162 413
Stove, cooking, J. R. Hyde, (reissue)	154	6,389
Stove, gas, Burnham and Taite	65	162,150
Stove, magazine, R. Blum	154	162,344
Stove pipe shelf, R. D. Farr	88	162,365
Stove, reservoir cooking, J. R. Hyde, (reissue)	154	6,390
Stoves, detachable ash pan for, A. T. Bleyley	154	162,267
Street sweeping machine, W. M. Blume	110	162,345
Sugar, refining, F. O. Matthiessen	155	162 242
Sugar, refining, F. O. Matthiessen	155	162,243
Sugar, refining, F. O. Matthiessen	155	162,244
Sugar, refining, F. O. Matthiessen	155	162 245
Table, L. Postawka	62	162,304
Table, combined mangle and ironing, F. Way	91	162 439
Table, folding, J. Bradfield	62	162 215
Tanning hides, Bartenbach and Richter	92	162,140
Tap and faucet for barrels, A. C. Springer	167	162 427
Target, C. Buckner, Jr	143	162,149
Telegraph wire, insulated, W. Strickler	50	162,204
Thill coupling, J. S. Smith	31	162,202
Tobacco package, J. D. Culp	160	162 353
Toy pistol, A. E. Taylor	143	162,258
Trap, sewer inlet, J. McGuire	8	162,403
Trowel, plasterer's, C. Disston	4	162,355
Truck, baggage, T. W. Porter	31	162 190
Tuck creaser, H. C. Goodrich	134	162 227
Tuck marker, H. C. Goodrich	134	162 225
Tuck marker, H. C. Goodrich	134	162,226
Valve, Lansdell and Leng	152	162,178
Vehicle axle, S. T. Gamwell	31	162 375
Vehicle seat, R. Rakestraw	31	162,310
Vehicle spring, G. F. Godley	31	162,165
Vehicle wheel, J. Curtis	31	162,222
Vehicle wheel, A. A. Philbrick	31	162 414
Ventilator, ridge, J. S. Wightman	166	162 261
Vessel for inflammable liquids, Chase and Crane	107	162 350
Vessel, metallic, W. B. Scaife, (reissue)	136	6,391
Vessel, metallic, W. B. Scaife, (reissue)	136	6,392
Vessels propelling and steering apparatus for, Dorman and Good	137	162,156
Wagon brake, O. T. Baker	31	162,337
Wagon tongue attachment, W. M. Bernhard	31	162 214
Walls, cramp for hollow, R. Hinvest	4	162 383
Wash bench, extension, S. Wiswall, (reissue)	91	6,398
Washer, metallic, M. G. Hubbard	14	162,386
Washing machine, J. A. Eberly	91	162 359
Washing machine, J. W. Hampton	91	162,380
Washing machine, E. W. Maxson	91	162,399
Washing machine, T. J. McWane	91	162,296
Washing machine, A. E. Worden	91	162 327
Watch case, F. Steffany	36	162,331
Watch cases, machine for the manufacture of, C. L. Thiery	36	162,324
Water closets, self-raising seat for, J. E. Walter	8	162,437
Water wheel, F. Kring	168	162,293
Wells, machine for perforating tubes for tube, C. L. Travis	51	162,435
Wells, means for pumping, Nickerson and Streeter	118	162,406
Wick raiser, H. C. Hart	90	162,246
Windmill, M. Gore	118	162,228
Window screen, J. Knowles	30	162,391
Window washer, C. H. Smith	62	162,318
Wire fastening for bottle stoppers, H. W. Yeringtou	1	162,451
Wood, bending, S. R. Bailey	176	162,138
Wrench, H. R. Sloat	160	162,317
Yoke, neck, C. R. Moon	144	162,249

INDEX OF PATENTEES TO WHOM PATENTS WERE GRANTED APRIL 20, 1875.

	Patent No.
Adams, A. A., Manufacture of glassware	162,330
Adee, F., and J. Foley, Trap for basins, &c	162,331
Aiken, W., Chuck for screw-threading	162,137
Allen, L. L., Machine for coating fabrics	162,332
Amis and Barber	162,139
Anderson, J., Soda water generator	162,212
Anthony, R. C., assignee	162,451
Ashcroft, E. H., Furnace door	162,335
Ashcroft, J., Furnace door	162,333
Ashcroft, J., Furnace door	162,334
Bailey, O. G., assignee	162,398
Bailey, S. R., Bending wood	162,138
Bailey Wringing Machine Company, assignee, (reissue)	6,398
Baker, O. T., Car coupling	162,336
Baker, O. T., Wagon brake	162,337
Baldwin, C. W., Hydraulic elevator	162,262
Balestrieri, P., Apparatus for collecting rays of light and heat	162,263
Ball, P., Stop cock	162 338
Baltz, H. W., Sr., Car starter	162,339
Barber, W. C., and G. Amis, Bean harvester	162 139
Barker, A., Car brake	162 340
Barker, G. E., Air pump	162,264
Barnes and Binns	162,145
Bartenbach, G. A., and C. Richter, Tanning hides	162,140
Bass, J. P., assignee	162,442
Bayles, G., Game board	162,141
Beardslee, M. D., Grain scourer	162,213
Beecher, E. B., Feeding mechanism for paper box machines	162,341
Beidler, G. A., Paper cigar box	162,342
Belmer, H., Bird cage	162,143

	Patent No.
Benedict, C. P., Pocket knife	162,265
Bernhard, W. M., Wagon tongue attachment	162,214
Bernheisel, S., Millstone balance	162,143
Bickel J. G., Faucet, (reissue)	6,394
Billingham, F., Sign	162,144
Binns, E., and E. A. Barnes, Casting shovel blanks	162,266
Bird, R. B., Sled runner	162,343
Blaisdell J. H., Molding machine	162,146
Blake, T. J., Manufacture of shovels	162 267
Bleyley, A. T., Detachable ash pan for stoves	162,344
Blum, R., Magazine stove	162,345
Blume, W. M., Street sweeping machine	162,346
Bollerman, R. and D. L., Bottle stopper	162,147
Bostwick, W. W., Jelly press	
Bourne, F. P., Automatic closing attachment for waste pipes	162,268
Boyers, J., Coffee pot	162,347
Bradfield, J., Folding table	162 215
Bradley, D. E., assignee	162,250
Brintnall, T. M., assignee	162,438
Brockunier, C. W., Manufacture of glassware	162 216
Brockunier and Hobbs	162,233, 162,234
Brooks, R. J., Jr., Machine for shaving basket stuff	162 148
Brothwell, C. R., assignee	162,418
Brown, G. W., Seed planter, (reissue)	6,384
Brown, G. W., Seed planter, (reissue)	6,385
Brown, J., Middlings purifier	162,269
Browning, T. H., assignee	162,398
Brunson, S., Nut lock	162,270
Buckner, C., Jr., Target	162,149
Buermann, A., Bridle bit	162,348
Bumpus and Gordon	162,377
Burnham, C., and J. G. Taite, gas stove	162,150
Burt, G., Door check	162,217
Campbell, Robinson, and Smith	162,253
Capewell, G. A., Shot charger	162 349
Carr, J., and M. D. Phillips, Wood pavement	162,218
Carroll, W. T., Spinning ring, (reissue)	6,386
Carter, C. L., Plow	162,151
Chamberlin, H. J., Broiler	162,152
Charles, E. R., Bit stock	162,271
Chase, D. L. F., Governor	162,219
Chase, M., and A. W. Crane, Vessel for inflammable liquids	162,350
Church, J. B., Elevated railway	162,220
Clark, F. N., assignee	162,282
Clark, I. D., Baby walker	162,153
Clover, B., assignee	162 378
Clover, H. H., Hydrant	162,351
Codman, J. T., Dental mallet	162,154
Colbock, D., Paper feeding machine	162 352
Colby, J. A., Door latch	162,272
Colver, A. B., Cultivator	162,273
Converse, M. D., Nail extractor	162,274
Cook, T. S., Roll for rounding and smoothing metallic rods and bars	162,155
Covington, N., assignee	162,441
Craig, P. L., Hay loader	162,221
Crane, J. H., Door latch	162 275
Crane and Chase	162,350
Crittenden, S., and J. Waters, Middlings purifiers	162,276
Crounse, L. L., assignee	162,362, 162,363
Culp, J. D., Tobacco package	162 353
Curtis, J., Vehicle wheel	162 222
Davis, J., assignee, (reissue)	6,394
Delamater, C. H., assignee	162,192, 162,419
Deyo, J. W., Bale tie	162,354
Dickinson, W. P., assignee	162,172
Disston, C., Plasterer's trowel	162,355
Doe, W., Nozzle for oil cans	162,223
Doland and Scherb	162,313
Dorman, J., and T. G. Good, Propelling and steering apparatus for vessels	162,156
Downton, R. L., Manufacturing middlings flour	162,157
Downton, R. L., Middlings purifier	162,158
Doyle, T., Saw filing machine	162,356
Draper, G. A. and W. F., assignees, (reissue)	6,396
Dunn, J. W., Vine rake	162,277
Durfee, W. F., Pile for bar iron	162 159
Dusenbury, W. F., Carriage spring	162 278
Eads, J. B., Iron bridge	162,357
Earnshaw, J., Car for inclined planes	162 358
Eastern Manufacturing Company, assignee	162,332, 162,440
Eberly, J. A., Washing machine	162,359
Edwards, H., Shawl strap handle	162,360
Eder, J., Awning	162,361
Elrod, C. W., assignee	162,449
Elward, J. H., Harvester, (reissue)	6,395
Endres, J. J., Artificial fuel	162,362
Endres, J. J., Machine for the manufacture of artificial fuel	162 363
Erskine, I. and C., Ladder	162,364
Everham, W., assignee	162,384
Ewart, W. D., Drive chain, (reissue)	6,387
Fairbanks, C. M., Circular saw mill	162 279
Farnan, J., Lubricator for steam engines	162 160
Farr, R. D., Stove pipe shelf	162 365
Fawcett, T. C., Automatic rain water cut-off	162,366
Feldmeier, H., and E. Stoeppelwerth, Coal scuttle	162,367
Felthousen, J. D., Horseshoe	162 280
Fergus, D., Steam injector	162,368
Fisher, D. A., Jr., Joiner's clamp	162,281
Flad, H., Railway signal	162,369
Flower, J., Street hydrant	162,370
Flynn, F. W., Cotton gin feeder	162,371
Foley and Adee	162,372
Follett, J. L., Sewing machine	162 161
Forbes, W. H., and N. Hallock, Bronzing machine	162,162
Forehand, S., and H. C. Wadsworth, Revolving fire arm	162,415
Foreman, S. H., assignee	162,224
Freund, F. W., Breech loading fire arm	162,373
Freund, F. W., Pistol gripe attachment for fire arm stocks	162,374
Freund, F. W., Guard lever and means of operating the breech block of breech loading fire arms	162,163
Frisbee, G., Expanding bit for enlarging blast holes	162,375
Gamwell, S. T., Vehicle axle	162,336, 162,337
Gay, O. M., assignee	162,193
Gibson, E. M., assignee	162,282
Gibson, R. F., Key fastener	162,164
Gilfillan, W., Combination lock	162,283
Gillespie, C. E., Automatic gate	162 138
Gillett, E. A. and O. S., assignees	162,239
Gilliland and Kennoch	162,239
Gilliland, E. T. and J. F., assignees	162,302
Githens and Nutting	162,415
Glase, C. F., assignee	162,284
Glund, C., Cigar box	162,165
Godley, G. F., Vehicle spring	162,156
Good and Dorman	6,395
Goodhue, W. S., assignee, (reissue)	162,225
Goodrich, H. C., Tuck marker	162,226
Goodrich, H. C., Tuck marker	162,227
Goodrich, H. C., Tuck creaser	162,376
Gordon, J., Railroad signal	
Gordon, T. J., and D. H. Bumpus, Manufacturing lubricating oils	162,377
Gore, M., Windmill	162,228
Gould, E., assignee	162 199
Goulet, F., Gage lathe for turning wood	162,229
Granger, E. J., Barrel stave adjuster	162,231
Granger, E. J., and H. S. Smith, Barrel head adjuster	162,230
Gray, J. D., Stand oil can, (reissue)	6,396
Grover, T. L., Device for forging tile blanks	162,378
Hagennan, J. J., assignee	162,159
Hagerty, J. S., Street car pole coupling	162,379
Hall, J. T., Fire extinguisher	162,232
Hallock and Forbes	162,161
Halsey, C. S., assignee	162,430
Hampton, J. W., Washing machine	162 380
Hapgood & Co, assignees	162,240
Harper and McCoy	162,402
Harris, N., Box for packing lamp chimneys	162,285
Hart, H. C., Wick raiser	162,286
Hatch, J. W., Heel stiffener, (reissue)	6,388
Head, M. A., Neck tie holder	162 287
Heath, L., Shoe	162,166
Heaton, G. S., Machine for making boot and shoe box toes	162,381
Hess, J. F., Rain water cut-off	162,382
Hill, A. A., assignee	162,308
Hill, J., assignee	162,166
Hinvest, R., Cramp for hollow walls	162,383
Hitchcock, G., Pavior's rammer	162 324
Hobbs, J. H., and C. W. Brockunier, Glass mold	162,233.
Hobbs, J. H., and C. W. Brockunier, Manufacture of pressed glass flower and fruit stands	162 234
Hoffmann, G. W., Sewing machine	162,288
Holland, C. L., Nut lock	162 167
Holyoke Machine Company, assignee	162 260
Hopkins, G. M., Steam trap	162,168
Hopkins, G. M., Pipe or hose coupling	162,169
Horner, S., Jr., Carpet fabric	162,3?5
Horton, R., Dental bib	162,170
House, J. M., assignee	162 295
Howard, R. L. and G. F., assignees	162,194, 162,195
Hubbard Harvester Company, assignee	162,405
Hubbard, M. G., Metallic washer	162,386
Hubon, H. G., Lamp bracket	162,171
Hurlbut, J. B., Apparatus for laying cement pavements in blocks	162 172
Huskamp, A., Cap box	162,387
Hutchins, C., Corn planter	162,173
Hyde, J. R., Cooking stove, (reissue)	6,389
Hyde, J. R., Reservoir cooking stove	6,390
Ingraham, L. S., Skate	162 174
Iribacker, J., assignee, (reissue)	6,394
Johnson, H., Conductor's punch	162,289
Johnson, L. M., Burglar alarm	162,235
Jones, C. L., Compound hose pipe nozzle	162,388
Jones, J., Hay elevator	162,389
Jones, J. F., Paper tube machine	162 236
Joyce, A. S., Hat brushing machine	162 390
Keely, N., Paper barrel	162,237
Kenison, O. W., Loom harness motion	162,238
Kennoch, W. W., and E. F. and J. F. Gilliland, Burglar alarm	162,239
Kimel, D. D., Car brake	162,290

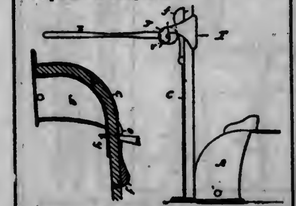
TITLES, DRAWINGS, AND CLAIMS

OF

PATENTS GRANTED APRIL 20, 1875.

162,137. CHUCKS FOR SCREW-THREADING. Walter Aiken, Franklin, N. H. [Filed Feb. 27, 1875.]

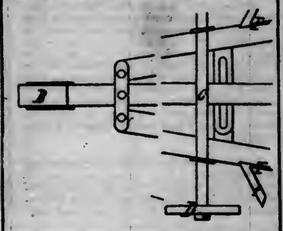


Brief.—Improvement on Letters Patent No. 149,620. Levers are bent as as to extend laterally out of the spindle, and are operated by a sliding sleeve and toggle-connection. Front ends of levers are held up against the rounded ends of the pivot screws by a U shaped spring.

In combination with the jaw-levers A A, bent and extended laterally at their rear parts out of the spindle B, substantially as represented, the tubular slide m and the toggles l l, arranged with the spindle, and in advance of the bent portions of the jaw-levers, and connected together and therewith, all as set forth.

162,138. BENDING WOOD. Saml. R. Bailey, Bath, Me., assignor to Edward A. Gillett, Boston, Mass., and Oscar S. Gillett, Buffalo, N. Y. [Filed Apr. 6, 1875.]

Brief.—The timber is kept heated while in the process of being bent.



1. The hollow former A having the shoulders p p, and adapted to be heated, as described, in combination with the strap C having the tapering block f, and shoulders a, and clamp F, constructed, and lever L all constructed to operate substantially as described.

2. The strap C having shoulders a a, in combination with form A, shoulders p p, and prongs or keys g, substantially as and for the purpose specified.

162,139. BRAN-HARVESTERS. William C. Barber and George Amis, Knowlesville, N. Y. [Filed Oct. 8, 1874.]

Brief.—The ordinary cultivator frame is provided with cutters, the blades of which project in a horizontal position. Said frame is also provided with carrying-wheels, which govern the depth of cut of the blades.

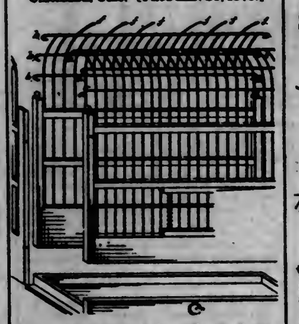
The combination, substantially as herein shown and described, of the frame A, single front guide-wheel B, cutters F F, and a pair of rear guide-wheels, D D, as and for the purpose set forth.

162,140. PROCESSES FOR TANNING HIDES. George A. Bartenbach and Chas. Richter, Detroit, Mich. [Filed Feb. 1, 1875.]

Brief.—Tanning solution: Alum, salt, sulphuric acid, wheat-bran, sulphur, terra-japonica, and mucilage. Dubbing composed: Fish-oil, tallow, linseed-oil, and soda.

1. In the manufacture of leather from hides or skins, the solutions composed of the ingredients named, in about the proportions specified.

2. The manufacture of leather from hides or skins by the application of the solutions named, substantially in the manner shown and described.



162,141. GAME-BOARDS. George Bayles, New York, N. Y. [Filed Mar. 17, 1875.]

Brief.—The game consists in the success or failure of erecting a structure upon the sensitive platform.

The combination, in a game-board, of the base A, the spring c, and the sensitive or oscillating platform b, substantially as and for the purpose described.

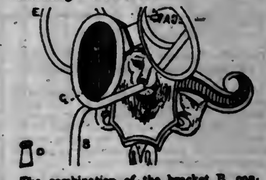
162,142. BIRD-CAGES. Herman Belmer, Cincinnati, Ohio. [Filed Mar. 30, 1875.]

1. A bird-cage made in sections, and provided with wires f and hooked ribs a b, for use in securing the same together, substantially as described.

2. A sectional bird-cage, having its parts secured together by projecting wires and hooks on its sides, and fastening devices passing through its sides into its ends, and through its bottom into its sides and ends, as specified.

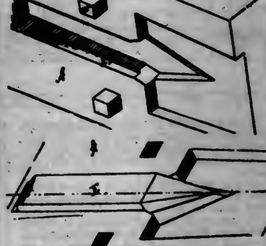
162,143. MILLSTONE-BALANCES. Solomon Bernheisel, Green Park, Pa. [Filed Aug. 20, 1874.]

Brief.—Balance-weights, as constructed, can be reversed to throw their preponderating ends either at the top or bottom of the stone.



The transversely or horizontally grooved tapering balance-weights A a, substantially as and for the purpose specified.

162,144.



162,144. SIGNS. Francis Billingham, New York, N. Y. [Filed Aug. 27, 1874.]

Brief.—A sign is mounted upon the top of a gas-bracket, and light reflected thereon by its hinged covers, which, when closed upon the sign, may be used upon their outsides for advertising in the daytime.

The combination of the bracket B, constructed substantially as described, and provided with a burner, D, with the sign or signs C and the covers E, lined with a reflecting surface, substantially as and for the purpose specified.

162,145. CASTING SHOVEL-BLANKS. Edwd. Binns and Elmore A. Barnes, Pittsburg, Pa. [Filed Feb. 15, 1875.]

1. A cast shovel-blank having those parts of the casting which correspond to the straps united at their outer ends, forming a loop, substantially as specified.

2. In combination with the molds A A, having shoulders or ledges b' b', a destructible pointed core, B, supported within the mold and above the bottom thereof, substantially as and for the purpose specified.

162,146. MANUFACTURE OF SHOVELS. T. J. Blake, Pittsburg, Pa. [Filed Feb. 18, 1875.]

Brief.—The socket is opened by a properly-shaped mandrel driven therein, and the straps, at their junction with the body of the shovel, are set down and the socket properly formed upon the mandrel by means of dies.

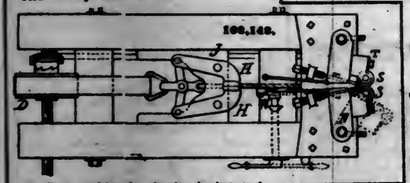
1. The improvement in the art of manufacturing a cycle herein described, and consisting in setting up and shaping the socket and straps, while heated, by means of suitable dies and a mandrel, substantially as specified.

2. The combination of the dies or swages A B, and the mandrel C, substantially as and for the purpose specified.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

160,146.

160,147.



160,147. JELLY-PRESSES. W. W. Bostwick, Cincinnati, Ohio. [Filed Mar. 30, 1875.]

In a jelly-press, the collar *g* and projections *e* on the journal *f*, and the handle B, in combination with the piston A, having an upwardly-projecting collar centrally arranged on it, and a soft-metal ring, D, fitted in a recess formed in the piston, substantially as and for the purpose set forth.

160,148. MACHINES FOR SHAVING BASKET-STUFF. Reuben J. Brooks, Jr., Rutland, Mass. [Filed Dec. 11, 1874.]

Brief.—The material is, by suitable mechanism, drawn between knives secured in pivoted and adjustable frames.

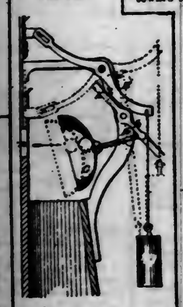
160,148.

1. In a machine for shaving basket-stock, the adjustable shaving mechanism described, consisting of the knife Q, roll S, and their adjusting-holder N, substantially as above set forth.

2. The pivoted knife-holder N, in combination with the lever W and connection therewith, as above set forth.

3. The combination of the holder N, adjustable knife Q, elastic roll S, and the guard-plate T, when constructed and operating in the manner and for the purposes above set forth.

4. The combination of the shaving mechanism described, consisting of the knife Q and its holder N, and the drawing mechanism, consisting of the sliding jaws H H and the drum D, substantially as set forth.



5. The combination of the shaving mechanism, the drawing mechanism, and the retaining mechanism, consisting of the springdrum M and connection L, making the machine automatic, when constructed and operating substantially as above set forth.

160,149. TARGETS. Charles Buckner, Jr., San Francisco, Cal., assignor of one-half his right to J. E. A. Ludwig, same place. [Filed June 10, 1874.]

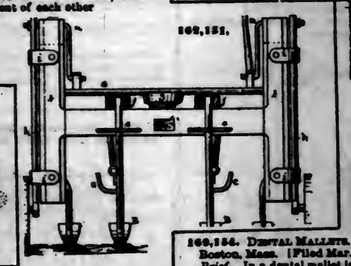
Brief.—Upon a ball passing through the opening in the target, a bell is sounded and the figure of an imp shot up into view.

The target herein described, consisting essentially of the board A, figure D, opening n, sliding figure I, lever L A, and gong G, all combined and arranged to operate substantially as and for the purposes set forth.

160,149.

160,150. GAS-STOVES. Charles Burnham and Jos. G. Taite, Philadelphia, Pa. [Filed Mar 24, 1875.]

Brief.—The draft of air through the aperture to the base of the drum throws the flame toward the reflector

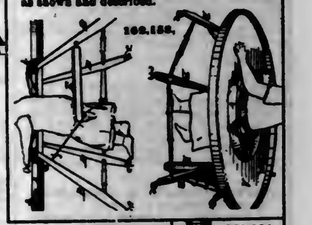


1. The gas-stove described, having the base A, reflector B, and gas-ring D, constructed and arranged as described.

2. The combination of the reflector and gas-ring with the radiating-drum C, as described.

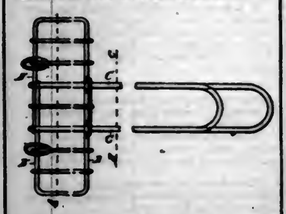
160,151. PLOWS. Clement L. Carter, Union City, Ind. [Filed Jan. 12, 1875.]

Brief.—An upright frame with crank and lever for raising it upon the wheels. Middle standards pivoted at their centers, and vibrated independent of each other



160,151.

160,152. BABY-WALKERS. Irving D. Clark, Gloversville, N. Y. [Filed Mar. 2, 1875.]



The walking table consisting of the platform A, supported on five or more legs, B, having casters *c*, and provided with the central opening A' and the inner and outer guards or rims *a* and *b*, in combination with the flexible waist-holder D and the swinging seat E, constructed and arranged to operate substantially as shown and described.

160,152.

160,153. PLOWS. Henry J. Chamberlin, Worcester, Mass. [Filed Mar. 29, 1875.]

Brief.—The frame is made of one piece of flattened wire, and is notched at the ends in the body of the wire, to hold laterally the cross-wires which are bent around it.

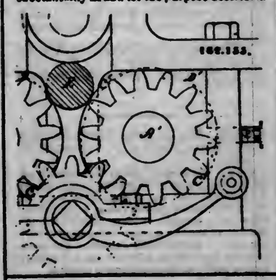
1. The combination of the wheels *g*, having long stub-axles *h*, with the frame, having the vertical slotted posts *k* and guides *i*, and with the cranks *n*, rock-shaft *o*, and lever *l*, as shown and described.

2. The combination of the inner standards B, pivoted at their middle to a rigid support, having the arms *ff* and the stirrups *e*, with the loops *c* and the swinging seat-bar S, substantially as shown, and for the purposes set forth.

160,154. DENTAL MALLETS. J. T. Codman, Boston, Mass. [Filed Mar. 30, 1875.]

Brief.—In a dental mallet in which reciprocating motion is produced upon the mallet-plugger by a cam and rotating shaft, pressure upon the end of the tool varies the power of the blow.

The combination, in a dental mallet or plugger in which rotary is converted into a reciprocating motion, and in which the blow is effected by means of a spring upon a plunger or driver, of an arrangement whereby the force of the spring is varied in accordance with end pressure upon the tool, substantially as described.



160,155. ROLLS FOR ROUNDING AND SMOOTHING METALLIC RODS AND BARS. Thomas B. Cook, Cleveland, Ohio. [Filed Mar. 6, 1875.]

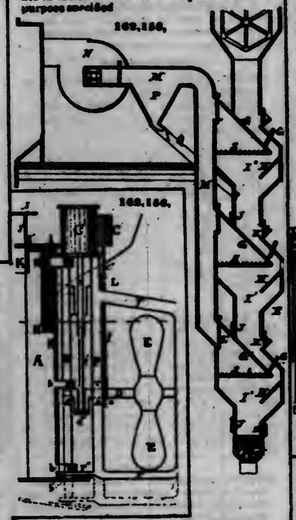
Brief.—A pair of cylindrical rolls, each having two plain-surface sections, alternating with two spirally-grooved sections extending from one end to the other, and so arranged in relation to one another that the bar to be rounded, lying between and parallel to the axes of the rolls, will be operated on constantly by the ridges or ribs of the one roll and a plain surface of the other, and, in virtue of the spirality of the ribs, be gradually drawn through and finally discharged from the rolls.

1. A device for the straightening, rounding, and smoothing of bars of metal, consisting of rolls A A', provided with alternate worm-grooves C C' and smooth surfaces D D' substantially as and for the purposes described.

2. In a device for rounding, smoothing, and straightening metallic bars, grooves C, constructed in worm or screw thread form, whereby the bar is automatically fed to the rolls, substantially as and for the purposes described.

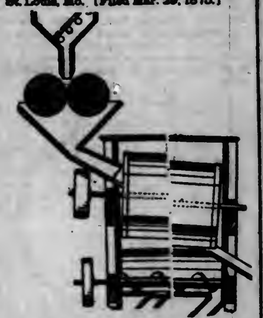
160,155.

160,156. PROPELLING AND STEERING APPARATUS FOR VESSELS. Jerry Dorman and Thos. G. Good, Georgetown, D. C. [Filed Jan. 22, 1875.]



1. The combination, in an apparatus for propelling vessels, of a bar or plate hinged to the under side of the vessel, an automatically-moving vertical shaft, the lower end of which rests upon said hinged bar, and a propelling-cylinder, which is connected to and moves with said shaft, the parts being arranged to operate substantially as and for the purpose set forth.

2. The herein-described arrangement of mechanism for elevating the propeller and engine, and for allowing of the independent automatic rising of said propeller and engine, substantially as set forth.



3. The combination of the propeller-shaft D and the perforated movable vertical shaft, their arrangement with reference to each other being such as is described.

3. The combination, with the fan and air-pipe M, leading to the dust-room, and communicating with the series of separating-chambers forming the air-leg, of the settling-chamber P, all constructed and arranged to operate in the manner substantially as and for the purposes specified

160,156.

160,157. PROCESSES OF MANUFACTURING MIDDLINGS-FLOUR. Robert L. Downton, St. Louis, Mo. [Filed Mar. 29, 1875.]

The herein-described process of manufacturing middlings-flour by passing the middlings, after their discharge from a purifier, through or between rolls, and subsequently bolting and grinding the same, for the purposes set forth.

160,158. MIDDLINGS-PURIFIERS. Robert L. Downton, St. Louis, Mo. [Filed Mar. 24, 1875.]

1. The combination of the graded reel or bolt A, clothed with different grades of cloth, and two or more separating air-legs, each air-leg consisting of a series of separating-chambers, having at the bottom an inclined passage for the purpose of conducting the material away from the currents of air, and introducing the material at a point above the air-inlet in each successive chamber for reparification.

2. The combination, with the separating-chamber I', of the perforated equalizing-partition S, substantially as set forth.

4. The combination, with the graded reel or bolt A and sets of separators or air-legs E E', each having a series of separating-chambers, of the pipes M, fans F F', and separate dust-rooms O O, all constructed and arranged to operate substantially in the manner as and for the purpose set forth.

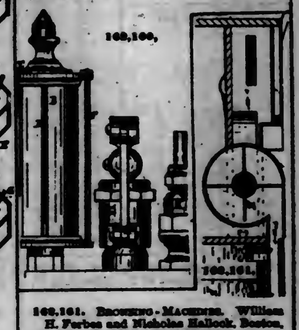
5. The combination, with the inclined board or plate G, of the slide G', to partially close the passage or space between the chambers I', substantially as and for the purpose set forth.

6. The combination, with separating-chamber I', of the air-openings J K at opposite sides and in the lower portion of said chamber, spreading board or plate H, and equalizing partition or board S, all substantially as and for the purpose set forth.

160,159. FILES FOR BAR-IRON. William F. Durfee, Milwaukee, Wis., assignor of one-half his right to James John Hagerman, same place. [Filed Mar. 16, 1875.]

1. A file for the manufacture of bar-iron, composed of railroad-bars, arranged in combination with other bars and scrap-iron, substantially in the manner and for the purpose hereinbefore described.

2. The peculiar combination of staples, or their equivalents, for holding the pile together, arranged substantially in the manner and for the purpose before described.



160,160. LUBRICATORS FOR STEAM-ENGINES. James Farran, Cleveland, Ohio. [Filed Oct. 28, 1874.]

Brief.—The oil passes from the glass reservoir into the chamber D, and through valve J into the sub-chamber I, where, by the lifting of the handle of the pump, the oil will be ejected from the apparatus, and injected into the cylinder.

1. The reservoir A, consisting of the glass cylinder E, cap E, base C, rods F, and stopper E', in combination with the chamber D and pump O, in the manner as described, and for the purpose set forth.

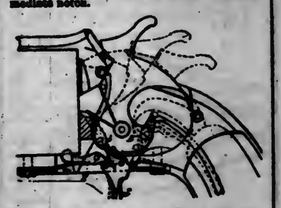
2. The combination of the reservoir A, chamber D, chamber I, valve J, pump O, and condenser K, having a valve N, in the manner substantially as described, and for the purpose set forth.

160,160.

160,161. BRONZING-MACHINES. William H. Forbes and Nicholas Hallock, Boston, Mass. [Filed Mar. 19, 1875.]

1. The perforated table, in combination with the exhaust-fan and condensing-reservoir F, substantially as set forth.

2. In combination with a bronze-printing machine, the exhaust-fan E and condenser F, provided with the tubes *a a*, and water or other liquid, substantially as and for the purpose described.

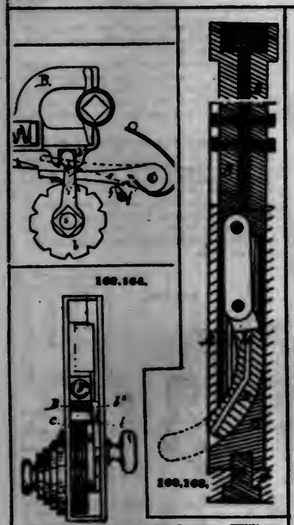


3. The reservoir or condenser F, constructed with the perforated diaphragm *i*, and pipes *a a*, as specified.

4. The process herein described of preserving waste bronze-powder by forcing the air containing it through water, substantially as described.

160,162. REVOLVING FIRE-ARMS. Sullivan Forehand and Henry C. Wadsworth, Worcester, Mass. [Filed Mar. 10, 1875.]

Brief.—The cylinder locking and releasing mechanism is so arranged that the cylinder is locked when the rear is in the half and full cock notches, and released when in the intermediate notch.



160,162.

The combination, with tumbler B and cylinder G, of safety-notch h, trigger D, finger A, locking-lever E, and springs I and m, substantially as and for the purposes set forth.

160,163. EXPANDING BITS FOR ENLARGING BLAST-HOLES. Gideon Frisbee, Reading, Pa. [Filed Nov. 21, 1874.]

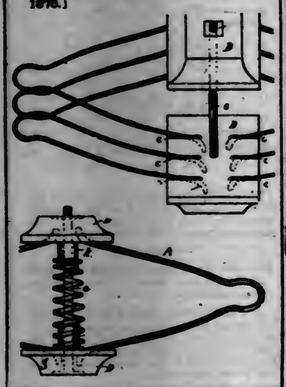
In a continuously-rotating expanding-drill, constructed substantially as specified, the combination of the bit D perforated with the water-hole H, with the diamonds inserted in the cutting end of the bit, substantially as shown and described.

160,164.

160,165.

160,164. COMBINATION-LOCKS. William Gilliam, Syracuse, N. Y. [Filed July 13, 1874.]

1. The tubular dials *a a'*, provided with numbers upon their outer flanges, and with the numbered grooves *c* upon their inner ends, in combination with the notched numbers *b*, provided with spurs *d*, substantially as set forth.



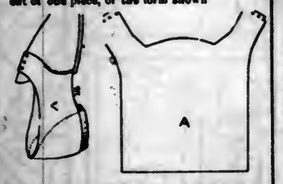
2. The bolt E, provided with the stop-arm *h*, arranged to pass above the cheek-bars when spurs *n* enter the notches *i* in the tumblers, and to pass below the cheek-bars when they are raised, as in dotted lines in Fig. 1, substantially as set forth.

3. A cheek-bar, *c*, provided with spur *n* and notch *o*, in combination with the shaft *f'*, provided with lip *f*, substantially as set forth.

4. The combination of the arm A, the lip *b'*, and the cheek-bars *c*, whereby the arm A serves as a guide to insure that the cheek-bars shall enter behind flange *b'*, substantially as set forth.

5. The combination of the shaft *f'*, provided with the lip *f*, the cheek-bars *c*, and the arm *h* on bolt E, whereby said cheek-bars may be lifted and suspended above arm *h*, so that bolt E may be operated as an ordinary latch-lock, substantially as set forth.

160,166. SPRINGS FOR VEHICLES. Geo. F. Godley, Philadelphia, Pa. [Filed Mar. 4, 1875.]

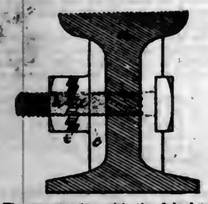


1. A spring for cars and other vehicles, composed of a series of doubled or retroverted rods or bars, A, the ends of which are lodged in grooves or recesses *c c* in the plates D D, the latter being held by a bolt or bolts, *e e*, as set forth.

2. In combination with the retroverted rods or bars A, recessed plates D D, and bolt or bolts *e*, the central auxiliary springs, substantially as shown and described.

160,166. SHOES. Laban Heath, Boston, assignor of one-fourth his right to Jas Hill, Stoughton, Mass. [Filed Mar 18, 1875.]

Brief.—The quarters and vamp portion are cut of one piece, of the form shown



1. As a new article of manufacture, a shoe having the quarters A cut in one piece, as shown in Fig. 3, and molded or crimped to fit the shape of the foot and form the shank *n*, substantially as and for the purpose specified

2. As a new article of manufacture, a shoe having the quarters A cut in one piece, as shown in Fig. 3, and molded or crimped to fit the shape of the foot and form the shank *n*, and provided with the metallic shank-piece C, substantially as and for the purpose set forth.

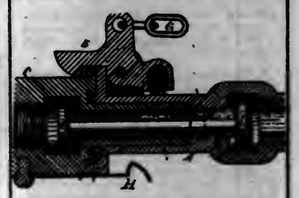
160,167. NUT-LOCKS. Charles L. Holland, Ipswich, Mass., assignor of one-half his right to J. J. Sullivan, same place. [Filed May 27, 1874.]

Brief.—Radial serrations are made on the fish-plate, or on a washer rigidly attached to it, and also on the adjacent face of the nut, with an elastic washer between.

The combination with the fish-plate *e* or washer *f*, provided with the rigid serrations or teeth *a*, of the bolt *d*, serrated nut *h*, having its teeth cut in opposite directions from those on the fish-plate, and the elastic washer *i*, arranged between the nut and serrations on the fish-plate or washer, as and for the purposes described.

160,168. STEAM-TRAPS. Geo. M. Hopkins, Albion, N. Y. [Filed Feb. 21, 1874.]

Brief.—The valves are set open when the expansion-tube is cold, thus allowing water of condensation while moderately cool to pass out. When the tube is expanded by hot water or steam, it will move the lever, which will depress the springs, and close the valves more or less. When steam is shut off from the pipes which the trap drains, the cylinder will retain heat sufficiently long to allow the water to pass out without freezing.



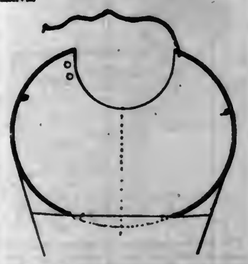
1. In combination with the pipe G and the expansion-tube E, the independent intermediate cylinder A, whereby the trap is adapted to retain heat, substantially as and for the purpose set forth.

2. The combination of the valves C and F, tube B, and cylinder A, substantially as specified.

3. The combination of the levers E E', screws *e e'*, springs D D', valves C and F, rods *b b'*, and expansion-tube B, substantially as shown and described.

160,169. PIPE OR HOSE COUPLINGS. Geo. M. Hopkins, Albion, N. Y. [Filed Feb. 21, 1874.]

Brief.—The coupling is for hose used in operating the brakes or in heating cars by steam. A catch on one part engages with a section of a screw thread on the other, being held in place by a spring. In case of accident the catch is tripped by a chain connecting it with the car. A spring-catch on one of the parts sustains the coupling after the catch is tripped until a slight additional force is applied.



1. The combination of the part A, catch E, part C, cam D, and chain G, substantially as specified.

2. The combination of the parts A and C and spring H, when arranged to operate in the manner specified.

3. The combination of the parts A and C, catch E, chain G, cam D, spring-catch H, and valves I I', substantially as shown and described.

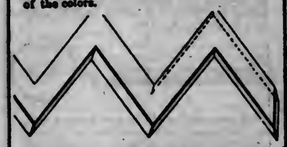
160,170. DENTAL BIBS. Rollin Horton, Cleveland, Ohio. [Filed Mar. 26, 1875.]

Brief.—A rubber pouch, held in place by inserting bent wires in a sheet of rubber, is secured underneath the mouth to catch the saliva.

A dental bib consisting of the pouch *a*, with the upper portion thereof formed to extend over the chest and under the chin, and made of gum-elastic or its equivalent material, and having a wire or spring, B, secured to the edges thereof, and provided with suitable means for fastening it under the chin, substantially as and for the purpose herein described.

160,171. LAMP-BRACKETS. H. G. Hubon, Salem, Mass. [Filed Feb. 26, 1875.]

Brief.—The socket is for the insertion of a support for a reflector.

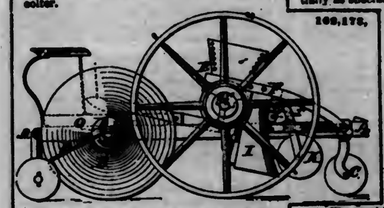


A lamp-bracket constructed with a holder, A, having an opening, *a*, in one side, a shaft or arm, B, provided with a reflector-socket, *b*, and a screw-shank, C, provided with a flange, *c*, all substantially as herein specified.

160,171.

160,172. APPARATUS FOR LAYING CEMENT PAVEMENTS IN BLOCKS. J. Burrell Hurlbut, Chicago, Ill., assignor of one-half his right to William P. Dickinson, same place. [Filed Nov. 21, 1874.]

Brief.—The block is beveled in opposite directions, on alternate sides, while plastic, thus forming a secure key to prevent deviations from a plane upper surface. A forming-frame is used for this purpose, of zigzag form, with parallel beveled faces, so that when reversed it forms the required bevel of the blocks. An elastic parting-strip is also used for lining off the edges and preventing the intermingling of the colors.



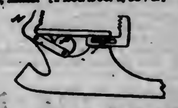
1. The forming-frame, when made with beveled edges, and reversible, substantially as described.

2. The parting-strip, having the depression *f* and pliable strip *g*, forming the spring-edges *h*, as described.

3. The block or stone, formed substantially as described, with its opposite edges beveled in opposite directions, for the purpose specified.

160,173. CORN-PLANTERS. Chas. Hutchins, Carthage, Mo. [Filed June 22, 1874.]

Brief.—To the swinging frame pivoted to the front of the main frame is attached a hollow plow having a pivoted lever, the upper end of which is struck by a second lever actuated by projections on the axle that rotates the seeding-wheels for dropping the seed. At the front are a caster-wheel and a revolving colter.



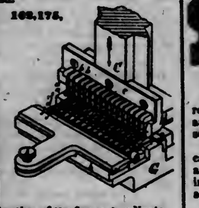
160,173.

1. In combination with the swinging frame E, attached to the main frame A by means of the arms F, the vertically-adjustable hollow plow I, attached to the pivoted swinging frame B by the connection I', and to the main frame A by the pivoted swinging bar I', provided with the dropping mechanism M N and revolving cutter K, all constructed, arranged, and adapted to operate as and for the purposes described.

2. The combination and arrangement of independently vertically-adjustable plows I I' I', swinging frame F, carrying the seeding mechanism L M, revolving cutter K, and main frame A, provided with the caster C, substantially as and for the purposes described.

160,174. SEATS. L. S. Ingraham, Florence, Mass. [Filed Dec. 1, 1874.]

The hinged heel-clamp H, operated by the eccentric F, hinged thereto, and recessed within the blade, as shown and described.

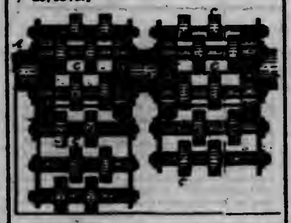


160,175. MACHINES FOR PUNCHING THE EYES OF MACHINE-NEEDLES. Samuel C. Kingman, Bridgeport, Conn., assignor to Wheeler & Wilson Manufacturing Company, same place. [Filed Feb. 15, 1875.]

Brief.—Spring presser-feet reach the needles before the punches do, and serve to press them firmly upon their respective dies. The punches and dies are secured in their respective places by keys or wedges. Back of the series of dies is a gage-bar provided with a series of holes, in which the points of the needles held in the clamp are placed.

1. In a machine for punching the eyes of sewing-machine needles, the series of two or more punches, *a a*, series of two or more tapering keys, *b b*, punch-seat H, series of two or more dies, *c c*, series of two or more tapering keys, *f f*, die-seat G, and adjustable gage-bar *h*, with the clamp *i*, all constructed, arranged, and operated for the purpose of punching the eyes of a series of two or more sewing-machine needles, substantially as and in the manner and for the object set forth.

2. In a machine for punching the eyes of sewing-machine needles, the series of two or more springs, *d d*, secured to the bottom of the reciprocating punch-seat H, in combination with the series of two or more needle-eye punches, *a a*, and tapering keys *b b*, for the purpose of pressing the series of two or more needles firmly upon the series of two or more dies, *c c*, during the operation of punching the eyes in said needles, constructed and operating substantially as specified.



3. In a machine for punching the eyes of sewing-machine needles, in combination with the series of two or more needle-eye punches, *a a*, and the series of two or more needle-eye dies, *c c*, the adjustable gage-bar *h*, secured to the front edge of the die-seat G, for the purpose of gaging the series of two or more needles and clamp *i*, to a proper position with respect to the series of two or more dies, *c c*, and punches *a a*, during the operation of punching the eyes in said needles, substantially as specified.

160,175.

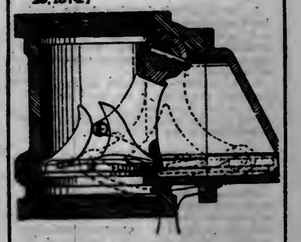
4. The combination of the frame A, adjustable gibs B B', slide C, shaft D, cam E, lever F, die-seat G, punch-seat H, series of two or more punches, *a a*, series of two or more tapering keys, *b b*, gage-plate *c*, series of two or more springs, *d d*, series of two or more dies, *e e*, series of two or more tapering keys, *f f*, gage-bar *g*, gage-bar *h*, with the clamp *i*, all constructed, arranged, and operated substantially as and for the object set forth.

160,176. LOOM PATTERN-CHAINS. Lemuel J. Knowles, Worcester, Mass. [Filed Mar. 20, 1875.]

1. The combination, with shaft A and hub pieces B, of the pocket-blades *b*, substantially as and for the purposes set forth.

2. The combination, with shaft A and pocket-blades *b*, of the pattern wheels or rolls C, fitted loosely upon their shafts D, substantially as and for the purposes set forth.

160,177. CAR-BRAKES. Cornelius Lagowe and Richard J. Wynkoop, Paterson, N. J. [Filed Dec. 1, 1874.]



160,177.

1. The brake-wheels C located upon the axle B, between the wheels A A, in combination with the brake-strap shoe D, lever D', and a connecting-rod, H', substantially for the purpose set forth.

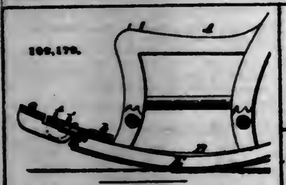
2. The combination of the brake-wheels C C, one upon each axle B, and the brake-strap shoe D D, levers D' D', pivoted to the bar G, and connecting-rod H, to communicate movement from one to the other of said levers, as set forth.

160,178. VALVES. Henry S. Lansdell and John S. Long, Brooklyn, N. Y. [Filed Dec. 29, 1874.]

1. In combination with a sliding valve, a rock-shaft arranged within the valve-chamber, and operating both to open and close the valve, substantially as set forth.

2. In combination with the sliding valve, a cam or lever-arm, or the equivalent thereof, arranged upon the rock-shaft and operating in connection therewith, substantially as described, to force the valve to its seat.

3. The combination of the rock-shaft, arranged within the valve-chamber, the lever-arm attached to said shaft, and the slot in the back of the valve, in which the lever-arm moves in opening and closing the valve.

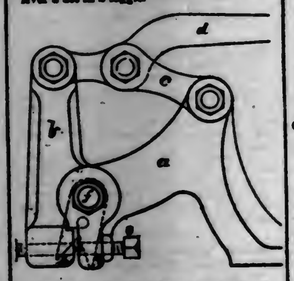


4. In combination with the lever-arm, the slot in the back of the sliding valve, when the same is curved or otherwise constructed, substantially as described, to aid in starting the valve away from its seat the moment it begins to open, substantially as and for the purpose set forth.

160,179. ROCKING-CHAIRS. Adolph List, Boonville, Ind. [Filed Mar. 23, 1875.]

1. In combination with the rocking-chair A B, the blind rockers E, secured to the rear ends of the rockers B, and provided at the front end with blind foot-stool *a*, as and for the purposes described.

2. In combination with the blind rockers E and blind foot-stool *a*, the foot-stool or rest *b'*, hinged to the ordinary rest *b*, and provided on its top with a heel-step, *b'*, as and for the purposes described.



3. The self-rocking chair, consisting of the rocking-chair A B, hinged blind rockers E E', blind foot-stool *a*, and hinged foot-stool *b' b''*, all constructed, arranged, and adapted to operate substantially as and for the purposes described.

No. 162,179.

162,179. CLAMPING DEVICES. James B. Maxwell, Hamilton, and Charles A. Scott, Cincinnati, Ohio; said Maxwell assignor to said Scott. [Filed Oct. 19, 1874.]

Brief.—The link *c* and the small end of the lever *d* act as a toggle.

1. The improved clamping device herein described, consisting of frame *a*, carrying a jaw, *g*, the lever *b*, carrying a jaw, *h*, and pivoted at *f* to the frame *a*, the lever *d*, and link *c*, all combined and operated substantially as set forth.

2. The improved clamping device herein described, consisting of the frame *a*, link *c*, levers *d* and *b*, and jaws *g* and *h*, in combination with the countervailing devices *e e*, as and for the purposes set forth.

162,181. PUMPS. Reuben A. McCauley, Baltimore, Md. [Filed Mar. 18, 1875.]

Brief.—Valve-seats and valves are inclined to the axis of the cylinder, and enveloped in a projecting elastic tubing, which assists in insuring a tight valve. Operating mechanism is partly within and partly outside of the enlarged chamber, the ends of the fulcrum-shaft only passing through the walls of it, and they being suitably packed.

1. In a pump, the chamber B, adapted to allow within it the operation of the mechanism forming the means of connection between the hand-lever and piston, substantially as herein specified.

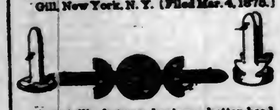
No. 162,181.

2. The arms *d*, links *c*, and piston D, placed within the barrel A and chamber B of the pump, combined with the shaft *e* and forked lever *f*, substantially as and for the purposes set forth.

3. The piston D, and valve-seats E and valves *g*, in combination with the flexible tubular extension-pieces G, substantially as and for the purposes set forth.

162,182. PAPER-FASTENERS. G. W. McGill, New York, N. Y. [Filed Oct. 9, 1874.]

The fastener herein shown, made of a single strip of metal bent into a T shape, with its shanks *d d* at obtuse angles from its head, so that they will bridge the center hole and must above it at their points, in the manner and for the purposes herein set forth and described



No. 162,182. No. 162,183.

162,182. METALLIC PAPER-FASTENERS. G. W. McGill, New York, N. Y. [Filed Sept. 12, 1874.]

The within-described metallic fastener, formed of the two blanks *a b c b* and the cap or shell *e*, bent and connected together as herein shown and described, the ends of the shanks *b b* of the blanks being in close parallel contact, and pointed so as to make only a single hole in the articles it is designed to connect, substantially as described.

162,183. METALLIC FASTENERS. G. W. McGill, New York, N. Y. [Filed Mar. 4, 1875.]

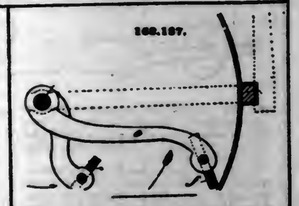
A metallic fastener, having a button-head with folded or struck-up edge, and constructed in other respects substantially as herein set forth and described, for the purposes specified.

162,184. SUPPORTING RINGS OR FASTENERS. G. W. McGill, New York, N. Y. [Filed Jan. 20, 1875.]

As an improved article of manufacture, my said suspending-fastener, stamped with an integral head from a single piece of metal, and bent and swaged into the form substantially as herein represented, the same being as and for the purposes herein set forth.

162,185. CAR-WHEELS. William A. Miles, Copake Iron-Works, N. Y. [Filed Dec. 29, 1874.]

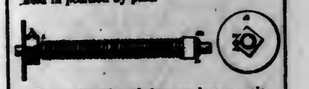
1. As a new article of manufacture, a car-wheel, consisting of three parts, a central portion, B, a tire, A, and an intermediate metal welding portion uniting the main portions to form a single solid structure, substantially as described.



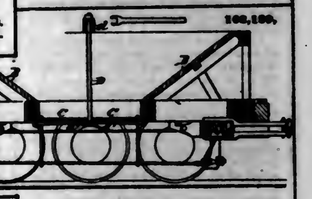
2. A car-wheel, having the tire A and body B, with corresponding recesses, and an intermediate uniting metal, filling said recesses, substantially as described.

No. 162,185. No. 162,186.

162,186. DOUGH-MIXERS. Elbridge G. Morrison, Haverhill, Mass., assignor to himself and R. Morrison, Raymond, N. H. [Filed June 10, 1874.]



In a dough-mixer having mechanism, substantially as described, for giving the mixing-stirrers movement in opposite directions, the stirrers *e f*, the first of which is set at an angle, the edge nearest the axis being advanced in the direction of rotation, for the purpose of throwing the dough from the center, and the second at an angle with the edge farthest from the axis advanced in the direction of its rotation, for the purpose of throwing the dough to the center, substantially as described.



No. 162,187.

162,187. WARP-BEAMS FOR LOOMS. Edwin Chadsey, Norwich, Conn. [Filed Oct. 2, 1874.]

Brief.—The tension of the spiral spring arranged around the shaft of the warp-beam, to regulate the tension on the warp, is adjusted by means of a sliding angular collar, held in position by pins.

The combination of the warp-beam *a*, spindle *c*, frictional plate *g*, rigid collar *h*, spring *i*, movable angular collar *k*, and pins *n n*, whereby the tension of the spring can be increased and diminished at will, substantially as set forth.

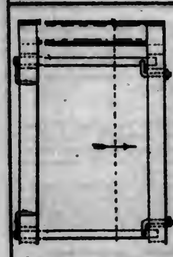
No. 162,189.

162,189. ORE-CARS. Elizabeth A. Pierce, Escanaba, Mich., administratrix of Silas L. Pierce, deceased. [Filed Jan. 6, 1875.]

The combination of the body, having the sides, inclined ends B B, and the central discharge-opening, with the outwardly-swinging discharging-doors C C, the revolving supporting-rod D, and the central wheels, whereby the car is adapted to carry a heavy weight steadily, and discharge the same through a central opening without interfering with the central supporting-wheels, as described.

162,190. BAGGAGE-TRUCKS. T. W. Porter, Boston, Mass. [Filed Sept. 29, 1874.]

Brief.—A cast-metal ribbed platform, malleable-iron brackets, and wrought-iron center for pole; a cast-metal coupling, two pivoted axles, and locking-tongues.



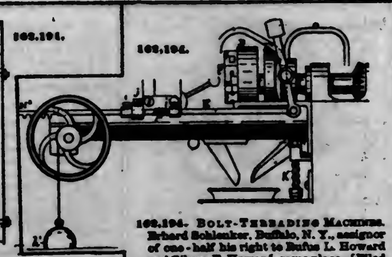
1. The cast-metal ribbed bed *c*, substantially as described and shown.

2. The cast-metal hand-crab *e*, substantially as described and shown.

3. The cast-metal hinged bracket *s*, substantially as described and shown.

4. The part *f* of the cast-metal coupling, formed with its king-pin *l*, in combination with the part *h*, formed with its socket to receive pin *l*, and with the radial brackets *i*, whereby it is bolted to the top or bed, substantially as shown.

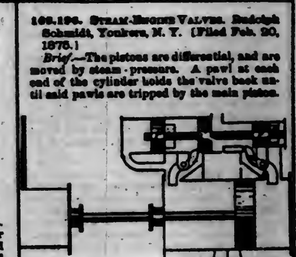
5. A baggage-truck, having the two pivoted axles *a*, and the locking-poles *n*, substantially as described and shown.



No. 162,191.

162,191. LOOM HEDDLE-FRAMES. Frederic S. Pratt, Worcester, Mass. [Filed Feb. 10, 1875.]

1. In combination with the heddle-bar and harness-frame, the fastening device, consisting each of a screw-threaded shank and a hook proper standing at right angles or thereabout to said shank, the shank adapted for attachment to the harness-frame, and serving as the axis on which the hook can swing to engage with or be disengaged from the heddle-bar, substantially as shown and set forth.



2. The combination, with the heddle-bar and harness-frame, of heddle-bar fastening-hooks capable of vibratory movement upon an axis or pivot, and adjustable, one or both, laterally, or in the direction of the length of the heddle-bar, to secure the proper tension of the same, substantially as shown and set forth.

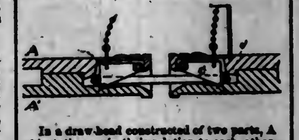
No. 162,194.

162,194. BOLT-THREADING MACHINES. Richard Schlenker, Buffalo, N. Y., assignor of one-half his right to Rufus L. Howard and Gilbson F. Howard, same place. [Filed Oct. 10, 1874.]

Brief.—The die-brackets are pivoted in the head, and are formed with side projecting stubs. A number of bevel-pointed pins are carried by the movable head, which, when moved forward, forces said pins over the stubs, thereby locking the dies in position. An adjustable stop on a rod attached to the lever that operates the pin-head gages the length of bolt to be cut. When a bracket on the bolt-carriage strikes said stop, the lever attached to the pin-head is operated, the head and pins moved back, and the dies allowed to be thrown open (to release the bolt) by the springs which press against them.

1. The fixed die-head B, having the pivoted brackets F', carrying the dies F and springs *r*, operating in combination with the movable head F', having pins *t*, substantially as and for the purpose specified.

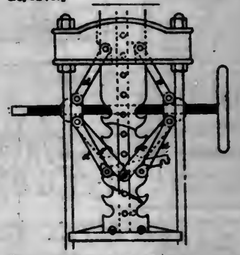
2. The combination of the heads B and F', crank-rod E, bolt-holder and carriage C, rack-bar H', and pinion shaft and wheel H, all operating substantially as and for the purposes specified.



3. The rod E, having the collars *i P* and spring *P'*, operating in combination with the brackets *j* on carriage C, and with the wheel H, having screw *h* and weight and cord *h'*, substantially as and for the purpose specified.

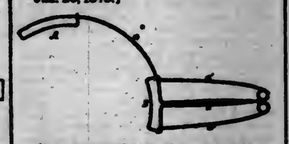
162,195. STEAM-ENGINE VALVES. Rudolph Schmidt, Towkers, N. Y. [Filed Feb. 20, 1875.]

Brief.—The pistons are differential, and are moved by steam-pressure. A pawl at each end of the cylinder holds the valve back until said pawls are tripped by the main piston.



The pawls placed inside the main ports of an engine-cylinder, in combination with a distributing-valve which is actuated by the pressure of a motive fluid, and is locked and released by the pawls, substantially as and for the purpose set forth.

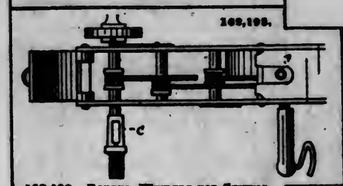
162,197. CAR-COUPLINGS. G. C. Schow, Chicago, Ill. [Filed June 18, 1874.]



In a draw-head constructed of two parts, A A', stationary in their relation to each other, the horse-shoe-formed brass on shoulder *a*, cast in one piece with the top A, and projecting into a corresponding recess in the bottom part A', substantially as and for the purpose set forth.

162,198. OIL AND OTHER FEEDERS. Alfred Shedlock, New York, N. Y. [Filed Mar. 20, 1875.]

In a toggle-lever press, the links *c c*, controlled by the cam-cards or followers, in combination with the toggle-levers *d d*, substantially as and for the purpose hereinbefore set forth.

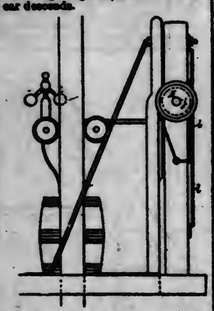


162,199. PLATE-LIFTERS. Daniel M. Skinner, Sandwich Centre, N. H., assignor to himself and Ezra Gould, same place. [Filed Jan. 20, 1875.]

As a new manufacture, the new plate-lifter, substantially as described, consisting of the jaws A A, and their shanks and handle parts *a a'*, in combination with the intermediate shank-clasp and plate-supporter B, all being composed of wire, bent substantially as specified.

162,192. GUARDS FOR HATCHWAYS. Richard Schlenker, Buffalo, N. Y., assignor of one-half his right to Rufus L. Howard and Gibson F. Howard, same place. [Filed Dec. 15, 1874.]

Brief.—The gate or guard is hung in ways by ropes, which pass over pulleys over hatch-shaft. Two upright posts attached to the car impinge against friction-wheels on the horizontal shaft, which rotate said shaft, and thus elevate the guard. The friction-wheels are provided with ratchets and pawls, set on opposite sides of the shaft, so that as the car ascends, one of the wheels will revolve freely on the shaft, the other wheel revolving the shaft and elevating the guard, and vice versa when the car descends.



No. 162,193.

162,193. BOBBIN-WINDERS FOR SEWING-MACHINES. Henry H. Rhodes and Charles C. Redmond, San Jose, Cal., assignors of one-half their right to H. S. Lamphin and R. M. Gibson, same place. [Filed Dec. 15, 1874.]

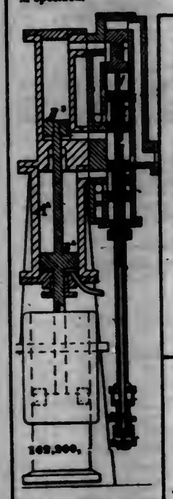
Brief.—The shaft on which the bobbin-clutch is located is operated by a train of clock mechanism.

A bobbin-winder constructed as described, and consisting essentially of the bobbin-clamp C and spool-holder F, in combination with the train of clock mechanism, substantially as and for the purpose set forth.

1. The door or gate *i*, operated by means of the shaft *j*, rubber rollers and ratchets *m m'*, and pulleys K, substantially as and for the purpose specified.

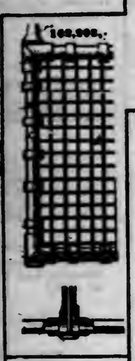
2. The combination of an elevator-platform, having uprights *l*, with rollers *n n'*, shaft *j*, and pulleys K, and with the sliding door or gate *i*, substantially as and for the purpose specified.

162,899. STEAM DROP-PERFORMER. William H. H. Sisson, Newark, N. J. [Filed July 29, 1874.]



Brief.—The height the drop is raised is regulated by a bar which is inserted in holes in the frame. Said drop is attached to a rod having two pistons working in separate cylinders, and controlled by valves operated by a lever. By means of said valves steam is admitted under the small piston to raise the drop, and on top of both pistons when a heavy stroke is desired.

1. The adjustable cross-bar or stop D, in combination with a steam-drop, and with devices for admitting steam under the piston and its free discharge, as herein specified.



2. The adjustable valve J, in combination with the valve I and suitable steam-passages, and with the piston B' and connected drop, as herein specified.

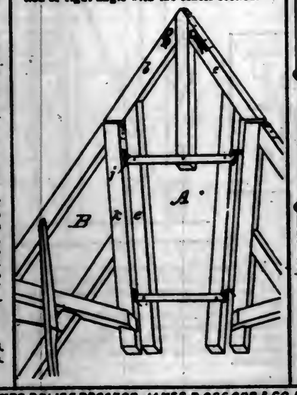
3. The adjustable valve K and piston B', in combination with the valve I, piston B', and suitable steam-passages and connected drop, as herein specified.

4. The combination of the three valves I J K, and their several adjustments, with the single operating-lever E, and with the two pistons B' B', and a drop, B, operated thereby, all substantially as and for the purposes herein specified.

162,899.

162,901.

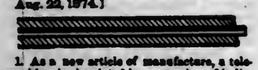
162,900. INSULATED TELEGRAPH-WIRE. Wilson Strickler, Lebanon, Pa. [Filed Aug. 22, 1874.]



1. As a new article of manufacture, a telegraphic wire insulated by a covering of india-rubber or gutta-percha, coated with coal-tar, and provided with mica applied both to the outside and inside of the gutta-percha or india-rubber covering for the wires, as and for the purpose set forth.

2. The method herein described of insulating a telegraphic wire, consisting of the application of mica around the wire, and then encompassing the wire and mica with a covering of india-rubber or gutta-percha dipped in coal-tar, to which mica is then applied, the coal-tar performing the double functions of closing the pores of the covering and causing the retention of the mica in place, as set forth.

162,902. BARROWS. Chas. W. Stromboek, Syracuse, Ind. [Filed Mar. 15, 1875.]



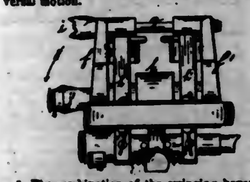
Brief.—The side pieces of the center section converge rearwardly. The side pieces of the head form shoulders, against which the wings abut. The wings are attached to the center section by spindle-hinges, so that they can be removed when raised to the position of right angle with the center section.

162,903. FRAMES FOR OPEN-WORK SIGNS AND BANNERS. Eli F. Southward, Boston, Mass. [Filed Mar. 20, 1875.]

In combination with a net-work sign or banner, provided on its edges with rings or ferrules, a jointed frame formed of metallic tubing with threaded ends, united by screw-couplings, substantially in the manner and for the purpose described.

162,904. INSULATED TELEGRAPH-WIRE. Wilson Strickler, Lebanon, Pa. [Filed Aug. 22, 1874.]

1. As a new article of manufacture, a telegraphic wire insulated by a covering of india-rubber or gutta-percha, coated with coal-tar, and provided with mica applied both to the outside and inside of the gutta-percha or india-rubber covering for the wires, as and for the purpose set forth.



2. The method herein described of insulating a telegraphic wire, consisting of the application of mica around the wire, and then encompassing the wire and mica with a covering of india-rubber or gutta-percha dipped in coal-tar, to which mica is then applied, the coal-tar performing the double functions of closing the pores of the covering and causing the retention of the mica in place, as set forth.

162,905. HARROWS. Chas. W. Stromboek, Syracuse, Ind. [Filed Mar. 15, 1875.]

Brief.—The side pieces of the center section converge rearwardly. The side pieces of the head form shoulders, against which the wings abut. The wings are attached to the center section by spindle-hinges, so that they can be removed when raised to the position of right angle with the center section.

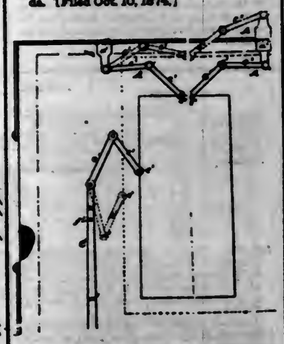
162,906. MACHINES FOR EDGE-SETTING SOLES OF BOOTS AND SHOES. Benjamin J. Tayman, Philadelphia, Pa., assignor of one-half his right to Jas. B. Boney, same place. [Filed Jan. 27, 1875.]

Brief.—The operating devices are mounted upon an angular base, which is supported upon the end of a swinging horizontal arm, so that the supporting-frame is provided with universal motion.

1. The combination of the swinging bars A A', slotted standards f f', eccentric shaft f, and eccentric pulley h, on said shaft, for imparting a reciprocating motion to the burnishing-iron, and for keeping the tension of the driving-belt uniform, substantially as set forth.

2. The combination of the ring b, and standards f f', with their annular base c, forming a frame for supporting the other operating parts of the tool, substantially as set forth.

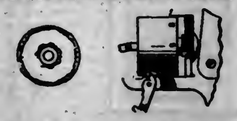
3. The crescent-shaped guard p, rods q q', and springs r r', in combination with the hollow shaft m, and burnishing-iron n, in the manner and for the purpose substantially as set forth.



4. In combination, the removable burnishing-iron n, crescent-shaped guard p, hollow perforated shaft m, and gas-pipes, arranged to heat both the iron and guard, all substantially as shown and described.

5. The sleeve-cloth o', in combination with the basket a, and arm w, provided with space o', in the manner and for the purpose substantially as set forth.

6. The combination of the milling-wheel s, nut and lip t, and the rotary heel-seat-burnishiron f, arranged on a common shaft, in the manner and for the purpose substantially as set forth.



7. The projection p' on the crescent-shaped guard in combination with the burnishing-iron n, to form a bead on the outer edge of the sole, substantially as set forth.

162,907. FEED-GAGES FOR PRINTING-PRESSES. James Turner, Montreal, Canada. [Filed Oct. 10, 1874.]

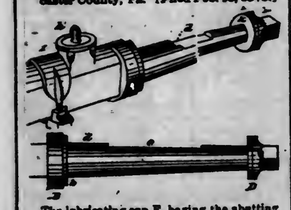
A printing-gage, A B C, provided with one or more points, d f, and composed of the jointed adjustable arms d' d', pivoted to the stationary part d', having the flange b', for attachment to the platen of a printing-press, in the manner and for the purpose substantially as specified.

162,908. REVOLVING FIRE-ARMS. Rollin White, Lowell, Mass. [Filed Feb. 4, 1875.]

1. The combination, substantially as described, of a revolving cylinder, an extractor for withdrawing cartridges therefrom, and a lateral abutment, for the purposes set forth.

2. In a fire-arm, a revolving cylinder, a central extractor or abutment, and an annular movable abutment or extractor, when combined for operation substantially as described.

3. The combination, in a revolving fire-arm, of a frame having projecting therefrom a hollow fixed or non-rotating centrally-arranged cartridge-extractor, a revolving chambered cylinder, and a lever for drawing or starting the cylinder away from the recoil shield and extractor, substantially as shown and described.



4. In a revolving fire arm, having a non-rotating central cartridge-extractor, the combination therewith of a cam for successively starting the cartridge as the cylinder revolves, substantially as set forth.

5. The combination, in a fire-arm, of a revolving cylinder, a toggle-joint, and a hinged barrel, adapted to withdraw the cylinder directly away from an extractor fixed to the recoil-shield, substantially as set forth.

6. In combination with a revolving and sliding cylinder provided with shoulders or notches, a hook and lever or swinging barrel for starting the cylinder, substantially as specified.

7. In combination with a revolving cylinder and hinged or swinging barrel, the catch-lever H, adapted to operate as a means of starting the cylinder, the construction and operation being substantially as described.

162,909. CARRIAGE-AXLE LUBRICATORS. John M. Witmer, Manor Township, Lancaster County, Pa. [Filed Feb. 16, 1875.]

The lubricating-cup F, having the abutting side flanges, which gives the device an extended flat base, to set directly upon the axle-bar A, to which it is secured on one of its projecting flanges, f, by an ordinary clip, I, the other end by inserting the tube G through the collar B, all constructed and combined substantially as and for the purpose set forth.

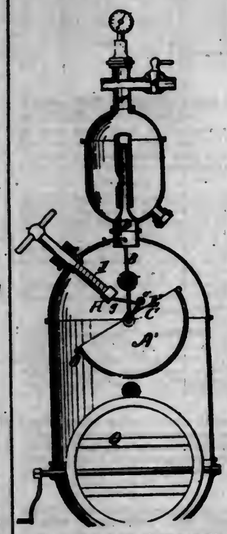
162,910. ATTACHMENTS FOR PLOWS. Elisha N. Yardley, Tonganoxie, Kans. [Filed Oct. 27, 1874.]

Brief.—The wheel slides in the previous furrow, and the horizontal weed-turner, pressing upon the surface, turns down the stubble, &c.

The bent drag-bar H, pivoted to the plow-beam A, point K, and loop L, constituting a plow attachment, for the purpose specified.

162,910.

162,911. BUCKLES. Banker C. Young, Boston, Mass. [Filed Jan. 12, 1875.]



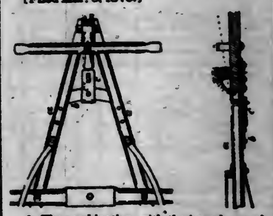
1. The described buckle attachment, consisting of the base-plate f and the perforated projection g, arranged as specified—that is, so that the said part g shall be at or in close proximity to the edge of the base-plate, and transversely to the direction of the strain of a buckle, when the said attachment may be in use, and in connection with said buckle, as set forth.

2. The buckle provided with the hook, in combination with the plate f and staple g, arranged as described.

162,912. SODA-WATER GENERATORS. Jas. Anderson, Allegheny, Pa. [Filed Mar. 20, 1875.]

Brief.—An acid-chamber supported by a bail in the generator, and provided with a rod, ball and-socket joint, and screw-stem, for gradually tilting the same and holding it in any desired position.

The acid-chamber A', supported by the ball B in the generator, and provided with the rod g, ball-and-socket joint H, and screw-stem I, substantially as described, and for the purpose set forth.

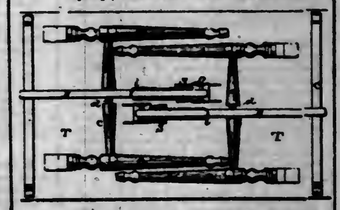


162,913. GRAIN-SCOURERS. M. D. Beardslee, St. Louis, Mo. [Filed July 21, 1874.]

Brief.—Cylindrical case or shell can be adjusted equally or unequally on each side of the scouring-cylinder, for giving a greater or less space where required.

162,913.

162,914. WAGON-TONGUE ATTACHMENTS. William M. Bernhard, Morristown, Ohio. [Filed Mar. 3, 1875.]



1. The combination, with the hounds a and tongue d, of the draft-bar b, bosses c, and bar e, as and for the purpose set forth.

2. The combination of the straight hound a with the tongue d, hinged to bar b in rear of the bevoled end of said hounds, as and for the purposes specified.

162,915. FOLDING TABLES. John Bradfield, Grand Rapids, Mich. [Filed Sept. 30, 1874.]

Brief.—Two saddle-blocks are fastened to the under side of the table, and to each one is pivoted a locking-brace. Secured to the under side of the table by these blocks are two springs, which bear on the locking-braces.

1. The blocks D, having the braces B pivoted to them, and serving as a means of holding the springs in position, substantially as shown.

2. The combination of the top T, cross-pieces C, folding legs a, cross bars c, having notches d, blocks D, springs S, having points g and loops f, and braces B, having notches j, substantially as set forth.

162,916. MANUFACTURE OF GLASSWARE. Charles W. Brockunier, Bridgeport, Ohio. [Filed Mar. 27, 1875.]

162,916.

1. A pivoted or divided mold for pressing glassware, having, in combination with the bowl-cavities, longitudinally ribbed handle-cavities a a, substantially as set forth.

2. A pressed bowl and pressed longitudinally-ribbed handle, the ribs tapering from either end or both ends of the handle to or toward the bow or curve, substantially as set forth.

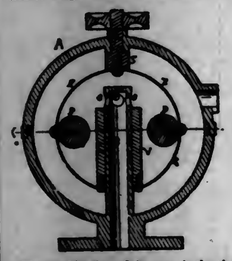
160,917. DOOR-CHECKS. Geo Burt, Denver, Colo. [Filed Mar. 13, 1875.]

Brief.—The claim sufficiently points out the invention; a hinged bolt or pin passing through the jaws and hooked plate of a portable door-fastener, to lock the device securely in position.

The hinged bolt E, in combination with and passing through the jaw C and the plate A, which plate works upon the rivet D, and terminates in a curved hook, B, all substantially as described and shown, for the purposes herein before set forth.

160,917

160,918. WOOD PAVEMENTS. John Carr and M. D. Phillips, Grand Rapids, Mich.; said Phillips assignor to said Carr, and said Carr assignor of one-half his right to Wm. Carr. [Filed May 6, 1874.]

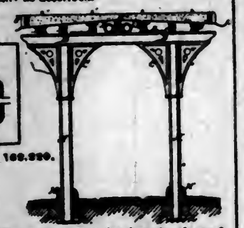


Brief.—A wood pavement in which the blocks are set in an inclined position, and rest upon a concrete foundation, the interstices between the blocks being filled with a fire and water proof mixture of water-lime, fine sand, shellac, and water, and the top surface covered with a solution of water-lime and water.

The combination of the foundation, made and laid substantially as above described, with a superstructure of blocks of wood prepared by soaking, as above stated, and of the general shape above described, laid in the mode above described, with the grouting composed of water-lime, fine sand, shellac, and water, as above stated, in the interstices between said blocks, with the solution or mixture of water-lime and water poured upon the surface of said blocks after they are thus laid or placed in position, as above described.

160,919. GOVERNORS. Daniel L. F. Chase, Somerville, assignor of one-half his right to Lorenzo B. Chase, Watertown, Mass. [Filed Apr. 1, 1875.]

Brief.—A tubular valve is fitted to a hollow stand-pipe, the upper end of which is provided with steam-inlet ports. The valve is raised and lowered by the centrifugal action of weights secured to a spring.



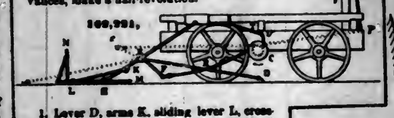
The combination of the case A, the shaft S, the spring E E E E, the balls D D, the valve V, and the tube B, with its ports O, the whole being arranged substantially as described, and for the purposes specified.

160,920. ELEVATED RAILWAYS. John B. Church, Scarborough, N. Y. [Filed Feb 23, 1875.]

Brief.—An elevated railway supported upon parallel rows of columns, the cross ties of which have a pitch from the center to each side, to give proper drainage to the roof, said ties and metal roof resting upon longitudinal girders, the tops of which are beveled to correspond with the pitch of the roof. Extending from column to column, and around each, is a stone curbing.

1. The curb or stone masonry along and around the base of the columns, in combination with the columns supporting an elevated railway, substantially as described.

2. In combination, the tiers of parallel columns A A, the cross-beams B B, the longitudinal girders D D, the roof E E, and the cross-ties F F, forming a support for the tracks of elevated railways, constructed substantially as described.

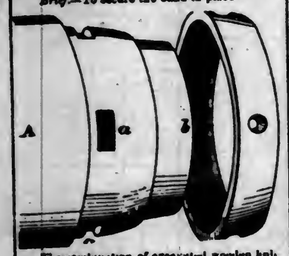


160,920.

3. The cross-tie F F, fitted to the slope of the roof E E, supported by the longitudinal girders D D in an elevated railway, substantially as described.

160,921. HAY-LOADERS. Pascal L. Craig, East Troy, assignor of one-half his right to H. C. Stratton, Coldwell's Prairie, Wis. [Filed Aug. 14, 1874.]

Brief.—A rake which slides in rear of the wagon to be loaded is elevated and caused to deposit its load by arms or levers, one on each side, which, at the will of the operator, take into the ground, and, as the wagon advances, make a half revolution.

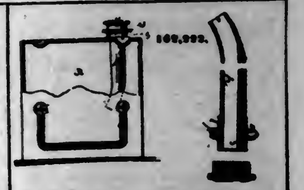


160,921.

1. Lever D, arms K, sliding lever L, cross-bar I, and teeth M, in combination with wheel O and rope R, substantially as described.

2. The combination of rope T, slide S, and wheel C, substantially as described.

160,922. WHEELS FOR VEHICLES. J. Curtis, Oldenmant, Ohio. [Filed Oct. 12, 1874.]

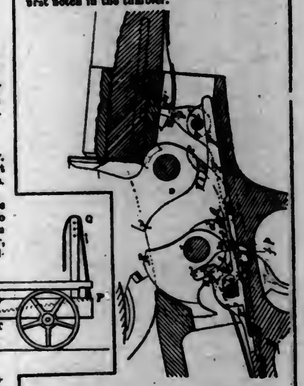


Brief.—To secure the band in place

The combination of elevated wooden hub A a and bands B, having openings b to receive fusible-metal plugs C, as set forth.

160,923. NOZZLES FOR OIL-CANS. William Dee, Reno, Pa. [Filed Feb. 23, 1875.]

Brief.—The screw-nozzle is reversed for transportation, and a screw-cap applied.



160,923.

In cans for the transportation of oil, the combination of the can a, reversible nozzle A, provided with the internal air-tube 3, threads f, and flange e, with the screw-cap B for closing the end of the nozzle, substantially as shown and described.

160,924. BREECH-LOADING FIRE-ARMS. Frank W. Freund, Denver, Colo. [Filed Mar. 19, 1875.]

Brief.—By means of the combinations claimed the breech cannot be opened while the hammer is at full-cock, and when the hammer is fully down it cannot be fully cocked until the breech has first been opened; and the firing-pin is securely locked in a retracted position after the breech is closed, until the sear is disengaged from the notch in the locking-slide, or the hammer is let down past the first notch in the tumbler.

1. The check f of the slide or part F, in combination with the hammer, for the purpose of preventing the full-cocking of the hammer, substantially as and for the purpose described.

2. The projection k of the slide or part F, in combination with the hammer, having a projectide, m, for moving the slide back, substantially as and for the purpose described.

3. The projection l of the slide or part F, in combination with the breech-block, for the purpose of moving the slide forward to set the check, or to withdraw the firing-pin when the breech is open, substantially as and for the purpose described.

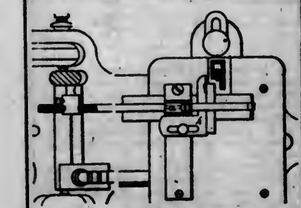
4. The sear-notch p of the slide or part F, in combination with the auxiliary sear q, and the hammer-trigger, substantially as described.

5. The combination of the projections l and k of the slide or part F, with the breech-block and hammer, for the purpose of moving the slide forward and backward, substantially as described.

6. The stop r of the slide or part F, suitably combined with the firing-pin, for preventing the firing-pin moving forward when the breech-block is fully closed, and while the part F is locked, substantially as described.

7. The lever A, in combination with the hammer, for fastening the breech block when the hammer is full-cocked, substantially as described.

8. The combination of the lever A and the breech-block, for preventing the full-cocking of the hammer while the breech-block is open, or only partly closed, substantially as described.



9. The firing-pin, combined with and operated by the hammer and breech-block, and suitable means for withdrawing said pin, so that it is retracted when the breech-block is in any position in which the firing-pin might be brought in contact with the cartridge, and when the hammer is in any position except in contact with the firing-pin, substantially as described.

10. The combination of a hammer, a breech-block, a movable intermediate part, F, having suitable projections, and a lever, A, whereby the hammer is prevented from being cocked when the breech-block is open, and the breech-block prevented from being opened when the hammer is cocked, substantially as herein described.

11. A vibrating lever, H', combined with a cartridge-shell extractor, having separated lugs or shoulders s^1 s^2, for producing a sudden percussive blow upon the extractor, substantially as described.

160,925. TUCK-MARKERS. HARRY C. Goodrich, Chicago, Ill. [Filed Dec. 8, 1874.]

Brief.—A non-flexible bar pivoted in the center is operated from the needle-arm. The upper marker, adjustable in the bar, is set eccentric, and by turning it around on its axis the amount of stroke, vertically, is adjusted.

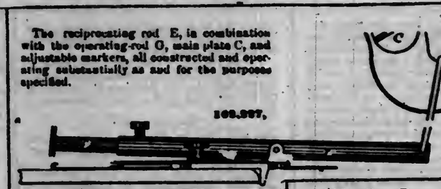
1. The pivoted bar r, in combination with the plate a, and the rear link or rod connected directly with the bar and forming an extension thereof, substantially as and for the purpose specified.

2. The combination, in a sewing-machine tuck-marker, operated by a non-flexible bar, r, of the separately-adjustable grooved disk or plate b, and the blade p for adjusting the length of the stroke between the two, substantially as described.

160,926. TUCK-MARKERS. HARRY C. Goodrich, Chicago, Ill. [Filed Dec. 8, 1874.]

Brief.—A reciprocating rod attached to the needle-arm, and adjustable lengthwise by a screw on its end, passes through a loop formed by raising part of the main plate of the attachment. The upper marker is formed on the end of a spring-plate, and the beveled end of the reciprocating rod operates against an incline on the plate, and presses the markers together. The height of the rod is regulated by a screw in the top of the loop.

1. In a tuck-creaser, the rod E, in combination with the incline f and plate c, constructed and operating substantially as and for the purposes specified.

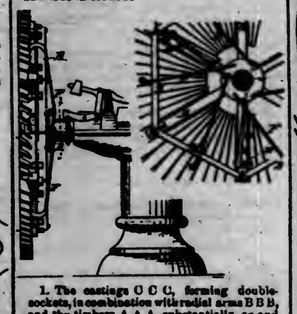


2. The main plate D, in combination with markers e g, incline f, plate c, and rod E, all constructed and operating substantially as and for the purposes specified.

3. The rod E, in combination with the incline f, plate c, and adjusting device m, substantially as and for the purposes specified.

160,927. TUCK-CREASERS. HARRY C. Goodrich, Chicago, Ill. [Filed Dec. 8, 1874.]

Brief.—The rod is screwed fast in a head on the rock-shaft, and is operated by a lever from the needle-bar. In its reciprocation the rod presses on the incline of the spring-creaser, and forces it down on the blade. The amount of pressure on the incline is regulated by screwing the rod backward or forward.

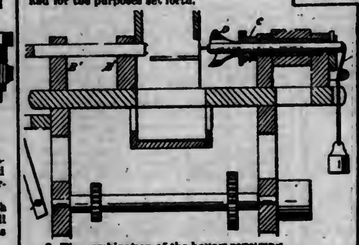


The reciprocating rod E, in combination with the operating-rod O, main plate C, and adjustable markers, all constructed and operating substantially as and for the purposes specified.

160,927.

160,928. WINDMILLS. MYRON GORE, Ottawa, Ill., assignor to Wm. Stormont, same place. [Filed Feb. 6, 1875.]

Brief.—The castings are formed of double sockets, in combination with the radial arms and timbers; also, the levers and springs, in combination with the brace collars, the rods and fans in sections



1. The castings O C C, forming double-sockets, in combination with radial arms B B B, and the timbers A A A, substantially as and for the purposes described.

2. The levers L L L, and springs M M M, in combination with the loose collar D, the rods F F F, and the sections K K K, substantially as and for the purposes described.

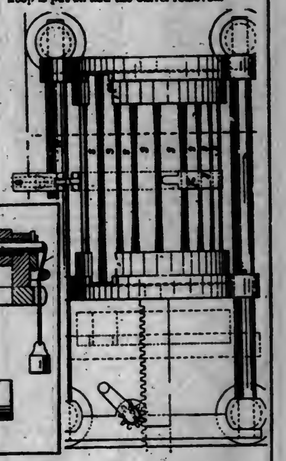
160,929. GAGE-LATHES FOR TURNING WOOD. Felix Goulet, Island Pond, Vt. [Filed Oct. 3, 1874.]

Brief.—The blanks are placed in a hopper, from which they are carried by a reciprocating center into a hollow cutter, which gives them the desired form. They are then pushed out of the cutters by a rod, which reciprocates within it, and fall from the lathe through an orifice in the bottom of the hopper.

1. The combination of the hollow revolving shaft C, hollow cutter-head D, with cutters a, and the reciprocating center mandrel b, operated by the weighted cord d, substantially as and for the purposes set forth.

2. The combination of the hollow revolving shaft C, hollow center-head D, reciprocating center mandrel b, and reciprocating spar-mandrel f, substantially as and for the purposes herein set forth.

160,930. BARREL-HEAD ADJUSTERS. Hiltu J. Granger, Brooklyn, and H. S. Smith, Southfield, N. Y. [Filed Jan. 9, 1875.]



Brief.—The different pieces of which the head is composed are retained in their proper relation to each other, and held in position while the hoops are being forced upon the barrel.

160,930.

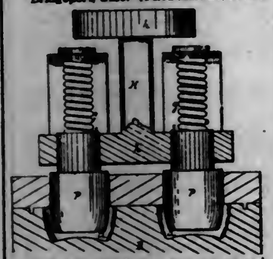
The combination of two or more plates capable of being applied to the head-pieces of a barrel, and connected by guiding-bolts, substantially such as described, with expanding-springs, substantially as and for the purpose set forth.

160,931. BARREL-STAVE ADJUSTERS. Hiltu J. Granger, Brooklyn, N. Y. [Filed Feb. 27, 1875.]

Brief.—Two heads, provided each with an annular groove of the same diameter as the barrel to be formed, are placed at the length of the staves apart. Staves are then introduced until the grooves are filled, when a truss-hoop is put on and the barrel removed.

1. A barrel-stave adjuster consisting of two disks, one of which is capable of receiving a sliding motion toward and from the other, both disks being provided upon their opposed faces with annular grooves of prescribed diameter, each of which grooves has an opening in its outer wall to admit of the insertion of staves, for the purpose of facilitating the selection of the quantity of staves required for a barrel and their arrangement in a cylindriform position, all constructed and operating substantially as herein shown and described.

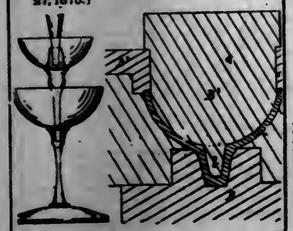
2. A central truss, as herein described, consisting of flexible ribbons of steel or other material, provided with a device for hooking or clasping their loose ends together, and connected at their opposite ends with a pair of jointed levers or hooks, for tightening them when clasped around the staves, and for holding the staves in their cylindriform position when extricated from the adjusting-grooves, substantially as and for the purposes set forth.



3. The combination of the stave-measuring and adjusting grooved disks herein described with an adjustable central truss or clamping-band, provided with the levers or hooks g^1 and g^2, for holding the staves in a cylindriform position, substantially as set forth.

169,822. TIRE-TIGHTENERS. John T. Hall, Morrisonville, Ill. [Filed Jan. 26, 1875.]

The tire-tightener composed of the plate a, provided with the horizontal inwardly-projecting plates b, the fixed arm c, and the adjustable arm c^1, having the triangular foot or projection c^2 and flanges c^3 and wedge d, having recess d^1, all combined to operate as and for the purpose set forth.



169,823. GLASS-MOLDS. John H. Hobbs, Wheeling, W. Va., and C. W. Brockunier, Bridgeport, Ohio. [Filed Mar. 27, 1875.]

1. A glass-mold having two or more cavities for the pressing therein of articles of glassware, and a corresponding number of plungers operated simultaneously at each stroke of the machine, in combination with a yielding device arranged in connection with the plunger or some movable part of the mold-cavity, substantially as set forth, whereby provision is made for the excess of material in the fuller cavities, and for the completion of the pressing stroke where the material is less.

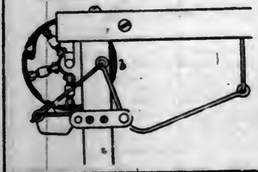
2. Two or more plungers, P, carried on and guided by a single head, H, in combination with springs acting on each independently of one another, substantially as set forth.

169,824. MANUFACTURE OF PRESSED-GLASS FLOWER AND FRUIT STANDS. John H. Hobbs, Wheeling, W. Va., and C. W. Brockunier, Bridgeport, Ohio. [Filed Mar. 27, 1875.]

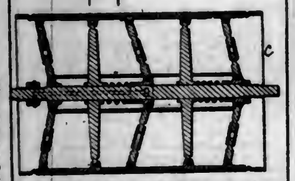
1. A pressed-glass dish having a pressed socket in or on the inside bottom thereof, substantially as set forth.

2. A fruit or flower stand built up of a series of two or more sections of pressed glassware, united by a pressed pin-and-socket joint, substantially as set forth.

3. The plunger P, having a projection, b, thereon, in combination with a recess in the mold-bottom, for the pressing of a socket in the bottom of the pressed article, substantially as set forth.



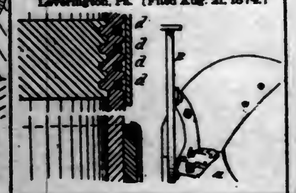
169,825. BURGLAR-ALARMS. Lafayette M. Johnson, Forest City, Mo. [Filed Jan. 27, 1875.]



1. In combination with a door-check having a yielding arm, with a wheel or roller moving on the floor, a burglar-alarm removably attached thereto, for the purpose herein set forth.

2. The combination of the plate E, bell G, wheel H, with projections y, oscillating block h, with arms m n, hammer p, and spring i, substantially as and for the purposes herein set forth.

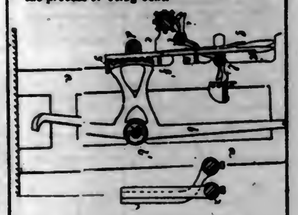
169,826. PAPER-TUBE MACHINES. John F. Jones, Marcellus Falls, N. Y. [Filed Nov. 28, 1874.]



1. The process of forming paper tubes, either bolging or straight cylinders, by first compressing the pulp from the paper-machine, and then, while green, conveying it to the molds, upon which it is wound in suitable form, and the layers, as they are wound on, saturated on the mold to make them plastic, so as to form a homogenous mass of layers, as herein described.

2. The expanding and contracting mold or cylinder b, around which the tubes are formed with expanding and contracting arms at its center and at both ends, operated as herein described, so as to vary the diameter independently at its center and end, in combination with a jacket, c, as and for the purposes specified.

169,827. PAPER BARRELS. Nice Keely, Leverington, Pa. [Filed Aug. 21, 1874.]



1. A manifold paper-body cask, or similar vessel, provided with molded internal and external screw-threads, as and for the purposes set forth.

2. A cask, barrel, or other vessel constructed of a paper body or shell provided with heads a, and the described ribs or threads, corresponding grooved or threaded heads B, and wire d, as and for the purposes set forth.

169,828. BENDING WOOD. Saml. R. Bailey, Bath, Me., assignor to Edward A. Gillett, Boston, Mass., and Oscar S. Gillett, Buffalo, N. Y. [Filed Apr. 5, 1875.]

Brief.—The timber is kept heated while in the process of being bent.

1. In combination with the elevator and depressor bars g g', the arms f f' and the harness-actuating levers b b, provided with the horizontal arms c and geared segments, for the purpose of closing the shed at each revolution of the crank-shaft, the whole constructed, arranged, and operated in the manner herein set forth.

2. The combination of the elbow-levers i i' l, springs k, pattern-chain h, and jack-bars, all arranged and operating together in the manner herein described.

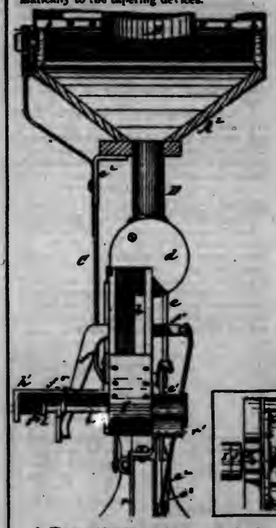
3. The combination of the harness-actuating levers b, provided with a horizontal arm, c, terminating in a geared segment, and sliding jack-bar g, provided with a rack adapted to gear with the arm c, all arranged and operating together in the manner and for the purpose herein set forth.

169,829. BURGLAR-ALARM. William W. Kennoch, New York, N. Y., and Ezra T. Gilliland and Jas. F. Gilliland, Cincinnati, Ohio. [Filed Oct. 26, 1874.]

The combination of cartridge-socket C, hinged hammer B, link d, and spring D, arranged and operating substantially as set forth, whereby greater delicacy of adjustment is secured, and a very slight movement of the door or window will suffice to trip the hammer.

169,830. PLOWS. Jno. Lane, St. Louis, Mo., assignor to Hapgood & Co., same place. [Filed Jan. 14, 1875.]

Brief.—Devices for securing the parts of the plow together.



1. The land-bar B, with support C and shoulders Z Z', in combination with the standard D, secured to the back of the mold-board and ending against the shoulder Z', and removable therefrom, and secured to the land-bar with a bolt at e, arranged as and for the purpose shown.

2. The frog E, bent to the curve of the mold-board, and twisted to the axis of the standard, in combination with the wide support W, covering the line of junction, as shown, substantially as and for the purpose set forth.

169,831. MACHINES FOR TAPERING CORKS. James M. Lane, Rockland, Mass. [Filed Feb. 6, 1875.]

Brief.—The corks are thrown into a hopper, from which they are passed singly and automatically to the tapering devices.

1. The combination, with the chute h, of a box, d^1, for automatically receiving and delivering a cork to the chute, substantially as described.

2. The combination, with the holder A^1 for the corks, of a box, d^1, for receiving and delivering a single cork to a chute, h, substantially as described.

3. The combination of a chute and plunger, f^1, with cork-presenting mechanism $r r'$, substantially as described.

4. In combination, a holder, A^1, for the corks, an agitator, B, a pipe, D, and a box, d^1, for receiving and delivering a cork to a chute, h, substantially as described.

5. The combination, with the box d^1 and the pipe D, of the projection e', to close the end of the pipe when the box is moved, substantially as described.

6. The combination, with the box d^1, of the hinged side, adapted to be opened and closed, substantially as described.

7. The combination, with the box d^1, of the chute e d^2 d^3, lever d^4, and spring d^5, substantially as described.

8. The combination of the plunger f^1 and its spring, with the lever f^4 and pivoted arm, all adapted to operate the plunger, substantially as described.

9. The combination, with box d^1 for selecting a single cork, of a chute, h, a plunger, f^1, to remove the cork from the chute h, and a cork-presenter, $r r'$, to receive the cork and present it to a tapering mechanism, all substantially as described.

169,832. REFINING SUGARS. Franz O. Matthiessen, New York, N. Y. [Filed Apr. 8, 1875.]

The improved process of producing free-grain coffee-sugar herein described, which consists in cooling and hardening the sugar-mass discharged from the vacuum-pan, and then disintegrating it by mechanical means, and subjecting it to gentle heat to cause until nearly all the water it contains is evaporated, and it acquires the condition of free-grain coffee-sugar, as set forth.

169,833. REFINING SUGAR. Franz O. Matthiessen, New York, N. Y. [Filed Apr. 12, 1875.]

The improved process of refining sugar herein described, which consists, in addition to the ordinary boiling of the clarified sugar-liquor in the vacuum-pan, in dividing the hot syrup and crystallized sugar discharged from the vacuum-pan into small masses or thin layers, and subjecting such small masses or thin layers to a process of gentle evaporation, conducted in the open air, and prolonged until sufficient water has been expelled from the material operated upon to convert it into a granular mass, as set forth.

169,834. PROCESSES OF REFINING SUGAR. Franz O. Matthiessen, New York, N. Y. [Filed Apr. 12, 1875.]

The improved process of refining sugar herein described, which, in addition to boiling the clarified sugar-liquor in the vacuum-pan and disintegrating the product discharged from the vacuum-pan after it is cooled and hardened, consists in subjecting the cold disintegrated sugar-mass to gentle heat applied in the open air, as set forth.

169,835. PROCESSES OF REFINING SUGAR. Franz O. Matthiessen, New York, N. Y. [Filed Apr. 14, 1875.]

The improved process of refining sugar herein described, which consists in subjecting divided masses or thin layers of the syrup and crystallized sugar, produced by boiling the clarified sugar-liquor in the vacuum-pan, to gentle heat, and a consequent drying operation, conducted partially in vacuo and partially in the open air, substantially as and for the purposes set forth.

169,836. SPINNING-MACHINES. C. S. Mattison, St. Louis, Mo. [Filed Oct. 10, 1874.]

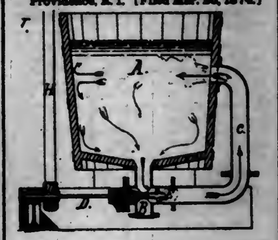
Brief.—Differential motions are given to the bobbin and fler by the devices of the first clause of the claim, and the material spun is guided, so as to be wound on the bobbin in overlapping conical layers, by the devices of the second and third clauses.

1. The combination of the wheels C, F, and G, when the wheels F and G vary as to the number of teeth, and are connected, respectively, with the bobbin and fler-frame, so as to give positive rotation to both and at different speeds.

2. The combination of cog-wheels O and P, a shaft, Q, with cog-barrel or wheels Y and W, crank T, rod S, and lever R, substantially as and for the purpose set forth.

3. The combination of the cog wheels O and P, screw-shaft Q Q', thread-carrier a b, with split nut engaging the shaft, wheels W and Y, crank T, rod S, and lever R, all constructed and operating substantially as and for the purpose set forth.

169,837. MINCING-MACHINES. J. A. Miller, Providence, R. I. [Filed Mar. 26, 1874.]



Brief.—The meat is driven to the knives by a rotating wheel having concavities in its periphery. The knives are situated over the wheel, and a pivoted stripper causes the meat to leave the wheel and pass through them.

1. The combination of the fluted cylinder A and abutment B with the knives C, arranged as and for the purpose described.

2. The knives C, having holes near their ends, arranged substantially as shown, so that when placed together these holes form steam-passages, so that the knives may be heated, substantially as and for the purpose herein set forth.

169,838. MACHINE-MACHINES. J. A. Miller, Providence, R. I. [Filed Mar. 26, 1874.]

The pipe B, connected with the bottom of a washing or mashing tub or tank, in combination with the propeller E, revolving within the pipe B, the other end of said pipe being connected, by the pipe C, with the tub or tank, so that the contents of the same will be subjected successively to the scrubbing, mashing, and mixing action of the propeller, substantially as and for the purpose herein set forth.

169,839. NECK-YOKES. Charles R. Moon, Wolcottville, Ind. [Filed Sept. 26, 1874.]

1. A boldback consisting of the plates C and D, and the part E, adapted to be so connected with the yoke A that the boldback can move freely to the right or left, as may be required, substantially as specified.

2. A boldback consisting of the plates C and D, each having an eye, a b, the part E, and plate or clip F, combined to operate as and for the purposes set forth.

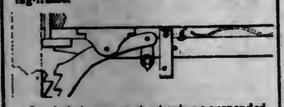
169,840. FIRE-SHIELDS. Thomas T. Moore, Chicago, Ill. [Filed Mar. 26, 1875.]

Brief.—A fire-shield composed of a series of metal plates, the ends of which are adapted to interlock each into the other, and so arranged as to admit of being suspended from the ridge or gable.

1. The portable fire-shield, consisting of the plates C, interlocked one into the other, and suspended from the building, as specified.

2. In combination with the lip *a* of the plate, the lug *e*, adapted to pass through mortise *d* in the plate, whereby the several plates are secured in line one with the other, laterally, as specified.

162,851. INTERFERING-PADS FOR HORSES. Henry S. Nichols, Lynn, Mass. [Filed Mar. 3, 1875.]



1. In a horseshoe provided with the heel-recess *a* and the elastic cushion B, having a tenon or projection, *b*, to enter such recess, the said elastic cushion arranged to project in rear of or beyond the heel of the shoe, as and for the purpose specified.

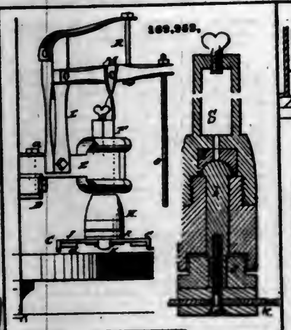
2. The elastic cushion B, provided with the projection *b*, and with the corn-reliever *d*, constructed and arranged with such projection as represented.

3. The elastic cushion, provided with the range of teeth in its outer edge, and extended over the upper surface of the shoe, and beyond its outer edge, and provided with a projection, *b*, extended into a corresponding recess or mortise in the shoe, all being as shown and described.

162,852. SAFETY-CATCHES FOR ELEVATORS. Francis B. Perkins, Boston, Mass., assignor to Whittier Machine Company, same place. [Filed Mar. 27, 1875.]

Brief.—The suspending-ropes are attached to the ends of a bar, which has a loose vertical motion in straps beneath the platform. On the breakage of either rope, the bar becomes a lever, acting on one of two arms on a rocking shaft lying parallel to it. These arms extend into links suspended from the ends of pawl-levers, which lock into a vertical line of ratchet-teeth on each side of the guiding-frame.

In a hoisting apparatus having a suspended platform or car, the combination of the lifting-bar with the rocker-shaft, and its levers connected to detaining-pawls, all adapted to operate, as set forth, with suspensories, either intact or broken.

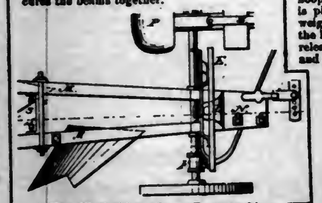


162,853. MACHINES FOR GRINDING MARBLE AND TILE. Norman W. Robinson, Frank W. Smith, and Henry Campbell, Burlington, Vt. [Filed Nov. 10, 1874.]

Brief.—The marble is placed upon a horizontally-rotating grinding-wheel. It is kept from revolving with it by an elastic frame-work, capable of receiving horizontally upon its own axis. A system of rubber and metallic springs keeps the marble uniformly adjusted, under pressure, to the grinding-wheel.

1. In a stone-grinding machine, the combination of the spindle I with the disk J and rubber disk K, and spring-arms *s*, substantially as and for the purposes herein set forth.

2. The construction and arrangement of the socket H, with the spindle I, disk J, and the slide F, substantially as and for the purposes herein set forth.



3. The combination of the adjustable arm H, the slide F, post L, lever M, spring Q, and connections O, N, and R, substantially as and for the purposes herein set forth.

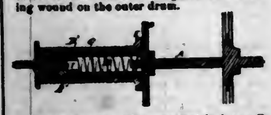
162,853.

162,854. GANG-PLOWS. Loring O. Rockwood, Ottawa, Ill. [Filed Feb. 4, 1875.]

Brief.—A sliding oval frame is secured to the axle with its sides in a vertical position. It carries three levers, which, respectively, elevate the plow-beams, "wing" the plows, and deflect the tongue. A novel clamp secures the beams together.

1. The elliptical lever-frame E, secured in a vertical position upon the axle A, and adjustable upon it by the slide K and the collars I I, substantially as and for the purpose set forth.

2. The elliptical frame E, in combination with the lever J, the lever D, and the lever X, in the manner and for the purposes set forth.

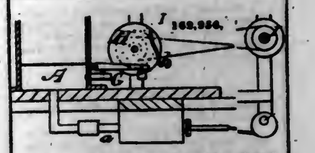


3. The elliptical frame E, in combination with the plow-beams M M, the slotted plates N N, the gage-piece or devis R, the balance-lever Q, the sway-rod S, the sleeve F, and the brace-rod T, in the manner and for the purposes set forth.

4. The solid clamp O, having the ends cut away to receive and secure the plow-beams M M to each other, with set-screws *s s s s* passing through the flanged inner ends, and impinging against the inside of the plow-beams, to adjust their relative position, in the manner and for the purposes set forth

---

162,855. AIR-PUMPS FOR CARBURETERS. Herman Seytar, Cambridge, Mass. [Filed Feb. 6, 1875.]

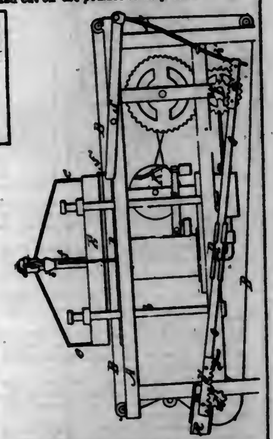


Brief.—A sustaining-spring is placed within the inside drum, for continuing the motion of the blower while the weighted cord is being wound on the outer drum.

The combination of the concentric drums G B with the pawl and ratchet E F, the concentric spring D, ratchet and pawl B C, all applied to and combined with the end of shaft A, outside the case of a rotary air-pump, substantially as and for the purpose described.

162,856. PUMPS FOR HYDRAULIC PRESSES. Daml. C. Starks, Hermitage, N. Y. [Filed Mar. 10, 1875.]

Brief.—The smaller plunger is thrown in gear before the larger plunger has completed its stroke, and both plungers then operate together at unequal speed, to complete the movement. A safety-valve is arranged so as to blow off at any desired pressure.



1. In a hydraulic pump, the combination of two plungers, C D, of unequal size, the operating cams *b b*, and the automatically-operating clutch *d*, whereby the smaller plunger is thrown in gear before the larger plunger has completed its stroke, and both plungers then operate together at unequal speed to complete the movement, substantially as herein set forth.

2. The combination, with the cylinder A, of the safety-valve G, face-plate H, with cam *h*, and cone-pulleys I I, with their connecting-belt run by gearing from the main shaft, substantially as and for the purposes herein set forth.

162,857. CIDER-PRESSES. Daml. C. Starks, Hermitage, N. Y. [Filed Jan. 28, 1875.]

Brief.—An intermittently-revolving endless apron passes the entire length of the top frame between the press-plates. A metal hoop surrounds the upper plate. On a shaft is pivoted a cam-headed lever, carrying a weight on its outer end. A rod is attached to the lower press-plate, which lifts the weight, releases the lever, and allows the hoop to drop and cut off the pomace to be pressed.

1. In combination with the stationary press-plate C and movable press-plate D, the automatically-operating hoop E, for the purposes herein set forth.

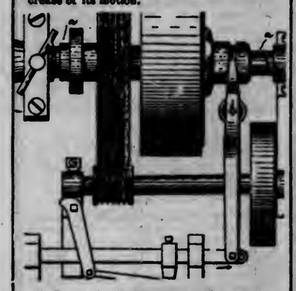
2. The combination of the hoop E, rods *c*, sleeve *d*, shaft *f*, and eccentric lever *h* with weight *i* and trip-rod *v*, all substantially as and for the purposes herein set forth.

3. The combination of the sliding rack-bar O, pivoted box P, slotted box R, spring *o'*, hook *p'*, pinions *w x'*, lever S, and arm *y'*, all substantially as and for the purposes herein set forth.

162,858. TOY PISTOLS. Augustus R. Taylor, New Britain, Conn. [Filed Mar. 13, 1875.]

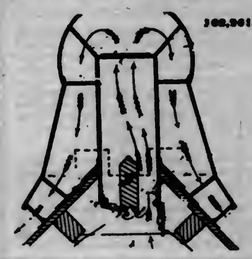
1. In a toy pistol, the combination of the cylinder B, provided with the slot or cavity *b*, the plunger *d*, spring *c*, and hammer D, all substantially as and for the purposes herein set forth.

2. In a toy pistol, the slotted revolving jacket or casing G, in combination with the cylinder B, plunger *d*, and hammer D, substantially as and for the purposes herein set forth.



162,859. KEY-FASTENERS. J. Thornton, Cleveland, Ohio. [Filed Feb. 17, 1875.]

A key-fastener consisting of one piece of wire, bent as described, having a spring-stem, C, formed by the return of the wire, and provided with a guide-loop, A, at one end thereof, and at the opposite end with a spring-hook, B, extending from the said stem C, in combination with a door-key, substantially as herein set forth.



162,860. OPERATING PAPER-CALENDERING ROLLS. N. H. Whitten, Holyoke, Mass., assignor to Holyoke Machine Company, same place. [Filed Mar. 17, 1875.]

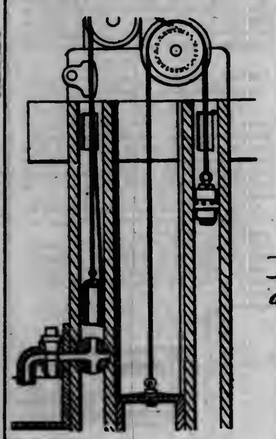
Brief.—On the roll-shaft a loose belt-pulley has motion given to it by a lever and friction-clutch, a parallel belt-shaft being simultaneously thrown out. On this latter shaft there is a friction-groove pinion, operating a similar wheel on the former, for the purpose of gradually reducing or permitting an increase of its motion.

1. In a calendering-machine, the combination, with the shaft driving the calendering-rolls, its friction belt-pulley or friction-clutch and friction-wheel, of a friction-pinion on an independently-rotated shaft, the friction belt-pulley or clutch and friction wheel and pinion being adapted to alternately operate the calendering-rolls at different speeds, substantially as set forth.

2. The combination, with shaft *s* of the calendering-machine, its friction belt-pulley or clutch, and friction-wheel, of the independently-rotated shaft, its friction-pinion, and mechanism, substantially as described, to operate for engaging and disengaging the parts, substantially as and for the purpose set forth.

162,861.

162,861. RIDGE-VENTILATORS. James S. Wightman, New York, N. Y. [Filed Nov. 17, 1874.]



Brief.—This ventilator extends the whole length of the ridge of a roof, and the circulation of air is controlled by valves that are operated by means of springs.

2. The combination, substantially as hereinbefore set forth, of the storm-shield, the interior cap, the wire-gauze, the ridge-pole, the pads, and the automatic valves.

3. The combination, substantially as hereinbefore set forth, of the interior cap, the automatic valves, and the springs and cords for operating these valves.

162,862. HYDRAULIC ELEVATORS. Cyrus W. Baldwin, Chicago, Ill. [Filed Feb. 19, 1874.]

Brief.—The working-piston is balanced by the carriage. The cord of the graduating-piston being rove to a drum of less diameter than the pulley over which passes the cord of the working-piston, (the drum and pulley being upon a common axis,) the downward draft of the latter piston overcomes that of the former, when the water is let off at the side cock. In this case the water discharges from the working-cylinder only. It also, from the same cylinder, follows up the graduating-cylinder below its piston by the natural counter-balance of the two columns. This secures the minimum power of the device, and its minimum expenditure of water. By opening wide the valve in the graduating-piston, its resistance to the working-piston is diminished, thereby increasing the working power of the latter to its maximum, with the maximum expenditure of water. These two effects may be graduated by graduating the width of the opening of the valve in the graduating-piston.

1. The combination, with the two communicating upright cylinders, of the lifting-piston in the one cylinder and the water-escape in the other cylinder, located with respect to the lifting-piston, substantially as shown and described.

2. The combination, with the main cylinder and graduating cylinder, of the lifting-piston, water-escape, and graduating valve-piston, for joint operation, as shown and set forth.

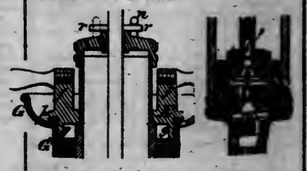
3. The combination, with the graduating cylinder, of the escape, the escape-cock, and the graduating valve-piston, arranged and operating as shown and set forth.

4. The graduating piston and its valve, in combination with the escape-cock and the valve-cord, and intermediate mechanism, by which said valve and cock are connected and operated, substantially as set forth.

5. The combination, with the water-supply reservoir, the main cylinder, the lifting-piston, and the elevator-car, of the escape, the escape-cock, the graduating piston, and its valve, for joint operation, as shown and set forth.

6. In combination with the main and graduating cylinders, elevator-car, and lifting-piston, the graduating piston, provided with a valve opening upward, and arranged to rise in the graduating cylinder when the car rises, substantially as shown and set forth.

162,863. APPARATUS FOR COLLECTING THE RAYS OF LIGHT AND HEAT. P. Balestrieri, Rome, Italy. [Filed Mar. 20, 1875.]



Brief.—A line, A A', is drawn perpendicular to O B (assumed axis of collector) at point O. This line is divided into equal divisions, and such divisions laid off on axis, and the corresponding points joined by right lines. Right lines are also drawn from same to divisional points on perpendicular. The line A A' is revolved about point O, and generates a plane. The lines 1c, 2b, &c., comprised between any two successive radiuses, will at same time generate right segments of cones, having a common axis, O F, and their bases in the same plane perpendicular to the axis. The segments thus generated constitute the armillary collector, and their surfaces are the reflecting-surfaces.

The armillary-photo-thermo collector, consisting of conical concentric rings *a*, *b*, *c*, *d*, &c., arranged and constructed upon the principles herein described, and made with reflecting-surfaces on their inner sides, substantially as and for the purposes specified.

162,864. AIR-PUMPS. George H. Barker, Waverly, N. Y. [Filed Oct. 2, 1874.]

Brief.—By means of the screw-thread upon the lower part of the cap the pump is attached to the reservoir. A small quantity of liquid is put in the cup to effectually seal the joints. By means of the hooks and pins the piston is held down when desired.

1. In an air-pump for a fire-annihilator, the combination of nut E and cap G, pocket as described, with the pump-barrel A, as specified.

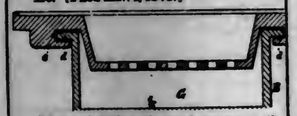
2. The hooks *n n* and pins *r r*, combined with the piston-rod E and the pump-barrel A, as described

---

162,865. POCKET-KNIVES. G. P. Benedict, Mount Carmel, Conn. [Filed Jan. 6, 1874.]

Brief.—The handle is struck up from a single piece of sheet metal, in the usual way, and has a free spring dropped within. An offset is struck up at each end, against which the blade impinges when open, instead of against the end of the spring itself, as is usual in such knives.

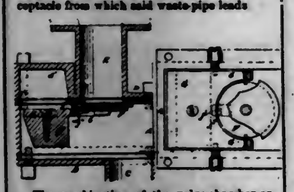
1. A pocket-knife composed of the combination of the handle A, made from a single piece of sheet metal, with the shoulders *f f* to hold both spring and blades, spring K, and blades B and D, constructed substantially as and for the purpose described.



2. The detachable separator for separating the blades, constructed and operating substantially as described.

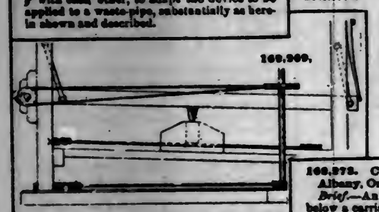
162,266. SLED-RUNNERS. Robert B. Bird, Madison, Wis. [Filed Jan. 21, 1875.]

The combination of the sliding tube E and K, and the slots U and I, as and for the purpose set forth.



162,267. DETACHABLE ASH-PANS FOR STOVES. Albert T Bleyley, Conception, Mo. [Filed Mar. 1, 1875.]

The combination of grated fire-box A U, having grooves *c c*, and the subjacent ash-pan B G, having flanges *d d*, as and for the purpose specified.

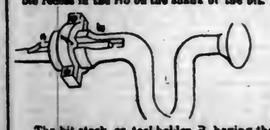


162,268. AUTOMATIC CLOSING ATTACHMENTS FOR WASTE-PIPES. F. P. Bourne, Brooklyn, N. Y. [Filed Mar. 6, 1875.]

Brief.—To the rear end of the plate a weight is attached, sufficient to hold the valve firmly against its seat. Directly above the weight is formed a recess or chamber, into which the weight rises when the valve is opened. This device is attached to the waste-pipe at a convenient distance below the sink or other receptacle from which said waste-pipe leads

The combination of the valve-chamber or box A, the bottom plate B, the chambered top plate D *d'*, the pipes C E, the pivoted valve F, the pivoted valve-plate G, and the weight *f'* with each other, to adapt the device to be applied to a waste-pipe, substantially as herein shown and described.

162,269.



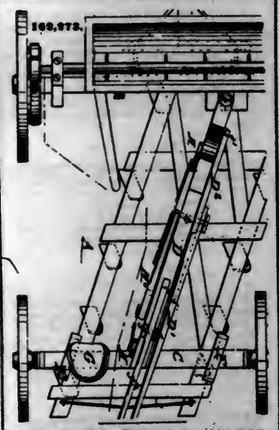
162,270. NUT-LOCKS. Sterne Bruneon, Benton Harbor, Mich. [Filed Dec. 16, 1874.]

A nut-lock consisting of the catch *g*, having both its ends beveled upon the same plane, and placed in a recess which is large enough to allow it to assume an inclined position when the nut is being screwed on, and a vertical position when the nut is being unscrewed, substantially as shown and described.

162,271. BIT-STOCKS. Elbert R. Charles, Petaluma, Cal. [Filed Feb. 16, 1875.]

Brief.—The bit is attached to the stock by a longitudinal rib upon its shank, which fits into a corresponding groove in the socket of the holder. The bit is secured in position by an adjustable ring upon the outer part of the holder, said ring having a projection upon its inner surface, which engages with a suitable recess in the rib on the shank of the bit.

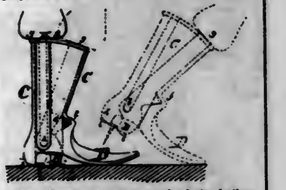
The bit-stock or tool-holder *B*, having the hole *c* with its groove *d*, and annular groove with its ring *f*, said ring having a projection, *e*, moving in the transverse slot *i* in combination with a tool, E, having the rib *e* with its transverse recess *s*, all combined and arranged substantially as and for the purpose described.



162,272. DOOR-LATCHES. John A. Colby, Springfield, Mass. [Filed July 7, 1874.]

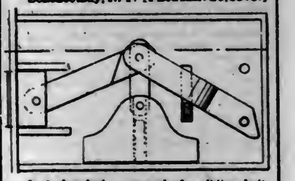
1. The swinging catch B, rigidly held to the frame A by the pawl-lever D to allow it to be retracted by sliding with the frame upon contact with the lamb-casing of the door, while freed by the sliding of stem W to permit it to be swung within the case by the movement of the door in opening, substantially as shown and described.

2. The cover *s*, sliding in place and held by the coil-spring *y'* from frame A, for the purpose shown and described.



3. The sliding frame A, having the swinging catch B pivoted thereto, in combination with the springs *w* and *y'*, all being arranged within the case and operating substantially as described.

162,273.



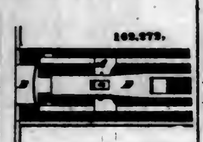
162,274. NAIL-EXTRACTORS. Macchil D. Converse, Jersey City, N. J. [Filed Jan. 20, 1875.]

Brief.—The extractor is made of two pieces of metal, one of which consists of a hollow shank provided with a fixed jaw and fulcrum-piece, and the other of a shaft provided with a jaw capable of a vibratory and vertical movement within and through said hollow shank. The edges of the jaws that rest upon the floor are provided with short prismatic projections.

A nail-extractor composed of the hollow shank C, provided with the jaw A and fulcrum D, and of the shaft B, provided with the jaw B, capable of both a vibratory and a vertical movement within and through the hollow of said shank, substantially as and for the purpose shown and described.

162,275. DOOR-LATCHES. Jonas H. Crane, Schenectady, N. Y. [Filed Mar. 20, 1875.]

1. A door-lock composed of a sliding bolt with pivoted and weighted toggle-levers and lateral operating thumb-lever, when arranged and constructed substantially as and for the purpose set forth.



2. The combination of the lateral thumb-lever, swinging in guide-slots of the casing, and having the bottom projection, with the grooved outer seat part, substantially as specified.

162,276. MIDDLINGS-PURIFIERS. Simeon Crittenden and James Waters, Chatfield, Minn. [Filed Mar. 1, 1875.]

Brief.—Blast is directed upward and distributed equally in sharp jets against the bolting-cloth by the graduated and zigzag plates, for raising the fine impurities therefrom, which are carried off by the suction-blast.

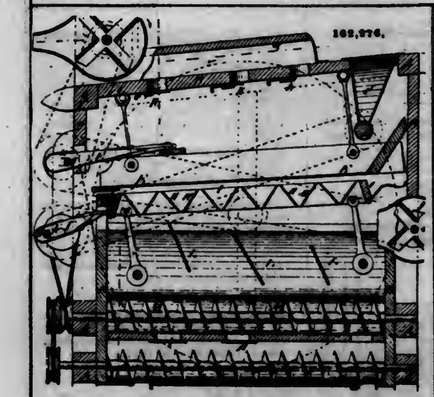
162,269.

162,273.

162,269. MIDDLINGS-PURIFIERS. J. Brown, Buffalo, N. Y. [Filed Aug. 26, 1874.]

1. The combination, with a screen, of the endless belt *h*, and a brush-frame secured to the endless belt by a coupling capable of a free lateral movement relative to the brush-frame, so as to permit the coupling to pass around the pulleys with the endless belt, and thereby impart a reciprocating movement to the brush, substantially as hereinbefore set forth.

2. The combination, with the screen, brush-frame, and endless belt, of the groove *t*, and shuttle or sliding coupling *h' i*, substantially as and for the purpose hereinbefore set forth.



162,273. CULTIVATORS. Amos B. Colver, Albany, Oreg. [Filed Jan. 30, 1875.]

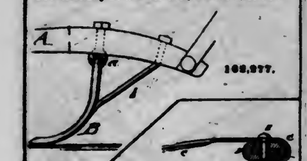
Brief.—An angular plow-frame suspended below a carriage having four wheels, and sliding up or down in guides. By a peculiar system of levers and connecting-rods, every part of the frame is uniformly raised and locked above the ground.

1. As an improvement in cultivators, the combination of the obliquely-arranged plow-frame A, sliding on front king-bolt *b*, and by rear guide-frames F on the rear axle, with the supporting main beam D, and operating lever D' L', and frame connecting-rods, for raising and lowering the plows as required, substantially in the manner and for the purpose set forth.

2. The combination of sliding plow-frame A with main beam D, and pivoted supporting-hooks H operated by spring-acted lever H', for locking plow-frame in raised position, substantially as set forth.

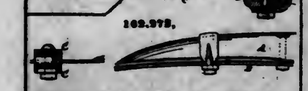
162,276.

162,281.



1. The combination of the vibrating frame I and the zigzag plates H, having narrow openings between their top and bottom edges, with the fan-blower P and the bolt E, substantially as herein shown and described.

2. The series of graduated plates L, in combination with the fan-blower P, the frame and plates I H, and the bolt E, substantially as herein shown and described.



162,277. VISE-RAKES. J. W. Dunn, Corpus Christi, Tex. [Filed Feb. 13, 1875.]

Brief.—A U-shaped bar, having the ends sharpened and bent forward, is secured to the under side of the beam by an eyebolt, and braced from each branch rearwardly to the beam. The guiding-handles are secured to the rear end of the beam.

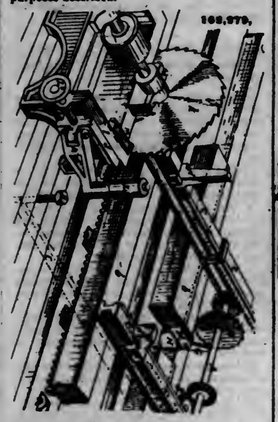
The combination, with beam A of the fork B B, pivoted in beam-eye *a*, and provided with braces *b b*, all constructed and arranged substantially as and for the purpose specified.

162,278.

162,278. CARRIAGE-SPRINGS. William F. Dunnenberry, New York, N. Y. [Filed Feb. 5, 1875.]

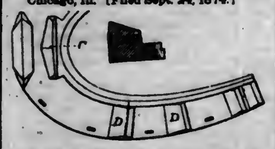
1. The combination, with a side spring, B, cross-spring C, and rubber spring D, of a single bolt, E, as and for the purpose specified.

2. The combination of the rubber blocks D, with the ends of the cross-springs C, and the ends of the steel springs B of the side bars A B, substantially as shown and described.



162,279. CIRCULAR-SAW MILLS. Chester M. Fairbanks, Lebanon, N. H., assignor to Lane Manufacturing Company, Montpelier, Vt. [Filed Aug. 20, 1874.]

Brief.—The gage roll swings vertically, and, when in its working position, is held rigidly by two projecting flanges upon the sliding carriage, to which it is attached.



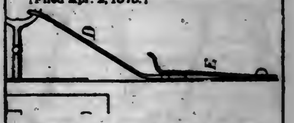
1. The projections b^2 and c^2 on sliding box J, in combination with the vertical and swinging gage-roller L, as a means of holding the gage-roller truly in position, and preventing displacement thereof, substantially as described.

2. The sliding box J, having projections b^2 c^2, and the leg c^3, to which the horizontal arm K, that carries the gage-roller L, is pivoted, in combination with the stationary slides I I, carrying the horizontal roller M, as and for the purposes described.

162,279.

162,280. HORSESHOES. J. D. Felthousen, Chicago, Ill. [Filed Sept. 24, 1874.]

1. A horseshoe provided with supplementary calks shorter than the toe and heel calks, and having their edges inclined to the plane of the shoe, substantially as and for the purposes specified.

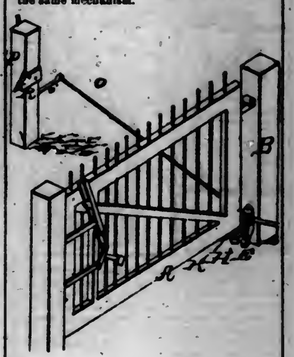


2. Having a projecting rib around the inside of the shoe, in combination with the supplementary calks C and D D, substantially as and for the purposes set forth.

162,281. JOINERS' CLAMPS. D. A. Fisher, Jr., Washington, D. C. [Filed Mar. 30, 1875.]

Brief.—In joiners' clamps a central purchase is obtained on wood of varying thickness by means of a sliding nut adjustable in vertical guideways, which are rigidly attached to the front of the bed of the clamp, said nut being attached to, and operated by, a regulating screw arranged at right angles to the main clamping-screw. The nut is secured at the desired height by a thumb-nut operating upon the regulating screw.

The combination of the bed A, support B, clamping-screw D, and block E with an adjustable nut, C, and screw, F, constructed as shown, and for the purpose described.



162,282. KEY-FASTENERS. Robert F. Gibson, Cleveland, Ohio, assignor of one-half his right to Franklin N. Clark, same place. [Filed Apr. 2, 1875.]

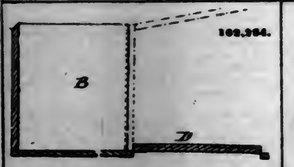
The tag D and the spring-catch E, in combination with the key C, for fastening the key in the lock, substantially in the manner and for the purpose set forth.

162,283. AUTOMATIC GATES. Cyrus E. Gillespie, Edwardsville, Ill. [Filed Mar. 18, 1875.]

Brief.—Operated by a system of levers, which is connected with the bottom hinge. This hinge is formed of three parts, one of which, having a rounded V-shaped groove in its upper side, is attached to the post. At the outer end of this part is a vertical hook, upon which a slotted lever works. Attached to the foot of the gate is a plate, with a hook projecting downward, which works in the slot in the lever. Motion being given to this slotted lever by the system of levers, the foot of the gate is drawn out, the front raised, and the gate allowed to swing open. It is closed by the same mechanism.

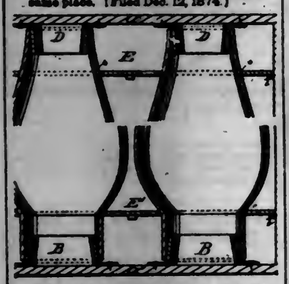
1. The lower hinge, consisting of the bracket E, lever H, and hook K', combined and operating substantially as described.

2. The upper hinge, consisting of the eye L, hook M, provided with the notches *m*, and the key N, combined and operating substantially as described.



3. The bracket E, lever H, hook K, rod *o*, arm *o'*, shaft *o''*, post P, arm *o'''*, and lever Q, combined and operating substantially as set forth.

4. The gate A, post B, bracket E, lever H, hook K, leverage O, post P, and fastening H, combined and operating substantially as described.



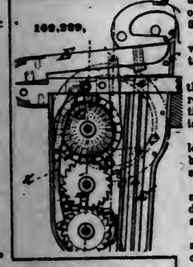
162,284. CIGAR-BOXES. Carl Giucd, New York, N. Y. [Filed Feb. 20, 1875.]

A cigar-box made with a hinged back, D, and with the lid E hinged to the hinged back, the back being grooved to receive tenons that project from the rear ends of the sides B B, all substantially as herein shown and described.

No. 162,264.

162,265. BOXES FOR PACKING LAMP-CHIMNEYS. Noah Harris, North Grove, Ind., assignor of one-half his right to Hiram Stout, same place. [Filed Dec. 12, 1874.]

A box for packing lamp-chimneys, having the perforated diaphragms E E', rests *d*, and cups D B, substantially as described.



162,266. WICK-RAISERS. Henry C Hart, Adrian, Mich. [Filed Jan. 12, 1875.]

Brief.—The shaft bearing the worm-wheel is turned by means of the hand-wheel attached to its lower end.

No. 162,266.

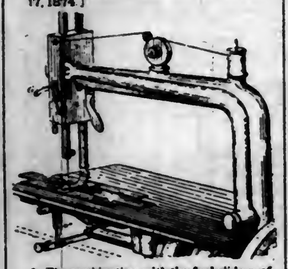
No. 162,269.

1. The combination, with the ordinary wick-raising device, consisting of the shaft *a* and toothed wheels *b b*, of the toothed wheel *d*, arranged within the oil-chamber, and the worm *c*, attached to a vertical shaft passing down through the bottom of the oil-chamber, and operated from below the same, substantially as herein set forth.

2. The combination of the oil-chamber A with the wick-raising mechanism, substantially as shown and described, all arranged and operating so that the wick-raising mechanism is placed within and below the top of the oil-chamber.

3. The combination, with the oil-chamber A, wick-tube B, and wick-raisers *b b*, of the toothed wheel *d*, worm *c*, shaft E, stuffing-box *f*, and hand-wheel G, all constructed and arranged to operate within the oil-chamber, substantially as and for the purposes herein set forth.

162,267. NECK-TIE HOLDERS. M. A. Head, Carthage, Ill. [Filed Mar. 23, 1875.]



1. The combined neck-tie holder and badge-holder, consisting of the shield E and the hinged clasp I, having the slots V, or equivalent fastening device, as set forth.

2. In combination with a neck-tie, a badge-holder, consisting of the clasp I, when provided with slots V or equivalent devices for holding the badge, as set forth.

No. 162,267.

162,268. SEWING-MACHINES. George W Hoffman, Monroe Centre Ill. [Filed Sept 17, 1874.]

1. The combination, with the feed-slide *p*, of the pivoted elbow-lever S, for giving the vertical movements, and the lever *o'*, for giving the reciprocating movements, to said slide, all arranged and operating as described.

2. The slotted take-up lever G, constructed as described, in combination with the ribbed pivoting disk *g* and spring *g''*, arranged and operating as set forth.

162,269. CONDUCTORS' PUNCHES. Henry Johnson, Washington, D. C. [Filed Mar. 16, 1875.]

1. In a conductor's punch, the double-crown ratchet-wheel G, having teeth *j j'*, adapted to sound an alarm, prevent a premature or fraudulent alarm, and actuate the dial mechanism of a registering device, substantially as specified.

2. The combination, with a registering device in a bell-punch, of the separate and detached dial-plate M, substantially as specified.

3. The slotted storing-tube E' for receiving the clippings, and adapted to be placed in and removed from the clipping-box, in combination with a punch and its actuating mechanism, substantially as specified.

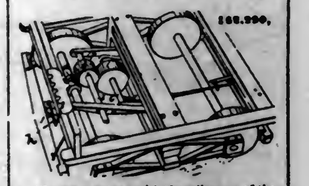
4. The combination of a vibrating thumb-lever cam, D, metallic arm E, and a wooden handle, *b*, rigidly secured to the punch-frame, substantially as specified.

5. The detachable lid or cover L, in combination with a dial-case, a clipping-box, and a detachable dial-plate, H, substantially as specified.

6. The ejector-spring *s*, in combination with a detachable cover, L, and plate H of the dial-case, substantially as specified.

7. The spring-pawl *o*, in combination with a ratchet-wheel, G, adapted to be intermittently rotated by suitable mechanism, and a spring-hammer, K, for the purpose of preventing a premature or fraudulent alarm, substantially as specified.

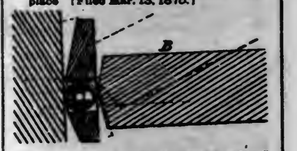
8. The intermittently-rotated crown-ratchet G, in combination with an overlying hammer-spring, K, having a beveled tooth, *u*, engaging with the teeth of the said wheel, substantially as specified.



9. The combination of a needle, F, having an enlarged pointed head, *i*, for perforating the clippings and allowing them to slide down the shank of the needle, in combination with a mechanically-actuated punch, substantially as specified.

10. The spring-secured arm E, having a punch bar or blade, in combination with a thumb-lever cam, D, for actuating the alarm and the registering mechanism, substantially as specified.

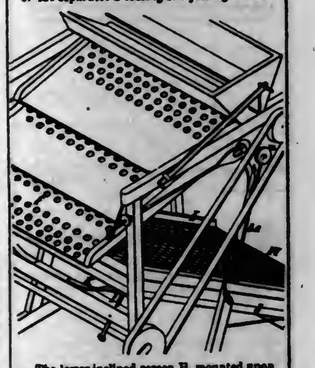
11. A double-crown ratchet, adapted to be intermittently rotated, and a pawl, in combination with an alarm mechanism, a push-bar for operating the said ratchet, and a spring for holding the push-bar to its engagement therewith, whereby a sharp clicking sound is produced both before and after the alarm, substantially as specified.



162,270. CAR-BRAKES. Dwight D. Kimel, Bement, Ill. [Filed Nov. 23, 1874.]

No. 162,270.

The combination, with the rollers *a c* of the loose roller *b* on shaft J, one end of which is attached to the bar *c'*, the other end passing through a perforation in the pivoted lever *c*, to the outer end of which the engaging-arm *h* of the rack bar is attached, substantially as and for the purpose set forth.

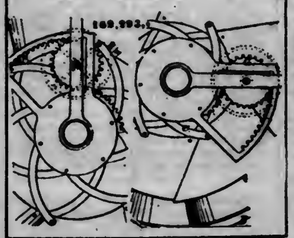


162,271. THROAT-GEARS FOR GAFFS. Chas. B Kingston, Worcester, Mass., assignor of one-third his right to E. W. Stone, same place. [Filed Mar. 13, 1875.]

The combination, with the mast A, and gaff B, of a flat-bearing surface and a bearing-roll, arranged in such relation to each other that the operation of "peaking" the gaff or elevating its rear end will transfer the pressure or strain at the throat from the bearing-roll to the flat bearing-surface, and vice versa, for the purpose set forth.

162,272. GRAIN-SEPARATORS. E. Knapp, San Francisco, Cal. [Filed Mar. 10, 1875.]

Brief.—Devices for giving the lower screen of the separator a tossing and jarring motion.



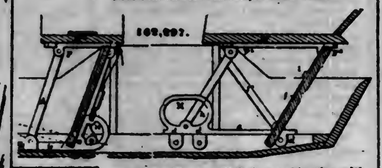
The lower inclined screen H, mounted upon springs K K, and having the screws *i*, or equivalent stop, in combination with the rods M and cam *p*, for imparting to said screen an up-and-down motion and jar, when the jar is produced at the termination of the stroke or motion, substantially as and for the purpose described

162,273. WATER-WHEELS. Fredk. Kring, Johnstown, Pa. [Filed Dec. 5, 1874.]

Brief.—The gates rest horizontally upon the wheel-case, and the weight of the water insures a close joint. The ends of each gate overlap the two adjoining gates, and thus form sliding joints between them.

The series of horizontal gates A, resting and sliding upon the wheel-case B, said gates overlapping each other, and being opened by moving radially inward, substantially in the manner and for the purpose set forth.

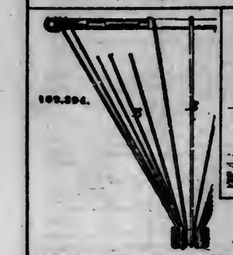
No. 162,273.



In a washing-machine, the combination of the semi-cylindrical vibrating suds-box C, suspended on trunnions or pivots D, and having the hand-lever E attached to its sides, and the removable vertically adjustable rubber F, having arms G provided with guide-pins H and the vertical open-grooved extensions B of the frame A, all arranged as shown and described, to operate as specified.

162,274. JUMP-SEATS FOR CARRIAGES. C. K. Mellinger, Harrisburg, Pa., assignor of one-half his right to Jacob Reinoehl and Lehman & Bergel, same place. [Filed Jan. 6, 1875.]

1. A panel, in combination with the jump-seat supports, having a common motion with, and being retained in position by, said supports, as and for the purpose set forth.



No. 162,274.

2. The sill-irons H S, in combination with the supports A B', the bolts *g g' g''*, and seat-irons F, all constructed to operate as and for the purpose set forth.

3. The sill-irons K *e d*, in combination with the supports D' *l f*, and the seat-irons F' F'', all constructed to operate substantially as and for the purpose set forth.

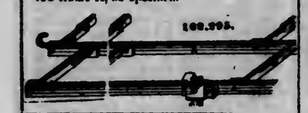
No. 162,275.

162,275. FILTER-RACKS. Moritz Leiner, New York, N. Y. [Filed Nov. 7, 1874.]

Brief.—A rack made adjustable by means of a rubber tube, which connects the wires at the top, and a rubber band connecting them at the bottom.

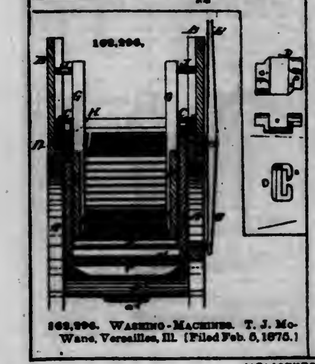
1. A filtering-rack, made so as to be adjustable as to diameter, substantially as described.

2. A filtering-rack consisting of the wires B, flexible tube C, and flexible band D, arranged substantially as shown as described.



162,276. HARROWS. J. McPherson, Housesville, N. Y., assignor to Deborah McPherson and J. M. House, same place. [Filed Feb. 26, 1875.]

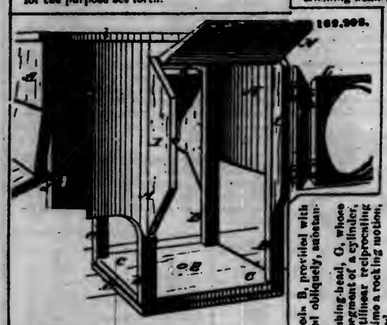
Brief.—The harrow-frame is made of iron. The teeth are each secured to the frame by a device fully described in the first claim.



1. The hasp or harrow-tooth fastener D, having a tooth-seat, *c*, and hooks *a a* at diagonal corners, the forward one resting upon and embracing the bar A in front of the tooth, and the rear hook clasping the rail beneath and behind the said tooth, as described.

2. The hasp D, in combination with the harrow-frame A, as specified.

No. 162,276.



No. 162,277.

162,277. WASHING-MACHINES. T. J. McWane, Versailles, Ill. [Filed Feb. 6, 1875.]

No. 162,278.

162,278. SHIRT-PROTECTORS. Marmaduke H. Macdonald, Wabash, Ind. [Filed Mar. 6, 1875.]

Brief.—Improvements on Patent No. 156,724, January 12, 1875.

1. The combination of the second bottom D, and the pivoting-screw E, with the case A B C, substantially as herein shown and described

2. The combination, with the case A B C, having its sides cut away or open at the bottom, of the flap N, hinged near the top thereof, the door L, and hinged pieces I, all constructed and arranged as shown and described, for the purpose specified.

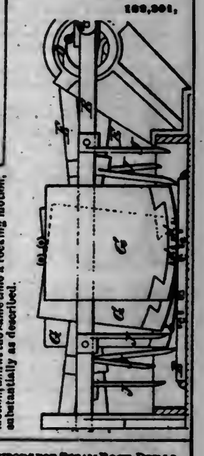
162,279. CURRY-COMBS. A. F. Migeon, Wolcottville, Conn. [Filed Feb. 27, 1875.]

Brief.—Projecting from the back of the comb, upon the side opposite from the handle, is a rest for the fingers in grasping the comb.

The combination, with a curry-comb, of a grasping-piece *c* at the back of the comb, and at the opposite side to the handle *a*, for the purposes and as set forth.

162,280. FASTENINGS FOR POCKETS. David Neustadter, San Francisco, Cal. [Filed Mar. 6, 1875.]

A re-enforce for pockets in garments, consisting of the strap *b*, sewed to the inside of the flap of the pocket, and having its ends *c* bent inward and sewed to the back of the pocket, substantially as described, whereby the whole flap is strengthened, and at the same time the points of juncture are re-enforced, as specified.



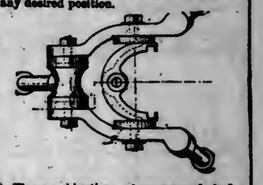
162,281. ORE-CRUSHERS. Geo. E. Noyes, Washington, D. C. [Filed Mar. 13, 1875.]

Brief.—The crushers are given a reciprocating motion by means of shafts connecting with the eccentrics. The rakes serve to feed the ore to the crushers, and, to facilitate the grinding, both the crusher-heads and the bed are furnished with oblique rifles.

1. The rings D, provided with wrist-pins *a* eccentric to their axes, in combination with the rods E, slotted standards F, and crushing-heads G, whereby a rectilinear reciprocating, and also a rocking-motion is given to the heads, substantially as described, and for the purpose set forth.

2. Rakes or feeders J, combined with one or more reciprocating and rectilinear reciprocating crushing-heads, G, substantially as described.

No. 162,281.



3. The heads G and bolts B, provided with the grooves *c d*, arranged obliquely, substantially as described.

4. A self-feeding crushing-bowl, G, whose base has the form of a segment of a cylinder, said bowl having a rectilinear reciprocating motion, and at the same time a rocking motion, substantially as described.

162,282. TRIPODS FOR STEAM ROCK-DRILLS. George B. Nutting and Joseph C. Githens, New York, N. Y. [Filed Apr. 8, 1875.]

Brief.—The cylinder-carriage is provided with conical trunnions, and the yoke with compensating-nuts, to readily secure the drill in any desired position.

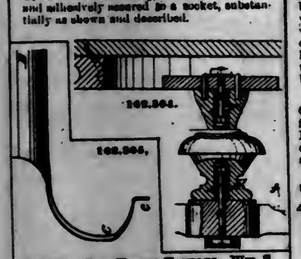
1. The combination of a grooved bed, mounted upon trunnions, with a yoke supported upon two fixed extensible legs, and one

pivoted extensible leg, for the purpose of facilitating the adjustment of the drill-cylinder at variable elevations, and at variable angles, substantially as described.

2. A yoke provided with bearings for the trunnions of a drill-cylinder bed in combination with two fixed legs and one movable leg, the latter pivoted in double conical-face bearings by means of a screw bolt and nut, for the purpose of securely holding the movable leg in prescribed position, substantially as set forth.

3. The combination of a drill-cylinder bed with two horizontal trunnions having conical-face bearings, each provided with a screw-bolt and nut, for the purpose of securely holding the cylinder-bed in prescribed position, substantially as set forth.

162,203. LAMP-BURNERS. James Pigot, Brooklyn, N. Y. (Filed Feb. 20, 1875.)

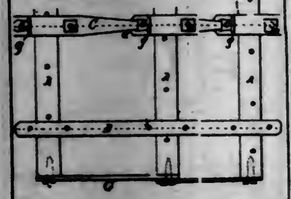


Brief.—The tube-extension forms a partition in the base of the burner-tube, one edge of which is embraced by the wick

The combination of U-spring F and air-tube extension D, as and for the purpose specified.

162,204. TABLES. Louis Postawka, Cambridgeport, Mass. (Filed July 3, 1874.)

A fastening for table-standard legs, stand A consisting of a beaded and end-threaded bolt, G, and a tubular filling, H, which is let into and adhesively secured to a socket, substantially as shown and described.



162,205. TEA-KETTLE HANDLES. Wm. S. Potwin, Chicago, Ill. (Filed Mar. 9, 1875.)

Brief.—A tubular open-ended handle.

As a new article of manufacture, a tea-kettle handle consisting of the large hollow part B, open at both ends, and of the slender corrugated parts C C, provided with the parts *c c*, all made in one continuous piece, substantially as specified.

162,206. HARROWS. Geo. H. Pounder, Fort Atkinson, Wis. (Filed Mar. 19, 1875.)

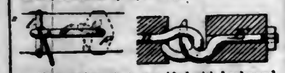
Brief.—The bars that carry the teeth are round, and are secured together by hinged links and clamps, so that the teeth may be placed and held at any desired angle. By securing longitudinal bars near the ends of the teeth-bars, the harrow can be changed from a flexible to a rigid one.

---

1. The coupling-plates C, with clasps D, and bolts *c*, in combination with bars A, substantially as described, for the purpose specified.

2. The bars B and clasps E, in combination with round bars A, substantially as described, and for the purpose specified.

3. The parallel bars A, having hinged couplings C at their center, in combination with the check-bars G or their equivalent, substantially as described, for the purpose specified.



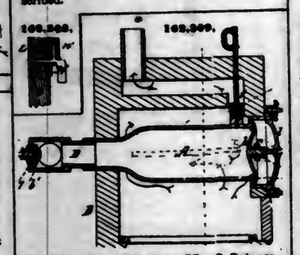
4. The hinged plate C with its slot *c*, in combination with the clasp D with its triangular point *g*, substantially as described, for the purpose specified.

5. The round bars A, in combination with bars B, couplings C, clasps D, check-bars G, and bar A, substantially as described, for the purpose specified

---

162,207. HAY AND GRAIN ELEVATORS. T. Powell, Stockton, Cal. (Filed Sept. 26, 1874.)

Brief.—Two sections of netting, each stretched on two parallel bars, the inner ones of which connect by a series of hooks, terminating in one, locking in the contrary direction, and detached by a crank forming part of the hook, actuated by a jerk-rope.



The sections A A, provided with hooks and eyes D E and swivel-hook F, having crank G, catch I, and trip-cord H, all arranged as shown and described.

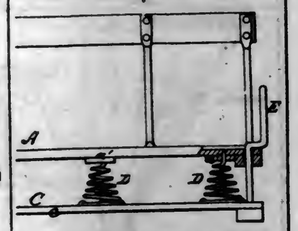
162,208. CHURNS. Benj. F. Price, Mount Sterling, Ill., assignor to himself and A. A. Hill, same place. (Filed Mar. 6, 1875.)

Brief.—Consisting in connecting the pitman to the dasher-shaft by a flexible joint formed of two plates attached to the pitman, and embracing the head of the dasher-shaft, through which plates and the shaft passes a pin provided with a toe, which passes under a small catch-plate, the handle of the pin being made heavy, so as to hang down, thus holding the toe under the catch-plate while the churn is being operated.

In a churning apparatus, the dasher-shafts O O and crank-rods K K, connected by the flexible joint or coupling formed of the plates L M, pins N, having toes *n* and weighted or drop handles, all combined as shown and described.

162,209. GAS-RETORTS. Silas S. Putnam, Boston, Mass. (Filed Mar. 4, 1875.)

Brief.—An interior cover may be tightened without removing the outer lid. The supporting-flanges of the retort and a horizontal partition in the furnace make detaining-flues for the products of combustion lengthwise of the retort. The oil-feeding pipe enters a clay-lined socket. The scraper-rod is packed by a disk, *d'*, into which the rod is screwed.



1. The retort A, with its wings *b*, in combination with the casing B, passages *c c*, formed at the opposite ends of the retort, by contracting the wings *b b*, and one or more flues, substantially as and for the purpose set forth.

2. The retort A, constructed in the form of a bottle with its outlet at the neck or contracted portion, and provided with the inner head *h*, in combination with the wings *b b*, passages *c* and *c*, outlet-pipe D, and condenser G, substantially as and for the purpose set forth.

3. The inner head *h*, provided with a central stud, *q*, and secured within the mouth of the retort A by the brace *s*, hollow screw *p*, and projections *r*, in combination with the outer head *l*, having a central screw *t*, which bears against the stud *q*, whereby a pressure may be exerted on the inner head to tighten it, without removing the outer head, substantially as described.

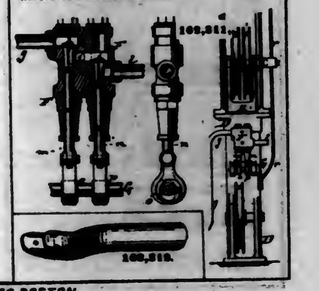
4. The scraper *b'*, with its rod *c'*, screw 15, and beveled disk *d'*, in combination with the screw-plug *d''*, provided with a beveled seat, 17, and with the outlet-pipe D, substantially as described, for the purpose set forth.

162,210. VEHICLE-SEATS. R. Sakestraw, Wyoming, Ill. (Filed Aug. 29, 1874.)

1. In a spring-seat for vehicles, the U-shaped seat-arm E at each side of a seat, A, its legs passing loosely through the seat, and their ends rigidly secured to the spring-frame C, all combined substantially as and for the purpose set forth.

2. The notch *e* of the U-shaped vehicle seat-arm E, in combination with the springs D and the seat A, substantially as and for the purpose specified.

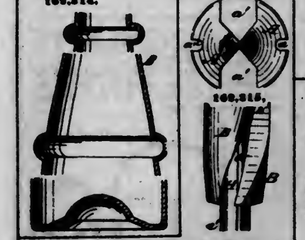
162,211. HYDRAULIC HOISTING APPARATUS. Ferdinand Rochow, Brooklyn, N.Y. (Filed Mar. 17, 1875.)



Brief.—Valve mechanism of the elevator-press can be operated from the carriage. An accumulator interposed between the pumping-engine and the elevator-press, by combination with a balanced valve, controls the motive power which operates the engine, so that when the accumulator is full, or nearly so, the engine is stopped, and the converse.

1. The accumulator A, having the weighted plunger B working in the chamber *f*, provided with pipes *e g g*, in combination with the balanced valve C, which, when raised, closes the passage *d*, substantially as and for the purpose specified.

2. In combination with a hydraulic press, the valve-chamber F, containing the valves *h i*, and connected with the pipes *g* and *l* and opening *j*, substantially as specified, the valves *h i* being arranged above lifting-pins *m n*, as and for the purpose set forth.

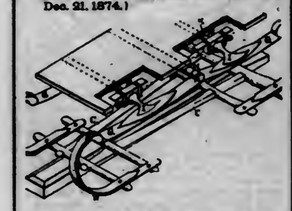


3. The combination of the crank-shaft G, carrying eccentrics *o* and *p*, with the lifting-pins *m n*, valves *h i*, and with the cylinder D of a hydraulic press, substantially as set forth.

4. The rod *r*, carrying the stop *s*, and connected with the crank-shaft G, that controls the valves *h i*, in combination with a sleeve or projection, *t*, on the reciprocating frame on the hydraulic plunger E, substantially as herein shown and described.

162,212. BOTTLES. Lewis F. C. Schmidt, Pittsburg, Pa. (Filed Oct. 24, 1874.)

The tapering bottle A, having a corrugation, C, of the same diameter as the widest part of body, and arranged just below the neck B, as and for the purpose described.



162,213. BOWLS. Chas. H. Sayre, Utica, assignor to himself and Albert B. Parker, New York, N. Y. (Filed Mar. 25, 1875.)

Brief.—A tube of iron or other suitable metal is split at one end, flattened and bent to the desired curve, and the blade of the shovel is inserted into the slit, and secured by rivets or otherwise. The wooden handle is steamed and driven in while soft.

The handle-socket for a shovel or spade, made entirely of an iron or steel tube bent to the curved shape required, and slotted and spread at one end to fit the surface of the blade, and attached to such blade, as set forth.

162,214. CARRIAGES. Francis Schertz and Frank F. Doland, Sacramento, Cal. (Filed Dec. 21, 1874.)

1. The C-springs D, in combination with the side springs G G, substantially as and for the purpose set forth.

2. The supporting shafts or bars *h h*, secured to the springs C, and passing through the adjustable cushions M upon the wagon-bed, in combination with the springs G and C, substantially as and for the purpose herein described.

162,215. BOTTLES. Lewis F. C. Schmidt, Pittsburg, Pa. (Filed Oct. 24, 1874.)

The tapering bottle A, having a corrugation, C, of the same diameter as the widest part of body, and arranged just below the neck B, as and for the purpose described.

162,216. DRILLS FOR DRILLING METAL. J. B. Shaw and Simeon H. Lucas, Chicago, Ill. (Filed Feb. 5, 1875.)

Brief.—Owing to the peculiar form of the grooves *a'*, the chips are caused to break in pieces, and thus prevent the drill from being choked. Small grooves, for conducting oil, are formed in the sides of the drill.

1. The drill A, provided with the peculiar grooves *a'*, formed in its opposite sides, substantially as herein shown and described.

2. An improved drill formed by the combination of the inner part or drill A, provided with the grooves *a'* and *a''*, and the outer part or case B, provided with spiral shoulders *b'*, substantially as herein shown and described.

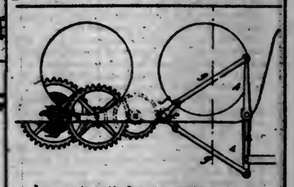
162,217. SPRING BED-BOTTOMS. George L. Sheppard, Columbus, Ohio. (Filed Mar. 18, 1875.)

Brief.—The bent elastic top strips straighten out under pressure, and thus reduce the tendency to bend the side bars of the frame, and to press down the adjacent springs. They are attached to the top coils of the springs by the rings and the wires, which pass over the rings, and are bent around them and the strips

162,218. SHOVELS. Chas. H. Sayre, Utica, assignor to himself and Albert B. Parker, New York, N. Y. (Filed Mar. 25, 1875.)

Brief.—A tube of iron or other suitable metal is split at one end, flattened and bent to the desired curve, and the blade of the shovel is inserted into the slit, and secured by rivets or otherwise. The wooden handle is steamed and driven in while soft.

The handle-socket for a shovel or spade, made entirely of an iron or steel tube bent to the curved shape required, and slotted and spread at one end to fit the surface of the blade, and attached to such blade, as set forth.



162,219. WRENCHES. H. R. Sloat, Sloatsburg, N. Y. (Filed Feb. 9, 1875.)

Brief.—The movable jaw is forced snugly against the nut by means of an independent cam-lever operating against the end of the spindle of the adjusting-screw.

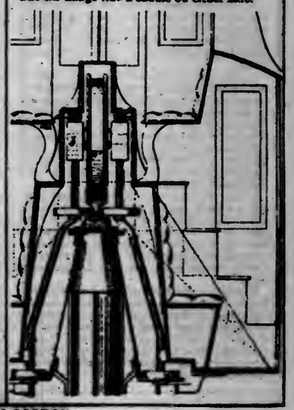
In combination with the movable jaw and screw-spindle of a monkey-wrench, the cam *e*, provided with a separate handle, *h*, for operating and locking it, substantially as and for the purpose specified.

162,220. AUTOMATIC FANS. L. D. Stamps, Galveston, Tex. (Filed Feb. 13, 1875.)

In an automatic fan, the combination of the cranks *f*, links *g*, arms *h*, rock-shaft and crank *i*, vertically-adjustable rod *l*, fan-shaft *m*, and vertically-adjustable fan D, substantially as described, for the purpose set forth.

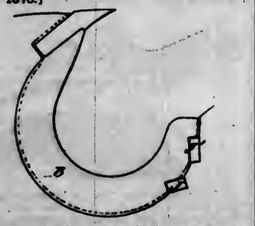
162,221. WATCH-CASES. Francis Steffany, Brooklyn, N. Y. (Filed Jan. 11, 1875.)

In stem-winding watches, the cap *a*, cut out in the center as described, and provided with the ring *c*, having an inward and upward extension on the inside of the cap, in combination with the bezel *e*, whereby material is saved, and the recess formed for the insertion of one or two pictures, all as and for the purpose specified.



162,222. COTTON-SEED DRILLS. Henry Stockler, Jr., New Iberia, La. (Filed Mar. 6, 1875.)

Brief.—The dropping-wheel is pierced with holes near its periphery, each pair of which receives a wire bent across the edge of the disk, and leaving both the ends projecting as teeth to agitate the seed.



In a seed-planter, the dropping-wheel, provided with a series of holes near its edge, and the wires K inserted therein, and their ends projecting, as shown and described.

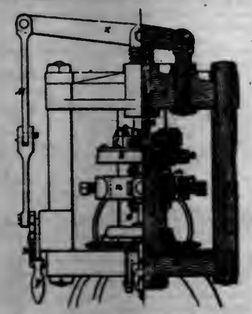
162,223. CARS FOR ELEVATED RAILWAYS. Roy Stone, Vandalia, N. Y. (Filed Mar. 20, 1875.)

Brief.—Double tier of seats, so arranged above one another as to maintain the equilibrium. Spring flexible bearings for single running wheel, with side guiding-wheels for pressing against either side of the single rail. The car hangs like a saddle on either side.

162,224. SAW-SETS. Benjamin Smith, Norwich, N. Y. (Filed Jan. 16, 1875.)

The saw-plate A and tooth-wedge B, provided with openings J J', arranged with the joint of wedge and plate diagonally, one portion in the wedge and the other in the plate, to allow the said wedge to be tightened against or loosened from the teeth by keys, in the manner specified.

1. In a car for elevated single-rail road, the combination of a lower tier or tiers of seats, near its center, with a similar tier or tiers vertically above the lower tier or tiers, substantially as and for the purpose set forth.



2. In a car for elevated single-rail ways, the combination of side platforms, communicating end stairways, and a central stairway at station side for giving ready access to the upper and lower tiers of seats, as set forth.

3. A saddle-car having two wheel-casings and enclosed base-supports, in combination with spring-supporting trucks, substantially as and for the purpose set forth.

4. In the car supporting truck adapted to shape of girder, the combination of top wheel, having flexible bearings, with upper guard and lower guiding wheels, substantially as and for the purpose set forth.

162,324. MACHINES FOR THE MANUFACTURE OF WATCH-CASES. Charles Louis Thiery, Boston, Mass. [Filed Mar. 26, 1875.]

Brief.—On the rotating disk are arranged four rolls, of which the carriages severally are adjustable radially and vertically. The cup-shaped blank is clamped by the dies. Two of the rolls roll on the edge of the cup and upset and thicken the metal, while the other two mold the metal against the former-die. All the devices operate automatically, except the plunger that carries the former-die.

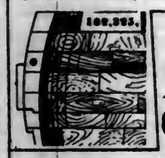
1. The means, substantially as herein described, whereby, with the descent of the series of rollers about the mold and plunger, in the act of reducing the blank to shape, one or all rollers shall be automatically advanced or fed inward toward the axis of the plunger, essentially in manner and for the purposes stated.

2. The mechanical details herein shown for effecting the advance or feeding of the horizontal rollers *a b*, the same consisting of the horizontal annular ledge or ring *m*, the beam *n*, and feed-screw *o*, actuating the bars *k*, &c., which support the roller-carriers, substantially as and for purposes stated.

3. The mechanism herein shown for elevating and depressing the plunger or male die *l*, the same consisting of the lever K, jointed or flexible pitman M, ratchet-wheel N, and hand-lever P, substantially as and for purposes stated.

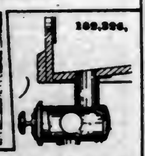
4. The combination of the tilting beam *n* and annular bearing or ring *m* with the roller-bars in such manner that as the beam departs from a horizontal plane in one or the other direction, in the act of raising and lowering the rollers, the ledge or ring *m* shall preserve a horizontal position, and constitute a roadway for the anti-friction rollers *r s*, &c., to travel upon or against, substantially as and for purposes stated.

5. The combination of the sliding bar *f* playing in suitable guides and carrying the roller *a*, and the variable or expansible wedge *i*, the latter being connected at its lower end to the slide-bar *k*, which bar, in turn, is connected with the annular head *m*, and the whole operating substantially as and for purposes stated.



6. The means herein shown of advancing or feeding the swaging-roller *d*, the same consisting of the bar *d'* sliding in the bar *c'*, and with its inclined faces or steps *g' h' i'*, and the dog or cam *P*, pivoted to a suitable support or abutment, and the whole carried by the carriage R, and operating substantially as and for purposes stated.

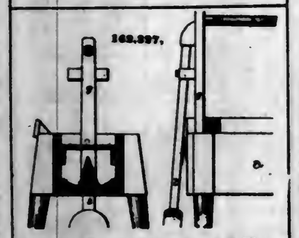
7. The means herein shown of advancing or feeding the roller *b*, the same consisting of the bar *r'*, carrying such roller, and secured to the plate *o'* by the post *t'*, and the yoke *y'*, with its sloping steps or grades *o'*, actuated by the ribs *d'*, the whole being substantially as and for the purposes stated.



162,325. CRUCIBLE-MOLDS. J. C. Wallace, Pittsburg, Pa. [Filed Mar. 19, 1875.]

1. The mode of preparing crucible molds for use in molding, by sprinkling a light layer of plumbago dust on the moistened molding-face of the mold, substantially as and for the purposes set forth.

2. A wooden crucible-mold, built up of small pieces, substantially as set forth.



162,325.

162,326.

162,326. CUT-OFFS FOR SHOT-BOXES. R. C. Wey, Hiawatha, Kans. [Filed Jan. 30, 1875.]

In shot-boxes, the discharge-valve or cut-off attached to the perforated hopper-bottom, and consisting of an outer guide-casing with spout, and an inner turning and sliding re-versed tube, adjusted by lug and guide-slot to the open and closed position of the valves, substantially as shown and specified.

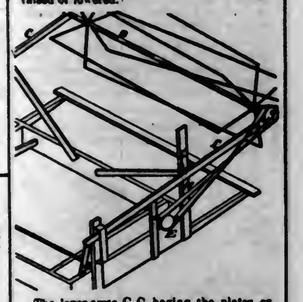
162,327.

162,327. WASHING-MACHINES. A. B. Worden, Smyrna, Del. [Filed Oct. 31, 1874.]

Brief.—Weighted levers are pivoted to the outside of the tub, and are connected at their upper ends to bars, to which the beater is attached.

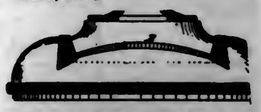
In a washing-machine, the combination of the levers 2, pivoted upon the end of the box *a*, and having a weight secured to each end, in combination with the arm *h*, bars *g*, and washer *c*, substantially as shown.

162,328. PITMAN-HOLDERS FOR HARVESTING-MACHINES. Cyrenus Wheeler, Jr., Auburn, N. Y. [Filed Mar. 19, 1875.]



1. The combination, with the reciprocating knife-head, of the latch D, pivoted to and vibrating with said head, and operating to hold the pitman connected therewith, substantially as described.

2. The latch D, pivoted to the reciprocating knife-head, in combination with the spring bolt or pin E, arranged and operating substantially as described.



162,329. REELS FOR HARVESTERS. Fredk. Wyman, San Buenaventura, Cal. [Filed Feb. 2, 1875.]

Brief.—Arrangement of devices whereby the belt which drives the reel will preserve nearly a uniform tension when the reel is raised or lowered.

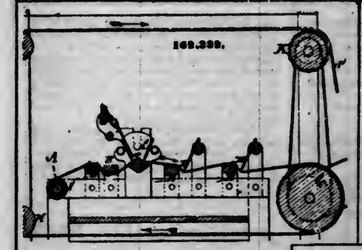
The lever-arms C C, having the plates or arms H attached thereto, and pivoted to the standards at a sufficient distance below the lever-arm to approximately preserve the arc of a circle drawn on a radius from the center of the pulley E to the outer end of the lever-arm, substantially as and for the purpose described.

162,330. MANUFACTURE OF GLASSWARE. Adolphus A. Adams, Pittsburg, Pa. [Filed Mar. 2, 1875.]

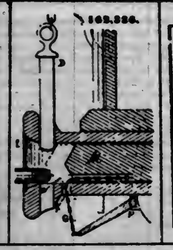
A glass cover for nappies, bowls, and similar articles, having a rest, B, formed thereon or attached thereto, substantially as and for the purpose specified.

162,331. TRAPS FOR BASINS, &c. Fredk. Ades and James Foley, Brooklyn, N. Y. [Filed Mar. 23, 1875.]

Brief.—The body is made with openings for the reception of the connecting pipes, the ends of which are slipped into the body, and then soldered in place.

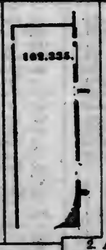


As a new article of manufacture, a trap body with the openings for the reception of the ends of the connecting-pipes, which pipes form the dams in the trap, when soldered to place in such body, as specified.



162,332. MACHINES FOR COATING FABRICS. Luther L. Allen, Monmouth, Me., assignor to Eastern Manufacturing Company, Bliss-both, N. H. [Filed July 30, 1874.]

Brief.—Cloth passes over stretchers, through trough which applies coating; then goes under scrapers, over a card-covered roll, which draws it then back under and up over the machine to card-covered delivery-roll.



HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

162,331.

162,332.

The combination, with the feed-roll A, grooved bar B, hopper C, and scraper D of a machine for coating fabrics, of the card-clothed roll for receiving the fabric from the coating device, the lower and upper rolls H and I for receiving the fabric from the roll G, and the card-clothed roll K, arranged above the roll G, for delivering the coated fabric in an elevated position to the carrier of a drying apparatus, substantially as described, for the object specified.

162,333. FURNACE-DOORS. John Ashcroft, Brooklyn, N. Y., assignor of one-half his right to Edwd. H. Ashcroft, Boston, Mass. [Filed Jan. 20, 1875.]

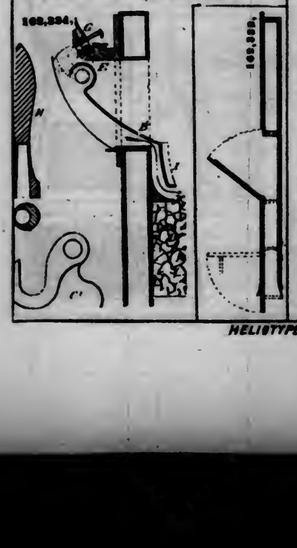
1. A hollow door provided with an inner curved plate, B, which serves as an air-deflector, substantially as shown and described.

2. The combination of a hollow furnace-door, the inner plate of which constitutes an air deflector, with a middle leaf or flap, which serves to admit the required amount of air to the fuel, substantially as set forth.

3. In combination with a hollow furnace-door, the lower leaf or flap, the same arranged to project downwardly beyond the end of the inner curved plate, substantially as and for the purpose set forth.

162,334. FURNACE-DOORS. John Ashcroft, Brooklyn, N. Y., assignor of one-half his right to Edwd. H. Ashcroft, Boston, Mass. [Filed Dec. 5, 1874.]

Brief.—Air is admitted to the surface of the fuel by means of a swinging door. A hood inside and immediately under the doorway, and a deflector attached to the inner wall of the furnace, and below the hood. Said door is manipulated, to admit the required amount of air, by devices enumerated in the claim.



1. The combination of the hood I and the deflector K, substantially as and for the purpose set forth.

2. The combination of the door B, the hood I, and the deflector K, substantially as shown and specified.

3. The brackets having the projecting flanges O', substantially as and for the purpose set forth.

4. The combination of the rock-shaft E, the brackets C, the pivoted hook G, and door B, substantially as and for the purpose set forth.

5. The combination of the eccentric handle H, pivoted hook G, and rock-shaft E, substantially as and for the purpose set forth.

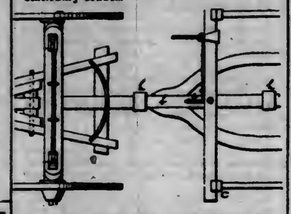
162,334.

162,335.

162,335. FURNACE-DOORS. Edwd. H. Ashcroft, Boston, Mass., assignor of one-half his right to John Ashcroft, Brooklyn, N. Y. [Filed Mar. 9, 1875.]

Brief.—The front shell of the door is provided with a slide, perforated to register with corresponding perforations in said shell. The air passing through the perforations impinges against the inner wall, and is heated. Passing downward, it is deflected upon the surface of the fire.

1. A door for steam-generators and other furnaces, having within it a chamber closed at all points, except its lower end, against the egress of air, and a deflector for directing the air upon the fuel within the furnace, substantially as and for the purpose set forth.



2. The combination, in a furnace-door, of a chamber within such door, a perforated slide for controlling the admission of air to said chamber, and a deflector for giving direction to the air as it emerges therefrom, the parts being constructed and arranged substantially as and for the purpose set forth.

162,336. CAR-COUPLINGS. Owen T. Baker, Wamego, Kans., assignor of one-half his right to Oscar M. Gay, same place. [Filed Mar. 11, 1875.]

The combination of the draw-head I, having an opening, *x*, in its under side, the follower M, having the bottom groove *e*, and chain O, the crank-lever F, extending up the side of the car, and the pin D, all substantially as set forth.

162,337. WAGON-BRAKES. Owen T. Baker, Wamego, Kans., assignor of one-half his right to Oscar M. Gay, same place. [Filed Mar. 12, 1875.]

Brief.—In descending hill wagon-reach slides forward, bringing rear wheels against stationary brakes.

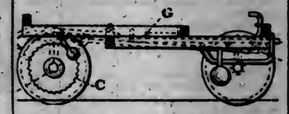
The combination of the reach, having the slot at its front end, with the bar *b* upon the same, the brake bar *c*, and keepers *h*, the reach and bar *b* being connected together and to the wagon by the king-bolt, substantially as set forth.

162,338. STOP-COCKS. Fiskehas Ball, Worcester, Mass. [Filed Nov. 21, 1874.]

1. A valve combined with operative mechanism, wherein the former, through the instrumentality of grooves in the walls of its chamber, on being opened, is first lifted from its seat in a line at right angles to the plane of the latter before it is moved in a line parallel therewith, and, on being closed, is first moved in a line parallel with the plane of its seat until it has fully covered the latter, and is then slowly forced home thereto by a lateral movement at right angles to the former, and there held, in the manner substantially as and for the purposes set forth.

2. A valve combined with its seat and shell, wherein the valve is raised from and forced home to its seat at no expense of rolling friction between the valve and its support, substantially as set forth.

3. The combination of the spider-frame C, spindle *e*, and friction-rolls *c c* with the rolls *a a*, grooves *f f*, and double inclines *f' f'* in the walls of the valve-chamber, or their equivalents, substantially as described, the whole operating in the manner substantially as and for the purpose set forth.



4. The combination of a spider-frame, C, with the disk A and yoke B, substantially as set forth.

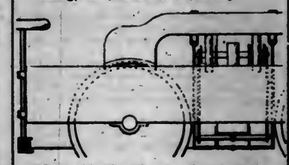
5. The combination of the spider-frame C and its sets of friction-rolls *a a* and *c c* with the disk A and yoke B, all operating in the manner substantially as and for the purposes set forth.

6. The combination of the screw D with the frame C and valve-disk A, the two latter being looped together, in the manner and for the purpose substantially as set forth.

162,339. CAR-STARTERS. H. W. Balts, Sr., Philadelphia, Pa. [Filed Mar. 30, 1875.]

Brief.—Operated by draft on sliding rods provided with elastic buffer. A spring-bar locks the parts, which are liberated and put in condition for action by a parallel rod rotating on its longitudinal axis, and provided with curved arms.

1. The locking-bar P, in combination with the sliding bar E, pawl D, and ratchet C, substantially as and for the purpose set forth.



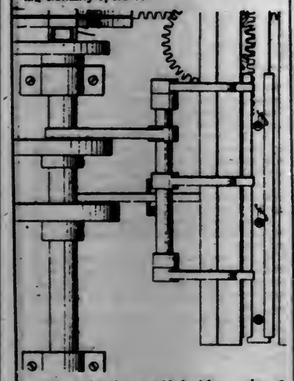
2. The elastic buffer G, in combination with the sliding bar E and beam F of the truck, substantially as and for the purpose set forth.

3. The oscillating rod H, having transverse arm J, in combination with the hinged pawl D and ratchet C, substantially as and for the purpose set forth.

4. The oscillating rod H, having transverse arm T, in combination with the locking-bar P and sliding bar E, substantially as and for the purpose set forth.

5. The oscillating rod H, having transverse arms J T, in combination with the hinged pawl D and locking-bar P, substantially as and for the purpose set forth.

162,340. CAR-BRAKES. Abel Barker, Wyoming, Pa. [Filed Jan. 27, 1875.]

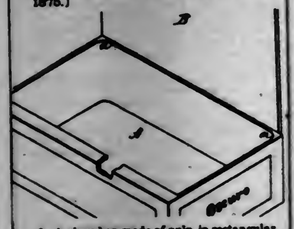


The combination of a car-body, a vertically-movable support therefor, and brakes with connecting mechanism, whereby the pressure of said brakes upon the wheels is regulated by the weight of said car-body, and a correspondence is maintained between such pressure and weight as the latter is increased or diminished, substantially as and for the purpose specified.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

162,841. FEEDING MECHANISMS FOR PAPER-BOX MACHINES. E. B. Beecher, Westville, Conn. [Filed Feb. 2, 1875.]

Brief.—The "four-motion" feed-bar is provided with pins, which enter the perforations in the strip, and feed it a definite distance. The lateral reciprocation of the bar is caused by the double-gear wheel, which is given an alternate rotary motion by the rack-bar connected with the main shaft. The vertical reciprocation of the bar is produced by a lever and cam on main shaft, the clamping-bar being similarly operated.



1. A feeding-bar provided with a series of independent pointed feeding-pins at regular distances apart, adapted, substantially as described, to feed a perforated box-blank strip, as set forth.

2. The combination of the vertically and longitudinally reciprocating feeding-bar, having the rack, with the gear-wheel, having the broad-faced periphery, as and for the purpose described.

3. The guiding-table formed in two separate parts, with an intermediate space, in combination with the feeding-bar and the presser-bars, as described.

4. The combination of the rack mechanism, intermediate double-gear wheel, the feeding-bar, and the vertically-moving supporting-bar, as described.

162,842. PAPER CIGAR-BOXES. George A. Builder, Philadelphia, Pa. [Filed Feb. 26, 1875.]

1. A cigar-box made of pulp, in rectangular form, and having interior rounded corners a a for strengthening the same, substantially as set forth.

2. The combination of the pulp cigar-box A, lid B, and one or more paper flaps, C, having mucilage or other adhesive substance thereon, for the purpose herein set forth.

162,843. MOLDING-MACHINES. John H. Steinfeldt, Philadelphia, Pa. [Filed Jan. 11, 1875.]

Brief.—The revolving cutter-spindle is placed within a hollow column, which forms the stand for the machine, and carries the vertically-adjustable table.

1. A molding and shaping machine, having a single central pedestal or column, and an adjustable work-table, substantially as described.

2. The molding and shaping machine, consisting of the central hollow column or pedestal C, inclosed central shaft B', cutter I, and adjustable work-table B, combined substantially as shown and described.

3. The spindle K, having a tapering shank, *k*, and an annular flange, k^2, in combination with the shaft B', having a correspondingly-tapering socket, k^1, and the nut g^1, substantially as shown and described.

4. The cutter-head I, having swiveled cutters M M, and studs or stops *n n*, substantially as and for the purpose specified.

162,844. MAGAZINE-STOVES. Reinard Blum, Champaign, Ill. [Filed Mar. 6, 1875.]

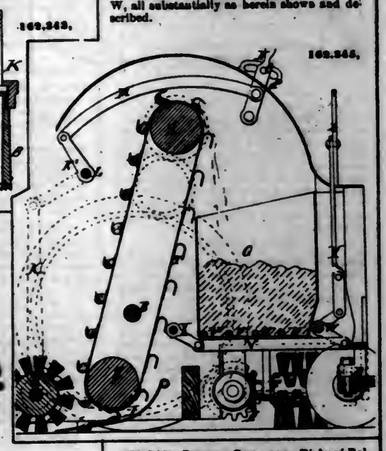
Brief.—The magazine is vertically adjustable. The draft may be made either direct or indirect by means of the dampers in the base.

1. The combination, in a stove, of the base A, lower section C, exit-pipe D thereto, the director E, and the damper F', both the director and the damper being independently-acting, substantially as set forth.

2. The combination of the section C, enlargement or belly H above the same, and having the inclined notched supports d d, and the perforated detachable fire-bottom I resting thereon, all substantially as set forth.

3. The combination, with the enlargement H, of the sliding mica doors J, having interior concave screens *f*, as and for the purposes set forth.

4. The combination of the sunken top N and collar O, having grooves, as described, with the cylinder or magazine P having exterior spirals or worm-screw, as and for the purposes set forth.



5. The combination of the rim R, having elongated bearings *h h*, and the cover S, having the projecting journals *i i*, with the cylinder P of a magazine-stove, all as set forth.

162,845. STREET-SWEEPING MACHINES. William M. Blume, Brooklyn, N. Y. [Filed Mar. 4, 1875.]

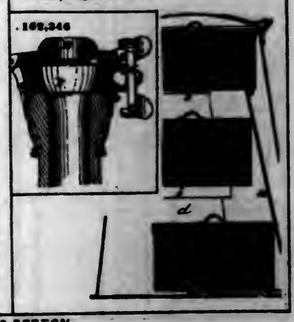
Brief.—A street-sweeper in which are combined a longitudinal rotating gutter-brush, the ordinary street-brush, a curved dirt-receiving pan, an endless dirt-elevator, and a dirt-receptacle provided with a hinged slat bottom. The slats rest upon horizontal bars, which are controlled by bell-cranks attached to a vertical lever, which, when released, allows the weight of the bars, together with the pressure of dirt on the slats, to cause the discharge of the contents.

1. The continuously-revolving gutter-brush F at the front of the machine, arranged at right angles to the rear main brush, in combination with the curved plate I, arranged in front of the main brush, for receiving the dirt, the elevating mechanism, and the dirt-receptacle Q, having a bottom constructed of hinged slats, all substantially as herein shown and described.

2. The combination of the main brush, the elevating mechanism, and the dirt-receptacle, having a bottom constructed of hinged slats, with the hand-lever Z, arm V, and bell-crank W, all substantially as herein shown and described.

162,846. BOTTLE-STOPPERS. Richard Bollerman and Dominik L. Bollermann, New York, N. Y. [Filed Apr. 2, 1875.]

Brief.—A metallic bottle-shell between the mouth of the bottle and the lid. The lid is fastened on one side by a hinge-joint, on the other by a button having a thumb-bar at each end. Between the bottle-shell and the lid there is an india-rubber flap-valve, opening downward.



1. In a bottle-stopper, the combination of the flap-valve C and hinged plate D, which is adapted to be fastened on the mouth of a bottle, and is provided with an inlet-hole, E, substantially as described.

2. In combination with the plate D and flap-valve C, the shell F, adapted to be fastened on the mouth of a bottle, substantially as described.

3. The thumb-button H, provided with one or more inclined lips, *f*, in combination with the shell E and plate D, substantially as described.

162,847. COFFEE-POTS. Jacob Boyers, Huntington, Ind. [Filed Mar. 8, 1875.]

Brief.—Each one of the percolators is, in its turn, charged with fresh coffee, and, when all are full, emptied in turn.

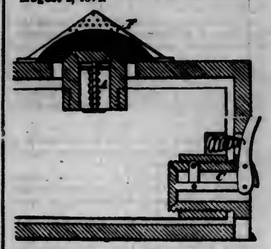
1. The combination, with the boiler, of a series of separate percolators, c, for the coffee, arranged one above the other from the bottom to the top of the boiler, and having the spaces *d* between them, substantially as and for the purpose herein set forth.

2. The combination, with the boiler and the percolators c, of a curved stand-plate, a, and shelves *b*, substantially as and for the purpose herein set forth.

162,848. BRIDLE-BITS. August Buermann, Newark, N. J. [Filed Nov. 18, 1874.]

The within-described bridle-bit, consisting of the mouth-piece *a*, the outer disk *b*, the ring-head or holder *c*, the cheek-piece *d*, and the inner disk *e*, arranged and connected substantially as shown, and for the purpose set forth.

162,849. SHOT-CHARGERS. G. A. Capewell, Woodbury, Conn. [Filed Mar. 19, 1875.]



1. In a shot-charger, the gate-cylinder B, with the grooves *n* formed therein by depressions, substantially as described.

2. The gate-cylinder B of the shot-charger, constructed complete from a single piece of metal, substantially as described.

3. In a shot-charger, substantially such as described, a depression, E, in the barrel, to receive and locate the gate-cylinder, substantially as set forth.

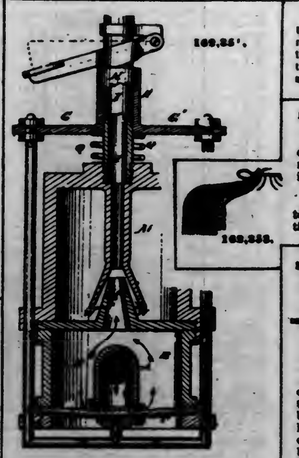
162,850. VESSELS FOR INFLAMMABLE LIQUIDS. Milton Chase and Alonzo W. Chase, Haverhill, Mass. [Filed Jan. 30, 1875.]

Brief.—Improvement on Patent No. 152,703, August 4, 1874.

1. The combination of the vessel B, having the detachable covering D, composed of a non-conducting material, and the safety-valve A, substantially as described, and for the purpose specified.

2. The combination of the vessel B, having the detachable covering D, composed of a non-conducting material, the safety-valve A, and spring-faucet C, the whole being constructed and arranged substantially as described, as and for the purpose specified.

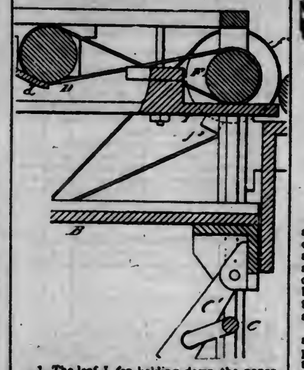
3. A carrier for transporting inflammable liquids, consisting of the vessel B, having a cooling, D, of some suitable non-conducting material, wire-gauze shield F, safety-valve A, and spring-faucet C, the whole being constructed and arranged to operate substantially as described.



162,851. HYDRANTS. Harvey H. Clover, (deceased,) Cincinnati, Ohio; C. S. Clover, administrator, Bay City, Mich. [Filed Aug. 10, 1874.]

Brief.—After the flow of water from the hydrant has been stopped, the water remaining in the discharge-pipe is withdrawn therefrom into a receptacle provided therefor. A flexible diaphragmic valve is employed to cut off the supply of water.

1. The combination of the inlet-pipe A, flexible diaphragmic valve C, disk D, inclined E F F' G G' H, spring Q, lever K, suitably-fulcrumed water-chamber B, and discharge-pipe, for the purposes mentioned.



2. The vacuum-chamber M, combined with the conical nozzle T, nozzle W, and discharge-pipe I, substantially as and for the purposes mentioned.

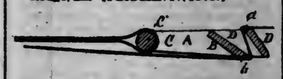
3. The combination of the flexible diaphragmic valve C, combined with mechanism whereby it will cut off the supply of water to the hydrant, and the inlet-pipe A, chamber B, nozzles T and W, chamber M, discharge-pipe I, substantially as and for the purposes set forth.

162,852. PAPER-FEEDING MACHINES. David Colbeck, Philadelphia, Pa. [Filed Feb. 20, 1875.]

Brief.—The paper lies on a bank, which is lifted intermittingly by crank. The top sheet is drawn off by a pad hung at one end to a revolving shaft.

1. The leaf I, for holding down the paper and preventing the advance of more than a single sheet at once, said leaf having a central longitudinal slot, in combination with the rotary feeding-finger d, substantially as described and shown.

2. In combination with the table B and finger-shaft D of a paper-feeding machine, the shafts F and G and pulley C, the cross-bands *f*, *f'*, and *g* commencing a fast motion to the shaft D and a slow motion to the shaft C, as set forth.



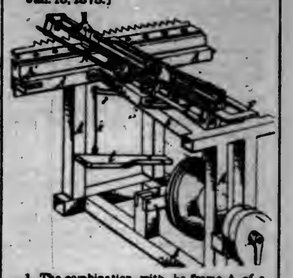
3. In combination with the crank-shaft C, table B, and shaft D, the roller *f'*, having the ridge *f''*, for stopping the upward motion of the table while the top sheet is being drawn through by the roller E, substantially as described.

162,853. TOBACCO-PACKAGES. J. D. Culp, Gilroy, Cal. [Filed Jan. 10, 1874.]

Brief.—The sack is knit on account of its elasticity. Owing to its being thus made it will not burst in being filled with tobacco, and having it pressed in it.

As a new article of manufacture, elastic tobacco-sacks made of knit fabrics, substantially as herein set forth and described.

162,854. BALE-TIES. John W. Deyo, Baton Rouge, La. [Filed Mar. 17, 1875.]

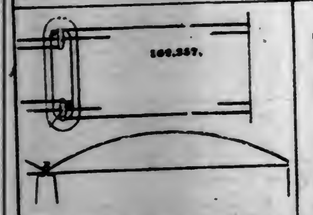


The tie-plate A, having an oblong central opening, and which is divided by an oblique tongue, B, into two slots, C D, and having bearing-walls C' D', the bearing-surface of the latter being formed so as to provide a beveled edge, *d*, and the lower section of the tongue being also beveled, as shown at *b*, and having its bearing projecting beyond the vertical line of the bearing of the edge *d*, so as to operate substantially as described, as and for the purpose specified.

162,855. PLASTERERS' TROWELS. Charles Denton, Philadelphia, Pa. [Filed Feb. 16, 1875.]

A plasterer's trowel having a blade enforced by a central longitudinal rib, *e*, adapted to the frame B of the handle, all substantially as set forth.

162,856. SAW-FILING MACHINES. Thomas Doyle, Bridgeport Centre, Mich. [Filed Jan. 16, 1875.]



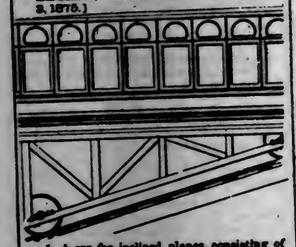
1. The combination, with the frame A of a saw-filing machine, of the bed-plate E, pivoted at a to said frame, and having a radial adjustment thereon to give the teeth the proper angle, and carrying the filing-frame F, pivoted in the lugs *b*, and adjustable at any angle by set-screws *c* rising through said bed-plate, to give the teeth the required bevel, all substantially as and for the purpose set forth.

2. The bars M M', with their clamp-screws, and the feed-bar N, bracket *i*, lever *j*, cord k, pallet *m*, spring *n*, and treadle *l*, in combination with the frame and girt A', for feeding forward said clamping-bars M M', the several parts being constructed and arranged substantially as described.

3. The bar O, conical bolt *o*, clamp-bar P, and cord *q*, in combination with the frame, the guide pulleys, and the treadle, for clamping a circular saw, substantially in the manner described.

162,857. IRON BEDSTEADS. James B. Eads, St. Louis, Mo. [Filed Aug. 1, 1874.]

No. 162,357.



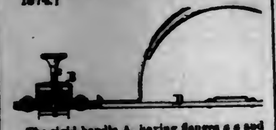
1. In combination with the tenoned new piece C of bow-string or similar girders, the disks O O or levers D D, fulcrumed in or to the skew-back or arch-rest, as set forth, for the purposes of compensating for the effects of temperature, and for distributing the strains from load and wind pressures, as described.

2. The combination of skew-back or arch-rest I, disks O O, and links or connecting-bars M M, all constructed substantially as and for the purpose set forth.

3. In combination with the disks O O, the connecting shaft or tube R, extending transversely to the bridge, and connecting the disks together upon the opposite sides of the span, to prevent said disks turning in opposite directions, for the purpose set forth.

No. 162,358. CARS FOR INCLINED PLANES. Jos. Barnshaw, Cincinnati, Ohio. (Filed Feb. 3, 1875.)

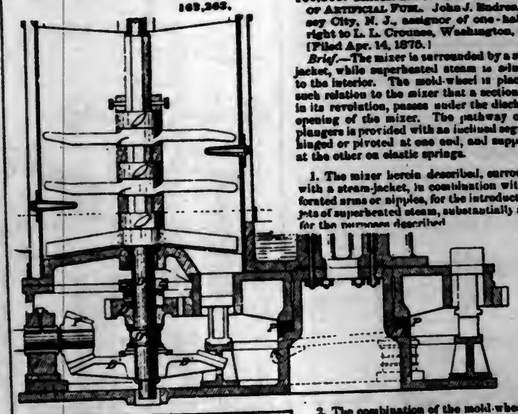
1. A car for inclined planes, consisting of compartments, side by side, upon a common truss, one compartment, C, being provided with seats, and the other compartment provided with rail-plates c, and adapted for vehicles or live stock, substantially as and for the purposes set forth.



2. In a car for inclined planes, the combination, with the compartment C, of the compartment D, provided with folding seats c c, for converting it into a passenger-car, substantially as set forth.

No. 162,360. WASHING-MACHINES. John A. Eberly, Eaststown, assignor of one-half his right to Martin Ehrley, Blairstown, Pa. (Filed Nov. 4, 1874.)

Brief.—Within the tub is a detachable disk with radiating rubbers, held by notches and lugs, and above these is a similar reciprocating disk.



The disk F, having V-shaped radiating rubbers, and the disk C, provided with notches O O, in combination with the lugs P, tongues L L', latch M, and turn-button N, all substantially as and for the purpose described.

No. 162,361. SHAWL-STRAP HANDLES. Henry Edwards, Brooklyn, N. Y. (Filed July 30, 1874.)

The rigid handle A, having flanges a a and straps C attached thereto, in combination with a guide, B, follower C, and set-screw c, substantially as described.

No. 162,363.

No. 162,365.

MACHINES FOR THE MANUFACTURE OF ARTIFICIAL FUEL. John J. Endres, Jersey City, N. J., assignor of one-half his right to L. L. Crounse, Washington, D. C. (Filed Apr. 14, 1875.)

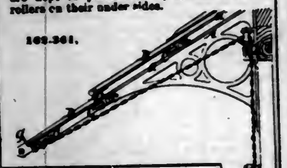
Brief.—The mixer is surrounded by a steam-jacket, while superheated steam is admitted to the interior. The mold-wheel is placed in such relation to the mixer that a section of it, in its revolution, passes under the discharge-opening of the mixer. The pathway of the plungers is provided with an inclined segment, hinged or pivoted at one end, and supported at the other on elastic springs.

1. The mixer herein described, surrounded with a steam-jacket, in combination with perforated arms or nipples, for the introduction of jets of superheated steam, substantially as and for the purposes described.

2. The combination of the mold-wheel, supporting-pivot, and rings F, substantially as and for the purposes set forth.

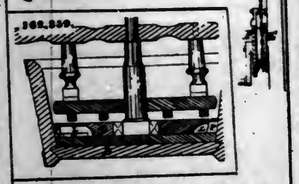
3. The pressure-plate provided with water-circulation compartments, substantially as described.

4. The inclined segment, in combination with an elastic support, substantially as and for the purpose described.



5. The plungers provided with metal plates or rollers in their side faces, for the purpose of lessening the friction and binding, substantially as and for the purposes set forth.

6. The mixer, constructed as specified, in combination with the mold-wheel, pressure-plate, stationary ring, and adjustably-inclined segment, substantially as and for the purposes described.



No. 162,364. AWNINGS. John Eller, Jersey City Heights, N. J. (Filed Mar. 4, 1875.)

Brief.—The cord or chain is attached to the outer plate. The plates are adjustable in parallel slots or grooves in the brackets, and are kept in place laterally by anti-friction rollers on their under sides.

No. 162,361.

No. 162,359.

1. The combination of the bracket A, constructed with the parallel guide-grooves a a, and rigid plate B', and the sliding plates adapted to the grooves in the bracket, and the outer plate having the vertical catch g, all substantially as described.

2. The combination, with the movable plates B of an awning, and the bracket A, of the anti-friction rollers C, which bear against the sides of the lateral brackets A and prevent lateral movement of the plates, substantially as and for the purpose described.

No. 162,366. ARTIFICIAL FUEL. John J. Endres, Jersey City, N. J., assignor of one-half his right to L. L. Crounse, Washington, D. C. (Filed Mar. 1, 1875.)

1. The process herein described, of manufacturing fuel from the culm or dust produced in the mining, breaking, screening, or transporting of anthracite or semi-bituminous coal, which process consists in combining, fusing, and agglomerating the same with coal-tar pitch or bitumen under high heat and pressure, as herein set forth, and molding and pressing the same into any desired shape or form for transportation and use.

2. The fuel herein described, consisting of screenings, culm, or dust, combined, fused, and agglomerated with coal-tar pitch bitumen, as herein set forth, and forming a fuel which, when subjected to the action of combustion, retains its given shape, and consumes gradually like natural coal, substantially as and in the manner herein described.

No. 162,364. LADDERS. Irving Erskine and C. Erskine, Bowling Green, Ky. (Filed Dec. 12, 1874.)

Brief.—The top section is pivoted to the upper round of the lower section, and is secured in an extended position by metallic slides or clips. The top ends of the side rails of the lower section are notched to receive a cross-bar, on which there is secured a hook for painters' use. A detachable step is secured to the ladder by hooks which engage with the side rails.

1. The combination, with the ladder A a, and the ladder B hinged thereto, of the metallic slides C, substantially as specified.

2. The combination of the cross-bar E, having hook A, with the rails A of the lower ladder having notches d, substantially as specified.

3. The combination, with the upper ladder B, of the detachable step E', having hooks i adapted to be engaged over the rails B of the said ladder, substantially as specified.

No. 162,364.

No. 162,365.

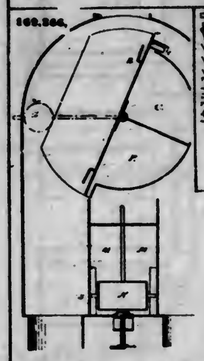
No. 162,365. STOVE-PIPE SHELVES. Royal D. Farr, East Middlebury, Vt. (Filed Sept. 20, 1874.)

Brief.—The shelf is cut out so as to partially encircle the stove-pipe, and is provided with lugs around the opening thus made, to prevent the shelf tipping. A bail is secured in holes cut in the shelf, and passes around the pipe above the shelf, whereby the latter is secured in position at any given point by its own gravity.

1. The shelf B, provided with holes a b, in combination with rod d, and bail C, all as and for the purpose set forth.

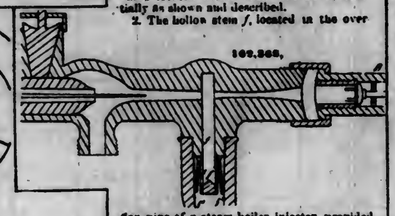
2. In a stove-pipe shelf, the shelf B, provided with lugs a a, and holes b b, bail C, and rod d, all arranged as and for the purpose set forth.

No. 162,366. STEAM-INJECTORS. David Fergus, Philadelphia, Pa. (Filed Oct. 3, 1874.)



Brief.—The check-valve is placed within the swivel, to permit the detachment of the injector without escape from the boiler, without the necessity of an extra section for the valve. The plug opening into the overflow has an opening in each side, controlled by flap-valves, which open by slight pressure, to allow the escape of water, and so readily closed to prevent the admission of air.

1. In combination with a swivel, B, a check-valve located within such swivel, substantially as shown and described.



2. The hollow stem f, located in the over-flow-pipe of a steam-boiler injector, provided with a flap-valve or valves f^1 f^2, for closing the lateral openings f^3, substantially as shown and described.

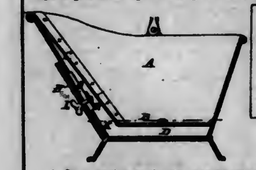
3. In combination with the hollow stem f, located in the overflow-pipe of a steam-boiler injector, the beveled plug G, for dividing the overflow, substantially as shown and described.

No. 162,366.

No. 162,365.

No. 162,366. AUTOMATIC RAIN-WATER CUT-OFFS. Thomas C. Fawcett, St. Clairsville, Ohio. (Filed Feb. 2, 1875.)

Brief.—A portion of the first of the rainfall is diverted from its passage to the waste-pipe into a cup, where it collects until, by its weight, the trough or conductor is reversed to direct the water into the cistern, the time being regulated by an adjustable weight. A float locks the conductor in this position until the rain is over, when the water escaping from the float-chamber causes the float to fall and release the conductor, which then, by the weight of the water accumulated in a cup the counterpart of the first cup, is caused to assume its original position.

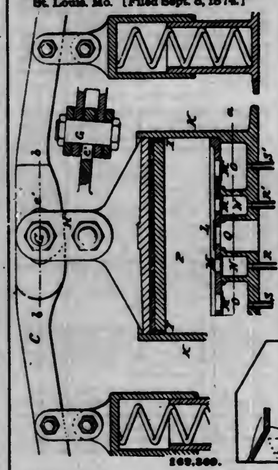


1. An improved rain-water cut-off, provided with revolving trough, cups, an adjustable weight, float, and water-chamber, by which the cut-off proper is rendered self-operating, substantially as and for the purpose set forth.

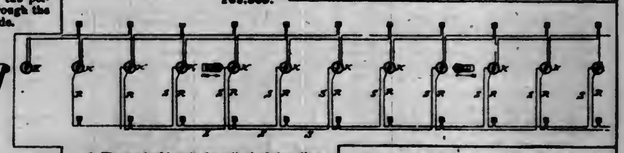
2. A revolving trough E, constructed as described and provided with cups C and P, the adjustable weight O, and brackets B B, combined to operate substantially as and for the purposes set forth.

3. In combination with the projection O of a revolving trough, the float N, arranged in chamber M, as described, to operate substantially as and for the purpose set forth.

No. 162,367. COAL-SCUTTLES. Henry Feldmeier and E. Stoeppelwerth, St. Louis, Mo. (Filed Feb. 12, 1875.)



Brief.—The dust sifting through the perforated bottom can be removed through the opening in front upon raising the slide.

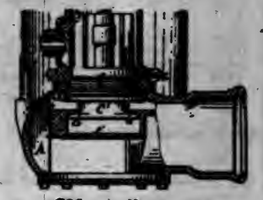


1. In a coal-scuttle, the combination of a perforated false bottom, B, plate or partition C, and sliding gate H, as and for the purpose set forth.

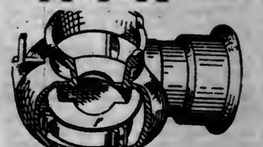
2. The combination of the coal-scuttle A, false bottom B, partition or plate C, chamber D, having discharge-aperture K, sliding gate H, and set-screw L, as and for the purpose set forth.

No. 162,369. RAILWAY-SIGNALS. Henry Flad, St. Louis, Mo. (Filed Sept. 8, 1874.)

No. 162,369.



1. The method herein described of signaling, whereby overlapping signals at a distance from the train are reversed, while other signals, between the former signals and the train, remain at rest, to be reversed in their turn, all substantially as and for the purpose set forth.

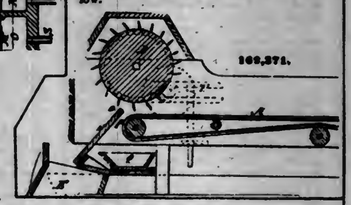


2. The combination of signals T T, pipes R S, and lever C with the air-pump K K, divided into two or more chambers, N O P, by diaphragm L, having valves M, and the chamber or chambers N O, in communication with the pipes R S, all substantially as and for the purpose set forth.

1. In combination with the pipes R S and cylinder U W, the piston W, spindle X, head Y, cam-groove d e, and stud Y, substantially as and for the purpose set forth.

No. 162,370. STREET-HYDRANTS. Jas. Flower, Detroit, Mich. (Filed Jan. 22, 1875.)

Brief.—An auxiliary valve is placed in a chamber under the seat of the hydrant-valve, which latter is provided with a hook or a pair of hook lugs at the bottom, to engage with the said auxiliary valve, such engagement being effected by a partial rotation of the hydrant, while the auxiliary valve is only allowed to move vertically by guides in the chamber.

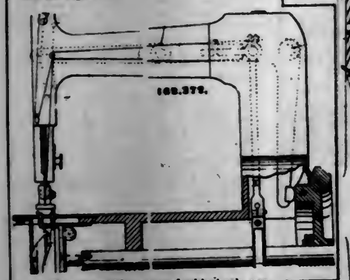


The combination, with the chamber A, of the valve C having the part C' which is provided with studs h for locking it with the valve F, substantially as described.

No. 162,371. COTTON-GIN FEEDERS. Frederick William Flynn, Germantown, assignor to himself and Wm. H. Lockwood, Collierville, Tenn. (Filed Nov. 21, 1874.)

Brief.—The apron which delivers the cotton from the feeder to the gin is hinged at its top, to allow its lower end to swing freely, and accommodate itself to the position of the breast of the gin. It is located between the carrier and the end of the hood, so as to leave a space for the passage of trash into a receptacle below.

No. 162,371.



The apron N, hinged at O, and arranged with respect to carrier A, breast E, and receiver Q, as and for the purpose set forth.

No. 162,372. SEWING-MACHINES. J. L. Follett, New York, N. Y. (Filed Feb. 12, 1875.)

Brief.—The revolving hook is constructed so as to be revolved in either direction, which it does at a regular and uniform rate of speed, making but one revolution to each descent of the needle, which also moves at a regular and uniform speed. A take-up, acting in connec-

tion with such devices, takes up the slack of the thread, and completes each stitch before the commencement of the next succeeding one. The feed-plate is attached to a disk that is mounted upon an eccentric, and receives an up-and-down and back-and-forward movement from the same. A portion of the goose-neck is removable, to admit of easy access to the adjustable rod, which connects the vibrating lever (that operates the needle-bar) with the driving-shaft.

No. 162,272.

1. The reversible rotary double hook, constructed and operating as herein shown and described.

2. The reversible rotary double hook, in combination with the revolving bobbin, stationary bobbin-case supported against said hook, and bobbin-thread tension carried by said case, for joint operation, as shown and set forth.

3. The reversible rotary double hook, in combination with the revolving bobbin, the stationary bobbin-case, and the adjustable bobbin-holder, substantially as shown and set forth.

4. The reversible rotary double hook, revolving bobbin, stationary bobbin-case, and bobbin-thread tension, in combination with a needle, which, on its down-stroke, enters between the stationary bobbin-case and the rotating hook, for joint operation, as shown and set forth.

5. The reversible rotary double hook, revolving bobbin, stationary bobbin-case, bobbin-thread tension, and reciprocating needle, operating together as herein specified, in combination with a reversible feed, substantially as set forth.

6. A reversible draw-feed, attached directly to and deriving its movements from a disk mounted on and positively operated by a rotating eccentric, from which it derives an up-and-down and to-and-fro movement, substantially in the manner shown and set forth.

7. In combination with the feed-carrying disk or plate, and eccentric for operating the same, the feed proper pivoted to the said disk, so as to follow its up-and-down movement, and receiving between arms adjustable nearer to or farther from one another a pin or stud, which is attached to said disk, and imparts to the feed proper a to-and-fro movement, substantially as set forth.

8. The combination, in a lock-stitch machine, of a rotary hook and a straight needle, both of which have regular and uniform movement, as described, with a take-up, arranged and operating as described, to take up the slack of one stitch and complete the same before the next stitch is commenced, substantially as and for the purposes set forth.

9. The vibratory take-up and its spring, in combination with the needle-bar lever, arranged to operate said take-up at the times and in the manner substantially as shown and described.

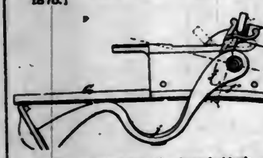
10. In combination with the bobbin-case, the bracket-holder for the same, and the removable cloth-plate section carrying said holder, substantially as shown and set forth.

11. The removable cloth-plate section, in combination with the bobbin-case holder attached to and adjustable on said section, as and for the purposes set forth.

12. The cover or case incasing the sides and back of the standard and its appurtenances, and hinged to the machine, substantially as shown and set forth.

13. In combination with the vibratory needle-bar lever and its driving crank or eccentric, the intermediate connecting-rod, adjustable in length, for the purpose of adjusting the stroke, substantially as herein and set forth.

162,272. PISTOL-GRIP ATTACHMENTS FOR THE STOCKS OF FIRE-ARMS. Frank W Freund, Denver, Colo. [Filed Mar 10, 1875.]



No. 162,272.

1. A pistol-grip consisting of a hand portion and a separate butt portion, substantially as described.

2. A pistol-grip having the metallic part, as at C, struck up from thin or sheet metal, substantially as described.

3. A trigger-guard provided with an adjustable head or screw, *m*, in combination with a trigger-plate having a slot, *p*, and shoulder *p'*, substantially as and for the purpose described.

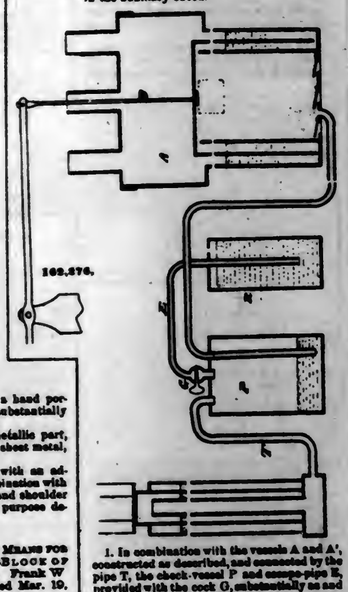
162,274. GUARD-LEVERS AND MEANS FOR OPERATING THE BREECH-BLOCK OF BREECH-LOADING FIRE-ARMS. Frank W Freund, Denver, Colo. [Filed Mar. 19, 1875.]

1. The combination of a breech-block, an operating-lever, and an intermediate connecting device, the lever and connecting device being applied outside of the frame of the arm, substantially as described.

2. A guard-lever having its rear end constructed in the form of the lower part of a pistol-stock, substantially as described.

3. The slide F, constructed with the projections or arms *f'* *f'*, with a play-space between, adapted to operate the breech-block, substantially as described.

4. The cap-spring D, in combination with the pin *d* and slide F, substantially as and for the purpose described.



162,276. AXLES FOR VEHICLES. Samuel T. Gamwell, Wayland, Mich. [Filed Jan. 20, 1875.]

In combination with the axle A, hub E, and skein B, the rod C, secured at one end to the lug *d*, and having a flange, A, and screw *i* at the outer end, and the nut G, all constructed substantially as set forth.

162,276. RAILROAD-SIGNALS. Jas Gordon, San Francisco, Cal. [Filed Oct. 15, 1874.]

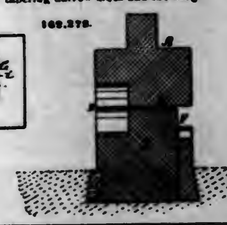
Brief.—By means of the check vessel and the auxiliary check, the signal and air vessels may be adjusted with relation to each other through the medium of the column of water in the auxiliary check.

No. 162,276.

1. In combination with the vessels A and A', constructed as described, and connected by the pipe T, the check-vessel P and escape-pipe E, provided with the cock G, substantially as and for the purpose set forth.

2. In combination with the vessels A and A', constructed as described, and connected by the pipe T, the check-vessel P and escape-pipe E, and auxiliary check F, substantially as and for the purpose described.

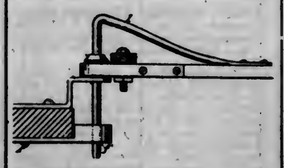
162,277. PROCESSES FOR MANUFACTURING LUBRICATING-OILS. Thos. J. Gordon and Delos H. Bumpus, Rossville, Pa. [Filed Sept. 29, 1874.]



Brief.—Deodorizes and refines crude petroleum by passing it through anhydrous pulverized clay.

The within-described process of decolorizing and refining petroleum by filtration through anhydrous pulverized clay, or anhydrous pulverized clay and sand, substantially as described.

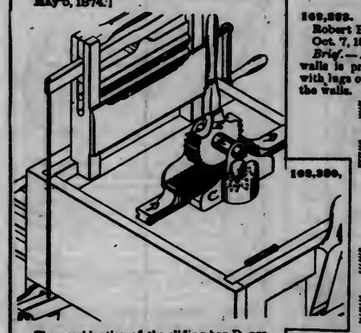
162,278. DEVICES FOR FORGING FILE BLANKS. Theodore L. Grover, Brooklyn, E. D., N. Y., assignor to Bertrand Clover, New York city. [Filed Oct. 10, 1874.]



Brief.—A pair of dies provided with reduced or contracted parts, for drawing the bars down to form the blanks; parts E for smoothing and finishing the wide sides; and a recess, F, formed by the detachable piece G, for tapering narrow sides and the tang.

No. 162,278.

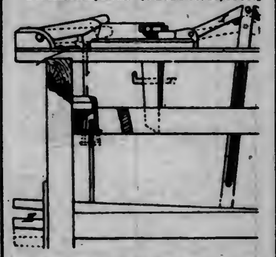
The dies A B, provided with drawing-faces D D, smoothing-faces E E, and tapering recess F, as and for the purpose specified.



162,279. STREET-CAR POLE-COUPLINGS. James S. Hagerty, Baltimore, Md. [Filed Mar. 31, 1875.]

1. The combination, with platform and coupling-pin, of the two plates M F, as and for the purpose described.

2. The bent rod I, attached to upper side of pole, and resting upon the head of coupling-pin, all combined as and for the purpose specified.



162,280. WASHING-MACHINES. James W. Hampton, Mount Pleasant, Iowa. [Filed May 6, 1874.]

No. 162,280.

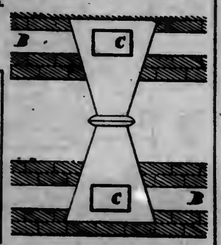
The combination of the sliding bar D, provided with cog-teeth upon its top and side, and grooved longitudinally on each edge, the box C, with groove and tongues on each side thereof, which take into the grooves in the bar D, the cog-segment E, with handle F, and mounted upon the shaft *a*, and the pinion G, all substantially as set forth.

162,281. MACHINES FOR MAKING BOX-TOES FOR BOOTS AND SHOES. Geo. S. Heaton, Portsmouth, N. H. [Filed Feb. 16, 1875.]

1. The carriage D, provided with the cap-plate H, in combination with the elbow-lever I, foot-lever B, hand-lever P, and spring T, all substantially as and for the purpose set forth.

2. The adjustable block G, in combination with the elbow-lever I, carriage D, and spring T, for adapting the machine to mold different styles of box-toes, substantially as set forth.

162,282. RAIN-WATER CUT-OFFS. Jacob F Hess, Massillon, Ohio, assignor to himself and Leonard Hess, same place. [Filed Mar. 23, 1875.]



Brief.—There are two pipes—one for the waste and the other for the eastern water—which are united in a common neck. The upper edge of the neck is rounded in, and has the collar soldered in it, and a slot with end notches is cut around one half of the neck. The cut off consists of the cylindrical part, which fits up between the neck and collar, and has the sloping lower end, by which the water is deflected. It is operated by an arm, which is secured to the part, and extends out through the slot in the neck.

The two-pipe case A B C, having the slot E made in its side and below its upper edge, in combination with the revolving cut-off F H, having the arm G extending through the slot E, and serving as the support for said cut-off in the case, substantially as and for the purpose herein specified.

162,283. CRAMPS FOR HOLLOW WALLS. Robert Hinvest, New York, N. Y. [Filed Oct. 7, 1874.]

Brief.—A cramp for connecting hollow walls is provided with holes, which engage with lugs on longitudinal stay-bars secured in the walls.

No. 162,283.

A cramp for walls, constructed with openings or recesses to receive the lugs C of the stay-bars B, combined for operation and adaptation substantially as described.

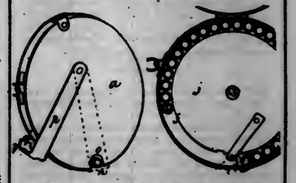
162,284. PAVIORS' RAMMERS. Geo. Hitchcock, Philadelphia, Pa., assignor to Wm. Everham, same place. [Filed Mar. 20, 1875.]

A paviour's rammer having a solid metal head, B, on which are formed wedge-shaped projections *a*, and a central stem, *b*, all being constructed for attachment to the wooden body A, substantially as and for the purpose herein set forth.

No. 162,284.

No. 162,285.

162,286. CARPET FASTENER. Samuel Horner, Jr., Philadelphia, Pa., assignor to himself and Robt. Horner, same place. [Filed Mar 13, 1875.]

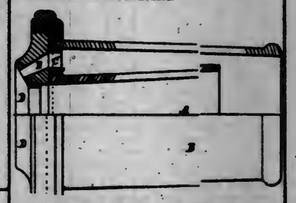


A damask or other fabric in which the entire number of figuring warp-threads are carried to the back of the fabric, at intervals in order to allow the thick weft or filling threads to be brought to the surface, all substantially as and for the purpose set forth.

162,286. METALLIC WASHERS. Moses G. Hubbard, Minneapolis, Minn. [Filed May 22, 1874.]

A square elastic washer curved in one direction only, said curve extending diagonally across said washer, substantially as and for the purpose specified.

162,287. CAP-BOXES. Anton Hunkamp, Montague, Mich. [Filed Nov. 28, 1874.]

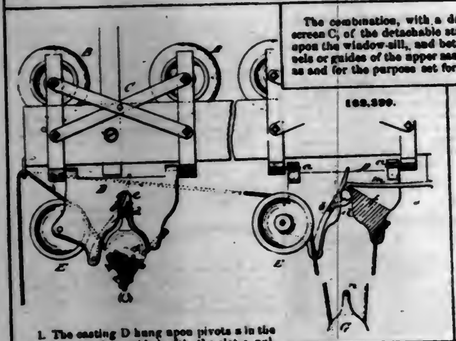


1. The eccentrically-pivoted hasp slide-piece *p q*, carried by the hinged cover *a*, in combination with the priming-exits *a e* and said cover, as and for the purpose described.

2. The combination of the dog *l* of the carrier-lid *j* with seat-stop *k* of the inner periphery of the box, for the purpose of holding the cap-carrier while the caps are being placed in the box, as described.

162,288. COMPOUND HOSE-PIPE NOZZLES. Chas. L. Jones, Wakefield, Mass. [Filed Dec. 7, 1874.]

Brief.—The combination, in a hose-nozzle, of a central tube and an exterior tube, with discharge-openings, controlled by a valve and set at an angle, so that the water discharged from them shall impinge the central stream as it issues from the main nozzle.



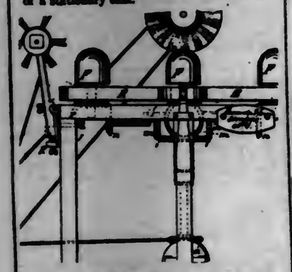
1. The combination, in a hose-nozzle, of a central tube, constituting the main discharging-nozzle, and an exterior tube, provided with discharge-openings, controlled by a valve and set at an angle, so that the water discharged from them shall impinge the central stream as it issues from the main nozzle, all shown and set forth.

2. A nozzle composed of the two tubes A and B, united at their outer ends, and provided with the gate D and ports C and E, substantially as and for purposes stated.

162,289. HAY-ELEVATORS. Justus Jones, Bartonville, N. Y. [Filed Mar 15, 1875.]

Brief.—A carriage on an overhead track has suspended to it a casting, to one end of which the hauling-rope is attached, then passed through the fall-block, and over a pulley on the other end. An upward extension of the block, on reaching the casting, strikes, passes, and becomes hooked to, a hauling lever, releasing also a spring-catch.

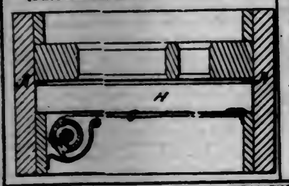
The combination, with a distended net or screen C, of the detachable strip H, arranged upon the window-sill, and between the channels or guides of the upper sash, substantially as and for the purpose set forth.



1. The casting D hung upon pivots a in the carriage c, and provided with the slot e, pal lay E, and arm b, with hook d, substantially as and for the purposes herein set forth.

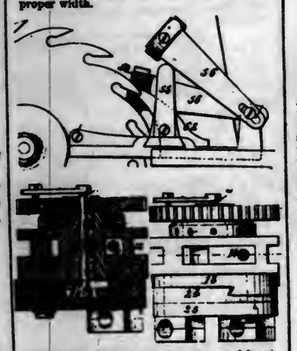
2. The combination of the carriage B C, casting D, pulley E, arm b with hook d, incline f, latch m, rope k, had pulley-block U, with loop s, all constructed substantially as and for the purposes herein set forth.

102,390. HAT-BRUSHING MACHINES. Alex. S. Joyce, Yonkers, N. Y. (Filed Mar. 20, 1875.)



Brief.—The bodies are "brushed up" upon blocks mounted on a table, rotating in unison with each other, and held in contact with rotary brushes of different shapes, positioned at intervals around the frame. The table rotates intermittingly by frictional contact with the bloek-gears. When the table is locked all the blocks revolve, save one, which is thrown out of gear by its spindle riding on top of a stationary cam.

1. The horizontal frame E, carrying the blocks F, and system of bevel-gears s s r, actuated by the gear t, in combination with the cylindric brush C, and conavo-conic brush D, the whole arranged for operation, substantially as and for the purpose specified.



2. The fixed cam G, arranged in relation to the axial stems of the blocks F, capable of a vertical movement in the intermittently-rotating frame E, whereby one of the said blocks is automatically lifted out of connection with its actuating-gear, while the rotatory movement of the others is continued, substantially as and for the purpose set forth.

102,391. WINDOW-SCREENS. J. Knowles, Graniteville, Mass., assignor of one-half his right to J. Henry Knowles, same place. (Filed Jan. 16, 1875.)

102,392. SAW-SHARPENING MACHINES. J. L. Knowlton, Sharon Hill, Pa. (Filed Feb. 5, 1875.)

Brief.—A rotary grinder mounted upon a reciprocating slide in a composed head. The slide is adapted to be set at any angle, the reciprocating movement of the grinder being designed to give the desired form to the tooth. Two pivoted swinging arms carrying files are arranged to dress off the sides of the teeth to proper width.

1. A grinding-wheel, 30, reciprocated longitudinally of the saw-tooth simultaneously with its rotation transversely of the tooth, by means of a slide having the bearings of the grinding-wheel thereon, in combination with a guide, 23, adapted to be set at different angles, so as to make the line of reciprocating movement coincident with the surface to be ground, substantially as herein shown and described.

2. The adjustable compound head 13 24 25, constructed and employed substantially as described, in combination with the grinding-wheel 30 and its shaft 29, to provide for the adjustment of the said wheel to operate upon the front or back of a saw-tooth of any form or size by a combined rotary and sliding movement.

3. The vibrating and sliding arms 56, carrying files or grinding-tools 59, and guided by gages 55, for the purpose of dressing and truing the sides of saw-teeth, as explained.

4. The combination of the rest 62, guides or gages 53, vibrating arms 56, and grinding-tools 59, substantially as shown, for the purpose set forth.

102,393. PEN-HOLDERS. Julius Larra, New York, N. Y. (Filed Mar. 17, 1875.)

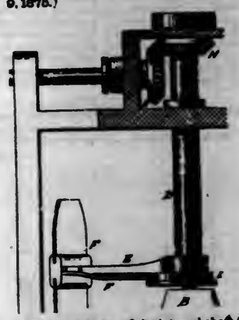
Brief.—The inner tube is rigidly attached to the pen-handle, while the outer one slides freely over it, to eject the pen, the heel of which abuts against the projection. The tubes are united by a stud rigidly attached to the outer one, and working in slots in the inner one.

The outer tube B, constructed with the inwardly extending projection b', and provided with the pin K, in combination with the inner tube C, constructed with the slots c' c', within which the pin K is arranged, and the slot c' within which the projection b' on the outer tube projects for disengaging the pen in the manner herein shown and described.

102,394. PROCESSES OF REDUCING ASPHALTUM TO A LIQUID. Archibald K. Lee, Galveston, Tex., assignor of one-third his right to J. B. McClintock. (Filed Mar. 8, 1875.)

The herein-described process of reducing asphaltum to a liquid, and holding the same in a fluid condition without heat or the use of dead oils, but through the action alone of a product obtained by the redistillation of the spirits of turpentine, and in then separating from the same the water, acids, and all resinous substances, and in then concentrating and rectifying the same, substantially as and for the purpose specified.

102,395. SPOUTS FOR SHEET-METAL POTS. Philip Lennon, Newark, N. J. (Filed Oct. 26, 1874.)

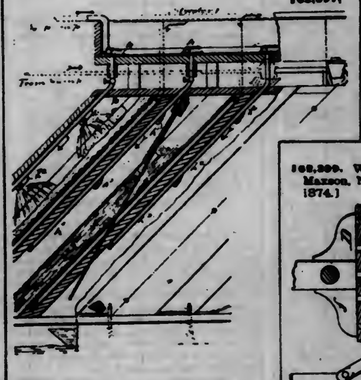


Brief.—A projection at the top of the base of the strainer engages with the slot in the spout.

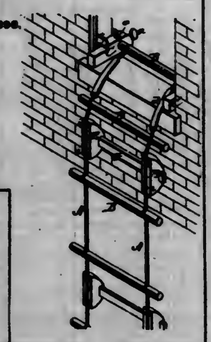
1. The combination of the discharge-nozzle A and the socket B, to form a spout for the vessel, the socket communicating at one end with the interior of the vessel, and contracted at its other end to form a seat for the spout, the parts being soldered together substantially as herein shown and described.

2. The strainer C, constructed with a tubular shank and loop, c, in combination with the spout A, having the steadying and guiding slot d, substantially as described.

102,396. STEERING-PROPELLERS. William H. Mallory, Bridgeport, Conn. (Filed Mar. 9, 1875.)



1. The combination of the internal shaft C, supported in the step B at its lower end, the external shaft D, carrying the arms E, hinged to their respective blades, and the eccentric or cam I on the said shaft C below the arms E, with a connection from the said eccentric to each of the blades, substantially as described.



2. In combination with the internal shaft C, supported in the step B at its lower end, the external shaft D, carrying the arms E, hinged to their respective blades, and the eccentric or cam I on the said shaft C below the arms E, with a connection from the said eccentric to each of the blades, the case N inclosing the driving-gear H H, substantially as and for the purpose described.

3. The herein-described propeller-blade, consisting of the head R, slotted for connection to the arm and eccentric rod, and the parts F F, inserted in grooves r in the said head, substantially as set forth.

102,397. ICE-MACHINES. Saml. B. Martin, San Francisco, Cal. (Filed June 20, 1874.)

Brief.—It is intended that no more water than can be frozen shall be sprayed upon the freezing-plates. The refrigerant passes through the pipe-coils along the bottom of each compartment, and behind the freezing-plates, or, by a two-way cock, may be directed by any designated coil. By pipe E the refrigerant cools the water to be frozen. This pipe enlarges in diameter as it advances from the pump. Water is admitted from G into shallow bottom of the troughs to loosen the ice. This water and any accidental excess of sprayed water fall into the trough, whence the ice cakes are finally floated.

1. The process described, consisting essentially in spraying water upon freezing-surfaces, inclined from the vertical, for the purpose of retarding the movement of the water and causing it to spread, by the action of gravity, in thin films over the plate, substantially as described.

2. The series of contiguous congealing-chambers, operating independently, but united to form a single series, substantially as described.

3. The combination of the trough-like frames, with ceilings and doors for the purpose of making close congealing-chambers, substantially as described.

4. The combination of the inclined troughs, the trough-like freezing-plates, and the refrigerating coil, substantially as described.

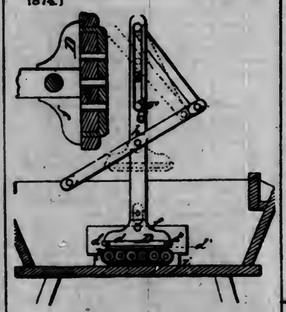
5. In combination with the freezing-chambers, the canal provided with doors, as described.

6. The combination of a freezing-plate inclined from the vertical, as described, with a suitable spraying apparatus, substantially as set forth.

7. The combination of the eye-bolt, the tackle-block, and suitable connecting-tackle, as and for the purpose described.

8. The combination of the upper tank, the series of valves h h, and the series of independent spray-pipes h^1 h^2 h^3, as described.

9. The machine described, consisting of the following elements: an upper and lower tank, an intermediate series of close freezing-chambers, a system of cooling-pipes, and a water-space for detaching purposes, combined substantially as set forth.



102,398. FIRE-ESCAPES. Elisha Masterson, Norwich, Conn., assignor of one-half his right to O. G. Bailey and T. H. Browning, same place. (Filed Oct. 10, 1874.)

Brief.—Adjustable arms provided with a set-screw are attached to the top round of the ladder, and hold the ladder firmly in the window. The blocks for holding the ladder from contact with the wall of the house are adjustably attached to the ropes.

1. The combination of the ropes A A, rounds B B, and the laterally-adjustable arms C C, with set-screws s s, substantially as and for the purposes herein set forth.

2. The combination, with the fire-escape A B, of the semicircular blocks E E, with cross bar G, adjustable upon the ropes, substantially as and for the purposes herein set forth.

102,399. WASHING-MACHINES. Erwin W. Manzon, Nicholson, Pa. (Filed Oct. 24, 1874.)

The rubber D, consisting of the rigid perforated portion d, with parallel edges, the perforated covering d^2, the strips d^3, and cleats f, as and for the purpose set forth.

102,400. BIRD-CAGES. John Maxheimer, Brooklyn, N. Y. (Filed Feb. 6, 1875.)

In a bird-cage, the combination of the perforated horizontal wire B with the upright wires A A, which are drawn through the horizontal wire, and then bent or crimped above and below the same, to form shoulders for holding the horizontal wire in place, substantially as herein shown and described.

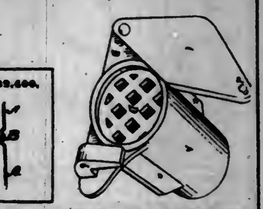
102,401. STEAM-ENGINE GOVERNORS. G. L. McCahan, Baltimore, Md. (Filed Dec. 11, 1874.)

Brief.—The governor-stem is divided into two parts, connected by a spring, so that the valve-part of the rod may be moved to open and close the valve without affecting the governor.

1. In a steam-engine governor, the valve-stem provided with a compressible coupling or connection, enabling the valve to be elevated independently of the position of the stem operated upon directly by the governor-balls, substantially as and for the purpose set forth.

2. The upper and lower cross-heads D and E, rods b, springs b', and lever F, combined as elements in a governor, substantially as herein specified, and for the purpose set forth.

102,402. PUMPS. Eugene McCoy and O. M. Harper, Owatonna, Minn. (Filed Dec. 5, 1874.)



1. In combination with the cylinder, the hollow piston having its inner lower edges beveled and the conical valve adapted to slide on a portion of the piston-rod extended through and below said piston, substantially as and for the purpose set forth.

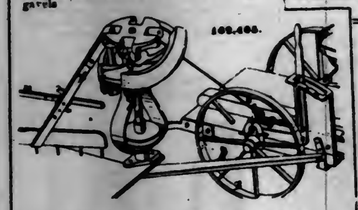
2. The submerged pump hereinbefore described, consisting of cylinder A, piston B B', conical sliding valve C, and elbow D, communicating with said cylinder by aperture G, provided with check-valve H, all constructed and combined in manner and for the purposes set forth.

102,403. SEWER INLET-TRAPS. J. McGuire, New Haven, Conn. (Filed Sept. 26, 1874.)

Brief.—A cast cylinder with flanges on its outside, for the purpose of fastening it to the wall of the vault; also a flange on end of cylinder, to which is pivoted a gate for closing the grated aperture of cylinder

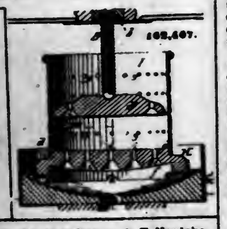
The sewer inlet-trap herein described, consisting of the cylinder A, having the flanges a a, and the flange B, on which is cast the guide b of the gate C, pivoted to the flange B, and of the grating D, as and for the purpose set forth.

102,404. PASSE-PARTOUT BASES FOR GILDING. Hugh McHugh, New Bedford, Mass. (Filed Jan. 21, 1875.)



Brief.—The composition is mixed in two sub-compounds, which are mixed at the time of using

1. The herein described composition for molded panel-mats, passe-partout panels, and like articles requiring to be mat-gilded or burnished, consisting of glue and gilders' whiting combined with oil, resin, and paper pulp, substantially in the proportions set forth.



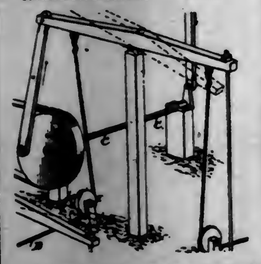
2. The herein-described composition for molded articles requiring to be mat-gilded or burnished, consisting of glue, gilders' whiting, oil, resin, paper-pulp, and clam, taken in the proportions substantially as stated.

162,405. HARVESTER-RAKE. J. H. Myers, Rochester, N. Y., assignor to Hubbard Harvester Company, Minneapolis, Minn. [Filed Feb. 16, 1875.]

Brief.—The rake switch trip is operated automatically by mechanism which may be adjusted to graduate the distance between the gavels.

162,406.

162,407.



1. The spring cam-arm *b*, actuated by the rake-reller, as described, for opening the switch or gate in the cam-track, causing the arm to act as rake-arms, in combination with the weighted or spring latch *d* for holding the cam-arm away from the switch or gate when it is desired that the rake-heads shall act as gatherers only, substantially as described.

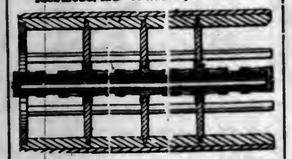
2. The combination, with the rake-tripping devices, of an index-arm or lever, controlled by the driver on the machine, for setting said tripping devices, to cause the rake automatically to discharge the gavels at any desired regular distances apart, substantially as described.

3. The adjustable bearers *m*, applied to the rake-arms, above and in front of the rake-heads, and set obliquely to said heads, substantially as and for the purpose set forth.

4. The angular clasp or socket-piece *n*, with its spur or finger *n'*, and single through-bolt, in combination with the rake-arms and the adjustable bearers *m*, for uniting said bearers to the rake-arms, as described.

162,408. MEANS FOR PUMPING WELLS. A. B. Nickerson and Levi C. Streeter, Allegheny Township, Venango County, Pa. [Filed Nov. 30, 1874.]

As a means of pumping two or more wells simultaneously by a single engine, the combination of the shaft C C, having cranks at each end, as described, with the ropes D and F, said cranks and ropes being connected to the walking beams of the several wells, in such manner that said walking-beams are caused to move in different directions from one another, thereby balancing each other, and equalizing the strain on the engine during the entire revolution of the band-wheel A, as herein specified.

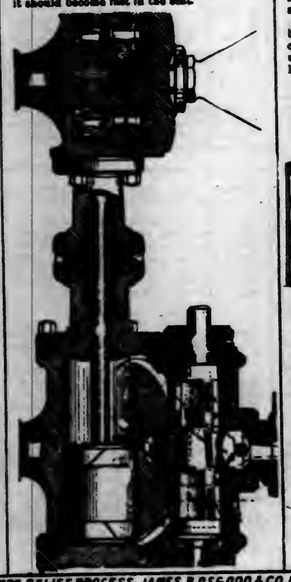


162,407. LARD AND CHEESE PRESSES. A. J. Noe, Mitchell, Ind. [Filed Dec. 19, 1874.]

1. The cylinder bottom H, constructed as described, provided with circular shoulders *d*, recess *f*, with channels *e*, and holes *i i*, in combination with the pan G, having concave bottom with central opening *g'* and plug *g g*, substantially as and for the purpose herein set forth.

2. The combination of the pan G, cylinder bottom H, having shoulder *d*, recess *f*, channels *e*, and holes *i*, the perforated cylinder I, and perforated follower J, all substantially as and for the purposes herein set forth.

3. The combination of the frame, consisting of the bottom piece A, side pieces B B, and cross-piece C, constructed out *b*, screw D with hand-wheel E, perforated follower J, perforated cylinder I, perforated bottom H, and pan G, all constructed and arranged to operate substantially as and for the purposes herein set forth.

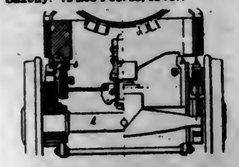


162,409. SOLTING-REELS. A. B. Nordyke, Richmond, Ind. [Filed Sept. 6, 1873.]

A bolt-reel for a flouring-mill, combining in its construction a tubular shaft and adjustable spiders with tapering flexible hubs attached by rings, and receiving wooden arms carrying the cloth-bars, substantially as set forth.

162,409. STEAM-PUMPS. J. North, Southington, Conn. [Filed Feb. 27, 1875.]

Brief.—The pump-valves are on each side of the cylinder, and have separate passages. The two cylinders are joined by tubular extensions, which form a packing for the piston-rod. The steam-valve is oscillated by an auxiliary transverse steam-valve, and has a projecting stem, by which it may be turned if it should become fast in the seat.



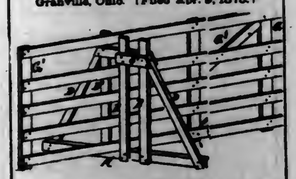
1. The combination of an oscillating steam-valve with a steam-moved piston-valve, extending transversely to the steam-valve and fitted into an auxiliary cylinder, the ends of which communicate with the main cylinder, substantially as shown and described.

2. The combination, with a steam-moved piston-valve, of an oscillating valve which may work in glands, provided with a stem extending through the steam-chest to allow of the oscillating valve being turned within its seat by means of a wrench or other device.

3. The combination of a tubular connection with the steam-cylinder and pump-cylinder of a direct-acting steam-pump, said connection being made in sections which are drawn together, and when drawn together form a tight joint on the piston-rod, substantially as and for the purpose described.

4. The double-acting pump-cylinder having two induction and two eduction ports located each side, and nearly on line with the center of the pump-cylinder, all said ports having separate passages, one from the other, substantially as set forth.

162,410. LOCOMOTIVE RUNNING-GEARS. Franz Seraph Wenzel Nowotny, Dresden, Saxony. [Filed Feb. 13, 1875.]



1. A locomotive provided with a fore truck having a single axle, *k*, to turn upon a king-bolt, *g*, which is the sole means of connecting the truck to the frame of the engine, all as set forth.

2. The combination of the fore truck, having a single axle to turn on a central king-bolt, *g*, which is the sole means of connecting the truck and frame; and bearings at opposite sides of the bolt, to retain the truck in its vertical position without interfering with its limited movement upon the bolt, as set forth.

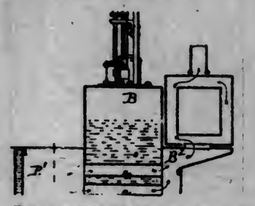
3. The bearings *h*, consisting of curved and inclined faces *x y*, adapted to corresponding faces of bearing-blocks *i'* upon the frame of the engine, as set forth.

4. The combination of the truck, the king-bolt *g*, and a bearing, *h*, confined to the truck, capable of an oscillating movement in one or more directions, and recessed to receive the king-bolt, substantially as set forth.

162,411. FARM-FENCES. Thos. W. Owens, Granville, Ohio. [Filed Apr. 9, 1875.]

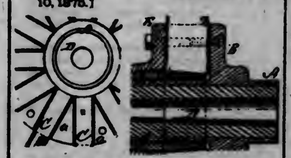
1. The combination, with the sill A, parallel uprights B B, and cap-pieces C, of the braces D D, fastened to the sill and let into the uprights, so as to form the two bearings *a b*, substantially as herein set forth.

2. The post formed of the parts A, B, D, and C, and the auxiliary upright B', placed on the opposite side of the sill A, in combination with the panels formed of the horizontal boards E, and battens G G' G², and arranged to slide and turn in the post, substantially as herein set forth.



162,412. KNITTING-MACHINE NEEDLES. S. Peberdy, Philadelphia, Pa. [Filed Apr. 7, 1875.]

A knitting-machine needle having at the end a hook, *a*, and a lever, D, hung, near its inner end, loosely to the said hook, all substantially as and for the purpose set forth.

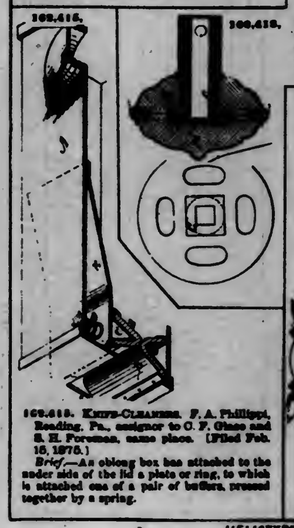


162,413. COOKING-STOVES AND STEAM-HEATERS. Thomas Perkin, Sarnia, Canada. [Filed Mar. 6, 1875.]

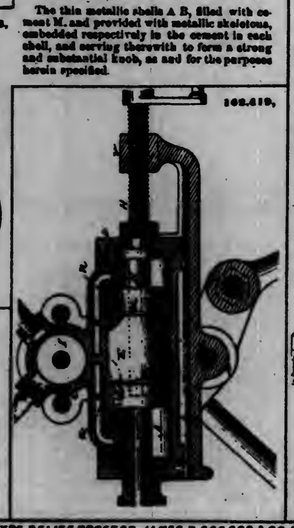
Brief.—Suitable attachments to the steam-chamber being made, the power may be applied to any convenient purpose.

The combination, with the base-plate A, of the boiler B, having tubes *a*, smoke-box B', oven C, and double-walled fire-box B', forming a water-leg, and having its top adapted to culinary operations, substantially as described and shown.

162,414. WHEELS FOR VEHICLES. Alvah A. Philbrick, Coldwater, Mich. [Filed Nov. 10, 1875.]



1. The sand-band G, extended to form a tapering screw-thimble at its inner end to enter between the hub-barrel and inner ends of the spokes for expanding the spokes, as set forth.



2. The combination of the barrel A, provided with band B having V-shaped projections *c*, the spokes C, back band E, and combined sand-band and screw-thimble G, all substantially as and for the purposes set forth.

162,415. KNIFE-CLEANERS. F. A. Philippi, Reading, Pa., assignor to C. F. Glass and S. H. Foreman, same place. [Filed Feb. 16, 1875.]

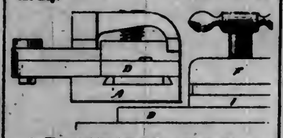
Brief.—An oblong box has attached to the under side of the lid a plate or ring, to which is attached one of a pair of buffers, pressed together by a spring.

162,416.

162,417.

The combination of the box A, with opening *c*, flanged forms C C, with rubbers B B, spring or springs D, and plate E, all substantially as and for the purposes herein set forth.

162,416. STAIR-RODS. Ansell W. Porter, Syracuse, N. Y. [Filed Mar. 29, 1875.]



Brief.—A triangular stair-rod is fitted at either end with loops or clasping-plates, which terminate in V-shaped flaps bent inward, the whole attached by a single screw. There is also an intermediate clasping-plate with attaching-screw, which serves to hold the rod more firmly in position.

The combination of the triangular rod or bar A and the plates B B, having lips or or flanges *b b*, formed with the V-shaped flaps or wings C C, and with or without one or more intermediate plates, D, and the attaching screws *c c*, all substantially as set forth.

162,417. DEVICES FOR SHAPING PIANO-KEYS. Milon Pratt, Deep River, Conn., assignor to Pratt, Read & Co., same place. [Filed Mar. 9, 1875.]

Brief.—The material is held to a pivoted clamp attached to a reciprocating table passing by a rotating cutter, which gives form to the key.

1. The combination of the reciprocating carriage D and pivoted clamp F I, substantially as and for the purpose described.

2. The combination of the bed A, reciprocating carriage D, pivoted clamp F I, and lever F, constructed and operating substantially as described.

162,418. DOOR-KNOBS. Christn. Rebstock, Bridgeport, Conn., assignor to David W. Sherwood, C. R. Brothwell, and Christn. Rebstock. [Filed Mar. 4, 1875.]

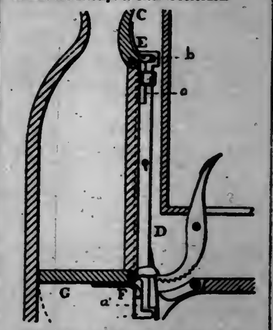
The thin metallic shells A B, filled with cement M, and provided with metallic skeletons, embedded respectively in the cement in each shell, and serving therewith to form a strong and substantial knob, as and for the purposes herein specified.

162,419.

162,419. ROCK-DRILLS. Geo. H. Reynolds, New York, N. Y., assignor to himself and C. H. Delamater, same place. [Filed Jan. 29, 1875.]

Brief.—A dash-pot is formed on the outside and at each end of the valve-cylinder to contain the valve. The drill is moved forward and rotated by the same movement of the feed-screw. The induction-ports are at some distance from the end of the cylinder, to contain the main piston. A passage in the piston admits steam to start it.

1. The air dash pots J J, constructed on the exterior of the heads of the valve-cylinder C, and with their contained pistons operating inwardly to effect compression, whereby a stuffing-box for the valve-stem in either cylinder-head is dispensed with, and said stem may readily be operated by hand when required, substantially as specified.

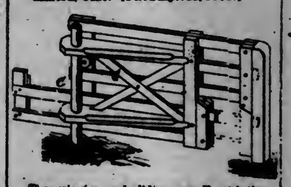


2. The combination of the parts or passages *b b'*, *d f'*, and *f f'*, the reciting drill-cylinder A, the drill-piston E, the piston-valve I, and the cylinder C, essentially as shown and described.

3. The combination of the screw feeding and rotating shaft H, connected with and feeding the cylinder A, and leaving the piston E free to turn with, but sliding on, said shaft, and the nut or screw box *v*, substantially as specified.

4. The combination, with the cylinder A, having its ends extended beyond the ports *b b'*, of the grooves *u* and perforations *s* in the ends of the piston E, essentially as and for the purposes herein set forth.

162,420. PANE-BOXES. B. Miles Reppert, Philadelphia, Pa. [Filed Jan. 26, 1875.]



Brief.—Depressing the trigger first closes the upper leaf, then opens the lower one, and on the release of the trigger the lower leaf is first closed, then the upper one opened. Inverting the pane-box operates the "tell-tale," so that the attempt to steal is recorded.

1. The upper and lower leaves C G and arms E F, in combination with the sliding bar D, formed with the slots *a a' b b'*, substantially as and for the purpose set forth.

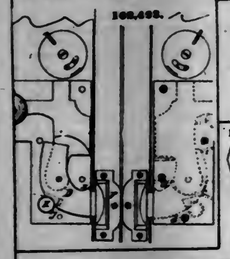
2. The combination, with a pane-box, of a tell-tale constructed of a continuously-rotating index, H, oscillating arm F', ratchet L, and pawl P, and operating as set forth.

162,421. FARM-GATES. George O. Ross, Marion, Ohio. [Filed Apr. 13, 1875.]

The swinging and sliding gate E, with the independently-sliding section F, in combination with the swinging frame G, hinged upon the hollow posts C, all substantially as set forth.

162,492. METHODS OF ENLARGING THE ENDS OF METAL BARS. George H. Sellers, Wilmington, Del., assignor to W Sellers and John Sellers, Jr., Philadelphia, Pa. [Filed Dec. 7, 1874.]

Brief.—The end of the bar to be thickened and expanded is, with a block or section of bar placed on it, heated, and the two pieces welded together by dies A B, and there, while yet confined in the die, is upset by a punch working within the die against the extremity of the thickened end, to expand it laterally to the desired breadth.



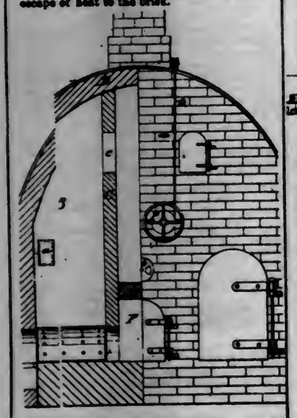
162,496.

The method of piling a rectangular bar, welding the pile between compressing-dies, and, without opening the dies, upsetting the welded metal, substantially as set forth.

162,493. LOCKING-LATCHES. C. Seymour, Charlottesville, Va. [Filed Mar. 9, 1875.]

The key having leg *i*, the tumbler K, having leg *j* and T-shaped slot *a*, the barrel L, having T-shaped slot *a'*, and the curved bolt D, having notch *h* and depression *i*, all combined and arranged substantially as and for the purpose described.

162,494.



162,494. SEAMS FOR LEATHER-WORK. S. W. Shorey, Boston, Mass. [Filed Aug. 17, 1874.]

The metallic fastenings of a seam or stay, the ends of which are united by solder, substantially as specified.

162,495. BRICK-KILNS. Peter Edwd. Smith, Lincomb, Iowa. [Filed Mar. 20, 1875.]

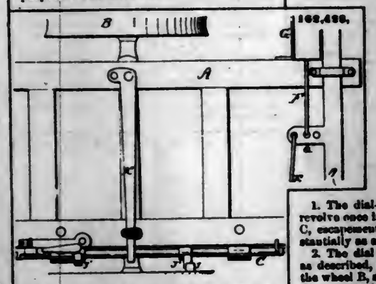
Brief.—The hollow wall contains a smoke-flue and hot-air chamber in contiguity. The detachable fire-boxes are perforated to allow escape of heat to the brick.

1. In the brick-kiln, as herein described, the transverse wall B, with dampers a and hollow wall C, containing flues F leading to a common chimney, and provided with dampers I, all combined and arranged substantially as and for the purpose described.

2. The detachable fire-boxes I', in combination with the stationary fire-boxes I in the wall X, and the hollow wall C, provided with flues F and dampers I, substantially as and for the purpose described.

162,496. SEWING STRAW BRAID. Wm. F. Sprague, Foxborough, Mass., assignor of one-half his right to L. Pond, same place. [Filed Feb. 20, 1875.]

As a new article of manufacture, strips of straw braid sewed together by their edges without lapping, as shown and described.

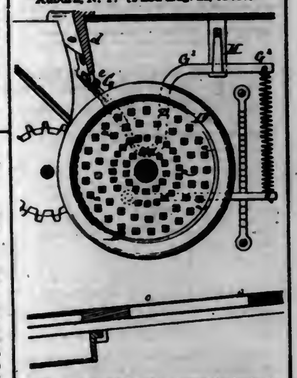


162,497. TAPS AND FAUCETS FOR BARRELS. A. C. Springer, San Francisco, Cal. [Filed Apr. 2, 1875.]

Brief.—The faucet is introduced bottom up, and the collar screwed down. A half-turn is given to the faucet, which places it in position for drawing, which turn, from the rapid pitch of the screw upon the plug, opens the passage, and at the same time forces the elastic ring against the projection in the bush and prevents leakage. The passage can be opened and closed without removing the faucet.

1. The cock or faucet constructed with the cylindrical portion E, and provided with the elastic ring G fitting the tube A, in combination, with the plug *c*, having two or more threads, as shown, and the shoulder *b*, working in the tube A, the whole operating substantially as herein described.

2. The tube A, with its peculiarly constructed screw-plug *c*, in combination with the faucet or cock having the securing or holding collar F, through which the cock moves loosely, as shown, and the elastic packing-ring G, the whole operating substantially as and for the purpose herein described.



162,498.

162,498. CORN-PLANTERS. John Stoll, Lincoln, Ill. [Filed Sept. 23, 1874.]

Brief.—To the side of the frame is supported the longitudinal shaft, provided near each end with lugs. Upon the inside of the bearing-wheel, and to one of the spokes, is secured a lug, which coincides with the projection on the shaft, and imparts to it a partial rotary motion. The front end of the shaft is bent at right angle to its length, and has holes, into one of which the end of the connecting-bar passes, for communicating motion to the adjustable seed-slide.

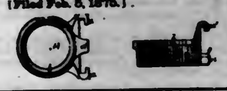
The combination, with the frame A and wheels B, having lug J, of the sliding and partially-rotating shaft C, with bow X, lugs J', perforated crank-arm C', adjustable rod K, sliding plate D, with central projection *e*, rod F, box G, all constructed substantially as set forth.

162,499. CORN-SHELLERS. Wm. Stover, Auburn, N. Y. [Filed Aug. 21, 1873.]

The combination, with the toothed wheels E and toothed wheel D, of the toothed jaws G, having the arms G^2 connected to the cross-bar *d* by an adjustable hinge, *e*, for adjusting said jaws vertically, substantially as and for the purpose described.

162,500. CLOCKS. Robt. H. Strong, Galesburg, Ill., assignor of one-half his right to Clinton S. Halsey, same place. [Filed Jan. 2, 1875.]

Brief.—A main drive-wheel, carrying a dial indicating fractions of an hour, gears with a pinion on the escapement, and is thus revolved once in each hour. A tappet in this dial acts on pins in a horizontal dial, indicating hours, moving it one space at each revolution of the main wheel.



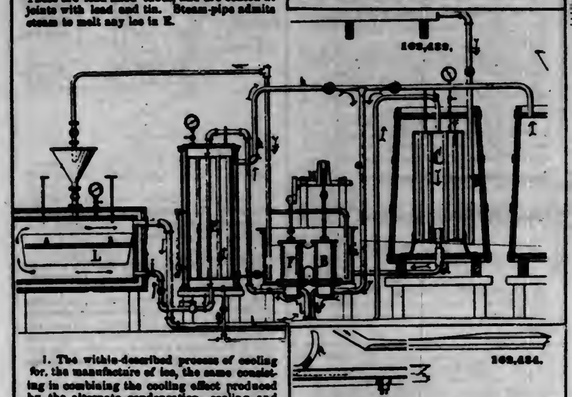
1. The dial-carrying wheel B, arranged to revolve once in each hour by means of spring C, escapement D E, and pendulum F, substantially as and for the purpose specified.

2. The dial G, constructed and graduated as described, secured to and operating with the wheel B, substantially as and for the purpose specified.

3. The horizontally-rotating dial I, constructed as described, and provided with projecting pins *i*, combined with the dial G, having a tappet, J, the wheel B, escapement D E, and pendulum F, substantially as described, and for the purpose specified.

4. The dial I, wheel B, dial G, escapement D E, pendulum F, spring C, and supporting-standard A, when arranged substantially as described, and for the purpose specified.

162,501. CARTRIDGE-LOADING IMPLEMENTS. Thos. L. Sturtevant, Framingham, Mass. [Filed Feb. 5, 1875.]



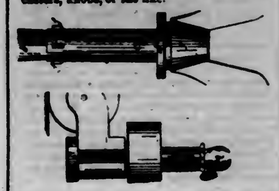
HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

1. The instrument herein described, consisting of the ring or short cylinder A, provided with rabbet *b* and hooks *a a* or *a a' a'*, or their equivalents, the whole being combined and operating substantially as and for the purposes stated.

2. As an instrument for supporting cartridge-shells while the latter are being loaded, the ring or cylinder A, with its rabbet *b*, substantially as and for purposes stated.

162,502. ICE-MACHINES. Augustus H. Tait, Jersey City, N. J. [Filed Dec. 28, 1874.]

Brief.—One pump condenses and circulates the condensible gas or liquefiable vapor. Another frame operates likewise on common air. The air, while compressed, is cooled by the expanding gas or vapor in the central chamber. These are lead-lined tubes, and are coated at joints with lead and tin. Steam-pipe admits steam to melt any ice in E.



1. The within-described process of cooling for the manufacture of ice, the same consisting in combining the cooling effect produced by the alternate condensation, cooling, and expansion of the vapors from a liquid having a low boiling-point, such as sulphite of carbon, with the cooling effect produced by the alternate compression, cooling, and expansion of atmospheric air, substantially in the manner herein shown and described.

2. The within-described process of cooling for the manufacture of ice, the same consisting in combining the cooling effect produced by the alternate condensation, cooling, and expansion of a condensible gas, such as sulphurous acid, with the cooling effect produced by the alternate compression, cooling, and expansion of atmospheric air, substantially in the manner herein shown and described.

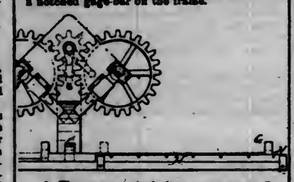
3. The gas-generator A, pump B, and compression-cylinder C, surrounded by water-tank D, for compressing and reducing the gas to a liquid state, in combination with the expanding-cylinder E, pump F, and the freezing-chamber L, substantially as described, for the purpose specified.

162,503. FASTENINGS FOR CASTERS. Knobs, &c. Jacob Thienes, Fredrick Thienes, and Charles Schuster, Brooklyn, N. Y. [Filed Mar. 19, 1875.]

Brief.—A self fastening attachment is formed by means of a conical or bulbous shaped head, which is drawn into a slit sleeve or outwardly-yielding socket, the sides of which have suitable catches or projections, for pressing into the wood. The rod carrying this enlarged head is screw-threaded, and provided at the other end with a flange and nut screw, the whole readily adapted for the fastening of casters, knobs, or the like.

The combination of the rod *a*, screw-threaded at one end, and having a bulbous or enlarged head, *b*, at the other, slit sleeve *c*, catches or projections *f*, flange *d*, and nut-screw *g*, for attaching and fastening the frame-work of a furniture-caster, for fastening knobs, or other analogous uses, all substantially as described and shown, for the purposes set forth.

162,504. RAILWAY-SWITCHES. B. A. Trapp, Davenport, Iowa. [Filed Apr. 2, 1875.]



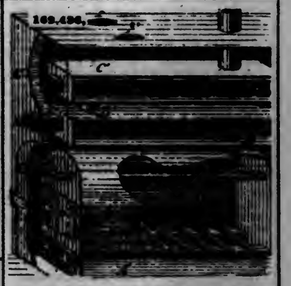
Brief.—In a railway-switch in which spring-rails are employed, the forward ends of the foot or inner flange of said rails are bent inward, and, in connection with similarly-formed inward projections from the main-track rails, act as guards, to prevent the rising of the forward ends of the spring-rails.

162,504.

The railway safety-switch consisting of the tongues E, springs D, main rails A, having the bottom flanges cut and bent inwardly at *d*, and the spring-rails C, having their bottom flanges extended at *f*, all combined and arranged substantially as shown, and for the purpose described.

162,505. MACHINES FOR PERFORATING TUBES FOR TUBE-WELLS. Chas. L. Travis, Minneapolis, Minn., assignor to the Star Manufacturing Company, same place. [Filed May 12, 1874.]

Brief.—The end walls of the feed-carriage are made concave, to conform to the shape of the tube. The carriage can be held at any desired point by a latch, which engages with a notched gage-bar on the frame.

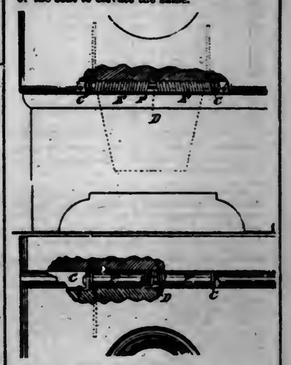


1. The concave bed-plate or support G', for automatically centering the tubes, in combination with the obliquely-acting punch cutter or cutters A, for perforating said tubes, substantially as and for the purpose set forth.

2. The combination, with the self-centering bed-plate or support G' and the obliquely-acting punches A, of the carriage G, for adjusting the tubes, as described.

162,506. HOT-AIR FURNACES. George B. Wallis, Owatonna, Minn., assignor of one-half his right to Searle & Dynes, same place. [Filed Mar. 23, 1875.]

Brief.—Air admitted to the hot-air chamber is heated by entering through pipes running through the combustion-chamber and the smoke-drum.



162,506.

The hot-air furnace herein described, consisting of the heater A A' and drum O O', with their connecting-pipes, and the air-tubes or pipes D and E E' E'', constructed and combined substantially in the manner and for the purposes set forth.

162,507. SELF-RAISING SEATS FOR WATER-CLOSETS. Jas. E. Walter, Baltimore, Md. [Filed Mar. 27, 1875.]

Brief.—Two hinges having a common pintle, upon which, between the hinges, two parts of a spiral spring are wound in opposite directions from the middle, the central parts of the spring being secured to the frame-work of the seat or closet, and the two extreme ends of the spring being inserted in holes in the edges of the seat to elevate the same.

1. The combination of the hinges C, a common pintle, D, and the portions E E of the spiral spring, wound in opposite direction from the middle, and attached to the seat at the ends, and to the frame-work at the center, or vice versa, substantially as and for the purpose described.

2. The combination of the hinges C, a common pintle, D, the spiral springs E E, and the sheet-metal casing F, substantially as and for the purpose described.

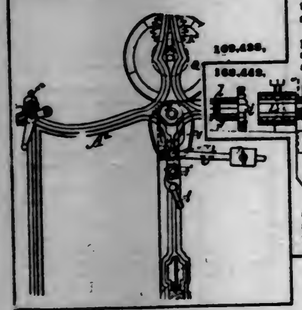
162,508. CLOTH WINDING AND MEASURING MACHINES. Jas. Wayland, New York, N. Y., assignor to himself and T. M. Brintnall, same place. [Filed Feb. 24, 1875.]

1. The cloth-clamping and winding device, consisting of the slotted bar K, finger L, set-screws *l*, eccentrically-slotted disk M, and shaft H', substantially as shown and described.

2. The jaws G G, pivoted at their centers to a head on the shaft H, in combination with the sliding sleeve J and revolving conical wedge I, attached to the said sleeve, substantially as and for the purpose described.

3. The combination, with the sleeve T and shafts H H', of the brake N, consisting of a divided bar attached at one end to a support upon the said sleeve, and provided at its outer end with a set-screw, substantially as described.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON



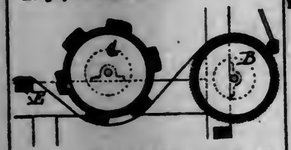
4. The combination of the tube or shaft F, detachable centers F', rods F², adjustable bezes A', cords or chains c', shaft T, ratchet f', and pawl f², substantially as and for the purposes described.

5. The combination of the shaft T, provided with cams t, the arm or lever U, attached to the said cam-shaft, and provided with an adjustable weight, u, and the vertically-adjustable tension-bar B, and the tension-roller P, substantially as and for the purpose described.

6. The adjustable guides V, sliding on the shaft T, and surrounding the roller P, and tension-bar S, substantially as shown and described.

7. The drum Q, journaled in adjustable tail-stocks hangers q, in combination with the shaft of the drum, having a tooth, r, the slotted double pointer or index R, and the toothed wheel R', substantially as and for the purpose described.

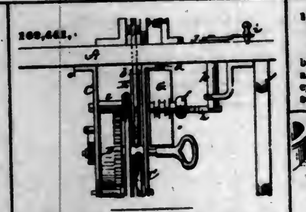
8. The drum and its axis or shaft, in combination with the tape-reel mounted on said axis or shaft of the drum, as and for the purpose described.



169,439. COMBINED MANGLE AND IRONING-TABLE. Francis Way, Springfield, Ohio. [Filed Apr. 12, 1875.]

In combination with the mangle and ironing-board constructed as shown, the pivoted supporting-frames D d and E e, the brace-rods F and F, and the brace-bar G, substantially as and for the purpose specified.

169,440. MACHINES FOR POLISHING OIL-CLOTH. J. Webber, Jr., Elizabeth, N. J., assignor to Eastern Manufacturing Company, same place. [Filed July 30, 1874.]



Brief.—A revolving cylinder covered with pumice-stone rubs the fabric as it is drawn along by the card-roller.

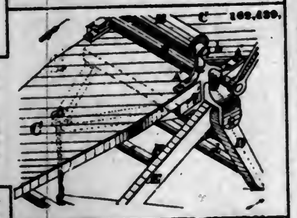
In a machine for polishing enameled cloth and other fabrics, the combination of the take-up cylinder B, polishing-cylinder C, brake or rollers C D, and stretching-bars E E E', substantially as and for the purpose shown and described.

169,441. POWERS FOR RUNNING SEWING-MACHINES. James K. Welter, Springfield, Ill., assignor of three-fourths his right to John F. Pritchard and Nat. Covington, same place. [Filed July 24, 1874.]

In combination with the clock-work D, and cross-shaft E having fan G and pulley f, I claim the vertical shaft h, provided with the spring h as its lower end, held in place by the brackets hl, and connected to the lever I upon the sewing-machine table, which lever has a pointer, i, and is adjusted by means of the perforated dial J, all substantially as set forth.

169,442. PHOTOGRAPH-BURNISHERS. Emile R. Wenton, Bangor, Me., assignor to J. F. Bass, same place. [Filed Jan. 18, 1875.]

1. A burnishing-tool made from Franklinite iron or cast-iron containing a large proportion of manganese.



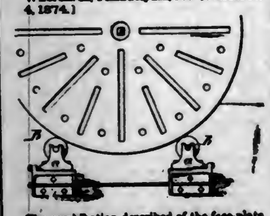
2. A burnishing-tool plate thickened at its front edge and gradually diminishing in thickness toward the rear and sides, as shown.

3. A burnishing-tool plate provided with a tail-piece, having the slots *d f f* therein, as and for the purposes specified.

4. In a burnishing-machine, a feed-roll, *l*, provided with a diagonal groove, *l*, extending around its arbor, in combination with the screw *o* in its supporting standard, as shown.

5. The feed-roll *l*, provided with groove *l* and screw *o*, in combination with a groove, *c*, and set-screw *p*, as and for the purposes set forth.

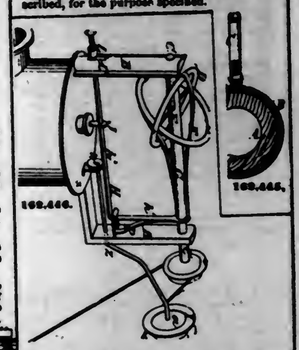
169,443. BRACKETS FOR SUPPORTING SHELVES. Wm. Hall, Jr., Cincinnati, Ohio. [Filed Jan. 18, 1875.]



Brief.—The bracket is made of a single piece of metal, and has a hook at its upper end, and a lip at its lower end, which is bent at right angles to the bracket, and has a hole through it for the reception of a screw.

169,444. PIANO-FORTE PEDAL ATTACHMENTS. Lorrain C. Whiting, East Saginaw, Mich. [Filed Dec. 30, 1874.]

The combination of the base-block C, the foot-rest D, pivoted thereto, the screw-rod E, and clamp-nut F, all constructed and arranged substantially as and for the purposes set forth.



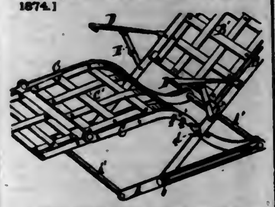
169,444. METAL-TURNING LATHES. Thos. Wilbraham, Philadelphia, Pa. [Filed Dec. 4, 1874.]

The combination described of the face-plate of an ordinary lathe with adjustable supporting-pulleys B B, for the purposes specified.

169,445. BULL'S-EYES. Wm. W. Wilcox, Middletown, Conn. [Filed Dec. 24, 1874.]

The combination, in a bull's-eye, of a wooden body, A, having a central groove or seat, and a surrounding strap, B, constructed with an eye, C, substantially as herein shown and described, for the purpose specified.

169,446. GOVERNORS FOR STEAM-ENGINES. James D. Willoughby, Washington, D. C. [Filed Mar. 27, 1874.]



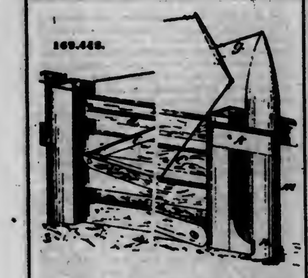
1. The rings D D, in combination with the spring-arms F F and sleeve G, substantially as and for the purpose set forth.

2. The pivoted elbow-lever H, consisting of the arms *h' h²*, in combination with the valve K and sleeve G, whereby a horizontal motion, given by the centrifugal device to the arm *h'* produces a vertical motion in the arm *h²* and valve K, substantially as and for the purposes set forth.

3. The pendent weight M, of varying resistance or force, in combination with the arm *h²* of the elbow-lever H, and spring F, substantially as described, and for the purposes set forth.

4. The adjustable-nut or sleeve *L'*, in combination with the arm *h²* and slot *L²*, substantially as and for the purpose set forth.

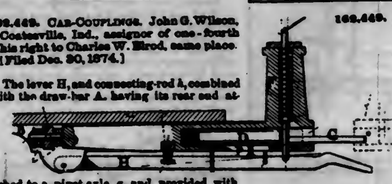
169,447. ADJUSTABLE IRON CHAIRS. Geo. Wilson, New York, N. Y. [Filed Nov 7, 1874.]



1. The combination, with the slotted frame A A', of the back-frame B, provided with the bar *d'*, and seat-frame C, having the notches *e*, for adjusting the inclination of said back-frame, substantially as described.

2. The combination of the slotted frame A A', the back-frame B, provided with the bar *d* and the arm-rests D, having jointed braces E, constructed with stops *e e'*, and the seat-frame C, having the notches *e* and foot-rest C', substantially as described and shown.

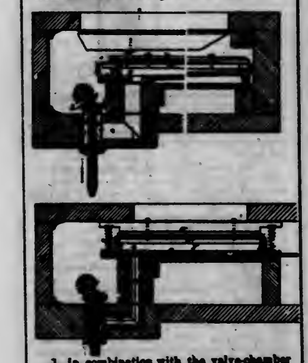
169,448. FARM-GATES. John N. Wilson, Carthage, Mo. [Filed Sept. 28, 1874.]



Brief.—The pin being thrown to the outer end of the slot forces down the lever, and by means of the wire draws down one end of the arm, the other end thereof being forced upward, which, by means of the wire, raises the outer end of the gate, and vice versa. When the pin is thrown to the inner end of the slot, the gate will descend, and its front end rest on the ground or in the leach, thus freeing the post from strain.

169,448.

The combination, with a gate, a, and inner gate-post m, of the lever d, arm c, with pin *b* passing through a slot, *a*, the wires *c b*, bar *f*, and wire *g*, all substantially as and for the purposes herein set forth.



169,449. CAR-COUPLINGS. John G. Wilcox, Centerville, Ind., assignor of one-fourth his right to Charles W. Bird, same place. [Filed Dec. 30, 1874.]

The lever H, and connecting-rod *h*, combined with the draw-bar A, having its rear end attached to a pivot-axle, *a*, and provided with the usual spring sliding block D and guard F, constructed to operate substantially as set forth.

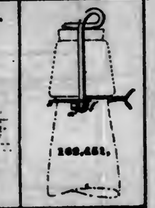
169,450. PNEUMATIC ACTIONS FOR ORGANS. Thomas Winans, Baltimore, Md. [Filed Mar. 26, 1875.]

Brief.—Special construction of ping-valve, to prevent leakage. The spiral springs, for keeping the valves in place, are secured within the wind-chest to a shaft having its bearings in the sides of the wind-chest, the tension of the springs being made adjustable from the outside through the said shaft.

1. In combination with the valve-chamber and the air-passage to the pneumatic device, the double-ping valve, arranged to play in said chamber, and so formed that the distance between the interior opposite faces of its heads at their outer edges shall not practically exceed the distance between the induction and eduction openings of the valve-chamber, substantially as shown and set forth.

2. The double valve, consisting of two heads, adapted to fit in the valve-chamber, a cylindrical intermediate connecting-stem, and a flange or disk of larger diameter applied to the outer face of the eduction or exhaust head, substantially as set forth, with or without a like flange or disk on the exterior opposite face of the induction-head.

3. The hollow or tubular valve-stem, in combination with the valve-operating spring contained in said stem, substantially as set forth.



4. In combination with the ping-valve, the tubular central stem, prolonged below the outer head, and the valve-operating spring, received and secured in said stem, substantially as set forth.

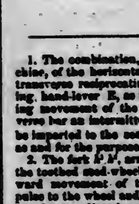
5. In combination with the valve-operating spring or springs, a tension-regulating shaft, by whose rotation the tension of the spring or springs can be increased or decreased at will, substantially as and for the purpose set forth.

6. The pneumatic valve-lifter, for operating the pallets of slider sound-boards, consisting of an oblong case or frame, whose top is formed of a flexible diaphragm and piston disks or plates, as described, adapted to engage the pallet, and to operate the same, substantially as set forth.

7. A pneumatic valve-lifter, consisting of a case or frame, formed with an aperture in its bottom for air admission and exhaust, and closed at its top by a flexible diaphragm embraced between two piston disks or plates, the outer one of which carries or engages with the air-admission pallet or valve, or constitutes in itself the pallet or valve, substantially as set forth.

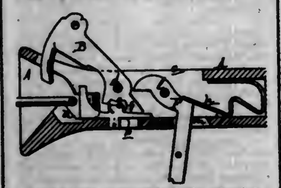
169,449.

8. The case or frame of the pneumatic valve lifter or worker for slider sound-boards, formed of metal, so that it will, by its weight, make a tight joint with the air-duct, whereby other fastenings can be dispensed with, and the ready removal and replacement of the device is provided for, substantially as set forth.



169,450.

169,451. WIRE FASTENINGS FOR BOTTLE-STOPPERS. Henry W. Yerington, Oceanic, N. J., assignor to Rowland C. Anthony, New York city. [Filed Aug. 1, 1874.]

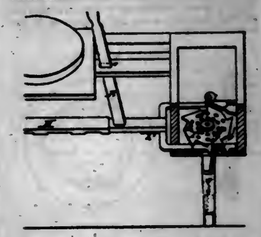


Brief.—The loops are below the neck-wire. The arms are first bent inward and then backward, so that in one direction of the movement of the ball they act as stops to prevent the ball from moving beyond a given point in that direction, while in the opposite direction they allow the ball free motion to swing backward only.

In combination with the loops *b'*, made on the under side of the neck-wire, the bends *a²* on the arms of the ball-wire, so that while the ball is free to swing in one direction the bent ends coming against the neck-wire prevents it from swinging in the other and wrong direction in relation to the plunger, substantially as described and represented.

169,451.

169,452. CAR-COUPLINGS. Saml. T. Young, Howell, Mich. [Filed Mar. 6, 1875.]



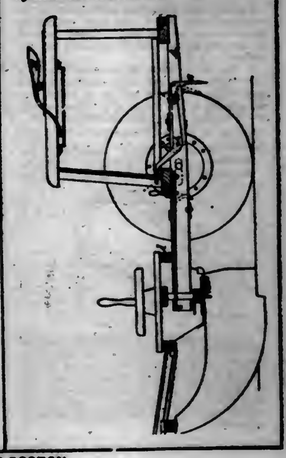
1. The combination, with the draw-head A, having the shoulder *a* and slots *b b*, of the dog B, pivoted at *d*, and having the leg *f* and notch *g*, and the tumbler C, provided with raised head *j*, head A, and lug *i*, substantially as described and shown.

2. The bell-crank lever F hung in the back part of the draw-head A, in combination with the leg *f* of the dog B, substantially as and for the purpose set forth.

REISSUES.

6,884. SEED-PLANTERS. George W. Brown, Galesburg, Ill. Patent No. 46,613, dated Feb. 28, 1865. [Filed Jan. 6, 1875.]

Brief.—The man who operates the planting mechanism is seated upon the front pivoted frame, and works the rotating seed-disks intermittingly by means of a hand-lever, through a forked transverse bar. The valves in the seed-tubes are also operated from the transverse bar.

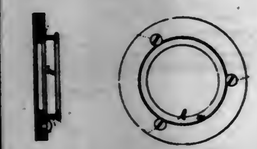


1. The combination, in a seed-planting machine, of the horizontal rotating wheels I' P, transverse reciprocating bar H, and operating hand-lever E, so that by the reciprocating movement of the hand-lever and transverse bar an intermittent rotary motion will be imparted to the seed-wheels, substantially as and for the purpose specified.

2. The fork *h' h'*, arranged to operate with the toothed seed-wheels I' P, so that the forward movement of the fork will give impulse to the wheel and turn it to a certain extent in one direction, and the return movement of said fork will give a similar impulse to said wheel, and in the same direction as received from the forward motion of the fork, thus turning the wheel intermittently, and always in the same direction, substantially as described, and for the purpose specified.

3. The combination, in a seed-planting machine, of a horizontally-rotating seed-wheel in the hopper, and valve in the seed-tube, transverse reciprocating bar, and operating hand-lever, all substantially as and for the purpose specified.

6,885. SEED-PLANTERS. George W. Brown, Galesburg, Ill. Patent No. 46,613, dated Feb. 28, 1865. [Filed Jan. 6, 1875.]

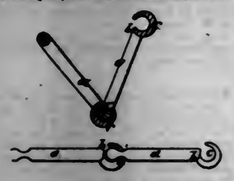


Brief.—The bearing-wheels of the machine have concave rims, which serve to cover the seed, and are kept free from adhering soil by convex scrapers, to be operated, respectively, by either foot of the driver.

In combination with a seed-planting machine carried on wheels, scraper G G'', arranged to be independently or simultaneously forced against the supporting-wheels by the driver's feet and released, substantially as and for the purposes specified.

6,889. SPINNING-RING. Wm. T. Carroll, Worcester, assignor to Geo. Draper and Wm. F. Draper, Hopedale, Mass. Patent No. 80,026, dated Apr. 20, 1869. (Filed Mar. 17, 1875.)

Brief.—The ring has two races, so that it may be reversed when one race becomes worn. Three screws, overlapping the unused race, confine the ring to the top of the rail or to a recess thereon.



1. A spinning-ring composed of an annulus and two connected races, substantially as described.

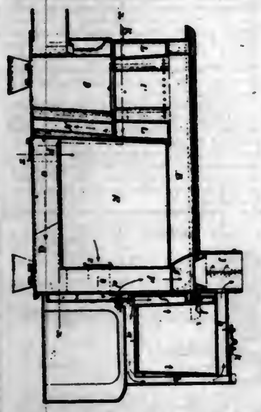
2. The combination of a ring having two races with a ring-rail, and with holding devices carried by the rail, to operate in connection with the lower or unused race, and confine the ring to the rail and about the spindle-receiving passage through the rail, substantially as and for the purposes described.

3. The double-raced spinning-ring, combined with a ring-rail having spindle-receiving openings, and arranged within a casket at the top of the ring-rail, substantially as described.

6,887. DRIVE-CHAIN. Wm. Dana Ewart, Belle Plaine, Iowa. Patent No. 154,594, dated Sept. 1, 1874. (Filed Dec. 15, 1874.)

1. The combination, in a drive-chain, of the coupling-hooks O and side bars sufficiently small close to the end bars to pass through the opening of the hook O, as shown and described.

2. The combination, in the open link of a drive-chain, of the end bar *b*, provided with a coupling-hook, and the end bar *b'*, adapted to be coupled to the hook of a corresponding link to form a chain, substantially as shown.



6,888. HEEL-STIFFENING. James W. Hatch, Rochester, N. Y. Patent No. 120,320, dated July 10, 1872. (Filed Mar. 27, 1875.)

As a new article of manufacture, a crimped heel-stiffener, substantially as described, turned inward at *b*, and bent and cut to form a well-defined cant ready for lasting, and with the flange of the stiffener crimped at back and sides, or wherever the flange is not notched and the cant is curved inwardly, substantially as described.

6,890. COOKING-STOVES. James R. Hyde, Troy, N. Y. Patent No. 150,048, dated Apr. 21, 1874. (Filed Mar. 23, 1875.)

Brief.—Air is taken from a heating-chamber adjacent to the fire-box, through flues at the side of return-flues in the bottom of a cooking-stove, to the reservoir-space, and also through the oven to the same locality. It can, however, if desired, be discharged into the rear vertical smoke-flues. From the reservoir-space it may be discharged either into the room or smoke-pipe.

1. In a cooking-stove which has a heating-chamber, L, around the fire-box, the combination of the oblique flues N, connected with two flues, O, located under the oven externally to the smoke-flues G, and the hot-air chamber or flue *a* in the rear of the descending and ascending smoke-flues F, and the valves *c* and *d*, substantially as and for the purposes described and set forth.

2. In a cooking-stove which has a heating-chamber, L, the hot-air flues N, connected with the flues O, located under the oven, and next to the outside of the stove, the chamber or flue *a*, having the valves *c* and *d*, in combination with the ordinary vertical and horizontal smoke-flues, and a water reservoir attached to the rear end of such stove, substantially as and for the purposes described and set forth.

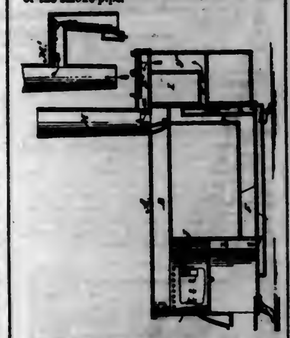
3. In a cooking-stove which has a heating-chamber, L, around the fire-box, the flues N, O, and *e*, and valves *c* and *d*, in combination with a water-reservoir, or reservoir and warming-closet, attached at the rear end of such stove, and having the flues *a b b'*, the spaces *f*, substantially as and for the purposes described and set forth.

4. In a cooking-stove, the combination of a water-reservoir attached thereto and a connecting-duct leading from the oven into a space or flue under or about such reservoir, for the purpose of conducting heated air from such oven to, under, or about such reservoir to heat the same, substantially as and for the purpose described.

5. A cooking-stove in combination with an inclosed reservoir attached thereto, having the spaces *f* between the water tank or lining *t* and the outside casing thereof, and a connecting-flue from such stove to such reservoir, through which heated air may pass from such stove to, under, or about said reservoir, and into the smoke-pipe or flue at the rear part of said stove, substantially as and for the purposes described and set forth.

6. The combination of the oven E, having the valved duct P, leading from the bottom of the stove into the oven, with the valved duct *a*, leading from the oven into the chamber or flue *a*, and to and into a space or flue in, under, or about a water-reservoir, substantially as and for the purposes described and set forth.

7. The oven E, having the valved duct P leading from the bottom of the stove into said oven, the valved duct *a* leading from said oven into the flue *a*, in combination with the chamber L and flues N, O, and *e*, substantially as and for the purposes described and set forth.



8. The stove-top A, provided with recess *a* for A in the rear projecting parts *A*, in combination with the reservoir having the projecting bearing-pieces *m* attached thereto, whereby the combined reservoir and warming-closet are suspended at and against the rear end of the stove substantially as and for the purposes described and set forth.

9. In combination, a cooking-stove and an inclosed reservoir arranged at the rear of said stove, the flue *a*, flue *e*, and the spaces *f*, the flues *b* and *b'*, and either with or without the valved opening *k* into the flue *b'*, substantially as and for the purposes described and set forth.

10. In combination, a cooking-stove having an inclosed reservoir attached thereto, and having a space between the water-tank and the outside casing, through which may pass a current of heated air from said stove to, under, or about said reservoir, and at will either into the smoke flue or pipe, or into the room through a valved opening at or near the top part of the reservoir, substantially as and for the purposes described.

6,891. RESERVOIR COOKING-STOVES. Jas. R. Hyde, Troy, N. Y. Patent No. 120,720, dated Mar. 11, 1873. (Filed Mar. 17, 1875.)

Brief.—Air is taken from a heating-chamber adjacent to the fire-box, through a flue at the bottom of the stove, into a flue or chamber in the rear of the ordinary diving-flues, from which it may at will be discharged either into said diving-flues, or into a flue between the reservoir and warming-closet. From the latter it may be admitted either into the room or the smoke-pipe.

1. The combination of the flues *b* and G, heating-chamber in rear of the fire-box, and the aperture *a* for the admission of air from the room into such heating chamber, substantially as and for the purposes described and set forth.

2. The combination of the flues *b* and G, with the vertical flue *g*, and the opening *r* in the back plate of the stove, substantially as and for the purposes described and set forth.

3. The combination of the vertical flue *g*, next the back plate of the stove, and having a valved opening at or near the top part thereof, with a valved opening *r*, in the back plate of said stove, for the purposes substantially as described.

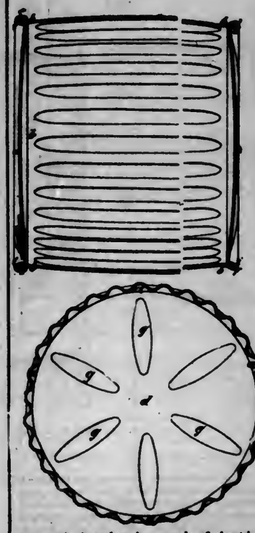
4. The combination of the heating-chamber in front of the oven, and next the fire-box, the aperture *a*, with the flue *g*, opening *r* in the back plate, sliding damper or valve *m*, with the opening *s* therein, and having the top part of said damper projecting inward, to cover the top part of flue *g*, substantially as and for the purposes described and set forth.

5. In combination, a stove having a water-reservoir attached thereto, which reservoir has hot-air flues, through which a current of heated air may pass from such stove, to and around said reservoir, and either into the smoke flue or pipe of such stove, or through a valved opening at or near the top part of such reservoir, for the purposes substantially as described and set forth.

6. The combination of the heating-chamber at the fire-box, the flues *b*, G, and *g*, opening *r*, in the back-plate damper or valve *m*, with a water-reservoir, I, having the flues *g'* and *g''*, substantially as and for the purposes described.

1. The combination of the flues *g'*, *g''*, and *g'''*, with the valved opening *e*, and flue *g*, substantially as and for the purposes described and set forth.

2. The combination of the smoke-flues P and F, the hot-air flue *g*, opening *r* in the back plate of the stove, with a reservoir, I, having a flue on two or more sides thereof, through which may pass a current of heated air, substantially as and for the purposes described and set forth.



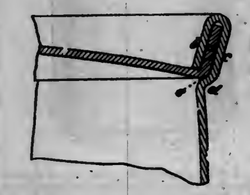
3. In combination, the water-reservoir I, and warming-closet I', arranged at the rear end of a cooking-stove, with the hot-air flue *g'* at the bottom of the reservoir, through which heated air may pass from such stove, substantially as and for the purposes described.

10. In combination, a water-reservoir and warming-closet for a cooking-stove, having hot-air flues through which may pass a current of heated air from such stove, said reservoir and warming-closet being mounted together, forming one article or whole, made capable of being attached to the top part or plate, and suspended at and against the rear end of such stove, or detached therefrom when desired, without the use of screws, screw-bolts, lugs, or hooks and eyes, substantially as and for the purposes described and set forth.

11. The combination of a water-reservoir, arranged at the rear part of a cooking-stove, which has a heating-chamber at the fire-box, into which air from the room may be admitted, and a duct (separate and distinct from the smoke-flue) through which to convey a current of air (heated in said chamber) to, into, and through a flue, under or about such reservoir, and into the smoke flue or pipe, substantially as and for the purposes described.

12. The combination of a cooking-stove with a water-reservoir attached thereto, which has a flue on two or more sides thereof, into and through which a current of heated air may pass from such stove to and through a valved opening, at or near the top part of such reservoir, into the room, substantially as and for the purposes described.

6,891. METALLIC VESSELS. Wm. B. Smith, Pittsburg, Pa. Patent No. 26,014, dated Apr. 24, 1860; extended seven years. (Filed Jan. 7, 1875.)

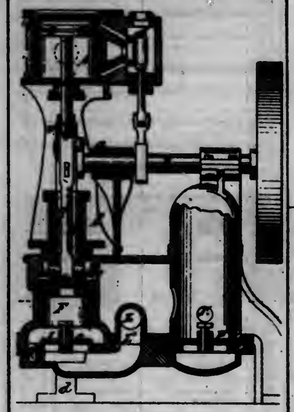


A cask, barrel, or keg, made of sheet-iron, having its sides corrugated longitudinally, in the manner described, to produce a bilge, and have the parts near the heads plain, and united with the heads by lap-joints, which extend beyond the heads in the form of a chine, as herein described.

1. The pump-cylinder F, in open communication, at or near its top, with the air-chamber J, above the discharge-valve P, and in communication below, by a channel or passage, with the under side of said valve, in combination with the pump-plunger and induction-valve O to the inlet-passage of the pump, substantially as specified.

2. The removable valve-plate N, with its induction and eduction or discharge valves O and I', inlet-passages L', and outlet Q, in combination with the induction channel or passage L, and eduction nozzle or nozzles M, arranged above in a fixed portion of the main frame, essentially as described.

3. The combination of the main frame, the steam-cylinder, the pump cylinder, the air-chamber, and the bearings for the crank-shaft, all arranged substantially as specified.

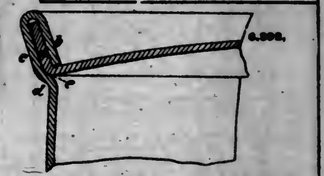


6,892. METALLIC VESSELS. Wm. B. Smith, Pittsburg, Pa. Patent No. 26,014, dated Apr. 24, 1860; extended seven years. (Filed Jan. 7, 1875.)

A metallic vessel having the heads constructed with a flange, *a*, and the body with an offset shoulder, *c*, and overlapping extensions *c b*, forming a chine, substantially as described.

6,893. STEAM-PUMPS. William Wright, New York, N. Y., assignor to the Valley Machine Company, Easthampton, Mass. Patent No. 100,702, dated Mar. 8, 1870. (Filed Mar. 26, 1875.)

Brief.—As the water is forced through the exit-valve by the descent of the piston, a portion of it enters the upper part of the cylinder, and is ejected by the next ascent of the piston. A bottom plate, which is removable, contains the valves and water-passages.



1. The pump-cylinder F, in open communication, at or near its top, with the air-chamber J, above the discharge-valve P, and in communication below, by a channel or passage, with the under side of said valve, in combination with the pump-plunger and induction-valve O to the inlet-passage of the pump, substantially as specified.

2. The removable valve-plate N, with its induction and eduction or discharge valves O and I', inlet-passages L', and outlet Q, in combination with the induction channel or passage L, and eduction nozzle or nozzles M, arranged above in a fixed portion of the main frame, essentially as described.

3. The combination of the main frame, the steam-cylinder, the pump-cylinder, the air-chamber, and the bearings for the crank-shaft, all arranged substantially as specified.

6,894. FAUCETS. John G. Bickel, Buffalo, N. Y., assignor, by mesne assignments, to J. Lefferdorf and Jacob Davis, same place. Patent No. 49,698, dated May 24, 1864. (Filed Jan. 14, 1875.)

1. In a beer-faucet, the combination with a chamber, of a plug, serving to control the flow of liquor, and a piston serving as a plunger, when both are formed of one continuous piece of metal, and capable of a combined rotary and reciprocating movement, substantially as described, and for the use and purpose set forth.

6,895.

2. The combination, with the chamber B, constructed in one piece with the body A, of the plug C, upper stem C', cross-handle G, lower stem E, and a squirting-cylinder, D, when the said plug C, upper stem C', and lower stem E are formed of one piece of metal, and capable of a combined rotary and reciprocating movement, substantially and described, and for the use and purpose set forth.

3. The combination, with the body A, of the chamber B, when the said chamber is formed in one piece with the body A, substantially as described.

6,895.

6,896. HARVESTERS. John H. Heward, St. Paul, Minn., assignor to himself and W. S. Goodhue. Patent No. 104,290, dated June 14, 1870. (Filed Mar. 24, 1875.)

Brief.—The driver's seat is adjustable on the grain side of the driving-wheel, for counterbalancing the weight of the binders upon the stubble side of said wheel.

1. An elevator for conveying the grain to a receptacle at the outer side of the machine, in combination with a yielding apron held or pressed toward the elevator by springs which allow it to yield to the varying bulk of the grain, substantially as described.

2. The adjustable longitudinal bars or supports K', in combination with the binders' platform, substantially as described.

3. The binders' platform K, in combination with a box or receptacle for the shattered grain, supported upon said platform, and the curved or inclined shield J, covering the outer face of the driving-wheel, and conducting the shattered grain into the receptacle or box, substantially as set forth.

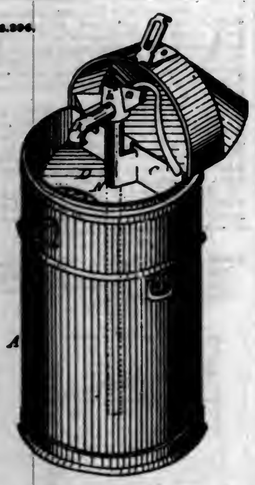
HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

4. The arrangement of the longitudinally adjustable bars or reel-supports M M', in combination with the overhung reel for adjusting the angle of rotation of the reel to the line of the cutters, as set forth.

5. The adjustable driver's seat, mounted on the bars H H', substantially as described, for giving both a lateral and longitudinal adjustment to said seat, as set forth.

6. The combination, with a binders' platform or support at the outer or stubble side of the main frame, and in the described relation to the raking and elevating mechanism, of an adjustable driver's seat arranged at the grain side of the drive-wheel, and in the same transverse vertical plane with said binders' platform and raking mechanism, whereby the machine may be balanced, substantially as described.

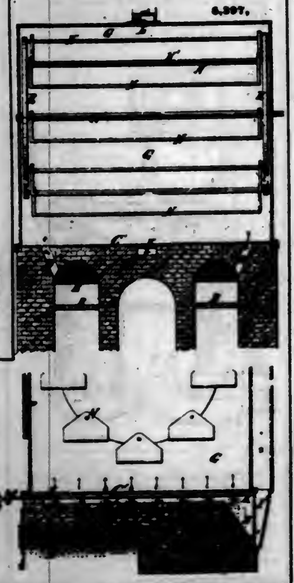
6,895.



6,896. STAMP OIL-CANS. John D. Gray, Cincinnati, Ohio. Patent No. 100,858, dated Mar. 1, 1870. [Filed Jan. 27, 1870.]

Brief.—A sunken cover of the entire mouth of the can has means for holding the pump. A socket in its bottom, with a pin on the inside of the can, guides the cover into position. The pump is screwed into its support.

6,896.



1. The oil-tank A, provided with a removable sunken top compartment having provision for the oil-drawing device, and adapted to be set into the mouth of the can, substantially as described.

2. The combination, with an open-mouthed oil-can and removable top, of a stand-pipe, J, rising from the top, and provided with interior screw-threads, and a pump-barrel, K, screwing into said pipe, as herein set forth.

3. The combination, with an open-mouthed oil-can and a removable top, of a lever-pump arranged with the top, substantially as herein set forth.

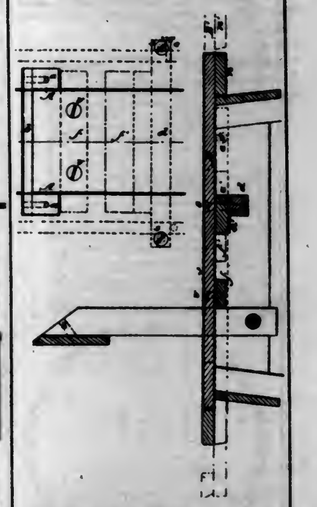
4. The pin H, in combination with the removable depressed top, having the socket I, as and for the purpose set forth.

6,897.

6,897. BAKERS' OVENS. Duncan McKenzie, Brooklyn, N. Y. Patent No. 99,190, dated May 1, 1860; reissue No. 3,920, dated Apr. 19, 1870; extended seven years. [Filed Apr. 6, 1875.]

1. The combination of the following elements, to wit: a furnace or fire-place, (one or more,) a baking-chamber arranged above such furnace or fire-place, and in direct communication therewith, and a rotating reel located within said baking-chamber, and provided with gravitating pans or shelves, arranged or hung around the shaft of said reel from rods attached to the end plates or arms thereof, substantially as and for the purpose described.

2. A system of flues communicating between the fire-places and the interior of the oven directly through the floor or bottom of the latter, substantially as herein described.



3. The combination of the flues D, escapes K K, and flue I in the lower part or floor of the oven C, for the purpose herein shown and described.

4. The flue I, having its rear end constructed with an enlargement and downward extension, in combination with the flue I', substantially as set forth.

5. The combination, with the oven C, of the flues I' I' I D and the dampers K K and L, as and for the purpose herein shown and described.

6,898. EXTENSION WASH-BENCHES. Samuel Wiswall, Hyde Park, Vt., assignor, by mesne assignments, to the Bailey Washing and Wringing Machine Company, Woonsocket, R. I. Patent No. 20,271, dated Oct. 5, 1858; reissue No. 4,067, dated Aug. 9, 1870; extended seven years. [Filed Feb. 10, 1875.]

Brief.—The bench has a sliding extension at each end, and standards for the attachment of a wringer.

1. A wash bench provided with upright standards, adapted to receive and support wringing-rolls and extension shelf or shelves, substantially as and for the purpose set forth.

2. A wash-bench, provided with upright standards connected by a cross-board and adapted to receive a clothes-wringer, substantially as described.

3. As an article of manufacture, a wash bench provided with upright standards, adapted to receive and support a clothes wringer, substantially as described.

COMMISSIONER'S DECISIONS.

SAMUEL C. MOORE.—*Interference.*

[*Appeal from the decision of the Examiners-in-Chief in the matter of the interference between the patents of Philander Baker and L. J. Atwood and the reissue application of Samuel C. Moore, for* "IMPROVEMENT IN LAMP-BURNERS."—*Decided March* 30, 1875.]

An invention which consists of a combination of elements is not complete until all the elements are combined.

The date when that is accomplished is the date of the invention.

THACHER, *Commissioner:*

The subject-matter of this interference is set forth in Moore's claim, and consists of a "connected air-distributing plate and cup or deflector, and the chimney rests or supports forming rests for the lower edge of the chimney below the air-distributing plate, in combination with an elastic device for supporting the chimney laterally at or near the periphery of the connected deflector and air-distributing plate."

The issue hinges upon the question who was first to invent and employ "the elastic device" mentioned in the claim. The evidence clearly shows that, in respect to the other features, Atwood was much earlier than his competitors.

Baker is practically out of the case, as he took no testimony, and his record date confines him to October 8, 1867, a period subsequent to the completion of the invention by both Atwood and Moore. The contest is, therefore, between the two last named.

The object of the elastic device is to render chimneys of various diameters self-adjusting. Atwood shows this device in the shape of a coiled spring connected to and extending entirely around the periphery of the air-distributing plate. Moore, in his model, shows the device constructed of elastic wire springs, extending upward from the screw-cup of the lamp, and bent so as to not only form rests for the chimney, but also to give a lateral pressure to both its inner and outer surfaces.

In his preliminary statement Atwood carries back the date of his experiments in this line to the year 1862. He therein says: "Deponent also, during that time, took a burner that was made, in 1859 and 1860, by Holmes, Booth, and Haydens, known as the 'Excelsior Screw-Burner,' in which the shell had large holes, and there was a fine foraminous plate within the shell and around the wick-tube, and cut off the shell at the large perforations and foraminous plate directly to the wick-tube, near the upper end, and then spun up a rather flat deflector and soldered to the edges, pendent hooks, into which the chimney was received, so that the chimney passed down below the air-distributer and deflector, and contained all the features of relative arrangement that deponent understands to be now in controversy. This burner was made and practically used in the latter part of the year 1862."

In evidence he introduces this burner, or one of the same construction, which is marked "Exhibit B." Now, this "Exhibit B," and also his "Exhibit C," made several years later, both of which Atwood insists embraced substantially the subject-matter in controversy, fail in one essential particular to meet the requirements of the present issue. They have not an elastic device for properly adjusting lamp-chimneys of different diameters to the periphery of the deflector and air-distributing plate.

In the exhibits named the chimney-rests are brass and wire hangers, and, although yielding to the press-

ure of the outer surface of chimneys of sufficiently large diameter, they do not afford any lateral support to the interior of chimneys, whether of large or small diameters, but leave the inner surface of the chimney to impinge upon the hard unyielding edge of the deflector. It is as much the object of the elastic device to accommodate itself to the pressure of the inner surface of the chimney as to its outer surface, and to chimneys of small as well as large diameters. Atwood's Exhibits B and C are entirely wanting in these characteristics.

The only elastic device mentioned or produced by Atwood which accomplishes the purposes of that in controversy is the coiled spring woven into the edge of the deflector. It is only necessary, therefore, to ascertain when he combined that feature with the others which enter into the construction of the burner claimed, to determine the date of invention on his part.

In his preliminary statement Atwood alleges "that in the lamp-burner made by deponent in 1862, as aforesaid, a difficulty was experienced from the fact that the varying sizes of chimneys left more or less space between the interior of the chimney and the metal deflector; hence uniformity of flame could not be depended upon. This was cured by the coiled spring of the said 'Comet burner,' and a second difficulty existed of obtaining easy access to the wick for trimming and lighting. This difficulty was overcome by the tapering coupling shown in the patent of January 21, 1868. Hence deponent, as soon as he had developed these two features in connection with the 'Comet' burner, was able to complete the burner now in question."

Upon cross-examination, when asked when he completed the invention of the "Comet" burner, he replied: "I should think about July or August, 1867;" and he also gives the same answer when asked as to the time when he first put a coiled spring on the periphery of a deflector, adding, however, that previous to that time he had "tried to use the coiled spring in other forms." But none of the other forms which he describes are like the one now in dispute, either in arrangement or results.

The date of the discovery of the device in dispute by Atwood must, therefore, be regarded as July or August, 1867.

Moore swears that he completed this invention in the month of April, 1867; that at that time he made two models, one of which accompanied his application for a patent filed in the following October, and the other was used practically at various times down to that date and then thrown aside, and cannot now be found. It has been questioned on the part of Atwood whether Moore's model correctly represents the subject-matter of this controversy. After careful inspection of that portion of his model heretofore described, in which elastic springs extend upward from the screw-cup, I am clearly of the opinion that it performs the functions now claimed for it.

Moore's testimony agrees with the allegations of his preliminary statement, is clear and positive, and, in the absence of any contradictory proof, I regard it as conclusive in establishing priority over Atwood by several months.

The decision of the Examiners-in-Chief is reversed.

DECISIONS OF THE COURTS.

U. S. CIRCUIT COURT, EASTERN DISTRICT OF PENNSYLVANIA.

THE UNION PAPER-COLLAR COMPANY *vs.* HENRY J. WHITE.

[*In equity.—Before* McKENNAN, *Cir. J.—Decided April*, 1875.]

The first claim of the reissued patent of Walter Hunt, of October 22, 1872, (original July 25, 1854,) which is for "a shirt-collar composed of paper and muslin, or its equivalent, so united that the muslin will counteract the fragile character of the paper," construed to be for "a shirt-collar composed of paper and muslin, or its equivalent, united by paste, glue, or other appropriate sizing, by means of which union the fragility of the paper is re-enforced by the fibrous strength of the muslin, and the necessary cohesiveness of the fabric thus secured.

Although paper and muslin or linen cloth were before united and used for maps, &c., this was not analogous to the use Hunt made of these materials, nor in any wise suggestive of his invention.

He produced a new device by giving a new form to an old substance, and, by suitable manipulations, making its peculiar properties available for a use to which it had not before been applied. This involved invention, and, in view of the great practical benefits resulting from it, invests the product with special patentable merit.

Notwithstanding the fact that the patent has been reissued seven times, the law presumes that the last patent was granted to correct accidental or inadvertent mistakes in the original. The only test of the validity of the Commissioner's action is whether he has allowed a reissue for a different invention from that covered by the original patent, or for what was not therein described, claimed, or indicated.

The claim for "a shirt-collar composed of paper and muslin, or its equivalent, so united that the muslin will counteract the fragile character of the paper," is not for the mere effect resulting from the union of paper and muslin, nor for the fabric thus produced, nor for the special mode of preparing it; but it covers the use of it for making collars, where its constituents are incorporated with each other, so that the textile strength of the one is made available to re-enforce the fragility of the other.

The original patent described a *standing* collar composed of cloth with paper on *both* sides; but both the invention and the claim are more comprehensive than this, and include a collar with paper on *one* side only, and this, too, when the collar is *turned over*, so as to expose the cloth surface only to observation.

The patent is not infringed by collars of paper with a simple cloth re-enforcement at the button-holes.

Characteristic resemblance is the fairest test of substantial identity.

[*George Harding*, for complainant.
J. J. Coombs and *E. Wetmore*, for defendant.]

McKENNAN, *Circuit J.*:

The complainants are the owners, by several mesne assignments, of a patent granted to Walter Hunt on the 25th of July, 1854, for a new article of manufacture, consisting of a collar made out of paper and muslin, so combined, formed, and manipulated as to adapt it to use as such. This patent was duly extended for seven years from the date of its expiration, and was reissued on the 22d of October, 1872, No. 5,109. The validity and infringement of this reissued patent are the subjects of this contention.

I do not think the legal presumption that Hunt was the first and original inventor of the article of manufacture for which he obtained a patent is at all shaken by the proofs in the cause. It is true that paper and muslin or linen cloth were before united, and used as a fabric for maps, &c.; but this was not analogous to the use to which Hunt adapted them, nor was it in any wise suggestive of his invention. He was the first to discover the adaptability of this material to a use not cognate to any to which it had before been applied, and, by appropriate manipulation, to give it a useful and practical form. He thus not only supplied the public with a new article of manufacture, but he demonstrated unknown susceptibilities of the material out of which it was made. This is something more than the mere application of an old thing to a new purpose. It is the production of a new device by giving a new form to an old substance, and, by suitable manipulation, making its peculiar properties available for a use to which it had not before been applied, thereby distinguishing it from all other fabrics of the class to which it belongs. This seems to me to involve an exercise of the inventive faculty, and, in view of the great practical benefits resulting from it, to invest the product with special patentable merit.

The patent in controversy is the seventh reissue of Hunt's original patent. This multiplication of reissues is, of itself, suggestive of a purpose to cover intervening improvements, and some phrases in the specification of the last reissue may, not without semblance of reason, be treated as having that significance. It is difficult to suppose that so many reissues, with considerable intervals of time between them, were necessary to correct accidental or inadvertent mistakes in the specification and claims of the original patent. And yet the correction of these is the only legitimate purpose of a reissue. This practice has been strongly disapproved by the Supreme Court on more than one occasion.

In *Carlton* vs. *Boker*, 17 Wall., 471, Mr. Justice Bradley remarks:

> We think it proper to reiterate our disapprobation of these ingenious attempts to expand a simple invention of a distinct device into an all-embracing claim, calculated by its wide generalizations and ambignous language to discourage further invention in the same department of industry, and to cover antecedent inventions.

Whatever reason there may be to suspect that the motive of the patentee was to give undue elasticity to his patent, still the law presumes that the reissue was granted to correct an inadvertent omission in the original, because it commits to the Commissioner of Patents the conclusive determination of that question, and the only test of the validity of his action is whether he has allowed a reissue for a different invention from that covered by the original patent, or for what was not therein described, claimed, or indicated.

The claim in the reissue which, it is urged, avoids it is as follows:

> A shirt-collar composed of paper and muslin, or its equivalent, so united that the muslin will counteract the fragile character of the paper.

Construing this in connection with the specification, its obvious import is that the patentee sought to secure as his invention a shirt-collar composed of paper and muslin, or its equivalent, united by paste, glue, or other appropriate sizing, by means of which union the fragility of the paper is re-enforced by the fibrous strength of the muslin, and the necessary cohesiveness of the fabric is thus secured.

Now, is not this described, or at least clearly indicated, in the original patent? In that patent the nature and distinguishing qualities of the invention are thus stated:

> Attempts have been made at various times to manufacture shirt-collars of paper; but they have never been extensively introduced, nor has anything lasting or beneficial resulted therefrom, on account of the fragile nature of the material, which rendered it liable to be easily broken and defaced, while it was liable to be quickly soiled and entirely destroyed if exposed to either rain or perspiration. The object of my present invention is to produce a shirt-collar that shall not be easily broken, while it shall have sufficient elasticity to bend to the motions of the head, that shall possess the beauty and whiteness of the most carefully dressed linen collar, and at the same time shall preserve itself unsoiled for a much greater length of time, and shall cost originally less than the washing and dressing of a linen collar; and my invention consists in making the collars of a fabric composed of both paper and cloth, and in subsequently polishing the same by enameling or burnishing, or in any suitable and efficient manner.

This statement distinctly identifies the subject of the first claim of the reissued patent. The invention to which it refers is said to be a shirt-collar consisting of paper and muslin, the qualities of which are cheapness of cost, smoothness of surface, flexibility, cohesiveness, and impermeability to moisture. It is not expressly declared that muslin is combined with paper to "counteract the fragile character" of the latter; but this is so distinctly indicated as to be equivalent to a direct expression of it. A substitute for paper collars is proposed, which are stated to be mainly objectionable on account of the fragile character of the material out of which they are made. This infirmity the inventor proposes to cure by the addition of a textile material, which obviously has no other function or object; and, in describing the mode of carrying his invention into effect, he directs how the paper and muslin are to be combined to secure for the fabric the necessary and desired qualities. Clearly this distinctly indicates, and is broad enough to cover, "a shirt-collar composed of paper and muslin, so united that the muslin will counteract the fragile character of the paper."

But it is urged that the contested claim is merely for an abstract result, and is, therefore, void. Certainly it is the settled law that a mere principle, or result, or mode of operation is not patentable. So, therefore, in *O'Reilly* vs. *Morse*, 15 How., 62, the eighth claim of Morse's patent was adjudged to be void because it sought to appropriate the use of electro-magnetism for marking or printing characters at a distance, independently of the means by which this natural agency was thus utilized; and in *Burr* vs. *Duryee*, 1 Wall., 31, it was held that a mode of operation, irrespective of the mechanism by which it was effected, would not be patentable.

Is the claim in this patent obnoxious to this objection? In one sense it is for a result, but only in the sense in which any fabric or device is the result of the means employed to produce it. It is not for the mere result of a union of paper and muslin in a shirt-collar, independent of the corporeal substance which embodies it; but it is for a thing fabricated in a given form, for a specific purpose, and out of materials so united that the combined fabric is impressed with the peculiar qualities which belong to each of its constituents. A collar made of these materials in mere juxtaposition is not within the range of the patentee's conception; but when they are incorporated so as to constitute substan-

tially a single fabric, and are used for the purpose for which he was the first to discover their adaptability, it is an invasion of his right.

The claim, then, is not for the mere effect resulting from a union of paper and muslin, nor for the fabric thus produced, nor for the special mode of preparing it; but it covers the use of it for making collars, where its constituents are incorporated with each other, so that the textile strength of the one is made available to reenforce the fragility of the other. And such original application of it to the production of a most useful article the inventor can lawfully claim to appropriate.

Does the defendant infringe this patent?

Hunt's invention consists of two elements or parts: First, of a collar, with reference to the materials out of which it is made, and their union, so as to secure certain qualities; and, second, of the subsequent manipulation of this collar, by which a smooth surface is given to it, and it is rendered impervious to moisture.

The defendant manufactures and sells shirt-collars made of muslin or linen cloth pasted to a sheet of paper. Fundamentally they are the same with the collar described in Hunt's patent, because they are composed of muslin (or its equivalent) and paper, so united as to utilize the same properties contemplated by Hunt in the union of the same elements. But it is sought to differentiate them, for the reasons that the defendant attaches a sheet of paper to but one side of the cloth, and that the collar is turned down with the cloth surface only burnished and exposed to view.

The first reason rests upon an undue limitation of the scope of Hunt's invention. In his original patent, in explaining a mode of carrying his invention into practice, he describes a collar with paper on both sides of the cloth. Although he does not limit himself to any form of collar, yet the description is evidently applicable to the standing collars then in fashion, and the double coating of paper was suggested as best adapted to collars of that class. But, as has already been said, his invention was more comprehensive than this, and it was clearly indicated in his original specification. It is appropriately claimed in the reissued patent in controversy, the authorized purpose of which was to protect it fully. Clearly the terms of that claim are broad enough to embrace the collars made by the defendant; but, at any rate, I do not think a double coating of paper on one side of the cloth changes the identity of the fabric described by Hunt. It is still composed of the same constituents, so united as to embody the same properties which he first proposed to utilize, and the difference is only apparent and formal. Characteristic resemblance is the fairest test of substantial identity.

Nor is there any better foundation for discrimination in the fact that the defendant's collars are turned down and the cloth surface only is exposed to observation. Hunt's patent is not limited to any particular form of collar, and the polishing of the cloth surface pertains exclusively to the manipulation of the collar, after it is made, to fit it for use. It does not, in any sense, change the fundamental character of the fabric out of which it is formed, and therefore does not affect the applicability of the first claim of the reissue.

The defendant also manufactures collars entirely of paper, with patches of muslin pasted around the button-holes to give additional strength at these points; and these are claimed to infringe the patent. I do not think so. Hunt did not contemplate any such restricted combination of paper and muslin. His collar was composed, throughout its whole body, of paper and muslin, and this was necessary to secure and embody the properties which he intended to make available. Nor could he successfully claim such a device. He did not invent paper collars, nor the application of cloth to button-holes to strengthen them. Such re-enforcement had been long before applied to button-holes, in leather curtains, sails, and other fabrics. It was merely, therefore, the application of an old device to an analogous and well-known use, for which no one could obtain a patent.

The complainants are entitled to an injunction, to continue in force until the 25th day of July next, when the patent will expire, and to an account, and a decree will be entered accordingly.

IN MEMORIAM.

U. S. PATENT OFFICE,
Washington, D. C., April 24, 1875.

Hon. S. H. HODGES, who died on the 20th of this month, was appointed Commissioner of Patents by President Fillmore in the fall of 1852, and remained as such until the incoming administration of President Pierce.

In 1861 he was appointed a member of the Board of Examiners-in-Chief, and remained its senior member until his death.

Of the many excellent qualities of the deceased, his eminent learning, his patience, his courtesy, and deep sense of justice were the most remarked.

Out of respect to his memory the Patent Office was closed at 12 m. the 23d of this month by order of the Commissioner of Patents.

At a meeting of the Examiners and employés of the Office, at which the Commissioner of Patents presided, the following resolutions were passed, expressive of the high sense entertained of the worth and talents of the deceased:

Resolved, That we recognize in the death of our late associate, Hon. S. H. Hodges, a grievous loss, both to the Office and to ourselves personally. His long connection with the Bureau as Commissioner and Examiner-in-Chief, his large experience in its affairs, his laborious habits, his accurate and careful observation, his just and impartial judgment and unswerving integrity, all combined to make his services invaluable. Our personal connection with him has been made pleasant by the kindness of his disposition and by our confidence in him as a man—upright and beyond reproach. His removal from us by death is no ordinary event. We grieve that we shall enjoy his society and counsels and see his venerable form no more. The memory of his character and example as a true and faithful man we shall cherish as sacred, and the best legacy that man can leave to men.

Resolved, That we deeply sympathize with his family in their affliction, and in testimony of our respect and sympathy forward them a copy of these resolutions, and will attend the funeral in a body.

DESIGNS PATENTED DURING THE WEEK.

[Each Design bearing date April 27, 1875.]

8,284.—Pickle and Preserve Jars.—CHARLES A. DU VIVIER, Summit, N. J., and EDWARD DU VIVIER, New York, N. Y. Application filed April 17, 1875. Term of patent 7 years.

8,285.—Medal.—THOMAS R. HARTELL, Philadelphia, Pa. Application filed April 3, 1875. Term of patent 3½ years.

8,286.—Glassware.—GEORGE E. HATCH, East Cambridge, Mass. Application filed March 3, 1875. Term of patent 3½ years.

8,287 to 8,289, inclusive.—Show-Cases and Stands.—JOSEPH LEHNBEUTER, St. Louis, Mo., assignor to C. CLAES & Co., same place.—Cases A, B, and C. Applications filed April 14, 1875. Term of patents 7 years each.

8,290.—Beer-Mug.—JOHN ERNEST MILLER, Pittsburg, Pa. Application filed April 10, 1875. Term of patent 3½ years.

8,291.—Goblet.—JOHN ERNEST MILLER, Pittsburg, Pa. Application filed April 10, 1875. Term of patent 3½ years.

8,292.—Toy.—JOHN STIDHAM, South Oil City, Pa. Application filed April 3, 1875. Term of Patent 7 years.

8,293 to 8,297, inclusive.—Street-Lamp Posts.—WILLIAM TWEEDDALE, Brooklyn, N. Y.—Cases B, C, D, E, and F. Applications filed April 10, 1875. Term of patents 7 years each.

8,298 to 8,300, inclusive.—Breastpin and Pendant.—LEONARD S. BEALS, Astoria, N. Y.—Cases A, B, and C. Applications filed April 9, 1875. Term of patents 7 years each.

8,301.—Dress-Trimmings.—SAMUEL BERNSTEIN, Mount Vernon, N. Y. Application filed April 9, 1875. Term of patent 7 years.

8,302.—Drinking-Vessel.—M. DANIEL CONNOLLY, Philadelphia, Pa. Application filed April 23, 1875. Term of patent 3½ years.

8,303.—Picture-Frame Molding.—HERMAN S. SEARLE, Rochester, N. Y., assignor, by mesne assignments, to ELLA R SEARLE, same place. Application filed April 2, 1875. Term of patent 7 years.

TRADE-MARKS REGISTERED DURING THE WEEK.

[Each certificate bearing date April 27, 1875.]

2,411.—Commercial Note-Paper.—JAMES LEACH, Passaic, N. J. Application filed April 15, 1875.
"words 'Beecher Mills Commercial Note.'"

APPLICATION FOR EXTENSION.

UNITED STATES PATENT OFFICE,
Washington, D. C., March 22, 1875.

On the petition of JOHN HASELTINE, of Boston, Mass., authorized by act of Congress approved February 18, 1875, praying for the extension of a patent granted to him on the 25th day of March, 1856, for an Improvement in Water-Wheels,

It is ordered that the testimony in the case be closed on the 11th day of May next; that the time for filing arguments and the Examiner's report be limited to the 21st day of May next; and that said petition be heard on the 26th day of May next.

Any person may oppose this extension.

J. M. THACHER, *Commissioner.*

INDEX OF INVENTIONS PATENTED APRIL 27, 1875.

	Class No.	No. of Patent.
Air in buildings, apparatus for cooling and circulating, A. Jas	166	162,660
Alarm and fire extinguisher, S. Sanderson	24	162,579
Annunciator, self-closing, E. Axthelm, (reissue)	24	6,399
Axle, E. H. Wheeler	31	162,729
Bale band tightener, D. E. McGarrah	7	162,672
Bale tie, J. J. Holloman	7	162,654
Bale tie, G. W. Scott	7	162,699
Barrel hoop, L. Weil	40	162,725
Basins and bath tubs, strainer for wash, J. D. Smith	8	162,705
Bed bottom, folding spring, E. P. Fowler	62	162,639
Bed bottom, spring, H. Beach	62	162,604
Bed bottom, spring, E. B. Dodge	62	162,631
Bed bottom, spring, J. R. Newman	62	162,680
Bell, revolving chime, W. H. Nichols	10	162,682
Bird cage, G. Günther	170	162,645
Blotter, paper cutter, and ruler, combined, F. R. Angell	146	162,516
Body loop, R. W. McClelland	31	162,670
Boilers, compound for removing incrustations in steam, Moore and McCloud	148	162,491
Bolt heading machine, S. C. Smith	14	162,583
Boot and shoe making, insole or former for use in, J. Elam	16	162,463
Boot and shoe stiffener, G. Bolvin	16	162,525
Bosom board, A. Mallory	91	162,464
Box scraper, G. Meyer	29	162,568
Bridge, lift, A. J. Post	21	162,576
Broom hanger, J. Cain	02	162,632
Broom head, portable, E. J. Merick	22	162,490
Brush, automatic fly, S. L. Long	165	162,482
Butter package, Scott and Granger	45	162,581
Calendering machine, W. F. and C. P. Edwards	108	162,635
Can, F. D. Brodhead	136	162,618
Can, T. J. M. Jewell	136	162,478
Car axle box, R. Brewer	122	162,615
Car brake, S. G. Howe	124	162,556
Car coupling, A. Dehuff	122	162,537
Car coupling, W. G. Hawkins	122	162,642
Car door, grain, E. Fee	121	162,464
Car roof, A. P. Winslow, (reissue)	121	6,401
Car starter, C. F. Murdock	122	162,572
Carbureter, D. Bickford	27	162,523
Carpet sweeper, F. M. Beckford	02	162,520
Cars and buildings, ventilating, J. Briggs	166	162,616
Cartridge box, J. Lee	32	162,481
Cartridge loading device, F. Wohlgemuth	55	162,512
Chair, nursery, C. A. Watson	02	162,584
Chair seat, W. F. Spencer	02	162,706
Cheese making, Larabee and Jocelyn	45	162,667
Churn, M. Jincks	45	162,560
Churn, A. Oot	45	162,494
Churn, rotary, C. H. Warren	45	162,723
Cigar mold fastening, S. Simonson	160	162,701
Cigars, machine for bunching and wrapping, B. H. Meyer	160	162,674
Cloth cutting machine, C. F. Harlow	37	162,547
Clothes pounder, C. B. and G. W. Hart	91	162,548
Coal hod, U. D. Alexander	154	162,454
Coats, metallic loop for, F. W. Tilton	24	162,507
Comb, band, H. A. Prouty	161	162,686
Condenser, surface, C. Godfrey	148	162,470
Cooler, milk, H. S. Murray	45	162,574
Corset, H. A. Schandevyl	80	162,580
Cotton, machine for cleaning, S. D. Keene	41	162,479
Crimping machine, A. Hecht	38	162,472
Cultivator, W. H. Robertson	43	162,577
Cultivator, E. Shupe	43	162,700
Cup for invalids, drinking, W. W. Fowler	156	162,640
Curry comb, J. H. Barringer	144	162,455
Curtain fixture, E. M. Judd	62	162,564
Curtain fixture, E. B. Lake	62	162,666
Curtain fixture, McGahey and King	62	162,488
Cutter head, M. Buck	173	162,526
Cylinders, machine for boring, J. C. Chapman	100	162,458
Darning machine, O. S. Hoemer	89	162,656
Digger, potato, J. J. McKinnon	114	162,489
Dock and ponton, floating, Clark and Stanfield	82	162,531
Drill, rock, C. Burleigh	124	162,528
Electrical machine, frictional, G. M. Mowbray	50	162,676
Electroplating, solution for, H. G. Coyle	50	162,627
Electroplating with nickel, H. P. Dechert	113	162,630
Elevator, hod, W. Murphy	79	162,573
Elevator, water, A. Brear	118	162,613
Engine, rotary, D. S. Jones	150	162,561
Engine, rotary, W. B. Stott	150	162,711
Engine, steam, J. M. Marty	150	162,485
Engine, steam pumping, C. H. Hudson	150	162,557
Engine valve, compound, W. Wright	150	162,503
Engine valve gear, steam, J. W. Thompson	150	162,715
Engine valve, steam, G. H. Reynolds	152	162,690
Engines through the medium of compressed air, transmitting the power of stationary, T. H. Neal	67	162,678
Equalizer, draft, W. Snow	31	162,584
Escritoire, A. Batchelder	02	162,601
Evaporator for saccharine liquids, T. Scantlin	155	162,696
Fan, automatic, W. W. Hunting	165	162,558
Faucet, J. G. L. Boettcher	167	162,608
Fence, iron clad, J. A. Bowyer	52	162,612
Fire arm, magazine, F. M. Shinn	18	162,582
Fire arm, revolving, H. H. Hopkins	123	162,475
Fire extinguisher, J. H. Steiner	118	162,585
Fire extinguisher, J. B. Van Dyne	118	162,718
Fire extinguisher, J. B. Van Dyne	118	162,719
Fire extinguisher, E. F. Wadhams	118	162,721
Flask and packing box, combined, T. R. Almond	154	162,567
Forging metallic sockets, machine for, Fitch and Shafer, (reissue)	60	6,404
Furnace, heating, Rees and Johns	85	162,688
Furnace, steam boiler, Dawson and Hughes	149	162,536
Furnaces, automatic governor for hot air, S. Kepner	154	162,662
Game board, V. Klobassa	143	162,604
Gas apparatus, J. D. Catheil	56	162,625
Gas machine, carbureting, E. Foster	27	162,543
Gas regulator, Potter and Thomas	64	162,685
Gas regulator, D. Sloan	64	162,703
Gas regulator, D. Sloan	64	162,704
Gasalier, extension, E. Russell	64	162,694
Generator, steam, D. Renshaw	148	162,497
Glass mold, King and Sperber	68	162,460
Globe holder J. White	90	162,731
Gloves, manufacture of, G. S. Hewitt	38	162,474
Glue joints, machine for making, O. C. Barnes	173	162,600
Grain distributor, J. Walker	57	162,591

	Class No.	No. of Patent.
Grinding machine, W. J. Reagan	70	162,687
Gun lock, L. L. Hepburn	35	162 473
Hair curling device, C. W. Baxter	161	162,603
Harvester, J. H. Elward, (reissue)	74	6,403
Harvester, J. H. Elward	93	162,486
Hasp fastening, W. McConway	76	162,530
Hat, J. Case	76	162,540
Hat stretching machine, R. Eickemeyer	76	162,540
Hatchway guard, J. C. Foster	30	162,466
Hay tumbler and rake, combined, Bishop and Sherman	77	162,457
Heater, soldering iron, J. S. Hull	136	162 657
Hitching device for straps, C. H. Bausch	72	162 518
Hoe, A. S. Acker	31	162,596
Holdback iron, A. Bedford	31	162,456
Hook and olip, single tree, M. S. Curtiss	31	162,629
Hoop making machine, G. V. Griffith	40	162,644
Horse detacher, A. Barker	31	162 517
Hose coupling, T. L. Summers	87	162,506
Ice machines, refrigerating tank for, A. Jas	83	162,659
Insect destroyer, W. T. Tongue	63	162,716
Jars, protector for stone ware, D. S. Chesebro	45	162 459
Jet with metal, inlaying, W. Stephans	86	162,586
Kettle, boiling, S. Spoor, (reissue)	154	6,406
Knife, oyster, C. W. Berger	41	162,606
Lamp-black apparatus, P. Neff	107	162,679
Lamp black, apparatus for the manufacture of, P. Neff	107	162,492
Lamp collar and filler, non-explosive, J. A. S. Hanford	90	162,646
Lamp extinguisher, M. Waterbury	90	162,593
Lamp, reflector, J. Retterer	90	162,689
Lamp, street, H. Wellington	90	162,728
Lantern handle, T. James	90	162,559
Latch for gates, &c., W. D. Skidmore	93	162,702
Level, plumb, &c., combined, J. R. Frailey	157	162 641
Lifts or hoists, safety apparatus for, H. A. Davis	79	162,535
Lime bin, D. G. Ormsby	153	162,684
Lock, combination, Hipp, Wehagen, and Nickol	93	162,551
Lock, indicator, J. H. Kinsman	93	162 663
Locomotive ash pan and damper, W. W. Beach	94	162,519
Loom stop motion, Greenwood and Templeton	95	162 471
Mat, foot, Weesar and Cornelius	56	162,510
Measure, liquid, E. A. Pontifex	132	162,575
Meat for packing, machine for cutting, W. Pitt	25	162,495
Meat, preserving, E. A. Duncan	58	162,539
Mechanical movement, P. M. Cummings	67	162,462
Mechanical movement, J. E. Dover	67	162,538
Mechanical movement, J. A. Newell	67	162,681
Metals with metal, coating, I. Adams, Jr., (reissue)	113	6,402
Millstone dress, Witman and Seibert	57	162,733
Mower, lawn, T. Coldwell	75	162,626
Neck tie, J. H. Fleisch	38	162,638
Needle, price tag, L. B. Benton	104	162 521
Organ keys, blank for, L. K. Fuller	106	162,467
Packing, piston, J. H. Rollings	157	162,693
Pan, bake, A. Brightman	154	162,617
Pan, dust, F. D. Bliss	62	162,524
Paper box, J. W. Turner	109	162,508
Paper box, W. Wallach	109	162,509
Paper cutter, rotary, C. G. Biedinger	109	162,607
Paper, machine for wetting printing, G. Rosquist	117	162,499
Paper towel, ladies, J. H. Hatch	109	162,647
Paper tube machine, C. P. and W. F. Edwards	109	162,634
Pencil-case, R. B. Currier	146	162,583
Percolator, G. McPherson	156	162,673
Piano stool, T. Miller	62	162,509
Pipes, clamp for cement, G. C. Nichols	20	162,663
Pipes with cement, machine for lining, M. Allen	20	162 515
Plane, carpenter's, E. G. Storke	29	162,710
Planing machine, wood, Hills and Allen	173	162,649
Planter, hand corn, Ogborn and Kendrick	133	162,493
Planter, seed, W. V. Burgess	133	162,527
Plow, C. A. Hego	114	162,549
Plow, J. Lane, Jr., (reissue)	114	6,405
Plow, gang, E. J. Sprague	114	162,709
Pot, tea and coffee, Hutchinson and Fairfield	154	162,658
Power, apparatus for transmitting motive, R. T. Smith, (reissue)	67	6,400
Press, cider and wine, J. S. Bogle	19	162,609
Printer's inking rolls, varnish or coating for, B. F. Allen	117	162,514
Printing paper, Machine for wetting, G. Rosquist	117	162,499
Printing press, J. Hinchcliff	117	162,650
Printing press, R. M. Hoe	117	162,651
Printing press, R. M. Hoe	117	162,652
Printing press, plate, R. Neale	117	162,677
Propeller, screw, J. C. Brown	139	162,619
Pump, M. Cook	118	162,532
Pump valve, R. V. and T. B. Bailey	118	162,598
Purifier, middlings, S. M. Brua	57	162,620
Purifier, middlings, J. W. Houghtelin	57	162,555
Railway air brakes, automatic air escape for, Ford, Westinghouse, and Welsh	122	162 465
Railway, elevated, R. Stone	120	162 504
Railway rail joint fastening, G. C. Vail	120	162,589
Railway switch, H. Cook	120	162,460
Rake, horse hay, J. E. Taylor	77	162,713
Refrigerating tank for ice machines, A. Jas	83	162 659
Refrigerator, R. W. Giddings	58	162 468
Register, passenger, Towle and Benton	42	162,717
Rolling metallic stripe or ribbons, apparatus for, S. R. Wilmot	125	162,732
Roof, metallic, J. C. Wands	126	162,722
Roofing composition, B. St. Jean	126	162,503
Roofing, metallic, G. Crowl	126	162,461
Sash fastener, E. K. Breckenridge	24	162,614
Sash fastener, J. S. Wallace	24	162 592
Sawing machine, scroll, C. N. and S. N. Trump	130	162 588
Scaffold clamp, W. C. Fellows	30	162,541
Screw blanks, machine for pointing and threading, W. Aiken	14	162,453
Screw blanks, manufacturing wood, J. Frearson	171	162,642
Seeding machine, J. C. Barlow	133	162,599
Separator, grain, Lobdell and Bartlett	159	162 669
Settee, W. F. Spencer	62	162 707
Sewing machine, J. Laing	134	162 665
Sewing machine, A. E. Schmidt	134	162,697
Sewing machine binding attachment, H. C. Jones	134	162,562
Shingling bracket, A. Lovejoy	30	162 463
Shot charger, P. Ziegel	55	162 734
Shutter fastener, H. H. Ham, Jr	24	162,546
Shutter fastening, A. D. Judd	24	162 563
Sifter, ash, W. Montgomery	154	162,571
Sifter, ash, J. Sutton	154	162,712
Slate frames, machine for rounding the corners of, A. Stroh	173	162,505
Sleigh knee, M. Glassbrook	31	162,469
Soldering iron heater, J. S. Hull	136	162,657
Sole fastening, L. Goddu	16	162,643
Spark arrester, W. H. Richardson	94	162 691
Spark arrester, C. G. Roberts	94	162 498
Speaking tube, Howard and Beadle	158	162,476
Spindles, die for crimping the halves of split, H. M. Johnson	60	162,661
Splints, machine for making, E. E. White	174	162,730
Steam trap, J. M. Meharg	150	162,567
Steering apparatus, P. K. Voorhees	137	162,730
Stove range and grate, W. L. McDowell	154	162,487
Stove, heating, C. H. Castle	154	162 624
Stove pipe damper, Wilson and Rolfe	154	162,511
Stove pipe drum, E. W. Prior	154	162 496
Stove pipe shelf, C. E Woodruff	88	162,595
Straw cutter, E. W. Fawcett	59	162,637
Table and refrigerator, combined pastry, H. Magee	58	162,566
Table, ironing, G. H. Thompson	91	162,587
Telegraph, duplex, T. A. Edison	50	162,633
Thill coupling, Boswell and Immel	31	162 610
Thill coupling, O. B. Franklin	31	162,544
Thill coupling, M. McDevitt	31	162,671
Thill loop, Berry and Alexander	72	162,522
Thrashing machine band cutter, P. A. Sommers	159	162,706
Thrashing machine straw carrier, G. Gentzel	159	162 545
Ticket clasp, Le Roy and Hunting	146	162,565
Tiles, composition for, W. G. Munk	20	162,675
Tobacco pipe bowls, machine for shaping, Schneider and Ulting	173	162,698
Toilet water and extract, portable, A. G. Campbell	161	162,529
Torch, vapor burning, H. Wellington	90	162,727
Trees, device for felling, C. C. Curtis	131	162,534
Umbrella, H. B. Mitchell	165	162,570
Umbrella support, R. J. Welles	165	162,726
Umbrella support, vehicle, A. J. Hood	31	162,553
Upholstering apparatus, C. F. A. Sieroks	62	162 501
Valve, balance and cut off, J. W. Thompson	152	162,714
Valve, safety, H. Stevens	152	162,502
Vehicle seat lock, Van Horn and Wideman	31	162,590
Vehicle spring equalizer, A. S. Hopson	31	162 655
Vehicle wheel hub, J. H. Hyman	31	162,477
Vehicle umbrella support, A. J. Hood	31	162,553
Vessels for transferring grain, elevating, J. J. Safely	79	162,695
Vise, bench, P. Rimbold	29	152,692
Wagon body, S. Rowell	31	162,578
Wagon bolt, J. W. Hollenbeck	31	162,552
Wagon brake, J. C. Carhart	31	162,623
Wagon brake, I. N. Downs	31	162,632
Wagon coupling, R. Bowman	31	162,611
Wagon jack, W. H. Horn	31	162 554
Washing machine, J. W. Batson	91	162 692
Washing machine, T. Crumbling	91	162,628
Washing machine, W. E. Hillson	91	162,550
Watch movements, construction of, J. H. Flynt	36	162,542
Water, apparatus for cooling and aerating, W. A. Lighthall	58	162,668
Weather strip, Barkhardt and Harden	30	162,621
Whip canes, socket joint for, J. A. Bechler	72	162,605
Windmill, Eggleston and Phelps	118	162 636
Windmill, D. G. Webster	118	162,724
Window shade fixture, L. C. Hoffmeister, Jr	62	162,653
Wrench, J. Rost	100	162,500

INDEX OF PATENTEES TO WHOM PATENTS WERE GRANTED APRIL 27, 1875.

	Patent No.
Acker, A. S., Hoe	162,596
Adams, I., Jr., Coating metal with metal, (reissue)	6,402
Aiken, W., Machine for pointing and threading screw-blanks	162,453
Alexander and Berry	162,522

	Patent No.
Alexander, U. D., Coal hod	162,454
Allen, R. F., Varnish or coating for printers' inking rolls	162,514
Allen, M., Machine for lining pipes with cement	162,515
Allen and Hills	162,649
Almond, T. R., Combined flask and packing box	162,597
American Cable Screw Wire Company, assignee	162,643
Angell, F. E., Combined blotter, paper cutter, and ruler	162,516
Axtheim, E., Self closing annunciator, (reissue)	6,399
Bailey, R. V. and T. B., Pump valve	162,598
Barker, A., Horse detacher	162,517
Barlow, J. C., Seeding machine	162,599
Barnes, O. C., Machine for making glue joints	162,600
Barney, F., assignee	162,457
Barringer, J. H., Curry comb	162,455
Bartlett and Lobdell	162,669
Batchelder, A., Escritoire	162,601
Batson, J. W., Washing machine	162,592
Bausch, C. H., Hitching device for straps	162,518
Baxter, C. W., Hair curling device	162 603
Beach, H., Spring bed bottom	162,604
Beach, W. W., Locomotive ash pan and damper	162,519
Beadle and Howard	162,476
Bechler, J. A., Socket joint for whip canes	162,605
Beckford, F. M., Carpet sweeper	162,520
Bedford, A., Holdback iron	162,456
Benton and Towle	162 717
Benton, L. B., Price tag needle	162,521
Berger, C. W., Oyster knife	162,606
Berry, F. S., and G. F. Alexander, Thill loop	162,522
Bettis, W. H., assignee	162,593
Bevin Brothers Manufacturing Company, assignee	162,682
Bickford, D., Carburetor	162,523
Biedinger, C. G., Rotary paper cutter	162,607
Bishop, G. W., and D. B. Sherman, Combined hay tumbler and rake	162,457
Bliss, F. D., Dust pan	162,524
Blunt, J. G., assignee, (reissue)	6,400
Boettcher, J. G. L., Faucet	162,608
Bogle, J. S., Cider and wine press	162,609
Bolvin, G., Boot and shoe stiffener	162,525
Bonney, J. S., assignee	162 617
Boswell, H. K., and D. Immel, Thill coupling	162,610
Bowman, R., Wagon coupling	162,611
Bowyer, J. A., Iron clad fence	162,612
Brear, A., Water elevator	162,613
Breckenridge, E. K., Sash fastener	162,614
Brewer, R., Car axle box	162,615
Briggs, J., Ventilating cars and buildings	162,616
Britton, J. W. and I. W., assignees	162,686
Brightman, A., Bake pan	162,617
Brodhead, F. D., Can	162,618
Brown, J. C., Screw propeller	162,619
Brua, S. M., Middlings purifier	162,620
Brunner, E., assignee	162,606
Buck, M., Cutter head	162,526
Buckeye Engine Company, assignee	162,714, 162,499
Bullock Printing Press Company, assignee	162,527
Burgess, W. V., Seed planter	162 621
Burkhardt, G., and C. E. Harden, Weather strip	162,622
Burleigh, C., Rock drill	162,528
Cain, J., Broom hanger	162,622
Campbell, A. G., Portable toilet water and extract	162 529
Carhart, J. C., Wagon brake	162 623
Carpenter, C., assignee	162 656
Case, J., Hat	162 530
Cassell, M. J., assignee	162 455
Castle, C. H., Heating stove	162,624
Cathell, J. D., Gas apparatus	162,625
Challen, J. H., assignee	162,584
Chapman, J. C., Machine for boring cylinders	162,458
Cheney, J. W., assignee	162,556
Chesebro, D. S., Stoneware jar protector	162,459
Clark, J. L., and J. Standfield, Floating dock and ponton	162,531
Clarke, A. B., assignee	162,606
Coldwell, T., Lawn mower	162,626
Comstock Castle & Co., assignees	162,624
Conley, F. M., assignee	162,560
Cook, H., Railway switch	162,460
Cook, M., Pump	162,532
Cornelius and Wesear	162,510
Coyle, H. G., Solution for electroplating	162,627
Crane, C. S., assignee	162,636
Crowl, G., Metallic roofing	162,461
Crumbling, T., Washing machine	162,628
Cummings, P. M., Mechanical movement	162,462
Currier, R. B., Pencil case	162,533
Curtis, C. C., Device for felling trees	162 534
Curtiss, M. S., Single tree hook and olip	162,629
Davis, H. A., Safety apparatus for lifts or hoists	162,535
Dawson, W., and J. Hughes, Steam boiler furnace	162,536
Dechert, H. P., Electroplating with nickel	162,630
Dehuff, A., Car coupling	162,537
Delamater, C. H., assignee	162,690
Dever, J. E., Mechanical movement	162,538
Dibble, A. J., assignee	162 581
Dilworthy, W., Jr., assignee	162,486
Dodge, E. B., Spring bed bottom	162,631
Dosty, W. H., assignee	162 561
Downs, I. N., Wagon brake	162,632
Duncan, E. A., Preserving meat	162,539
Dunning, A. J., assignee	162,615
Earl, W., assignee, (reissue)	6,400
Edison, T. A., Duplex telegraph	162,633
Edwards, C. P. and W. F., Paper tube machine	162,634
Edwards, W. F. and C. P., Calendering machine	162,635
Eggleston, C. H., and W. M. Phelps, Windmill	162,636
Eickemeyer, R., Hat stretching machine	162,540
Elam, J., Insole or former for use in boot and shoe making	162,463
Elward, J. H., Harvester, (reissue)	6,403
Estey, J., & Co., assignees	162,467
Fairfield and Hutchinson	162,658
Fawcett, E. W., Straw cutter	162,637
Fee, E., Grain car door	162,464
Fellows, W. C., Scaffold clamp	162,541
Finch, W. S., assignee	162,616
Fitch, G., and P. Shafer, Machine for forging metallic sockets, (reissue)	6,404
Fleisch, J. H., Neck tie	162,638
Flynt, J. H., Construction of watch movements	162,542
Ford, R., assignee	162,577
Ford, W. J., G. Westinghouse, Jr., and T. W. Welsh, Automatic air escape for railway air brakes	162,465
Foster, E., Carbureting gas machine	162,543
Foster, E., assignee	162,721
Foster, J. C., Hatchway guard	162,466
Fowler, E. P., Folding spring bed bottom	162 639
Fowler, W. W., Drinking cup for invalids	162,640
Frailey, J. R., Combined level, plumb, &c	162,641
Franke, J., assignee	162,568
Franklin, O. B., Thill coupling	162,544
Frearson, J., Art of manufacturing wood screw blanks	162,642
Fuller, L. K., Blank for organ keys	162,467
Furst and Bradley, assignees, (reissue)	6,405
Gates, G. M., assignee	162,648
Gentzel, G., Straw carrier for thrashing machines	162,545
Giddings, E. W., Refrigerator	162,468
Glassbrook, M., Sleigh knee	162,469
Goddu, L., Sole fastening	162,643
Godfrey, C., Surface condenser	162,470
Goodhue, W. S., assignee, (reissue)	6,403
Granger and Scott	162,581
Greenwood, S., and J. Templeton, Loom stop motion	162,471
Griffith, G. V., Hoop making machine	162,644
Grottenthalen, V., assignee	162 698
Gunn, A. H., assignee	162,577
Gunther, G., Bird cage	162,645
Hailey, J., assignee	162,539
Ham, H. H., Jr., Shutter fastener	162,546
Hamburg American Sewing Machine Company, Limited, assignee	162,697
Hanford, J. A. S., Non-explosive lamp collar and filler	162,646
Hapgood & Co., assignees, (reissue)	6,405
Harden and Burkhardt	162,621
Harlow, C. F., Cloth cutting machine	162,547
Harrington, G., assignee	162,633
Hart, C. B. and G. W., Clothes pounder	162,548
Hatch, J. H., Ladies paper towel	162,647
Hawkins, W. G., Car coupling	162,648
Heath, J., assignee	162,486
Hecht, A., Crimping machine	162,472
Hege, C. A., Plow	162,549
Hepburn, L. L., Gun lock	162,473
Hewitt, G. S., Manufacture of gloves	162,474
Hieber, J. D., assignee, (reissue)	6,404
Hille, L. M. and E. Allen, Wood planing machine	162,649
Hillson, W. E., Washing machine	162,550
Hinchcliff, J., Printing press	162,650
Hipp, S., T. Wehagen, and C. Nickel, Combination lock	162,551
Hoe, R., & Co., assignees	162,650
Hoe, R. M., Printing press	162,651
Hoe, R. M., Printing press	162,652
Hoffmeister, L. C., Jr., Window shade fixture	162,653
Holcomb, A. A., assignee	162 648
Hollenbeck, J. W., Wagon bolt	162,552
Holloman, J. J., Bale tie	162,654
Hood A. J., Vehicle umbrella support	162,553
Hopkins, H. H., Revolving fire arm	162,475
Hopson, A. S., Vehicle spring equalizer	162 655
Horn, W. H., Wagon jack	162,554
Hosmer, O. S., Darning machine	162 656
Houghtelin, J. W., Middlings purifier	162,555
Howard, B., and J. Beadle, Speaking tube	162,476
Howe, S. G., Car brake	162,556
Hudson, C. H., Steam pumping engine	162,557
Hughes and Dawson	162,536
Hull, J. S., Soldering iron heater	162,657
Hunting and Le Roy	162,565
Hunting, W. W., Automatic fan	162,558
Hutchinson, J. B., and G. W. Fairchild, Tea and coffee pot	162,658
Hyman, J. H., Vehicle wheel hub	162,477
Immel and Boswell	162,610
James, T., Lantern handle	162,559
Janin, A. C., assignee	162,659, 162,660
Jas, A., Refrigerating tank for ice machines	162,659
Jas, A., Apparatus for cooling and circulating air in buildings	162,660
Jewell, T. J. M., Can	162,478
Jincks, M., Churn	162,560
Jocelyn and Larabee	162,667
Johns and Rees	162,688
Johnson, H. M., Die for crimping the halves of split spindles	162,661
Jones, D. S., Rotary engine	162,561
Jones, H. C., Sewing machine binding attachment	162 562

	Patent No.
Judd, A. D., Shutter fastening	162,563
Judd, E. M., Curtain fixture	162,564
Kaiser, P., assignee	162,604
Keene, S. D., Machine for cleaning cotton	162,479
Kendrick and Ogborn	162,493
Kepner, S., Automatic governor for hot air furnaces	162,662
King and McGahey	162,488
King, Son & Co., assignees	162,480
King, W. C., and A. Sperber, Glass mold	162,490
Kingsman, J. H., Indicator lock	162,663
Klobasea, V., Game board	162,664
Laing, J., Sewing machine	162,665
Lake, E. B., Curtain fixture	162,666
Lamson, E., assignee	162,661
Lane, J., Jr., Plow, (reissue)	6,405
Larabee, A. L., and J. M. Jocelyn, Cheese making	162,667
Lauten, A. F., assignee	162,618
Lee, J., Cartridge box	162,481
LeRoy, A., and W. M. Hunting, Ticket clasp	162,565
Lighthall, W. A., Apparatus for cooling and aerating water	162,668
Lobdell, J. B., and M. F. Bartlett, Grain separator	162,669
Long, S. L., Automatic fly brush	162,482
Lovejoy, A., Shingling brackets	162,483
Magee, H., Combined pastry table and refrigerator	162,566
Mallory, A., Bosom board	162,484
Marty, J. M., Steam engine	162,485
McClelland, R. W., Body loop	162,670
McCloud and Moore	162,491
McConway, W., Hasp fastening	162,486
McDevitt, M., Thill coupling	162,671
McDowell, W. L., Stove range and grate	162,487
McGahey, H., and J. King, Curtain fixture	162,488
McGarrah, D. E., Bale band tightener	162,672
McKinnon, J. J., Potato digger	162,489
McPherson, G., Percolator	162,673
Mebarg, J. M., Steam trap	162,567
Merick, E. J., Portable broom head	162,490
Merrick, B. G., assignee	162,490
Meyer, A. C., assignee	162,495
Meyer, B. H., Machine for bunching and wrapping cigars	162,674
Meyer, G., Box scraper	162,568
Miller, T., Piano stool	162,569
Mitchell, H. B., Umbrella	162,570
Mitchell, W., assignee	162,605
Monk, W. G., Composition for tiles	162,675
Montgomery, W., Ash sifter	162,571
Moore, G. A., and W. McCloud, Compound for removing incrustations in steam boilers	162,491
Morrison, C. M., assignee	162,615
Mowbray, G. M., Frictional electrical machine	162,676
Murdock, C. F., Car starter	162,572
Murphy, W., Hod elevator	162,573
Murray, H. S., Milk cooler	162,574
Neal, T. H., Transmitting the power of stationary engines through the medium of compressed air	162,678
Neale, R., Plate printing press	162,677
Neff, P., Lamp-black apparatus	162,679
Neff, P., Apparatus for manufacture of lamp-black	162,492
Newell, J. A., Mechanical movement	162,681
Newman, J. R., Spring bed bottom	162,680
Nichols, G. C., Clamp for cement pipes	162,683
Nichols, W. H., Revolving chime bells	162,682
Nickel, Hipp, and Webagen	162,551
Ogborn, H., and T. T. Kendrick, Hand corn planter	162,493
Ott, A., Churn	162,494
Ormsby, D. G., Lime bin	162,644
Patton, R., assignee	162,567
Phelps and Eggleston	162,636
Pickering, C. C., assignee	162,661
Pitt, W., Machine for cutting meat for packing	162,495
Pontifex, E. A., Liquid measure	162,575
Post, A. J., Lift bridge	162,576
Potter, R. M., and W. W. Thomas, Gas regulator	162,685
Priest, J. K., assignee, (reissue)	6,400
Prior, E. W., Stove pipe drum	162,496
Prouty H. A., Band comb	162,686
Reagan, W. J., Grinding machine	162,687

TITLES, DRAWINGS, AND CLAIMS

OF

PATENTS GRANTED APRIL 27, 1875.

162,456. MACHINES FOR POINTING AND THREADING SCREW-BLANKS. W. Allen, Franklin, N. H. [Filed Mar. 16, 1875.]

Brief.—The rock-shaft which carries the cutter-holder is made separate from, but abuts against, a like shaft. The shaft E is caused to move away from the shaft K with a slow movement by a cam and lever, the necessary compound motion of the cutter-holder upon said shaft being effected by the usual former. Just prior to the completion of the pointing operation, the shaft K will be advanced to meet the rock-shaft by the cam, and both shafts will thereafter be caused to move simultaneously back and forth until the blank is threaded.

For effecting the pointing and threading of a screw-blank by a single tool and a former, to co-operate as explained, the combination of the separate slide or shaft K and the rotary threading-cam T, applied as described, with the tool-carrier D in its shaft E, the retractive spring V, the lever N, and the pointing-cam O, all being arranged substantially in manner and to operate as specified.

162,464. COAL-HODS. U. D. Alexander, Chicago, Ill., assignor to Margaret Alexander, same place. [Filed Feb. 16, 1875.]

Brief.—Flanges upon body, bottom, and hoop are clasped together within the hod.

1. The combination, in connection with a bottom piece, of the body A having the inwardly-turned lower edge *d*, and of the hoop O having therein the inwardly-sunken groove *f*, the said edge being clasped in the said groove, substantially as shown and described, and for the purposes set forth.

2. The combination of the body A having the inwardly-turned lower edge *d*, the bottom piece B having the downwardly-turned or rolled edge *e*, and the hoop O having therein the inwardly-sunken groove *f*, the edges *d* and *e* being clasped in the groove *f*, all substantially as shown and described, and for the purposes set forth.

162,465. CURRY-COMBS. John H. Barringer, Lincoln, Nebr., assignor to M. J. Cassell, same place. [Filed June 20, 1874.]

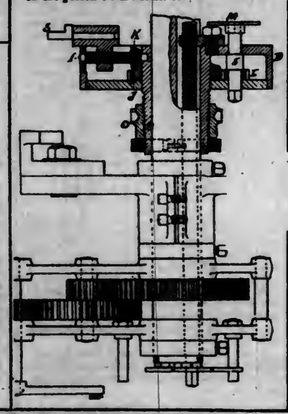
Brief.—The tang, being turned at a right angle to the handle, is again turned to receive the carry-comb, which is so held at its far end by a screw-nut as to prevent its turning, but by rotating the screw-nut may be received so as to bring into use another set of comb-blades on the reverse side.

In a carry-comb, the combination of the shouldered shank B, the series of comb-plates, the inner one being recessed for the reception of the shoulder *e* of shank B, and nut *g*, substantially as described.

162,466. HOLDBACK-IRON. Alma Bedford, Coldwater, Mich. [Filed Nov. 27, 1874.]

A holdback-iron cast in one piece, and having countersunk screw-holes in its ends, and provided with an oblique bearing for the breech-strap, substantially as and for the purpose set forth.

162,467.



162,467. COMBINED HAY TUMBLERS AND RAKES. George W. Bishop and David B. Sherman, Charleston, Va.; said Bishop assignor to F. Barney, same place. [Filed Apr. 6, 1875.]

Brief.—Two sets of rake-teeth are placed in one head, at an angle of about one hundred and five or ten degrees from each other. The handle is inserted behind one set of teeth at an angle of about fifteen or twenty degrees. The operator shoves the rake before him with that set of teeth upon the ground that have the greatest angle with the handle.

As a new article of manufacture, the combined hay tumbler and rake, consisting of the head B, having the two rows of teeth C and D arranged therein at suitable angles with each other, and a handle, A, substantially as described and shown.

162,468. MACHINES FOR SCORING OUTLINESS. John C. Chapman, Passaic, N. J. [Filed Sept. 14, 1874.]

Brief.—Improvement on Letters Patent No. 37,384. The hub of the rear bearing is conical and split, and is clamped upon the bar by a conical nut, a set-screw being provided in said nut for the purpose of taking up lost motion. The head is clamped upon the bar by a nut, and is provided with three tool-holders, each of which is mounted upon the screw-threaded shaft of a pinion. The pinions are simultaneously revolved by a bevel-gear, which is operated through the medium of the pinion on the shaft S.

1. The bevel-head D, having a slotted tapering hub and slotted face, in combination with the nut O, as described, for the purpose set forth.

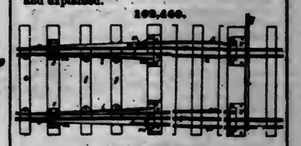
2. The set-screw E and cap or nut O', in combination with the bearing C, and bar A, all constructed and operated as described, for the purpose of taking up any longitudinal motion of the bar and head, as set forth.

3. The pinion L and spur-wheel M, in combination with the gear J, pinion K, screw *l*, tool-holders 3, and pieces S, all constructed and operated substantially as and for the purpose set forth.

4. The bearing C, constructed as described, in combination with conical nut O' and set-screw E, substantially as and for the purpose set forth.

162,469. PROTECTORS FOR STONEWARE JARS. Denison S. Chesebro, Geddes, N. Y. [Filed Nov. 21, 1874.]

The stone-ware-jar protector, consisting of a wooden cover, *c*, constructed as herein described, and projecting over the rim of said jar, and attached thereto by means of rigid metal hooks *e* affixed to said cover, extending over the top thereof, and bent down around projections or lugs *b*, having inclined planes on their under sides formed on the jars, the whole being arranged and combined as and for the purposes specified.



162,470. RAILWAY-SWITCHES. H. Cook, Norwich, Conn. [Filed May 1, 1873.]

Brief.—A railroad-switch in which two stationary frog-plates are employed, in connection with movable switch-rails placed between the main-track and turn-out rails; also, four safety-rails may be interposed between the frogs and movable switch-rails.

1. The arrangement and combination of the two duplex frogs *a b a b*, and guides *i i*, as described, the four-rail switch r^1 r^2 *t t*, and the main and turn-out rails r^3 r^4 r^5 r^6.

2. The arrangement and combination of the two duplex frogs *a b a b*, and guides *i i*, as described, the four safety-rails *c d c d*, the four-rail switch r^1 r^2 *t t*, and the main and turn-out rails r^3 r^4 r^5 r^6, all being substantially as shown and explained.

162,470.

162,471. METALLIC ROOFING. Geo. Crowl, New Lisbon, Ohio. [Filed Mar. 22, 1875.]

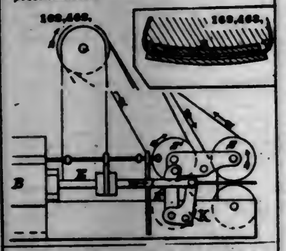
Brief.—The metallic sheets are slightly corrugated, but not so as to interfere with the bending over of the upper and lower ends for engaging with the tiles above and below. One side is bent up at a right angle, and the other bent over to form a hook for clasping over the portion so bent.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

1. A metallic roof-plate, A, having corrugations *a*, formed therein at intervals from each other, and at such slight height as not to prevent the bending of hooks at the ends of said plates, after the corrugations have been formed therein, as is herein specified.

2. A metallic roof-plate having light corrugations *a a* formed therein at intervals from each other; a hook, D, turned at its upper end, with ears *d d* left at its sides; lip B and hook C, turned at its sides; and a hook, E, turned at its lower end, between said lip and hook, substantially as and for the purpose specified.

3. A metallic roof combining the following features of construction, to wit: light corrugations at intervals in the plates; vertical plate-seams formed by uniting the lip and hook of adjacent plates; flat cross-seams formed by central upper hook of a plate, and a transverse lower hook of the next plate above; and a ridge-joint formed by hooking together the ridge-plates in the plane of one side of the roof; the several parts being constructed, arranged, and secured on the roof, substantially as and for the purpose specified.



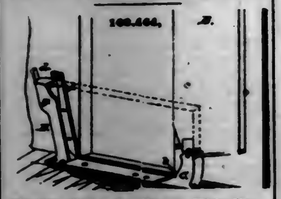
162,460. MECHANICAL MOVEMENTS. Parley M. Cummings, Lyons City, Iowa. [Filed Jan. 19, 1875.]

Brief.—Steam being introduced in the cylinder, the piston-rod is moved, thereby operating the valve in steam-chest, rocking the lever backward and raising roller, and depressing roller, bringing it in contact with friction-plate, when, by means of cylinder, the friction-plate is moved, revolving roller.

1. In combination with cylinders A B, pistons E E', friction-plate J, and friction-rollers S S', the rocking devices, consisting of bar K, connecting-bar *m*, and plate P, substantially as and for the purposes described.

2. In combination with cylinders A B, pistons E E', friction-plate J, rollers S S', and rocking devices K, *m*, and P, the drums or pulleys A^1 A^2, substantially as and for the purposes described.

162,462. 162,462.



162,463. BENDERS OR FORMERS FOR USE IN MAKING BOOTS AND SHOES. Johns Hand, Rochester, N. Y., assignor to B. Tremaman, same place. [Filed Apr. 6, 1875.]

Brief.—A former or false inner sole for use in stitching single-soled shoes is constructed of one thickness of leather and one of rubber.

In the manufacture of single-soled boots and shoes, the former or inner sole herein described, composed of one thickness of leather and one of rubber, to which the upper is lasted or secured, as herein shown and described.

162,464. B.

162,464. GRAIN-CAR DOORS. Elisha Fee, Colfax, Iowa. [Filed Dec. 26, 1874.]

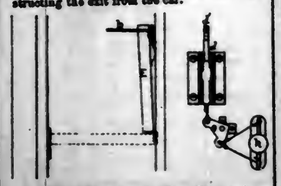
1. The corner-brace and door-fastening C, having the curved and beveled shoulder *b* and vertical projection *c*, substantially as and for the purposes shown and described.

2. The vertically-grooved corner-brace and door-fastening D, having the swell or chamber *g* and the vertical spring *d*, carrying the bolt *f*, in combination with the vertically-swinging door B, having a notch in its front edge, substantially as and for the purposes shown and described.

3. The combination of the door B, having rounded lower corners, and the corner-braces and fastenings C and D, substantially as and for the purposes specified.

162,465. AUTOMATIC AIR-BRAKES FOR RAILWAY AIR-BRAKES. Walter J. Ford, Adrian, Mich., and George Westinghouse, Jr., and Thomas W. Walsh, Pittsburg, Pa. [Filed Apr. 2, 1875.]

Brief.—When the brake-cylinder is being charged, air enters a reservoir through a port from the supply-pipe, and an equal pressure is maintained in the pipe and reservoir. When it is desired to release the brakes, air is allowed to escape from the supply-pipe, thereby forming an excess of pressure in the reservoir, that operates to raise an intermediate valve, and allow air in the supply-pipe to readily escape through radial ports in the neck of the reservoir.

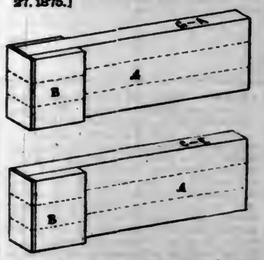


1. In combination with a brake-pipe or cylinder, an air-reservoir, B, arranged to be charged with compressed air while the brakes are being applied, an intermediate valve to be opened by the back pressure of the air in such reservoir when the brakes are being released, and an air-escape port or ports for the escape of the air on the opening of the valve, such valve being opened against the pressure of the escaping air, substantially as set forth.

2. As an attachment for the brake-pipe or cylinder, the piece A, containing a chamber, *a*, with valve U at one end, a reservoir, B, at the other, a communicating charging-port, and an intermediate escape-port, substantially as set forth.

3. In combination with the brake-pipe or cylinder, the reservoir B and air-charging port, a valve, C, arranged intermediate between the reservoir and another wise unobstructed source of supply, and closing the escape by air-pressure simultaneously with the application of the brakes and the charging of the reservoir, substantially as set forth.

162,466. HATCHWAY-GUARDS. J. C. Foster, Lynn, Mass. [Filed Mar. 9, 1875.]

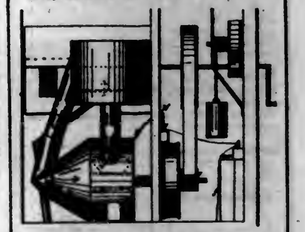


Brief.—A guard-bar hinged to the side of the door is released from its vertical fastening, and drops to a horizontal position when the door is opened from the outside. When the door-knob is turned and the door opened from the inside, the catch that releases the guard-bar is depressed by means of rods and a bell-crank lever, so as not to engage with the spring that sustains the bar in its vertical position, thus preventing the bar from obstructing the exit from the car.

1. The combination of a bar with a swinging door, and intervening mechanism, substantially as described, whereby the bar is dropped when the door is opened from the outside, as specified.

2. The combination of a bar, E, latch *h*, catch *d'*, bell-crank *g*, and knob *h*, all connected and operating substantially as and for the purpose set forth.

162,467. BLANKS FOR ORGAN-KEYS. Levi K. Fuller, Brattleborough, Vt., assignor to J. Estey & Co., same place. [Filed Jan. 27, 1875.]



1. As an improvement in the manufacture of keys for organs, pianos, and similar keyboard instruments, the process herein described, consisting essentially in forming the blank from which to construct each key with its top and bottom faces corresponding in shape to the face of the keys, and of a depth to allow of two or more keys being cut therefrom, by dividing it in a plane parallel to the faces of the same, substantially as and for the purpose specified.

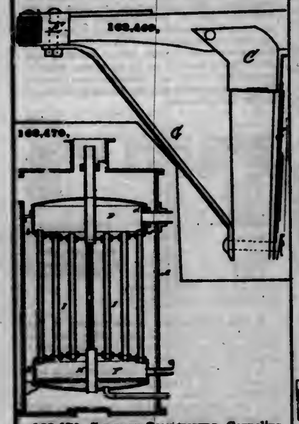
2. The method of constructing a key-blank for organs and similar instruments, by making the body of the blank A of the width desired for the rear end of the key, and securing the cheeks B B to the side or sides thereof, to give the proper width to the key at the front end, substantially in the manner shown, and for the purposes set forth.

3. The blank for the sharp or black keys, having a thickness equal to the thickness required in the key, and grooved, as at *a*, at the rear end, when constructed substantially in the manner shown, and for the purposes described.

162,468. REFRIGERATORS. E. W. Giddings, Johnstown, Pa. [Filed Apr. 12, 1875.]

Brief.—A fan, driven by clock-work or hand, sends air down through the ice, and expels it through channel into the cooling-chamber. An adjustable red sets one wire of a battery at any desired elevation in the mercury-tube of a thermometer. When that temperature is reached in the cooling-chamber, a circuit is established, the armature which has been braking the fly-wheel is lifted from the fly-wheel, and the fan-wheel is permitted to act.

1. In a refrigerating-chamber, the combination of the thermometer I, screw-rod *h*, nut *i*, and wire *c*, substantially as shown.



2. In a refrigerating-chamber, the combination of an adjustable circuit-closing device, a battery, and a starting and stopping mechanism, whereby the temperature can be regulated at will to suit various articles, as specified.

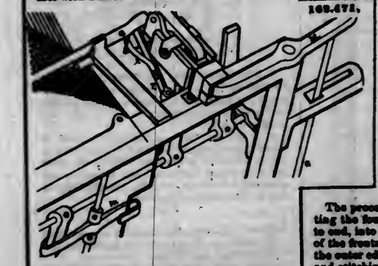
3. The combination of the thermometer I, platinum wire *c*, adjustable rod *h*, electric wires *f g*, battery M, and electro-magnet N, all arranged as described, with a refrigerating-chamber, an automatically-operating suction-fan therein, and a stopping and starting mechanism therefor, substantially as and for the purposes herein set forth.

162,469. SLEIGH-KNEE. Myron Glenbrook, Batchellerville, N. Y. [Filed Mar. 27, 1875.]

In a sleigh-knee, the combination of the fastening-strips *b b*, having the strengthening-web D and socket C, and the brace-rod G and socket E, substantially as shown and described.

162,469. C.

162,470. SURFACE-CONDENSERS. Cornelius Godfrey, Huntington, N. Y. [Filed Sept. 21, 1874.]



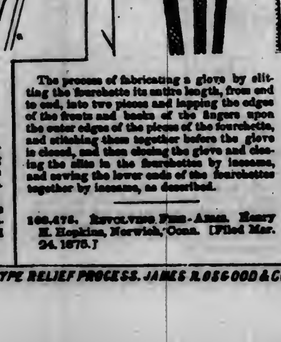
1. A surface-condenser, in which the steam-tubes are rigidly secured to the steam-chamber and vacuum-chamber, and wherein provision is made for the expansion of the tubes by means of a sliding or expansion joint between the steam-inlet pipe and the steam-chamber, substantially as specified.

2. In a surface-condenser, the combination and arrangement, substantially as shown and described, of the steam-chamber D, vacuum-chamber F, upright tubes I, connecting said chambers, water-inlet B, water-outlet O, pipe J, and shell A, for the purposes set forth.

3. The tube H, passing upward through the chamber F, in combination with the water-passages *b b'*, inlet B, and outlet O, as and for the purpose set forth.

162,471. STOP-MOTIONS FOR LOOMS. Saml. Greenwood and Jas. Templeton, Lowell, Mass. [Filed June 24, 1874.]

Brief.—To stop the loom when the breaking or tangling of a warp-thread causes a knot or bunch to be made on the surface of the fabric, a notched plate is arranged to reciprocate in front of the temples, and is so connected with the shipper-lever as to release it when the plate is stopped by coming in contact with a knot or bunch.



1. In combination with the stopping mechanism of a loom, the lever I and the sliding notched plate Q, adapted to reciprocate on the surface of the fabric, as and for the purpose set forth.

2. The combination of the lever W, the crank U, spring-rod V T, the plate Q, the lever I, the lever M, and the shipper O, as and for the purpose herein described.

162,472. CRIMPING-MACHINES. A. Hecht, New York, N. Y. [Filed Jan. 4, 1875.]

The combination, in a machine for crimping or finishing trimmings which have been gathered or plaited and stitched on both edges, of the crimping irons or dies D and H, formed, respectively, with the two faces *a* and *a'* and *n* and *n'*, arranged about at right angles with each other, respectively, and provided, respectively, with the prominences *x x'* and *y y'*, which are in a line with spaces between the prominences on the other face of the same die, and constructed to form the triangular spaces *f* and *g*, arranged to operate as specified.

162,472. 162,472. 162,472.

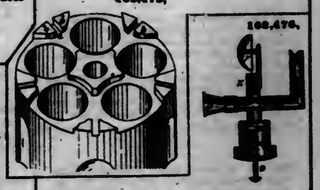
162,472. GUN-LOCKS. Lewis L. Hepburn, Ilion, N. Y. [Filed Apr. 3, 1875.]

1. The stirrup S, provided with the two bearings *a* and *b*, in combination with the tumbler T, said parts being constructed to operate substantially as described.

2. The combination, in a gun-lock, of a tumbler, with a stirrup arranged to bear alternately on opposite sides of the axis of said tumbler, substantially as and for the purpose set forth.

162,474. MANUFACTURE OF GLOVES. Geo. S. Hewitt, Johnstown, N. Y. [Filed Mar. 4, 1875.]

162,474.

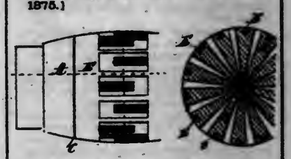


The process of fabricating a glove by slitting the fourchette its entire length, from end to end, into two pieces and lapping the edges of the fronts and backs of the fingers upon the outer edges of the pieces of the fourchette, and stitching them together before the glove is closed, and then closing the glove and closing the slits in the fourchettes by inseams, and sewing the lower ends of the fourchettes together by inseams, as described.

162,475. REVOLVING FIRE-ARMS. Henry H. Hopkins, Norwich, Conn. [Filed Mar. 24, 1875.]

A cylinder for a revolver fire-arm, provided with safety-notches *a* in the projection *b* on the end face of the said cylinder, the said projections being formed as described, so that the hammer of the fire-arm falling upon such projections will not, in practice, force the metal of the projection inward into the spaces intended for the periphery of the cartridge-head, or form a burr or roughness that will interfere with the revolution of the cylinder in the frame or stock of the fire-arm, as specified.

162,475. 162,476.



162,476. SPEAKING-TUBES. Benj. Howard and Jesse Beadle, Shickshinny, Pa. [Filed Apr. 2, 1875.]

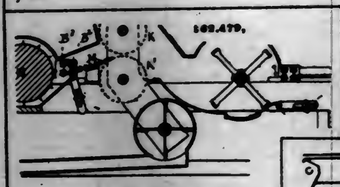
Brief.—The piston or hammer is thrown against the bell, to give a signal at the other end, by operating the piston on the air-cylinder.

An alarm attachment for speaking-tubes, consisting of the combination of the speaking-tube A, cylinder C, piston-rod D, valve E, and bell or gong F, substantially as shown.

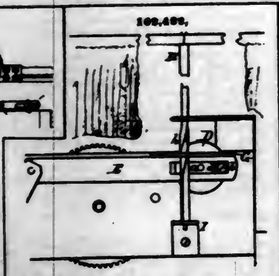
162,477. VEHICLE-WHEEL HUBS. John H. Hyman, Tippecanoe, Ohio. [Filed Jan. 14, 1875.]

The bob A, having grooves C and D filled with metal E, all combined substantially as and for the purpose set forth.

162,478. CANS. Tryon J. M. Jewell, New York, N. Y., assignor of one-half his right to Nathan Seeley and George I. Stevens, same place. [Filed Feb. 16, 1875.]



Brief.—The wire, with each end projecting, is arranged in a groove formed in the flange of the cover, which construction facilitates the application of the cover to the can.



The can-cover B, constructed with the groove *a*, in combination with the free wire C, projecting from the cover at both ends, and arranged to cover the sheet metal by tension upon either end, substantially as and for the purpose set forth.

162,479. MACHINES FOR CLEANING COTTON. Saml. D. Keene, Providence, R. I. [Filed Sept. 19, 1874.]

Brief.—After the cotton passes through compressing-rollers to a revolving beater, which breaks the cotton-motes and dirt tangential down, the motes and dirt falling clear of a longitudinally-adjustable mote-board, it is carried, assisted by a current of air, to condensing-cylinders, thence over a toothed lattice-work and through compressing-rollers situated above a vertically-adjustable mote-board, which further separates the motes from the cotton, as the latter is conveyed down an incline, and combed by a revolving toothed drum.

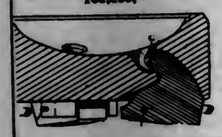
No. 162,479.

No. 162,482.

1. The combination of a beater and drawing-rolls, driven at different speed, with an adjustable mote-board, all operating together, substantially as described, and for the purpose set forth.

2. The combination of the condensing-rolls K K' and the drawing-rolls B' B' with the grill M and the combing-cylinder N, all operating together, substantially as described, and for the purpose set forth.

162,480. GLASS-MOLDS. William C. King and August Sperber, Pittsburg, Pa., assignors to King, Son & Co., same place. [Filed Feb. 27, 1875.]



1. A glass-mold having a part of the working-face of its cavity, intermediate between its upper and lower ends, hinged or pivoted, each part swinging into position preparatory to pressing, and swinging out or back to permit the discharge of the article pressed, substantially as set forth.

2. In combination with a glass-mold, a series of pivoted or hinged mold-sections, each of which, swinging in a vertical plane, carries an extension, *e*, for forming, when in position for pressing, a re-entrant part of the article to be made, and by swinging clear of such position, leaving an open path for the discharge of the part so formed, substantially as set forth.

3. The mode of closing up and holding in place the movable parts of the cavity of a glass-mold, by resting the mold on such movable parts or some extension thereof outside the pivoting-point, whereby an increased tightness of joint shall be secured by increased pressure, substantially as set forth.

4. The arrangement of the hinged mold-sections D, whereby they will automatically close the cavities they help to form when the mold is set in position for pressing, substantially as set forth.

No. 162,480.

162,481. CARTRIDGE-BOXES. James Lee, Milwaukee, Wis. [Filed Apr. 12, 1875.]

No. 162,481.

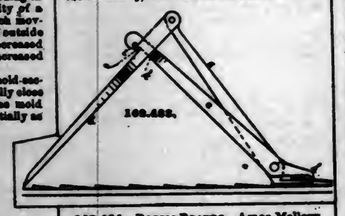
1. A cartridge-box, consisting of the case A, curved edgewise to permit the cartridges to fit therein in a compact row, with their heads overlapping, as shown, and curved sidewise to adapt it to the person or to the gun, substantially as described.

2. The box A, having its lower end I curved laterally, and provided with the mouth or opening *d* for withdrawing the cartridges, as described.

3. The box, provided with the hooks *c* and the catch *a*, or its equivalent, for attaching it to another box or to the belt, substantially as set forth.

4. The curved box A, provided with the swing *b* for feeding forward the cartridges, and the spring-catch *r* for preventing the accidental expulsion of the same, substantially as described.

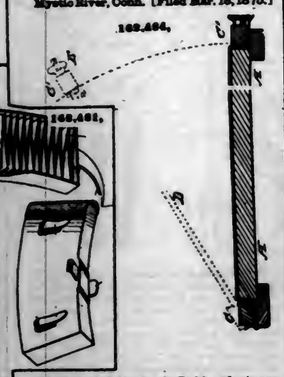
162,482. AUTOMATIC FLY-BRUSHES. Saml. L. Long, Kettleberg, Ill., assignor of one-half his right to W. D. Smith. [Filed Mar. 20, 1875.]



1. In a fly-brush operated by clock-work, a spiral shaft, upon which the brushes are secured, in combination with a reciprocating lever, for imparting to said shaft a reciprocating rotating motion, substantially as herein set forth.

2. The combination of the revolving disk D, with crank-pin *b* and box *d*, the pivoted slotted lever E, with slotted flange G, and the shaft H, having spiral part *h*, substantially as and for the purpose herein set forth.

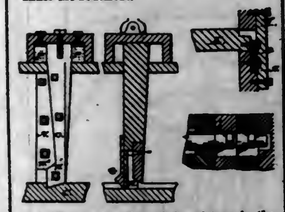
162,483. SHINGLING-BRACKETS. Addison Lovejoy, South Paris, Me. [Filed Sept. 19, 1874.]



The staging-support composed of the slotted pointed double arm *b*, arms *c* and *e*, the bifurcated slipper *h*, the arm *e*, having the shoulder *k* and hook *i*, and the arm *h*, having the shoulder *j*, all as herein described.

No. 162,483.

162,484. BOSOM-BOARDS. Amos Mallory, Mystic River, Conn. [Filed Mar. 16, 1875.]



No. 162,484.

The bars C C' and rods D, hinged at one end, and the rods provided with the longitudinal pressing-springs *a a*, and set-screws E, exerting a pressure at both ends of the board A, and the bars B B', all as and for the purpose specified.

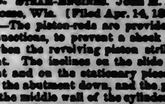
162,485. STEAM-ENGINES. John M. Marty, La Crosse, Wis. [Filed Apr. 14, 1875.]

Brief.—The piston-rods are provided with link-connections, to prevent a shock on the piston when the revolving piston strikes the abutment. The inclines on the slide on the abutment and on the stationary piece serve to press the abutment down, and the packing against the middle wall of the cylinder. The projection on the steam side of the abutment receives the blow given by the piston when it passes the former, and the adjustable piece on the opposite side packs the piston as it passes under the abutment.

1. The combination of the pistons in the tube H, provided with link-connection, the abutment E, and pistons B' B', substantially as and for the purpose specified.

2. The combination of the abutment E, bar I, and packing F, substantially as and for the purpose specified.

3. The combination of the abutment E, slide O, having incline W', and stationary piece N, having corresponding incline W, substantially as and for the purpose specified.



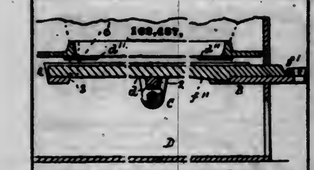
4. The combination of the abutment E, projection Q, and packing R, substantially as and for the purpose specified.

5. The combination, with packing-strips having a portion of their inner periphery inclined, as set forth, of the adjustable automatic valve, the same consisting of a spindle provided with adjustable cones, substantially as shown and described.

6. The combination, in a rotative engine, of the adjustable cam M', stationary M', and the valves which control the steam-ports, substantially as and for the purposes set forth.

7. The combination of the runner B with packing-rings C C' and set-screws, the said packing-rings being supported by flanges formed solid with the sides of the casing, and serving to pack the inner periphery of the runner, and also forming a portion of the casing of the annular steam-chest, substantially as shown and described.

162,486. FASTENINGS FOR HASPS. W. McConway, Pittsburg, Pa., assignor to himself, John J. Torley, John Heath, and W. Dilworthy, Jr., same place. [Filed Mar. 9, 1875.]



1. The combination of a hasp, B, and headed bolt *a*, the hasp having an outwardly-swinging motion independent of the motion of the door, substantially as and for the purposes set forth.

2. A headed bolt, *a*, having a bolt or curved neck embrace the door or other structure in which it is inserted, and at its inner end a fastening device not self-detaching nor detachable from the outside, substantially as and for the purposes described.

162,487. GRATES FOR RANGES AND STOVES. William L. McDowell, Philadelphia, Pa. [Filed Mar. 16, 1875.]

Brief.—The grate has a slightly rising and falling, as well as a forward and backward, movement.

1. The combination, in a range, stove, or furnace, substantially as described, of the rock-shaft C, with the grate A B, provided with a special handle, *b'*, projecting through the front plate of the base or ash-pit D, for purposes set forth.

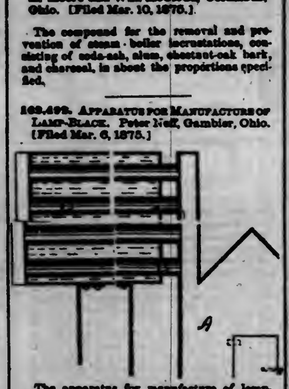
No. 162,487.

1. In a potato-digger, the frame C, with its inverted U-shaped rear end arranged to form the standard or leg *a*, and plow or shoe F, in combination with the longitudinal shaft I and radial wheel L, all combined and arranged to operate substantially as and for the purpose specified.

2. In combination with the plow F and wheel L, the guard D, with its downward-projecting bars or fingers *b c c*, substantially as and for the purpose described.

162,488. PORTABLE BROOM-HEADS. R. J. Merrick, Rochester, N. Y., assignor to himself and Bemanjah G. Merrick. [Filed Jan. 10, 1873.]

Brief.—The wings of the head are pivoted at the sides, so that the wedge-shaped handle forces their lower ends together to grasp the broom-corn. A device for fastening the broom and holding the corn to the wings is attached to the latter.



The corn-band C, screw D, wire-stiffener G, and the retainer E, constructed of a metallic plate or sheet bent double, and having the blade *g g* turned to fasten the headed nails or teeth *h h*, the whole combined with the wedging-handle A, and pivoted jaws B B, in the manner and for the purpose specified.

162,489. COMPOUNDS FOR REMOVING INCRUSTATIONS IN STEAM-BOILERS. George A. Moore and Wm. McCloud, Columbus, Ohio. [Filed Mar. 10, 1875.]

The compound for the removal and prevention of steam-boiler incrustations, consisting of soda-ash, alum, chestnut-oak bark, and charcoal, in about the proportions specified.

162,490. APPARATUS FOR MANUFACTURE OF LAMP-BLACK. Peter Neff, Gambier, Ohio. [Filed Mar. 6, 1875.]

The apparatus for manufacture of lamp-black, consisting of the combination, with a suitable burning-chamber, A, of a water-tank having two or more flues, C, communicating with said burning-chamber, whereby the products of combustion may be divided up, substantially as and for the purpose described.

162,491. COMPOUNDS FOR REMOVING INCRUSTATIONS IN STEAM-BOILERS. George A. Moore and Wm. McCloud, Columbus, Ohio. [Filed Mar. 10, 1875.]

The compound for the removal and prevention of steam-boiler incrustations, consisting of soda-ash, alum, chestnut-oak bark, and charcoal, in about the proportions specified.

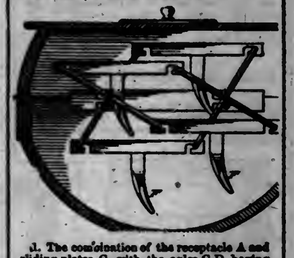
162,492. APPARATUS FOR MANUFACTURE OF LAMP-BLACK. Peter Neff, Gambier, Ohio. [Filed Mar. 6, 1875.]

The apparatus for manufacture of lamp-black, consisting of the combination, with a suitable burning-chamber, A, of a water-tank having two or more flues, C, communicating with said burning-chamber, whereby the products of combustion may be divided up, substantially as and for the purpose described.

162,493. HAND CORN-PLANTERS. Harrison Osborn, Richmond, Ind., and T. T. Kendrick, New York, N. Y. [Filed Apr. 13, 1875.]

Brief.—To a handle are adjustably attached two planters. Within the tube are fastened two curved springs, the upper one dividing the delivery-chamber into two compartments, holding the seed previously dropped, until the plunger descends to fill the seed-pocket, when the seed falls onto the lower spring that forms the bottom, and is forced out by the downward stroke of the descending plunger. To the planter, near its top, is pivoted a hopper, having its inner upper edges flared to engage with vertical indentations to hold the hopper when closed.

1. Two or more hand corn-planters, adjustably secured to a handle and arranged to plant two or more hills of corn in a single row at one and the same time, substantially as described.



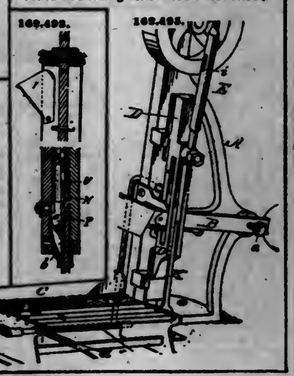
2. The curved lateral spring *a*, located within the grain-tube of a corn-planter, and dividing it into an upper and a lower chamber, in combination with a plunger, F, having a seed-cup, N, substantially as and for the purposes set forth.

3. The curved lateral springs *a b*, secured one above the other, within the grain-tube of a corn-planter, in combination with the plunger F, having the seed-cup N, substantially as and for the purposes set forth.

4. In a hand corn-planter, the hinged hopper I, provided with the inner upper flaring edges, in combination with the vertical indentations J, substantially as and for the purposes set forth.

162,494. CHURNS. Adam Cox, Oswego, N. Y. [Filed Mar. 19, 1875.]

Brief.—Two removable crank-shafts fit into the ends of slotted bars, in which paddle-dashers are fixed, and so arranged that as the shafts rotate the paddles will alternately dip into the cream at one side of the churn, even to the other, and arise therefrom.



1. The combination of the receptacle A and sliding plates G, with the axles C D, having throw-cranks arranged as shown and described, and connected by cross-pieces L with dashers F, attached as and for the purpose set forth.

2. In a churn, the combination with the axles C and D, provided with throw-cranks, as described, of the cross-pieces L, and dashers F, as set forth.

162,495. MACHINES FOR CUTTING MEAT FOR PACKING. William Pitt, Baltimore, Md., assignor of one-half his right to Chas. A. Vogeler and Adolph C. Meyer, same place. [Filed Mar. 22, 1875.]

Brief.—Before the stroke is finished the knife is released, and finishes the stroke by its momentum. The knife only operates when the workman causes the dog or catch in the machinery to engage with the knife by working a treadle under the chopping-table. When the meat is thick, the knife is not disengaged, but carried through to the end of the stroke.

No. 162,495.

1. In combination with the pivoted counterbalanced knife B, the vertical slide D provided with the dog H, which may be caused to engage with and operate the knife.

2. In combination with the pivoted knife B, the slide D provided with the dog H and spring e, and the rock-shaft I, provided with the arm c and treadle d, as shown and described.

3. In combination with the knife B slide D and dog H, the spring-arm K or its equivalent.

4. In combination with the bed or table C, and the slide D, arranged to lift the knife at its inner end, the knife B provided with the knuckle-joint and spring, as and for the purpose described.

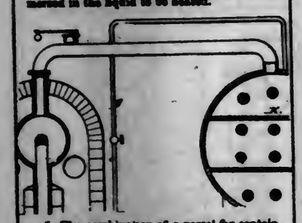
5. The combination of a vertically-moving knife, and a bed or table provided with rollers m, and a removable wooden block to receive the blow of the knife, substantially as described.

6. The combination, substantially as shown and described, of a movable knife, and an actuating mechanism, which starts the knife with a positive motion, and then releases the same and permits it to finish its stroke by its momentum, as set forth.

7. The combination of a vertically-moving knife with an operating mechanism, arranged so that while the mechanism has a continuous movement, the knife will be operated only when it is caused to engage therewith by the attendant, substantially as and for the purpose set forth.

162,496. STOVE-PIPE DRUMS. E. W. Prior, Cambridge, Vt. [Filed Feb. 17, 1875.]

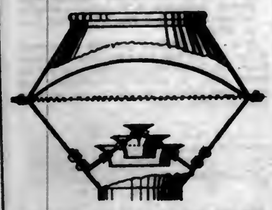
Brief.—The cavity in the centrally-located air-heating chamber receives the smoke directed from the sliding section of pipe, which acts as a damper.



1. In a stove-pipe drum, the hot-air chamber B, surrounded by fire-chamber a, and having the chamber C and hot-air openings b^{iv}, in combination with the induction-pipe A^{ii} and exit-pipe A^{iii}, constructed and arranged with relation to each other, substantially as described.

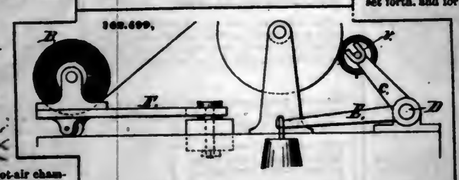
2. In a stove-pipe drum, the combination of the hot-air chamber B, chamber C, induction-pipe A^{ii}, and exit-pipe A^{iii}, with the cylindrical sliding damper O, substantially as described.

162,497. STEAM-GENERATORS. D. Bonshaw, Hingham, Mass. [Filed Apr. 6, 1874.]



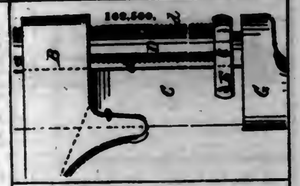
Brief.—Superheated steam is kept circulating through a system of pipes which are immersed in the liquid to be heated.

1. The combination of a vessel for containing a liquid which it is desired to evaporate with a system of submerged pipes, connected with a steam-superheating apparatus arranged in relation thereto, so as to establish and maintain a constant current of superheated steam from the superheater into one end of the system of pipes, while constantly withdrawing the cooler steam from the other end of the system of pipes, whereby a prescribed quantity of steam is maintained in continuous circulation, substantially as described, and for the purpose set forth.

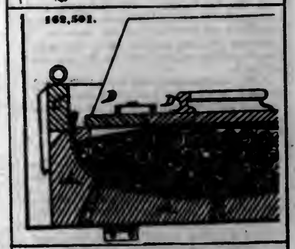


2. The combination of a superheating apparatus, provided with a safety-valve and connected with the pipes N and P, and arranged in relation to a steam generator or boiler, substantially as shown and described, with the inlet-pipe g leading from the steam-space G to the pipe C, for the purpose of facilitating the regulation of the quantity of steam maintained in circulation, substantially as described.

162,498. SPARK-ARRESTERS. C. G. Roberts, Jersey City, N. J. [Filed Oct. 26, 1874.]



A spark-arrester, consisting of a series of inverted sections of cones, one above the other, in which the greatest diameter of its lower section exceeds the diameter of the smoke-pipe, and the greatest diameter of each succeeding section exceeds the smallest diameter of the section immediately below it, and whose top section is a cone, with the same relation existing between its greatest diameter and the smallest diameter of the section immediately below it, substantially as described.



162,499.

162,500.

162,501.

162,502. SAFETY-VALVE. Hiram Stevens, New Haven, Conn. [Filed Feb. 6, 1874.]

Brief.—The adjusting-nut is provided with one or more vertical grooves, into which enters a removable pin, arranged to be locked in position, thereby securing the valve adjustment from interference.

The nut C, provided with the grooves a, in combination with the locking devices herein set forth, and for the purpose specified.

162,502.

162,499. MACHINES FOR WETTING PRINTING-PAPER. George Bonquist, New York, N. Y., assignor to the Bullock Printing-Press Company. [Filed July 22, 1874.]

Brief.—The web of paper is led to the damping-cylinder from a roller held in a frame pivoted so that either end of the roller shall yield to allow the smooth passage of the paper, one margin of which may be shorter or longer than the other. It is then wound upon a roller leaning against the damping-cylinder, being borne on arms from a shaft, from which extends another arm carrying a weight, by which is adjusted the pressure of the winding-up roll against the cylinder.

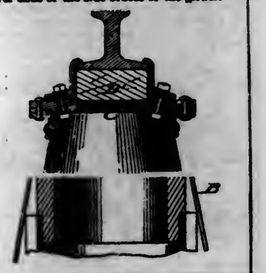
The combination of the large cylinder A, the shaft D, with its arms s c, the roller v, journaled in the upper ends of said arms, the lever E, with its weight e, and the roller B, mounted on a pivoted frame, F, all constructed and arranged to operate substantially as described.

162,500. WRENCHES. Julius Rost, Allegheny, Pa. [Filed Sept. 28, 1874.]

The screw-rod D, with the threads d d cut upon its opposite sides with intermediate plain surfaces, and with its arm B, in combination with the head A, head B, rod C, and heel G, in the manner and for the purpose herein described.

162,501. UPHOLSTERING APPARATUS. C. F. A. Starcke, Chicago, Ill. [Filed Dec. 4, 1874.]

The combination of the mold A, the removable frame C, for extending the depth of the mold, and the presser D, having therein the removable part D', to admit of the manipulation of the filling without removing the part D', substantially as and for the purpose specified.



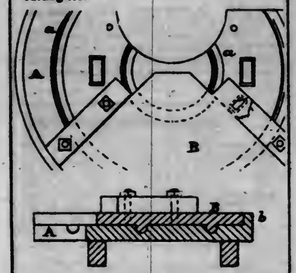
162,503. ROOFING COMPOSITIONS. Basile St. Jean, Manchester, N. H. [Filed Apr. 3, 1875.]

Brief.—A roofing composition consisting of one part sifted coal-ashes, one part sifted sawdust, and two parts coal-tar. Applied to roofing-felt. A coating of gravel is then applied as a top dressing.

The above-described composition of matter as a roofing material, to be used in combination with roofing-paper and gravel, substantially as and for the purposes set forth.

162,504. ELEVATED RAILWAYS. Roy Stone, Vandalia, N. Y. [Filed Mar. 20, 1875.]

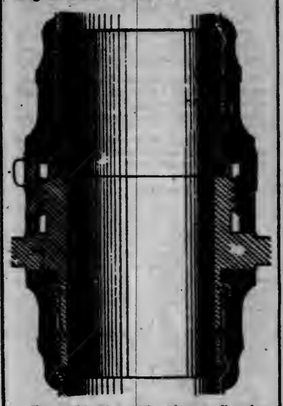
Brief.—An elevated railway in which the central elevated bearing-rail is supported upon a wooden stringer, which rests upon the top chord of a trapezoidal lattice truss-girder, provided with a guide-rail on each side at the lower ends of the side braces of the girder.



1. The combination of the bearing-rail with the trapezoidal truss-girder, having its top chord C secured to and connecting its sides B B, as shown and described.

2. The top bearing-rail, seated on a timber-combine, and secured by base-binding angle-rails to the top chord, substantially as shown and described.

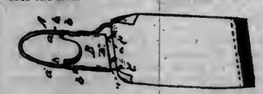
162,505. MACHINES FOR ROUNDING THE CORNERS OF SLATE-FRAMES. Abraham Stroh, Manch Chunk, Pa. [Filed Mar. 16, 1875.]



Brief.—The corners of slate-frames are rounded by means of a segmental bed-plate provided with a flange at its outer edge, and upon its face with one or more grooves upon lines of circles with a common center, and a vibratory or laterally-moving plate, (upon which the slate-frame is placed,) provided upon its under side with corresponding ridges or projecting rings, in connection with a suitable cutting-tool.

The bed-plate A, provided with one or more grooves, a, and shoulder b, in combination with the plate B, provided with one or more rings, c, constructed to operate as shown.

162,506. HOSE-COUPLINGS. T. L. Summers, Boston, Mass. [Filed Oct. 24, 1874.]



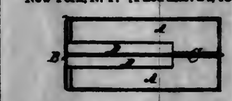
Brief.—The external band, which connects with the internal or male shank by means of an internal flange and radial studs, is made in two parts, the clamping part screwing into the other, by which the engagement of the flange and studs is made firmer.

The combination, with either coupling-ring extended to form a tail having an annular end rib, c, adapted to be introduced into the end of the hose-section, of an outer inwardly-threaded collar engaging with the coupling-ring near its joint end, and an outwardly threaded end collar having an annular interior end groove adapted to secure the hose-section on said rib when said end collar is screwed into said outer collar, substantially as specified.

162,507. METALLIC LOOPS FOR COATS. F. W. Tilton, New Bedford, Mass. [Filed Jan. 16, 1873.]

Brief.—A piece of spring-wire is bent in U shape, and hooks are formed on the free ends. A recessed guard or apron is arranged to slide upon the wire, and covers the points of the hooks after an article is attached. The edges of the guard may be slotted, and the wire correspondingly bent, so that it will spring into the slots.

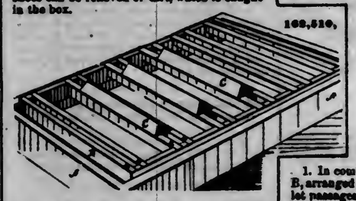
1. The U-shaped hook or loop A, constructed from a single piece of spring metal, each of its branches or arms having a hook, C, in combination with the sliding guard B, having the apron or flange E, for preventing the displacement of the suspended article and protecting the points of the hooks, substantially as described.



2. In combination with the spring hook or loop A, constructed with the shoulders a' a', the guard B, having the slots b', and apron or flange E, substantially as and for the purpose described.

162,508. PAPER BOXES. Jas. W. Turner, Boston, Mass. [Filed Mar. 15, 1875.]

As a new article of manufacture, the photograph positive and negative holder, having its inner case or drawer B made or provided with the three chambers c e f, arranged as described, and with the intermediate chamber open at one end or side, as stated.



162,509. PAPER BOXES. Willy Wallach, New York, N. Y. [Filed Mar. 24, 1875.]

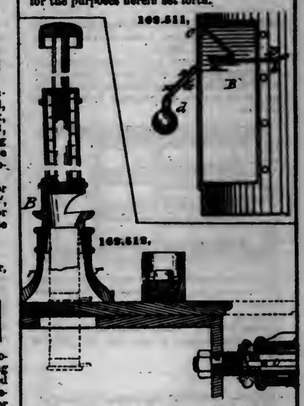
As a new article of manufacture, a box consisting of two divisions or boxes, A A, connected to a back piece, B, by means of suitable hinges a a, having a central board, C, firmly attached to the back B, provided, on both sides, with partitions or pockets D D, in the manner and for the purpose substantially as herein specified.

162,510. FOOT-MATS. Andrew Weaver, Dubuque, Iowa, and Peter W. Cornelius, Minneapolis, Minn. [Filed Mar. 6, 1875.]

Brief.—Inside a box is supported a removable frame, having slats extending across it, and in the slots between the slats are inserted removable rubber scrapers, upon which the shoes can be relieved of dirt, which is caught in the box.

The box A, frame B, and slats c c, in combination with the rubber cleaners C, provided with the tongues d, substantially as and for the purpose set forth.

162,511. STOVE-PIPE DAMPERS. Harison H. Wilson and William H. Robb, Wabash, Ind. [Filed Feb. 8, 1875.]



Brief.—The smaller wing prevents the larger from rising above a horizontal position.

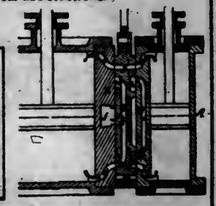
1. A stove-pipe damper consisting of an upper smaller wing, C, and a main wing, D, provided with a curve, b, as and for the purposes herein set forth.

2. The combination of the stove-pipe A, half-bor B, rod a, two-winged damper C D, substantially as and for the purposes herein set forth.

3. In combination with the two-winged damper C D, hung upon the rod a, the handle G, provided with notches n, and the movable weight d hung thereon, substantially as and for the purposes herein set forth.

162,511.

162,512. CARTRIDGE-LOADING DEVICES. Friedrich Wohlgemuth, New York, N. Y. [Filed July 3, 1874.]



1. A cartridge-charger consisting of a tube, B, made with an opening in the side, by which to charge the cartridge, combined with a cap (screwed in the top thereof) and a rammer, fitted with a conical head, (screwed on the end,) to fill a correspondingly-shaped hole in said cap, by which the rammer is held up by the friction of the cone in the hole of said cap.

2. The tube r, in which the cartridge-case is held, in combination with a base-piece, fitted with a sliding section to admit and support or discharge the cartridge, as shown in Fig. 1 of the drawing, and as described herein.

162,513. VALVES FOR COMPOUND ENGINES. Walter Wright, Tapleyville, Mass. [Filed Mar. 24, 1875.]

Brief.—A single valve, having two faces inclined to each other, admits live steam to the small cylinder, exhausts it into the low-pressure cylinder, and exhausts from said cylinder into the atmosphere. The valve is held to its seat by a bar and set-screws.

162,513.

1. In combination with the two cylinders A B, arranged and provided with inlet and outlet passages and ports a e', d d', e, f, and e', as described, a depressed parallel-faced valve, F, arranged between each two cylinders, and provided with the open chambers h h', the transverse passages g g', and the connected ports i h h', all being to operate as specified.

2. The combination of the bearing or support rail I and its adjusting-screws m with the wedge-shaped valve F and the two cylinders A B, arranged and constructed substantially as specified.

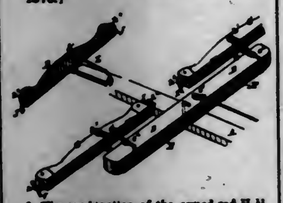
160,514. VARNISHING OR COATING FOR PRINTERS' INKING-ROLLS. Benj. F. Allen, Boston, Mass. [Filed Apr. 9, 1875.]

Brief.—The roll is washed and coated with the varnish. The coating can be renewed as often as necessary.

The process herein described for renewing the surfaces of printers' rollers by a coating of varnish consisting of boiled oil, soap, and resin, substantially as and for the purpose set forth.

160,515. MACHINES FOR LAYING PIPES WITH CEMENT. Michael Allen, Natick, Mass. [Filed Dec. 17, 1874.]

Brief.—The pipes, being placed vertically on a frame and filled with cement, have passed upward through them plungers of less diameter, on a slide reciprocated by racks and pinions.

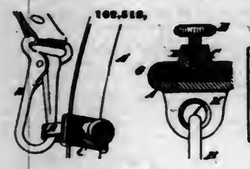


In a machine for lining pipes with cement, the combination of the reciprocating rack-frame G H, working in guides attached to frame A, cog-wheels I I, and shaft J, with pinions L L, for rapidly operating the forms D D, substantially as and for the purpose herein set forth.

160,516. COMBINED BLOTTERS, PAPER-CUTTERS, AND RULERS. Frank B. Angell, Los Angeles, Cal. [Filed Nov. 14, 1874.]

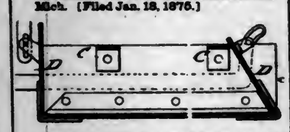
The paper-cutter rule A, having two cross-slots, D D, at one end, and a single cross-slot at the other, to admit of receiving the blotting-paper, in the manner described.

160,517. HOOKS-DETACHING. Amos Barker, Nebraska City, Nebr. [Filed Jan. 30, 1875.]



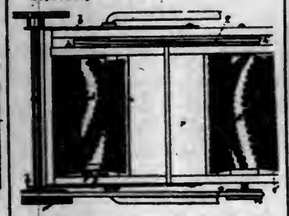
1. The combination of the armed rod H h^1 h^2, and the pivoted half-circle hooks, with the double-trees, substantially as shown and described.

2. The combination of the armed rod H h^1 h^2, the pivoted half-circle hooks I, and the cords or chains G, with the single-tree C, substantially as shown and described.



3. The combination of the armed rod H h^1 h^2, the armed rods H h^1 h^2, the cords or chains G, and the cord F, with the double-tree E, and the single-tree C, substantially as shown and described.

160,518. HITCHING DEVICES FOR HORSES. Charles H. Bunnah, Holyoke, Mass. [Filed Mar. 12, 1875.]

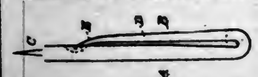


The sliding lock C, consisting of hub D, screw E, mortise F, plate G, and perforated extension H, the whole being adapted to be used with strap A and snap B, in the manner described.

160,519. LOCOMOTIVE ASH-PANS AND DAMPERS. Walter W. Beach, Saconawbe, Mich. [Filed Jan. 18, 1875.]

The dampers D D, hinged to the bottom ends of ash-pan, longer than fire-box, and folding inwardly between the sides or braces C, thus always preventing escape of fire, while they are allowed to fold under the bottom, and permit the pan to be cleaned without removal.

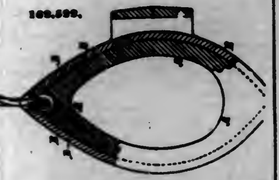
160,520. CARPET-SWEEPERS. Frank M. Beckford, Haverhill, Mass. [Filed Mar. 20, 1875.]



1. The combination, with the box A, of the driving-wheels O O', their axle a, and the pendulous arms or levers b b, the whole being arranged substantially as and for the purpose set forth.

2. In a carpet-sweeper, the combination, with the case A, of the two brushes c c', arranged as described, and provided with actuating mechanism, substantially as set forth.

3. In a carpet-sweeper, substantially as specified, the combination, with the case A and the brushes c c', of the removable duplex dust-receptacle, constructed and arranged substantially as shown and described.



4. The improved carpet-sweeper, consisting of the box A, self-adjusting driving-wheels c c', provided with actuating mechanism, as described, and the duplex dust-receptacle, the whole being combined and arranged substantially as set forth.

160,521. FEED-TAG NEEDLES. L. B. Benton, Milwaukee, Wis. [Filed Jan. 18, 1875.]

In a needle constructed substantially as described, the recess F for the reception of the point E, and the portion D made wider than the portion C at the line A B, substantially as shown and described, for the purpose set forth.

160,522. TELL-LOCKS. Frank S. Berry and G. F. Alexander, New Sharon, Me. [Filed Feb. 18, 1875.]

The combination, with body A, strap B, and buckle C, of the perforated plate D, securing buckle to body, and itself covered by strap, substantially as shown and described, for the purpose specified.

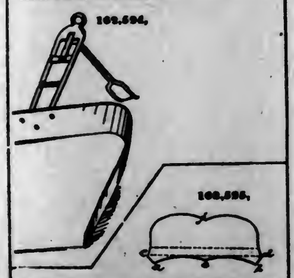
160,523. CARBURETTERS. Dana Bickford, New York, N. Y. [Filed Apr. 6, 1875.]

Brief.—The open-work basket, holding the absorbent material, is attached to the floating bell, and is suspended by a coil-spring extending from the top of the carbureting-chamber.

1. The combination of the floating bell open at its bottom, the open-work cage or basket surrounding the same for holding the absorbent material, and the inlet-tube H, extending from the top of the carburetor to the top of the bell, as and for the purposes set forth.

2. The combination, with the float D and its bell C and gas-inlet, of the open-work lining B and absorbent G, for the purposes set forth.

3. In combination with the bell or basket, a spring or springs, exerting a gentle lifting action on the bell or basket, for the purpose set forth



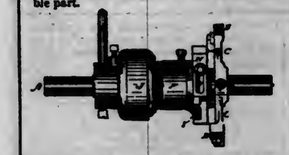
---

160,524. DUST-PANS. Francis D. Bliss, New Haven, Conn., assignor of one-half his right to O. W. Tuttle, same place. [Filed Mar. 31, 1875.]

Brief.—A supporting-brace which may be inclosed in or folded under the handle, and held in folded or extended position by a spring.

1. A dust-pan provided with a leg or brace, which is attached to the handle by a pivoted connection, and arranged to fold within or parallel with the handle, substantially as described.

2. The combination, in a dust-pan handle, of a leg or brace and a double-acting spring, substantially as described.



160,525. STIFFENERS FOR BOOTS AND SHOES. Guillaume Belvin, Montreal, Canada. [Filed Feb. 5, 1875.]

A stiffener for boots and shoes, provided with the different parts a b c d e f, the whole substantially as and for the purpose hereinbefore described.

160,526. CUTTER-HEADS. Martin Buck, Lebanon, N. H. [Filed Nov. 2, 1874.]

Brief.—For cutting grooves, slots, or mortises of different widths, an adjustable and expansible cutter-head is formed in two parts, each provided with a suitable number of adjustable cutters, one part being stationary on the shaft, and the other adjustable to or from said part, by means of a swiveled nut operating upon a screw-sleeve on the adjustable part.

1. In an expansible cutter-head, the combination of the swiveled screw-nut J and screw-sleeve F, carrying the cutter-arms G, constructed and operating substantially in the manner described and specified.

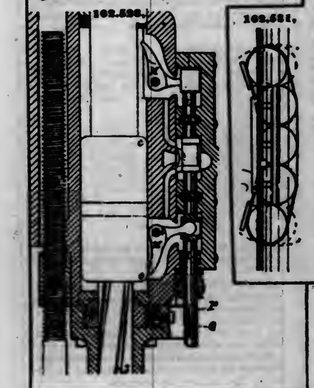
2. The combination of the shaft A with sleeve B, provided with arms C, screw-sleeve F, provided with arms G, and the screw-nut J, constructed and operating substantially in the manner described and specified.

160,527. SEED-PLANTERS. William V. Burgess, Baxter Springs, Kans. [Filed Mar. 12, 1875.]

Brief.—Upon a shaft revolving within the closed cylinder are two seed-wheels, that are laterally adjustable beneath the hoppers, to increase or diminish the quantity of seed to be sown, or close the cups entirely. Motion is imparted to the shaft by a cog-wheel gearing with a similar wheel on the bub of one of the bearing-wheels.

In combination with the closed cylinder I, hoppers f^1, and dropping-cylinders H H^1, the gear-wheels f g, shaft A, short arm m, supporting-plate n, bent lever K, and guide-rod s, the whole combined to operate as and for the purpose specified.

160,528. ROCK-DRILLS. Charles Burleigh, Fitchburg, Mass. [Filed Apr. 23, 1874.]



Brief.—A bent tappet is placed in the induction-port at each end of the cylinder. Said tappets are raised by the beveled ends of the piston, and operate the valve. The back cylinder-head forms a bearing for the turning-bar and ratchet, and is closed to the atmosphere.

1. The combination of a series of horizontal tubes, divided longitudinally and transversely into compartments, and vertical tubes arranged in groups or series corresponding with said compartments, substantially as and for the purpose set forth.

2. The combination, with the horizontal or bottom portion of floating docks or ..., of vertical tubes divided into compartments for water and for storing air under pressure, communicating by valves, as and for the purpose set forth.

3. The combination of horizontal tubes, vertical tubes arranged in groups at the corners of the horizontal tubes, and short intermediate side tubes, as and for the purpose set forth.

4. The combination, with the central horizontal portion of floating docks or pontons, of hinged or self-adjusting outer tubes, substantially as and for the purpose set forth.

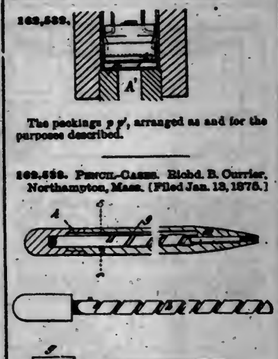
160,529. PORTABLE TOILET WATERS AND EXTRACTS. A. Gibbs Campbell, Paterson, N. J. [Filed Mar. 6, 1875.]

As an improved article of manufacture, a compound for the production of toilet waters or extracts by, lixiviation with alcohol, the compound consisting of a mixture of carbonate of magnesia with one or more fragrant attars.

160,530. HATS. John Case, Alexandria, (Frenchtown P. O.,) N. J. [Filed Mar. 6, 1875.]

The combination of the outer conical or hemispherical portion A and flat-topped inner part B, the same being united at the point shown, whereby the spaces C and D are formed, as shown and described.

160,531. FLOATING DOCKS AND PONTONS. Josiah L. Clark and Jno. Standfield, Westminster, England. [Filed Sept. 11, 1874.]

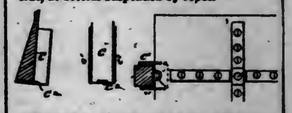


1. The combination of the boat levers M, with the annular cam-surfaces s s on the piston, said levers moving laterally thereto, as described, and the valve, where said levers are arranged within the air-passages which lead from the valve into the cylinder, substantially as described.

2. The closed back cylinder-head formed with a closed bearing for the back end of the piston-bar, and a recess for the turning-ratchet, constructed and operating substantially as described.

3. The lever Q provided with a spring, S, to hold the same in a central position in combination with the valve-rod having an elongated slot P, substantially as described.

160,532. PENCIL-CASES. Richd. B. Currier, Northampton, Mass. [Filed Jan. 13, 1875.]



1. In a pencil-case, the combination of the spiral b and splined follower g, the latter form 1 to grasp the end of the lead, both operating together to retract or extend the lead by the movement of the head e, as shown and described.

2. The combination of the stud s, stop x, channel h, and groove o, constructed in the manner as and for the purpose set forth.

160,533. SAFETY APPARATUS FOR LIFTS OR HOISTS. Henry A. Davis, London, England. [Filed Feb. 6, 1875.]

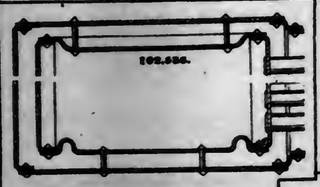
Brief.—Should the hauling-rope break, the platform would drop onto a wedge at each side, at bottom suspended by ropes.

The wedge c, having a tooth, c^1, and flanges c^2, or other suitable guides, as herein set forth, and for the purpose specified.

160,534. DEVICES FOR FELLING TREES. C. C. Curtis, Coos, N. H. [Filed Mar. 20, 1875.]

Brief.—A pole is placed with its upper end against a tree, its lower resting upon an inclined platform, one end of which may be raised by a screw, causing the pole to push against the tree.

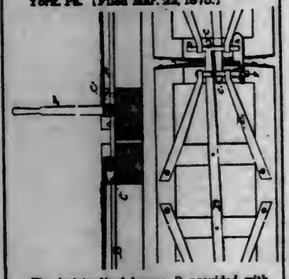
A device for controlling the falling of cut or sawed trees in any required direction, being composed of a spiked detachable pole, a hinged inclined supporting-piece, with seats or recesses for the same, an intermediate supporting-collar with hinged brace-rods, and of an elevating mechanism to raise the inclined piece and force the pole against the tree, substantially as specified.



160,535. SAFETY APPARATUS FOR LIFTS OR HOISTS. Henry A. Davis, London, England. [Filed Feb. 6, 1875.]

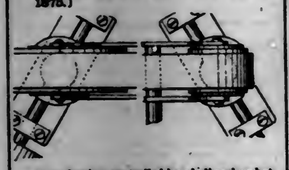
Brief.—Should the hauling-rope break, the platform would drop onto a wedge at each side, at bottom suspended by ropes.

The wedge c, having a tooth, c^1, and flanges c^2, or other suitable guides, as herein set forth, and for the purpose specified.



160,536. STEAM-BOILER FURNACES. Walter Dawson and James Hughes, Scranton, Pa. [Filed Apr. 3, 1875.]

Brief.—The portions of the inner walls of the furnace adjacent to the joints are bulged inward, forming a partial shield, to prevent the flame coming in direct contact with and burning out the rivets.



A fire-box or furnace of a steam-boiler, having the side sheets bulged or projected inward, substantially as seen in the drawing, for the purposes described.

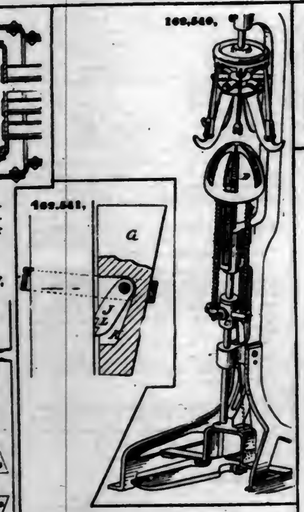
162,537. CAR-COUPLINGS. Abram Dehuff, York, Pa. [Filed Mar. 22, 1875.]

The longitudinal braces B, provided with ends C, locking upon the cross-bars D, in combination with the springs E, handle or lever F, and pivoted latch A, substantially as and for the purposes set forth.

162,538. MECHANICAL MOVEMENTS. James B. Dever, Goshen, Ind. [Filed Mar. 29, 1875.]

A mechanism controlled by a ball and socket on a revolving shaft, by means of which pulleys, gearing, all kinds of wheels, and other mechanical movements may be actuated, substantially as shown and described.

162,539. PRESERVING MEAT. Edward A. Duncan, Washington, D. C., assignor of one-half his right to J. Halley, Boise City, Idaho. [Filed Feb. 16, 1875.]



The process of preparing flesh or meat by first separating it into pieces of a pound each; more or less, then treating with a hot-water bath, as glue, and incorporating into the mass nitrate of potash and chloride of sodium, then grinding the mass into a fine pulp, and after thoroughly drying said pulp, pressing the same into suitable molds, substantially as and for the purpose described.

162,540. HAT-STRETCHING MACHINES. R. Hahnemayer, Yonkers, N. Y. [Filed Mar. 29, 1875.]

Brief.—After the hat-body is stretched, the "former" recedes to and retires within the peripherial limits of stripper D, thus leaving the body on the stripper wholly cleared from the former, free to be received upon the stripper to a different point, so as to admit of a repetition of the stretching operation.

In a hat-stretching machine, a skeleton or ribbed former, in combination with a clearer or stripper, substantially as described.

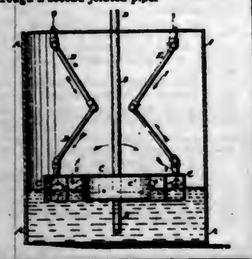
162,540.

162,541.

162,541. SCAFFOLD-CLAMPS. William C. Fellows, Toledo, Ohio, assignor to himself and C. Whittingham, same place. [Filed Jan. 4, 1875.]

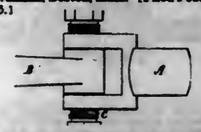
Brief.—A serrated pawl is introduced within a scaffold-clamping support for additional security against slipping.

The combination of band F, having notches f, recessed key G, and key-pivot H, having end-ratcheted arm J L, all constructed and arranged, as shown and described, to form an adjustable scaffold-bracket.



162,542. CONSTRUCTION OF WATCH-MOVEMENTS. James E. Flynt, Duluth, Minn. [Filed July 11, 1874.]

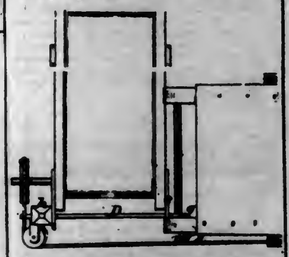
A watch-movement in which motion is communicated from the mainspring-barrel to the escapement-wheel through a single pinion and wheel, said wheel being of nearly the circumference of the pillar-plate, and arranged between the face and the pillar-plate.



162,543. CARBURETING GAS-MACHINES. E. Porter, New York, N. Y. [Filed Feb. 5, 1875.]

Brief.—The gas or air passes through a jointed pipe to the float, where it passes through an annular chamber open at the bottom to the hydrocarbon fluid, and then escapes into the tank. In order to pass to the burners, the enriched vapors must enter and pass through another annular chamber of the float, from which it passes out of the tank through a second jointed pipe.

The combination, with tank A and two pipes, D E, jointed as described, of the float C, having holes 1 2 3 4, air-chamber c^1, and bottom open passages c^2 c^3, all constructed and arranged substantially as set forth, whereby the air is entered through pipe D, passes through hole 1 into passage c^2, thence through hole 2 into upper part of tank, thence through hole 3 into passage c^3, and thence through hole 4 into a jointed discharge-pipe, E.

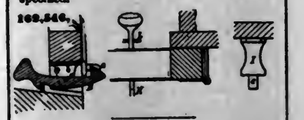


162,544. THILL-COUPLINGS. O. B. Franklin, Guilford, Vt., assignor to himself and Ira B. Franklin, Boston, Mass. [Filed Feb. 3, 1876.]

The combination of the duplex left and right threaded screw-bolt C and the duplex right-threaded screw-nut D with the clip A and the arm B, all provided with conical bearings, substantially as set forth.

162,545. STRAW-CARRIERS FOR THRASHING-MACHINES. George Gentzel, Spring Mills, Pa. [Filed July 23, 1874.]

Brief.—The carrier is adapted to deliver the straw in rear of the machine, or at either side, as may be preferred.

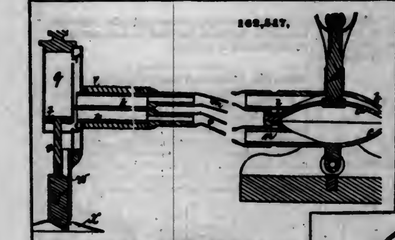


The movable supporting-rod D, provided with the hook g and leg or support A, in combination with the straw-carrier B and thrashing-machine A, substantially as and for the purpose herein specified.

162,546. SHUTTER-FASTENERS. Henry H. Ham, Jr., Portsmouth, N. H. [Filed Mar. 24, 1875.]

Brief.—A suitable catch attached to the wall or side of the house is formed with an outwardly-projecting tenon, and the frame or carrier of a gravitating-latch, secured to the under part of the shutter, is provided with a corresponding mortise, into which the tenon enters, thus securely locking the device.

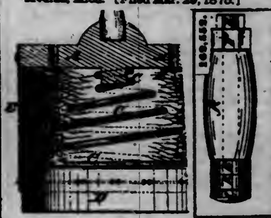
The combination of the catch I, and its tenon e, applied to the front of a building, with a gravitating-latch, H, and its carrier G, provided with the mortise h, and fixed to a shutter or blind, all being substantially as specified.



162,546.

162,547. CLOTH-CUTTING MACHINES. Chas. F. Harlow, Boston, Mass. [Filed Aug. 5, 1874.]

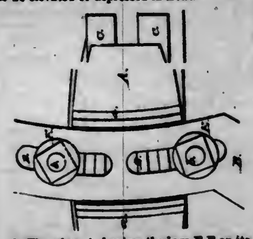
Brief.—The knife, which is pushed by hand against the cloth in any desired direction, is attached to a piston operated by an air-engine, consisting of a flexible diaphragm, secured at the edge between a pair of concave metal disks, each of which is connected to the piston-cylinder by a flexible tube. The diaphragm is moved up and down to compress and rarefy the air by means of an eccentric.



162,547.

1. A machine for cutting cloth or other textile and fibrous materials, consisting of the laterally-adjustable flexible diaphragm e, hollow case b c, pipes f m k and e o p, the handle l, cylinder q with its piston f and rod p, the cutter v with its guide w and slotted foot-plate x, as and for the purpose herein set forth and described.

2. The mechanism, as herein shown, for the transmission of a reciprocating motion, consisting of a laterally-adjustable flexible diaphragm, e, hollow case b c, pipes f m k and e o p, the cylinder q with its channels r s, and movable piston t, as herein shown and described.

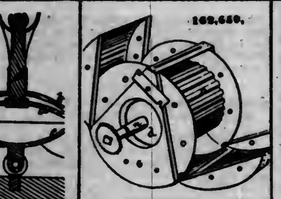


162,548. CLOTHES-POUNDERS. Chauncey B. Hart, Fairport, N. Y., and Geo. W. Hart, Medina, Mich. [Filed Mar. 29, 1875.]

An improved atmospheric clothes-washer, formed by the combination with each other of the disk or head A, provided with a handle, B, and one or more downwardly-opening valves, F, the coiled spring C, the band or ring D, and the flexible connecting-band E, substantially as herein shown and described.

162,549. PLOWS. C. A. Hege, Salem, N. C. [Filed Mar. 17, 1876.]

Brief.—A plate having lugs upon its back to enter the plow-beam, and a channel with vertical slots on its face to receive the standard, both being corrugated concentrically across their surfaces, to allow the plow-beam to be elevated or depressed in front.



1. The plate A, having the lugs F F on its back, and concentric horizontal grooves O between curved vertical flanges a a on its face side, as and for the purpose set forth.

2. The standard B, of the shape described and shown, having the horizontally-eccentric grooves K and the curved vertical slots D, as set forth.

3. The combination of the plate A, standard B, cuff A, beam H, and wedges c c, all constructed and arranged, as and for the purpose set forth.

162,550. WASHING-MACHINES. William H. Hillson, Oshkosh, Wis. [Filed Oct. 21, 1874.]

The combination of the two cylinders c d and e f with the roller l, spiral spring k, the shaft s, and the case c b, substantially as described, and for the purposes set forth.

162,551. COMBINATION-LOCKS. Saml. Hipp, T. Wehagen, and Chas. Nickel, Cleveland, Ohio. [Filed Mar. 25, 1875.]

1. The spindle G, carrying-wheel D, springs e d, and nut L, in combination with the notched tumbler-wheels C E, dents o f, and frame F, in the manner substantially as described, and for the purpose set forth.

2. Index-wheel H, spindle G, wheels C D E, nut L, and frame F, in combination with the catch O, provided with shoulders P P, substantially in the manner as described, and for the purpose set forth.

162,550.

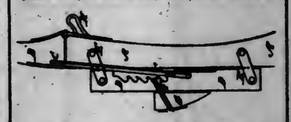
162,551.

162,552. WAGON-BOLTS. J. W. Hollenbeck, Aurorsville, Wis. [Filed Mar. 11, 1875.]

Brief.—By pressing bolt through sleeve and washer as far as the spring will permit, the feathers are liberated from the depressions in which they usually rest. The bolt may then be turned until the feathers come opposite the slots in the washer, and then easily withdrawn.

The lugs d on the end of bolt B, in combination with the washer F, with slots g and recesses h, and spring E and clip A, substantially as described.

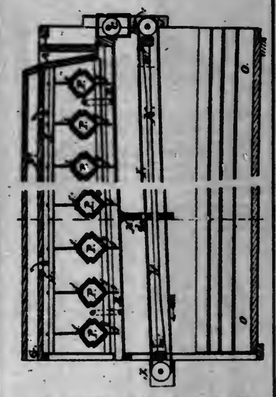
162,552.



162,553. UMBRELLA-SUPPORTS FOR VEHICLES. Alex. J. Hood, Warren, Ill. [Filed Mar. 1, 1875.]

1. The grooved arm D and band F, in combination with clip E and disk C, as and for the purposes described.

2. The wrenches H and G', in combination with an umbrella-holder, as and for the purposes described.



162,554. WAGON-JACKS. Wm. H. Horn, Santa Cruz, Cal. [Filed Mar. 6, 1875.]

Brief.—A bar, with ratchet-teeth on its back, works on links parallel to, and in front of, the post. A rod on each side attaches it by the middle to a lever hinged to the top of the post, which, in passing over its center of motion, brings also the extremity of the rods. A block in front of the bar is vertically adjustable by an embracing link and the ratchet.

An improved wagon-jack, formed by the combination of the standard A, the hinged lever B, the pivoted link or loop C, the sliding toothed bar D, the link F, the adjustable block G, and the stop H with each other, substantially as herein shown and described.

162,555. MIDDLINGS-PURIFIERS. Jarvis W. Houghtalin, Fairbury, Nebr. [Filed Apr. 22, 1874.]

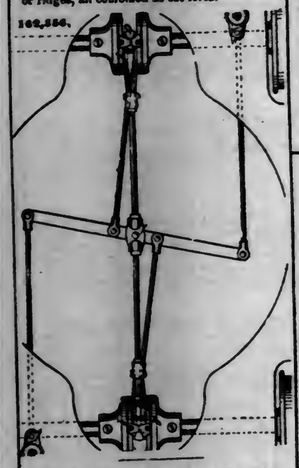
1. In a middlings-purifier, the combination, with the screen, of the adjustable expansion-valves F, when constructed and arranged to operate substantially in the manner as and for the purpose specified.

2. The combination, with the screen or bolt of a middlings-purifier, of the brush H, provided with an abutment or bearing, substantially as described, and an endless belt, provided with a projection for imparting an intermittent reciprocating motion to the brush, for the purpose specified.

3. The belt I, provided with lug d, passing over pulleys J J in one direction, in combination with inclined planes w w', plate I, and brush H placed vertically or horizontally, as fully set forth.

162,556. CAR-BRAKES. Solon G. Howe, Detroit, Mich., assignor to himself and J. W. Cheney, same place. [Filed Feb. 20, 1875.]

1. The car-brake constructed of double shells, keyed to the axle, and sliding friction-cones fitting therein, and to be operated by

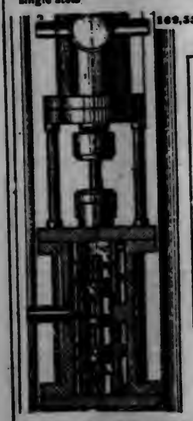


wedge-bail and spring-braces with intermediate lever-connection from the brake-wheels of the car, all combined substantially as and for the purpose set forth.

2. The sliding friction-cones, provided with friction-rollers at upper and lower parts, in combination with the sliding wedge-bail to act thereon, for pressing the levers against the shells, as set forth.

3. The combination of the center-pin of the upper friction-rollers of the cones, having oil-channel throughout its length, with the axle, for lubricating axle, cones, and rollers, substantially as described.

4. The spring-braces attached to tapering spring-brace block, having binding side flanges or ridges, all combined as set forth.

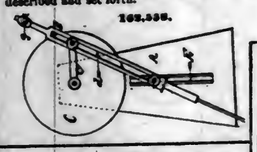


162,556.

162,557. STEAM PUMPING-ENGINES. Chas. H. Hudson, Chicago, Ill. [Filed Jan. 18, 1875.]

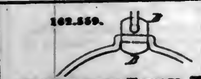
Brief.—The valve is operated by steam from the main cylinder. The eduction-pump valves open toward each other, and are guided by a single stem

162,557.



1. The three-disk valve J', having a stem extension at each end, the separate passages M M', through which induction and exhaust alternate, the chamber L', and the common parallel exhaust-passage m, communicating with said chamber by means of openings f f' of different sizes, all combined and arranged as shown and described, to operate as specified.

2. The water-eduction valves T T, having their stems extended, and one of them made tubular to receive the other, and the spring V encircling the same, as shown and described, for the purpose specified.



162,558. AUTOMATIC FANS. W. W. Hunting, Aiken, S. C. [Filed July 30, 1874.]

The clock-work A B C e, with a vibrating pendulum, D, having a slot, *d*, for the crank *e*, and a movable fulcrum, *d'*, adjusted in the ways E, the said pendulum carrying on its lower end a fan, F, and on its upper end an adjustable counter-weight, G, all constructed and arranged to operate in the manner herein described and set forth.

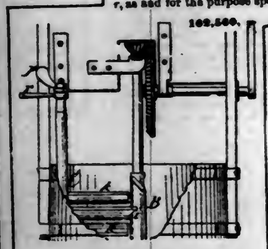
162,558.

162,559.

162,559. LANTERN-HANDLES. Theo. James, North Adams, Mass. [Filed Mar. 12, 1875.]

Brief.—The block turns on the bail, and the ring slides through the block.

The combination of the swinging and sliding block B with the bail C and ring A, substantially as herein described, for the purpose set forth.



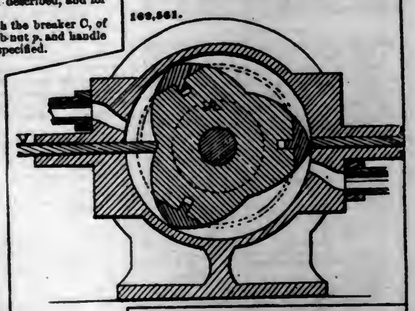
162,560. CHURNS. Melvin Jinoks, Wallace, assignor of one-half his right to F. M. Conley, Cohocton, N.Y. [Filed Sept. 21, 1874.]

Brief.—A revolving vertical dasher, its arms passing through the arms of a vertical shaft at the periphery, this side shaft movable upon its axis, so as to regulate the extent of influence of the revolving and fixed arms upon the mass in the different stages of the work.

1. The combination, with the revolving dasher B, of the breaker C, located on one side of the churn, and adjustable to different positions on its axis, as shown and described, and for the purpose specified.

2. The combination, with the breaker C, of the tenon-bearing *m*, thumb-nut *p*, and handle *r*, as and for the purpose specified.

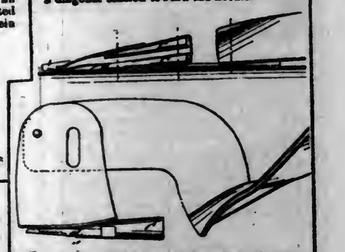
162,560.



162,561. ROTARY ENGINES. Diodorus S. Jones, Shamokin, Pa., assignor of one-half his right to William H. Douty, same place. [Filed Mar. 19, 1875.]

Brief.—The slides are connected by intermediate levers to the rod carrying the tappet-plates which operates the valves.

1. The combination of the piston A, slides E E', and their connections, with the rod P, plate Q, tappets S, and teeth R and rods X, substantially as set forth.

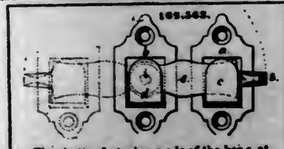


2. The auxiliary steam-chests W W', provided with the cut-off valves V V' and ports *f f' f'' f'''*, in combination with the rods X, tappets S, teeth R, and rod P, substantially as shown and described.

162,561.

162,562. BINDING ATTACHMENTS FOR SEWING-MACHINES. H. C. Jones, Brooklyn, N. Y. [Filed Mar. 12, 1875.]

Brief.—The lower guide-scroll of the binder has a tongue extending forward, that bears upon the binding and guides it, too. Attached to the upper scroll is a serrated spring, that bears upon the upper binding and holds it when the presser-foot is raised, and also gives a diagonal tension toward the needle.



1. The binding attachment to sewing-machines composed of adjustable spiral rear guide and double tapering front guide, with fold-controlling tongue and serrated spring-arm, substantially in the manner and for the purpose set forth.

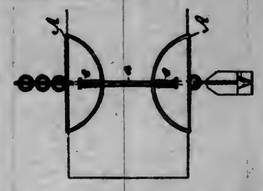
2. The combination, with the double tapering front guide, provided at the front end of the lower scroll with shorter side extension and forward-extending arm or tongue, of a serrated-top spring-arm, arranged on the upper scroll, substantially as and for the purpose described.

162,563. SHUTTER-FASTENERS. A. D. Judd, New Haven, Conn. [Filed Nov. 26, 1874.]

Brief.—A swinging bar, formed with projecting thumb-piece, is attached and swings upon its rivet, in such manner that the bar can be turned entirely over to the right or left, engaging with the hook upon the opposite plate, from which it cannot be drawn out laterally, on account of its projecting thumb-piece, the construction making it readily reversible.

162,563.

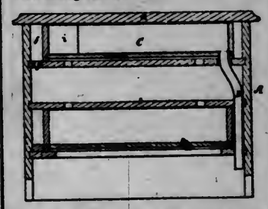
The shutter-fastening made of the bar *a*, attached at one end behind the hook *d* of the plate *b*, and swinging into the hook *c* of the plate *a*, and having the thumb-piece *e*, projecting at the outer end of the said bar *a*, substantially as and for the purposes set forth.



162,564. CURTAIN-FIXTURES. R. M. Judd, Brooklyn, N. Y. [Filed Nov. 26, 1874.]

The roller end *c*, made with elliptical recesses placed diagonally as specified, in combination with the fastened axis, stops *i* and spring curtain-fixture, substantially as set forth.

162,565. TICKET-CLASPS. Alphonso Le Roy and William M. Hunting, Little Falls, N. Y. [Filed Apr. 5, 1875.]

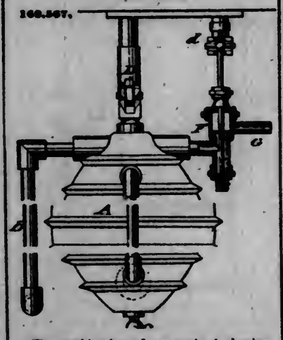


Brief.—Two bow-shaped flanged clamps, united by a rod, provided with springs, interposed between the headed ends of the rod and the bowed portion of the clamps. It is also provided with a guide, consisting of a tube and rod working within each other, the former attached to the upper clamp, and the latter to the lower clamp.

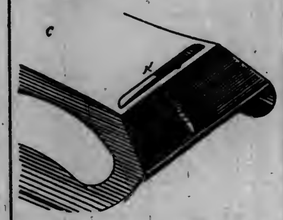
A ticket-holder consisting of the two clamping frames A, united by the rod *e*, having the springs *c* arranged thereon, with the pin P attached, all being constructed to operate substantially as described.

162,566. COMBINED PASTRY-TABLES AND REFRIGERATORS. Henry Magee, South Boston, Mass. [Filed Mar. 24, 1875.]

Brief.—The ice-box pivoted on its drip-pipe turns horizontally in and out beneath the stone cover of the commode. Air passes from the ice-box into adjacent chamber, and downward through the case.



1. The ice-holder C, and its vertical pivotal drip-pipe D, fastened together, and applied to the partitioned cabinet A, viz, so that the pipe shall turn with the ice-holder therein, and answer the purposes of a pivot thereto.



2. In combination with the stone top *a* and the ice-holder C, curved on one end *i*, as shown, the cabinet A, provided with one or more passages or holes, *g*, leading from the space *f*, contiguous to such end, to the compartment next beneath that in which the ice-holder is placed, all being as represented.

162,567. STEAM-TRAPS. James M. Meherg, Montreal, Canada, assignor to R. Patton, same place. [Filed Mar. 1, 1875.]

Brief.—When a sufficient amount of condense-water has accumulated in the trap to overbalance the counter-weight, the trap falls, causing the valve-seat to recede from the stationary valve, and allowing steam to enter the trap and force water to the boiler.

162,567.

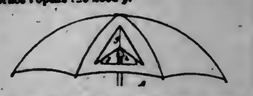
1. The frame A, having the handles B and horizontal surface or base C, substantially as shown and described.

2. The combination of the clamp H, having the ledge L, screw I, and file-cut knife E, with the inclined part D, substantially as specified, and for the purposes set forth.

162,568. PIANO-STOOLS. Thomas Miller, Boston, Mass. [Filed Sept. 10, 1874.]

Brief.—The stool-top is pivoted to a central standard, and also to three supporting-arms, two of which are pivoted to a sleeve encircling the standard, and the other arm has a spring-catch connection at its lower end with said sleeve. A lower sleeve bearing a pawl, which engages with a ratchet on the standard, also turns with the standard on the leg-frame.

162,569.



1. The combination, with the seat A and hinged standard C, of the hinges K K N, braces I I J, and collar M, substantially as and for the purpose specified.

2. The hinged brace J, provided with the spring O and rack R, in combination with pin P and projecting piece M', substantially as and for the purpose specified.

3. The combination of the socket B, tube E, sleeve F, pin F', and standard C, as and for the purpose specified.

162,570. UMBRELLAS. Hosea B. Mitchell, Boston, Mass. [Filed Nov. 13, 1874.]

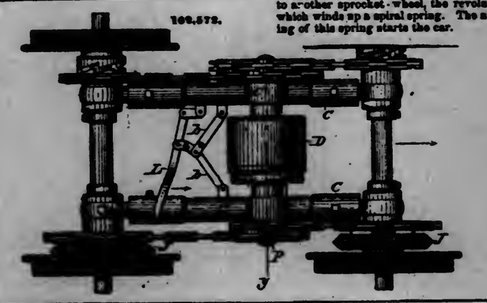
Brief.—When the umbrella is raised the brace *i* opens the hood *g*.

1. An umbrella or a parasol, A, provided with one or more lookout openings or holes, *f*, and with a folding hood, *g*, to each, all being arranged substantially as and for the purpose as specified.

2. The combination of the hood-expander *h* and its brace *i* with the umbrella or parasol A, provided with the lookout-opening *f* and its hood *g*, all being arranged and applied substantially in manner and to operate as set forth.

162,571. ASH-SIFTERS. W. Montgomery, Chicago, Ill. [Filed Feb. 13, 1875.]

Brief.—On one side of the sieve is a channel, through which cinders are passed to the ash-box below, after the sifting is completed.



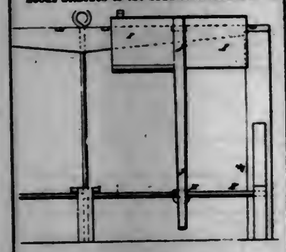
The spout or channel F in the sifter C D, communicating with the ash-box A, substantially as and for the purpose herein shown and described.

162,572. CAB-STARTERS. C. F. Murdock, Detroit, Mich. [Filed Apr. 19, 1875.]

Brief.—Laterally-sliding bars force a V-shaped brake-block against inner side of wheel. To the block is rigidly attached a sprocket-wheel, which is connected by a chain to another sprocket-wheel, the revolution of which winds up a spiral spring. The unwinding of this spring starts the car.

162,572.

1. The combination of concave flange J, the friction-blocks c, pivoted levers f, and laterally-sliding disk, all substantially as and for the purpose set forth.



2. The combination of the bars C, capable of lateral motion with the levers L and A, car-axles, brake, and clutch, substantially as set forth.

3. The shaft P, in combination with the drum D, spring A, and friction-clutch for preventing the spring from unwinding, all substantially as set forth.

4. The combination of the sliding bars C, with the sprocket-wheels and chains, the drum, with its spring and clutch, the friction brakes and clutches, and the axles and wheels of a car, all substantially as and for the purpose set forth.

102,572. HOD-ELEVATOR. Wm. Murphy, New York, N. Y. [Filed Nov. 21, 1874.]

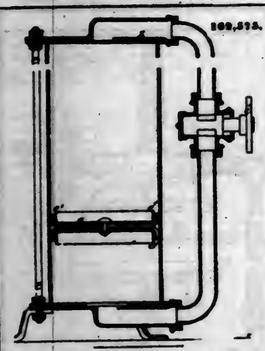
Brief.—Rods are attached to the inner sides of the frame-work of the elevator, to receive hooks attached to the handles of the hods.

1. The rods F, attached to the frame-work of the elevator in such positions as to be over the inner part of the side bars of the base of said elevator-frame, to receive the hooks K, attached to the handles J of the hods I J, substantially as herein shown and described.

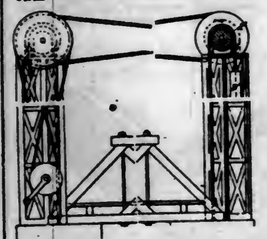
2. The hooks K, attached to the handles J of the hods I J, and, whether stationary or swiveled, to adapt the hods to be hung upon and supported by the rods F, attached to the frame-work of the elevator, substantially as herein shown and described.

102,574. MILK-COOLER. H. S. Nurrey, Ames, N. Y. [Filed Jan. 20, 1875.]

In milk-coolers the outlet-tube C, consisting of annular socket $g\,g'$, flanged collar $h\,h'\,h''$, threaded and flanged tube i, and the screw-cap extending up inside of pan, in combination with a bottom-perforated water-tank and milk-pan, A B, as shown and described, whereby the cover-cap and binding-tube may be more readily removed.



102,575. LIQUID-MEASURER. R. A. Prentice, London, England. [Filed Dec. 16, 1874.]

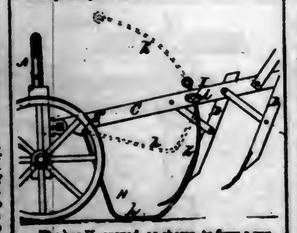


Brief.—A cylinder with the passages f at each end, for allowing liquids to enter and pass out through the four-way cock by the pressure of the piston, which is moved from end to end by the liquid, which enters at the ends alternately, whereby a certain known quantity is measured.

The arrangement, substantially as described, of apparatus to be used in drawing off water and other liquors, and in measuring the quantities drawn off, such apparatus consisting of a cylinder or vessel, with inlet and outlet passages, and a piston, which, when at rest at the end of the stroke, is held by the pressure upon it up to a surface, and so closes the way to the outlet independently of any packing with which the piston may be provided, to keep it approximately water-tight as it traverses from end to end of the cylinder or vessel in which it operates.

102,576. LIFT-BRIDGE. Andrew J. Post, Jersey City, N. J. [Filed Aug. 26, 1874.]

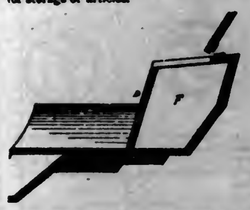
Brief.—A vertically-sliding bridge, guided by columns at its four corners, operated by flexible connecting-belts extending across the towers, driven by a windlass and crank. Counterbalancing-weights are arranged in the towers, and connected to the bridge. Safety-gates are operated by the same shafts and belts.



1. The flexible connecting belt or belts J, extending across between the towers on the opposite sides of the canal, in combination with the lifting bridge M, balancing cords or chains $b'\,b''$, and the power applied at the base of one of the towers, all substantially as herein specified.

2. In combination with the lifting bridge M, the safety-gates G H, operated by the same shafts, $b\,c$, which operate the bridge, as and for the purposes herein specified.

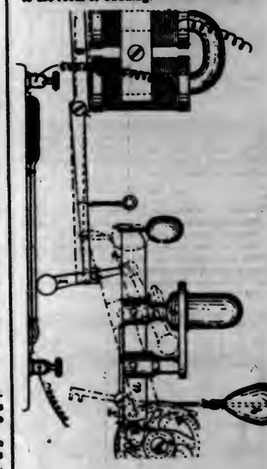
102,577. CULTIVATOR. Wm. H. Robertson, Buda, Ill., assignor of two-thirds his right to Bailus Ford and A. H. Gunn, same place. [Filed Jan. 6, 1875.]



Brief.—A curved bar or rod is hinged to the front end of the beam. Its rear arm passes through a keeper, and is held by a set-screw. It may be let down to serve as a runner for transporting the plows.

The bar H, curved, as shown, to form a runner, A, and an adjusting-handle, h', arranged to operate with the plow-beam C, symbolt I, axle A, and wheels B; substantially as described, and for the purpose specified.

102,578. WAGON-BODIES. Saml. Rowell, Amesbury, Mass. [Filed Feb. 4, 1875.]



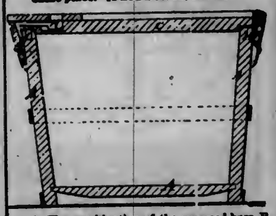
Brief.—Body extended back to form box for storage of articles.

In a carriage-body, the combination of the seat-back D with the body-back, extended beyond it and forming box F, substantially as set forth.

102,579. ALARMS AND FIRE-EXTINGUISHERS. Solomon Sanderson, Huddersfield, England. [Filed Apr. 14, 1875.]

Brief.—When the thermometer takes effect by undue heat, the mercury rises and comes in contact with one end of the circuit-wire, the other end being in contact already. The armature of the magnet is drawn down, and the percussion-lever falls, striking the horizontal lever and releasing the wheel, which allows the weight to descend and opens the valve, admitting steam or other suitable fluid to the room or building.

The cock or valve J', weighted lever a, wheel K, and weight q, in combination with the holding-catch T, percussive lever I, and lever N, moved by or through the expansion of a thermostat, substantially as and for the purposes set forth.



102,580. CORSETS. H. A. Schandevyl, East Saugus, Mass. [Filed Feb. 2, 1875.]

1. In combination with the two portions A A' of a corset, provided with a shoulder-strap, C or C', to each of them, as set forth, the two intermediate crossed straps D D', arranged above the said portions A A', and applied so as to connect the said two shoulder-straps, in manner as set forth, or cause each of them to be connected with both of said portions A A', all substantially as specified.

2. The two corset shoulder-straps C C, provided with the oblique connecting-straps D D', arranged and connected with them as described.

102,580. BUTTER-PACKAGE. H. B. Scott and Dennis W. Granger, Franklin, N. Y., assignors to themselves and A. J. Dibble, same place. [Filed Dec. 12, 1874.]

1. The combination of the recessed bars E and spring-catches G with the box A, recessed cover C, and bars F, substantially as herein shown and described.

2. The combination of the sliding bolts H with the spring-catches G, the recessed cover C, and the bars F, substantially as herein shown and described.

3. The combination of the rubber blocks I with the edge of the box A, and with the recessed cover C, the spring-catches G, and the sliding bolts H, substantially as herein described.

102,582. MAGAZINE FIRE-ARMS. Fredk. M. Shinn, Leroy, Kans. [Filed Aug. 10, 1874.]

Brief.—The chambers of the revolving cylinder are open at the sides, and receive the cartridges from the magazine under the barrel. The ratchet which rotates the cylinder is attached to the ejector, which works vertically in a guide in rear of the cylinder, and is operated by a projection on the guard-lever when the breech is opened. A gate is hinged beneath the cylinder-chamber, to prevent the cartridges dropping out during the rotation of the cylinder.

1. The combination of the ejector with the revolving chambered cylinder, having openings in the sides to the chambers.

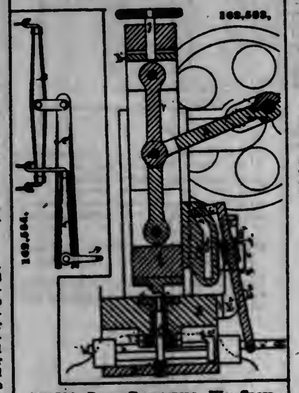
2. The combination of the guard and its projection X with the ejector, in the manner described.

3. The combination of the mainspring, the lever N, the presser T, and rock-lever U, to hold the guard in position, as specified.

4. The pawl Y for turning the cylinder, connected to the ejector to be operated by the action of the projection X of the guard, substantially as specified.

5. The magazine-openings b in the breech, and the door a d for closing them, arranged and combined substantially as specified.

---



1. The adjustable connection B^1 and its screw g, in combination with toggle-bars P and R, and hammer-head D^1, and its die c, and with the side hammers M by means of arms L and toggle levers o n p, substantially as described.

2. The adjustable slide and pawl-operating mechanism, consisting of the cam E^1 with the cam-groove g^1, the rocking-lever D^2, having ears d^1, carrying a roller-stud, 4, in the said cam-groove, and connected to the slide b by a link, d^2, and a stud, 4, and adjustable to vary the motion of the slide by a box, g^1, on the latter, and by similar boxes n on horns E^2, and with stops e^1 in the slide and the horns, substantially as described.

3. The stops e^1, in combination with the adjustable clamping-boxes g^1 and n, and with the lever D^2, and horns or supports E^2, substantially as described.

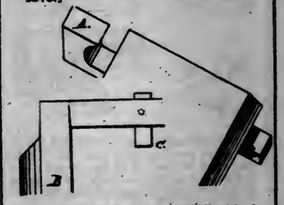
4. The spring-dog g^1, having a spring, f^1, in combination with the slide b, pawl n, and ratchets f and A, and die-socket d, and operating substantially as described.

102,583. DRAFT-EQUALIZERS. Wm. Snow, Waverly, Ill., assignor to himself and Jos. H. Challiss, same place. [Filed Nov. 30, 1874.]

The combination, with the bar A and the single-trees B attached to its ends, of the single-tree C, pivoted upon the middle portion of said bar by means of clevis D, and the traces arranged to produce a three-horse equalizer, as set forth.

102,585. FIRE-EXTINGUISHERS. Joan H. Steiner, Albany, N. Y. [Filed Apr. 10, 1875.]

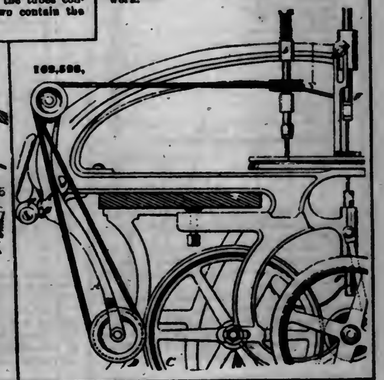
Brief.—A case containing supply to renew a fire-extinguisher. Two of the tubes contain alkaline solution, and two contain the necessary acid.



A case, substantially such as described, for containing chemicals, and adapted to be used in connection with a fire-extinguisher, as set forth.

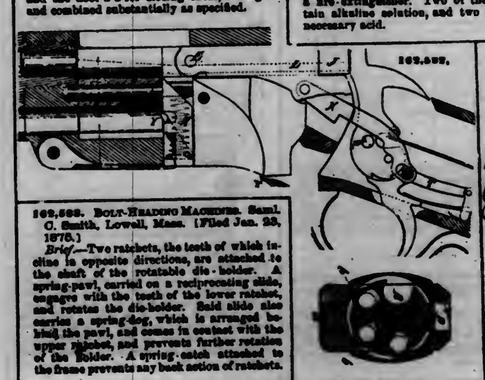
102,586. MODES OF INLAYING JET WITH METAL. Wm. Stephens, New York, N. Y. [Filed Oct. 31, 1874.]

The process of inlaying jet with metal, consisting in the application of a guard-plate perforated with the desired design to the article of jet, the bursting of a matrix in the jet by heated dies, which are passed through the guard-plate perforations, and the application of cement and an ornamental device immediately after the removal of said instruments, all substantially as set forth.



102,587. IRONING-TABLES. Geo. H. Thompson, Georgetown, D. C. [Filed Apr. 12, 1875.]

The combination of the board B with the extended notched cross-pieces A A and the frame B, with a broadside beveled or rounded upon its outer edge, with the buttons C and D, substantially for the purpose set forth.



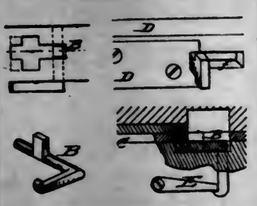
102,588. SCROLL-SAWING MACHINES. Chas. N. Trump and Saml. N. Trump, Wilmington, Del. [Filed Jan. 18, 1875.]

Brief.—A boring device is attached to the machine for the purpose of facilitating the work.

102,589. BOLT-HEADING MACHINES. Saml. C. Smith, Lowell, Mass. [Filed Jan. 23, 1875.]

Brief.—Two ratchets, the teeth of which incline in opposite directions, are attached to the shaft of the rotatable die-holder. A spring-pawl, carried on a reciprocating slide, engages with the teeth of the lower ratchet, and rotates the die-holder. Said slide also carries a spring-dog, which is arranged behind the pawl, and comes in contact with the upper ratchet, and prevents further rotation of the holder. A spring-catch attached to the frame prevents any back action of ratchets.

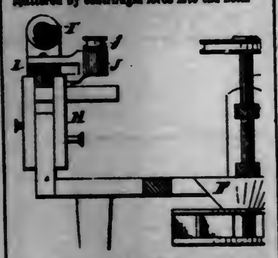
1. The combination of clamp S, screw T, bar U, having faces W, and nut V, as and for the purposes set forth.



2. The lever E and eccentric F, in combination with piece A, having pin G, pulley D, and wheel C, all as and for the purposes specified.

162,890. RAILWAY-RAIL-JOINT FASTENINGS. G. C. Vail, Madison, Ind. [Filed Oct. 13, 1874.]

The improved fastening for railway-rail joints, consisting of the fish-plates B B, perforated with rectangular holes, having their upper or lower faces beveled, as at *a a*, in combination with the wedges C C, beveled or tapered, as described and shown, and driven in back to back, one above the other, as shown, the points *b b* being bent or clinched over the heads, all substantially as specified.

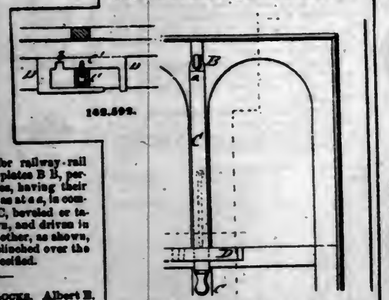


162,891. VESSELS-SEAT LOCKS. Albert B. Van Horn and Jos. Wideman, Sebewaing, Mich. [Filed Mar. 13, 1875.]

The combination, with a T-shaped lug attached to and projecting from the recessed seat block or riser D, of the pivoted dog B and pawl or locking device E, both attached to the side board A, as shown and described.

162,892. GRAIN-DISTRIBUTERS. J. Walker, New York, N. Y. [Filed Mar. 19, 1875.]

Brief.—A wheel in a vertical axis with a hopper is suspended in the hatchway of a ship. Rotation being given by belting passed over adjustable pulleys, the grain received is scattered by centrifugal force into the hold.



1. The combination of the movable and pivoted frames H I J, as and for the purposes described.

2. The adjustable and removable framework or support C C, for supporting the shaft D, in combination with the wheel E, substantially as described.

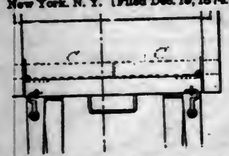
3. The device or mechanism herein described for distributing grain in the holds of ships, consisting of the wheel E, hopper F, frame C C, frames H I J, and pulley G F J, all constructed, arranged, and adapted to operate as and for the purposes described.

162,893. HAIR-FASTENERS. J. S. Wallace, Philadelphia, Pa. [Filed Mar. 1, 1875.]

Brief.—A pendent rod pivoted to a projecting bracket near the top of the upper sash, for raising and lowering the same, plays in a suitable guide or socket attached to the meeting-rail, and may be detached through a suitable recess. There is also a spring, similar to that commonly used in umbrella-sticks, attached to the pendent rod, which serves to fasten down the meeting-rail of the lower sash.

162,893.

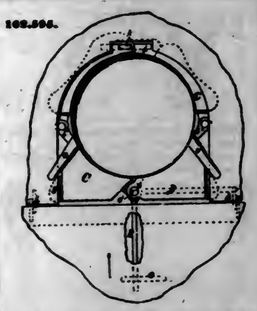
The combination of rod C, hung to bracket B, and having spring C', with the guide or socket D, attached to upper cross-piece of the lower sash, and having an opening, *d*, and notched recess *b*, all constructed and arranged substantially as and for the purpose specified.



162,894. LAMP-EXTINGUISHERS. M. Waterbury, Mason City, Iowa. [Filed Mar. 6, 1875.]

Brief.—The horizontal lever is provided with two arms, connected, respectively, with weighted cap and safety-ball.

The combination, with a lamp-burner, of the hinged extinguisher-cap J, a weight, M, attached thereto by an arm; the link I, the rod G having arms H F, the ball-weight A, its chain, and a bracket-support, as shown and described, to operate as specified.



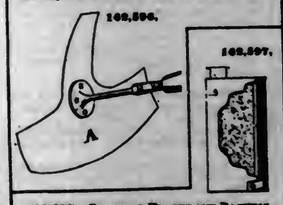
162,895. NURSERY-CHAIRS. C. A. Watson, New York, N. Y. [Filed Dec. 19, 1874.]

As a new article of manufacture, a nursery-chair constructed of a seat-board with central apertures, supported on hinged legs, and provided with hinged side boards hold open by a removable brace-piece, combined substantially in the manner and for the purpose set forth.

162,896. STOVE-PIPE SHELVES. Charles R. Woodruff, Carlton, N. Y. [Filed Feb. 16, 1875.]

Brief.—The collar or clamp is provided with jointed links, the rear sections interlocking and fastened with a wedge-shaped key, whereby the collar adapts itself to pipes of different shapes and sizes.

162,896.



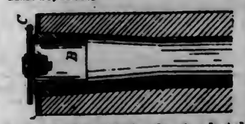
1. In a stove-pipe shelf, the collar or clamp C, provided with joint *i*, links *l*, and key *k*, for the purpose of adapting the clamp to pipes of different size, as described.

2. In a stove-pipe shelf, the collar or clamp C, provided with joints *i*, *i'*, and *i''*, the rear sections terminating in slotted interlocking links *l*, in combination with the key *k*, for the purpose of adapting the clamp to pipes of different shape, as described.

162,896. HOES. Allen S. Acker, Lockport, N. Y. [Filed June 29, 1874.]

Brief.—The hoe has a wide blade upon one side, and a narrow one upon the other, with a cutting-edge upon all sides. The shank of the handle has a tapering screw, that enters the handle. By turning the screw into the handle it is constantly tightened.

The hoe described, composed of the blade A, having six cutting sides, the shank B, having a boss at one end, by which it is secured to the blade, and a screw-thread at the other end, by means of which it is secured to the handle, substantially as described and shown.

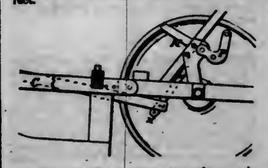


162,896. **162,897.**

162,897. COMBINED FLASKS AND PACKING-BOXES. Thomas R. Almond, Fitchburg, Mass. [Filed Feb. 23, 1875.]

Brief.—For containing traveler's lamp-stove and liquid fuel therefor.

The combined flask and box A B, having two or more compartments, one for containing liquids, and one for containing the apparatus in which said liquid is to be burned, for the purposes herein specified and set forth.

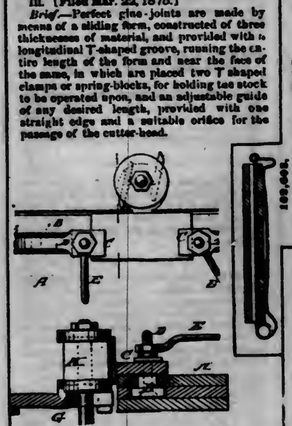


162,898. PUMP-VALVES. Ralph V. Bailey and Thos. B. Bailey, Mendota, Ill. [Filed Mar. 26, 1875.]

In combination with the plug A, adapted to fit the lower portion of a pump-barrel, having on its inside the metallic ring B, forming a part of the bore of said plug, provided with the flanges *b* and a web extending across its top, to which a flexible flap, C, is secured at the intersection of said web, its outer edge resting on the metallic flanges, substantially as described and shown, for the purposes set forth.

162,899. SEEDING-MACHINES. Joseph O. Barlow, Quincy, Ill., assignor to the Vandiver Corn-Planting Company, same place. [Filed Sept. 15, 1874.]

Brief.—The wheel and runner frames being flexibly connected, the runners are elevated or depressed by a connecting-rod attached to the rear end of the tongue, and its opposite end to a double crank-lever fastened to the standard of the driver's seat, to be operated by his foot.



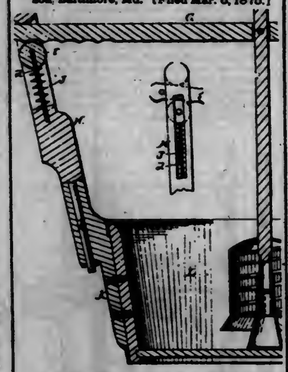
1. In a seed-planter, having two frames pivoted together, one supported by wheels, and the other having the furrowing mechanism, the crank-shaft M, having the levers N and P, substantially as and for the purpose set forth.

2. In a seed-planter, having the pivoted frames, the combination of the pitman H, crank-shaft M, and levers N and P, as and for the purpose expressed.

3. In a seed-planter, having the pivoted frames, the crank-shaft M L, lever N, bent lever P, and foot-rests *m* and *l*, constructed and arranged substantially as specified.

162,900. MACHINES FOR MAKING GLUE-JOINTS. Orsmel C. Baynes, Champaign, Ill. [Filed Mar. 22, 1875.]

Brief.—Perfect glue-joints are made by means of a sliding form, constructed of three thicknesses of material, and provided with a longitudinal T-shaped groove, running the entire length of the form and near the face of the same, in which are placed two T shaped clamps or spring-blocks, for holding the stock to be operated upon, and an adjustable guide of any desired length, provided with one straight edge and a suitable orifice for the passage of the cutter-head.



The combination of the sliding form A, provided with T-shaped groove *a*, clamps B C D E, and the guide G, all constructed substantially as and for the purposes herein set forth.

162,901. ESCRITOIRES. Alden Batchelder, Reading, Mass. [Filed Apr. 2, 1875.]

As my improvement in the escritoire, the cylindrical segment *k* combined with the lid *a*, and arranged with its pivots *l l*, and the chamber bottom or shelf *s*, all substantially as specified.

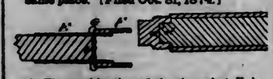
162,902. WASHING-MACHINES. J. W. Batson, Baltimore, Md. [Filed Mar. 6, 1875.]

The combination, with a circular tub, L, of the support K, attached to the exterior thereof, the standard H swiveled thereto, and provided with the bearing-block I, which slides in the slotted standard H, spring J, and rod *d*, and the corrugated lever G, connected to a rounder-stem, *a*, all substantially as set

---

162,903. HAIR-CURLING DEVICES. Chas. W. Baxter, Camden, N. J. [Filed Apr. 10, 1875.]

A hair-carrier, composed of a tube, A, and spring-retainer B, constructed and applied to the tube, all substantially as and for the purpose set forth.



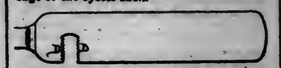
162,903. **162,904.**

162,904. SPRING BED-BOTTOMS. H. Beach, Warsaw, Ill. [Filed Dec. 31, 1874.]

Brief.—The bed-bottom is stretched or tightened as the spring-bars are forced down into the inclined seat-irons. The spring-loops hold the slats in place on the wire rods.

The combination of the spring-bars A, inclined seat-irons B, wire rods C, slats D, and the holding-loops E, substantially as and for the purpose set forth.

162,905. SOCKET-JOINTS FOR WHIP-CANES. John A. Beckler, Philadelphia, Pa., assignor of one-half his right to Wm. Mitchell, same place. [Filed Oct. 31, 1874.]



1. The combination of the tip-socket E, internally-threaded connecting tube or ferrule F, and butt-socket D, said tip-socket having its end inclosed by the combining-tube, and said butt-socket being constructed with a threaded neck, *d*, and a tenoned end, *d'*, the former fitting the threaded portion of the connecting-ferrule, and the latter entering the inclosed end of the tip-socket, substantially as shown and described, and for the purpose set forth.

2. In a whip-tip having the end of its core inserted in a tubular socket, E, and the latter covered by the braiding, the ring G, protecting the end of said braiding, in combination with the connecting-ferrule F and butt-socket D, constructed substantially as shown and described.

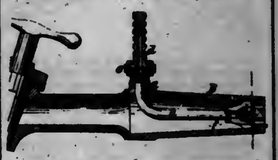
162,906. OYSTER-KNIVES. C. W. Berger, Philadelphia, Pa., assignor to E. Brunner and A. B. Clarke, same place. [Filed Oct. 9, 1874.]

Brief.—Jaws with inclined serrated faces are formed in the handle, and of the same piece with it, to take hold of and break off the edge of the oyster-shell.

The oyster-knife having serrated jaws D in its handle, substantially as and for the purpose set forth.

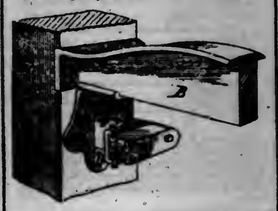
162,907. ROTARY PAPER-CUTTERS. C. G. Biedinger, Cincinnati, Ohio. [Filed Mar. 29, 1875.]

Brief.—Blade on upper cylinder encounters beveled gullies on lower blade, and forces the blade sidewise against a spring, which holds the two together to make a shear-cut. On the completion of cut the upper knife strikes a pivoted lever, which holds the lower knife back against the spring, and prevents friction between the two after the cut is made.



1. The roll A, carrying the fixed radially-disposed blade *a*, in combination with the roll B, provided with the radially-disposed blade *b*, which has side guides *b'*, and rests against springs C, permitting it to move laterally, substantially as and for the purpose specified.

2. The combination of roll A, provided with blade *a*, roll B, carrying laterally-moving blade *b*, spring C, and compressing-lever D, substantially as and for the purpose specified.



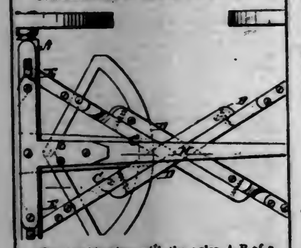
3. The combination of roll A, provided with blade *a*, roll B, carrying laterally-moving blade *b*, guides *b'*, spring C, and compressing-lever D, substantially as and for the purpose specified.

162,908. FAUCETS. John G. L. Boettcher, Brooklyn, N. Y. [Filed Mar. 24, 1875.]

The combination, with the screw-threaded projection *e* on the shank B, of the corrugated nipple *d*, the coupling-nut *c*, connecting the nipple with the projection, the vent-pipe *c*, and the valve *g*, all constructed substantially as shown and described.

162,909. CHEESE AND WINE PRESSES. Jas. S. Bogle, Springfield, Ohio, assignor to Thomas, Ludlow & Rodgers, same place. [Filed Apr. 6, 1875.]

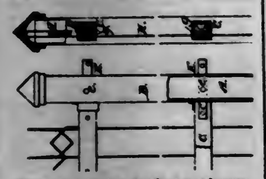
1. The brackets D D, having lugs *d d* attached to the posts of a fruit-mill, substantially as and for the purpose specified.
2. In a fruit-mill frame, the brackets D D, provided with flanges *d' d'*, substantially as and for the purpose specified.
3. In combination with the posts A A and press-beam B, the brackets D D, acting as braces to the mill and supports for the grinding-frame, substantially as described.



162,610. THILL-COUPLINGS. Henry K. Boswell and David Immel, Cincinnati, Ohio. [Filed Mar. 25, 1875.]

Brief.—Thill fastened by detachable pin, ordinarily held in place by spring.

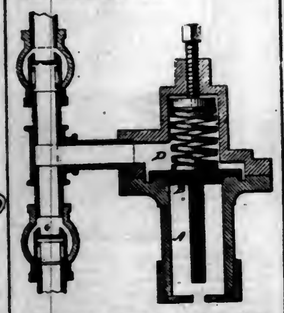
1. The combination of socket A a B, coupling-pin G, and spring H, for attachment of the shanks C c D or N a O, substantially as set forth.
2. In combination with the socket A a B, and the coupling-pin G, the ring or staple *h*, shanks C c and N a O, as set forth.



162,611. WAGON-COUPLINGS. R. Bowman, Terre Haute, Ind. [Filed Mar. 30, 1875.]

The combination, with the axles A B of a four-wheeled wagon, of the cross-couplings C D C D, made adjustable and connected to the axles by means of connections E E, substantially as and for the purposes set forth.

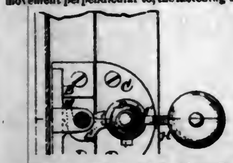
162,612. IRON-CLAD FENCES. J. A. Bowyer, Huntsburg, Ohio. [Filed Mar. 8, 1875.]



Brief.—Posts and stringers are of wood incased by sheet metal. The metal coverings of the stringers are extended on one side, and embrace metal strips, which are secured to the sides of the interior wooden rails, thus forming longitudinal spaces for the wire pickets, which extend through the metal coverings.

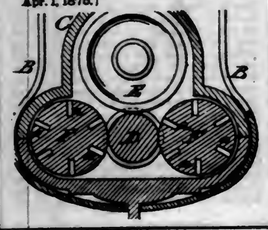
The posts A having the sheet metal covering B, the rails C with their covering D and strip *g*, the metal pieces E E, and the pickets H, the whole constructed and combined as shown and described, and for the purpose set forth.

162,613. WATER-ELEVATORS. Abel Breer, Saugatuck, assignor of one-half his right to F. L. Smith, New Haven, Conn. [Filed Mar. 9, 1875.]



Brief.—Steam is admitted to the chamber below the valve in a small jet. When the pressure counterbalances the spring-pressure, the valve suddenly rises, steam escapes, expels the water before it is condensed, (the valve having reseated,) producing vacuum, and refilling the pipes from below. Process automatically repeats itself.

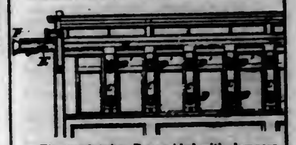
The steam-chamber A, provided with the inlet C, and combined with the piston B, chamber D above, the inlet and outlet valves to and from said chamber D, and the counter-balance upon the said piston, substantially as described.



162,614. FASTENERS FOR THE MEETING-RAILS OF SASHES. Elias K. Brockeridge, West Meriden, Conn. [Filed Mar. 17, 1875.]

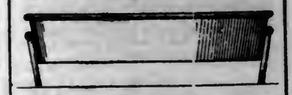
Brief.—The details of construction are sufficiently pointed out in the claims, and constitute the invention; the locking-lever moving with, but having likewise an independent movement perpendicular to, the fastening-arm.

1. The combination, with the plates C and E, of the fastening-arm G, the locking-lever H, moving with said arm but having an independent movement perpendicularly thereto, and the spring-arm *w*, substantially as shown and described.
2. The combination, with the base-plate C, of the lip or stud *h'*, on the lever H, serving as a fulcrum for the latter, substantially as shown and described.
3. The combination of the notches or holes in the plate C, and the projection *h'* on the lever H, substantially as described.



162,615. CAR-AXLE BOXES. Russell Brewer, New York, N. Y., assignor of part of his right to C. M. Morrison, A. J. Dunning, and W. A. Sherwood, St. Louis, Mo. [Filed Apr. 1, 1875.]

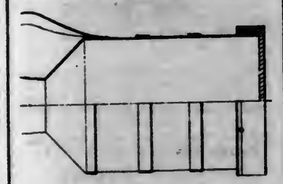
1. The car-axle box C in combination with a strap-frame, B, and pivots *b b'*, which allow said box to oscillate horizontally, as and for the purpose set forth.
2. The combination of bearing-roller E with journal D below it and rollers F F on opposite sides of said journal, and having the oil-cups *a* in their peripheries, the end roller *h*, and bearing *g*, substantially as and for the purpose set forth.
3. The roller *h* in combination with journal D and bearing *g*, substantially as and for the purpose set forth.



162,616. VENTILATING CARS AND BUILDINGS. Johnson Briggs, Toronto, Canada, assignor of one-half his right to Wm. S. Finch, same place. [Filed Feb. 1, 1875.]

Brief.—A trunk-tube running the whole length of the car, provided with dampers and air-catches furnished with a covering of metallic or textile mesh-work, and connecting with a series of branch pipes having registers.

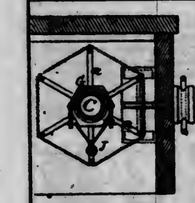
The trunk-tubes B provided with dampers F, and air-catches F, furnished with a covering of metallic or textile mesh-work, and connecting with a series of branch pipes, C, having suitable registers D, the whole arranged and applied to a car, building, &c., in the manner and for the purpose set forth.



162,617. BAKE-PANS. A. Brightman, New Bedford, Mass. [Filed Apr. 9, 1875.]

A baking-pan provided with handles constructed to be converted into feet for the pan, whereby the latter may be supported by said handles in an elevated position above the stove, substantially as and for the purpose described.

162,618. CANS. Francis D. Brodhead, Boston, Mass., assignor to himself and Albt. F. Lauten, same place. [Filed Mar. 6, 1875.]



Brief.—The removable bottom is cup-shaped, and its rim constructed with oblique internal grooves, that match with projecting studs arranged on the outer periphery of the head attached to the lower edge of the can-body.

A can, formed with a breast and contracted mouth at one end, and provided at the opposite end with a separate and removable bottom that fits and connects with the can-body, substantially in the manner and for the purpose set forth.

162,619. SCREW-PROPELLERS. John Collie Browne, London, England. [Filed July 16, 1874.]

The combination of the two sets of blades or independent screws *a* and *b*, having the like faces of the blades arranged in reverse order, substantially as shown and described.

162,620. MIDDLINGS-PURIFIERS. S. M. Brue, Martinsburg, W. Va. [Filed Apr. 3, 1875.]

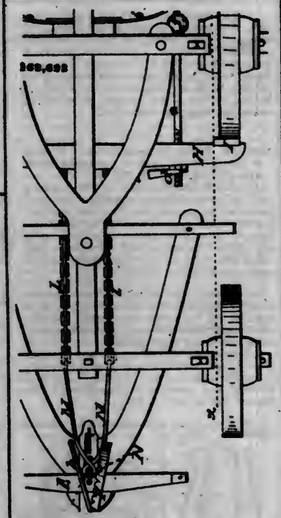
Brief.—Shield covering upper portion and sides of perforated reel-shaft prevents any of the flour carried up by the ribs of reel in its revolutions from falling on the shaft, and being drawn off through the perforations thereof by the suction-blast.

1. The combination, with a hollow perforated reel-shaft, of a shield, G, arranged to overlap the upper portion of the shaft, substantially as described.
2. The combination, with a perforated reel-shaft, C, and a shield, G, of weights J, substantially as and for the purpose set forth.
3. The enlargements *c' c'* at the ends of the hollow perforated reel-shaft C, in combination with the loaded shield G, substantially as described.

162,621. WEATHER-STRIPS. Gustav Burkhardt and Charles E. Harden, Homer, Ill. [Filed Mar. 9, 1875.]

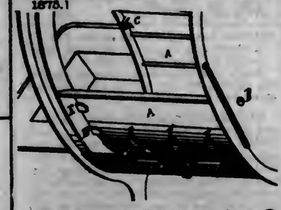
Brief.—The weather-strip proper is so pivoted to a metallic strip attached to the door that by the opening of the door, and releasing it from the pressure bar or strip, the back portion will fall, thus elevating the front edge without the use of springs.

1. In a weather-strip, the plate B, hung to the inclined plate A, fastened to the door, and having the upwardly-curved portion *d*, substantially as and for the purpose set forth.
2. The plate B *d*, in combination with the inclined plate A and inclined projection *c*, substantially as and for the purpose set forth.



162,622. BROOM-HANGERS. Jacob Cain, Altoona, Pa. [Filed Oct. 16, 1874.]

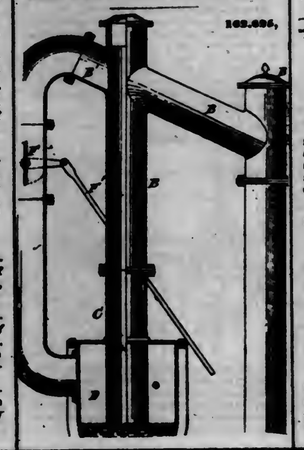
Brief.—The holding-ring has a central biting-edge, formed by double bevels on a portion of its inner periphery, and angular biting-edges on the remaining opposite portion of said ring. It is also provided with a tangential pivot-arm, whereby broom-handles of different sizes are securely suspended in a vertical position.



The broom-hanger consisting of the eye or ring A, having the central biting-edge *b*, formed by double bevels on one side, the angular holding-edges *c* on the opposite side, and provided with the tangential pivot-arm B, substantially as herein set forth.

162,623. WAGON-BRAKES. Jacob C. Carhart, Ashurstville, assignor of one-half his right to J. D. Skinner, Martin's Creek, Pa. [Filed Mar. 20, 1875.]

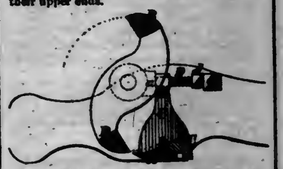
1. The combination of the brake-bar H, adjustable connecting-rods *d e*, and springs *b f*, substantially as and for the purpose set forth.
2. The combination of the brake-bar H, chain or chains L L, clevis M, and whiffletree B, substantially as and for the purpose set forth.
3. The combination of the lever F and ratchet-bar P with the whiffletree B, clevis M, chain or chains L L, and brake-bar H, substantially as and for the purpose set forth.



162,624. HEATING-STOVES. Chauncey H. Castle, Quincy, Ill., assignor to Comstock, Castle & Co., same place. [Filed Jan. 23, 1875.]

The plates A provided with the flanges F and F', in combination with a stove having apertures of a suitable size to permit the removal of the plates, and provided with the cars E and C, and the plates held in position by the bolts B.

162,625.



162,626. GAS APPARATUS. J. D. Caldwell, Georgetown, D. C. [Filed Apr. 12, 1875.]

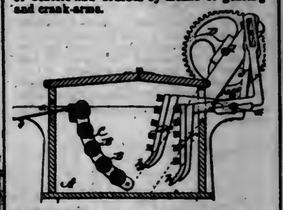
Brief.—Utilizes the nozzle of the bridge to aid in forming a direct conduit for the gas from the retort into the hydraulic main without passing through the liquid seal.

The combination, with the dip-pipe C and bridge B, having nozzle B', of the branch pipe, leading from said nozzle to the upper portion of the main D, and controlled by a valve, F, substantially as and for the purpose specified.

162,627. LAWN-MOWERS. Thos. Coldwell, Newburg, N. Y. [Filed Apr. 10, 1875.]

Brief.—The cutter-bar is attached to vertical arms pivoted to the sides of the frame, and adjustable by screws passing through their upper ends.

In combination with the reversing wiper B, the cutter-bar C provided with the vertical pivoted arms C' and C', and the screws D and D fitted within said arms, and extending between the legs *a* and *c*, substantially as and for the purpose specified.



162,627. SOLUTIONS FOR ELECTROPLATING. Henry G. Coyle, West Meriden, Conn., assignor of one-half his right to C. H. Shaw, same place. [Filed Apr. 12, 1875.]

Brief.—The article to be plated and the tin are suspended in the bath, and the battery applied in the usual manner.

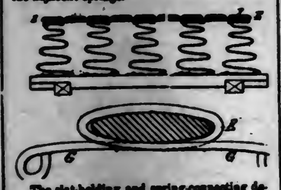
The herein-described solution for electroplating, consisting of muriate of tin, sulphate of ammonia, sulphuric acid, aqua ammonia, arine, and water, in the proportions substantially as specified.

162,628. WASHING-MACHINES. T. Crumbling, East Prospect, Pa. [Filed Feb. 4, 1875.]

Brief.—An inclined set of rollers pivoted near the bottom of the tub. The upper end, being adjustable, is operated upon by a series of beaters and brushes by means of gearing and crank-arms.

The combination of the box A, having the adjustable frame C, with rollers B B, crank-shaft G, bars I, with slotted arms J J, and the arms K K, with brushes L L, and the curved and corrugated ends A A, all constructed and operating substantially as set forth.

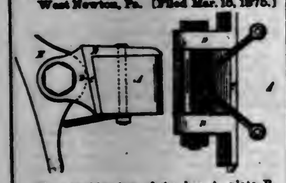
162,629. SINGLE-TREE HOOKS AND CLIPS. Marshall S. Curtiss, Berryville, Ill., assignor of one-half his right to William Wilcox, same place. [Filed Feb. 3, 1875.]



The combination of single-tree A with a hook having cross-piece *c*, returned clasps *d e*, and bolt *d*, and with a clip having similar clasps *f f*, and bolt *g*, substantially as and for the purposes set forth.

162,620. ELECTROPLATING WITH NICKEL. H. P. Dechert, New York, N. Y. [Filed July 14, 1874.]

In electroplating with nickel, an electroplating-bath composed of a solution of chloride of calcium and chloride of nickel, substantially as and for the purpose set forth.

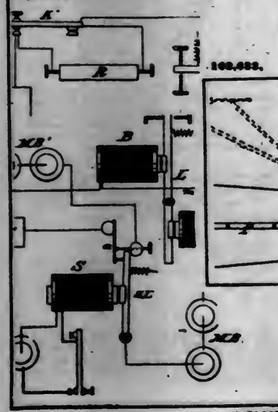


162,621. SPRING BED-BOTTOMS. Edward B. Dodge, Peterborough, N. H. [Filed Dec. 4, 1874.]

Brief.—The connecting device claimed alternately rests upon and between the springs, and the intermediate ones connect the tops of the adjacent springs.

The slat-holding and spring-connecting devices E, F, G, and H, substantially as shown and described.

162,622. WAGON-BRAKE. I. N. Downs, West Newton, Pa. [Filed Mar. 16, 1875.]



The combination of the bar A, plate B, flange C, ears D, metallic block or brake E, and V-shaped stop *d*, substantially as set forth.

162,623. DUPLEX TELEGRAPH. Thos. A. Edison, Newark, N. J., assignor to himself and Geo. Harrington, Washington, D. C. [Filed Apr. 26, 1873.]

1. The armature-lever L, pivoted between the magnets A and B, and operated by an increase and decrease in the tension of the line-current, in combination with the key K' and rheostat R, for the purposes set forth.

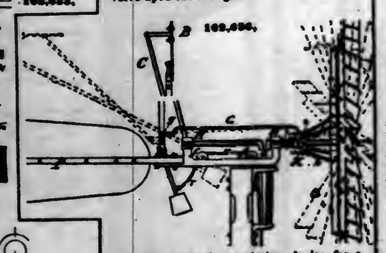
2. The armature-lever L, flexible-spring contact c, and batteries M B and M B', arranged substantially as set forth, and for the purpose specified.

162,624. PAPER-TUBE MACHINES. Charles P. Edwards and Wm. F. Edwards, Summit, N. J. [Filed Jan. 20, 1875.]

Brief.—The pulp is taken from the tapering mold in the vat onto the segmental belt, supported on the tapering carrying-rolls, and conveyed to the tapering formers, which are brought into action alternately. The outer edge of the segmental belt or apron is provided with a flange, which runs between guide-rollers, to hold it in position.

1. The combination, with the endless segmental apron and its supporting tapering rollers, of the tapering mold and one or more forming-rollers, all constructed to operate substantially as and for the purpose specified.

2. The strengthening-flange on the outside edge of the curved apron, in combination with the guide-rollers and a guide-rail, all constructed and operating substantially in the manner shown and described.



162,625. CALENDERING-MACHINES. Wm. F. Edwards and Charles P. Edwards, Summit, N. J. [Filed Oct. 7, 1874.]

Brief.—For calendering paper dishes, &c., the calender-roll both swings and slides into parallelism with the dish.

The combination, with the shaping-roller G and the calendering-roller K, mounted in a vibrating frame, D, for adjusting the calendering-roller with respect to the shaping-roller, of a horizontally-sliding supporting-frame, connected with the vibrating frame, for regulating or adjusting the distance between the shaping and calendering rollers, substantially as and for the purpose herein described.

162,626. WINDMILLS. Chas. H. Eggleston and W. M. Phelps, Marshall, Mich., assignors of one-half their right to C. S. Crane, same place. [Filed Oct. 6, 1874.]

Brief.—A weight is so adjusted as to hold the standard and its vane upright against a breeze of ordinary force. When the wind is heavy, the vane, standard, and rod are oscillated backward, carrying with them the rod and sliding collar, and, by means of the links, causing the sections of the wheel to revolve upon their hinges.

1. An automatic regulating device for a windmill, consisting of a vane, B, hinged upon a weighted hinged standard, D, and tilting rod C, when constructed and operated in the manner and for the purpose substantially as shown and specified.

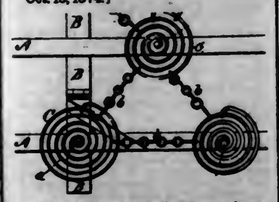
2. The combination of the vane B, tilting rod C, and weighted hinged standard D, with the connecting-rod G, sliding collar K, links *h*, arms Q, and sections A, when constructed and operated in the manner and for the purpose substantially as shown and specified.

162,627. STRAW-CUTTERS. R. W. Fawcett, Salem, Ohio. [Filed Apr. 12, 1875.]

1. In a feed-cutter, the combination of the upper yielding feed-roller E, the racks *f f*, forming bearings for the axle of the roller, and the segmental gears *e e* attached to a shaft, *i*, and meshing with said racks, substantially as and for the purposes herein set forth.

2. The combination, with the feed-rollers E and G, the gear-wheels *k l*, arranged on their axles to overlap each other, and the intermediate wheels *m* and *n*, all constructed substantially as and for the purposes herein set forth.

3. The combination, with the driving-shaft *d* and its pinion *p*, of the adjustable arm or plate I, carrying two or more concentric gear-wheels, *j*, and two or more concentric gear-wheels, K, secured on the journal of the lower feed-roller G, substantially as and for the purposes herein set forth.



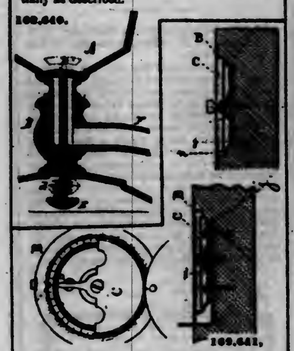
162,628. NECK-TIES. Jacob H. Fleisch, New York, N. Y. [Filed Apr. 16, 1875.]

1. The combination, with a bow or scarf, of a tie, G, rendered retractable entirely within the bow or scarf, by means of a spring concealed within said bow or scarf, substantially as and for the purposes herein set forth.

2. The combination of the casing D, spool E, tie G, and spring *h*, arranged within a bow or scarf, substantially as and for the purposes herein set forth.

162,629. FOLDING SPRING BED-BOTTOMS. Edwin P. Fowler, Brooklyn, N. Y. [Filed Oct. 16, 1874.]

The bed-bottom composed of the metal bars B, having their ends formed into hinge-butts, which are connected by a wire, the wooden slats A attached directly to the center of each section B, and having the spiral springs C C arranged in alternate order and coupled together by the links *b b*, all as and for the purpose set forth.



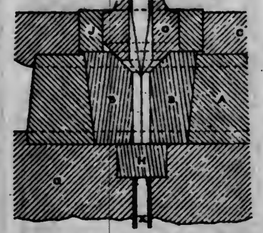
162,630. DRINKING-CUPS FOR INVALIDS. Wm. W. Fowler, Guilford, Conn. [Filed Mar. 27, 1875.]

Brief.—A cup has a hollow standard furnished with a spring-valve and thumb-piece, and a lateral tube, from which the patient can drink whenever the valve is raised.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

The herein-described drinking-cup, consisting of the bowl A, the tubular stem B upon the base C, the valve D to close the passage from the bowl to the stem, the head E, the spring *d*, and the transverse tube F, substantially as described.

162,640.



162,641.

162,641. COMBINED LEVELS, PLUMBS, &c. John B. Fraley, Philadelphia, Pa. [Filed Aug. 5, 1874.]

The universally-swinging protractor C, in combination with the dished plate B, having a chamber, *f*, graduated shoulder *n*, and raised bearing or spring *m*, substantially as and for the purpose set forth.

162,642. ART OF MANUFACTURING WOOD-SCREW BLANKS. John Pearson, Birmingham, England. [Filed Oct. 14, 1874.]

1. As an improvement in the art of forming heads upon screws and screw-blanks, first upsetting the end of the wire rod or blank in a flaring or cone-shaped recess or cavity in the face of the die-block by means of a punch chamfered externally to correspond to the wall of the said recess, and having at its extremity a flaring, conical, or conoidal cavity, and then subjecting the upset head, while still in the die in which it was formed, or in another die like it, to the action of another punch, that, entering by its point into the apex of the conical or conoidal head, shall, at the same time, force the metal laterally outwardly all around, to, and against the wall of the flaring or conical die-block recess, produce the cavity, nick or nicks, and fasten or shape the extremity or outer surface of the screw-head, substantially as described.

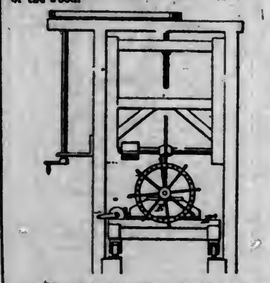
2. The combination of the punch D and die B B, constructed and arranged as shown in Fig. 3.

3. The combination, substantially illustrated in Fig. 7, of the parts marked P, O, J, C, A, B, H, G, and X, arranged for joint operation, as and for the purposes set forth.

4. In combination with the herein-described parts marked C, J, A, B, H, G, and X, the punch E, constructed substantially as and for the purposes set forth.

162,643. SOLE-FASTENINGS. Louis Goddu, Winchester, assignor to the American Cable-Screw-Wire Company, Boston, Mass. [Filed Apr. 7, 1875.]

1. A continuous length or integral wire or rod of distinct nails or pegs having heads *s* and clinching-points, and adapted to be penetrated where the different nails are joined in the wire-length before or after they are driven, substantially as herein illustrated and set forth.



2. A continuous wire of distinct nails or pegs having heads *s* and blunting-points, formed by coincident indentations in the sides of a wire or rod, and corresponding to the heads and points of such nails, and with angles of taper on two or more sides, substantially as herein set forth.

3. A continuous length or integral wire, on which coincident indentations are formed, of lengths equal to that of the nail blade or tang, to form annular sections *s*, whereby to serve as the means of feeding and determining the proper lengths of the pegs, and no more, substantially as herein set forth.

4. A continuous length or integral wire of distinct nails or pegs having transverse roughening corrugations, curves, or threads *o*, applied to the coincident indentations of the wire, which form the tangs or blades of each nail, as herein set forth.

162,644. MACHINES FOR MAKING HOOPS. Geo. V. Griffith, Huntington, Ind. [Filed Aug. 1, 1874.]

Brief.—The log is suspended between centers upon a reciprocating carriage, and the lumber cut by vertically-adjustable circular saws, which cut into the log radially, thus causing each cut to be parallel with the fiber of the wood.

1. The method of sawing planks for forming barrel and other hoops, as herein set forth and shown.

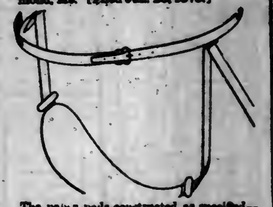
2. The combination of the carriage A, frames E F, centers D D', perforated hand-wheel F, and spring-catch E' with each other and the adjustable saw, substantially as described, for the purpose specified.

162,645. BIRD-CAGES. Gottlob Gunther, New York, N. Y. [Filed Feb. 24, 1875.]

Brief.—The removable feed and water cup screens are constructed with an inclined bottom, to direct the scattered food inside the cage.

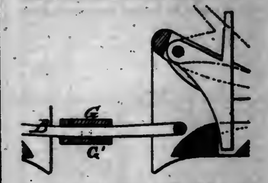
The combination, with a bird-cage having removable feed cup or cups B arranged in its sides, as described, of the removable screens C, having an inclined bottom, A, and arranged over the feed-cups, as and for the purpose described.

162,646.



162,646. NON-EXPLOSIVE LAMP COLLARS AND FILLERS. Jas. A. S. Sanford, Chicago, Ill. [Filed Mar. 31, 1875.]

1. The hinged cap C, having the elastic stopper D, in combination with the ordinary collar of a coal-oil lamp, having vertical slots and horizontally-perforated holes, which receive the nail stoppers for the purpose of forming an inlet for the oil and a safety-valve for the lamp, substantially as described.



2. The supplemental collar E, consisting of the conical plates F F', forming a closed chamber, which opens into the oil-receptacle, in combination with the hinged caps C and elastic stoppers D, substantially as and for the purpose described.

162,647. LADIES' PAPER TOWELS. Joseph H. Hatch, Melrose, Mass., assignor of one-half his right to Jos. W. Spaulding, Richmond, Me. [Filed Jan. 23, 1875.]

The paper pads constructed as specified—that is, of layers of soft and flexible paper that shall be a ready absorbent of moisture, with a layer upon one side that shall be impervious to moisture, for the use of females during menstruation, in connection with the common towel or elastic belt and strap.

162,648. CAR-COUPLINGS. Wm. G. Hawkins, Pavilion, Mich., assignor of one-half his right to A. A. Holcomb and G. M. Gates, same place. [Filed May 20, 1874.]

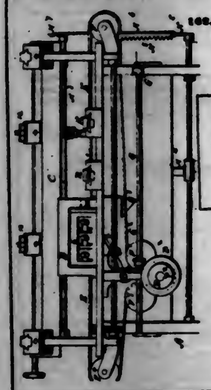
In a car-coupler, the metallic sliding gut, consisting of the plates G G' united together by the rivets *h h*, in combination with an open link, B, substantially as and for the purpose set forth.

162,649. WOOD-PLANING MACHINES. I. M. Hills, New Haven, and Edwin Allen, Norwich, Conn.; said Allen assignor to said Hills. [Filed Aug. 26, 1874.]

Brief.—The surface of the wood is dressed by means of an adjustable cutting-stock, provided with one or more cutters of any desired form, mounted upon a longitudinally-reciprocating carriage, which is arranged between suitable guides, in connection with vertically-adjustable clamps, for holding the work upon a bed which is adjustable to different inclinations, and also adjustable vertically and laterally. Adjustable arms operating upon suitable inclines automatically vary the extent of movement of the carriage, and two stationary cutters, forming a pair of shear-blades, prevent the long shavings from becoming entangled with the mechanism of the machine.

1. A reciprocating carriage, B, carrying the cutter-stock L, made adjustable in said carriage, in the manner substantially as set forth, combined with the work-table L', substantially as described.

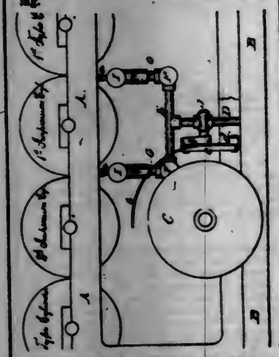
HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON



2. In combination with the reciprocating carriage B, cutter-stock L, and work-table L', the inclined G^1 G^2, the cloth D^1, and pulleys D D^1, substantially as and for the purpose specified.

3. In combination with the reciprocating carriage B, cutter-stock L, and work-table L', the clamp M, made adjustable vertically and transversely, substantially as specified.

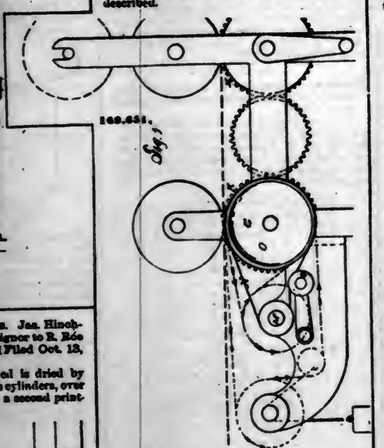
4. In combination with the reciprocating carriage B, cutter-stock L, and work-table L', the stops k, the inclined groove r, and the connections between said grooves and stops, substantially as and for the purpose of automatically operating said stops.



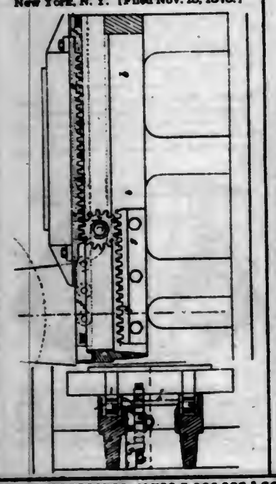
5. In combination with the reciprocating carriage B, cutter-stock L, and work-table L', the shear-cutters T T', substantially as and for the purpose specified.

No. 162,649.

No. 162,650. PRINTING-PRESSES. Jas. Hinchcliff, Bromley, England, assignor to R. Hoe & Co., New York, N. Y. [Filed Oct. 13, 1873.]



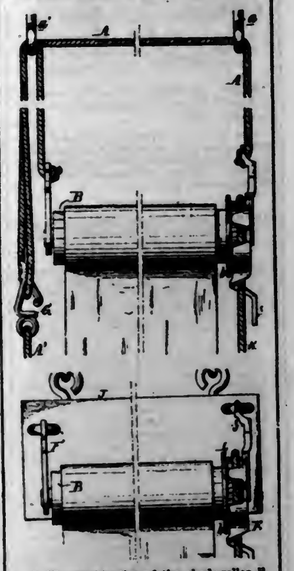
Brief.—The web once printed is dried by gas-jets interposed between the cylinders, over which it passes on its way to a second printing.



1. The combination, with two or more type and impression cylinders, whereby a web is printed on opposite sides, of a series of gas-burners, which direct heat upon said web at a point between the first type and first impression cylinders, or between the first and second impression-cylinders, whereby the ink is dried to prevent its offsetting, substantially as described.

2. In a printing-press having impression and type cylinders, the combination of the slitted gas-tubes I I with the shipper s, cock J in pipe D, and connecting-rod r S for shutting off the gas supply simultaneously with the stopping of the press, substantially as described.

No. 162,651.



No. 162,652. PRINTING-PRESSES. R. M. Hoe, New York, N. Y. [Filed Nov. 13, 1873.]

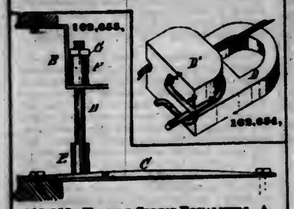
The rack e on the bed, pinion e' fixed to one roller-frame, and stationary rack g, in combination with the rods f, by which two or more roller-frames are attached together, so as to move in unison, substantially as described.

No. 162,653. WINDOW-SHADE FIXTURES. L. C. Hoffmeister, Jr., Philadelphia, Pa. [Filed Mar. 31, 1874.]

Brief.—The ends of the cord are attached to the opposite ends of the roller. The cord passes through eyes at the top of the window-frame. When it is desired to hold the roller in a certain position, the looped portion of the cord is wedged into a suspended V-shaped hook, the other end of which is formed with a ring or eye, through which passes a cord that is made fast to a stationary stud on the frame. The roller-pulley rests in connection with a bracket, which is provided with a lip, over which the cord for rolling up the curtain passes, and between which and the pulley the cord is compressed by the weight of the roller. The pulley has a flange on one side only. It also has an internal conical projection, adapted to the center of the end of the shade-roller.

1. The combination of the shade-roller B, the continuous looped suspension-cord A, attached to the opposite ends of the said roller, and adapted to eyes or pulleys a and a' at the top of the window-frame, and the V-shaped hook or eye O, into which the looped portion of the cord can be wedged, for the purpose of maintaining the roller in a horizontal position, all substantially as specified.

2. The combination of the roller-pulley L and bracket E, having a lip over which the cord passes, and between which and the pulley the cord is compressed by the weight of the roller and its attachments, substantially as described.



3. The within-described shade-pulley, having a flange, b, at one edge only, and a toothed or serrated periphery, in combination with the fixture or attachment E, which, in connection with the said single flange b, will retain the curtain-cord on the periphery of the roller.

4. The recessed shade-pulley L, having an internal conical projection, adapted to the center of the end of the shade-roller, for the purpose specified.

No. 162,654. BALE-TIES. Joseph J. Holloman, Humboldt, Tenn. [Filed Apr. 12, 1875.]

The combination, with a wire having horizontal hook B on one end, and at an angle thereto, on the other end, a vertical hook, C, of the grooved plate D D' having hole d', as and for the purpose described.

No. 162,655.

No. 162,656.

No. 162,655. VEHICLE-SPRING EQUALIZERS. A. S. Hopson, Plainview, Miss. [Filed Mar. 9, 1875.]

The combination of the elliptic spring A, curved brace B, of the form shown, the lower brace C, guide-rod D, and springs E F, all constructed to operate as specified.

No. 162,656. DARNING-MACHINES. O. S. Hosmer, Boston, Mass., assignor to C. Carpenter and Edwin Strain, trustees, same place. [Filed Nov. 4, 1874.]

1. In machinery of the kind herein specified, the combination of the following elements, namely, ribbed die-plates, which clamp in ridges the fabric placed between them, reciprocating needles, which move in the plane of needle-passages, between the plates, and tension mechanism, substantially as described, arranged for operation, with said plates and needles, substantially as set forth.

2. In organized machinery of the kind herein specified the combination, with the ribbed clamping-dies and the needles which reciprocate between said plates, of the cutter, substantially as specified, which severs the yarn after the withdrawal of the needles from the fabric, substantially as set forth.

3. A needle having one boundary of its eye reduced to a sharp edge for cutting the yarns, substantially as and for purposes stated.

4. The guide-plate through which the needles pass, having its faces arranged at an angle to, or obliquely with, the path of movement of the needles, in order that but one yarn may be severed at a time, or the series of yarns in succession, substantially as and for purposes stated.

5. The combination, with the guide-cylinders or plungers, of a lock, substantially as described, to lock the same in position, and prevent breaking of the needles, substantially as set forth.

6. In combination with the stem of the plunger, the notched disk n and bolt k, substantially as and for purposes stated.

7. The arrangement of the teeth of the plunger, substantially as herein described, whereby the yarns are caused to travel or be laid in a path similar to the saw-teeth, substantially as and for purposes stated.

8. The combination, with the reciprocating needles, of the plungers or dies, adjustable to and from each other to vary the distance between them, substantially as and for the purposes set forth.

9. The combination of the tubular sleeve I with one of the plungers and its shaft, as a means of adjusting the height of the plunger, substantially as and for purposes stated.

No. 162,657. SOLDERING-IRON HEATERS. John S. Hill, Cincinnati, Ohio. [Filed July 8, 1874.]

Brief.—The hollow end of the soldering-iron tip is provided with a screw-thread, by which it is attached to the gas-supplying apparatus, and has apertures for emission of flame. Gas is derived from oil contained in a portable vessel, which oil is forced up to the burner by means of an air-pump conveniently attached to said vessel.

No. 162,657.

The combination, in a portable soldering-iron heater, of the reservoir A, air-pump B, generator I, and soldering-iron T, constructed to operate in the manner and for the purpose specified.

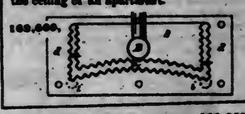
No. 162,658. TEA AND COFFEE POTS. James B. Hutchinson, Cambridge, and G. W. Fairfield, Boston, Mass. [Filed Feb. 20, 1874.]

1. In a duplex vessel, a divided spout provided with a two-way cock at or above the level of the liquid in said vessel, substantially as described.

2. The combination of the divided spout and two-way cock, provided with lever F and guide J 1, substantially as described.

No. 162,659. REFRIGERATING-TANKS FOR ICE-MACHINES. Augusto Jas, New Orleans, La., assignor of one-half his right to A. C. Janis, same place. [Filed Apr. 2, 1875.]

Brief.—The refrigerating vapor passes around each cell in each range, and successively through the ranges. Ice-molds may be placed in the cells; or the latter being very smooth, or having been greased, the water to be frozen may be placed in them. The water may be deprived of air, preparatory to being frozen, by boiling it.

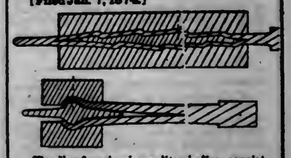


The herein-described refrigerator for ice-machines and analogous apparatus, consisting of a lower box divided into distinct and separate ranges of compartments or receptacles, in combination with an upper plate-supporting cells fixed to said plate, and corresponding in numbers to the compartments, the said parts fitting together, as described, and when so fitted together forming a serpentine passage for the refrigerating vapor or gas, which is thereby caused to pass through the successive compartments of the successive ranges, substantially as set forth.

No. 162,660. APPARATUS FOR COOLING AND CIRCULATING AIR IN BUILDINGS. Augusto Jas, New Orleans, La., assignor of one-half his right to A. C. Janis, same place. [Filed Apr. 6, 1875.]

Brief.—The volatile fluid passes (in a circuit from and back to the condenser and cooler, &c., not shown) through the hollow bottom of a brine-trough. Air is forced through tubes L^1 in the brine, the whole to be placed near the ceiling of an apartment.

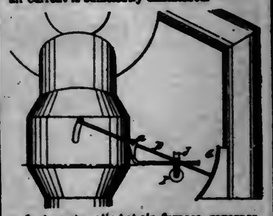
No. 162,660.



1. In apparatus for ventilating and cooling buildings and other structures, the combination of a refrigerant-conduit, a surmounting trough, and an air duct or pipe arranged within the trough, for operation substantially as shown and set forth.

2. The cooling-trough, designed to contain a liquid congealable at a low temperature, and provided with a concave-convex double bottom, which constitutes the conduit for the refrigerating agent, substantially as set forth.

3. The trough-sections, constructed substantially as described, and provided with end plates or flanges, by which the said sections may be fitted and secured together end to end, substantially as and for the purposes shown and set forth.

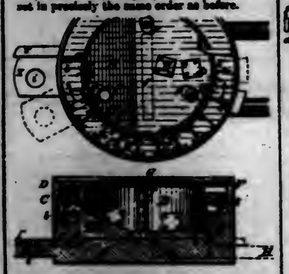


No. 162,661. DIES FOR CRIMPING THE HALVES OF SPLIT SPINDLES. Henry M. Johnson, Lowell, Mass., assignor to Bert A. Tidmarsh, C. C. Pickering, and B. Lamson, same place. [Filed Jan. 7, 1874.]

The dies for crimping split spindles, consisting of the loose central die provided with transverse ribs, and the two outer dies, having grooves or depressions corresponding to the ribs of the central die, substantially as described.

No. 162,662. AUTOMATIC GOVERNORS FOR HOT-AIR FURNACES. Solomon Kepner, P tstown, Pa. [Filed Apr. 12, 1875.]

Brief.—A damper is opened by the impulse of a current of hot air on a valve or disk in the hot-air flue attached to one end of the pivoted lever. The other end is weighted to close the damper when the force of the hot-air current is sufficiently diminished.



1. An automatic hot-air furnace governor, consisting of a pivoted lever, a valve contained in the hot-air flue and attached to said lever, and a damper attached also to said lever, which opens and closes communication between the outside air and the smoke-pipe or fire-box, all combined substantially as and for the purpose described.

2. The combination of the graduated lever D, the valve B, damper G, the pulley J, and weight I, substantially as and for the purpose described.

160,666. INDICATOR-LOCKS. J. H. Kimmins, Salem, Mass. [Filed Jan. 7, 1875.]

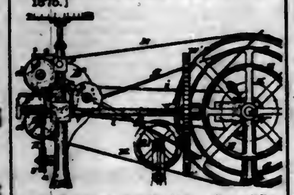
Brief.—A series of cubes having figures on their faces are conveyed, one at a time, from a chamber within the lock, into a path or space, where they are held, exposed to view, until the lock is unlocked. In unlocking, the cubes are all forced back into the inner chamber, and cannot, except by mere chance, be reset in precisely the same order as before.

1. An indicator-lock, substantially as hereinbefore described, provided with a series of cubes having suitable numerals or other symbols on the several faces of each, substantially as and for the purposes set forth.

2. The combination of base-plate A, jacket O O', chamber B, and cubes K, substantially in the manner and for the purpose set forth.

3. The cubes K, engraved, stamped, or otherwise marked in their corners with numerals placed diagonally, and combined and used with an indicator-lock, substantially as and for the purposes set forth.

4. The device herein described, consisting of base-plate A, chamber B, jacket C, loop H, projections I I', glass F, cap G, and cubes K, all combined and operating substantially in the manner set forth.



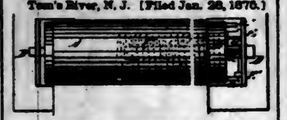
160,664. GAME-BOARDS. Victor Klobasser, Washington, D. C. [Filed Mar. 6, 1875.]

Brief.—Embodying in a game-board historical facts grouped radially about a center, and arranged with numbers, fortunate and otherwise, regulated by dice-throwing or the like.

The within-described game-board, having upon its face two concentric circles, B C, with radial lines a a between them, forming one hundred spaces, b b, in which are marked in succession the years from 1776 downward, with a notable event for each year marked in the proper space, substantially as herein set forth.

160,665. SEWING-MACHINES. Jas. Laing, Dundee, North Britain. [Filed Jan. 29, 1875.]

1. The sewing-mechanism, substantially herein described, consisting of the needle e, tube or barrel I, belt H, and supporting-pulleys f, in combination with work-feeding mechanism.



2. The combination of the needle e, tube I, thread-barrel J, belt H, and supporting-pulleys f, with mechanism for advancing and retracting the thread-barrel, as set forth.

3. The combination of the screw-rod K, pulley L, catch t, and spring g, with the thread-barrel J, and drag t.

4. The combination of the catch t and knife 13, with the barrel J and needle e, for finishing the stitches.

5. The combination of the arms 1 and 4, spring 8, and the striker 8, on the rod r, with the hook eye needle a.

160,666. CURTAIN-FIXTURES. R. B. Lake, Tom's River, N. J. [Filed Jan. 26, 1875.]

In combination with a certain roller having studs projecting at different radial distances from its end, or from an attachment thereto, a separate pawl or dog, constructed and arranged substantially as described, so that when the roller turns slowly said pawl will ride upon the innermost studs, but when said roller is turned rapidly will be projected outward by them, and be caught by one of the outermost studs, as and for the purpose described.

160,667. CHEESE-MAKING. Amos L. Lourbee and Josiah M. Jocelyn, Little Valley, N. Y. [Filed Jan. 16, 1875.]

Brief.—Scored milk and buttermilk, warmed to about 80° Fahrenheit, are treated with an alkali, and then heated to 85° or 90°, when they are converted into cheese in the usual manner, the alkali neutralizing the acid in the milk, and saponifying the grease or cream.

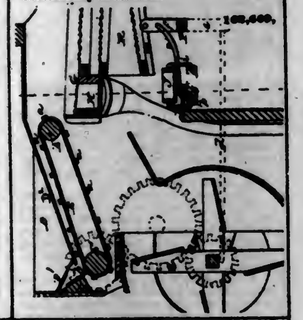
The process described of manufacturing sweet cheese from sour milk, substantially as specified.

160,668. APPARATUS FOR COOLING AND AERATING WATER. William A. Lightbody, Brooklyn, N. Y. [Filed Feb. 27, 1875.]

Brief.—Steam doing as an injector lets the condenser make a partial vacuum in filter B. The filtered and cooled water is pumped into D, where, in partial vacuum, it is further cooled, and is aerated. It is then transferred to the surrounding tank D, or to tank E, for use.

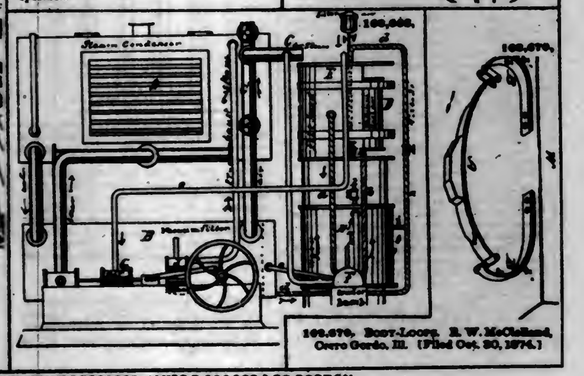
1. The condenser A, filter B, cooler D, air-pump G, air-pipes C and C', water-pipe d, and air-pipe g, all constructed and combined to operate as described, whereby steam is condensed, and the resulting water, filtered under a partial vacuum, is thereby somewhat cooled, and immediately forced into a vacuum-cooler, where the cooling operation is continued and the water aerated, substantially as specified.

2. The filter B, vacuum-cooler D, tank H, water-pipes d, e, and f, air-pump G, and force-pump F, all combined to operate as specified, whereby a certain portion of the filtered water is forced into the said cooler D, and the surplus forced into the tank H, substantially as described.



3. The vacuum-cooler D, placed within and surrounded by the tank E, the force-pump F, and pipes a and b, whereby water, as it is cooled in the said cooler, is transferred to the said tank, and there kept cool, ready for use, by contact with the said cooler, substantially as described.

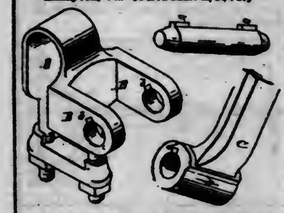
160,669. GRAIN-SEPARATORS. J. B. Lobdell and M. F. Bartlett, Battle Creek, Mich. [Filed Jan. 16, 1875.]



Brief.—Arrangement of feeding and discharging devices in a "thrashing-mill."

1. The slotted mullens bolt B, arranged close beneath the inclined side D' of the hopper D, and parallel therewith, for the purpose of evening and regulating the feed of the grain to the screens, as set forth.

2. The combination of the vibrating spout J, made in step form and carried on vibrating rods f, the loose connections m n, elbow-lever p, and arm f, all constructed and arranged substantially as set forth.



160,670. BODY-LOOPS. R. W. McClelland, Cerro Gordo, Ill. [Filed Oct. 20, 1874.]

1. The spring body-loop B, composed of a single piece of steel bent or folded back on itself to form two leaves, b b', the folded portion being adapted for attachment to the wagon-body, substantially as described.

2. The loops B B, having leaves b b', in combination with the spring A and wagon-body W, substantially as and for the purpose specified.

160,671. TRILL-COUPLINGS. M. McDevitt, Hampton, Va. [Filed Mar. 2, 1875.]

The combination of the clip A, having parallel perforated ears B B, with slots b, the thill-iron C, with perforated eye D, having also slot b, and the fastening-bolt, provided with the two feathers a a, substantially as and for the purposes set forth.

160,672. BALE-BAND TIGHTENERS. Danl. R. McGarrah, Rosemond, Ill. [Filed Mar. 2, 1875.]

The band-tightener having toe L, helve or handle C, opening E, and clamping eccentric roller F, all combined and constructed substantially as and for the purpose set forth.

160,673. PERCOLATORS. Geo. McPherson, Chicago, Ill. [Filed Apr. 2, 1875.]

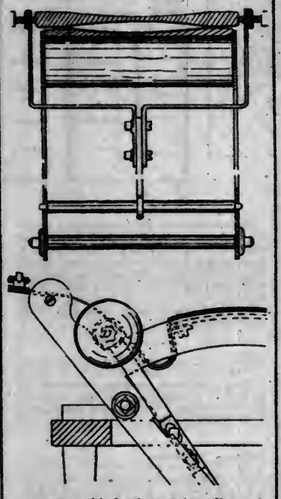
Brief.—A faucet controls the supply of air, and an air-forcing pump increases it indefinitely. The faucet has a V-shaped opening, to graduate the supply of air more minutely. Above the faucet is a funnel. Two perforated diaphragms extend across the body of the percolator, one movable, the other permanent.

1. The combination, with a percolator, of a suitable faucet, provided with depressions h h, for controlling and regulating the admission of air, substantially as and for the purpose set forth.

2. The percolator, provided with the air-tight-fitting cap B, faucet-shell A, and plug E, the latter provided with orifice j and depressions h h, substantially as and for the purpose set forth.

3. In combination with the closed-top percolator A B, the faucet shell and plug C E, the latter provided with the long handle F, substantially as and for the purpose specified.

4. The combination, with a percolator, of the faucet, substantially as herein described, provided at its top with a funnel, for the purpose specified.



5. The combination, with a percolator provided with closed top B, faucet E, and depressions h h, of a suitable pump or air-compressing apparatus, substantially as and for the purpose specified.

6. In combination with the percolator, provided with the closed top B and faucet E and funnel D, the removable nipple G, for the purpose set forth.

7. The percolator herein described, consisting of the body or shell A, perforated diaphragm b, perforated weight c, air-tight cap B, shell C, faucet E, the whole combined to operate as specified.

160,674. MACHINES FOR BUNCHING AND WRAPPING CIGARS. Bernhard H. Meyer, New York, N. Y. [Filed May 29, 1874.]

Brief.—The bed of the machine and the roller are both concave, to compress one or both ends of the cigar-bunch.

A segmental bed and traversing roller, each concaved centrally to give form to the cigar as it is rolled on the periphery of said segment, in combination with the apron, as and for the purpose set forth.

160,675. COMPOSITIONS FOR TILES. Wm. G. Monk, Brooklyn, N. Y. [Filed Nov. 11, 1874.]

1. The composition of sulphur, sand, and carbonate of lime, with sal-ammoniac, or equivalent flux, introduced for the purpose, and substantially as set forth.

2. In a compound of sulphur and sand, the mode herein specified of preparing the sand by moistening it with a solution of sal-ammoniac, or equivalent flux, substantially as set forth.

160,676. FRICTIONAL ELECTRICAL MACHINES. Geo. M. Mowbray, North Adams, Mass. [Filed Nov. 30, 1874.]

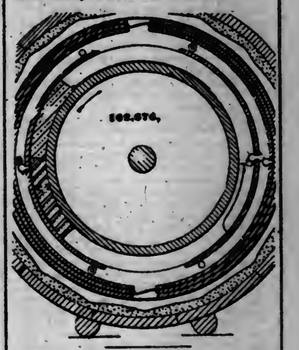
Brief.—Hard-rubber cylinder surrounded by two semi-cylindrical condensers. Machine discharged by reversing the crank, as in the Smith patent, No. 93,562, August 10, 1869, with the addition that a partial reversal breaks the connections from the rubber and the collector to the condensers. Other features explained by claims.

1. The arrangement of a frictional exciting-surface between two curved dielectrics, both of these curved dielectrics having on each surface, respectively, metal armatures with sufficient marginal insulation to form a condenser, the inside surface of one of them so situated during excitation as to receive electricity from the rubber, while the inside surface of the other curved dielectric simultaneously receives electricity from the collector, and withal the inner surface or armature of each one being in connection with the outer surface or armature of the other, substantially as described.

2. The accumulator or Leyden jar, of any preferred shape, built up of sheet hard rubber and metal plates, insulated from external influence by other sheets of hard rubber, and enveloped in pure sheet rubber, substantially as described.

3. An electric rubbing-cushion, formed of two distinct surfaces, the one resinous, to receive the amalgam and excite electricity, the other flannelous, felted, or velvety, to cleanse and polish the exciting-surface with the usual oiled or varnished silk flap, substantially as described.

4. The combination of an exsiccator, composed of a material capable of absorbing moisture from the atmosphere, packed in a permeable envelope, with a frictional electric machine in a water-tight case, substantially as described.



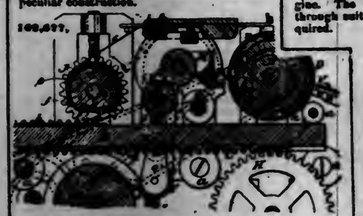
5. The oscillating cylinder, independent of the condenser, which is stationary, composed of two disks, each having a slot cut out of its periphery for about sixty degrees, carrying two semi-cylindrical sheets of hard rubber, there being affixed to one of these the rubbing-cushion and its connecting-hook, to the other a knob projecting through it, this oscillating cylinder admitting of a determinate limited motion from the rotation of the exciting-surface, the range of oscillation being determined by the collecting-rod, which is stationary, and passes through the slots of the disks, serving a triple purpose, viz: First, isolating the condenser from the rubber collector and feed wires when it receives a thirty-degree reverse motion; second, discharging the battery through the leading and return wires when this reverse motion is continued to sixty degrees of a circle; and, third, conducting the charge from the rubber and from the exciting-surface to the condenser by a forward motion of sixty degrees, substantially as described.

6. The graduated test-gage, with sliding or movable standard and connections for terminal wires, substantially as described, and for the purposes set forth.

7. The hard-rubber shaft of a frictional electric-machine, with sunken socket for crank, substantially as described, and for the purposes set forth.

8. The elastic-wire connections between the knobs moving and the fixed knobs of a frictional electric-machine, for the purpose of cushioning violent movement, substantially as described.

9. The combination of a rotating exciting-surface, an independent oscillating frame, carrying a rubber and connecting-knobs, with a stationary collector and a stationary condenser, all inclosed in a water-tight case or keg, substantially as described.



160,677. PLATE-PRINTING PRESSES. Robt. Neale, Brooklyn, N. Y. [Filed Nov. 10, 1874.]

Brief.—The plate is secured to a horizontally-reciprocating table, to a rack on which motion is communicated through gear-wheels connected with a series of pinions carried in a frame swinging on the driving-shaft, which frame, acted upon by cams on the nearest connecting gear-wheel, is so swung that the motion is given to that wheel from the continuously-revolving shaft through one and through two pinions alternately. The impression is made by a D stop-cylinder, which has applied

to it a bolster, by which the impression-surface is defined with relation to the printing-surface of the plate. The griper-plate extends across the cylinder, and is adjustably secured to arms pivoted to the heads thereof. The inking-rollers are drawn down to the plate in its forward movement by a projection on the bed acting on pallets pivoted to their frame, which pallets are inactive in the opposite movement of the bed. The plate is cleaned by a continuously-revolving elastic leather-covered cylinder of peculiar construction.

160,677.

1. In a plate-printing machine, in which the printing-roller is constructed with a flattened-surface section, the combination, with the printing-surface, of a shell-bolster, *c*, for defining the bounds of the impression, substantially as herein set forth.

2. The combination, with the impression-cylinder, of the shell bolster *c*, and continuous griper *f*, carriated for conjoint action, substantially as herein described.

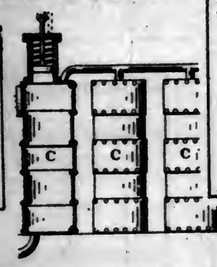
3. The combination, with an elevated table having an adjustable rabbet-rest, K *l*, for the sheet, and a laterally-adjustable plate, *t*, on said rabbet, of the griper *f* and the printing-roller, whereby the sheet is held upon the rabbet-rest, which thereby gages its relation to and insertion beneath the griper, and thus provide for the feeding of different-sized sheets to said griper, as herein set forth.

4. The combination of the adjustable griper-plate *f* with the arms *f'*, whereby the plate is carried and made adjustable upon said arms, in the manner and for the purpose herein set forth.

5. The combination, with the driving-gear wheel J of the printing-roller and the carriage-rack *l*, of a hinged push-arm, *k*, carried by said gear-wheel, substantially as and for the purpose herein set forth.

6. The combination, in a plate-printing machine, in which the carriage with its plate has a reciprocating motion, and is provided with side bars E E, of the swinging pallets Q Q', and the inking-roll R, upon the pivoted frames O P whereof the pallets are mounted, and operate to bring the inking-roll into action upon the engraved plate, substantially as herein set forth.

7. The combination, with the cleaning-cover *o* of the perforated rims *q*, of the cylinder-disks, having circumferential grooves, and the interlocking *p* for said cleaning-cover, substantially as and for the purpose herein set forth.

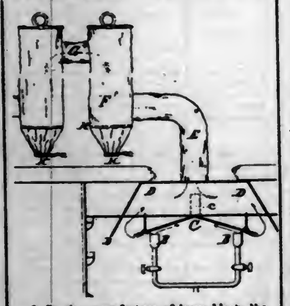


8. The combination, in a plate-printing machine, of the plate-carriage B, having a reciprocating motion, and a swinging frame, W, carrying pinions *w x z a*, three of which have a swinging movement with said frame upon the driving-shaft, and the lever-arm 7 of said frame, with the carriage-rack G and intermediate gear-wheels H S Y, the last gearing with the pinion *z a*, and operated by cams to disengage the intermediate gear-wheels from the driving-shaft, to stop the machine to operate by hand-power, or to continue the operation for power-work, as herein set forth.

9. The combination, in a plate-printing machine, of the swinging pinion carrying-frame W, supported on the driving-shaft, and provided with the lever-arm 7, with the cam *c* carried by the intermediate gear-wheel T, connecting with the carriage-rack, whereby the lower pinion *z* is automatically disengaged from the intermediate gear to stop the machine and render its movement intermittent by the lever-arm 7, substantially as herein set forth.

10. The combination, in a plate-printing machine, of the pivoted pinion-frame W, carried by the main shaft, and a spring-catch, Z, of the adjustable cam *c*, and the cam 9 upon the intermediate gear-wheel, operating in conjunction with the intermediate gear to change the position of the upper and lower pinions, to render the movement of the plate-carriage continuous for steam-power, as herein set forth.

160,678. MEANS FOR TRANSMITTING THE POWER OF STATIONARY ENGINES THROUGH THE MEDIUM OF COMPRESSED AIR. Thos. H. Neal, Philadelphia, Pa., assignor of one-half his right to M. F. Richardson, same place. (Filed Oct. 24, 1874.)



Brief.—The air-holder consists of a series of cylinders arranged in an upright position, and separated from each other, for convenience in repairs, &c., and provided with a governor for controlling the speed of the pumping-engine. The air is drawn from the holder through suitable connecting-pipes as it is required.

The combination, with a stationary pumping-engine, a system of piping, F, along a carriage-route, and communicating attachments G, of an air-holder, B, consisting of a series of cylinders, C C, extending vertically, separated from each other, and provided with a governor for automatically controlling the speed of the pumping-engine, all as set forth, and for the purpose described.

160,679. LAMP-BLACK APPARATUS. Peter Neff, Gambier, Ohio. [Filed Apr. 17, 1875.]

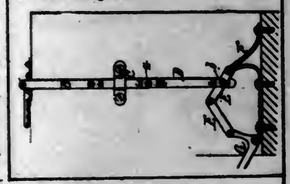
Brief.—Into such apparatus introduces the surface G, for receiving the first formed of the lamp-black. C may have openings or pipes directly to D.

1. In the manufacture of lamp-black, the domes or surfaces C, located over the burning carbonaceous matter, in combination with the flue or flues D and canvas or woolen bags F, substantially as and for the purpose described.

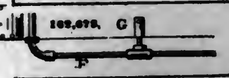
2. The combination, with the surfaces C, canopy flue or flues D, and bags F, of burners located beneath the said surfaces C, and means for feeding the said burners with oil or gas, substantially as and for the purpose described.

3. The combination, with the surfaces C, flue D, and canvas or woolen bags, of the burners B and openings *a*, substantially as and for the purpose described.

160,680. SPRING BED-BOTTOMS. Jared R. Newman, Franklin, Pa. [Filed Feb. 20, 1875.]

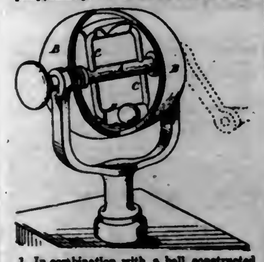


Brief.—By means of the adjustable blocks, which permit the positions of the free ends of the springs to be changed, the bow or arch of the slats can be regulated.



In a bed-bottom, having arched slats C, supported by springs B, the grooved blocks *b* and adjustable blocks *c*, combined as described.

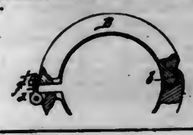
160,681. MECHANICAL MOVEMENTS. John A. Norvell, Kalamazoo, Mich. [Filed Nov. 7, 1874.]



Brief.—Two vibrations of the bell-crank lever are produced by one revolution of the cranked driving-shaft.

The herein-described mechanical movement, consisting of the pitman B, plunger C, connecting-rod D, toggle-levers E E', bell-plate F, and bell-crank G, in combination with a cranked driving-shaft, substantially as described.

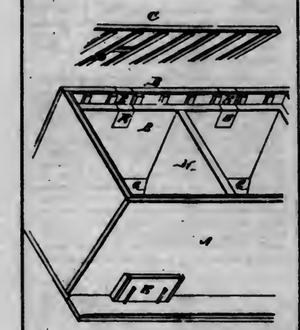
160,682. REVOLVING CHURN-BELLS. Wm. H. Nichols, East Hampton, Conn., assignor to Bevin Brothers Manufacturing Company, same place. [Filed Mar. 29, 1875.]



1. In combination with a ball constructed to be rotated by wheels or by a suitable handle, cups or cents located at or near the inner periphery of the same, for catching and holding a loose ball or clapper after the striking operation, substantially as herein described, for the purpose set forth.

2. The combination, with the open-mouthed cups or shells B B, constructed to be rotated by wheels or by a suitable handle, of the revolving shaft or axis A, the arms C projecting from the same, and the clapper or ball-retaining cents or cups at the ends of said arms, substantially as herein described.

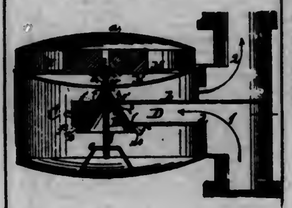
160,683. CLAMPS FOR CEMENT. G. Clark-Nichols, Binghamton, N. Y. [Filed Dec. 5, 1873.]



Brief.—The clamp is made of two semicircular parts. The end of one of the parts is slotted and provided with a hook. The end of the other part is also provided with a hook, which fits into the slot, and engages with the hook of the other. The opposite ends of the parts are secured by a pivoted eyebolt and nut.

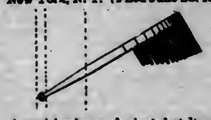
In the manufacture of cement water and gas pipes, a ring or clamp made in two semi-circular parts, A and B, and provided with hooks *a b*, slotted ears *d d*, pivoted eyebolt *f*, and nut *i*, substantially as and for the purposes herein set forth.

160,684. LIME-KILNS. David G. Ormsby, Pewaukee, Wis. [Filed Apr. 6, 1875.]



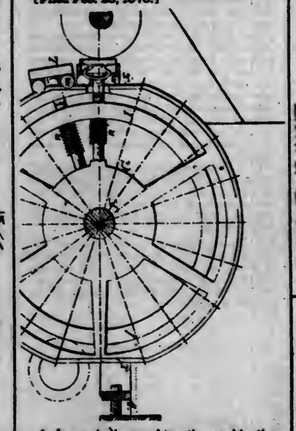
Brief.—The bin is designed to exclude air from quicklime, and allow its easy introduction or removal.

The bin A, provided with double walls and roof, filled in with slaked lime and ashes, the outer wall being covered with roofing-felt on the inside, the whole provided with hatches D, and doors E F and F F, for filling with lime and removing the same, substantially as herein set forth and described.



160,685. GAS-REGULATORS. Robt. M. Potter and William W. Thomas, Jersey City, N. J. [Filed Mar. 17, 1875.]

Brief.—An internal chamber with valve-seats in its top and bottom, and a conical valve adapted thereto,

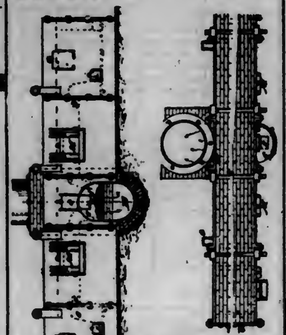


The combination, in a gas-regulator having an enlarged gas-chamber, C, and a diaphragm, H, of the inlet-chamber D, constructed at its top and bottom with valve-seats *f' f'*, and arranged horizontally within the gas-chamber, and the conical valve E, arranged within the inlet-chamber and connected with the diaphragm, all substantially as described.

160,686. BAND-COMBS. Henry A. Prouty, Worthville, assignor, by mesne assignments, to J. W. Britton, and I. W. Britton, New York, N. Y. [Filed June 26, 1873.]

A semicircular comb pivoted at its ends to the sides of an ordinary semicircular comb near its ends, substantially as herein shown and described.

160,687. GRINDING-MACHINES. William J. Keegan, Pottstown, assignor to Boyer's Ford Iron Foundry, Philadelphia, Pa. [Filed Feb. 23, 1875.]



1. In a grinding-machine, the combination of the following elements, namely: a revolving grinding or polishing disk or disks, ways partly circular and partly straight, and a series of yielding carriages for receiving and retaining the objects to be ground, guided by the said ways, and carried by a wheel revolving in a course concentric with the circular portions of said ways, all substantially as set forth.

2. The combination of the revolving hub G and ring I, and their spring-rods K, hinged to the carriages L, with the ways H and H', and one or more grinding or polishing disks.

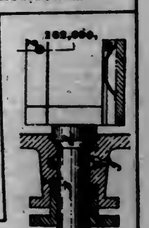
160,688. HEATING-FURNACES. Craddock Rees and Thomas Johns, Ironton, Ohio. [Filed Feb. 19, 1875.]

Brief.—The products of combustion pass from the middle of the double furnace by an exit-flue, which descends on the side of the furnace where the working-doors are, and passes across beneath the middle of the hearth to the stack. The hearth is thus most highly heated on the side where the doors are. The draft in the main flue is regulated by slide *d* in small flue H.

1. In a smelting-furnace, having a fire-place at both ends, the central flue E running transversely under the furnace, and opening into the same at the side in which the doors M are arranged, all substantially as and for the purpose specified.

2. The combination of the fine-door *d* with the main smoke-outlet E, substantially as and for the purpose specified.

160,689. REFLECTOR-LAMPS. J. Bottcher, Chicago, Ill. [Filed Mar. 20, 1875.]

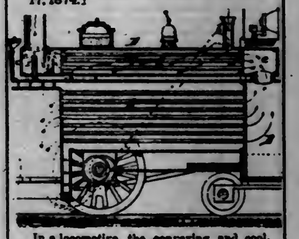


Brief.—The upper reflector directs light upon the lower one, which surrounds the lamp, from whence it is reflected to any desired point.

The combination of the corrugated reflector B, as described, with the flame A, and corrugated refractor E placed over said flame, substantially as described and shown.

160,690.

160,690.

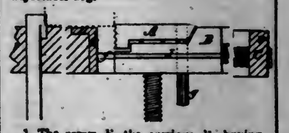


160,690. VALVES FOR STEAM-ENGINES. G. H. Reynolds, New York, N. Y., assignor of one-half his right to C. H. Delamater and G. K. Robinson, same place. [Filed Mar. 4, 1875.]

Brief.—The oscillating valve is placed on a web which is formed on the stem. The valve is adjusted to its seat by springs between the web and the bottom of the slot in the valve.

1. In a rolling or oscillating valve, the combination of continuously circular heads *O O*, with the slotted portion C, loosely fitting stem B, and filling-piece *b*, substantially as and for the object specified.

2. The combination of the filling piece or strip G, with the slotted portion C of the body of the valve, the bolts *h*, and the loosely fitted stem B, essentially as specified.



160,691. SPARK-ARRESTERS. William H. Richardson, Cincinnati, Ohio. [Filed Oct. 17, 1874.]

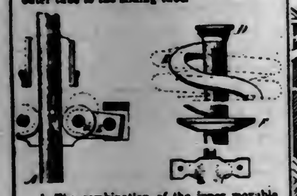
In a locomotive, the conveying and cooling apparatus E F G *a*, having air induction and eduction openings *a b*, to admit of a natural circulation of air through it, the apparatus being supported horizontally on top of the boiler, connecting at its forward end with the smoke-box B, and terminating at its rear end in the chimney C, all substantially as and for the purpose specified.

160,692. BRICK-VISES. Pierre Bimbold, San Antonio, Tex. [Filed Dec. 7, 1874.]

Brief.—The vise-screw carries a vertically-adjustable dog.

1. The screw E, the carriage B, having tongue J, and the frame or box D, having grooves *f*, all combined and arranged substantially as and for the purpose described.

2. The carriage B, clamping-block A, the screw F, and the guide-pin *g*, all combined and arranged substantially as and for the purpose described.



162,692. PISTON-PACKINGS. J. H. Rollings, Brooklyn, N. Y. [Filed Sept. 16, 1874.]

The combination, substantially as hereinbefore set forth, of the auxiliary cylinder with its piston, having a V-shaped end, and split ring provided with V-shaped projections, each side of said opening, as described, so arranged that the ring may be spread endwise by the said piston acting in lines perpendicular to the circumference of the ring, for the purposes set forth.

162,694. ESTERGHOT-GASALIERS. Edwin Bunnell, New Haven, Conn. [Filed Jan. 12, 1875.]

Brief.—The upper end of the flexible tube is connected with the gas-supply, and the lower end is attached through the slot in the outer tube to the sliding tube.

1. The combination of the inner movable tube A, the slotted outer tube B, and the flexible conducting-tube E, substantially as and for the purpose specified.

2. The combination of the inner movable tube A with the slotted tube B, flexible conducting-tube E, and pan F, substantially as and for the purpose specified.

3. The combination of the inner movable tube A, outer tube B, and cams L L, each carrying a roll, a, in its face, substantially as and for the purpose specified.

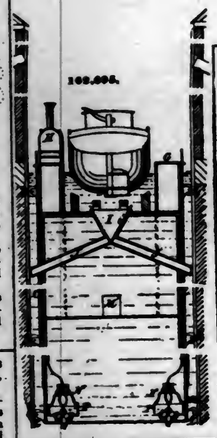
162,695. METHODS OF ELEVATING VESSELS FOR TRANSFERRING GRAIN. Jno. J. Safely, Ottumwa, Iowa. [Filed Oct. 5, 1874.]

Brief.—The elevating floating-dock has air-compartments, within which steam-engines operate vacuum-pumps, to effect the elevation of the dock and laden boat to the required height above the water. The dock-surface is provided with conduits, through which grain is received into bin-chutes, with which the conduits are brought to a level.

1. The method herein described of transferring grain, coal, &c., and other like material, from boats, by elevating the laden boat upon a floating-dock, and effecting the transfer through valved openings in the boat's bottom, and through corresponding side conduits in the raised floating-dock, to the place of transfer.

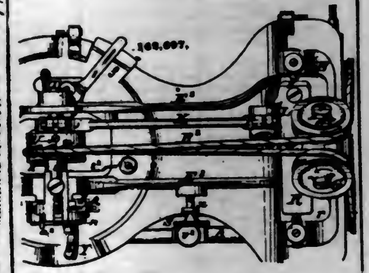
2. A floating-dock constructed for elevating laden vessels, to effect the transfer of their contents, having combined therein a steam boiler or boilers, vacuum-pumps in the water-compartment connected with said boiler or boilers, conduits or chutes opening at top of the dock to receive the contents from bottom openings in the boat, and at the sides of said dock, to deliver the contents where desired, with suitable gates by which to let in and shut off the water from said floating dock, and air-bearing compartments, the several parts co-operating to effect the object stated.

3. A floating-dock and a laden boat thereon, elevated by the displacement of the water directly through the bottom of its water-filling compartment, substantially as described.



4. The combination of a floating-dock, constructed and operated substantially as described, with elevators or elevated bins, constructed for use on one or both sides of said dock, and having conduit communication therewith, substantially as and for the purpose specified.

5. The method herein described of elevating the floating-dock and the laden vessel thereon, to bring the dock-conduits at a height to form a junction with the elevator or bin-conduits without regard to the combined weight of the dock and the vessel.



6. A floating-dock divided into upper and lower water-compartments, in combination with air-buoying compartments, vacuum-pumps, arranged and operated to displace the water from the lower compartment, and gates to let out the water from the upper compartment when its floor has reached a level above the outer water, whereby the dock is quickly elevated by the combined free outlet and forced displacement of the water therefrom.

7. The combination of the guides and rollers upon the elevated bins and the dock sides, to maintain the conduits of the latter in vertical range with those on the bins, to affect their junction when the dock has reached its proper height.

8. The combination, in a floating-dock constructed with dock-conduits for the transfer of grain from boats, of the air-tight buoying-compartments G, and the valved compartments E and F, substantially as and for the purpose set forth.

162,696.

162,697.

2. The combination of the wooden sides or pieces E, projecting beyond the sides of the furnace, and having grooves for the reception of the ends of the pans, the pans each provided with an opening in each end into the outside passages, the continuous outside passages, the lap-joint between the pans and the cross-rods, having heads and screw-nuts, all combined to form an evaporator composed of a series of pans communicating with each other, or with any one on the series, and the whole constructed without the use of solder or rivets, substantially as described.

162,697. SEWING-MACHINES. Albert E. Schmidt, Hamburg, assignor to the Hamburg American Sewing-Machine Manufacturing Company, limited, Berlin, Germany. [Filed Sept. 21, 1874.]

1. The hollow base, having longitudinal hinges *y*, the standard or post V, and the recess Z, to accommodate a hand driving-wheel at the right-hand end of the machine, substantially as herein described.

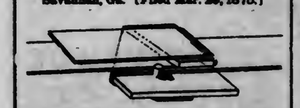
2. The combination, in a hand sewing-machine, of the close-bottomed hollow metallic base B, having a recess or orifice, Z, at its right-hand end, and a cap-plate, C, hinged at its front edge, the post or standard F on the cap-plate at its right-hand end, and the vertical transverse driving-wheel D, supported by the latter, substantially as herein shown and described, for inclosing, protecting, and conveniently operating the converting and transmitting mechanism, in the manner set forth.

3. The combination, in a hand sewing-machine, of the oblique guide-palleys G G², the pulley U, having a serrated groove, *v*, and the grooved pulley-flange *d*, arranged immediately above the guide-palleys, to provide for rotating a transverse horizontal shaft, beneath the cloth-plate at the left-hand end of the machine by a driving-wheel, D, on a longitudinal shaft at the right-hand end of the machine, through the medium of a band or belt, B², in the manner set forth.

4. A bobbin-holder, X, having a hinged retaining-ring, *a*, a spring locking-catch, *b*, and an opening-spring, *c*², operating automatically when the catch is tripped, said parts being constructed and combined substantially as herein shown and described.

162,698. MACHINES FOR SHAPING TOBACCO-PIPE BOWLS. John Schneider and Leonard Ulbing, Philadelphia, Pa., assignors to V. Grottenthalen, same place. [Filed July 21, 1874.]

Brief.—The bowl is supported upon a holder capable of adjustment in various directions, and applied to the face of a revolving serrated disk, which removes the superfluous material.

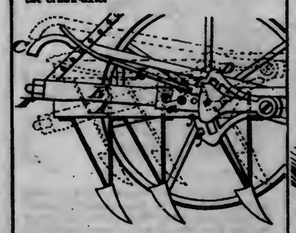


1. The combination of the rotating cutter E, having at one side a flat cutting-face, and a carrier, M, provided with appliances for holding the bowl of a pipe, and adjustable, as described, so that the said bowl may be presented at any desired angle to the cutting-face.

2. The combination of the carrier M and its spindle M with the slides I and O and plate B.

3. The within-described chuck, consisting of the tapering end *i* of the spindle M, sleeve *e*, split throughout a portion of its length, and a key, *h*, passing through both sleeve and spindle, all as set forth.

162,699.



1. A bale-tie fastening formed of a double plate, open at one side and both ends, and provided with a laterally-extended base portion, carrying a stop-pin or stud, substantially as described.

2. A plate of metal constructed so as to form a rounded back and sides, about in parallelism, one of the sides being of a width greater than the other, and having an oblique end, upon which is placed a shouldered stud or flat-headed rivet, to permanently secure one end of the band to the plate, and prevent lateral displacement of the free end of the band when sprung into position, substantially as described.

3. In combination with the double plate, a stud or stop formed and placed so as to secure one end of the band permanently to the plate without affecting the strength of the band, and to securely hold the other end after it has been sprung into position.

162,700. CULTIVATORS. Eli Shupe, Middletown, Mich. [Filed Mar. 13, 1875.]

Brief.—The crank-axles project forward, and are pivoted to the front end of the inner frame, which is manipulated by a handle. The outer frame turns upon the same pivot, and has a vertically-slotted plate on each side, in which the projecting spindle slides, the frame being elevated by a lever and spring-stop upon the crank-axle.

1. The frame A, having *d* draft-pole, B, and a handle, C, secured to it, in combination with the arms E and foot-bar F, pivotally connected to said frame, and with segments D J, spring-latching arms K, and wheels N, substantially as described.

2. In combination with the handle C on frame A, the slotted standard G and its pin *p* on the foot-bar F, substantially as and for the purposes described.

162,701. CIGAR-MOLD FASTENINGS. Sigmund Simonson, Bridgeport, Conn. [Filed Oct. 31, 1874.]

Brief.—The catch upon one half of the mold is caused to embrace a lug upon the other half, when the molds are brought together by a spring under the catch. The catch is drawn from over the lug by hand to open the molds, which raises a cam part of the same, that forces the molds apart.

A cigar-mold having combined therewith the hooked lever *a b* and spring E on one part, and the lug D on the other part, substantially as and for the purpose specified.

162,702. LATCHES FOR GATES, &c. Wm. D. Skidmore, Mount Vernon, N. Y. [Filed Apr. 9, 1875.]

A gate-fastening constructed of the bifurcated latch-bar A, in combination with a catch, C, having the inclined surfaces *d d*, recess *d*, and protuberance *e*, substantially as described.

162,703. GAS-REGULATORS. Danl. Sloan, New York, N. Y. [Filed Mar. 13, 1875.]

Brief.—The valve is controlled in its movements by the shoulders.

In a gas-burner, the combination of the valve *c*, provided with a shoulder, *g*, the conical check or nipple *d*, the tubular body *b*, and the burner-tip *e*, all constructed and operating substantially as shown and described.

162,703.

162,704.

162,704. GAS-REGULATORS. Danl. Sloan, New York, N. Y. [Filed Mar. 13, 1875.]

Brief.—A tubular set-screw supported by a cross-bar as a guide for the valve-stem.

The combination, in a gas-regulator, of the valve-casing A, having the conical nipple B, and the cross-bar *a*, arranged above the same, the perpendicular valve *c* arranged over said nipple to create a tapering chamber between the two, and having the guide-stem *b* projecting upwardly from its upper top, and the tubular set-screw E, projecting down through the said cross-bar of the valve-casing, all substantially as and for the purposes specified.

162,705. STRAINERS FOR WASH-BASINS AND BATH-TUBS. Jas. D. Smith, Washington, D. C. [Filed Dec. 23, 1874.]

Brief.—A removable strainer adapted to fit within the waste-pipe below the boss of the plug, whereby any accumulations of matter may be gathered and removed.

162,705.

162,705.

As a new article of manufacture, a strainer for wash-basins or bath-tubs, consisting of a perforated cup adapted to be dropped within and removed from the waste-pipe, and being of such length as to readily admit of the insertion of the ordinary plug within the upper end of the waste-pipe, substantially as and for the purpose set forth.

162,706. BAND-CUTTERS FOR THRASHING-MACHINES. Peter A. Sommers, Cassnovia, Ill. [Filed Apr. 16, 1875.]

Brief.—Knives provided with adjustable guard; device for throwing knives into and out of gear, and securing them within the guard.

1. In a band-cutting attachment for thrashing-machines, having rotating knives upon a shaft, the guards G, provided with slots *a a*, tapering curved fronts *g*, and slotted ears *b b*, whereby they may be adjusted forward or rearward, substantially as set forth.

2. The combination of the shaft D, its curved

cutters *c c*, slotted adjustable bearing-arms F, and the slotted adjustable guards G, substantially as set forth.

3. The tilting lever H, provided with the downwardly-inclined prongs *e e*, in combination with the clutch-pulley A, the shaft D, notched collar *d* of the bearing-arm, and the sliding flanged clutch *e d*, all substantially as set forth.

162,707. SEATERS. William F. Spencer, Richmond, Ind. [Filed Jan. 19, 1875.]

1. A settee made in sections A A, so as to form a continuous seat when placed in a straight line, the sections being pivoted or hinged together at or near their forward edges, only so that they may be freely adjusted to assume any desired continuous curve, or be set at any desired angle with relation to each other, substantially as and for the purpose specified.

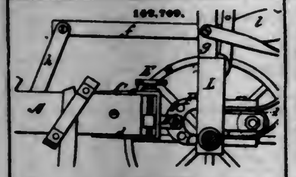
2. The pivoted plates B, having slots *b* and the buttons or pivot-bolts C attached to the settee sections A A, at or near the front edge of the seat-frames, substantially as and for the purpose specified.

162,708. CHAIR-SEATS. Wm. F. Spencer, Richmond, Ind. [Filed Jan. 19, 1875.]

1. A cushion made in sections or separate pieces A, secured to or between slats B, substantially as and for the purpose specified.

2. The cushions A, secured to slats B, in manner substantially as described, and arranged upon suitable standards or supports to form a cushioned seat, substantially as set forth.

3. The cushions A, secured to slats B, or other suitable backing or support, and arranged upon suitable standards or supports, with open spaces between the cushions for the passage of air, substantially as and for the purpose specified.



162,709. GANG-PLOWS. E. J. Bourgue, Cantagne, N. Y. [Filed Jan. 2, 1875.]

Brief.—Slotted loops are secured to the front ends of the plow-beams, and are coupled to other loops which encircle the axle. Both run upon crank-screws, by which the former adjust the plow-beams vertically, and the latter to or from land.

1. The combination, with the loops F laterally adjustable on axle G, and the supporting-legs J, of the adjusting-screw S, substantially as specified.

2. In a gang-plow the combination, substantially as described, of the clip-loops F, extending rearwardly from the axle G, the slotted loop *e* secured upon the front ends of the plow-frames, the adjustably-connecting links D, and the vertically-adjustable screw E, all operating substantially as and for the purpose set forth.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

160,709. CARPENTERS' PLANES. Elliot G. Storke, Auburn, N.Y. [Filed Jan. 6, 1875.]

Brief.—The cutting-bit can be adjusted as desired by means of a casting-lever, provided upon its forward part with an upward globular projection, and with journals, which rest in fulcrum-bearings on the front of the standards, which support the upper end of the bit, and a recessed screw-head attached to the under side of the cap. A metal fastener adjustable in grooves in the interior sides of the plane-body by means of lugs, and operated by a set-screw, secures the bit in position. The front of the plane-body is provided with an adjustable metallic throat-piece, for keeping down the grain and preventing wear from the friction of the shavings.

1. The casting-lever E, provided with journals which rest in fulcrum-bearings C on the front of the plane-iron standards B, and have lateral play in said bearings, substantially as shown and described.

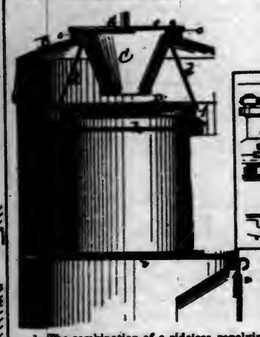
2. The combination, with the countersunk or recessed screw-head of a double plane-iron, of the journaled casting-lever engaging with its shorter arm the recessed screw-head, substantially as herein shown and set forth.

3. The metallic section or throat-piece I applied to and movable and adjustable upon the upper face of the plane-body, as described, and formed with a vertical portion, K, projecting downward through the plane body to form the front of the throat, substantially as set forth.

160,711. ROTARY ENGINES. Wm. R. Stott, Scranton, Pa. [Filed Feb. 17, 1875.]

Brief.—The rotary center-block is provided with a transverse slot and lateral radial extension, in which the valve of corresponding structure works. The arms of the valve are provided with wheels having hubs, which operate in a cam-groove. The abutment is provided with chambers and steam-channels, to balance it and the rotary center.

1. The combination of the fixed cylinder, having a rabbeted concave surface, with the rotary center A, plates D D, and flanges e, substantially as and for the purpose described.



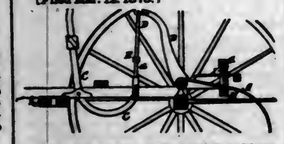
2. The rotary center-block A, having the side flanges d' d', the hub a, the recesses d' d', the transverse slot c, and the lateral radial extensions d' of said slot, all arranged substantially as and for the purposes set forth.

3. The valve V, adapted to fit into the open slot d, with its arms e' e' projecting into and working in the two lateral slots d' of the rotary center, substantially as described.

4. The wheels O, having the hubs o o' combined with the valve V and the cam-groove f, substantially as and for the purpose set forth.

5. The abutment F, provided with the chambers or recesses g g' and the steam-channels i i', substantially as and for the purpose described.

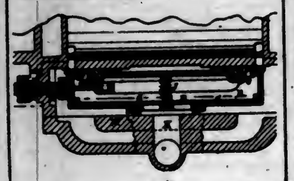
160,712. AXE-SETTERS. John Sutton, Ja.sp, N. Y. [Filed Mar. 4, 1875.]



1. The combination of a sideless revolving or oscillating sieve and the inner and outer reservoirs or vessels, having a space between them, substantially as and for the purpose described.

2. The combination, with a sieve and an inner and outer vessel, of a hopper attached to and revolving or oscillating with the sieve, substantially as and for the purpose described.

3. The combination, with the outer vessel A and inner vessel H, of the bottomless vessel J, serving as a guard and a centering device, substantially as herein described.

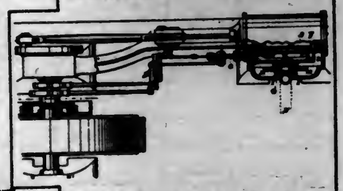


160,713. HORSE HAY-RAKES. Jas. R. Taylor, Westminster, Md., assignor to Taylor Manufacturing Company, same place. [Filed Mar. 12, 1875.]

The combination of lift-bar B, hand-lever C, and intermediate connecting-rod D, provided with adjustable foot-piece E, with the oscillating rake A, all constructed and arranged to operate substantially as and for the purpose specified.

160,714. BALANCED AND CUT-OFF VALVES. Jos. W. Thompson, Salem, Ohio, assignor to himself and Buckeye Engine Company, same place. [Filed Oct. 10, 1874.]

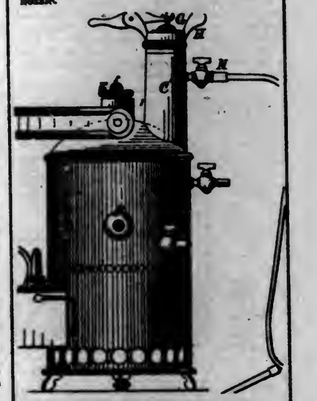
Brief.—The main valve is hollow. Steam is conducted into it through the lid of the chest. The cut-off is placed inside the main valve, and is operated by a rod passing through the main-valve hollow rod.



1. The combination of the sliding hollow steam-valve A, and inclosed sliding cut-off valve with the steam-chest L, having steam-induction pipe K, exhaust-passages M M, and pipe N, all constructed and relatively arranged substantially as herein shown and described.

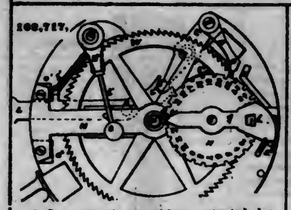
2. The combination of the tubular valve-rod Q with the rod P, the valves A O, their eccentrics, and connecting-rods, as herein shown and described.

160,715. VALVE-GEARS FOR STEAM-ENGINES. Jos. W. Thompson, Salem, Ohio, assignor to himself and Buckeye Engine Company, same place. [Filed Mar. 20, 1875.]



Brief.—The cut-off rock-shaft is pivoted to the main-valve rock-shaft, and receives its motion in addition to a movement from a separate eccentric.

The double-armed rock-shaft R of the cut-off valve, mounted on the rock-arm S of the main valve, which is operated by a fixed eccentric, in combination with an eccentric arranged for adjustment around its center of motion, and the rods connecting said parts, whereby the movement of the cut-off is varied, as set forth, for the purpose specified.



160,716. INSECT-DESTROYERS. William T. Tongue, Liverpool, England. [Filed Nov. 11, 1874.]

Brief.—A portable steam-generator, of size convenient for carrying in the hand, is provided with a spirit-lamp for heating, a safety-valve, steam-pipe, and nozzle, with steam stop-cock. A flexible pipe or tube of convenient length connects the steam-exit pipe with the nozzle.

As an improvement in means for destroying insects by steam, the hereinbefore-described apparatus, consisting of the casing A, containing the water-chamber C', steam-chamber C, combustion-chamber F, and discs p and p, the safety-valve G g, the steam-cock K, and the discharge-pipe and nozzle O o, all constructed and combined to operate in the manner and for the purpose substantially as specified.

160,717. PASSENGER-REGISTERS. Hamilton B. Towle and John B. Benton, New York, N. Y. [Filed Feb. 20, 1875.]

1. In registering-machines, actuated by pulls given upon a lever, the combination of two index-fingers, one of which is carried by friction, and may be freely adjusted to any point on the dial, and the other of which is permanently fixed to and moves only with the driving mechanism, arranged to operate substantially as described.

2. The actuating-lever L and lever L', pawl A, and ratchet-wheel W, in combination with the stop-lock B, adapted to receive the end thrust of the pawl at each movement of the actuating-lever, whereby the ratchet-wheel is securely locked.

3. A cover-plate, provided with suitable aperture, mounted upon the same shaft and combined with a register-disk, in combination with a register-wheel, the actuating-leg of which moves simultaneously the cover-plate and the disk, to keep the proper number upon its dial in view, and to keep, at the same time, the next consecutive number on the dial obscured until it is time for the indicator to change, and show said next number at the completion of a century, or at any other point of numeral division.

4. The disk x, carrying the index-hand C, in combination with the key V, inserted through the opening in the cover-plate.

160,718. FIRE-EXTINGUISHERS. Jacob B. Van Dyne, Louisville, Ky. [Filed July 30, 1874.]

Brief.—To operate the extinguisher from an upper floor, a rod passes down, terminating in an angle-spring having a subjacent stud, which engages with a notch on the shaft. The stopper of the acid-bottle is attached to a cam, so that it is swung to one side as it is lifted. The leaden acid-bottle has a glass mouth-piece, to prevent adhesion of the leaden stopper.

1. The angle-spring E, having subjacent stud e, and provided with a rod, F, in combination with a trunnioned fire-extinguisher, as and for the purpose described.

2. The combination of nut and screw I J and cam K, to remove or replace the stopper, in the manner specified.

3. A trunnioned fire-extinguisher, having a hollow trunnion, in combination with a stand-pipe having a swiveled connecting-pipe, and the latching devices, consisting of the spring E, notch-eted J, and rod F, substantially as shown and described.

4. In a chemical fire-extinguisher, the combination of a leaden acid-vessel, a glass cover or mouth-piece, and a leaden stopper, for the purpose specified.

160,719. FIRE-EXTINGUISHERS. Jacob B. Van Dyne, Louisville, Ky. [Filed July 30, 1874.]

Brief.—In the ring of the holder for the acid-bottle are formed slots, through which pins on the neck of the acid-vessel pass when the latter is secured to its holder. The vessel being then turned, the pins enter notches also formed in the ring, to prevent displacement of the acid-vessel, and the premature mixture of the chemical ingredients.

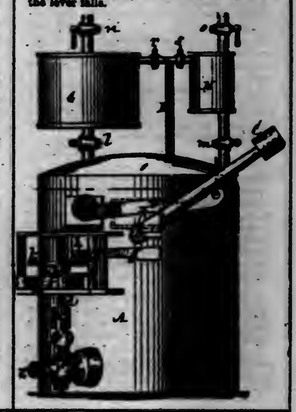
The combination, with acid-vessel having studs f' f', of the holder-ring H, having the notches h' h', as well as the vertical slots h h, as and for the purpose specified.

160,720. STEERING APPARATUS. Philip R. Voorhees, Washington, D. C. [Filed Jan. 21, 1875.]

1. A vibrating winding mechanism, constructed substantially as described, in combination with a rotary driving-shaft, a ship's rudder, and suitable ropes and levers, whereby the rudder is either moved and held by hand-power alone, or moved in either direction, but not held, by the assistance to the hand-power of power transmitted from the driving-shaft, without the necessity of reversing or stopping the motion of said shaft, all at the will of the helmsman, and in the manner substantially as described and set forth.

2. A cylinder and its piston, oscillating in a horizontal plane, in combination with a hand steering wheel or lever and a ship's rudder, through the intervention of a piston-rod, and suitable ropes and levers, whereby the rudder is actuated and controlled at the will of the helmsman, in the manner substantially as described and set forth.

3. The combination, with the winding-shafts s s, of the counterbalance-weights u u and toggles T T, attached to the winding-ropes P' P', whereby the said ropes are prevented from leaving and arbitrary winding action of the pulleys prevented, in the manner substantially as described and set forth.



4. The combination, with a ship's rudder, of the oscillating cylinder F and its piston, the elevating-pumps P P, connected by a beam, and suitable ropes and levers, whereby the movements of the rudder and its resistance to the helm are controlled by operating the helm itself, at the will of the helmsman, in the manner substantially as described and set forth.

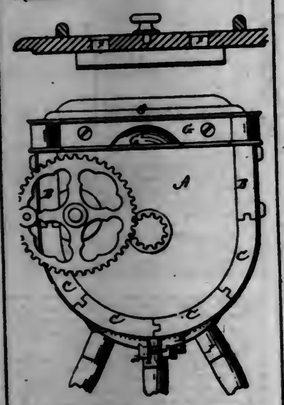
5. The combination of the oscillating cylinder F and its piston with the stand-pipe G and elevating-pumps P P, provided with pipes H H, K K, L L, whereby the motions of the pumps P P are actuated, in the manner and for the purposes substantially as described and set forth.

6. The combination of the elevating-pumps P P, constructed substantially as described, with the vibrating frame M and its winding mechanism, whereby said mechanism is thrown both in and out of winding operation, in the manner substantially as described and set forth.

160,721. FIRE-EXTINGUISHERS. Edward F. Wadhams, Stamford, Conn., assignor of nine-tenths his right to Elon Foster, New York city. [Filed Feb. 16, 1875.]

Brief.—A pivoted tilting vessel holds the acid, and is discharged by descent of a weighted lever. A stop and spring mechanism, interposed between the weighted lever and the discharge-cock, opens the latter when the lever falls.

The combination, with the pan B, vessel A, and discharge-cock F, of tripping mechanism, interposed between the pan and the cock, for opening the latter when discharging the contents of the pan, substantially as specified.



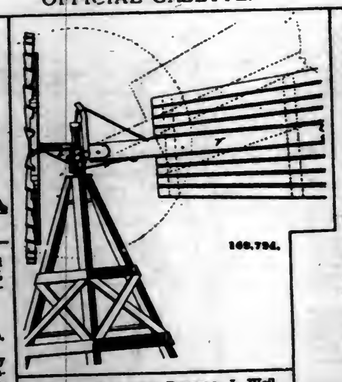
160,725. METALLIC ROOFS. J. C. Wands, Nashville, Tenn. [Filed Jan. 19, 1876.]

The raised corrugated ribs r at the lateral edges of corrugated plates, constituting a roof, combined, arranged, and constructed substantially as specified.

160,726. ROTARY CHURNS. C. H. Weston, Toledo, Ohio. [Filed Mar. 17, 1875.]

Brief.—The top of the churn is clamped by single castings at each end. The staves forming the body of the churn are held in position by being firmly fixed to the churn near the top. Each hoop is cut at its middle, the ends passed through slots in lugs, brought forward, and bent up around the ends of the lugs. A bolt passes through perforations in the lugs and ends of hoop, upon which a nut is screwed. By tightening this nut the staves are forced together.

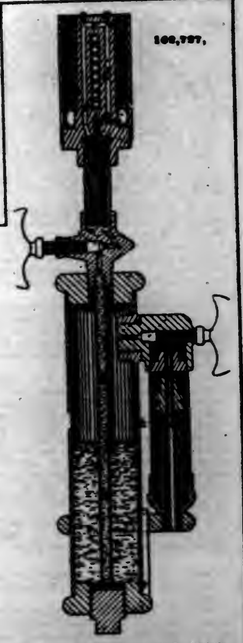
1. The combination, with the churn-body A B C, of the hoops D, having the bent perforated ends a, the clasps E, provided with slots e, recesses b, and perforated lugs d, and the bolt f, passing through the ends a and lugs d, substantially as and for the purposes herein set forth.



2. The combination, with the churn-body A B C, of the metallic castings G G, provided with end sockets to inclose the corners of the churn, and having handles G' cast therewith, all substantially as set forth.

160,727. WINDMILLS. David G. Webster, Park's Corners, Ill. [Filed Mar. 1, 1875.]

Brief.—The wheel is pivoted to one side of the turn-table, and connected to the vane by means of a short rigid rod, so that when the wheel yields to the force of the wind, the vane is raised upward. When the wind subsides the weight of the vane brings the wheel into position again.

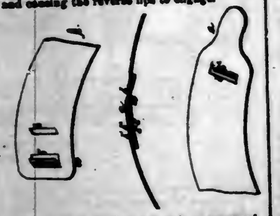


1. In combination with a wind-wheel, a vane that is pivoted so as to move vertically, and connected to the wheel by a rigid connecting-rod, substantially as shown.

2. The combination of the wheel W, journaled in the support b, which support is placed to one side of the center of the derrick, in combination with the step f, rod r, and vertically-moving vane V, substantially as set forth.

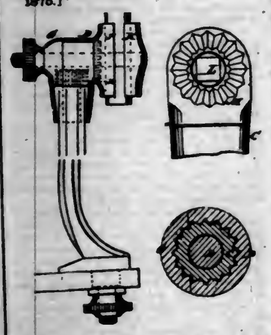
160,734.

160,727.



1. The combination, in a torch for lighting street-lamps, &c., of a tubular handle, forming a reservoir for the burning-fluid, and an air-pump for producing pressure in said reservoir, as and for the purpose described.

2. The combination, with the handle of a torch, and an air-pump connected therewith, of a ring surrounding said handle and attached to and serving as a guide for the piston of the pump, and a handle by which the piston is operated, substantially as described.

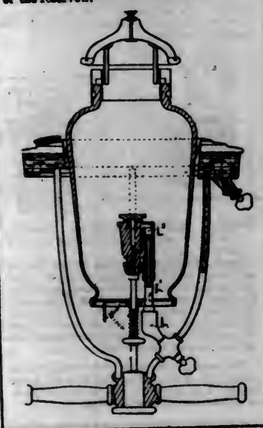


160,735. HOOPS FOR BARRELS. L. Weil, New York, N. Y. [Filed Mar. 12, 1875.]

Brief.—The hoop-lock consists of rectangular slots formed upon both ends of a metal hoop, and provided with reverse lips rising on opposite sides of the hoop from the edges of said slot. The hoop is locked by passing the narrow end through a slot in the wide end, and causing the reverse lips to engage.

The hoop A, having one end, a, narrowed and the other wide, and c' cross-slotted at b to receive said narrow end; the two ends then locked by reversed lips b^1 b^2, rising on opposite sides from the edges of cross-slots b^1 b^2, as and for the purpose described.

160,736. UMBRELLA-SUPPORTS. Richard J. Wellen, St. Joseph, Mo. [Filed Jan. 26, 1876.]



1. The annular and serrated socket C, and the head D, constructed and combined as and for the purposes set forth.

2. The jaw K, in combination with the screw I journaled in the head D, and the jaw J, as and for the purpose described.

160,737. VAPOR-BURNING TORCHES. Henry Wellington, New York, N. Y. [Filed Mar. 10, 1875.]

160,738. STREET-LAMPS. Henry Wellington, New York, N. Y. [Filed Mar. 10, 1875.]

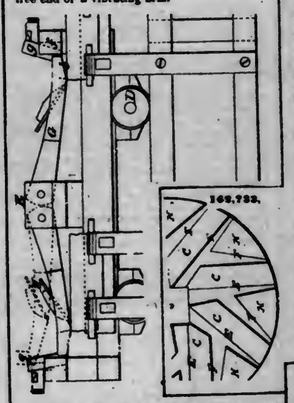
Brief.—The shade rests upon the inner face of the reservoir.

1. The combination, in a street-lamp, of a reservoir for holding the burning-fluid with the frame that supports the glass shade surrounding the shade and forming part of the supporting frame, substantially as described.

2. The vaporizing-chamber consisting of the tube L', the socket L², and the channel f communicating with the said socket and the burner, substantially as described.

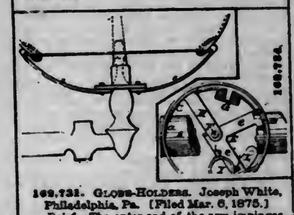
160,729. AXLES. Elisha H. Wheeler, Memphis, Mo. [Filed Nov. 14, 1873.]

Brief.—Skein, bolster, and axle bound together by means of tension-rod, hound-bolts, and lugs.



1. Axle A, bolster B, thimble-skein E, lugs 3 3, and tension-rod H, in combination with arm F, recess O, and flanges L, as set forth.

2. The combination of the axle, hound, bolts, washers 1 1 1, tension-rod H, lugs 3 3, as set forth.

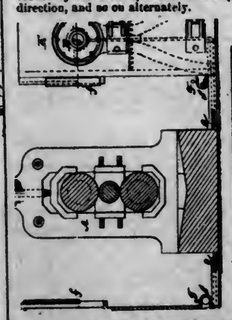


160,730. MACHINES FOR MAKING SPLINTS. Edward E. White, Oakland City, assignor of one-half his right to Ancel B. White, Lynnville, Ind. [Filed Dec. 10, 1874.]

Brief.—The material is secured in suitable clamps, and cut by planes attached to the free end of a vibrating arm.

1. In a machine for splitting hoops and making chair-splits, a reciprocating carriage carrying a double set of cutters, operating in the manner herein set forth.

2. The hinged arms G, pivoted at their inner ends, in pairs, to the central cross beam E, and extending therefrom in the same line, in combination with the guides f g for their free ends, substantially as herein shown and described



160,731. GLOBE-HOLDERS. Joseph White, Philadelphia, Pa. [Filed Mar. 6, 1875.]

Brief.—The outer end of the arm impinges upon the inside of the globe.

The improved globe holder, having the spring-arms e, curved upwardly and outwardly, and terminating in S-shaped hooks, bent inwardly and depending, so that their ends shall impinge on the inner surface of the globe, as shown.

160,732. APPARATUS FOR ROLLING METALLIC STRIPS OR RIBBONS. Saml. E. Wilmot, Bridgeport, Conn. [Filed Mar. 17, 1875.]

Brief.—The rolls are located between two reels placed in heated chambers, and the ribbons are drawn from one reel through the rolls, and wound upon the other reel, succeeded by the same operation in the opposite direction, and so on alternately.

1. The combination of a rolling-mill and reels on opposite sides thereof, constructed to give and take alternately, substantially as and for the purpose herein set forth.

2. The heat conserving casings or furnaces E E and reels B B, constructed to give and take alternately, arranged therein, in combination with an interposed rolling-mill, substantially as and for the purposes specified.

160,733. MILLSTONE-DRESS. John A. Witman and George W. Seibert, Middletown, Pa. [Filed Mar. 23, 1875.]

1. The combination of the stone A, dressed with eight double-tapered furrows, B, and lands G, and bed-stone D, dressed with eight double-tapered main furrows, E, short furrows F, and lands G H, all constructed and arranged as and for the purposes described.

2. The grooves or furrows constructed or formed as herein described—viz., wide at the eye, narrow at the skirt, perpendicular sides or edges b^1 b^2, deep at the back, and shallow at the skirt, the bottom deep on one side, with a curve upward and across the groove, and upward and outward toward the skirt—as and for the purposes described.

160,734. SHOT-CHAMBERS. Peter Eisenl, Nashville, Ill. [Filed Apr. 6, 1875.]

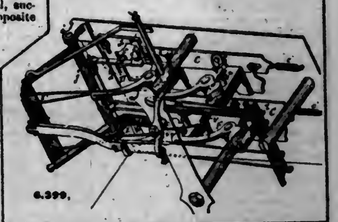
1. The combination of tube A, cut-offs B and C, arms e and H, springs G and I, substantially as and for the purpose set forth.

2. The combination of tube A, cuts-offs B and C, arms e and H, springs G and I, and knob K, substantially as set forth.

REISSUES.

6,399. SELF-CLOSING ANNUNCIATORS. Ernst Axtheim, Pittsburg, Pa. Patent No. 150,274, dated Apr. 28, 1874. [Filed Dec. 16, 1874.]

1. The combination of a bolt provided with a retracting-spring, a locking-slide having spring-dogs, and a lever operated from the bell-wire for advancing the bolt, substantially as and for the purpose specified.

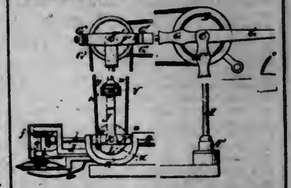


2. The combination of the bolts b, locking-slides C, bell-wires I, and intermediate mechanism, whereby the pulling of any one of the wires I exhibits a corresponding number, and conceals the number previously exhibited, as and for the purposes specified.

3. The locking-slides C, provided with the spring-catches c, substantially as specified.

4. The coupling-slide D, provided with the arms d d^1, in combination with the locking-slide C, having the pins or projections c^1 b, substantially as specified.

5. The coupling-slide D, having the lugs d^2, in combination with the catches c of the lever E, substantially as and for the purpose specified.



6. In combination with an annunciator a coupling-piece, by moving which the annunciator is changed at will from a self-closing to a hand-closing condition, and its reverse, as specified.

6,399.

6,400. APPARATUS FOR TRANSMITTING MOTIVE POWER. Roswell T. Smith, Nashua, N. H., assignor to himself, John G. Blunt, Wm. Earl, and J. K. Priest. Patent No. 59,069, dated Oct. 23, 1866; reissue No. 4,623, dated Nov. 7, 1871. [Filed Jan. 15, 1873.]

Brief.—The standard, supported upon the bed-plate, has a horizontal arm pivoted to its upper end. Said arm carries a weight at one end, and has a rod connected to the other, to the lower extremity of which the brush, shearing apparatus, or a device requiring universal motion, is connected.

1. In the machine for transmitting motion, the hanger F, pivoted upon the arm G, which is pivoted to its support A, whereby the hanger itself is permitted to vibrate in a vertical plane, and the arm and hanger together are permitted to vibrate in a vertical plane, which is at right angles to the plane in which the hanger alone vibrates, substantially as described.

2. In the machine for transmitting motion, the bearing N, pivoted upon the stirrup of the rod I, and upon the section O, whereby said bearing is permitted to move in planes at right angles to one another, substantially as described.

3. In the machine for transmitting motion, the arm G, pivoted to a swiveling-support, A, substantially as described.

4. In a machine for transmitting motion, the rod or bar I, pivoted to hanger or rod G, substantially as described.

5. In a machine for transmitting motion, the section O, pivoted to bearing N, substantially as described.

6. In a machine for transmitting motion, the combination of the swiveled rod or bar I with the section O, pivoted to bearing N, and having freedom to move in planes at right angles to each other, substantially as described.

7. In a machine for transmitting motion, the combination of the arm G, having freedom to vibrate vertically, the bar or rod I, having freedom to swing in planes at right angles to each other, and the section O, pivoted to bearing N, and having freedom to vibrate in planes at right angles to each other, substantially as described.

8. In the machine for transmitting motion, the combination of arm G, swiveled support A, bar or rod I, having freedom to swing in planes at right angles to each other, and the section O, pivoted to bearing N, substantially as described.

9. In a machine for transmitting motion, the arm G, rod or bar I, swivel-joint V, and the section O, pivoted to bearing N, substantially as described.

10. In a machine for transmitting motion, the shaft g, driven with a positive motion from the prime motor, which has its power transmitted to said shaft through the gearing, which is supported on shafts which form the joints of the parts composing the machine, substantially as herein set forth.

11. In a machine for transmitting motion, the combination of the following elements, viz: a vertically-swinging arm, G, a balancing-weight, H, and a support for said arm, substantially as described.

12. In a machine for transmitting motion, the combination of the following elements, viz: a vertically-swinging arm, G, a balancing-weight, H, a support for said arm, and a swivel-joint, A', substantially as described.

13. In a machine for transmitting motion, the combination of the following elements, viz: an arm, G, pivoted to swing vertically, a balancing-weight, H, a support for said arm, a hanger, F, a pivot-shaft, F', and a pendent swinging rod or bar, I, substantially as described.

14. In a machine for transmitting motion, the combination of the following elements, viz: an arm, G, pivoted to swing vertically, a balancing-weight, H, a swinging pendent rod or bar, I, stirrup J, and joint V, substantially as described.

15. In a power-transmitting machine, the combination of the following elements, viz: the gear-shaft g on section O, and carrying a gear, f, and a pivot-shaft, K, on bearing N, and carrying a gear, M, and intermediate gearing, substantially as described.

16. In a machine for transmitting motion, the section O, carrying the instrument to be driven, and the handle pivoted to a vibrating bearing, N, on a pivot-shaft, K, substantially as described.

17. In a machine for transmitting motion, the combination of the following elements, viz: Swivel-stirrup J on rod I, bearing N, section O, carrying a handle, and the shafts K and g, connected by bevel-gears M and c, and e and f, and d, substantially as described.

18. In a power-transmitting machine, the following elements, viz: a vertically-swinging arm, G, a balancing-weight, H, a pendent swinging bar or rod, I, and a hinged section, O, carrying the instrument to be driven, and pivot-shafts which support the gear-wheels and said arm, bar, and section, substantially as described.

19. In a power-transmitting machine, the combination of the following elements, viz: belt-pulley D on pivot-shaft C, belt-pulleys E and E' on pivot-shaft F, belt-pulley L on pivot-shaft K, belts n n', arm G, pivoted to swing vertically, a support for this arm, a balancing-weight, H, a pendent rod or bar, I, having a stirrup at its lower end, substantially as described.

6,401. CAR-ROOFS. A. P. Winslow, Cleveland, Ohio. Patent No. 25,071, dated Aug. 9, 1859; reissue No. 2,050, dated Aug. 8, 1866; extended seven years. [Filed Mar. 8, 1875.]

1. A car or steamboat roof formed of two layers, that underneath being metallic, that on top wood, substantially as and for the purpose set forth.

2. A car or steamboat roof composed of an under surface of metal, an upper layer of wood, and an intermediate air-space, substantially as and for the purposes set forth.

3. A car or steamboat roof composed of an under surface of metal, an upper surface of wood, an intermediate air-space, the said air-space communicating with the exterior air, whereby a circulation is maintained, substantially as and for the purposes set forth.

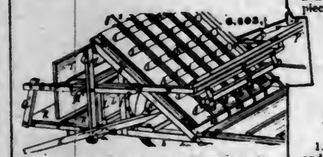
4. A car or steamboat roof composed of an under surface of corrugated metal and an upper surface of boards, substantially as and for the purposes set forth.

5. A car or steamboat roof consisting of an under surface of separate metallic plates, D, and an upper surface of boards, substantially as and for the purposes set forth.

6. A car or steamboat roof consisting of an under surface of separate metallic plates, an upper surface of wood, and an intermediate air-space, substantially as and for the purposes set forth.

7. A car or steamboat roof consisting of an under surface of separate removable metallic plates and an upper surface of wood, substantially as and for the purposes set forth.

8. A car or steamboat roof consisting of an under layer of separate metallic plates D, rafters B, and an upper surface of boards, substantially as and for the purposes set forth.



9. The combination, with the plates D and rafters B, of cap-plates F, substantially as and for the purposes set forth.

10. The combination, with the plates D, board covering A, and the rafters B, made to project above the said plates, of orifices H, substantially as and for the purpose set forth.

6,402. COATING METALS WITH METAL. Isaac Adams, Jr., Boston, Mass., assignor to the United Nickel Company, New York city. Patent No. 87,271, dated Aug. 21, 1860; reissue No. 6,313, dated Mar. 2, 1875. [Filed Apr. 16 1875.]

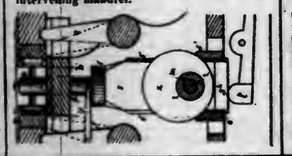
Rendering gas-tips and other similar articles anti-corrosive to heat or moisture by surfacing them with nickel, substantially as set forth.

6,403. HARVESTERS. John H. Elward, St. Paul, Minn., assignor to himself and W. S. Goodhue. Patent No. 127,324, dated May 28, 1872. [Filed Mar. 5, 1875.]

6,403.

1. In a machine for reaping grain, a removable gear and gear-frames, said gearing being adapted to drive the cutter at different velocities, and the gear-frame being constructed, substantially as described, so that it can be supported upon the main wheel at different heights, substantially as and for the purpose set forth.

2. The binders' platform, constructed of two parts, K K', hinged to each other, substantially as described, so that one part may be operated as a dropper, substantially as set forth.



3. In combination with the bar I, to which is attached the upper ends of rods h', the fingers l', whereby said bar I is made to serve both as a support for rods h' and as a head for its rocking-grain receiving-fingers, substantially as set forth.

4. The combination, with broad, endless elevating-apron, upon the moving surface of which the grain is carried to the outer or stubble side of the machine, of the knife-edged slats h, arranged and operating as described.

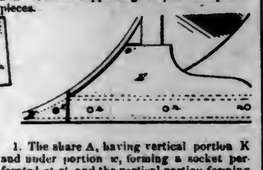
5. The combination, with the secondary elevating-apron H', of the knife-edged slats h, and the compressing rods or wires s, substantially as and for the purpose described.

6,404. MACHINES FOR FORGING METALLIC SOCKETS. George Fitch and Peter Shafer, Etna, assignors, by mesne assignments, to George Fitch and John D. Hieber, same place, and F. O. Siegebruck, Millvale, Pa. Patent No. 134,045, dated Dec. 17, 1872. [Filed Jan. 29, 1875.]

Brief.—A vertical mandrel is elevated and depressed at pleasure by lever f and eccentric e, and is rotated by ratchet and pawl. The dies d are concave, corresponding to the cylindricity of the socket, and strike simultaneously upon the socket-blank surrounding the intervening mandrel.

1. The method of welding metallic socket-blanks and converting said blanks into sockets, finished internally and externally, on a rotating mandrel and by suitable dies, at one operation and one heat, substantially as set forth.

2. The combination of an intermittently-rotating mandrel, for supporting internally the walls of the socket, and reciprocating dies, bounded above and below by transverse walls, to prevent longitudinal extension of the socket, substantially as set forth.



3. The combination of reciprocating dies d d, vibratory arms e e, and ratchet and pawl r v, whereby the mandrel is rotated when the dies are retracted, and is stationary at the forward stroke of the dies, substantially as set forth.

4. The sliding hub i, carrying an eccentric or cam at one end and a clutch at the other, and suitably arranged to operate the dies in one position and discharge the finished socket in the other, substantially as set forth.

5. The combination of mandrel p, one or more projections, s, and recessed and flanged dies d, substantially as set forth.

6,405. PLOWS. John Lane, Jr., Chicago, Ill., assignor to Hapgood & Co., and Furst & Bradley. Patent No. 113,436, dated Apr. 4, 1871. [Filed July 26, 1874.]

Brief.—Share, mold-board, land-side plate, and land-side-supporting bar, all in separate pieces.

1. The share A, having vertical portion K and under portion w, forming a socket perforated at a', and the vertical portion forming a shoulder on a line with the upper edge of the same, substantially as and for the purpose set forth.

2. The share A, having vertical portion K, ending on a line with the upper portion of the share, and the land-side F, ending with a vertical shoulder against the rear portion of the part K, the vertical portion of the share A and the land-side attached, by bolts a' and n, directly to the bar B, furnishing the entire support, all combined as and for the purpose herein specified.

3. The share A, having the vertical portion K, with perforation a' forward of the upper edge of the share, in combination with the land-side E and bar B, bolted together at a n, substantially as and for the purpose set forth.

6,406. BOILING-KETTLES. Stephen Spoor, Troy, N. Y. Patent No. 87,306, dated Feb. 23, 1869. [Filed Sept. 10, 1874.]

1. The construction and arrangement of the cover and bail of a boiler, kettle, or other similar vessel with projections on each, substantially as described, whereby the bail, when raised and tilted, will hold the cover nearly or quite closed, leaving an open space or spaces sufficient to allow the water to drain off without spilling the contents of the vessel, substantially as and for the purpose herein specified.

2. In a kettle or boiler the combination of the bail C, with shoulders or projections d d, whereby the said bail may be sustained in an upright position while boiling goes on in the kettle, substantially as and for the purpose herein specified.

3. A kettle or boiler, provided with a notch or projection, h, on its front side, in combination with a cover, B, held upon the kettle or boiler by the bail, which is held in a perpendicular position, substantially as and for the purpose herein specified.

OFFICIAL GAZETTE

OF THE

United States Patent Office.

VOL. 7.—NO. 18. TUESDAY, MAY 4, 1875. PRICE { $6,00 per year—single. $5,00 per year in clubs.

The OFFICIAL GAZETTE is published on Tuesday of each week, from the United States Patent Office. The subscription price for 1875 is six dollars per year for single subscribers; five dollars per year to clubs of not less than five sent at one time, and which will be mailed free of postage to separate addresses if desired. Subscriptions will commence and terminate with the year. All orders should be addressed to the Commissioner of Patents, Washington, D. C.

DECISIONS OF THE COURTS.

SUPREME COURT OF THE UNITED STATES.

GEORGE W. BROWN, APPELLANT, *vs.* RUFUS B. GUILD, &c., AND GEORGE W. BROWN, APPELLANT, *vs.* JAMES SELBY, *et al.*

[*Appeals from the circuit court of the United States for the northern district of Illinois.—Decided at the October term, 1873.*]

[The opinion of the court in these cases was reported in the OFFICIAL GAZETTE, vol. 6, p. 391.

Below will be found the dissenting opinion of Mr. Justice Clifford.]

Mr. Justice CLIFFORD, dissenting:

Applicants for a patent are required to file in the Patent Office a written description of their invention and of the manner and process of making, constructing, and using the same, in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, and use the same; and in the case of a machine he must explain the principle thereof, and the best mode in which he has contemplated applying that principle, so as to distinguish it from other inventions.

Patents granted without a compliance with those conditions are invalid, as the express requirement of the act of Congress is that every inventor or discoverer shall do so *before* he shall receive a patent for his invention or discovery. (16 Stat. at Large, 201.)

Letters patent were granted to the complainant on the 2d of August, 1853, to take effect from the 2d of February prior to the date of the patent. Seed-planter is the name of the invention given in the patent, but in the introductory part of the specification it is denominated "new and useful improvements in seed-planters for planting corn and smaller grains."

Very minute description is given of the machine and of the several devices of which the machine is composed, for the declared purpose of enabling others skilled in the art to make and use the invention. Suffice it to say, without entering into details, that of all the numerous devices described as ingredients of the machine not one of them is new, nor it is claimed that the patentee either invented the machine or any one of the ingredients of which it is composed.

What he claims in that patent is as follows: (1) The oscillating horizontal wheels or distributers in the bottom of the hopper, having slots and tubes of various sizes, *in combination* with the stationary caps and pins for the discharge of different kinds and qualities of seeds. (2) He also claims the arrangement of the covering-rollers, mounted as described, and performing the functions of covering the seed, elevating the cutters in turning the machine, and also in adjusting the cutters to different depths.

Tested by the descriptive portion of the specification, the better opinion is that the second claim is also for a combination, but in the view taken of the case it is unimportant whether it be regarded as a method of accomplishing the described result or as a combination of the described ingredients to effect the same end, as it is quite clear that the patentee does not claim that he is the original and first inventor of any one of the several devices of which the entire machine is composed.

Beyond all doubt the invention consisted of the two combinations described in the respective claims, and it is equally certain that the letters patent were in all respects sufficient to secure the full enjoyment of the patented machine to the patentee. Nevertheless the patentee surrendered the same, and on the 16th of February, 1858, the same was reissued to him with an amended specification which contains only one claim. Instead of claiming a combination of old ingredients, as in the original patent, he claimed in the reissued patent a shoe for opening a furrow, which has a convex edge in front and a seeding-tube in its rear end, so that it may out through any grass, open out a furrow, and hold it open until the seeds are deposited in the same, substantially as set forth in the specification.

Like the original patent, the reissued patent was in form both operative and valid; but, inasmuch as it was not sufficiently comprehensive to supersede all other improvements, the patentee surrendered it for a second time and caused the original invention to be reissued in

five parts, embracing several claims, all of which, except one, are involved in the present action.

Surrendered patents cease to be a cause of action from the moment the surrender takes place, nor can the owner of the patent recover, even for an infringement which preceded the surrender, unless the claim for profits or damages had passed into judgment before the surrender took place. Such a patent, though inoperative as a cause of action, may be admitted as evidence to support or disprove an issue that the reissued patent is not for the same invention as the original. Reference may also be made to such patent as to a repealed statute, to aid in the construction of a reissued patent, if the latter is ambiguous; but it ceases to be operative for any other purpose, just as much so as a repealed statute, and can never have the effect to enlarge or diminish the operative words of a reissued patent.

Patents are public grants, and every person claiming any right under such an instrument must show that the right claimed is secured by the instrument; nor can he be benefited by showing that the right claimed was secured by a surrendered patent, unless the reissued patent also secure the same.

Viewed in the light of these suggestions, it is clear that the rights of the complainant in this case depend solely upon the last-mentioned reissued patents, which are the patents mentioned in the bill of complaint and which it is alleged by the complainant that the respondents have infringed.

Defenses of various kinds are set up by the respondents to the allegations of the bill of complaint, as follows: (1) That the complainant is not the original and first inventor of the improvements described in the said several patents mentioned in the bill of complaint. (2) They deny that the said new patents were issued in good faith, and they allege that said reissued patents are not for the same invention as that described and embodied either in the original patent or in the prior reissues of the original patent. (3) That the five last-mentioned reissued letters patent are severally invalid in law and void and of no effect, and that they do not confer any such right or monopoly to the complainant as he alleges and pretends to claim.

Enough has already been remarked to show that the original patent was a combination of old ingredients by which the described result was effected; or, in other words, that the patented invention consisted in a new combination of the described ingredients, every one of which was proved to be old. Old ingredients are not the proper subjects of letters patent in any other form than as a combination, for the plain reason that nothing is the proper subject of a patent which is not both new and useful.

Reissued patents must be for the same invention as the original, and that condition is just as applicable to a second reissue as to the first; nor is the second reissue relieved in any respect from the full force of that condition in a case where the invention in the reissue is divided into several parts.

Undoubtedly a new and useful combination consisting of old ingredients may be the proper subject of letters patent if the combination produces a new and useful result; but the act of Congress does not authorize the patentee to surrender such a patent and to reissue the same for the separate ingredients, for the plain reason that the ingredients are old, and for the additional reason that a patent for a separate ingredient is not the same as the combination of several ingredients. (*Gould* vs. *Rees*, 15 Wall., 194.)

Authorities to support these propositions are unnecessary, as they are self evident; nor is it necessary to do more than to refer to the several claims of the several reissues under consideration to show that every one of those reissues are invalid, both for the reason that the alleged improvement is old, and also for the reason that the invention embodied in each of the reissued patents is different from the one secured by the original patent. Even the court here admits that each one of those reissues is "for a distinct and separate part of the original invention alleged to have been made by the complainant," full proof of which is exhibited in the claims of the respective reissued patents. (*Gill* vs. *Wells*, 20 Wall.) They are as follows:

1. No. 1,036.—Appended to that patent is a claim much more comprehensive than is to be found in either of the four other patents, but it is plainly not a claim for a combination, nor one for the whole machine, as was admitted in argument by the complainant. What he there claims is a seed-planting machine constructed principally of frame-work, the front part of which is supported on not less than two runners or shoes, with upward-inclining edges, and the rear part is supported on not less than two wheels, the latter being arranged to follow the former.

Evidently that claim is not intended to cover the whole machine; nor would it benefit the complainant even if it could receive that construction, as it is not pretended that he was the original and first inventor of such a planting machine, nor that the specification of the original patent professed to describe such an original invention. Machines of the kind have existed for a very long period before the date of the complainant's patent, even for a period whereof the memory of man runneth not to the contrary.

2. No. 1,037.—Nothing is claimed in this patent except the construction of a shoe or runner for a seed-planting machine, with an upward inclining edge, with its point sufficiently raised so that it will climb up and over, or cut and break through, intervening obstacles without materially forcing the earth laterally at its front part, and widening toward the rear end so as to open a furrow in which the seed to be planted may be deposited, and long enough to furnish a support to the frame work of the machine. Explanations of that patent are certainly unnecessary, as it is plain that the claim is for distinct and separate ingredients of the combination embodied in the original patent.

3. No. 1,038.—Under this patent the complainant claims a hinged joint between the point of the tongue and the rear part of the machine, in combination with a seed-planting machine, so that one part of the frame-work may be raised, lowered, adjusted, and supported on the other part. Nor is any argument necessary to show that the claim of the patent is for one of the separate and distinct ingredients of the combination embodied in the original patent, all of which were confessedly old.

4. No. 1,039.—Two claims are made in this patent as follows: (1) The seat for the attendant, or, in the language of the claim, the mounting of the attendant upon the machine or seed-planter, wherein the seed-dropping

mechanism is operated by hand, in such a position that he may readily see the previously-made marks upon the ground and operate the dropping mechanism to conform thereto. (2) He also claims a lever, in combination with a seed-planting machine, or its equivalent, by which the driver or second attendant may raise or lower that part of the frame-work that carries the attendant and the seeding devices.

Manifestly the lever or its equivalent is the principal subject-matter of that claim, reference being made to certain other parts of the seed-planter, *merely* as a means of describing the functions to be performed by the lever and the results to be attained by its use; nor does it require any argument to show that the lever is old, as it is matter of common knowledge that it was well known long before the original patent of the complainant was issued.

5. No. 1,040.—Two claims are also made by the patentee in this patent: (1) He claims a pair of auxiliary wheels and an axle, in combination with the seed-planting machine, carried mainly upon not less than two runners and two covering-wheels, for the double purpose of taking a portion of the weight off from the runners and the other wheels, and for affording means of readily converting the machine from a hand-planter to an automatic seed-sower. (2) He also claims hanging the axle of the auxiliary wheels in hinged or adjustable arms or levers, so that more or less of the machine may be placed upon the auxiliary wheels.

All necessity for any remarks upon those claims is superseded by the admission that they are not infringed by the respondents.

Four of the five reissues are included in the charge, and the complainant also charges that the respondents have infringed five other reissued patents held by him, which also secure to him the exclusive right to the respective improvements therein described, all of which appertain to the same machine for planting corn and smaller grains.

Reference will first be made to the original patent from which those several reissues are derived. Like the preceding reissued patents, these were all derived from a single original patent, issued May 8, 1855, as appears by the record, which it is claimed is an improvement upon the prior original patent.

Doubtless the patentee made some change in the original machine, as appears by the descriptive portion of the specification; as, for example, he enlarged the rollers, increased the length of the side pieces, connected those pieces by cross-pieces, and constructed the frame in two parts, denominated front and rear, placing the long seat for the driver on the front end, in order that he may slide forward or back, to tilt the machinery when necessary to deepen the furrow, or to raise the front of the shoes from the ground, as occasion calls for such a movement; but he invented no new ingredient or device, nor did he introduce any element into the machine which was not previously well known, all of which will sufficiently appear from the claim when compared with the drawings, without reproducing the details of the specification annexed to the patent. It contains but a single specification in that regard, which, in substance and effect, is as follows: What he claims is the runners, with their valves, in combination with the hoppers and their plates, together with the adjustment of the valves by means of levers and cams, and the driver's weight, for the purpose of carrying and dropping seeds by each vibration of the lever, and to regulate the depth of the planting.

Tested by the description contained in the specification, it is not doubted that the patent was a valid one for the described combination, which, beyond all doubt, is composed of old ingredients. Regarded as an invention for a combination, it may be regarded as an improvement upon the original invention described in the first-mentioned patent, but it is quite clear that it contains no devices except such as had long before been well known to mechanics.

Though operative and valid, still it was not satisfactory to the complainant, because not sufficiently effective to shut out other improvements for planting seeds. Accordingly, on the 10th of November, 1857, he surrendered the patent, and the same was, on the same day, reissued to him with a single claim, as follows: He claims the locating the seat for the driver in the rear of the supporting-axle, in combination with the hinged frames or hinged joint, so that as the driver moves forward or back on his seat the rear frame may act as a lever for lowering or raising the seed part of the machine and thus throw it into or out of the ground, as circumstances may require.

Probably it would be difficult to frame a claim which would more exactly embody the true nature of the actual improvement, but still it was not satisfactory to the complainant, and on the 11th of December, 1860, he surrendered the patent, and the same was reissued to him in five separate patents, as follows:

1. No. 1,091.—Two claims are contained in this patent, as follows: (1) The placing of both the driver and the person who operates the seed slides or valves in such a position on the seed-planter that each may attend to his particular duty without interfering with that of the other. (2) The so locating the seats or stands for those persons, in combination with the machine, that the weight of one of the persons may be used to counterbalance or overbalance the weight of the other, for the purpose of more readily raising or lowering the seeding apparatus.

2. No. 1,092.—He claims in this patent the locating of the seat in the machine in such relation to a line drawn through the center of the wheels or ground-supports that the occupant of the seat may, by moving himself or throwing his weight forward or backward on his seat, without the necessity of rising, walking, or standing over or near the seeding devices, force the seeding apparatus into or raise it from the ground.

3. No. 1,093.—His claim in this patent is the so connecting of the parts between the fixed points in the described machine that the portion of it carrying the seeding devices may be raised up out of the ground by the attendant riding on the machine and be carried by the tongue or horses' necks and the supporting-wheels.

4. No 1,094.—Wherein he claims a lock-block or stop, in combination with the machine, which prevents the rear part of the frame from descending so low as to strike the ground or inconvenience the occupant of the seat upon the rear portion of the frame.

5. No. 1,095.—His claim in this patent is for a valve or slide in the seed-hopper and a valve in the seed-tube, so combining with a lever operating both that a half-motion of the lever, by the operator riding on the ma-

chine, shall open and close the seed-passages at regular periods and pass only the right quantities.

Most of these ten reissued patents are for a single ingredient of the combinations described in the two original patents, and every one of the others is for a separate and distinct part of one or the other of those combinations; and the rule of decision set up by the complainant is that he may mass these several patents just as if the several ingredients were all described in one patent embracing a claim for a combination of each and every of the respective ingredients included in these ten several patents. Such a theory, in my judgment, is simply absurd, and it is certain that it finds no support in any decided case nor in any treatise upon the rules and practice in patent cases.

Argument to show that such is the theory of the present suit is scarcely necessary, as it is plainly shown in that part of the bill of complaint which alleges that the improvements and inventions contained in those several letters patent constitute separate parts of an entire machine for seed-planting, and that they may be constructed for use and used in one machine in that department of agriculture; and the complainant charges that the respondents have constructed machines and used the same, and vended the machines to others to be used, in imitation of all those improvements and inventions except the improvement described in the reissued patent No. 1,040, which it is admitted is not infringed by the respondents.

All the ingredients described in those ten reissued patents are old; and it was admitted at the argument that no one of the patents contains a claim for a combination of the several ingredients described in the said several reissued patents, and that the case rests on the basis that the several claims, or some of them, are valid, though not amounting to a combination.

Valid patents may be granted for a new combination of old ingredients, provided it appears that the combination produces a new and useful result; but the invention in such a case consists entirely in the new combination, and any other party may, if he can, make a substantially different combination of the same ingredients, or he may use any number of the ingredients less than the whole, for the reason that the monopoly of the patent extends only to the combination, and not to the ingredients separately considered. (*Vance* vs. *Campbell*, 1 Black, 428; *Prouty* vs. *Ruggles*, 16 Pet., 341)

Patents may also be granted for a machine or for a separate and distinct device, but it cannot be held that such a patent is valid, unless it be proved that the patentee is the original and first inventor of the thing patented. (*Seymour* vs. *Osborne*, 11 Wall., 555.)

None of the separate devices patented in those reissued patents are new; and, it being conceded that no one of the patents contains any such a combination as that embodied in either of the original patents, it is clear, in my judgment, that the decree of the circuit court should be affirmed, unless the theory that these several patents can be massed and be, by judicial construction, converted from patents for separate and distinct ingredients into one patent for a combination of all the ingredients described in the several patents mentioned in the bill of complaint.

Courts of justice cannot accomplish such an object by construction, nor in any other mode, for several reasons: (1) Because the province of construction is restricted to the ascertainment of the meaning of the language employed in the grant. (2) Because the object can only be accomplished by the surrender of these patents and by a reissue of the original patent, which is a matter within the exclusive jurisdiction of the Commissioner. (3) Because each of these patents is a separate and distinct grant. (4) Because the court, in construing such a grant is restricted to the language employed by the granting power. (5) Because several patents for several separate and distinct devices do not in law amount to a patent for a combination, and, therefore, cannot so be declared by a court of justice.

Mr. Justice MILLER and Mr. Justice DAVIS concur in this dissent.

DESIGNS PATENTED DURING THE WEEK.

[Each Design bearing date May 4, 1875.]

8,304.—Valise-Locks.—GUSTAVE BERNHEIM, New York, N.—Case B. Application filed April 19, 1875. Term of patent 7 years.

8,305.—Fans.—GEORGE S. FARWELL, Boston, Mass. Application filed April 16, 1875. Term of patent 3½ years.

8,306.—Stair-Covers.—WILLIAM B. GOULD, Montrose, N. J. Application filed April 8, 1875. Term of patent 7 years.

8,307.—Fans.—BERNARD HECHT, New York, N. Y. Application filed April 26, 1875. Term of patent 3½ years.

8,308.—Font of Printing-Types.—HERMAN IHLENBURG, Philadelphia, Pa., assignor to MACKELLAR, SMITHS & JORDAN, same place. Application filed March 10, 1875. Term of patent 7 years.

8,309.—Clips or Fasteners for Suspending Cards.—GEORGE W. MCGILL, New York, N. Y.—Case B. Application filed February 26, 1875. Term of patent 14 years.

8,310.—Fans.—ELIZABETH W. PERRY, Cincinnati, Ohio. Application filed April 15, 1875. Term of patent 3½ years.

8,311.—Hat and Fur Boxes.—HENRY F. REINECKE, Jersey City Heights, N. J. Application filed April 17, 1875. Term of patent 7 years.

8,312.—Cuff-Buttons.—LEONARD S. BEALS, Astoria, N. Y. Application filed April 9, 1875. Term of patent 7 years.

8,313.—Font of Printing-Types.—JAMES M. CONNER, Greenville, N. J. Application filed April 14, 1875. Term of patent 7 years.

8,314.—Font of Printing-Types.—HERMAN IHLENBURG, Philadelphia, Pa., assignor to MACKELLAR, SMITHS & JORDAN, same place. Application filed April 28, 1875. Term of patent 14 years.

TRADE-MARKS REGISTERED DURING THE WEEK.

[Each Certificate bearing date May 4, 1875.]

2,412.—Whisky.—ADAMS & TAYLOR, Boston, Mass. (Re-registration.) Application filed January 4, 1872.

"'Daniel Boone, Paris, Ky., Bourbon.'"

2,413.—Gin.—ADAMS & TAYLOR, Boston, Mass. (Re-registration.) Application filed January 4, 1872.

"Inside two concentric circles is a representation of a 'phœnix.' Below the figure are the initial letters 'A T.' Between the said circles are the words 'Phœnix' and 'Schiedam;' the former above and the latter below the figure."

2,414.—Whisky.—ADAMS & TAYLOR, Boston, Mass. (Re-registration.) Application filed January 4, 1872.

"A line forming an ellipse incloses the figure of a hunter or pioneer and the words 'Kentucky Pioneer;' 'Kentucky' being placed over the head of the figure, and 'Pioneer' beneath the feet of the same."

2,415.—Gin.—ADAMS & TAYLOR, Boston, Mass. (Re-registration.) Application filed January 4, 1872.

"Between two concentric circles or rings are placed the words 'Mayflower Gin, Schiedam.' Inside the smaller circle is a spray of flowers and leaves."

2,416.—Whisky.—ADAMS, BLAKE & TAYLOR, Boston, Mass. (Re-registration.) Application filed January 15, 1872.

"'G. O. Blake's Bourbon Co., Ky., Whisky.'"

2,417.—Gin.—ADAMS, BLAKE & TAYLOR, Boston, Mass. (Re-registration.) Application filed March 1, 1872.

"Inside two concentric circles is the representation of an apple-tree. Between the said circles, above and below the representation of the apple-tree, are the words 'Apple-Tree Gin, Schiedam.'"

2,418.—Soap.—J. P. BABCOCK & Co., Stonington, Conn. (Re-registration.) Application filed January 23, 1872.

"word Irish."

2,419.—Essence of Jamaica Ginger.—FREDERICK BROWN, Philadelphia, Pa. (Re-registration.) Application filed February 24, 1872.

"the fac-simile of the signature of the originator of the article, FREDERICK BROWN, Sr., and the word Genuine, placed upon a steel-plate engraving of geometrical lathe-work and medallion ruling."

2,420.—Liniment.—GILES O. CLARK, College Point, Long Island, N. Y., assignor to G. O. CLARK & Co. (Re-registration.) Application filed, July 30, 1872.

"letters 'G. O. C.,' in German text, and 'I. M. L.,' in Roman letters, arranged in an oval-shaped diagram, with rounded ends."

2,421.—Lead.—FOREST RIVER LEAD COMPANY, Salem, Mass. (Re-registration.) Application filed May 16, 1872.

"A barrel or cask lies upon its side, with the year '1840' lettered upon it. Underneath the foundation upon which the said barrel is placed is a streamer, upon which is placed 'Trade-Mark.' Below is a large shield containing the words 'Forest River Lead Company, Salem, Mass.'"

2,422.—Alcohol.—CAESTER H. GRAVES, Boston, Mass. (Re-registration.) Application filed November 20, 1871.

"'Atwood's Pure Alcohol, 95 per cent., Patented Aug. 23, 1853, C. H. Graves, Boston.'"

2,423.—Galvanized Sheet-Iron.—MCCULLOUGH IRON COMPANY, Philadelphia, Pa. (Re-registration.) Application filed January 24, 1873.

"word 'Chetwynd,' in crescent shape."

2,424.—Medicine.—JOHN PURLEY & Co., Atlanta, Ga. (Re-registration.) Application filed June 24, 1872.

"a representation of an Egyptian landscape, with camels and Bedouins in the foreground and the Pyramids in the background."

2,425.—Axle-Oil.—CHARLES C. RICHMOND, Boston, Mass. (Re-registration.) Application filed March 25, 1872.

"word 'Crosby's' and the picture of a pair of horses harnessed to a carriage."

2,426.—Soda-Water.—SAMUEL F. SIMES, Philadelphia, Pa. (Re-registration.) Application filed April 29, 1872.

"words 'Egg Soda.'"

2,427.—Wood-Carvings.—SORRENTO WOOD-CARVING COMPANY, Boston, Mass. (Re-registration.) Application filed December 16, 1871.

"'Sorrento Wood Carving.'"

2,428.—Compound Oxygen-Water.—GEORGE R. STARKEY, Philadelphia, Pa. (Re-registration.) Application filed November 14, 1872.

"word 'Oxygenaqua.'"

2,429.—Sewing-Machines.—THE FINKLE & LYON MANUFACTURING COMPANY, Middletown, Conn. (Re-registration.) Application filed December 20, 1871.

"a female figure clad in mail, bearing a spear in one hand, upon which hangs a wreath, and supporting a shield with the other."

2,430.—Paints, Colors, and Painting Materials.—D. F. TIEMANN & Co., New York, N. Y. (Re-registration.) Application filed October 12, 1872.

"a globe representing the earth, supported on the short arm of a paint-brush handle, used as a lever, and supported on a fulcrum upon the top of a paint-can, the long arm of the lever being grasped by a human hand and held in space to support the globe."

2,431.—Soda-Water Apparatus.—JAMES W. TUFTS, Medford, Mass. (Re-registration.) Application filed January 15, 1872.

"'The Arctic Soda Apparatus.'"

2,432.—Roasted Coffee.—G. BOYD & Co., Philadelphia, Pa. Application filed April 21, 1875.

"representation of an arrow, upon which are strung letters forming the word 'Aroma.'"

2,433.—Tonic or Bitters.—E. BROWN & Co., Jersey City, N. J. Application filed March 18, 1875.

"'The Great Zuni Sanpurgat, or Corrupt Blood Purifier.'"

2,434.—Coffee.—D. FOCHT & Co., Philadelphia, Pa. Application filed April 26, 1875.

"picture of a coffee-pot of ornamental design."

2,435.—Woolen Cloths.—MIDDLESEX COMPANY, Lowell, Mass. Application filed March 11, 1875.

"characters X X."

2,436.—Champagne.—MOËT & CHANDON, Epernay, France. Application filed April 3, 1875.

"figure of a five-pointed star, together with our firm-name inclosed in a circle."

2,437.—Lard.—GEO. C. NAPHEYS & SON, Philadelphia, Pa. Application filed April 30, 1875.

"a tin pail of the shape or configuration of the base section of an inverted truncated cone, the same being broadest at the top, and tapering downward to a less circumference at the bottom."

2,438.—Medicine.—JAMES R. NICHOLS & Co., Boston, Mass. (Re-registration.) Application filed February 23, 1872.

"compound word 'Cincho-Quinine.'"

2,439.—Essential Oils and other Chemicals.—CHARLES H. PHILLIPS, New York, N. Y. (Re-registration.) Application filed November 16, 1872.

"the monogram shown in the fac-simile, and containing the letters PHILLIPS."

2,440.—Mustard and Spices.—PINCKNEY, JACKSON & Co., New York, N. Y., Chicago, Ill., and London, England. Application filed April 22, 1875.

INDEX OF INVENTIONS PATENTED MAY 4, 1875.

	Class No.	No. of Patent.
Addressing machine, C. W. Van Vleet	117	162,872
Air, apparatus for exhausting and propelling, C. James	12	162,824
Annunciator, T. H. Aurocker	24	162,736
Auger, W. Wells	29	162,874
Auger, earth, A. M. Hanna	51	162,816
Auger, earth, W. W. Jills	51	162,825
Auger, earth, G. S. Strong	51	162,866
Axles, machine for turning, C. A. Brand	31	162,893
Bale tie, O. R. McClean	7	162,844
Battery, galvanic, W. M. Davis	50	162,806
Bed bottom, spring, Branson and Juergens, (reissue)	62	6,418
Bed bottom, spring, Dennen and Newhouse	62	162,906
Bedstead, invalid, R. D. Whittemore	62	162,985
Bee hive, E. Armstrong	9	162,788
Bill file, D. H. Baker	146	162,881
Blower, fan, B. F. Sturtevant	12	162,967
Blower, fan, B. F. Sturtevant	12	162,968
Bluing case, S. W. Sheldon	91	162,860
Boiler, sectional, H. F. King	148	162,922
Boiler, steam, H. W. Rice, (reissue)	148	6,422
Boot and shoe, C. F. Hill	16	162,923
Boot and shoe, Prusha and Wales, (reissue)	16	6,421
Boot and shoe heels, &c., machinery for burnishing, V. K. Spear	16	162,775
Boot and shoe shank pieces, machine for making, L. Bradford, 2d	16	162,740
Boot and shoe soles, mechanism for molding, W. H. Palmer	16	162,764
Boot, opera, J. T. Harper	16	162,916
Bosom pad, J. C. Tallman	80	162,869
Bottle stopper, G. J. Crikelair	1	162,803
Bottle washing apparatus, Schlich and Koster	1	162,771
Box for packing and showing goods, F. S. Kinney	160	162,827
Brick machine, J. Whiteley	20	162,783
Bricks for paving, prepared, B. A. Berryman	20	162,885
Bridge, floating draw, H. F., J. M., and W. B. Rice	21	162,768
Brush back, H. Holmes	22	162,749
Brush blocks, machine for punching, H. Holmes	22	162,750
Butter worker, J. Macnee	45	162,758
Car axle box, J. Rhoads	122	162,950
Car brake, A. F. Gue, (reissue)	122	6,411
Car coupling, A. V. Anderson	122	162,877
Car coupling, J. G. Baader	122	162,879
Car coupling, J. and A. E. Crane	122	162,903
Car coupling, H. F., J. M., and W. B. Rice	122	162,769
Car coupling, H. A. Sharp	122	162,772
Car coupling, J. H. C. and N. B. Smith	122	162,774
Car doors, mounting, G. S. Knapp	121	162,930
Car starter, Shain and Waitt	122	162,956
Car starter, A. B. Sharp	122	162,957
Car, street, J. Stephenson	121	162,964
Cars, apparatus for lighting railway, R. Pintsch	121	162,946
Cards, ornamentation of show, L. C. Goodale	54	162,912
Carpet stretcher, N. H. Merrill	69	162,939
Carriage lamp, F. C. Cannon	90	162,898
Cartridge, E. J. Collett	32	162,901
Celluloid, process and apparatus for softening and molding, R. F. Hunt	35	162,752
Chair, opera, J. Richardson	62	162,951
Chandelier, drop light, G. F. Blaisse	64	162,889
Chuck for veneer cutting machines, compound, E. J. Granger	172	162,913
Churn, reciprocating, W. Howe	45	162,821
Cigar wrapper knife, J. E Brechbiel	160	162,792
Clamp, J. J. Squire	29	162,866
Cloth measuring machine, J. Sullivan	37	162,973
Coal chute, extensible, J. M. Lafferty	79	162,832
Coffin handle, J. S. Ray	39	162,949
Corn row marker, W. M. Starliper	133	162,963
Cooking apparatus, pocket, G. B. Sickels	65	162,959
Cultivator, W. O. Clark	43	162,900
Cultivator, strawberry, J. Orlando	63	162,761
Curry comb, W. T. Kellogg	144	162,753
Curry comb, W. P. Kellogg	144	162,754
Curry comb, T. Steers, Jr.	144	162,868

	Class No.	No. of Patent.
Door check, M. H. Matsinger	24	162,934
Dredging machine, R. R. Osgood	51	162,849
Dredging machine, Osgood and Brotherhood	51	162,763
Earthenware and pottery, manufacture of, W. Galloway	115	162,911
Egg tester, J. W. Van Arnam	116	162,870
Engine governor, steam, T. I. Walsh	69	162,873
Engine governor, steam, G. Westinghouse, Jr.	69	162,782
Engine, motive power, Wyss and Studer	150	162,785
Engine, rotary, H. G. Wood	150	162,875
Fan, automatic fly, Palmer and Elmer	65	162,933
Feather renovator, H. P. Manley	62	162,933
Feed box and rack, combined, D. R. Ostrander	141	162,943
Feed water, apparatus for heating, D. F. Mosman	149	162,940
Fence, farm, D. R. Ostrander	52	162,850
Fence wire, barbed, M. M. Mack	52	162,835
Fire arm, revolving, Smith and Marshall	123	162,863
Fire extinguisher, C. Van Dusen	118	162,976
Fire place, J. H. Garrard	154	162,745
Floor for malt kilns, L. Herrmann	19	162,748
Foot rest, L. M. Angle	62	162,787
Furnace, hot air, L. Duport	154	162,907
Furnace slag castings, annealing, F. A. Luckenbach	85	162,932
Furnaces, straw feeding attachment for, D. Morey, (reissue)	149	6,420
Gas apparatus for carbureting air, F. W. Ofeldt	27	162,848
Gas, condenser and purifier of coal, W. L. Pratt	66	162,766
Gas machines, automatic air blast for, R. Hewson	27	162,932
Gas pendants, slide for, S. B. H. Vance	64	162,871
Gas, purifier, J. D. Patton	66	162,851
Gas regulator, W. H. Pounds	64	162,948
Gas regulator diaphragms, treating leather for, R. J. Pintsch	64	162,947
Gilding machine, W. Braidwood	113	162,892
Glass, machine for pressing and molding, A. P. Brooke	68	162,894
Glass press, W. Beck	68	162,791
Goods bias, apparatus for cutting, S. Mayer	38	162,841
Grain binder, Carr and Wilcox	74	162,899
Grain conveyer, H. Severn	79	162,955
Grapple, G. Conklin	79	162,801
Grate, F. S. Bissell, (reissue)	154	6,407
Hame fastening, W. H. Ward	72	162,980
Harvester, B. Illingworth	74	162,927
Harvester, J. H. Kirton	74	162,929
Harvester, H. Porter	74	162,858
Head light for steamboats, W. E. Merrill	90	162,938
Head rest, W. M. White	62	162,784
Heating feed water, apparatus for, D. F. Mosman	149	162,940
Hinge, spring, J. Annin	24	162,735
Hoe, M. Johnson, (reissue)	141	6,419
Horse awning, F. D. Webster	72	162,982
Horseshoe, T. Skelton	60	162,862
Horseshoe machine, G. Custer	60	162,804
Horseshoe nails, machine for finishing, Armstrong and Hutchinson	60	162,789
Ice cutting machine, Heisler and Deremer	58	162,919
Ice pick, chisel, and hammer, combined, A. V. M. Sprague	58	162,864
Indicator, low water, J. H. Brown	148	162,795
Injector, W. P. Patton	148	162,852
Injector, W. Randall, (reissue)	148	6,414
Insects, device for applying poisonous compounds to plants for destroying, O. S. Warner	63	162,781
Ironing board, H. C. Green	91	162,815
Ironing machine, G. F. Perrenot	91	162,854
Kiln, brick, N. B. Heafer	20	162,818
Knife, cigar wrapper, J. E. Brechbiel	160	162,792
Knitting machine, D. Bickford	89	162,886
Ladder, firemen's extension, H. Bastian, Sr.	30	162,882
Ladder, firemen's extension, P. Peterson	30	162,856
Lamp, carriage, F. C. Cannon	90	162,896
Lantern, light-house, O. Cook	90	162,802
Lantern, magic, A. G. Busby	157	162,896
Lantern, magic, A. G. Busby	157	162,897
Lantern, magic, L. J. Marcy	157	162,759
Lathe for turning wood, W. R. Hodge	172	162,819
Lathing, metallic, J. W. Hoyt	4	162,822
Leather rounding machine, H. F. Osborne	92	162,762
Lightning rod, J. A. Kleckner	150	162,828
Liquids, apparatus for drawing effervescent, F. W. Wiesebrock	1	162,926
Lock for doors, &c., P. Werni	93	162,984
Lock, seal, W. H. Darling	93	162,805
Loom shedding mechanism, G. Crompton	95	162,904
Loom temple, N. Chapman	95	162,744
Mail bag fastening, J. C. Franklin	23	162,812
Malt kilns, floor for, L. Herrmann	19	162,748
Meat cutter, C. Fogelberg	25	162,909
Metal bullion, refining base, F. H. Bousfield	99	162,891
Milling tool, E. F. Bonaventure	100	162,739
Millstone dress, H. T. Ashworth	57	162,878
Mines, ventilating, purifying, and cooling the atmosphere of, L. J. Henry	166	162,920
Mirror, toilet, E. T. Starr	62	162,777
Mortising machine, S. H. Wilder	173	162,987
Music teaching apparatus, J. A. Scarritt	102	162,770
Needle case, W. H. Yeomans	32	162,989
Newspaper file, F. B. Alderson	146	162,876
Night soil from tanks to cars, &c., apparatus for transferring, W. Painter	96	162,945
Nuts, machine for making box, Marland and Lewis	14	162,838
Nuts, manufacture of hexagonal, A. Marland	14	162,837
Oil, meal molder in the manufacture of linseed, A. Judson	26	162,826
Ordnance breech loading, D. Davison	165	162,807
Ore separator, W. J. Evans	99	162,809
Overalls, S. R. Krouse	38	162,930
Ox bow pin, W. Varnum	31	162,780
Paddle wheel, feathering, C. A. Lamphere	139	162,756
Padlock, combination, D. A. Root	93	162,952
Pan, steak cooking, D. B. Smith	154	162,961
Pantaloons, apparatus for shaping, E. B. Viets	38	162,977
Pantaloons block, J. McCurdy	38	162,843
Paper can, E. T. Covell	109	162,902
Paper feeding apparatus, C. A. Maxfield	117	162,940
Paper vessel, D. N. Russell	109	162,954
Pegging machine, Bickford and Startevant	16	162,887
Piano forte agraffe, Kranich and Bach	112	162,829
Pipe, Lansdell and Leng	167	162,833
Planing machine, O. G. Howes, (reissue)	173	6,412
Planing machine, G. Spire	173	162,776
Planter, corn, F. Van Doren	133	162,779
Plow, T. J. Mereney	114	162,760
Plow, D. B. Smith	114	162,962
Plow caps, machine for making, Marland and Lewis	114	162,839
Plow, corn, L. G. Clawson	43	162,798
Plow, steam, D. Beaumont	114	162,894
Plow, sulky, O. Osborn	114	162,942
Post, fence, M. W. Colwell	52	162,800
Pot and kettle, D. M. McLean	154	162,847
Press, baling, J. M. Albertson	7	162,786
Pump, centrifugal, L. Chapman	118	162,743
Pump faucet, air, T. Bingham	12	162,888
Railway, elevated, C. L. Horack	120	162,751
Railway signaling apparatus, J. Ewart	120	162,908
Railway rail, street, J. P. Nessle	120	162,941
Railway switch, street, C. B. Barlow	120	162,790
Refrigerator, A. F. Bronner	58	162,793
Roller, trawl, A. L. McDonald	143	162,845
Roofing tile, G. Manvel	126	162,836
Sad iron, Ellyson and Askew	91	162,808
Sad iron handle, J. Webster	91	162,981
Sash holder, T. Walker	24	162,979
Saw buck, G. Collins	130	162,799
Saw frame, fret, O. Evans	130	162,810
Saw guard, Graves and Howes	130	162,814
Saws, device for setting, filing, and jointing, W. Bryson	131	162,796
Scraper, road, B. Goodrich	51	162,746
Scraper, road, J. L. McKeen	51	162,846
Screen, G. W. Brown	170	162,895
Screw cutting die, M. A. Griffith	14	162,914
Screw threading die, F. E. Wells	14	162,983
Screw threads, machine for cutting, C. T. Litchfield	100	162,931
Sewing machine bobbin winder, F. Peck	134	162,853
Sewing machines, take-up and thread controller for, M. M. Barnes	134	162,737
Shaft hanger, counter, J. J. Squire	87	162,867
Shaving mug, D. Heston	161	162,921
Sheep, device to protect workmen from the water while washing, C. H. and J. H. McCall	144	162,842
Shingle machine, O. T. Williams	174	162,988
Shoe fastening, T. Tucker	16	162,974
Shutter, fire proof, S. Fales	30	162,811
Skate, O. Edwards, (reissue)	143	6,410
Sleigh shaft attachment, D. Smith	31	162,861
Sleighs, bent knee and beam for, D. O. Card, (reissue)	31	6,408
Slicing utensil, kitchen, A. Iske	88	162,823
Soap holder, E. Cundey	91	162,905
Soldering machine, W. L. Ballie	136	162,880
Sole fastening, B. F. Sturtevant	16	162,970
Sole fastening material, apparatus for preparing, B. F. Sturtevant	16	162,969
Sole fastenings, manufacture of, B. F. Sturtevant	16	162,971
Sole fastenings, rod for, B. F. Sturtevant	16	162,972
Spinning machine bobbin, G. Richardson, (reissue)	142	6,416
Spinning machine spindle bolster, G. Richardson, (reissue)	142	6,415
Steam trap, F. A. Pratt	148	162,765
Stereoscopic print cutter, Smillie and Siebert	146	162,960
Still, petroleum, J. L. Stewart	47	162,965
Stove, cooking, E. H. Bates	154	162,883
Stove door handle, A. S. Shontz	154	162,958
Stove door hinge, W. T. Howard	154	162,925
Stove pipe damper, G. W. Leading	154	162,757
Stove, pocket lamp, T. W. Houchin	154	162,924
Stove, reservoir cooking, G. H. Phillips	154	162,857
Stoves, ventilator for cooking, A. Leigh	154	162,834
Strap loop, S. C. Talcott, (reissue)	23	6,417
Stump extractor, A. McKenney	79	162,936
Stump extractor, A. McKenney	79	162,937
Sugar, manufacturing hard, F. O. Matthiessen, (reissue)	155	6,413
Table, extension, N. Petry	62	162,855
Table, folding, Sprigade and Schnoering	62	162,865
Table, folding, S. T. Waggoner	62	162,978
Table slide, extension, W. J. Boda	62	162,890
Table slide, extension, J. C. Turner	62	162,975
Telegraph, fire alarm, A. Rosenbusch	50	162,953
Tobacco boxes, machine for raising and planishing, C. J. Hauck	160	162,817
Tobacco, machine for laminating the stems in leaf, G. P. Unverzagt	160	162,778
Tobacco, treating, G. S. Prince	160	162,767

	Class No.	No. of Patent.
Top, adjustable, A. Clarke	31	162,797
Torch, J. Benson	90	162,738
Toy building block, C. M. Crandall, (reissue)	143	6,409
Toy money box, J. Hall	143	162,747
Truss, J. M. Zirkle	156	162,990
Tubing, machine for making welded, J. Huggins	163	162,926
Turn table, S. M. Carpenter	120	162,756
Umbrella, Hayes and Somerset	165	162,917
Valve, lock-up safety, E. B. Kunkle	152	162,831
Valve, plug, T. Shaw	118	162,773
Vehicle end gate, J. Heald	31	162,918
Vehicle wheel hub, W. Gallan	31	162,813
Ventilating, purifying, and cooling the atmosphere of mines, L. J. Henry	166	162,920
Vessels, construction of, T. W. Pratt	139	162,859
Vessels, mechanism for casting the lead on, C. E. Kirtland	137	162,755
Wash bench and wringer combined, Holden and Corey	91	162,820
Water closet, W. S. Carr	8	162,742
Wheat, apparatus for drying and bleaching ground, C. S. Fuller	57	162,910
Whiffletree, J. H. Brown	31	162,794
Wire way, endless, A. S. Hallidie	170	162,915
Wringer, T. E. McDonald	91	162,935

INDEX OF PATENTEES TO WHOM PATENTS WERE GRANTED MAY 4, 1875.

	Patent No.
Albertson, J. M., Baling press	162,786
Alderson, F. B., Newspaper file	162,876
Anderson, A. V., Car coupling	162,877
Angle, L. M., Foot rest	162,787
Annin, J., Spring hinge	162,735
Ardry, J., assignee	162,805
Armstrong, D., and J. A. Hutchinson, Machine for finishing horseshoe nails	162,789
Armstrong, E., Bee hive	162,788
Asheim, M., assignee	162,877
Ashworth, H. T., Millstone dress	162,878
Askew and Ellyson	162,808
Aurocker, T. H., Annunciator	162,736
Baader, J. G., Car coupling	162,879
Bach and Kranich	162,829
Bailey, J., assignee	162,908
Ballie, W. L., Soldering machine	162,880
Baker, D. H., Bill file	162,881
Barclay, W. H., assignee	162,895
Barlow, C. B., Street railway switch	162,790
Barnes, M. M., Sewing machine take-up and thread controller	162,737
Bastian, H., Sr., Firemen's extension ladder	162,882
Bates, E. H., Cooking stove	162,883
Beaumont, D., Steam plow	162,884
Beck, W., Glass press	162,791
Benson, J., Torch	162,738

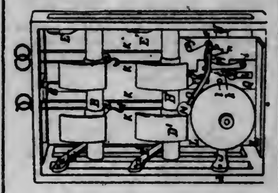
TITLES, DRAWINGS, AND CLAIMS

OF

PATENTS GRANTED MAY 4, 1875.

162,735. SPRING-HINGES. Joseph Anain, Brooklyn, N. Y. [Filed Oct. 21, 1874.]



Brief.—A sleeve through which the pintle passes is placed midway between the eyes of the two leaves of the hinge. This sleeve carries a flat spring, which has one end secured to one of the leaves. The tension of this spring is adjusted by a collar and a short pin, which rests upon one leaf.

The movable sleeve B, having holes H, and provided with the spring A, attached in combination with the leaves C and D and pin G, all constructed and operating as and for the purpose set forth.

162,736. ANNUNCIATORS. T. H. Aurocker, Philadelphia, Pa. [Filed Oct. 27, 1874.]

Brief.—The levers carrying the number-plates turn upon transverse shafts, and are operated by wires attached to their ends, which wires are also connected with a weighted plate pivoted in the lower part of the frame. Pivoted arms rest upon the levers, and when the latter are operated the arms are also carried up. By bearing down the arms the levers are returned to their original position. The weighted plate at the bottom is connected with and operates a bell mechanism, to sound an alarm.

1. The combination of the shaft B, lever C, wire K, and the gravity-plate I, for the purposes shown and described.

2. The combination of the shaft B, lever C, wire K, adjusting-rod E, and the gravity-plate I, for the purpose shown and described.

3. The combination of the gravity-plate I, pin *l*, and the trip-plate Q, for the purpose shown and described.

4. The combination of the gravity-plate I, pin *l*, trip-plate Q, trip-lever R, and the lever O, for the purpose shown and described.

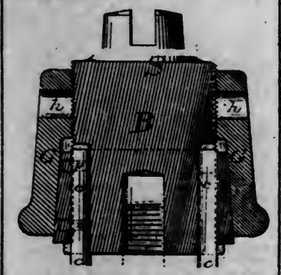
162,737. TAKE-UPS AND THREAD-CONTROLLERS FOR SEWING-MACHINES. M. M. Barnes, Boston, Mass. [Filed Nov. 16, 1874.]

Brief.—Take-up made in two parts, connected by a spring, to allow of a yielding motion in connection with the usual take-up motion.

The take-up composed of the two parts *a* and *b*, joined by the screw *c*, in combination with the coiled spring *e* and the stops *d* and *f f*, substantially as described, and for the purpose set forth.

162,738. TORCHES. Jos. Benson, Boston, Mass. [Filed Aug. 26, 1874.]

Brief.—For the purpose of lighting the torch the perforated flame-guard is made in sections, which may be opened by moving a rifle suitably connected therewith.

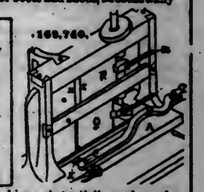


1. The combination, with a vapor-burner and an oil-reservoir connected with the burner, for supplying the same with vapor, of a longitudinally-divided shield or cover, hinged together, and having perforations to permit the escape of flame, and adapted to open and close for covering and uncovering the burner, substantially as and for the purpose described.

2. The combination, with a vapor-burner and an oil-reservoir, of the longitudinally-divided shield, the two parts of which are hinged together, and the links attached to the two parts of the shield and to a sliding stem, substantially as described, whereby by moving said stem the shield is opened or closed, as set forth, for the object specified.

162,739. MILLING-TOOLS. Edmond F. Bonaventure, New York, N. Y. [Filed Aug. 11, 1874.]

Brief.—A cylindrical head is provided with longitudinal notches or grooves, to receive a series of triangular cutters, which latter are held firmly in place through the medium of a conical sleeve screwed onto the head, acting in conjunction with wedge-pieces. A circular plate is fitted onto the end of the head, to adjust the cutters by, a notch permitting their insertion, one at a time.



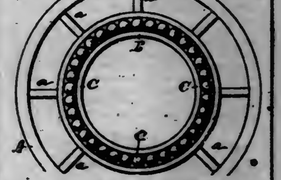
1. The improved compound cutting-tool, consisting of a head, B, fitted with a series of cutting-tools, arranged to project beyond the end of the head, combined with a sleeve, G, formed to clamp or hold the cutting-tools when screwed down, and release them when screwed up or back toward the spindle.

2. The adjusting-disk A, made with the notch H, through which to remove any one of the cutting-tools, in the manner substantially as described.

162,740. MACHINES FOR MAKING THE SHANK-PIECES FOR BOOTS AND SHOES. Leonel Bradford, 2d, Plymouth, Mass. [Filed Mar. 30, 1875.]

Brief.—Longitudinally-reciprocating slides are arranged one above the other. The one provided with cutters separates the blank from the sheet of stock, when it drops in front of the lower slide, and is molded into the form desired.

1. In a machine substantially such as described, in combination, the slides B and Q, eccentric-shaft J, standard U, and springs *m*, for punching, cutting, and molding metallic shank-pieces for boots and shoes, substantially as specified.



2. In a machine substantially such as described, in combination, the lever *c*, slide *e*, and cam M, all substantially as and for the purpose set forth.

3. In a machine substantially such as described, the slide Q, provided with the spring-dowel 1, as and for the purpose specified.

4. In a machine substantially such as described, the frame C, provided with the ways F F, pulley H, and cam-lever G, in combination with the slide E, punches T T, and standard U, substantially as and for the purpose set forth.

162,741. TURN-TABLES. S. M. Carpenter, Cleveland, Ohio. [Filed Dec. 15, 1874.]

Brief.—A turn-table of the circular trough and ball species, having a radiated metallic support for the lower trough, in which the balls travel.

1. The frame A, provided with the standards *a*, upon which rests the elevated groove or gutter B, substantially as and for the purpose set forth.

2. In combination with the frame A, provided with the standards *a*, the elevated groove or way B, balls C, and platform D, provided with its counter-groove D', as and for the purposes described.

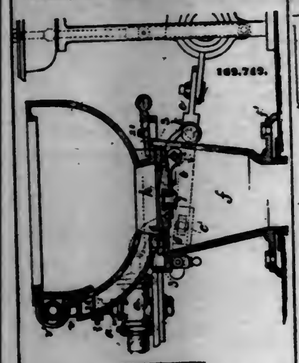
162,742. WATER-CLOSETS. Wm. S. Carr, New York, N. Y. [Filed Mar. 20, 1875.]

Brief.—A bowl of porcelain or earthenware resting on a washer, secured by rubber wedges passing through loops in the upper part of the hopper. The bowl has two water-ways, opening above and below the valve closing the escape-pipe. The water-pipe is joined to the hollow arm in the upper part of the bowl. The hopper, having inward flange and opening, is connected with the bowl by a valve jointed to a rock-shaft by nut and screw. The rock-shaft has a shoulder at its outer end, behind the cam-arm, in combination as set forth.

1. The bowl or basin of porcelain or earthenware, resting upon a washer of elastic material, and secured in place by wedges passing through metallic loops at the upper part of the hopper, and pressing upon the base of the bowl, substantially as set forth.

2. The metallic hopper, made with a seat at the upper end for the elastic washer and earthenware bowl, and a dam around the outside of such washer, for the purposes set forth.

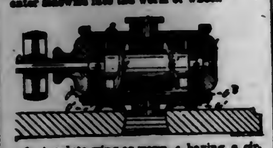
HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON



3. The hopper *f*, having an inward flange 3 and opening 21, through which the overflow-water passes from the basin, as set forth.

4. A bowl or basin made with the water-ways *r* and *s*, opening respectively above and below the valve that closes the escape-pipe, substantially as set forth.

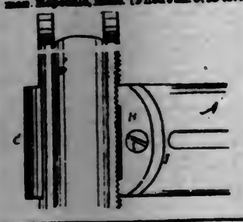
5. The rock-shaft *t*, provided with a shoulder at its outer end, behind the cam-arm *k*, in combination with the spring 12, and water-closet pan or valve, for keeping the shaft water-tight at its junction with the hopper or container, substantially as set forth.



6. The valve A, of porcelain, connected to the arm 8 of the rock-shaft *t*, by a screw and nut, and removable from said rock-shaft, substantially as set forth.

7. The water-pipe *o*, connected to the bell-low procelain arm *v* by the rubber packing, in combination with the sleeve or ferrule *o*, packing gland *t*, and supply-cock or valve *o*, substantially as set forth.

162,743. CENTRIFUGAL PUMPS. Lake Chapman, Collinsville, Conn. [Filed Sept. 6, 1874.]

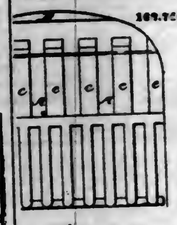


Brief.—Each of the worms or wheels is surrounded by a circumferential band, and a part of the outer end is closed by a plate. Each cap-plate is furnished with a radial wing, which extends to the nearest wheel. These wings act as cut-offs, to prevent the free rotation of the water, and thereby cause it to enter sidewise into the worm or wheel.

1. A volute wing or worm, *c*, having a circumferential band, *c'*, and a facing, *c''*, upon one end or side, substantially as shown and described.

2. The combination of the cylinder *a*, having the inlets *a' a'*, the cut-offs *b'*, the shaft *h*, and the right and left hand worms *c c'*, each provided with a circumferential band, *c'*, substantially as shown and described.

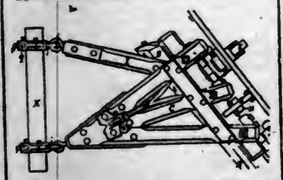
162,744. LOOM-TEMPLE. Nathan Chapman, Hopedale, Mass. [Filed Jan. 9, 1875.]



The loom-temple stand A, provided with a flange, C, curved flange J, and the curved and notched wedge-plate H, in combination with the stand D, having a notched side to correspond with the notched plate H, as described, for the purpose set forth.

162,745. FIRE-PLACES. John H. Garrard, Allegheny, Pa. [Filed Aug. 27, 1874.]

Brief.—The vertical ribs, which form gas-passages in the back of the fire-place, limit the motion of the horizontally-moving deflecting-plate.

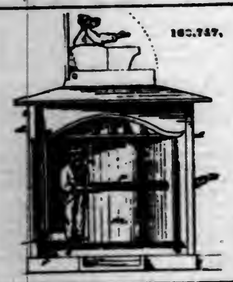


162,746.

A fire-tile, A, with grooves or open flues *e e e*, set vertically, an iron plate or tile, B, to lie horizontally as a deflector, the same to be coped over by the fire-tile D, laid horizontally against the top of the fire-tile A, as described and set forth, the whole combined substantially for the purpose intended.

162,748. ROAD-SCRAPERS. Barnard Goodrich, Exeter, assignor to himself and Geo. H. Tuck, Stratham, N. H. [Filed Oct. 28, 1874.]

Brief.—An inclined cutter on a drag is combined with a board provided with casters, and connected by bent arms hinged to the carrier. An adjustable tongue connects the cutter-carrier and drag, by a shackle, chain, and hooked screw, to the axle and drag.



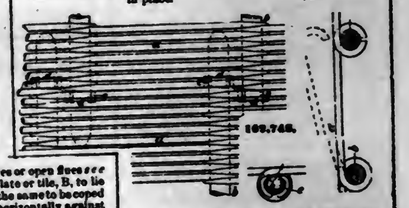
1. In combination with the cutter B and its carrier A, connected with the drag C, as described, the board E, provided with casters F F, and connected with the carrier by bent arms *g g* hinged thereto, all substantially as specified.

2. The combination of the adjustable tongue I, as described, with the cutter-carrier A and the drag C, arranged and connected with each carrier, all as shown and described.

3. The combination of the right-angular shackle *n*, the chain *o*, the hooked screw *p q*, and the nut *r*, all constructed, arranged, and applied to the axle K and the drag C or tongue I, substantially as specified.

162,747.

162,747. TOY MONEY-BOXES. John Hall, Watertown, Mass. [Filed Nov. 10, 1874.]



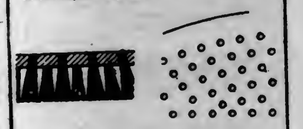
1. The toy money-box herein described, consisting of the box A, recess *m*, slot *p*, door *b*, and image *a*, secured to the door by the arm L, all said parts being constructed and arranged to operate substantially as and for the purpose described.

2. The toy money box, consisting of the box A, recess *b*, slot *k*, and image *c*, vertically pivoted at both ends, as described, all constructed and arranged as set forth.

162,748. FLOORS FOR MALT-KILNS. Louis Herrmann, Dresden, Germany. [Filed Mar. 3, 1875.]

Brief.—Into the recesses in the weft-wires are fitted collars, to confine the parts securely in place.

162,748.

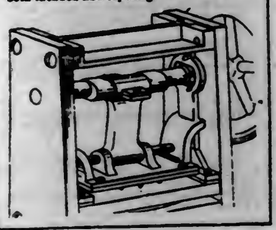


1. As an improvement in floors for malt-kilns, the combination of bent warp-wires *a a*, recessed weft-wires *b b*, and collars *c c*, to form hurdles, in the manner and for the purpose described.

2. The combination of the divided and interlocking end eyes of two abutting hurdles with a weft-wire, *b*, as and for the purpose set forth.

3. The combination of the projecting ends of weft-wires *b b* of one hurdle with the outer warp-wires *a a* of the other hurdle, for giving a reciprocal support to the edges of contiguous hurdles, in the manner described.

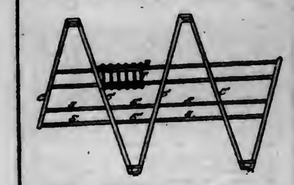
162,750. BRUSH-BACKS. Henry Holmes, Troy, N. Y. [Filed Apr. 9, 1875.]



Brief.—The holes are punched by parallel punches while the back is in a concave position, after which the back is permitted to straighten out, which leaves the holes inclined, as shown, and tapering.

A brush block or back, punched with a series of inclined and tapering holes, as and for the purpose described and represented.

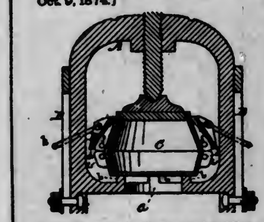
162,751. MACHINES FOR PUNCHING BRUSH-BLOCKS. Henry Holmes, Troy, N. Y. [Filed Apr. 9, 1875.]



Brief.—The material for the brush-back is held in a concave seat in the machine, where it is punched from above. When the material is removed it assumes a flat shape, which causes the punched holes for the tufts to be both inclined and tapering.

The combination of the bed and platen for pressing the brush block or back into a concave or arched form, and the series of punches for punching said block or back while held in that form, as and for the purpose described and represented.

162,751. ELEVATED RAILWAYS. Carl L. Horack, Brooklyn, N. Y. [Filed Apr. 6, 1875.]



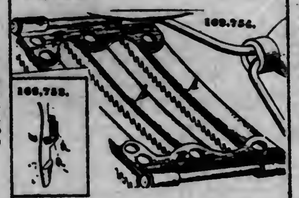
Brief.—An elevated railroad supported upon posts arranged so that those on one side are opposite the spaces between those on the other side, the cross-beams running from each post to each of the two nearest posts on the other side. The longitudinal track-stringers are arranged between the cross-beams.

1. The combination, in an elevated railroad, of the posts P P', cross-beams or their equivalent O O', and the track-stringers S S', when the arrangement is such that the posts on one side of the structure are placed opposite the spaces between the posts on the other side, one cross-beam running from each post to each of the two nearest posts on the other side.

2. The combination described, when the arrangement is such that the track-stringers are fastened between the cross-beams, the tops of the former remaining below or level with the tops of the latter.

162,752. PROCESSES AND APPARATUS FOR SOFTENING AND MOLDING CELLULOID. R. Finley Hunt, Washington, D. C. [Filed Oct. 9, 1874.]

1. The process of softening and molding celluloid and celluloid blanks by the application of the heating agents directly to the flask or mold containing the celluloid, by means substantially as herein described.

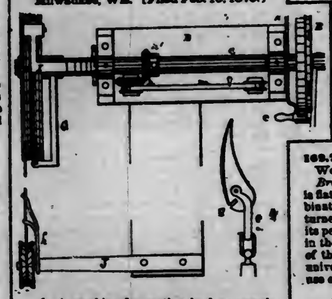


2. The herein-described apparatus for softening and molding celluloid and celluloid blanks, consisting of the screw-press A, having in its bottom a circular opening, *a*, and at or near the edge of this opening three or more projections, *b*, equidistant from each other, on which the flask or mold rests, thus forming a space or channel through which the flame and hot air are made to pass under the bottom of and around the flask or mold; the flask C having the lugs *c c* on opposite sides, with the holes *d* in each lug to receive the ends of the fork or holder, and having four tapered lugs or webs, *e*, equidistant from each other, the two opposite the lower lugs *c* being provided with holes *f*, and the loose jacket D having projections *g* on opposite sides, with holes in them to receive the loops or hooks *h*, all combined as and for the purpose herein described.

162,753. CURRY-COMBS. Warren T. Kellogg, Troy, N. Y. [Filed Sept. 22, 1874.]

Brief.—The knockers serve the additional purpose of bearings for the mane-comb, and are made separate from the comb, and attached by means of rivets.

The shouldered knockers D, provided with steels for riveting, and bearings *d* for the journals of the mane-comb, open at one end, and closed, as at *d'*, at the other, all substantially as specified.



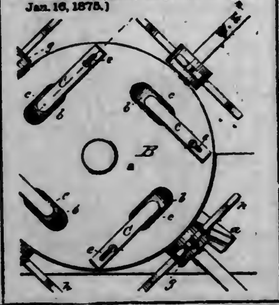
162,754.

162,754. CURRY-COMBS. Wm. P. Kellogg, Troy, N. Y. [Filed Sept. 22, 1874.]

As a new article of manufacture, the herein described curry-comb, composed of the tooth bars A, secured by separate rivets, stout wrought-iron end pieces B, handle D, and wire handle-frame C, the end pieces having lugs *b* and *b'* wrapped around the wire, as stated, and the ends of the wire being riveted down on the outer butts or lugs, all as specified.

162,755. MECHANISMS FOR CASTING THE LEAD ON VESSELS. Charles B. Kirtland, Milwaukee, Wis. [Filed Feb. 10, 1875.]

1. A machine for casting lead on vessels, having shaft *c*, crank F, wheels D and H and line *s*, combined, substantially as and for the purpose herein specified.

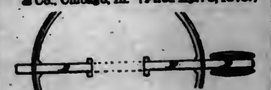


2. The device *e f*, in combination with the lead L, substantially as and for the purpose specified.

3. The wheels D and H and cord or cable *d*, in combination with the tripping device *h*, substantially as and for the purposes specified.

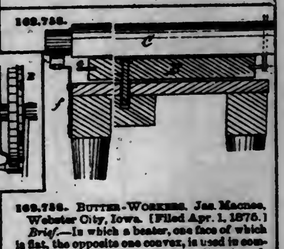
4. The wheel D, lead-line *s*, and the wheel H, cable *d*, in combination with the loose arm G and shaft C, as and for the purpose set forth.

5. The wheel D and shaft C, in combination with the wheels *n* and *n'*, and belt *m*, substantially as specified.



162,756. FEATHERING PADDLE-WHEELS. Chas. A. Lamphere, Arkport, N. Y. [Filed Jan. 16, 1875.]

1. The paddle-heads B, carrying the paddles D, upon the shafts of which are mounted the hubs *g*, carrying arms *h*, and the rollers *b*, provided with V-shaped grooves *i*, which are operated upon by friction-springs C, the whole adapted to be operated for feathering the paddles by suitable projections on the side of the boat, substantially as set forth.



2. The regulating-springs C, having the lips *d* and elongated slot *e*, in combination with the rollers *b*, constructed to operate substantially as and for the purpose described.

162,757. STOVE-PIPE DAMPERS. Geo. W. Leading, Lacon, assignor to Frank Sturges & Co., Chicago, Ill. [Filed Apr. 6, 1875.]

A stove-pipe damper, consisting of a diaphragm, combined with the removable bent or doubled wire or spring D, passing entirely through the pipe, grasping the diaphragm, and constituting the sliding spindle thereof at opposite points, whereby the diaphragm may be turned and firmly held in any position, substantially as shown and described.

162,758.

162,758. BUTTER-WORKERS. Jas. Macnee, Webster City, Iowa. [Filed Apr. 1, 1875.]

Brief.—In which a beater, one face of which is flat, the opposite one convex, is used in combination with a revolving kneading-board, turned by means of teeth or projections upon its periphery, into which catches a pin inserted in the beater near the handle. The other end of the beater is attached to the table by a universal joint, which enables the operator to use either face of the beater.

1. The combination, with a suitable kneading board or table, of the removable hand-lever C, of the form shown and described, the same being connected to the table in a manner so that either side of such lever may be used, as and for the purpose specified.

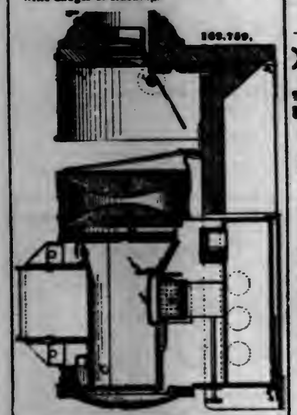
2. The combination, with the table A and revolving kneading-board B, provided upon its outer periphery with teeth or projecting pins *c*, of the swiveled hand-lever C, having near its outer end pins *j j*, substantially as and for the purpose set forth.

162,759. MAGIC LANTERNS. L. J. Marcy, Philadelphia, Pa. [Filed May 31, 1875.]

1. In a magic lantern, a color-glass, constructed substantially as set forth, to slide upward from below across the line of light, whereby the shade is caused to descend upon the picture, as set forth.

2. The combination, substantially as set forth, of objective lenses, their supporting-frame, and a color glass or shade reciprocating in guides in said frame outside of the focus of the lantern whereby the effect of clouding is produced upon the picture.

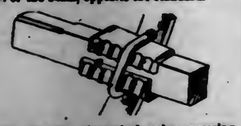
3. A hinged flap, constructed substantially as set forth, to swing upward from below across the line of light, with its edge within the focus of the lantern, whereby a sharp line, similar to that caused by a falling curtain, is produced when the flap is turned up to shut off the light from the objective tube.



4. The combination, substantially as set forth, of a lantern-body, an adjustable frame, in which the objective lenses are mounted, a hood attached to the adjustable frame, and a swinging flap hinged within, and protected by, said hood.

5. The combination, substantially as set forth, of a flame-chamber, a lamp-chamber, a slotted diaphragm separating the two chambers, a lamp the upper edge of which sits close to the diaphragm, and flanges on the diaphragm overlapping the top of the lamp, to secure a strong draft, while preventing flickering.

6. The combination, substantially as set forth, of the flame-chamber, the front glass, its spring frame, and circular retaining-spring, whereby the glass, although accidentally cracked, may be retained in the frame.



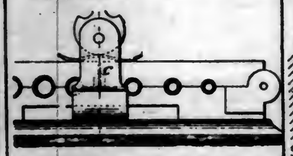
7. The combination, substantially as set forth, of the lamp, the flame-chamber, its front glass, and the heat-deflector plate *f*, arranged between the lamp and glass, whereby the front glass may be brought close to the lamp with little danger of cracking.

162,759.

162,760. PLOWS. Thomas J. Mercney, Salisbury, N. C. [Filed Apr. 13, 1875.]

Brief.—An ordinary clip or staple holds the plow-standard to the beam, and the adjustment for a deeper or shallower furrow is effected by means of two flanged and notched wedges, embracing the upper and lower corners of the beam, opposite the standard.

The flanged and notched wedges covering the upper and lower angles of the beam opposite the standard, in combination with the standard, beam, and calf or gripe, as shown and described.



162,761. STRAWBERRY-CULTIVATORS. Jno. Orlando, West Yarmouth, Mass. [Filed Feb. 13, 1875.]

Brief.—A vertically-adjustable frame is mounted upon wheels. The frame carries upon each side a rotary vine-cutter, and upon two sets of cross-bars are mounted cultivator-teeth. The rear end of the frame carries a vibrating rake, which gathers up the vines and weeds, and when full can be vibrated backward and upward to discharge its burden.

1. In combination with a wheeled carriage, A, and frame C, arranged and applied together, as described, a vibratory rake, H, disk-cutters F F, a series of plow teeth, E, and cutters G, all being arranged to operate as explained.

2. In combination with the wheel-carriage A, the vibratory rake, and the frame C, arranged and applied together, as specified, the arms *b' l* and the levers *i m*, pivoted together, and applied all as shown and described.

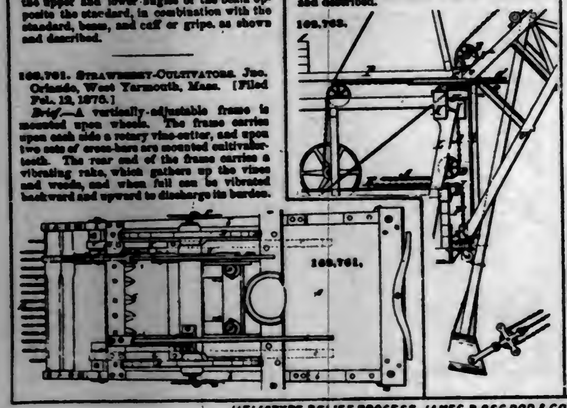
162,762. LEATHER-ROUNDING MACHINES. Henry F. Osborne, Newark, N. J. [Filed July 9, 1874.]

The combination of a spring, with a sliding carriage or clip and bars of a rounding-machine, substantially as shown and described.

162,763. DRESSING-MACHINES. Ralph R. Osgood, Troy, N. Y., and F. Brotherhood, Charleston, S. C. [Filed Apr. 9, 1875.]

Brief.—The hoisting-chain is led down through the hollow top pivot of the crane (which is suspended on friction-rollers) to a sheave placed near the deck. The backing-chain is, in like manner, led up through the bottom pivot to a point near the former. The use of centering guide-sheaves is thus dispensed with, the twist of the vertical portions of the chain acting as a swivel. The arrangement of the crane enables the weight to be carried in the best manner, to avoid strains of the boat.

1. The combination of the upper hollow suspended trunnion N and J, hoisting-chain passed through said trunnion, and a sheave nearly on a plane with the deck of the dredging-boat, substantially as described.



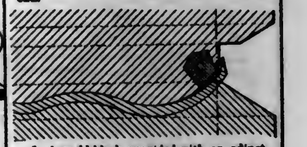
2. The combination of the bottom hollow trunnion, backing-chain passed through the said trunnion, and a sheave nearly on a plane with the deck of the boat, substantially as described.

3. The combination of friction-rollers with the suspended hollow-top trunnion and the turn-table of the swinging crane of dredging-machines, substantially as and for the purpose described.

4. The combination of struts L with the swinging crane, top trunnion, and kneisons of the boat, substantially as and for the purpose described.

5. The socket casting of the upper trunnion, constructed to receive the pivot of the top trunnion, and form an abutment for the struts L and their girts K, substantially as shown and described.

162,765.



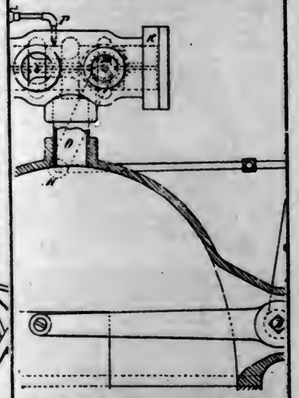
6. The pivot-casting of the top trunnion, having the turn-table of the crane, upper beams of the crane-arm, the angle-pulley, and the counterbalancing-timbers connected to it, substantially as described.

7. The combination of the counterbalancing-timbers P, turn-table, crane constructed with arms O and U, and the upper trunnion, substantially as described.

8. The suspension-bolts *d*, in combination with the crane, having main arm O, and auxiliary arm U, and top and bottom trunnions, substantially as described.

162,766. MECHANISM FOR MOLDING THE SOLES OF BOOTS AND SHOES. William H. Palmer, Dover, N. H. [Filed Feb. 13, 1875.]

Brief.—The mold is provided with a vertically-adjustable depressing-plate at its toe end.

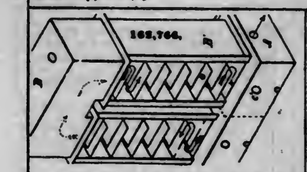


1. A mold-block provided with an adjustable stamp or device, O, for forming in the toe portion of the sole a depression to receive the inner sole and upper, all substantially as and for the purposes described.

2. A boot or shoe sole having a recess or depression at the toe formed by compression without removing any portion of the stock, substantially as and for the purpose described.

162,767. STEAM-TRAPS. Francis A. Pratt, Hartford, Conn., assignor to R. N. Pratt, New York, N. Y. [Filed Mar. 11, 1875.]

Brief.—The float automatically actuates an oscillating valve, which admits steam to and controls the movement of a piston-valve, the latter serving to regulate the admission of water to the reservoir. The cylinder is provided with a vent to allow of the escape of air from the reservoir.



1. The combination of the subsidiary disk-valve J and its steam-channels with the cylinder and reciprocating piston K N N', and the steam and water pipes M L O, substantially as and for the purpose herein described.

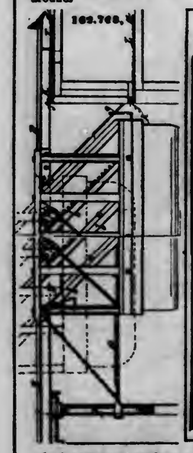
2. The aperture P in the cylinder K, in combination with the reciprocating piston N and pipe O, leading to the reservoir, to form an escape-valve, substantially as herein described.

162,768. CONDENSERS AND PURIFIERS OF COAL-GAS. Wm. L. Pratt, St. Louis, Mo. [Filed Oct. 12, 1874.]

Brief.—Two upright chambers are set upon a divided tar-tank, and are connected at the top. They are provided with zigzag plates within and doors on the sides. The tar-tank and the connecting-tube are provided with cleansing-openings.

162,764.

The parlor described, having the divided tar-tank A, provided with the cleansing-openings *a a'*, the vertical chambers B B', provided with the removable doors C, and the connecting-tube D, provided with the cleansing-openings *r r'*, as described.



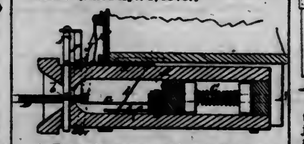
162,767. PROCESSES FOR TREATING TOBACCO. Geo. S. Prince, Richmond, Va. [Filed Feb. 13, 1875.]

The method herein described of curing and brightening tobacco in the leaf, for the manufacture of chewing and smoking tobacco, by subjecting it successively to the action of sulphuric acid, for the purpose of removing the sap and toughening the fiber, and to the action of sulphurous-acid gas, for bleaching and brightening it, and then to the action of steam for removing the acids and their compounds, substantially as herein set forth.

162,768. FLOATING DRAW-BRIDGES. Henry F. Rice, James M. Rice, and Wm. B. Rice, Dubuque, Iowa. [Filed Mar. 30, 1875.]

Brief.—A roadway combined with a floating truss-pontoon, the trusses of which are connected to the roadway by inclined guides and diagonal braces. Transverse shafts, with racks and pinions on the truss-pontoon, operate it, so as to preserve the roadway at a uniform level whatever the stage of the water. The hinge is composed of upper and lower levers, pivoted to a bracket and arms, to carry the pontoon entirely out of the way of the abutment and keep it steady when swung around.

162,768.



1. A permanent roadway or marine structure erected above water, in combination with a floating truss-pontoon, the trusses of the pontoon being connected to the roadway by inclined guides and diagonal braces, substantially as and for the purpose described.

2. The combination of the shafts, pinions, and rack-bars with the truss pontoon and the permanent roadway, substantially as described.

3. The perforated hubs, in combination with the shafts, pinions, rack-bars, pontoon-truss, and permanent roadway, substantially as described.

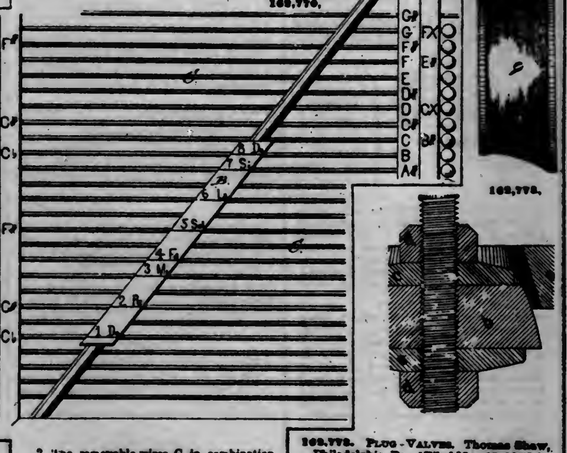
4. The combination of the hinge, composed of the bracket K, pivots *d d'*, and two pairs of arms, J L, with the truss pontoon-draw for a bridge, substantially as described.

162,769. CAR-COUPLINGS. Henry F. Rice, Jas. M. Rice, and Wm. B. Rice, Dubuque, Iowa. [Filed Apr. 6, 1875.]

1. The spring support and guide G, in combination with the draw-bar A, substantially as and for the purpose described.

2. The spring support and guide G, attached to an adjusting block, *c*, substantially as described.

3. The slide I, for holding up the coupling-pin F, connected to a spring-rod, A, and made with an angular shoulder, F', and slots *g g'*, in combination with the vertically-sliding notched bar F' of the coupling-pin F, and with the draw-heads, substantially as described.



4. The combination of the laterally-movable bar K, swinging links K' K', rod J, bar F', coupling-pin F, and slide I, substantially as and for the purpose described.

162,770. MUSIC-TEACHING APPARATUS. J. A. Scarritt, Columbus, Ohio. [Filed Apr. 2, 1875.]

Brief.—For teaching the elements of transposition.

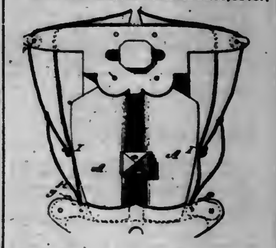
1. In combination with the frame A, provided upon its vertical margin with letters or characters indicating all the tones or notes of one, two, or more octaves, the removable wires or rods C and the sliding scale-indicator, so marked, spaced, and lettered as to indicate the major, minor, or chromatic scale, or any musical chord, substantially as and for the purpose described.

162,770.

1. The removable wires C, in combination with the frame A and sliding scale-indicator, substantially as and for the purpose shown.

2. The frame A, provided upon its vertical or lateral margins with the letters and characters of the natural scale in regular order, and so placed as to appear consecutively over the wires or rods C, substantially as and for the purpose shown.

162,771. BOTTLE-WASHING APPARATUS. Fredrich Schlich and John Koster, New York, N. Y. [Filed Oct. 17, 1874.]



Brief.—Series of jet-tubes in connection with tubs in which the bottles are soaked and washed off, and with couplings that allow the jet-tubes to be moved from one tub to the other.

162,771.

The bottle-washing apparatus consisting of the tubs *a* and *b*, and ranges of nipples or jets and supply-pipes, arranged substantially as set forth, so that the washing jets can be placed over either one tub or the other, for the purposes specified.

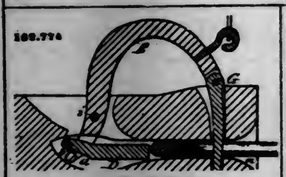
162,772. CAR-COUPLINGS. Hiram A. Sharp, Jackson County, Mo. [Filed Feb. 10, 1875.]

The hinge-jaws A A, the pivoted braces *g g*, and the link O, in combination with the bumper I, to act substantially as described.

162,772.

162,773. PLUG-VALVES. Thomas Shaw, Philadelphia, Pa. [Filed Mar. 10, 1875.]

Brief.—The valve is molded with a concave periphery, placed in position on the rod, and compressed until said periphery assumes a convex form.



The elastic valve *b*, with a concave periphery, as described, for the purpose set forth.

162,774. CAR-COUPLINGS. Jno. H. C. Smith and Nathan B. Smith, St. Mine, Ill. [Filed Mar. 22, 1874.]

The combination, with a draw-head, A, having interior chamber *a*, of the slide D, curved lever E, and pin C, substantially as and for the purposes set forth.

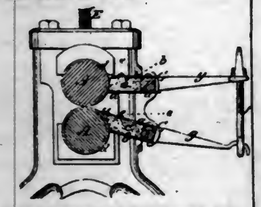
160,776. MACHINERY FOR BURNISHING BOOT AND SHOE HEELS, &c. Vivian K. Speer, Lynn, Mass. [Filed Nov. 28, 1873.]

Brief.—The spring is caused to vary automatically in power during any elevation of the carrier, according as the angle formed by its free end with the body is more or less obtuse.

1. In combination with the tool-carrier and the abutment, with or without the roller, the spring, attached at one end to said carrier, and playing at the other upon the abutment, substantially as described.

2. In machinery for burnishing boot and shoe heels, the spring I, bent at its free end, substantially as described, in relation to the pivot of the carrier, as and for the purpose set forth.

160,777. TOILET-MIRRORS. Rhen T. Starr, New York, N. Y. [Filed June 22, 1874.]



Brief.—The handle is provided with a circular rim, having internal screw-threads and an annular rib or projection, and is combined with a solid circular frame, having an external screw-thread and a rib or flange, whereby, when the latter is screwed into the former, the mirror is confined between the two ribs.

As an article of manufacture, a toilet-mirror, the handle B of which is formed with a circular rim, C, having internal screw-threads c', and a rib or flange, c^*, combined with a solid circular back, having external screw-threads c', and a rib or flange, c^*, substantially as described, whereby, when the two parts are screwed together, the reflecting-glass is confined between the ribs, and the mirror may be held and manipulated in the hand by its handle, for reflecting different parts of the person, as set forth.

160,778. MACHINES FOR LAMINATING THE STRIPS IN LEAF-TOBACCO. G. F. Unversagt, Baltimore, Md. [Filed Nov 11, 1874.]

Brief.—The scraper for removing gum from the rolls is formed of two metal plates, between which a wet sponge is held. The sponge and scraper are situated upon the short arm of a lever, so that the same can be adjusted to or from the roll as desired.

1. The combination, with the crushing rolls A A, of the sponge-holders, consisting of the scrapers a a, plates b b, and the adjustable arms g g, whereby the scrapers and moistening-sponges are made adjustable as one in relation to the rolls, in the manner substantially as herein set forth

2. The sponge-holders, consisting of the plates a b, forming openings at their edges, the upper plates provided with perforations c, and situated upon suitable supports for the purpose, as hereinafter set forth.

160,779. CORN-PLANTERS. F. Van Doren, Adrian, Mich. [Filed Feb. 11, 1875.]

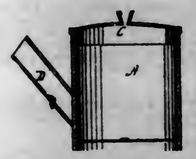
Brief.—The lower end of the shoe is closed by a reversible spring-plate having a notched block for fitting under a transverse rod, for holding it in position. Above the seed-cup, and in the side of the planter, is secured a reversible cut-off bar, having a rubber cut-off on each end, which are used alternately in contact with the periphery of the seed-wheel, for cutting off the surplus seed.

160,779.

1. The reversible spring-plate H, provided with the central notched block d, in combination with the planter A, shoe B, and rod e, as and for the purposes herein set forth.

2. The reversible cut-off consisting of the bar I, blocks h h at the ends thereof, and the rubber pieces i i fastened to the blocks by central screws, substantially as and for the purpose herein set forth.

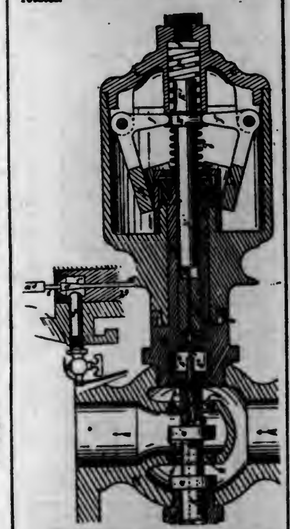
160,780. OX-BOW PINS. William Varnum, Sharon, Vt., assignor to James B. Larkin and Henry C. Varnum, same place. [Filed Aug. 18, 1874.]



Brief.—For fastening the bows in the yoke.

The pin A, with standard or pivot C thereon, in combination with a spring, D, substantially as and for the purpose set forth.

160,781. DEVICES FOR APPLYING POISONOUS COMPOUNDS TO PLANTS FOR DESTROYING INSECTS. Oliver S. Warner, Akron, Ohio, assignor of one-half his right to Alex. M. Van Lier, Brooklyn, N. Y. [Filed June 20, 1874.]



Brief.—The device consists of a covered vessel provided with a handle, and a perforated bottom placed a few inches above the lower end of the tube, through which the powder is sifted upon the plant

The magazine A, having the sieve-like or perforated bottom situated within the magazine proper, near the lower end thereof, and provided with the cover C and socket D, substantially as and for the purpose specified.

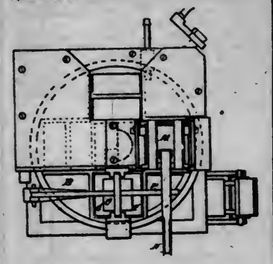
160,782. GOVERNORS FOR STEAM-ENGINES. George Westinghouse, Jr., Pittsburg, Pa. [Filed Apr. 3, 1875.]

Brief.—The governor-valve is operated by a piston working in a cylinder. A small valve, operated by the governor-balls, exhausts steam from the upper side of the piston, causing it to ascend. It is forced down by the small valve closing its port, and allowing the boiler steam to act in the upper side of the piston. The whole also containing the balls rotates.

1. A governor-valve and piston, arranged to operate the same, such piston, when in use, being subject to steam-boiler pressure simultaneously on both sides, in combination with an auxiliary valve and part for increasing or or lessening such pressure on one side, substantially as set forth.

2. A piston b, made subject to constant boiler-pressure on one side, and having a steam-port through or past the same to a chamber, b^2, on the other side, in combination with a governor-valve on one side and a tapering valve, d, and port i, communicating with the atmosphere on the other, substantially as set forth.

3. The combination of the rotating governor, governor-valve, piston, auxiliary valve and port, whereby when the governor ceases to revolve the auxiliary-valve port will be fully opened and the governor valve closed, substantially as set forth.



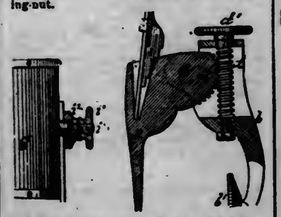
4. The valves a a', arranged on the same stem with pistons b b' of different areas, each working in a separate chamber, the piston b taking its steam from the boiler side, whether the governor-valves be open or closed, substantially as set forth.

5. The weights D D' in the revolving case C, in combination with arms f f', collar E, and regulating springs, arranged and operated substantially as set forth.

6. The combination of stems E' d^2 a^2, and valve d, with steam-ports, piston b, and chamber b^2, substantially as set forth.

160,783. BRICK-MACHINES. Jos. Whiteley, Dunlap, Iowa. [Filed Feb. 18, 1875.]

Brief.—Four pairs of molds are on a plate rotating on a vertical axis by hand gearing over a fixed platform, having an opening for the descent of the bricks onto an endless belt. The nearest mold, while being filled by hand, has the one in advance pressed by a cam lever, which, on further depression, acts on another lever, to expel the brick that is another step in advance.



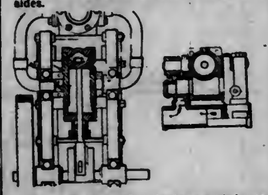
1. The combination, substantially as specified, of the horizontal rotary and bottomless molds, the fixed platform B having an opening, a, therein, a press, and an ejector, for the purpose set forth.

2. The combination of the presser L, the eccentric M, the lever N, the flexible bands s s, and the molds, substantially as and for the purposes specified.

3. The combination and arrangement, in a brick-making machine, of the press-lever N and ejector-lever P, both operating together substantially as and for the purposes specified.

160,784. HEAD-RESTS. Willard M. White, Boston, Mass. [Filed Jan. 8, 1875.]

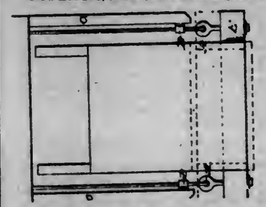
Brief.—The standard is adjustable in the top of the clamp by sliding the foot-adjuster on the standard, and the head-rest is rotated and adjusted on the standard by the clamping-nut.



1. The combination of the clamp-fingers a b, the former bearing the gear-segment a', and the latter bearing the worm-screw d, all constructed and designed for use substantially as described.

2. The combination of the foot-adjuster c (its back consisting of a series of steps) and the standard f, substantially as shown and described.

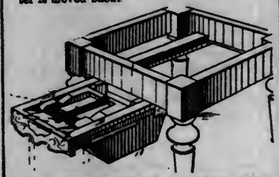
3. The combination of the spring-standard f, rest g, pin i, nut i', and clamp i^2, substantially as shown and described.



160,785. MOTIVE-POWER ENGINES. Conrad V. Wyss and Henry Studer, Zurich, Switzerland. [Filed July 14, 1874.]

Brief.—Valve ports are in the sides of the projecting chamber, and receive and exhaust the water simultaneously on both sides, the driving-column being divided to supply both sides.

The combination of a cylinder provided with a projecting valve-chamber, as shown in Fig. 5, the fixed distribution boxes located one up on each side and adapted to distribute the actuating fluid equally and simultaneously upon each side, substantially as and for the purpose as described



160,786. BALING-PRESSES. J. M. Albertson, New London, Conn. [Filed Nov. 20, 1874.]

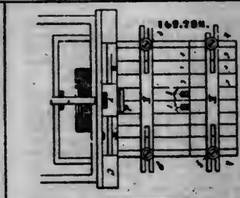
In combination with the jointed side rods A, secured to the straining-beam E, the beams C, attached firmly to the head D, and extending downward parallel with the rod, and secured to it above the joint, substantially as and for the purpose specified.

160,787. FOOT-RESTS. Lewis M. Angle, Chicago, Ill. [Filed Mar. 19, 1875.]

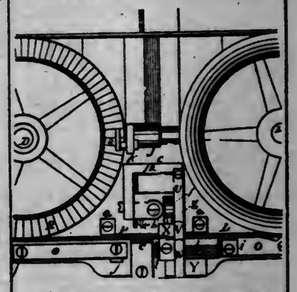
Brief.—As the sliding frame is drawn out, the legs drop down into position to sustain the front portion thereof, and when the frame is moved back they are folded up by the strap which is attached to the staple. The cushion is folded into the sliding frame when the latter is moved back.

In combination with the seat-frame of an easy-chair, the sliding frame B, folding cushion C, folding legs E, provided with the staple e and connecting-strap i, all constructed and operated substantially as set forth.

160,788. BED-RIVES. Elvin Armstrong, Jeersyville, Ill. [Filed Oct. 6, 1874.]



Brief.—The nests of frames are pressed together between slanted frames, slotted side bars being held by set-screws to these frames; the heavy box above having a slotted floor and surface grooves, and the top carrying over said slots V-shaped channels inverted over said slots, and leading to external air-ports.



1. The combination of the bars E, slotted at their ends, and the securing-screws f f, with the follower k k and the intermediate frames e e, as described.

2. The combination of the board Q, having openings t and channels q q, with the V-shaped cover w, as described.

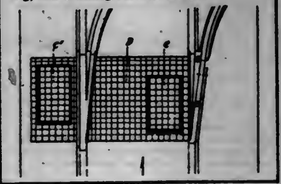
160,789. MACHINES FOR FINISHING HORSE-SHOE NAILS. Daniel Armstrong and John A. Hutchinson, Chicago, Ill. [Filed Jan. 27, 1875.]

Brief.—A pair of horizontal wheels (one of which has teeth to engage with a pawl to intermittingly rotate it) carry a belt provided with holders for the nails, which nails are carried between a die on a reciprocating frame and a roller on a rocking frame, where the first operation is performed, viz., beveling the nail flatwise. The next movement of the belt carries the nail between a stationary punch and a die on the reciprocating frame, when the second or finishing operation of cutting the bevel point is performed, after which the nail is delivered to a projection, which discharges it from the belt.

1. The belt L, provided with carriers M N, and arranged to place nails at the dies, and to stop during the finishing operation, and move forward, as and for the purpose specified.

2. The pointing-die b', formed of two pieces and combined with the adjusting-wedge f', as set forth.

3. The roller die a, formed of three pieces, and combined with the carriage C' and roller c', moved on the arc of a circle by the yoke 1, 5, as specified and shown, and with the carrying devices L M N.

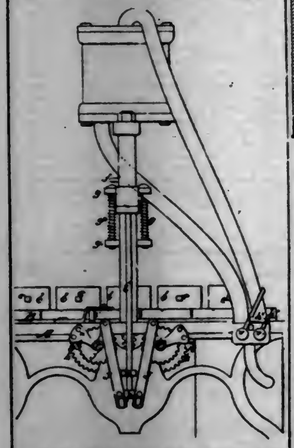


4. The die b', combined with spring f g and punch Z, substantially as described and shown.

5. The combination of the yokes 1, 5 and 3, cams 6 and 8, carriage C', lever K, pawl e with feed-wheel B, as described.

6. The nail-holder X a', constructed as set forth, and combined with the carriage C', rock-shaft A, spring W, cam U, plate V, substantially as described.

160,790. STREET-RAILWAY SWITCHES. C. B. Barlow, Portsmouth, N. H., assignor of one-half his right to John I. Shaver, Belleville, Canada. [Filed Feb. 3, 1876.]



Brief.—An improvement on Patent No. 151,185, June 2, 1874. The movable tables upon which the horses are driven rest upon independent rollers, and are located above the plane of the bed-plate, overlapping the opening, thus avoiding obstruction by dirt.

in a street railway switch, substantially such as described, the tables *c c'*, arranged to work above the bed plate D, in combination with the loose independent friction-rollers *s s*, substantially as and for the purpose specified.

162,791. GLASS-PRESSES. Washington Beck, Pittsburg, Pa. (Filed Apr. 4, 1873.)

Brief.—The glass former or plunger is connected with and operated by the atmospheric engine, in contradistinction to hydraulic or steam engines, by the employment of which, and consequent escape of water from the cylinder to the mold, the glass becomes marred.

1. The power glass-press, consisting of the glass-shaping mechanism, and the mechanism for applying atmospheric pressure for performing the pressing operation, combined and operating substantially as described.

2. The combination of the revolving shaft *r*, carrying pin 2, with the plugs *b'* of molds *b*, substantially in the manner and for the purpose described.

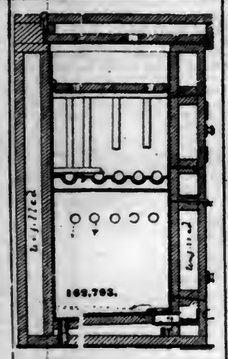
3. The incline planes *e* of table A, in combination with the lifting-plugs *b'*, substantially as described.

4. The spring T, in combination with the reciprocating mold-bed B, pings *b'*, and shaft *r*, carrying pin 2, substantially as described.

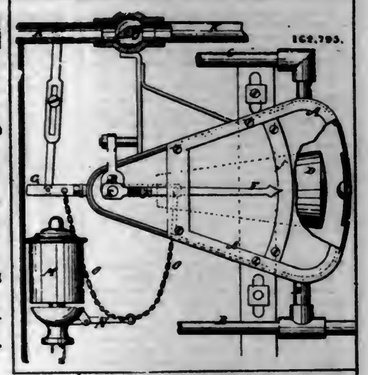
5. The combination of the shaft *r*, wheel *k*, handle *q*, and the automatically-reciprocating mold-bed B, in the manner and for the purposes described.

6. The combination of the mold-bed B, connecting-links J, a rod, *i*, wheels *j* and *k*, pawls *l*, and a plunger, *l*, substantially as and for the purposes described.

7. The locking devices *s* or *s'*, in combination with the bed of molds, substantially as described.



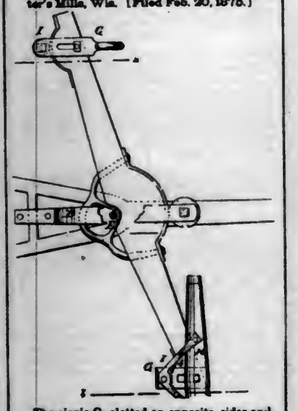
8. The removable handle ?, constructed with a socket, and provided with a catch pin, 6, on a spring-key, *4*, and adapted to be fitted and fastened upon the tenon *o* of the molds, substantially as and for the purposes described.



162,792. CIGAR-WRAPPER KNIVES. John H. Brookhiel, Highland Falls, N. Y. (Filed Apr. 14, 1875.)

Brief.—The two knives being upon one and the same end of the handle, either can be used, when desired, by turning the handle half-way over.

The combination of the handle *a*, rotting-blade *c*, and drawing-blade *d*, the two blades being secured to the same end of the handle, substantially as shown and described.

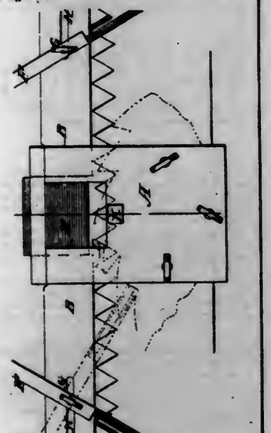


162,793. REFRIGERATORS. A. F. Bronner, New York, N. Y. (Filed Apr. 3, 1875.)

Brief.—Warm air falls through the perforated double cover of the case and removable cover of the ice-box and the ice, along the inclined drip-ways, under removable bottoms of the food chambers, on each side of the ice-box, into the hollow side walls and the large food-space. The drip passes down grooves under the ice rack into the hollow walls, down slanting troughs therein, to outlets across the front end of the floor, and thence to the rear exit. Pillars only separate the ice-box from the side food-chambers.

In refrigerators, the combination of a central ice-receptacle, by inclined troughs, with perforated double walls, bottom troughs, connecting and perforated front channel, and inclined bottom with exit-aperture, for conveying drip water off after utilizing the same, substantially as and for the purpose set forth.

162,794. WHIFFLETREES. J. H. Brown, Porter's Mills, Wis. (Filed Feb. 20, 1875.)

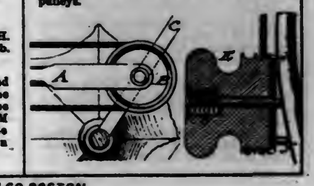


The clevis G, slotted on opposite sides and provided with end roll I, in combination with a double-tree having bolt and convexity near the end, as and for the purpose specified.

162,795. LOW-WATER INDICATORS. J. H. Brown, Porter's Mills, Wis. (Filed Feb. 20, 1875.)

The combination of the two chains O and the cross-bar O with the shaft E of the gage-float D, and with the stem N of the valve that admits steam to the whistle M from the pipe K, that supplies steam to the steam-pump, substantially as herein shown and described.

162,796. DEVICES FOR SETTING, FILING, AND JOINTING SAWS. William Bryson, Unity, Wis. (Filed Mar. 13, 1875.)

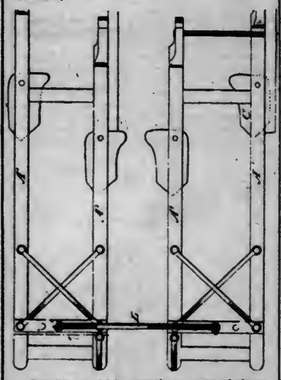


Brief.—A block, A, on each side of the saw to clamp and guide it. A screw through each, one to act as die and the other as punch for setting, and a straight or curved edge to gage or joint the points, said edge having at each end gages for the bevel-filing or sharpening cuts.

The improved device for setting, filing and jointing saw teeth, consisting of notched blocks A D A D, end-slotted edge E, jointing-gage F, adjustable gages F F, and set J K, all arranged substantially as shown and described.

162,797. ADJUSTABLE TOPS. Almon Clarke, Sheboygan, Wis., assignor to himself and Chas. A. Spencer, same place. (Filed Nov. 21, 1874.)

Brief.—The top may be operated from the rear, to a certain extent, by means of cords and pulleys.

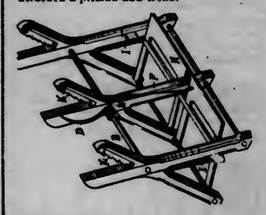


1. The canopy-adjusting device, composed of curved supporting standard with rotating end pulley, having adjustable canopy to be operated by spring-knob and connecting cords, all combined substantially as specified.

2. The combination of a rotating pulley, B, having clamping device B', with arc-shaped slide-piece C, attached to canopy for setting the same under any inclination to the carriage-body, as specified.

3. The pivoted spring-knob E, having ratchet base-plate *d*, and stop-pin *f*, combined with standard A and pin *d'*, for defining extent of turning motion of knob and securing its position when set, substantially as specified.

162,798. CORN-PLOWS. Linus G. Clawson, Pleasant Hill, Mo. (Filed Apr. 11, 1874.)

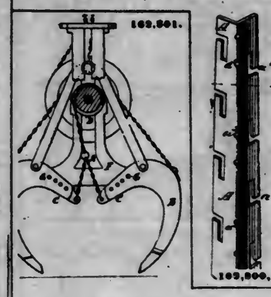


Brief.—The plow frames swiveled on the connecting-arch, and capable of being swung around to throw the earth either to or from the row.

Two frames, A' A', carrying a gang of plows having their respective sets of mold-boards turned in opposite directions, in combination with the connecting-bow L, pivoted loosely to each, as shown and described, so that they may by simply turning, and without any adjustment, be made to turn the soil to or from a row of plants.

162,799. SAW-BUCKS. Geo. Collins, Kingfield, Me. (Filed Apr. 6, 1875.)

Brief.—The saw-buck is automatically adjustable by means of a clutch formed upon one end of a spring coiled loosely around the central connecting-rod; the other end of the spring forming an arm, to the end of which is attached a pitman and treadle.

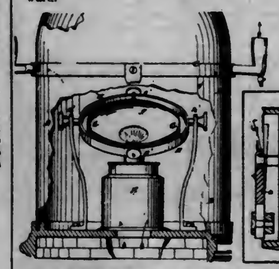


In a saw-buck, substantially such as described, the treadle H, pitman F, spring I, plate K, and coiled spring C, provided with the arm E and clutch D, constructed and arranged to operate substantially as and for the purpose specified.

162,800. FENCE-POSTS. Myron W. Colwell, Dunlap, Iowa. (Filed Apr. 3, 1875.)

Brief.—The post, which is driven into the ground, supports fence-wires in the angular slots shown, or boards, by means of wire ties, which pass through the round perforations.

The tapered fence-post A, made of wrought sheet-iron, bent longitudinally into angular form, and having angular slots a^1 formed in its side edges, and holes a^2 formed in its angle, substantially as herein shown and described.



162,801. GRAPPLES. Geo. Conklin, Poughkeepsie, N. Y. (Filed Mar. 29, 1875.)

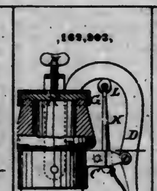
Brief.—Pivoted to the bottom of each of two descending sides of a frame is a pair of curved arms, connected by a metallic plate and ribs to form each side, which, on the descent of the implement, are, by attached chains, suspended openly, but which, on its ascent, collapse by the unwinding on a shaft of another suspending chain.

The combination of lever-jaws B B, pivoted at G G to a double frame, F F, provided with end chains A, and having pulleys D D, arranged as and for the purpose specified.

162,802. LIGHT-HOUSE LANTERNS. Oliver Cook, Darien, (Rowayton Post-Office,) Conn. (Filed Mar. 1, 1875.)

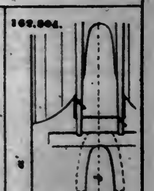
Brief.—The lamp chamber is made of glass, arched in form of a dome, which is attached to and supported by the lantern-frame. A reflector mounted in gimbals, supported by standards, throws the light upward against the clouds, which again reflect the light downward.

1. A light-house lantern provided with a glass dome or cover, substantially as herein shown and described.



2. The combination of the concave-ring reflector F and the gimbal G H, provided with clamping screw-pivots *g' h'*, with the lamp E and the glass dome or cover of a light-house lantern, substantially as herein shown and described.

162,803. BOTTLE-STOPPERS. Gustave J. Orikelair, Green Bay, Wis. (Filed Dec. 19, 1874.)



Brief.—The stopper is held in place by means of a bent or curved lever pivoted to a clevis on the band that encircles the neck of the bottle.

1. The band B, clevis C, lever D, stopper F, and spring I, constructed and arranged substantially as and for the purposes described.

2. In combination with the lever D, stopper F, the holding-hook K, for the purposes described, and also the clamp *L'*, as set forth.

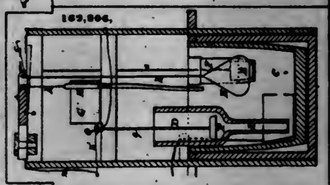
162,804.

162,804. HORSESHOE-MACHINES. George Custer, Monroe, Mich. (Filed Mar. 18, 1875.)

Brief.—The inner end of the beading-die is made straight or square across, for the purpose of forming on the end of the shoe a straight or square toe for the reception of the calk.

The improved horseshoe-forming machine, composed of the blocks *a c*, constructed with the recesses *a' c'*, die *b*, hooks or draw-bars *f*, and female die *d*, constructed with a flat surface *e*, as described, substantially as and for the purpose set forth.

162,805. SEAL-LOCKS. Wm. H. Darling, New York, assignor of one-half his right to John Ardry, Brooklyn, N. Y. (Filed Oct. 2, 1874.)



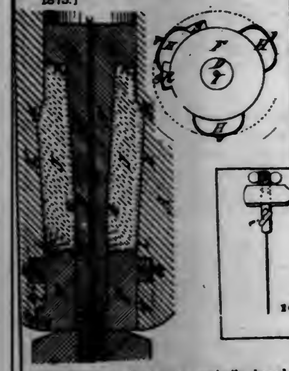
1. In a seal-lock, the combination of the block B, carrying the tumblers D, with the keeper B'', constructed with the shoulders *g*, and adapted for use with the seal *r*, substantially as and for the purpose set forth.

2. The combination of the seal *r*, thrust into place through the slot *m* in the keeper, and with its edges held by the groove *n* therein, the top plate *a*, provided with the key-hole *b*, and the tumblers D, carried by the block B, and arranged to lock upon the shoulders *g* of the keeper, the whole constructed and arranged substantially as and for the purpose set forth.

162,806. GALVANIC BATTERIES. William M. Davis, Cleveland, Ohio. (Filed Mar. 9, 1874.)

Brief.—Automatically gives notice of the total consumption of the sulphate of copper or of the zinc. Water-feed automatically regulated by a hydrometer.

1. In combination with the zinc bar E of a galvanic battery, the guiding-cell F and its supporting-shelf *f*, substantially as and for the purpose specified.



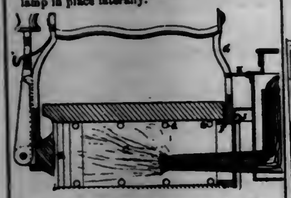
2. The combination, in a galvanic battery, of a water-reservoir, G, a hydrometer, H, and valve K, operating together substantially as and for the purpose specified.

3. The combination, with the reservoir D and a common call-circuit, of the call-weight P and the contact-spring Q, substantially as and for the purpose specified.

4. In combination with the descending bar of zinc E of a galvanic battery and a common call-circuit, the call-catch R and the contact-spring *r*, operating together substantially as and for the purpose specified.

5. In combination with the ascending bulb H, in the liquid of a galvanic battery and a common call-circuit, the contact-spring S on beam I, or their mechanical equivalents, operating together substantially as and for the purpose specified.

162,807. BREECH-LOADING ORDNANCE. D. Davison, New York, N. Y. [Filed Mar. 25, 1875.]



1. A cannon having the conically-shaped enlarged bore K, at or near the breech of the gun, with its smallest end toward the rear, in combination with the elastic cylinder and conical spindle, substantially as and for the purpose described.

2. The combination, with the piston-head C, and elastic cylinder J, of the spindle D made conical shaped, with its largest diameter at or near the inside face of the piston-head, substantially as and for the purposes described.

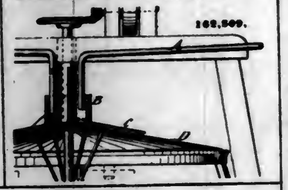
3. The locking ring F, constructed or provided with locking-legs H, and stop-lug E, in combination with the channels V G, and recess S, substantially in the manner and for the purpose herein described.

162,808. SAD-IRONS. Thos. J. Ellyson and A. O. Askew, Jackson, Tenn. [Filed Feb. 13, 1875.]

Brief.—The studs enter slots in the plate attached to the lamp, and the latch holds the lamp in place laterally.

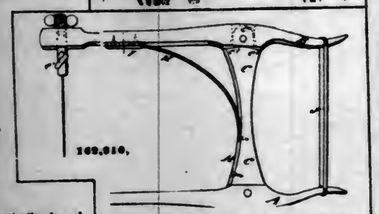
The combination with burner and hollow iron, of handle, standard G, having pivot F and studs I, the plate J, and the latch K, all constructed and arranged substantially as and for the purpose described.

162,809. ORE-SEPARATORS. W. J. Evans, Houghton, Mich. [Filed Apr. 3, 1875.]



Brief.—Ore is fed onto a stationary cam-shaped plate, over which a stream of water flows. The ore is washed onto a revolving plate under the cam-shaped one. The gold, &c., remain near the top of the revolving plate, and are protected from further washing by the cam-plate, while the quartz and sand are still exposed to the stream of water, and are washed into the trough.

1. The combination of cam shaped stationary plate C, division-pieces L, and distributer B, with table D, to separate the ore from the puddled water and conduct the same evenly over the rotating table D, substantially as and for the purpose specified.



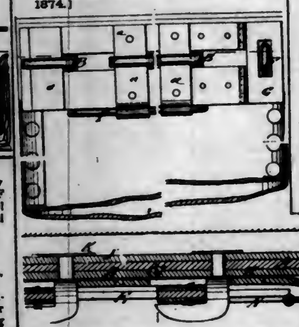
2. The perforated pipe E, in combination with the rotating table D, and cam shaped plate C, substantially as and for the purpose specified.

3. The conducting board G, pivoted on stationary plate C, and resting lightly on rotating table D, to conduct the water and ore into hutch H, through pipe f, substantially as described, and for the purpose specified.

162,809.

162,810.

162,810. FRET-SAW FRAMES. O. Evans, Halifax, Canada. [Filed Apr. 10, 1875.]



The combination of the springs H J and the flanged plate I with the frame A B C, having a pivoted mortise and tenon joint, b' c', at one end of the cross-bar C, substantially as herein shown and described.

162,811. FIRE-PROOF SHUTTERS. S. Fales, St. Joseph, Mo. [Filed Nov. 25, 1874.]

A corrugated metal shutter or door provided with air-passages G, in combination with the air-ventilating chamber f and box H, filled with a non-conductor of heat, substantially as and for the purpose set forth.

162,812. MAIL-BAG FASTENINGS. James C. Franklin, Lona, Oreg. [Filed Dec. 19, 1874.]

1. The hasp-slide pivoted on the wire staples F, in combination with the metal hooks B and the staple F, substantially as specified.

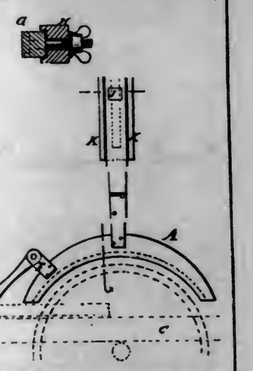
2. The washer-plates H, hinged together as described, in combination with the bag-front and the hooks, substantially as specified.

3. The slotted leather strap E, cross-plates e, attaching-plate N, and hasp G, combined and arranged substantially as specified.

4. The leather strap L, combined with the washer-plates H and the flap C, substantially as specified.

162,813. HUBS FOR VEHICLE-WHEELS. W. Gallan, Newark, N. J. [Filed Sept. 8, 1874.]

Brief.—To prevent the splitting of the hub.



1. The combination of the hub a', with the bent double-ended tacks b, the tacks being driven into the hub and made to overlap each other, substantially as and for the purposes described.

2. The combination of the hub a', having one or more annular grooves in its surface, the bent double-ended tacks b, and filling-bands c, substantially as set forth

---

162,814. SAW-GUARDS. Dwight Graves and Charles O. Howes, North Amherst, Mass. [Filed Jan. 18, 1875.]

Brief.—A circular saw guard consisting of a slotted and grooved stationary piece, which is secured to an upper floor-timber; and an adjustable hanger, the upper part of which is attached to the stationary piece, and the lower part provided with a grooved metal guard, having upon its front end a stationary stand, to which is pivoted a serrated presser-foot.

The combination of slotted flange-piece H, hanger G, guard A, stand F, and jointed foot E, all constructed and arranged to operate in the manner described.

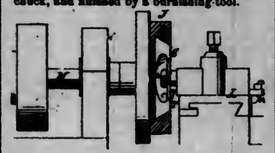
162,815. IRONING-BOARDS. Henry Clay Green, Oshkosh, Wis., assignor of one-half his right to John H. Gottman, same place. [Filed Mar. 6, 1875.]

162,815.

162,815.

An ironing-board, A, having at one end the loosely-secured neck-wire B and a straining cross-bar, C, all combined to operate together in the manner described.

162,815.



162,816. EARTH-AUGERS. A. M. Hanna, Kosciusko, Miss. [Filed Mar. 20, 1875.]

An improved earth-auger, formed by the combination of the cylinder A, the cross-bar B, the cutters C, having flaps or valves D hinged to their inner edges, and lips c' upon the outer corners of their cutting-edges, the bail E, and the sectional shaft F, with each other, substantially as herein shown and described.

162,817. MACHINES FOR RAISING AND PLANISHING TOBACCO-BOXES. Chas. J. Hauck, Brooklyn, N. Y. [Filed Sept. 5, 1874.]

Brief.—The blank is first raised by dies, then placed in a divided mold on a revolving chuck, and finished by a burnishing-tool.

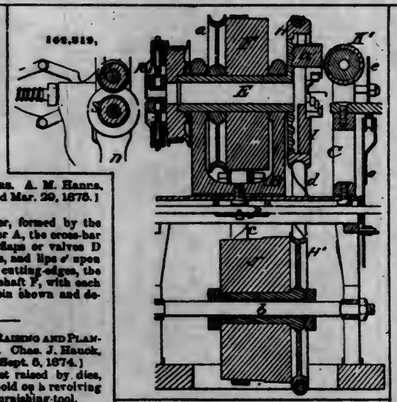
1. The combination of the chuck J and the divided mold S, adapted to open and close, the chuck being provided with the eccentric or cam U to lock or unlock said mold, substantially as and for the purpose herein shown and described.

2. The combination of the slide L, the tool g, and cutter f, and mold S, substantially as and for the purpose shown and mentioned.

162,818. BRICK-KILNS. N. B. Heafer, Bloomington, Ill. [Filed Jan. 30 1875.]

The combination, in a brick-kiln, of a layer of coarse bituminous coal and a superimposed layer of fine coal or slack, to form a bed or foundation for the kiln, substantially as described.

162,819. LATHES FOR TURNING WOOD. W. B. Hodge, East Newark, N. J. [Filed Sept. 19, 1874.]

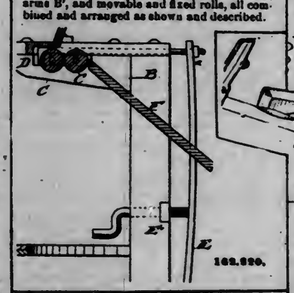


Brief.—The cutters are placed in a revolving head, and are forced toward the center and drawn from it by a spirally-grooved pulley, regulated in its motion by a pair of cone-pulleys, upon which runs a belt, the position of which is governed by a pattern-wheel.

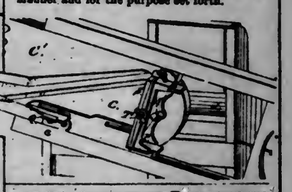
1. In combination with the radially-adjustable cutter-carrying blocks a', the loose pulley H, and the hollow spindle E, the cone-pulleys F J, pulley H', belt d, belt c, shifting carriage F, lever-connections L e, pattern-plate c, and driving-roller K', substantially as described.

2. Segments I and cutter-carrying block a' on hollow spindle E, in combination with the pulley H, turning loosely on spindle E, substantially as and for the purpose described.

3. The cone-pulley F, fast on the hollow spindle E, and the cone-pulley J, loose on shaft b, in combination with carriage F, belts c, lever-connections L e, and pattern-plate c, actuated as described.

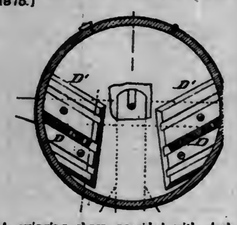


4. In a machine for turning irregular forms, the combination of a pattern-plate, c, a belt-shifter, and cone-pulleys F J, substantially as described.



162,820. COMBINED WASH-BENCHES AND WRINGERS. O. S. Holden and J. S. Corey, Felchville, Vt. [Filed Mar. 29, 1875.]

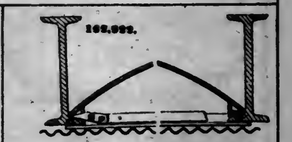
1. The wringer rolls C C, supported horizontally in arms B' B', the vertical frame B B, the inclined shelf F and guard F', and wash-bench A, the said frame being connected with and forming part of the bench, all as shown and described, whereby the operation of wringing and discharging the clothes may be carried on, in the manner set forth



2. The sprag-plate E, attached to and extending along the standards B, the crank-screws E', the horizontal sliding hook-rods D, arms B', and movable and fixed rolls, all combined and arranged as shown and described.

162,820.

162,821. RECIPROCATING CHURNS. Wilhelm Howe, Brooklyn, N. Y. [Filed Apr. 3, 1875.]



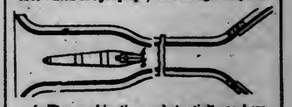
A swinging churn provided with dash-board D, adjustable in supporting plates D', as and for the purpose specified.

162,822. METALLIC LATHINGS. J. W. Hoyt, Springfield, Mass. [Filed Oct. 20, 1874.]

Brief.—A metal jaw is bolted to the ends of the furrings, between which jaw and the end of the furring the flanges of the beams are confined. A metallic strip is bolted to the furring, against which the lath-holding bolts are driven and upset.

162,822.

1. Metallic furring having clamps or jaws bolted to the ends thereof, for the purpose of securing said furring to the flanges of metal floor-beams, substantially in the manner described.



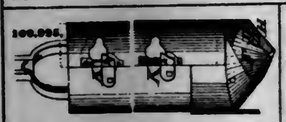
2. Metallic furring constructed with supplementary plates, wherein the ends of the rivets for retaining the lathing are upset, substantially in the manner described.

162,823. KITCHEN SLICING UTENSILS. A. Ilke, Lancaster, Pa. [Filed Dec. 5, 1874.]

The combination and arrangement of a swinging frame, B Z z, on a pivot-bolt, S, with its thumb-screw T held in position by a pin, t, sliding knife holders O C U, with the adjusting devices Q P p s v u, the whole constructed and operating substantially in the manner and for the purpose set forth.

162,824. APPARATUS FOR EXHAUSTING AND PROPELLING AIR. Christopher James, Bristol, England. [Filed Oct. 22, 1874.]

Brief.—The jet is delivered from a long narrow slit, and in the form of a thin sheet. The chamber and nozzle are of a thin oblong figure, and inclosed in a larger chamber of similar figure, reduced in width in the part into which the jet plays, and enlarged beyond.



1. The combination, substantially as hereinbefore set forth, of a narrow straight jet casing or pipe, with an exterior casing, connected as described, and forming a narrow passage around it, through which the air or other fluid to be acted upon is admitted, and which is so constructed as to bring the said fluid in close contact with the inner jet-pipe, as set forth.

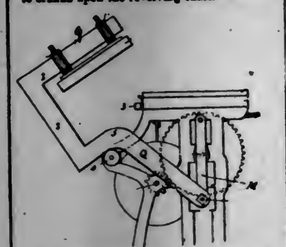
2. The jet-casing, as described, divided lengthwise of its orifice, and with bolts bolted or fastened together, as shown in Figs. 1 to 7.

162,825. EARTH-AUGERS. Wm. W. Jils, St. Louis, Mo. [Filed Apr. 20, 1875.]

Brief.—The bottom of the auger is provided with a lip and projections, over which the earth slides when boring. A hole behind the projection in the bottom allows the water to escape and lubricate the bottom. The bucket is provided with lugged hinges, which hold the door closed, but allow it to be opened when the same is slightly raised.

162,826.

1. The auger A, bottom F, lip H, and projection I, combined and operating substantially as described.



2. The auger A, bottom F, and perforation J, combined substantially as and for the purpose set forth.

3. The combination of the auger A, bottom F, lip H, projection I, and perforation J, substantially as described.

4. The combination of the auger A and door E, provided with the hinges K K', constructed as described, with the legs k k', substantially as and for the purpose set forth.

162,826. MEAL-MOLDERS IN THE MANUFACTURE OF LINSEED-OIL. Agur Judson, Newark, N. J. [Filed Feb. 13, 1875.]

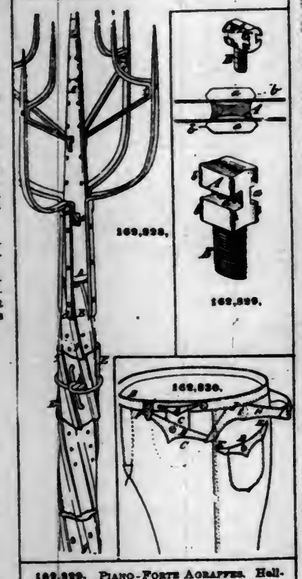
Brief.—The platen is secured to two swinging brackets, pivoted to a vertically-reciprocating block sliding within guides. The bracket and block are connected by connecting-rods to cranks upon the revolving shaft.

In combination, the platen-supporting levers Q, guide-rolls 4, slides O, connecting-rods M, and cranks L, and their shaft, substantially as and for the purpose described.

162,827. BOXES FOR PACKING AND SHOWING GOODS. Francis S. Kinney, New York, N. Y. [Filed Apr. 3, 1875.]

Brief.—The box is provided with a lid at one end, which can turn down under it to support it, and inside of the box is a series of steps, upon which the cigarette bundles are placed. The steps gradually descend from front to rear.

The rhomboidal-shaped box A, made with the upper part of its lower end cut away, and provided with a terraced or step false bottom, B, and hinged flaps or false ends C D, substantially as herein shown and described.



162,828. LIGHTNING-RODS. John A. Klockner, Canton, Ohio, assignor to himself and Henry F. Shelby, same place. [Filed Jan. 26, 1874.]

1. In combination with a hollow, ribbed, or corrugated main rod, the hollow conical main point A, when both the rod and point are pierced to admit the passage of the fluid into the interior of the point and rod, as and for the purpose described.

2. In combination with the hollow and pierced point and rod, the brace-points, with branched tangs, so as to conduct the fluid both onto and into the hollow point or rod, or both, substantially as described.

3. The tongued and grooved joint and wired splice *j k*, with or without the sleeve E, as and for the purpose described.

4. In combination with the hollow, ribbed, corrugated, and pierced main rod B, the coupling-piece F, for the purpose of joining said rod B to a solid rod of any kind, as described and represented.

162,829.

162,830.

162,829. PIANO-FORTE AGRAFFES. Hallmuth Kranich and Jacques Bach, New York, N. Y. [Filed Jan. 26, 1875.]

Brief.—The side grooves have a hollowed-out bottom, (as if cut out with a small circular saw,) so that the string may have but two bearing-points at the ends of the grooves.

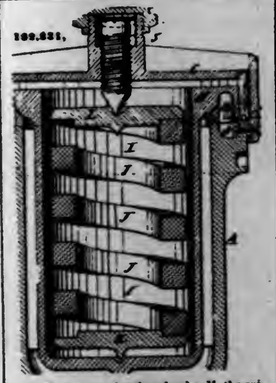
1. A reversible piano-forte agraffe, A B, provided upon one or more sides with one or more right-angled grooves, *a*, and with ribs or teats *b* at the terminations of the said grooves, substantially as described, and for the purpose herein set forth.

2. A piano-forte agraffe, A B, provided upon one or more sides with one or more grooves, *a*, having concave backs, substantially as herein set forth.

3. An agraffe, A B, provided upon one or more sides with one or more transverse grooves, *a*, having concave backs, and having at the terminations of said grooves ribs *b*, or other projections, substantially as and for the purpose herein set forth.

162,830. OVERALLS. Saml. R. Krouse, San Francisco, Cal. [Filed Mar. 8, 1875.]

1. The stay D, stitched across the pocket-top to resemble a flap, and having its ends extended over and beyond the pocket-corners, to form the re-enforces E E, as and for the purpose herein described.



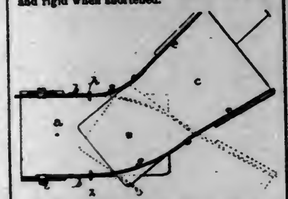
2. In combination with the waistband B, the cosponsed re-enforce or stay F, when constructed and arranged substantially as and for the purpose described.

3. The back-strap H, constructed as described, in combination with the waistband B, hip-seam K, and pocket-corner, substantially as herein set forth.

162,831. LOCK-UP SAFETY-VALVES. Ernestus B. Kunkle, Fort Wayne, Ind., assignor to himself and E. Bostick, same place. [Filed Nov. 14, 1874.]

Brief.—A cup-valve incloses a spiral spring between two disks, said disks being pivoted at their center, so that the spring is made to have an even bearing, and hold the valve squarely upon its seat. A seat is provided in the cap, to prevent the valve from being tampered with.

162,831.

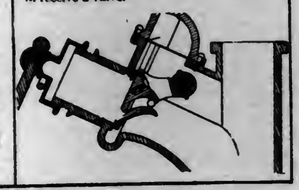


1. The cup or chambered valve H, the spiral spring J, and disks K L, respectively provided with a point and recess, and arranged within the valve, the pointed pressure-adjusting screw M, and the steam-pipe or casing A, having cap C, all combined as shown and described.

2. In a safety-valve, the combination of the steam-pipe cap C, having a socket, S, and screw-cap T with the sealed pressure-screw M, to permit the latter to be turned by a wrench, substantially as herein described.

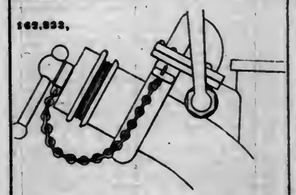
162,832. EXTENSIBLE COAL-CHUTES. John M. Lafferty, Mansfield Valley, Pa. [Filed Mar. 23, 1875.]

Brief.—A chute composed of an upper and lower part, connected by a central pivot, so that it can be changed to either side, and provided with flexible side walls, moving in guides to lengthen and shorten it, so that the chute can be made flexible when extended, and rigid when shortened.



1. The upper part *c* and short vertical sides *b*, in combination with the movable part *c* and the rigid vertical sides *a*, substantially as and for the purpose specified.

2. The two parts *c c* and flexible walls *g*, in combination with the fixed guides *h* and the sides *b b* and *c c*, all as and for the purpose herein described.



3. A coal-chute composed of the two parts *c c*, whereby the chute can be lengthened out and made flexible, or be shortened and made rigid, substantially as shown.

162,833. PIPES. Henry S. Lansdell and J. S. Long, Brooklyn, N. Y. [Filed Apr. 7, 1875.]

Brief.—A main and branch pipe cast in a single piece. The branch pipe is so cast as to have a valve-seat, and is otherwise adapted to receive a valve.

162,833.

The combination of a main and a branch pipe, when both are cast in a single piece, and the branch pipe so cast is provided with a valve-seat, and otherwise adapted to receive the valve, substantially as and for the purpose set forth.

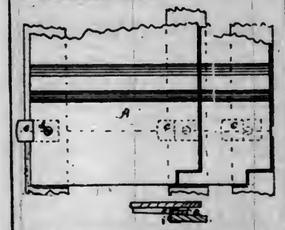
162,834. VENTILATORS FOR COOKING-STOVES. Alfred Leigh, Flemington, N. J. [Filed Mar. 3, 1875.]

Brief.—The cams raise the flaps, and the weight retains them in position when raised.

1. The crank-rod *j*, with cams *l m*, in combination with flaps *d*, *e*, and *f*, as and for the purpose described and set forth.

2. In combination with flaps *d*, *e*, and *f*, the chain *n*, provided with weight *o*, arranged substantially in manner and for the purpose set forth.

3. The hood or inclosure, provided with folding flaps *d*, *e*, and *f*, crank-rod *j*, having cams *l m*, funnel-shaped or contracted top *c*, exit-pipe *g*, having check-damper *e*, all arranged and combined as described and set forth.



162,835. BARBED FENCE-WIRE. Martin M. Mack, Belvidere, Ill. [Filed Mar. 27, 1875.]

As an improvement in barbed fence-wire, the single wire *b*, provided at intervals with spiral twists, into which are spirally-intertwisted the barbs *a*, having their ends turned outward at right angles to the fence, substantially as specified.

162,836. ROOFING-TILES. Gaffy Manvel, Rochester, N. Y. [Filed Oct. 20, 1874.]

Brief.—The roofing-tiles are provided with a wedge-shaped depression, and at their lower ends with a mortise, into which the end of a clip fastened to the roofing-bars fits, and holds the tile at the lower end.

1. The roofing-tile, provided with the wedge-shaped depression C, substantially as and for the purposes shown and described.

2. The roofing-tile, formed substantially as shown and described, and provided with the mortise *a*, for the purpose set forth.

3. In combination with the roofing-tile A, the locking-clip *c*, for the purpose set forth.

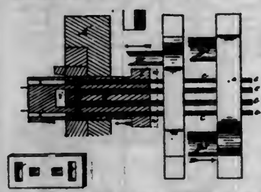
162,837. MANUFACTURE OF HEXAGONAL NUTS. A. Marland, Pittsburg, Pa. [Filed Mar. 11, 1875.]

In the manufacture of polygonal nuts from cylindrical blanks, the combination of the following steps: first, severing the blanks transversely, without materially distorting their cylindrical form, from cylindrical rods or bars of a diameter equal or about equal to that of the inscribed circle of a cross-section of the nut to be made; second, inclosing the same in a close die-box of polygonal form in cross-section; third, expanding the same by end compression so as to fill the polygonal corners; and, fourth, punching the eye in the axial line of the blank, substantially as set forth.

162,837.

162,838.

162,838. MACHINES FOR MAKING BOX-NUTS. A. Marland and William J. Lewis, Pittsburg, Pa. [Filed Apr. 2, 1875.]



Brief.—An ordinary nut-making machine, adapted, by a particular die and a series of three punches, to form, simultaneously, three cylindrical and countersunk holes in the blank nut, the central hole being of greater diameter than the others, and the countersink being formed by a conical shoulder at the base of the punch.

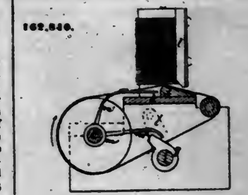
1. In a machine for making box-nuts, the combination of the die-box, the front and rear dies *b c*, the outer punches *c c*, for punching the screw-holes, the intermediate larger punch *d*, for punching the box-rod hole, and the stripper *m'*, substantially as set forth.

2. In combination with the die *b* and die-box, the punches *c*, having each a punching or perforating point for making the screw-hole, and at the base thereof a conical flare or enlargement, *d'*, for swaging a countersink around the screw-hole at its outer end, substantially as described.

162,839. MACHINES FOR MAKING PLOW-CAPS. A. Marland and William J. Lewis, Pittsburg, Pa. [Filed Apr. 2, 1875.]

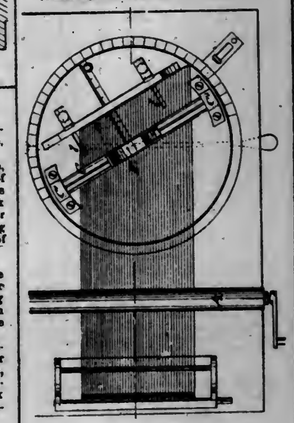
Brief.—An ordinary nut-making machine, adapted, by a particular die and a series of four rectangular punches, to simultaneously form, by punching, four rectangular holes in a plow-cap blank previously cut from a bar in the way common to nut-machines.

In a machine for making plow-caps, the combination of the die-box, the front and rear dies *b c*, the rectangular side punches *c c*, rectangular middle punches *c'*, and stripper *m'*, constructed, arranged, and operated substantially as set forth



---

162,840. PAPER-FEEDING APPARATUS. C. A. Maxfield, New York, N. Y. [Filed Sept. 22, 1874.]



Brief.—The bed-plate has a ridge, over which pass the feeding friction-bands under the pile of blanks. Oscillating arms in rear of the ridge lift up the pile as the lower blank passes beyond them.

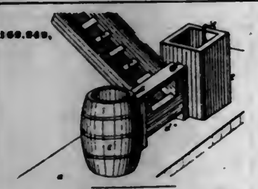
The combination of the friction-bands *f*, *f'*, and *f''*, lifting-arms *m' m'*, ridge *x*, and adjustable guides *V V*, substantially as hereinbefore set forth.

162,840.

162,841. APPARATUS FOR CUTTING GOODS BIAS. Salomon Mayer, New York, N. Y. [Filed Apr. 17, 1875.]

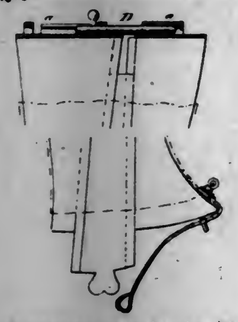
1. An apparatus for cutting goods bias, composed of a supporting-table, with centrally-slotted revolving disk-plate, provided with a slotted knife-guiding and treadle-acted clamp-piece, and parallel adjustable gage-piece, all arranged and operated substantially as and for the purpose set forth.

2. The slotted and spring-acted clamp-piece, having bottom slot in line with central guide-slot of disk and longitudinal side guide-slots, in combination with pivoted and spring-cushioned cutting-knife, guided therein substantially as specified.



3. In an apparatus for cutting goods bias, the combination of the revolving disk-plate, having grooved or recessed circumferential bottom flange, with the sliding lock-bolt of the table, for setting disk to any cutting angle, substantially as set forth.

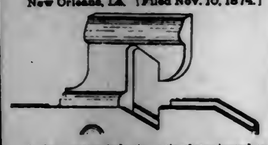
162,842. DEVICES TO PROTECT WORKMEN FROM THE WATER WHILE WASHING SHEEP. Charles H. McCall and James H. McCall, Morristown, Ohio. [Filed Feb. 11, 1875.]



Brief.—Consisting of a platform, to which are attached suitable inclosures for the workmen to stand in, and a chute, which enables the washed sheep to gain the bank washed, not necessitating the wetting of the workmen, the whole firmly anchored in the water.

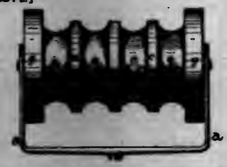
The device herein described, composed of the platform *a*, vessels or inclosures *c c*, chute *b*, and frame *d*, constructed and arranged substantially as herein set forth, and for the purpose described.

162,842.



162,843. PANTALOONS-BLOCKS. Jas. McCurdy, Lock Haven, Pa. [Filed Mar. 29, 1875.]

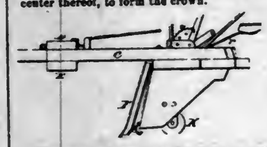
The combination, with the front piece of the shaping-block having fastening-pin at lower end, of a leather strap and clamping device attached thereto and to the lower front end of leg for retaining the same in position on block, substantially as specified.



162,844. BALE-TIES. Oscar R. McClean, New Orleans, La. [Filed Nov. 10, 1874.]

1. In a cotton bale tie, a tie-plate riveted to and laterally projecting from a folded end of the bale-band, in combination with said bale-band, the end thereof being notched and folded, as shown, so as to provide a bearing for the looped free end of the bale-band, to enable it to be held in position independently of the expansive force of the bale, substantially as specified.

2. A bend-seat, one-half of which is on the folded end of the bale-band, and the other half on the tie-plate, the arrangement being such as to cause the looped free end of the band, when placed in position, to bear equally on the tie-plate and bale-band, as herein set forth.



162,845. TRAWL-ROLLERS. Allan L. McDonald, Gloucester, Mass. [Filed Nov. 23, 1874.]

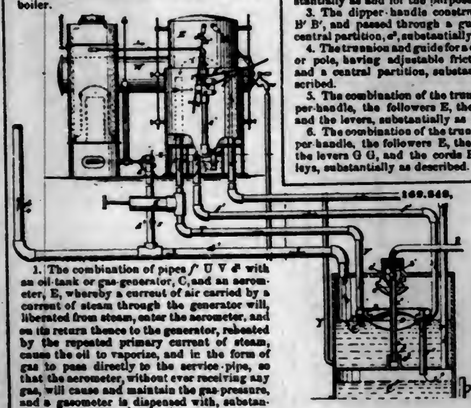
The combination of the frame *a*, having the shank *i*, for attaching it to the side of the boat, in combination with the grooved roller *c c*, provided with the flanges *g* on its ends, to prevent the ropes from slipping off, substantially as shown and described.

162,846. ROAD-SCRAPERS. J. L. McKeen, Acworth, N. H. [Filed Jan. 8, 1875.]

Brief.—An improved arrangement of parts to enable the operator to adjust the machine without stopping, to excavate from either side of the road at pleasure, and discharge in the center thereof, to form the crown.

The combination, with the racks *q q*, pinions *r r*, stands *l l*, pins S S, and levers J J, of the trucks K K, scraper F, lever G, and connection-rod *h*, draft-pole B, latch *j*, guide *k*, and lever *c*, substantially as and for the purpose hereinbefore set forth.

162,847. POTS AND KETTLES. Donald M. McLean, Gloucester, Mass. [Filed Mar. 26, 1875.]



1. In combination, with a pot or kettle, *a*, the two bails *d d*, said bails crossing each other between the points of attachment to the pot or kettle, substantially as and for the purpose set forth.

2. The pot or kettle *a*, in combination with the bails *d d* crossing each other, as described, and the ears *e e* with shoulders to prevent the bails from falling, as and for the purpose set forth.

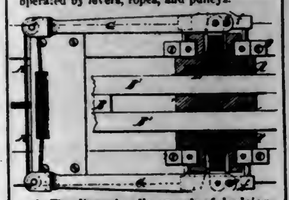
162,848. GAS APPARATUS FOR CARBURETING AIR. Frank W. Ofeldt, Newark, N. J., assignor to himself and George W. Hall, same place. [Filed Oct. 10, 1874.]

Brief.—Air is forced to the carburetting-tank by a steam-jet. The mingled air and steam pass through the lower division of a double annular chamber, which rests on the gasoline, from which they pass to the condenser. The air, freed from moisture, passes to the aerometer, and from it to the upper division of the annular chamber, and escapes through apertures into the gasoline. The rising and falling aerometer regulates the steam injector-valve. A pump is provided for forcing air to the carburetter, for making the first gas to start the flame under the steam-boiler.

1. The combination of pipes *f' U V d'* with an oil-tank or gas-generator, C, and an aerometer, E, whereby a current of air carried by a current of steam through the generator will, liberated from steam, enter the aerometer, and on its return thence to the generator, roasted by the repeated primary current of steam, cause the oil to vaporize, and in the form of gas to pass directly to the service-pipe, so that the aerometer, without ever receiving any gas, will cause and maintain the gas-pressure, and a gasometer is dispensed with, substantially as specified.

2. The combination of the pipes *f' f''*, passing through the oil in the generator into the condensing-tank C', with the pipe U, for the purposes of heating the oil without getting it mixed with water from condensation, separating the steam and air by condensation, and collecting the former, condensed, in the tank C', and returning the liberated air by the pipe U to the aerometer E, substantially as specified.

3. The annular vessel composed of compartments R and S, one of which is provided with tubes *r'*, passing through the other, for the purpose of heating a current of air passing through the former by a current of steam passing through the latter, in order to promote and maintain the formation of gas in a generator, C, substantially as specified.



4. The cup *c'*, in combination with the hollow stem or pipe *c''*, provided with holes *c²*, as shown, for the purpose of bringing the supply to the bottom of the generator, substantially as specified.

5. The pipe *u'*, in combination with the water-tank W of the boiler T, and the condensing-tank C', for returning the condensed steam to the boiler, substantially as specified.

6. The air-pump B, in combination with the pipes *V d' d²*, generator C, boiler T, and aerometer E, for starting the machine, substantially as specified.

162,849. DREDGING-MACHINES. Ralph R. Osgood, Troy, N. Y. [Filed Mar. 9, 1875.]

Brief.—The dipper-handle of a dredging-machine is arranged to pass through a support or guide oscillating on trunnions, and is provided with clamps capable of extending transversely into the passage through which the pole moves, for the purpose of controlling the pole or dipper-handle. The clamps are operated by levers, ropes, and pulleys.

1. The dipper-handle or pole of dredging-machines, passed through a support or guide which has clamps capable of being extended transversely into the passage through which the pole moves, for the purpose of controlling the handle or pole, substantially as and for the purpose set forth.

2. The oscillating trunnion, forming a guide and support and clamp, the clamps thereof capable of being extended transversely into the passage, through which the dipper-handle or pole of dredging-machines is passed, substantially as and for the purpose described.

3. The dipper-handle constructed of bars B' B', and passed through a guide having a central partition, *e'*, substantially as described.

4. The trunnion and guide for a dipper-handle or pole, having adjustable friction-followers and a central partition, substantially as described.

5. The combination of the trunnion, the dipper-handle, the followers E, the plungers F, and the levers, substantially as described.

6. The combination of the trunnion, the dipper-handle, the followers E, the plungers F, the levers G G, and the cords H H, and pulleys, substantially as described.

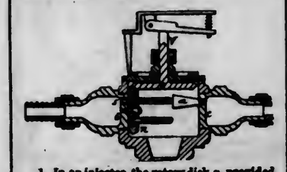
162,850.

162,850. FARM-FENCES. D. R. Ostrander, Fountain Green, Ill. [Filed Dec. 23, 1874.]

1. The portable fence-posts having the base H, the uprights F F', braces I I', fitted to two sides of the uprights and the bolt I'' lengthwise of panel, holding all firmly together in one post, substantially as and for the purpose set forth.

2. In combination with the panels A, the auxiliary support formed of the four stakes M M' N N' driven into the ground crosswise securely, and all four bolted together into one frame to support and hold the panels, substantially as set forth.

162,851. GAS-FURNACES. Jos. D. Patton, Trewerton, Pa. [Filed Mar. 13, 1875.]



Brief.—Gas passes from retorts through scrubbers, and through condensers within the water of the gasometer, and on through another scrubber toward the burners. But one scrubber, with but one condenser, may be used.

One or more scrubbers located outside of a gasometer-tank, in connection with condensing-chambers beneath the surface of the water within the tank, for removing condensable matter and cleansing the gas, substantially as shown and described.

162,852. INJECTORS. Wm. P. Patton, Harrisburg, Pa., assignor to himself and S. S. Child, same place. [Filed Apr. 3, 1875.]

Brief.—A rotating disk provided with nozzles of different bores is pivoted so that any one of them may register with the steam-inlet and combining tube; said disk being controlled by a beveled gear and spindle, furnished with a spring-finger, to indicate the position of the disk. An alarm-valve is attached to the water-chamber, to indicate the operation of the injector.

1. In an injector, the rotary disk *a*, provided with two or more nozzles, substantially as and for the purpose set forth.

2. In an injector, the rotary disk *a* provided with two or more steam-nozzles, constructed as described, in combination with the steam-passage S and receiving-nozzle *s*, substantially as and for the purpose described.

3. The spring-handle *r h*, provided with the leg *b* and shaft V, in combination with the wheel *e* and disk *a* provided with different sized nozzles, substantially as set forth.

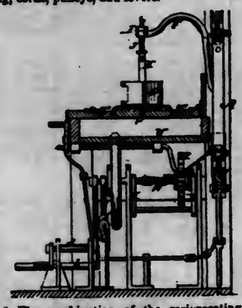
4. The notched plate 10 and leg *b* in combination with the spring-handle *r h*, shaft V, miter-wheel *e*, and disk *a* provided with the nozzles, substantially as and for the purpose set forth.

5. In combination with an injector the alarm-cock E, consisting of the valve *s*, screw G, and outlet-pipe *f*, constructed to operate substantially as and for the purpose set forth.

162,853. BOBBIN-WINDERS FOR SEWING-MACHINES. Franklin Peck, West Cheshire, Conn., assignor to Silas E. Jerolds and E. R. Lawton, same place. [Filed Dec. 26, 1874.]

Brief.—The hub of the main shaft is eccentric, and is fitted into an adjustable sleeve, also eccentric. The grooved drum, that moves the thread-carrier, has on its end a friction-disk, that is engaged and moved forward by a spring-latch carried by the rock-arm, that fits over the eccentric hub and sleeve, and operated thereby. The drum is locked after each forward movement by a spring-brake engaging the friction-disk; and the amount of movement imparted to the rocking arm is regulated by changing the relative axial positions of the hub and sleeve.

1. In combination with the main shaft of a bobbin-winder, an adjustable eccentric, for regulating the speed of the thread-carrier, substantially as set forth.



2. In combination with the main shaft of a bobbin-winder, the compound adjustable eccentric, hereinbefore described, consisting of the eccentric turned upon the end *g* of the main shaft A, and the eccentric formed upon the sleeve *s* of the adjustable disk I.

3. In combination with the adjustable eccentric, the rock-sleeve D, with its forked arm O and friction-latch *k*, spring *l*, and the friction-wheel E, constructed and arranged to operate substantially as set forth.

4. The combination of an eccentric on the main shaft, a friction-wheel on the shaft that drives the thread-carrier, and a friction latch or lever for communicating motion from the main shaft to such friction-wheel.

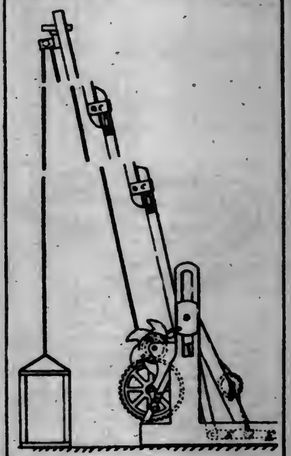
162,854. IRONING-MACHINES. G. F. Perrenot, Rockport, Ark. [Filed Feb. 5, 1875.]

Brief.—A reciprocating frame has a vertically-adjustable rail, to which are attached curved arms, that support a smoothing-iron, adjusted by rods and springs, above an ironing-board; the whole being operated by gearing, cords, pulleys, and levers.

1. The combination of the reciprocating frame A, vertically-adjustable rail-frame C, posts E, and the ironing-table, substantially as specified.

2. The overhanging arms F, vertically-adjustable rods H, springs J, irons G, and the ironing-table, substantially as specified.

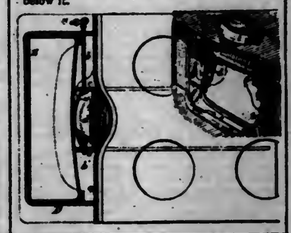
3. The toggle-bars M, bar N, rod P, and levers O Q, combined and arranged with the vertically-adjustable rail-frame, and the ironing-table, substantially as specified.



162,855. EXTENSION-TABLES. N. Petty, Rockport, Mo. [Filed Dec. 26, 1874.]

In an extension-table, the combination of the independent self-supporting end tables A, leaves B, and independent central table C, all connected together by suitable fastenings, to form a single extension-table, which can be disconnected to form three separate self-supporting tables, substantially as described.

162,856. FIREMEN'S EXTENSION-LADDERS. Peter Peterson, New Milford, Conn. [Filed Apr. 7, 1874.]



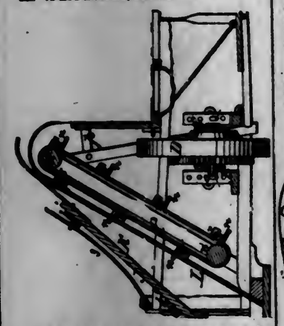
Brief.—The toggle-joint braces, slotted standards, and weighted slides enable the sliding sections of the extensible ladder to vary their angle of inclination, so as to be kept in suitable relation with the elevating mechanism.

The combination of the toggle-braces, slotted standards, and weighted slides with the telescopic ladders, operating as set forth, the whole arranged as and for the purpose specified.

162,857. REMOVOM COOKING-STOVES. G. E. Phillips, Troy, N. Y. [Filed Feb. 13, 1875.]

Brief.—The products of combustion may, by means of a single damper, be sent down the diving-flues, through the recesses in the flue-strips, into the central ascending and exit flue, or down to the return-flues under the oven, thence to the exit. In either case they impinge nearly the whole front of the reservoir. There is communication between the diving-flues through the space behind the damper, where its upper edge rests against the reservoir, and also through the channel below it.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON



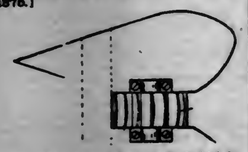
1. The combination of the body A and casing D of a stove, the partitions *e e'*, having recesses *i*, the valve h, covering said recesses, and water-reservoir E, smaller than the interior of the casing, whereby a gas-circulating space is formed completely round and beneath the reservoir, substantially as and for the purpose set forth.

2. The combination, in a reservoir-stove, of a reservoir, E, partitions separating the diving and rising flues, and having recesses *i*, through which said flues may communicate, and a valve or damper arranged in one of the flues, and closing the same when adjusted to one position, and covering the recesses *i* when adjusted to another position, all substantially as set forth.

3. The combination of the reservoir E, diving and rising flues, communicating passages *i i*, and valve h, arranged to bear with its upper edge against the reservoir and form a circulating passage, *e*, as set forth.

4. The combination of the reservoir-flues *b d*, valve h, and channel *o*, forming a communication in the stove, between the outer flues and around the central flue, as and for the purpose set forth.

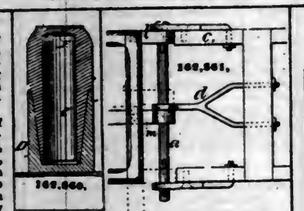
162,656. HARVESTERS. Henry Porter, Polo, Ill. [Filed Dec. 26, 1874.]



1. The grain rest or guard K, constructed as described, and operated by means of a long crank, *l*, and a spring, *s*, in the manner and for the purposes specified.

2. In combination with the reciprocating rising and falling rack K, actuated as described, the fixed strips L and elevating-fingers *n*, operated as specified.

3. The pitman-rod J', having the grooved connecting-pin *p'*, in combination with the removable lever J' and divided block *p*, substantially as described.

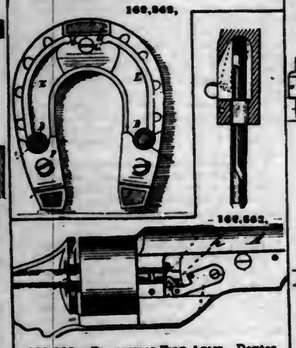


162,659. CONSTRUCTION OF VESSELS. T. Willis Pratt, Boston, Mass. [Filed Mar. 5, 1875.]

A steamboat or vessel, the hull of which is constructed in such a manner that the horizontal water-lines form a sharp angle at the stem and continue in regular divergence to a point nearly opposite the paddle-wheel center, whence they run into semi-ellipses, as shown in Fig. 1, substantially as and for the purpose set forth.

162,660. RUDDER-CASES. S. W. Sheldon, New York, N. Y. [Filed Dec. 26, 1874.]

As a new article of manufacture, the blowing-case made in two parts, A and D, the upper part A being externally, and the lower part D being internally, tapered, to fit one within the other, the upper part provided with cavity C for holding the blowing and the discharge-opening F, with covering-plate G, all as specified.



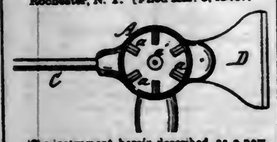
162,661. SLEIGH-SHAFT ATTACHMENTS. D. Smith, Johnstown, N. Y. [Filed Feb. 27, 1875.]

The cross bar *a*, in combination with the central strap *d*, shafts *f*, and straps *l m*, one of which is attached near the center of the cross-piece of the shafts, all substantially as and for the purposes set forth.

162,662. HORSESHOES. Thomas Skelton, Milwaukee, Wis. [Filed Apr. 9, 1874.]

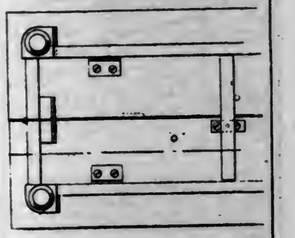
Brief.—The wearing surface of the shoe is provided with a longitudinal rib having enlargements at the ends, around and between which the removable heel and toe calks are fitted.

The shoe A, provided with the rib E and enlargements D, in combination with the removable calks, constructed and applied as described.



162,663. REVOLVING FIRE-ARMS. Dexter Smith and Jos. C. Marshall, Springfield, Mass. [Filed Mar. 26, 1875.]

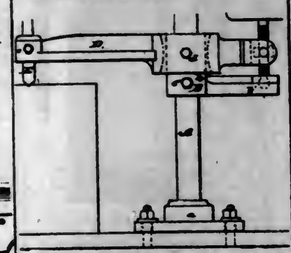
1. In a revolving fire-arm, an extractor-rod located in front of the chambered cylinder, and operating to eject the empty shells from the rear of the chambers, and to rotate the cylinder to bring the chambers into position for that purpose.



2. A revolving fire-arm in which the chambered cylinder may be rotated by the operation of the extractor-rod located in front of the cylinder.

162,664. COMBINED ICE PICKS, CHISELS, AND HAMMERS. Austin V. M. Sprague, Rochester, N. Y. [Filed Mar. 6, 1875.]

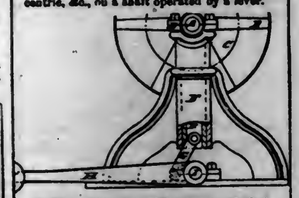
The instrument herein described, as a new article of manufacture, consisting of the head A, attached to the handle B, having the pick C and cutter D cast therein, and constructed with the teeth *a a'* and concavity *b* on the two opposite faces, as shown and described, and for the purposes specified.



162,665. FOLDING TABLES. Rudolph Sprigade and John Schnoering, Brooklyn, E. D. N. Y. [Filed Mar. 29, 1875.]

A folding table composed of longitudinally-divided top-sections with hinged centrally-divided leg-sections, hinged side-boards, and pivoted locking center-piece, arranged for opening and folding, substantially as specified.

162,666. CLAMPS. Jno. J. Squire, St. Louis, Mo., assignor of one-half his right to J. W. Branch, same place. [Filed Feb. 17, 1875.]

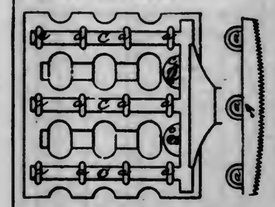


Brief.—The clamp has a universal adjustment by means of a swinging arm pivoted to a shoe provided with a sleeve, and which is vertically and horizontally adjustable upon a round post having a rotary movement in a suitable socket at its base. The material is clamped by a screw working in a nut journaled in the inner and forked end of the swinging arm, which forces a dog upon the outer end of said arm into the material.

The herein-described clamp, consisting of the post A, base *a*, shoe B, arm D, dog E, nut G, and screw H, combined and operating substantially as described and shown.

162,667. COUNTER-SHAFT HANGERS. John J. Squire, St. Louis, Mo., assignor of one-half his right to J. W. Branch. [Filed Feb 25, 1875.]

Brief.—Both bearings of the band pulley shaft are on vertical slides in standards, which, for the purpose of slackening the belt to throw out of gear, are raised by a link or eccentric, &c., on a shaft operated by a lever.



1. The combination of the counter-shaft A, pulley B, bearings D D', slides E E', supports F F', connections G G, lever H, shaft I, and counterpoise J, substantially as described and shown.

2. The combination of the counter-shaft A, pulley B, bearings D D', slides E E', supports F F', connections G G, and shaft I, substantially as described and shown.

162,668. CURRY-COMBS. Thos. Steere, Jr., Ottawa, Canada. [Filed Sept. 12, 1874.]

Brief.—The combs are detachable from the back plate, so that when they become worn out new ones can be inserted. Prongs attached to, and extending from, the handle pass through loops on the combs, for holding the latter to the back plate.

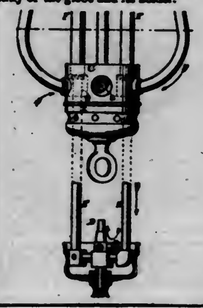
1. The combination, with the detachable combs A and back plate B, of the locking-prongs C, substantially as specified.

2. The combination, with the detachable combs A, back plate B, and pronged handle D, of the lugs *a* and screws *c*, substantially as specified.

162,669. BOSOM-PADS. John C. Tallman, New York, N. Y. [Filed Mar. 6, 1875.]

As a new article of manufacture, a bosom-pad made entirely of thin sheet-cork, molded or pressed into shape, as herein described, for the purpose set forth.

162,670. BOG-TESTERS. J. W. Van Arnam, Watertown, N. Y., assignor to himself and C. T. Greene, Newtown, Conn. [Filed Oct. 3, 1874.]

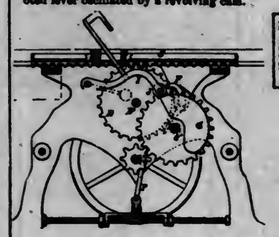


Brief.—The point of junction of the metallic chimney and tube, when soldered together, may be protected from the effects of heat by being surrounded by water placed in a receptacle attached to the chimney.

1. A lamp-chimney provided with branch tube B, enlarging toward the outer and upper end, as and for the purpose described.

2. The combination, with tubes A B, soldered together at their junction, of the water-receptacle C, covering said joint with liquid, as and for the purpose specified.

162,671. SLIDES FOR GAS-FIXTURES. Saml. B. H. Vance, New York, N. Y. [Filed Apr. 3, 1875.]

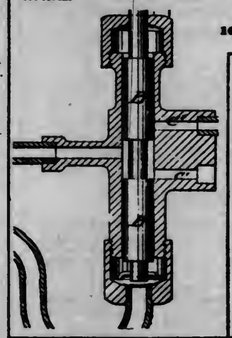


Brief.—The burner adjustable independently of the globe and its holder.

The combination of the sliding tubes E and the stationary tubes F, one or both pairs, with the burner D, the globe-holder C, and the arms B of a gas-pendant, substantially as herein shown and described.

162,672. ADDRESSING-MACHINES. Charles W. Van Vleet, Waterloo, N. Y. [Filed Feb. 13, 1875.]

Brief.—Toothed galley moved over grooved table by a cog-wheel beneath, which is intermittingly revolved by a wiper-tooth on a revolving shaft. Platen-arm attached to a pivoted lever oscillated by a revolving cam.



1. In an addressing-machine, the combination, with the toothed galley, sliding on table B, of spur-gear D, cam-wheel G, pivoted arm I, and platen-carrying arm M, substantially as shown and described, for the purpose specified.

2. In an addressing-machine, the combination of tooth *e* on revolving shaft E, the lever-pawl F, spur-wheel D, toothed galley C, and wheel G, having cam H, the pivoted bar I, and its rigid arm M, working through the table B, and carrying platen S, all as shown and described.

162,673. STEAM-ENGINE GOVERNORS. T. I. Walsh, Brownsville, Pa. [Filed Jan. 18, 1875.]

Brief.—When steam gets above required pressure, the double piston is raised, stopping the passage to the engine, and allowing steam to escape through a second passage.

The combination, in a steam-pressure detector and regulator, of a cylindrical communicating casing with steam-exit channels, and a weighted double piston sliding therein, for establishing or interrupting the steam-connection of boiler and engine, according as the pressure is below or above the fixed limit of pressure, substantially as and for the purpose set forth.

162,674. AUGERS. William Wells, Cleveland, Ohio, assignor of one-half his right to G. B. Johnson, same place. [Filed Feb. 24, 1875.]

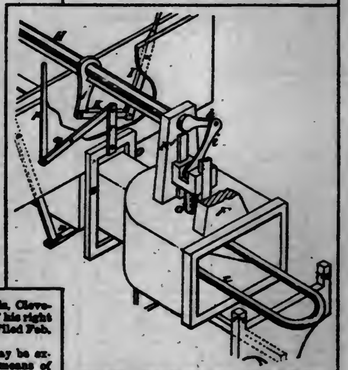
Brief.—The shanks of augers may be extended to any desired length by means of auxiliary shanks provided with tangs upon each of their ends, and a double coupling or socket provided with spring-latches, which engage with suitable notches in the tangs.

As a means of extending the length of an auger-shank the combination with the brace and the bit of an intermediate double socket or coupling and the extra shank G, provided with a tang at each of its ends, substantially as and for the purpose described.

162,675. ROTARY ENGINES. H. G. Wood, Sharon, Pa. [Filed Mar. 13, 1875.]

Brief.—A double eccentric flanged piston revolves in a cylinder having open ends.

A rotary steam-engine constructed as shown and described—that is, having movable abutments J J and two or more eccentric drums or wheels, E E, with side wheels or flanges and a central dividing wheel or flange, revolving in an open cylinder on a central shaft, as shown and described.

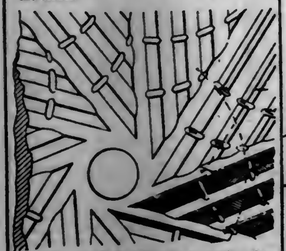


162,676. NEWSPAPER-FILES. F. B. Alderson, San Jose, Cal. [Filed Jan. 28, 1875.]

Brief.—The spring-follower or pressure-bar is held in an elevated position above the base or pin bar by stops pivoted in slots or recesses in the ends of the former.

In a temporary paper-file, the swinging stops H, in combination with the slotted holding-bar B and bar A, substantially as and for the purpose set forth.

162,677. CAR-COUPLINGS. Adolph V. Anderson, Virginia City, Nev., assignor of one-half his right to Manuel Axelson, same place. [Filed Feb. 10, 1875.]

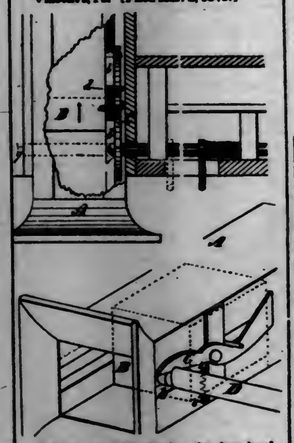


1. The coupling-pin c, provided between the standards F F, to be operated by the shaft H, with its crank-arm h and pitman i, in combination with the depending arm j, lever l, and connecting-rod k, substantially as and for the purposes described.

2. The devices for shifting the horizontal direction of the link, consisting of the bar M, having one end pivoted to the rear end of the draw-head, and carrying the plate L, with its cam m m in front of the bumper, in combination with the lever l' and the connecting-rod n, all to operate substantially as and for the purpose described.

3. In combination with the device for shifting the link c sidewise, the frame O and system of levers p q r, constructed and applied substantially as and for the purpose specified.

169,878. MILLSTONE-DRESS. Harvey T. Ashworth, Berger's Store, Va., assignor to himself and James T. Graves, same place. [Filed May 16, 1874.]

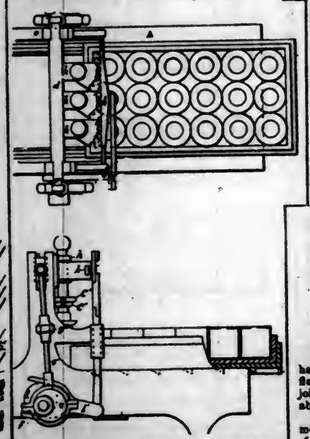


Brief.—Curved furrows cause a draft from the periphery in a backward direction, which materially assists in circulating air between the stones.

1. The ventilating-furrows traversing the lands from one leader to another, and curved as shown and described.

2. The inner parts F F of the lands, each having cracks inclined in an opposite direction from the next, as shown and described.

169,879. CAR-COUPLINGS. J. G. Reader, St. Vincent's, Pa. [Filed Mar. 2, 1875.]



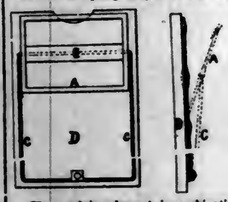
1. In a car-coupling having the draw-head A, secondary buffer B, and transverse coupling-bolt D, the centrally-pivoted trigger C at the side of the draw-head, to be operated from the buffer by means of the pin d, substantially as described and shown.

2. The combination of the laterally-pivoted trigger C, spring e, secondary buffer B, pin d, and transverse coupling-bolt D, having the groove f, substantially as described and shown.

169,880. SOLDERING-MACHINES. Wm. L. Bellis, Baltimore, Md. [Filed Oct. 9, 1874.]

Brief.—A series of annular soldering-tools adapted to be heated by gas, arranged in a cross-head in such manner as to be brought down on a series of cans supported on a carriage having an intermittent movement imparted to it, so as to bring the cans successively under the soldering-tools.

1. In a soldering-machine, the adjustably-held soldering-irons C, adapted to have the vertically-reciprocating and circumferential movements described, in combination with the sliding carriage B, to which an intermittent feed is applied, substantially as set forth.



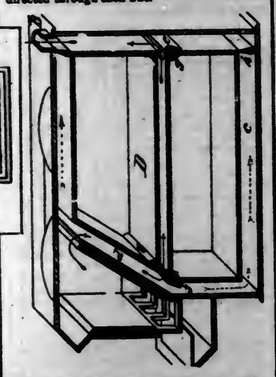
2. The cylindrical and flanged soldering-irons C within the adjustable bearings A, in combination with the springs e, substantially as described.

3. The soldering-irons C and toothed sectors i, in combination with the laterally-sliding rack k, as specified.

4. The vertically-movable cross-head d, connected by the eccentric wheels g and rods g' to the shaft f, in combination with the soldering-irons C, as shown.

169,881. BILL-FILES. D. H. Baker, Boston, Mass. [Filed Oct. 27, 1874.]

Brief.—A swiveled clamp held down by torsion of wire springs stapled to back piece.



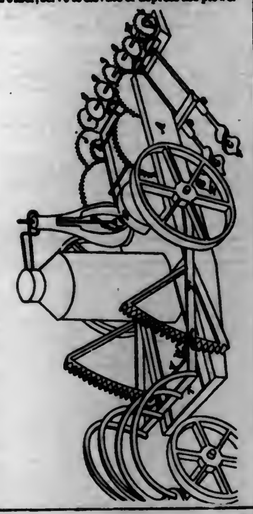
The revolving clamp A, in combination with springs C C and back piece D, or their equivalents, forming a bill-holder, substantially in the manner described, as and for the purposes set forth.

169,882. FIREMEN'S EXTENSION-LADDERS. Henry Bastian, Sr., Montoursville, Pa. [Filed Apr. 12, 1875.]

The toothed feet C C, connected by means of pivoted stirrups d d to the lower ends of the ladder A, as and for the purposes herein set forth.

169,883. COOKING-STOVES. E. H. Bates, Washington, D. C., assignor of one half his right to Norval B. Bates, same place. [Filed Mar. 10, 1875.]

Brief.—The draft may be direct and over the oven, or through the flue-shelf, or under the entire oven, or be divided and partially directed through each flue.



1. The combination, with the oven-wall, having the openings of the hollow sliding flue-shelf D, and the devices for closing the joints, of the shelf with the oven-wall, both above and below, substantially as described.

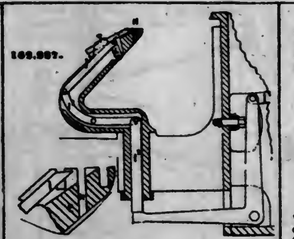
2. In a stove having flues a b c d, the removable hollow flue-shelf D and the valves e f h i, all combined and arranged substantially as and for the purposes set forth.

169,884. STEAM-PLOWS. D. Beesemore, Sacramento, Cal. [Filed Mar. 10, 1875.]

Brief.—The plows are of sugar form, placed upon rotating shafts projecting toward the line of draft, and operated by gear and bevel wheels. To the bearing-axle a skeleton-frame is pivoted, secured by a king-bolt to the axle of steering-wheels. A toothed segment upon one frame, and a crank-shaft and pinion upon the other, serve to elevate or depress the plows.

The balanced frame A, having the gear-wheels f h i, bevel-wheels g q, and spiral plows C, placed at an angle with the ground and projecting forward, in combination with the connecting-frame T, steering-wheels S, toothed segments U, shaft V, and pinion W, all arranged and operating substantially as shown and described.

169,885. PREPARED BRICKS FOR PAVING. R. A. Berryman, St. Louis, Mo., assignor to himself, S. Hutchins, and W. H. Barclay, same place. [Filed Mar. 24, 1875.]



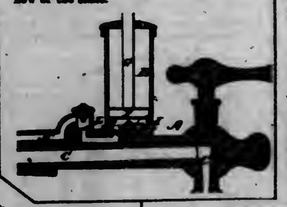
Brief.—Bricks for pavements are saturated in a solution of alum, borax, and copperas, and are then boiled in a mixture of exocthchone and coal-tar. When laid on a suitable foundation, the interstices are filled with a mixture of coal-tar and exocthchone.

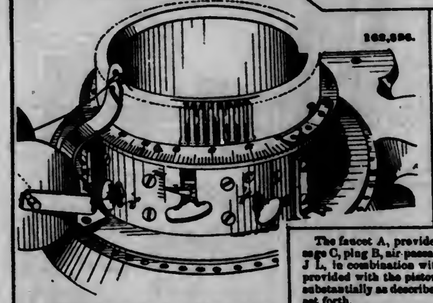
1. A brick hardened by immersion in a solution of alum, borax, and copperas, and afterward boiled in a mixture of exocthchone and coal-tar, substantially in the manner set forth, for paving and other purposes.

2. A pavement made of bricks prepared as described, with the spaces between the bricks filled with the mixture of coal-tar and exocthchone, as set forth.

169,886. KNITTING-MACHINES. D. Bickford, New York, N. Y. [Filed Mar. 6, 1874.]

Brief.—The cam-cylinder is provided with a handle, by which it may be operated without toothed gearing, and the yarn-spool is carried around coincidently with the cams and the thread-guide, so as to avoid slack yarn on reversing. The cam-cylinder, preferably, has gear-teeth, as usual, so that, if desirable, it may also be driven in the usual way. The needle-elevating side cams are pivoted below the needle-groove, and operated automatically by the direct action of the needle-butts, or by springs placed beneath them.





In a machine for pegging boots and shoes, the supporting-arm E, provided with the central opening H and the annular awl-receiving groove F, substantially as described

---

169,887. AIR-PUMP FANNERS. Thos. Bingham, Pittsburg, Pa. [Filed Sept. 4, 1874.]

Brief.—Air is forced into the cask during the process of drawing liquids, to increase the flow of the same.

1. The wing or switch cams H H', adapted to rise and fall at their outer ends, substantially as and for the purpose set forth, in combination with a stitch or draw-down cam and the needle-cylinder.

2. The wing-cams, actuated by springs, in combination with guides u u, which serve to guide the needles to the draw-down cam, substantially as shown and described.

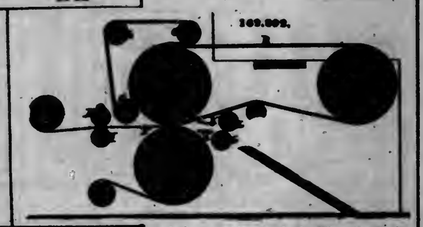
3. The wing-cams, adapted to be actuated by the butts of the needles, in combination with guides v v, needle-cylinder, and cam-plate.

4. A rotary knitting-machine resting on a smooth bed in its frame, provided with a driving-handle, as described, and with a shifting thread-guide and spool-carrier, which automatically, upon reversing the machine properly, change their position relatively to the needle-operating cams.

5. In combination with the rotary reversible cylinder of a family knitting-machine, a bobbin or spool frame or stand and a thread-guide, substantially as described, the combination being such that each frame or stand shall revolve coincidently with it and with the thread-guide, and upon reversing shall properly shift its position with the thread-guide.

169,888. PRESSURE-MACHINES. Jno. R. Bickford, Abington, and Benj. F. Sherbrenne, Boston, Mass. [Filed Apr. 5, 1875.]

Brief.—A dovetail groove is formed in each section of the slide, and receives a dovetail tenon that is attached to the opposite section; said tenon having one of its bearing faces formed by a yielding metal bar.



The combination of the slides A and A, provided each with a dovetail groove, a, half dovetail tenon A', pivoted bar B, and spring C, substantially as and for the purpose specified.

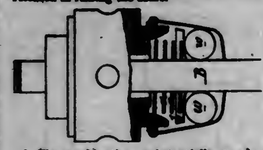
169,889. REFINING BASE-METAL BULLION. Fredk. H. Bousfield, San Francisco, Cal. [Filed Mar. 17, 1875.]

The process herein described for refining bullion—that is, by adding, while melted, lead to the amount of about two to five per cent., granulating the alloy, roasting the granules, and subsequently leaching with the sulphuric acid, and then brine, substantially as set forth.

169,890. GILDING-MACHINES. Wm. Braidwood, New York, N. Y. [Filed Nov. 28, 1874.]

Brief.—The gold-leaf is carried by a sheet to the pressure-rollers, where it is applied to the paper. After the gilded sheets of paper have passed through the pressure-rollers, they are separated from each other by passing between rollers which have a greater surface-speed than the pressure-rollers.

1. In a machine for leaf-gilding, the feed-apron D, in combination with the pressure-rollers C E and leaf-sheet F, substantially as described.



2. In a machine for leaf-gilding, the combination, with the apron D, rollers C E, and leaf-sheet F, of the feed-apron B and apron-roller C', substantially as described.

3. In combination with the pressure-rollers C E, the separating-rollers I, geared so as to have a greater surface speed than the pressure-rollers C E, substantially in the manner and for the purpose specified.

4. The guide-pieces K K, in combination with the pressure-rollers C E and separating-rollers I, substantially as described.

169,891. DROP-LIGHT CHANDELIERS. Geo. F. Blaisse, Philadelphia, Pa., assignor to Benj. Thackara, W. J. Beck, J. H. Southworth, Charles Thackara, and R. H. Beck, same place. [Filed Apr. 9, 1875.]

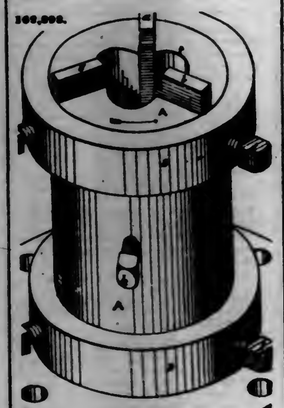
Brief.—The spheres are wedged between the cap and tube in lowering the latter, and are released in raising the same.

1. The combination, substantially as described, of the cup D and its spheres with the sliding drop-light tube B of a chandelier.

2. The combination of the cup, the spheres w, spring a, and plate b with the sliding tube B.

169,892. EXTENSION-TABLE SLIDES. Wm. J. Boda, Dayton, Ohio, assignor to himself and Alva E. Boda, same place. [Filed Oct. 12, 1874.]

The faucet A, provided with the liquid-passage C, ping B, air-passages I K N, and valves J L, in combination with the air-chamber E, provided with the piston F and piston-rod G, substantially as described, and for the purpose set forth.



169,893. MACHINES FOR TURNING AXLES. Chas. A. Brand, Wilmington, Del., assignor of one-half his right to J. A. Hooper, Jr., Baltimore, Md. [Filed Sept. 2, 1874.]

Brief.—A revolvible head furnished with cutters. Two of the cutters, looking from their rear, are set at an angle to the axis of the axle being cut, to give a shear-cut and prevent chattering; and to compensate for the concave cut which this adjustment would make the cutters are made slightly helical in form.

1. In a machine for turning axles, the hollow revolvible head A, with flange A', in combination with the cutters a, b, and c, arranged with reference to the axis of the head A, as described, substantially as set forth.

2. The head A, in combination with the collars B and set-screws f and h, substantially as and for the purpose set forth.

160,902.

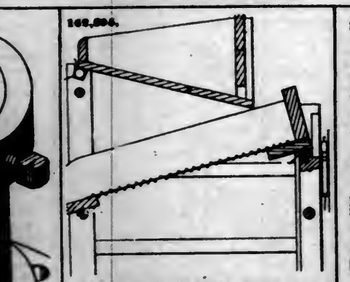
1. In a machine for pressing and molding glass and other materials, the combination of the former T and mold S with a lifting apparatus adapted to lift the mold, screw-spindle I, which forms the support of the mold, and with a divided nut, O, substantially as described.

2. In combination with the former T and mold S, a lifting apparatus constructed of the spindle I, crown-head R, slotted frame-piece D, cams F, rock-shaft G, and lever H, substantially as described.

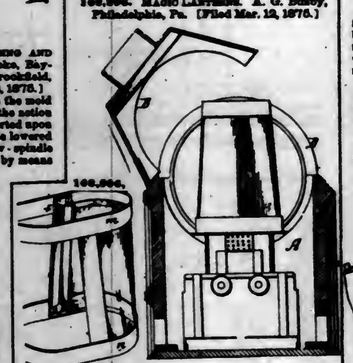
3. In combination with the former T and mold S, the screw-spindle I, carrying and adapted to support the mold, and the divided nut O, substantially as described.

4. The combination, with the screw-spindle I and divided nut O, of the eccentric Q, substantially as and for the purpose described.

5. In combination with the divided nut O and eccentric Q, the rods e and springs f, substantially as described.



160,903. SCREENS. Geo. W. Brown, Ashburnham, Mass. [Filed Apr. 7, 1874.]



In a screen in which a hopper rests at one end upon, and is shaken by the movements of, the screen, the arrangement of the screen inclined in a direction the reverse of that of the hopper, the lower end of the latter resting on the intermittingly rising and falling end of the screen, which has a journal extending through and guided by vertically-slotted bars, and carrying a roll that rests upon a cam or wiper wheel, substantially as shown and described.

160,904. MACHINES FOR PRESSING AND MOLDING GLASS. Aries P. Brooks, Bayonne, N. J., assignor to Jos. M. Brockfield, New York, N. Y. [Filed Apr. 13, 1875.]

Brief.—The lifting apparatus lifts the mold in order to subject its contents to the action of the "former." The mold is supported upon a screw-spindle, and is adapted to be lowered by a revolving motion. The screw-spindle can be brought in and out of notion by means of the divided nut.

160,905.

1. The combination of the body A of a stereopticon or magic lantern with the cover B, hinged to one side of the said body, as set forth.

2. In a magic lantern, a lamp and chimney combined with the top of the body, substantially as described, so as to permit the withdrawal and replacing of the said lamp and chimney, as specified.

3. The lens-holder D, perforated in the manner and for the purpose described.

4. The lens-holder D and its flange f, in combination with the studs e at the end of the box.

5. The chimney-frame composed of the end-less strips m and n of sheet metal and the connecting-strips p, with their grooves s r.

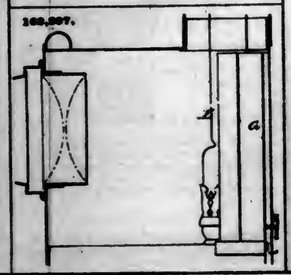
160,906. MAGIC LANTERNS. A. G. Busby, Philadelphia, Pa. [Filed Mar. 12, 1875.]

1. A magic lantern having a body to the rear of which is adapted a shield, G, combined with a removable lamp, all substantially as set forth.

2. The combination of the flange n, open at the rear, with the tubular metal chimney F and chimney E.

160,907. MAGIC LANTERNS. A. G. Busby, Philadelphia, Pa. [Filed Mar. 12, 1875.]

1. The combination of the body A of a stereopticon or magic lantern with the cover B, hinged to one side of the said body, as set forth.



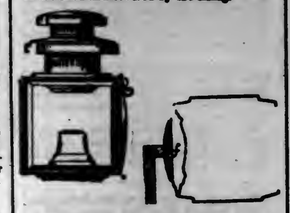
2. In a magic lantern, a lamp and chimney combined with the top of the body, substantially as described, so as to permit the withdrawal and replacing of the said lamp and chimney, as specified.

3. The lens-holder D, perforated in the manner and for the purpose described.

4. The lens-holder D and its flange f, in combination with the studs e at the end of the box.

5. The chimney-frame composed of the end-less strips m and n of sheet metal and the connecting-strips p, with their grooves s r.

160,907.

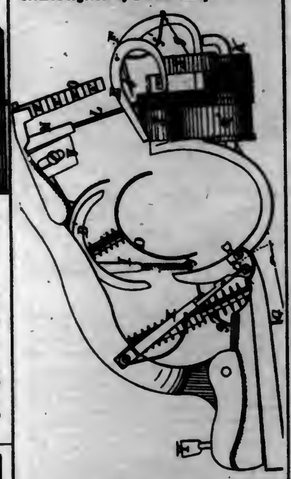


160,907. MAGIC LANTERNS. A. G. Busby, Philadelphia, Pa. [Filed Mar. 12, 1875.]

1. A magic lantern having a body to the rear of which is adapted a shield, G, combined with a removable lamp, all substantially as set forth.

2. The combination of the flange n, open at the rear, with the tubular metal chimney F and chimney E.

160,908. CARRIAGE-LAMPS. F. C. CHESEBRO, New Haven, Conn. [Filed June 19, 1874.]



Brief.—The back, bottom, and top in one piece; the shank inserted through an aperture in the back and covered by the lining.

A coach-lamp body, the back, bottom, and top of which are in one and same piece, combined with a shank, S, having its head f upon the inside of the back, the stem projecting outward, and a lining to cover said head, substantially as described.

160,909. GRAIN-BINDERS. Charles F. GOFF and Stephen S. Wilson, Adel, Iowa. [Filed Mar. 15, 1875.]

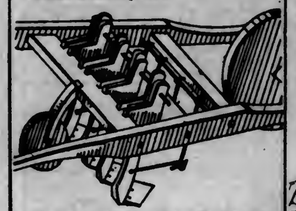
Brief.—The cut grain is bound by a cord secured together by a metal clamp.

1. The journaled shaft F provided with the fingers f and f and spring-arm f', the rod I, the spring-arms G and f', the pivoted block H, the rod I, and the spring i, all constructed and combined to operate in the manner and for the purpose substantially as shown.

2. The pivoted lever B, provided near its outer end with the pick-up jaws N, in combination with the perforated stud M in working within the table A", substantially as and for the purpose set forth.

3. In combination with the table A" the cutter P attached to the lever B in rear of the pick-up jaws N, and arranged to cover the binding-cord L just before the same is grasped by said jaws, substantially as in shown and described.

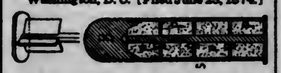
4. In combination with the die U, provided with the projections a and a, and secured to and moving with the lever B, the table A" having the curved ing T and the recesses s' and s' for the reception of said projections, substantially as and for the purpose specified.



5. The geared feed-rollers S and S' and toothed wheel S', in combination with the ratchet-bar e e, attached to and moving vertically with the end of the pivoted arm B, substantially as and for the purpose shown.

6. The toothed stud W, attached to and moving horizontally with the bar W', in combination with the bar X, provided with the wedge-shaped lower end x, pivoted to the lever B and arranged to engage with the hooked end x of said bar X, substantially as and for the purpose shown and described.

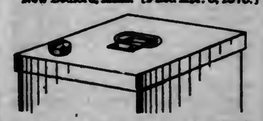
7. In combination with the pivoted binding or compressing arm B the screw Y, passing downward upon its rear end and bearing at its lower end upon the base A, for regulating the opening through which grain flows to the binder, substantially as and for the purpose specified.



160,900. CULTIVATORS. William O. Clark, Northampton, Mass. [Filed Apr. 14, 1875.]

Brief.—This implement consists, primarily, of a wheelbarrow-frame, upon which are mounted a series of cultivator-teeth, which are pivoted at the top of the standards, and held to their work by springs, which yield to obstructions, and return to their positions by the tension of the springs as soon as the obstruction has been passed.

The improved cultivator described, consists of the frame-work A B B' L, provided with the wheels M N, springs i, rods H, pendulous pivoted beams F, and shares G, combined and arranged to operate substantially as and for the purpose specified.



160,901. CARTRIDGES. Eustace J. Collett, Washington, D. C. [Filed June 23, 1874.]

1. The combination, in a cartridge, of disks D, each provided with flanges, shell S, bullet B, and the firing-pin F, as and for the purpose described.

2. The disks D, each having three, more or less, flanges, adapted for use in combination with a cartridge, as and for the purpose specified.

160,902. PAPER CANS. Edward T. Covell, New Bedford, Mass. [Filed Apr. 5, 1875.]

A paper can whose ends are closed by inner and outer heads of a material such as specified, substantially in the manner described—that is to say, the inner head fitting the interior of the can, with its outer face flush with the end of the can, and the outer head fitting over and upon the end of the can and outer face of the inner head, with an overstepping rim or flange that embraces the sides of the can, said inner and outer heads being connected together and to the sides of the can embraced between them, as shown and set forth.

160,903. GAS-COUPLINGS. John Crane and Abram B. Crane, Canisteo, N. Y. [Filed Mar. 29, 1875.]

1. The combination, in a self-coupler for cars, of the coupling-pin c, and the link k, with the stop-head d, pivoted beneath the draw-head, substantially as and for the purpose set forth.

2. The combination with the stop-head d, provided with an outwardly-projecting stem, e, of a horizontal spring, d, pivoted at its free end to said stem, and the spring f connected therewith below the stem-pivot, substantially as and for the purpose set forth.

3. The stop-head provided with shoulders a a', and having stem e, in combination with draw-head having slot b, whereby the outward movement of the stop-head is limited to support the pin in coupling position, as set forth.

160,904. SHEDDING MECHANISMS FOR LOOMS. G. Crompton, Worcester, Mass. [Filed Apr. 6, 1875.]

1. In a fancy loom, a series of exterior and interior heddle-frames, the interior frames being arranged in the same, or nearly the same, vertical planes as the exterior, and provided with heddles, and adapted to operate the warp, substantially as set forth.

2. The combination of a series of exterior and interior heddle-frames and heddles with pattern mechanism, elevators and depressers, and notched jacks, placed in position by the pattern mechanism, and adapted to operate exterior and interior heddle-frames, substantially as described.

3. The vertical levers, connected alternately with and combined with the series of exterior and interior heddle-frames, substantially as described.

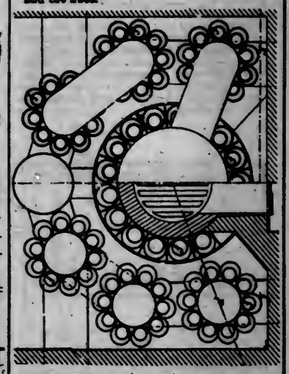
160,905. SOAP-HOLDERS. Hiltch Cumley, Philadelphia, Pa. [Filed June 26, 1874.]

1. A soap-box having a strainer formed of round or equivalent-shaped metal or wooden rods, substantially as shown and described.

2. The soap-box A, having the drainer B, formed of metal bars resting in an annular groove, c, the middle bars being sprung into place, substantially as shown and described.

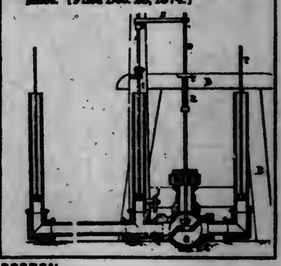
160,906.

160,906. SPRING BED-BOTTOMS. Augustus M. Donnan and Casey Newhouse, Stockton, Cal. [Filed Mar. 26, 1875.]



Brief.—The flat coiled springs are inserted between the main springs, to give an additional spring-surface to the bed-bottom.

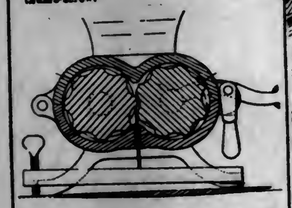
In combination with the springs E E, the flat coiled spring G, placed between the upper coils of the springs E, and connected with them by links h h, substantially as and for the purpose described.



160,907. HOT-AIR FURNACES. L. Dupont, Lyons, France. [Filed Aug. 26, 1874.]

Brief.—The eccentrically-arranged tubes are placed in contact with both the fire-pot and the flues.

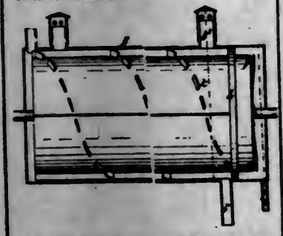
The double eccentric air-flues f arranged in a stove or furnace, and formed of double pipes, one placed within the other, substantially as and for the purpose described.



160,908. RAILWAY-SIGNALING APPARATUS. John Ewart, Lawrence, Mass., assignor of one-fourth his right to John Bailey, same place. [Filed Dec. 28, 1874.]

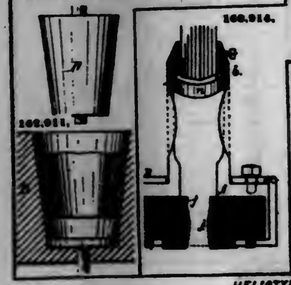
In a hydraulic railway signaling apparatus, the means, substantially as described, for equalizing the pressure and compensating for the expansion and contraction of the fluid and pipes, consisting of the pipe O, piston P, valve Q, and rod D with its arm E, in combination with the pipes I, L, and m, adapted to be operated by the piston-rod F, in the manner described.

162,909. MEAT-CUTTERS. Carl Fogelberg, Cambridgeport, assignor to himself and Oscar A. Johnson, Boston, Mass. [Filed Apr. 7, 1875.]



Brief.—A single knife passes through a slot in case resting upon an adjustable lever, which is raised or lowered, adjusting the knife by a thumb-screw.

The combination, with a meat-cutter, substantially as described, of the knife *i*, and an adjustable lever on which the knife rests, the knife being adapted to be adjusted within a slot extending entirely through the lower portion of the shell of the cutter, substantially as set forth.



162,910. APPARATUS FOR DRYING AND BLEACHING GROUND WHEAT. C. S. Fuller, La Fayette, Ind. [Filed Mar. 17, 1875.]

Brief.—Steam is applied within the cylinder, around the outer surface of which the chop is moved by the spiral and longitudinal conveyers, the inner cylinder being revolved by suitable mechanism.

1. The combination, with the outer stationary cylinder B, of the revolving steam-drum C, provided on its outer surface with ribs *i*, for elevating the material, substantially as hereinbefore set forth.

2. The combination, with the outer stationary cylinder B, of the revolving steam-drum C, provided with longitudinal ribs *i* and interrupted spiral plates *k*, substantially as and for the purpose herein before set forth.

162,911. MANUFACTURE OF EARTHENWARE AND POTTERY. William Galloway, Philadelphia, Pa. [Filed Mar. 13, 1874.]

The within-described mode of first forming the clay into short tubes, and then subjecting the latter to the action of molds or dies under pressure, as set forth.

162,912. ORNAMENTATION OF SHOW-CARDS. Levi C. Goodale, Cincinnati, Ohio. [Filed Mar. 13, 1875.]

The hereinbefore-described process for forming signs, show-cards, &c., by first enameling, printing, or painting upon the surface of sheet metal the desired lettering, surrounded by the representation of a frame, and then striking up the portion of said plate covered by the latter, so as to cause its outer surface to conform to the shape of the frame represented, substantially as and for the purpose specified.

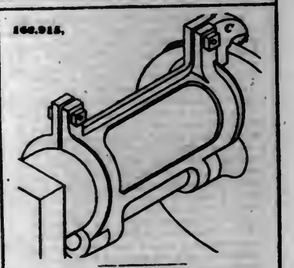
162,913. COMPOUND CHUCKS FOR WHEEL-CUTTING MACHINES. Elihu J. Granger, Brooklyn, N. Y. [Filed Jan. 9, 1875.]

Brief.—An outer and inner set of dogs are moved independently of each other by means of adjusting-screws.

A compound dog, having its parts telescopically arranged with relation to each other, and having each of its parts provided with independent means of adjustment in an axial line, substantially as described, and for the purposes set forth.

162,914. SCREW-CUTTING DIES: Mortimer A. Griffith, Dayton, Ohio. [Filed Jan. 20, 1875.]

Brief.—Four chasers arranged in radial grooves in a circular plate, and retained in position by a cap-plate provided with cam-grooves to receive pins on the dies, and thus provide for their adjustment. The shank-piece C is adjustable in the stock, and serves as a gage to determine the length to be cut.



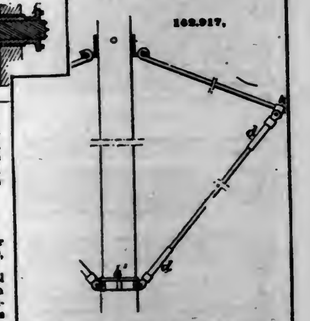
The improved screw-cutting device, constructed substantially as described, and consisting of the shank C, circular shaft *h*, boss A, threading-jaws *f*, and surface shell D, provided on its face, from which the chasers project, with an eccentric aperture and slots *f*, as and for the purpose specified.

162,915. ENDLESS WIREWAYS. Andw. S. Hallidie, San Francisco, Cal. [Filed Mar. 8, 1875.]

Brief.—The traveling cable of an endless wireway is prevented from jumping the supporting-pulley by a fixed block, which overhangs the upper edge of said pulley, and extends below its inside edge, serving as a guard or keeper.

In combination with the rope-supporting pulley B, the fixed block C, arranged to overhang the upper edge of the pulley and extend down below its inside edge, so as to serve as a guard or keeper for the rope, substantially as above specified.

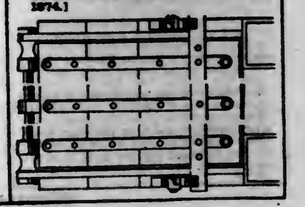
162,915.



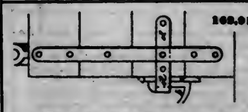
162,916. OPERA-BOOTS. Joseph T. Harper, Charleston, Ill., assignor to Jos. T. Harper & Son, same place. [Filed May 23, 1874.]

The combination of the boot-front, cut in two pieces, A A, having curved extended bottoms *b b*, with the upper B, having the break-joint tongue C, all substantially as set forth.

162,916.



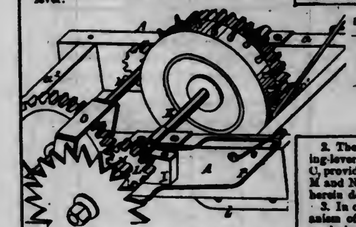
162,917. UMBRELLAS. Isaac B. Hayes and Jno. Somerset, Manchester, Great Britain. [Filed Jan. 16, 1875.]



The mode described of connecting the ribs and stretchers of umbrellas, by means of the spring-jaws *d f*, ferrule *f*, connecting-pin *e*, and perforated projection *h*, combined substantially as set forth.

162,918. RED-GATES FOR VEHICLES. Jos. Heald, Chorley, England. [Filed June 3, 1874.]

162,918.



1. The combination of a hinge-gate of a land-carriage, the bolt *b*, and the striker on the said gate to actuate the bolt, all substantially as described.

2. The combination of the door of a land-carriage, the hinge *s* to form the striker, and the bolt *b*, substantially as and for the purpose specified.

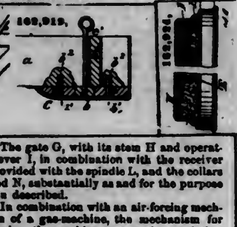
162,919. ICE-CUTTING MACHINES. Charles Heisler and John M. Devemer, Williamsport, Pa. [Filed Apr. 12, 1875.]

Brief.—By bearing down on the lever the frame is lifted from the sleds, and the driving-wheel disengaged from the ice. The saw, in a side frame, is raised and lowered by a lever.

1. In an ice-cutting machine drawn upon sleds, and capable of being raised off of the sleds, so as to clear the driving-wheel, the combination of the frame I I, placed on the outside of the frame A, having the circular saw F, head O, and hand-lever P, the several parts being constructed and arranged substantially as described and shown, for the purpose set forth.

2. The combination, with the frame A, of the sleds B C, guide-rods *b'*, uprights *c'*, and lever D, substantially as described.

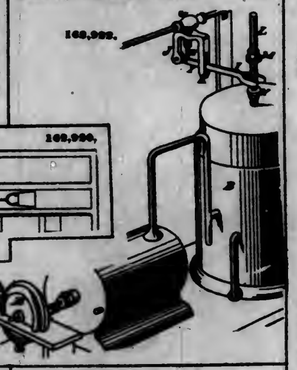
162,921.



162,922. AUTOMATIC AIR-BLASTS FOR GAS-MACHINES. Robt. Hewson, San Francisco, Cal. [Filed Nov. 10, 1874.]

Brief.—The gas-holder, as it is elevated, shuts the cock in the pipe which supplies water to turn the water-wheel, and as it is lowered opens the same cock. Thus the power which evolves the gas is automatically regulated by the supply of gas.

1. In combination with the air-compressor A, provided with the shaft F, the external water-wheel E and pipe D, provided with the valve G and stem H, substantially as and for the purposes set forth.



162,919.

2. The gate G, with its stem H and operating-lever I, in combination with the receiver C, provided with the spindle L, and the collars M and N, substantially as and for the purpose herein described.

3. In combination with an air-forcing mechanism of a gas-machine, the mechanism for rendering the machine automatic, consisting essentially of water-wheel E, pipe D, gate G, stems H and L, and operating-lever I, substantially as herein described.

162,922.

162,920. PROCESSES FOR VENTILATING, PUMPING, AND COOLING THE ATMOSPHERE OF MINES. Levi J. Henry, San Francisco, Cal. [Filed July 30, 1874.]

Brief.—A spray of water mingled with air is thrown into a mine by means of water-pipes, jets, tanks, wheels, and blowers, for the purposes of ventilating and cooling the air.

The combination of a water-pipe with jets, tanks, wheels, and blowers, as herein before described, for the purpose of ventilating, purifying, and cooling the air in mines.

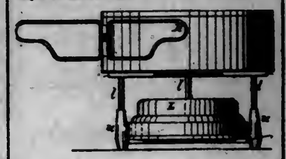
162,921. SHAVING-MUGS. David Easton, Philadelphia, Pa. [Filed Apr. 14, 1875.]

1. As a new article of manufacture, a shaving-cup made of detachable sections, substantially as and for the purposes set forth.

2. The soap-receptacle C, made detachable from the body of a shaving-cup, and constituting an integral portion thereof, substantially as and for the purpose set forth.

162,920.

162,923. BOOTS AND SHOES. Chas. F. Hill, Baltimore, Md. [Filed Apr. 2, 1875.]



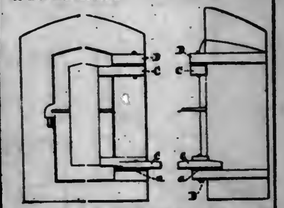
1. In a boot or shoe, the combination, with the upper, the insole, and the outsole, of a tap-sole depressed without break or incision upon the upper surface, and trimmed upon the lower, so as leave a raised protecting-edge for the vamp, substantially as and for the purposes described.

2. As a new article of manufacture, a tap-sole depressed without break or incision upon the upper surface, and trimmed upon the lower, so as to leave a raised edge at the toe, substantially as and for the purpose described.

162,924. POCKET LAMP-STOVES. Thomas W. Houchin, New York, N. Y. [Filed Apr. 20, 1875.]

Brief.—The legs of the gridiron are inserted into the sockets of the uprights on the stand to form the support for the boiler; a false bottom forming a non-conducting chamber, and a layer of porous fire-proof cement supporting the wire-gauze cover, and located upon a layer of cotton-wool.

1. A pocket-stove consisting of the stand S, lamp L, gridiron G, and boiler B, all constructed and combined in the manner and for the purpose set forth.



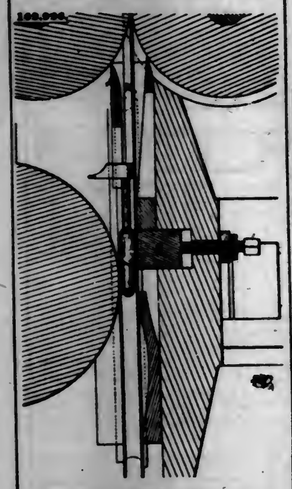
2. In the lamp of a pocket-stove, the false bottom *p* and air-space *s*, for the purpose specified.

3. In a pocket-stove, the triangular stand S, having the uprights *w*, provided with sockets, in combination with the gridiron G, provided with the legs *l*, as and for the purpose specified.

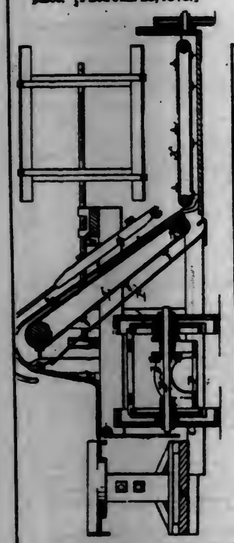
4. In combination with the chamber of lamp L, a layer of porous fire-proof cement, F, made to conform in shape with the wire-gauze W, placed above it, and located directly over the cotton-wool in the lamp-chamber, as described, for the purpose stated.

162,925. STOVE-DOOR HINGES. William T. Howard, Baltimore, Md. [Filed Feb. 11, 1875.]

Brief.—The serrations, in connection with the ridge, render the door adjustable. By the projection E, the door may be slightly lifted to diminish friction.



The hinge portion D of the door-frame, having the ridge or A-shaped tooth *a*, in combination with the dental portion C of the door-hinge, having its under surface provided with V-shaped teeth, the whole forming a device for adaptation to doors of stoves, furnaces, &c., whereby the door may be conveniently held to any desired position within its circumferential movement, substantially as herein set forth.



162,926. MACHINES FOR MAKING WELDED TUBING. Jno. Huggins, Birmingham, England, assignor to Richard Chamberlain, E. Ludlow, and Edwd. L. Parker, same place. [Filed Feb. 17, 1875.]

The hereinbefore-described and illustrated improvement on the machinery for which Letters Patent were granted me on the 8th day of December, 1873—that is to say, the addition to or combination with that pair of rolls of the said machinery L, which the welder of the tube is edicted, of a guide and welding roll for assisting in guiding the trough-like strip to the said welding-rolls, for assisting in welding the joint of the partly-made tube, and for perfecting the cylindrical figure of the said tube at the joint part, the said welding-rolls and guide and welding roll being constructed and combined and acting substantially as described and illustrated.

162,926.

162,927. HARVESTERS. Benj. Illingworth, Hampton, Iowa, assignor of two-thirds his right to R. S. Benson and A. M. Mott, same place. [Filed Jan. 26, 1875.]

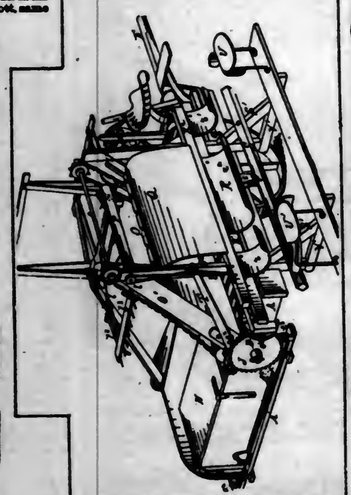
1. The skiff-shaped standing-platform T, having its bottom formed of the two removable pans V V, for the purposes herein set forth.

2. In combination with the standing-platform T, the vertically-adjustable binding-platform W supported thereon, for the purposes herein set forth.

3. The combination of the hinged grain-receiver O, apron R, rod c, and hinged end tables S S, all substantially as and for the purposes herein set forth.

4. In combination with the hinged receiver O, the elevator-lining F, forming a spring to hold said receiver in place, substantially as herein set forth.

162,928. SECTIONAL BOILERS. H. F. King, Corry, Pa. [Filed Feb. 4, 1875.]



Brief.—A single cast-iron water-back is provided with a double row of water-passages, which register with a vertical row of blind water-tubes.

The upright water-back A, made in one piece, and constructed with a series of vertical longitudinal stay-plates, *f*, and a series of transverse metal strips, *g*, arranged centrally between said stay-plates, whereby the water-back is provided with a series of inner and outer water-passages, *d d*, for each row of tubes, as described, in combination with the inclined blind tubes B, projecting from the water-back, and each vertical row of the same communicating with one of the inner water-passages *d*, as set forth.

162,929. HARVESTERS. James H. Kirton, Rockford, Ill. [Filed Dec. 1, 1874.]

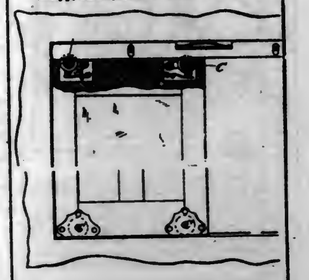
Brief.—The cut grain that falls upon the platform is carried by an elevator to the receiver, which is automatically reciprocated, so that the gavel is delivered alternately to the binders upon each end of the table.

1. The vibrating frame B, in which the driving-wheel is mounted, pivoted on the pinion-shaft, and provided at its swinging end with the toothed segment *b'*, in combination with the segment C, mounted on the rock-shaft *c*, and operated by means of the crank-arm *c'*, cord *c*[1], and lever D', arranged and operating as described.

2. The crank-arm *c'*, which operates the segment C and wheel-frame B, as described, provided with the grooved sector *c*[2], and connected, by means of the cord *f*, with the vibrating grain-wheel-frame E', said parts being combined and operating substantially as described, for simultaneously raising both sides of the machine.

3. The pivoted vibrating wheel-frame E', arranged and operating as set forth, in combination with the sliding frame E', made adjustable on the platform-frame A', substantially as and for the purpose described.

4. The stationary cam-plate K, provided with the curved way *k* and spur *k'*, in combination with the traveling block or shoe *m*, for actuating the rod-rake through the connecting crank and links, as described.



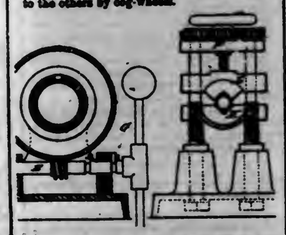
5. The hinged guard or cover N, connected to the vertical guard or fender M', and overhanging the platform M', as described.

6. The reciprocating grain-receptacle R, adapted to receive and support the gavels alternately upon its opposite ends, in combination with the cord, lever, and cam, substantially as described, for automatically reciprocating the receiver, in the manner and for the purposes set forth.

7. The reciprocating grain-receptacle R, supported and guided by the grooved roller *r'*, and the longitudinal rails or tracks S and S', arranged as described.

8. The cam-wheel J, provided with the cam-groove, formed substantially as set forth, in combination with the lever and cord, or their equivalents, for automatically operating the grain-receptacle, as described, whereby intervals of rest are given to said receptacle at each end of its throw, for the purpose specified.

162,930. MOUNTING CAR-DOORS. Geo. S. Knapp, Chicago, Ill. [Filed Feb. 25, 1875.]

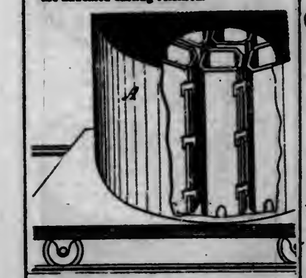


1. The sliding car-door mounted on rollers, and a notched rail or track therefor, the rollers or the rail being made movable, and acted upon by a spring, all combined substantially as shown.

2. In combination with the sliding car-door and the notched rail or track, the swinging arm L, roller C, and spring M, to operate substantially as shown.

162,931. MACHINES FOR CUTTING SCREW-THREADS. Chas. T. Litchfield, Brooklyn, N. Y. [Filed Mar. 27, 1875.]

Brief.—A hollow shaft provided with handles for direct propulsion or rotation, and a worm-wheel, worm, and weighted crank for slow and powerful movement. The bolt to be threaded is held in a clamp, the upper jaw of which is moved downward by a single screw, and the lower jaw moved upward by two screws, all the screws being right-handed, and all simultaneously moved by a hand-wheel attached to the middle one, which is connected to the others by cog-wheels.

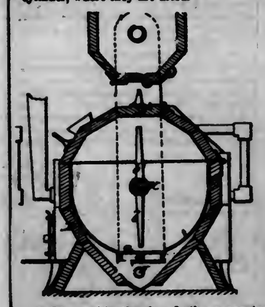


1. The hollow spindle A, with the handles *a* for direct propulsion, in combination with the worm-gear D, worm *b*, and driving-shaft E, and weighted crank G for indirect and powerful propulsion, substantially as herein set forth.

2. The combination of the three threaded spindles *a a* and *a'* with the jaws K L and pinions *p p* and *p'*, substantially as and for the purpose herein set forth.

3. The combination of the threaded spindles, jaws, and pinions with the hollow spindle, its handles, worm-gear, and threaded collar, and the head with the cutting-off tool and die-holding devices, substantially as and for the purposes herein set forth.

162,932. ANNEALING FURNACE-SLAG CASTINGS. Frederic A. Luckenbach, New York, N. Y. [Filed Dec. 31, 1874.]



Brief.—An outer sectional mold envelops inner sectional molds, having flues through their sides at their bases. Molten furnace-slag poured into any one mold fills all of them. The cast is cooled in open air, or slowly in an oven. Then the outer mold is parted, slag between inner molds broken away, and inner molds severally opened, and the annealed casting released.

The process of annealing slag castings by the gradual cooling of a surrounding mass of slag cast simultaneously therewith, substantially as set forth.

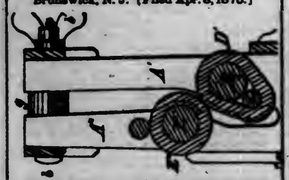
162,933. FEATHER-RENOVATORS. Henry F. Manley, Potsdam, N. Y., assignor of one-half his right to Nathan P. Chaney, same place. [Filed Nov. 13, 15]

Brief.—The feathers are a...ed in the upper cylinder. A section of the lower cylinder being then raised, and a section of the upper cylinder being dropped, a passage is formed, through which the feathers fall into the lower cylinder, where they are dried.

1. The combination, in a feather-renovator, of the two cylinders B and D, arranged one above the other separately in the frame A, and connected to the boiler P by the pipes I and J, respectively, substantially as set forth.

2. The cylinder B, with hinged side B', in combination with the hinged side D' of the cylinder D, as and for the purposes herein set forth.

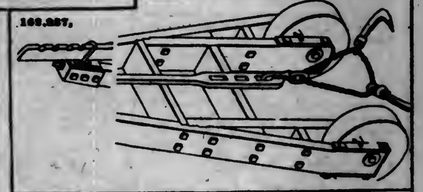
162,934. DOOR-CHECKS. M. H. Mattingly, Philadelphia, Pa. [Filed Apr. 7, 1875.]



Brief.—An elastic cushion, held in place by a suitable bracket at the top of the door, breaks the force of contact, and prevents slamming.

162,935.

The combination, substantially as described, of the arm A, constructed at one end for attachment to a door or door-frame, and having at the opposite end a socket, B, with the elastic pad D, adapted to the said socket, and so arranged in respect to the door and door-frame that it will be compressed before the door is completely closed, all as set forth.



162,936. WRINGERS. T. R. McDonald, New Brunswick, N. J. [Filed Apr. 6, 1875.]

1. In a clothes-wringer, the combination of the rubber tube D', shafts D and *d* in a rigid support, A', and rubber tube E', shafts E and *e* in a yielding support, A'', substantially as and for the purposes described.

2. The combination of the spring *g*, screw-bolt *b*, and screw-nut *b'*, yielding support A'', and rubber tube E', and its shafts E and *e*, with the rigid support A', and rubber tube D, and its shafts D and *d*, substantially as and for the purposes described.

162,937.

162,938. STUMP-EXTRACTORS. A. McKenney, Berlin, Wis. [Filed Mar. 26, 1875.]

1. In a stump and grub puller, the combination of the crotched lever A and the axle C, having flanges B B formed thereon, all arranged substantially as and for the purposes herein set forth.

2. The clevis bar or rod *b*, arranged in combination with the axle C, having projections *a a* and flanges B B formed thereon, and the crotched lever A, substantially as for the purposes herein set forth.

3. In a stump-extractor, the wheel G, constructed as described, in combination with the tube *p* and flanges *r r*, having the jointed-projecting flanges *r' r'*, forming the journal-bearings, substantially as and for the purposes set forth.

4. In a stump-extractor, the combination of the hollow axle C, wheel G, rod *d*, nut *f*, and cap *h*, provided with tube *e* and tongue *c*, substantially as and for the purposes herein set forth.

5. The combination, with the crotched lever A, of the gripe-link J and slotted extension-bar L, as and for the purposes herein set forth.

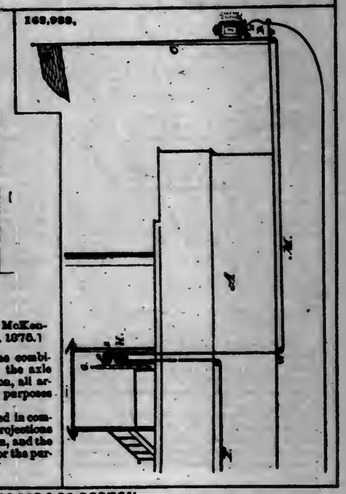
6. The combination of the crotched lever A, middle plate I with tenon *v*, the stirrup *t* and plate *n*, with the notched extension-bar L, as and for the purposes herein set forth.

7. The combination of the notched eccentric-rod *b'* with the wheels O, having cog-plates H attached thereto, and the pivoted brace-hooks M, substantially as set forth.

8. The movable bent bar D, formed with shoulders *a a* and sharp edge *b*, in combination with the crotched lever A, substantially as and for the purposes herein set forth.

9. The movable iron platform, consisting of the cross-bar N, with hooks *c'* and the longitudinal bars O, substantially as and for the purposes herein set forth.

162,939. STUMP-EXTRACTORS. A. McKenney, Berlin, Wis. [Filed Apr. 1, 1875.]

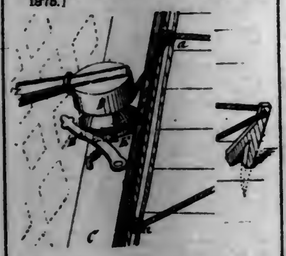


Brief.—The frame is formed of two long beams, converged to an apex in front, and braced laterally, supported on a wheel near each rear end, on a short axle-tree between the diagonal beam and a short longitudinal one braced and bolted against its inner side.

The double-crotch lever, in combination with the independent wheels and axles, as and for the purposes herein shown.

162,940. HEAD-LIGHTS FOR STEAMBOATS. Wm. B. Merrill, Cincinnati, Ohio. [Filed Jan. 14, 1875.]

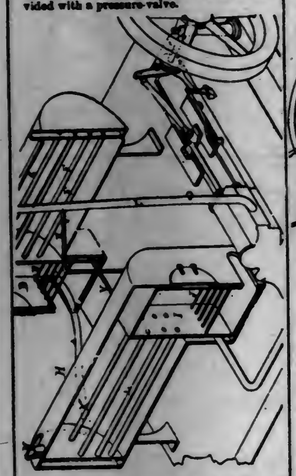
Brief.—The light can be received through an entire circle by a person in the pilot-house.



162,941.

1. The winch-shaft E F Q, arranged relatively to the steering-wheel, as described, in combination with suitable ropes M, sheaves W, and turn-table for turning a head-light placed in front of the jackstaff above the stem, substantially as herein set forth, for the purpose designated.

2. A head-light for steamboats and other water-craft, consisting of a lantern, I, (light on one side only,) attached to a horizontal turn-table, K L N, capable of complete rotation and connected by means of cords M passed under the steamer's deck around sheaves W, with the drum, worm, and winch movements S O P Q R F in the pilot-house, in manner substantially as set forth.



162,939. CARPET-STRETCHERS. Norris H. Merrill, Buchanan, Mich. [Filed Mar. 29, 1875.]

The endless cord L and bar C, having an eye, *a*, near each end, in combination with winding-pulley D and staple A, as and for the purpose specified.

162,940. APPARATUS FOR HEATING FEED-WATER. D. F. Mosman, Chelsea, Mass. [Filed Feb. 17, 1875.]

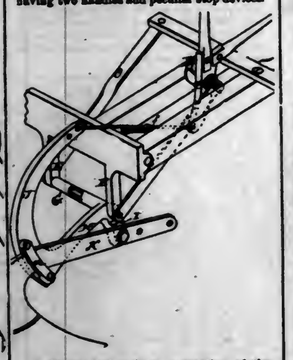
Brief.—The exhaust steam is conducted into the water in the heater. The heater is provided with a pressure-valve.

1. The method herein described of heating feed-water by steam-generators by exhausting steam into the feed-water in a vessel closed to the atmosphere except through the medium of a pressure or relief valve, substantially as set forth.

2. A feed-water heater, operating to heat the feed-water by direct contact of exhaust steam therewith, and closed to the atmosphere except through the intermediary of a pressure-valve, substantially as and for the purpose set forth.

3. In combination with the feed-water heater adapted to receive the exhaust steam, and closed to the atmosphere except through the medium of a pressure-valve, as described, flues or passages whose exterior surfaces are heated from the feed-water, or the heat of the exhaust steam, or both, and whose interior areas constitute air-flues, through which air is supplied to the boiler-furnace, and which air becomes heated in passing through such flues or spaces, substantially as and for the purposes stated.

4. The combination of the engine A, boiler B, heating-structure H, having a relief or pressure valve, N, as specified, and pump Q, substantially as and for purpose stated.



162,941. STREET-RAILWAY RAILS. John P. Nessle, Newark, N. J. [Filed Apr. 16, 1875.]

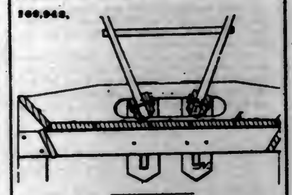
In a street-railroad track, the combination of the rails C C, reduced in thickness, as described, and the continuous line of supporting-plates B B, said rails and plates being arranged to break joints, substantially as and for the purposes herein set forth.

162,942. SULKY-PLOWS. Orman Osborn, Trumansburg, N. Y. [Filed Feb. 4, 1876.]

Brief.—The plow-beam is hung upon a rocking frame, composed of a hollow shaft having arms projecting at right angles, and a curved crank-arm connected by a rod with a lever having two handles and peculiar stop devices.

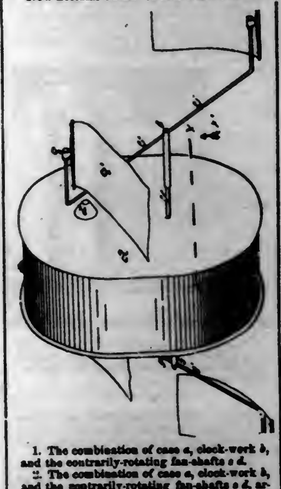
1. The swinging frame, consisting of the sleeve G, arms H I, and curved arm J, in combination with the plow-beam K, pivoted to the arm I, and held by the loop *a*, all substantially as herein set forth.

2. The combination of the two-handled lever P, having tooth *d*, ratchet-hub I, bolt *b*, spring *c*, and rod or chain *f*, with the swinging frame G H I J, having loop *a*, and the plow-beam K, all substantially as and for the purposes herein set forth.



162,943. COMBINED FEED BOXES AND RACKS. David B. Ostrander, Fountain Green, Ill. [Filed Mar. 24, 1875.]

Brief.—A portable trough with central double rack, having bearings at bottom in slots, so that the journals may be moved together or apart, and the racks closed perpendicularly, or expanded over the trough at each side.



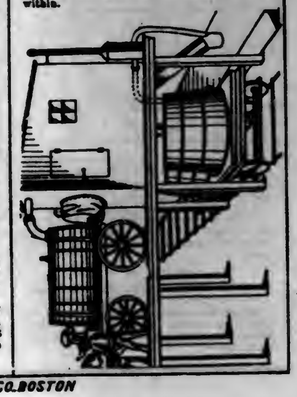
1. The portable feed table and rack, having the rack made adjustable in the distance of its sides apart, and arranged for use substantially as set forth.

2. The portable feed table and rack, having the two parts of rack formed of upright bars, arranged to fold together and open apart upon the table, substantially as and for the purpose set forth.

162,944.

162,944. AUTOMATIC FLY-FANS. Amos B. Palmer, Willimantic, and Albert R. Elmer, New Britain, Conn. [Filed Jan. 6, 1874.]

1. The combination of case *a*, clock-work *b*, and the contrarily-rotating fan-shafts *c d*.



2. The combination of case *a*, clock-work *b*, and the contrarily-rotating fan-shafts *c d*, arranged to have different speeds of rotation.

3. The combination of the two contrarily-rotating fan-shafts *c d* with the adjustable fan-bearing sockets *e f*.

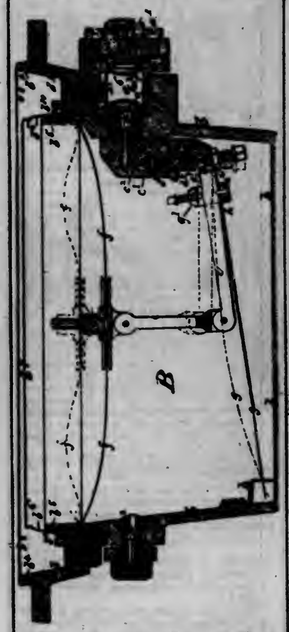
4. The combination of the contrarily-rotating fan-shafts *c d*, adjustable sockets *e f*, arms *e' f'*, swivels *g*, and banners *g'*.

162,945. APPARATUS FOR TRANSFERRING NIGHT-SOIL FROM TRANSIT-TANKS TO CARS, BOATS, &c. William Painter, Baltimore, Md. [Filed Mar. 6, 1876.]

Brief.—An air-tight structure placed on an elevated platform contains the transfer apparatus, with space for an operator to work within.

---

1. An air-tight transfer-chamber, provided with means for connection with the exit-aperture of the transit-tank, and also with an air-tight discharge-chute, and located above a roadway or water-line, substantially as described, whereby night-soil or other offensive matter may be transferred from a transit-tank to a car-tank or barge without creating offense, as set forth.



2. The combination, with the transfer-chamber, of a deodorizing apparatus, substantially as described.

3. The combination, with the transfer-chamber, of an air-tight conducting pipe or chute, a stench-pipe, and a deodorizer, the latter communicating with the transfer-chamber and with the car-tank or barge, substantially as described.

4. An apparatus, substantially as described, for transferring night-soil and other offensive matters from transit-tanks to car-tanks or barges, consisting essentially of an air-tight chute or conducting-pipe, a stench-conducting tube, and a deodorizer, whereby the night-soil and other offensive matters may be transferred by gravitation directly from the transit-tanks into the car-tanks or barges, substantially as described.

162,946. APPARATUS FOR LIGHTING RAILWAY-CARS. Richard Pintsch, Berlin, Prussia. [Filed Oct. 31, 1874.]

Brief.—A reservoir for containing gas, with a regulator upon the car. The valve is supported upon a hinged lever attached to the diaphragm, with a rod intervening between valve and lever, resting in adjustable bearings in the lever. An adjustable counterbalance-spring is attached to the lever.

1. The combination, with a reservoir or boiler in which gas is contained at a high pressure, of a regulator, B, constructed with a main case or castings, *b b'*, cover *b²*, dust-chamber *a²*, valve *c d*, levers *e e'*, spring *f*, and diaphragm *f'*, constructed and operating substantially as and for the purpose described.

2. The valve *d*, provided with a seat or aperture, *d²*, in combination with a supporting-rod, *c'*, and a lever, *e*, provided with an adjustable seat or recess in a bearing, *e²*, substantially as described.

3. The combination, with the valve *d*, supporting-rod *c'*, and lever *e*, of the adjustable counterbalance-spring *g*, arranged, constructed, and operating substantially as described.

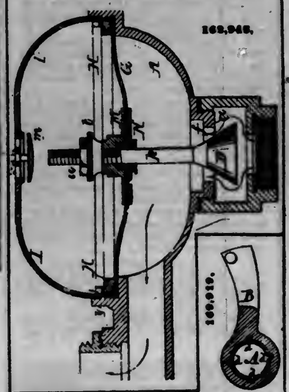
4. The combination, with the valve casting or body *c*, formed with a chamber, *c¹*, valve seat *c²*, and passage *c³*, as described, of the valve *d*, formed with a conical upper end, *d'*, and a stem provided with channels *d²* and a seat, *d³*, for the reception of a supporting-rod, *c'*, substantially as shown and described.

162,947. TREATING LEATHER FOR GAS-REGULATOR DIAPHRAGMS. Richard J. Pintsch, Berlin, Prussia. [Filed Apr. 2, 1875.]

The process for treating leather for diaphragms for gas-regulators, dry gas-meters, and similar purposes, by means of a dissolution of gutta-percha in bisulphuret of carbon applied upon the inside, and best not oxidized oil, free of acid, applied upon the outside, substantially as described.

162,948. GAS-REGULATORS. W. H. Pounds, Philadelphia, Pa., assignor to T. J. Martin and D. W. Stuart, same place. [Filed Mar. 22, 1876.]

Brief.—The cover turns loosely upon the screwed ring-clasp of the diaphragm, and is provided with pins adapted to notches and grooves in the flange of the body. The clamping-plates inclose on all sides the packing around the spindle.



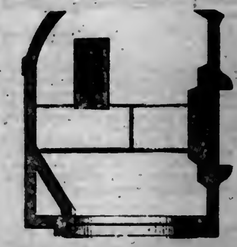
1. The combination, in a gas-regulator, of the body A, its flange *i*, grooves *s*, and notches *p*, the diaphragm O and cover I provided with pins *s c*, adapted to said grooves and notches, as and for the purpose set forth.

2. The combination of the cover I, inclosing a chamber above the diaphragm of a gas-regulator, and a valve, *m*, opening downward, as and for the purpose set forth.

3. The combination of the spindle *p*, clamping-plate N, having a threaded projection for the reception of the clamping-plate M, and jam-nut *t*, bearing on the plate M, as set forth.

4. The combination of the spindle *p*, clamping-plates M N, and packing *w*, confined in a recess in the plate N, as specified.

5. The combination of the body A, its flange *i* and shoulder *h*, the screw-ring H, adapted to the threaded interior of the flange *i*, and the diaphragm G, clamped upon the shoulder by the screw-ring, as set forth.

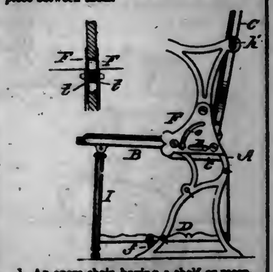


162,948.

162,949.

162,949. COFFIN-HANDLES. James S. Ray, East Haddam, Conn. [Filed Jan. 22, 1874.]

The coffin-handle having the tubular portion A and bars B united together by an indentation, *d*, formed by depressing the metal of the tubular portion outwardly by a tool into the interior of the rings of the bars B prior to the insertion of the tips C, all combined and constructed in the manner shown, and for the purpose specified.



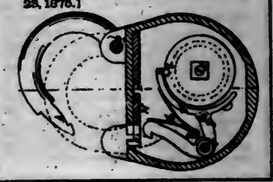
162,950. CAR-AXLE BOXES. John Rhoads, Harrisburg, Pa. [Filed Jan. 6, 1876.]

A journal-box, in combination with a receptacle or receptacles containing solid grease, substantially as and for the purpose set forth.

162,951. OPERA-CHAIRS. John Richardson, New York, N. Y. [Filed Nov. 14, 1874.]

Brief.—A chair with folding seat, having a folding frame beneath for hats, and formed to be joined in rows by making the ends upon adjoining chairs play between the same slotted plates, and mortising legs formed on the backs of adjacent chairs into the arm-piece between them.

1. An opera-chair having a shelf or receptacle arranged under the seat for receiving hats, in combination with the seat E, pivoted upon the frame, substantially as described, whereby the seat can be tilted without depressing its rear edge, thus avoiding the crushing of hats on the shelf below, as set forth.



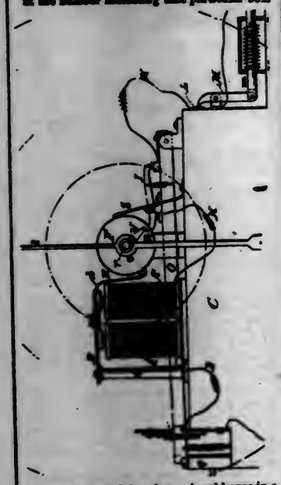
2. The slotted plates F, secured to the uprights A, in combination with the seat B, provided with the headed pins *i*, whereby said pins act as pivots for the seat, and also serve to unite the series of seats and their uprights, and prevent the latter from spreading apart, as set forth.

3. The combination of the back frames C, provided with the ears A, and the uprights A, provided with a notch for said ears to fit in, whereby the series of seat-frames are locked together, substantially as described.

4. The combination of the pivoted seat B and the folding shelf D with the telescopic legs I I', all constructed to operate substantially as described.

5. The stud *f*, attached to the folding shelf D, for supporting and locking it in place, as set forth.

162,952. COMBINATION-FASTENERS. D. A. Root, South Bay City, Mich. [Filed Mar. 23, 1875.]



160,950.

1. The combination of the locking-dog, having the fence-lever pivoted thereto, with the hasp, notched tumbler-wheel, spring G, and knob G, whereby the dog is released from the notch in the hasp by turning the knob, substantially as described.

2. The bolt H, arranged to slide in the top of case A, and held in position by the hasp, in combination with the clip *p* and hook *g* on the back plate A', for securing the latter to the lock-case, substantially as described.

160,960. FIRE-ALARM TELEGRAPH. Andw. Rosenbaum, Quincy, Ill., assignor of one-half his right to Theodore W. Krebs, same place. [Filed Mar. 3, 1875.]

Brief.—Pointer in each box continues to be carried around by a step-by-step movement, produced by automatic interruptions of the circuit at the central box, until circuit is permanently broken at the box from which signal is sent in, by means of an arm upon the shaft of the pointer operating a circuit-breaking lever; said arm being so arranged with relation to the pointer that the circuit shall be broken at the moment that the pointers stand at the number indicating that particular box.

1. A system of fire-alarm signal-boxes in a common closed circuit, with an alarm-box common to them all, upon the breaking and making of which circuit at any signal-box the number of said box is automatically transmitted from the common alarm-box and indicated at all the other boxes.

2. The lever I, provided with the detent R, in combination with the cervoll tooth U, operated by the shaft *r*, substantially as set forth.

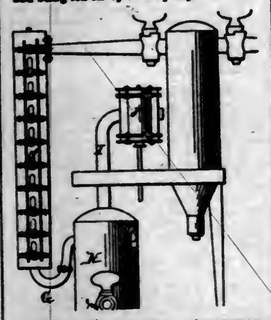
3. The lever O, of non-conducting material, provided with the tongue *b*, and operated by the lark Q, substantially as set forth.

4. The curved tooth U, for the purpose specified.

160,964. PAPER VESSELS. D. N. Russell, New York, N. Y. [Filed Dec. 22, 1874.]

Brief.—The vessel is coated with a grease and lime proof material of such a nature as to avoid all possibility of imparting any flavor or smell to its contents.

1. As a new article of manufacture, the butter dish or vessel composed of a body and bottom of paper, as united as to leave a water-tight joint, and having its interior surface coated or prepared, all substantially in the manner and for the purposes described.



2. In a dish or receptacle for butter, having its body and bottom composed of separate pieces of stock, the combination, with said body and bottom, of a paper band, *a*, and a strip, *f*, of canvas or other light and flexible material, the whole arranged and operating together substantially as described.

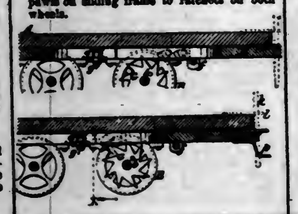
160,954.

160,955. GRAIN-CONVEYERS. H. Severs, Davenport, Iowa. [Filed Apr. 13, 1875.]

Brief.—A vertical series of fan-blowers, each on a horizontal axis, worked by belting, exhausts for the purpose of conveying through tubing grain which falls into receivers; the air constituting its course through the jars by communicating ducts from periphery to center, and being led off by an air-pump.

1. The combination, with a grain-conveying pipe, D, of a series of suction fans or pumps, E E, for creating a vacuum in said pipe, and by suction draw the grain through the same into receivers properly arranged, substantially as herein set forth.

2. The combination of the air-conveying pipe B, receivers A A, provided with air-breakers *c c*, the pipe D, and the series of suction fans or pumps E E, substantially as and for the purposes herein set forth.



3. A series of suction fans or pumps, E E, arranged to communicate from the circumference of one to the center of the next fan or pump, in combination with a grain-conveying pipe, substantially as herein set forth.

4. The combination, with the suction fans or pumps E, of the pipe G, tank H, pipe I, and air-pump J, substantially as and for the purposes herein set forth.

5. In a grain-conveyer, a continuous stream or current of water passing with the air through a series of suction fans or pumps, for the purposes herein set forth.

160,956. CAR-STARTERS. Charles J. Shain and G. L. Waltt, Philadelphia, Pa. [Filed Feb. 26, 1875.]

Brief.—The first strain is applied through pawls on sliding frame to ratchets on both wheels.

---

1. The combination of car-wheels B with wide-spaced ratchets G on their inner sides, draw-bar K, and pawls in pairs at each side of the draw-bar, and matching the wide-spaced ratchets, all substantially as set forth.

2. The combination, with the pawls *c c*, of ratchets G at each side of the car, and rest-plates *e*, to maintain the pawls in horizontal positions, as set forth.

3. The pivoted L-shaped pawl or pawls *c* in combination with the draw-bar, to engage with their operative arms, the ratchets on the inner faces of the car-wheels, but allow the slide to move between the ratchet, substantially as set forth.

160,957. CAR-STARTERS. A. B. Sharp, Plaquemine, La. [Filed Apr. 6, 1875.]

Brief.—Before stopping, rack is thrown into gear with pinion on axle, and thereby forced back, compressing spring. On starting, rack is withdrawn from gear, and pawls, pressed forward by expanding-spring, are made to engage with ratchet-wheels, also rigidly secured to the axle.

1. The combination of the car-axle, having pinion D, the rack-bar E, the spring G, the frame-work, having pawls *c* upon the opposite side of the car-axis from the rack, and the ratchet-wheels I, substantially as and for the purpose set forth.

2. The combination of pinion D, rack-bar E, spring G, frame F, having pawls *c*, ratchet-wheels I, hand-levers *a* and *d*, and crank-shafts *b* and *e*, all substantially as and for the purpose set forth.

160,957.

160,958.

160,958. STOVE-DOOR HANDLES. Absalom S. Shouts, Quincy, Ill., assignor to Comstock, Castle & Co., same place. [Filed Jan. 26, 1875.]

Brief.—The part H is cast with the door, while the part E is detachable.

The key composed of the handle A and latch B, made in one piece, and operating in combination with the bow composed of the parts E and H, substantially as specified.

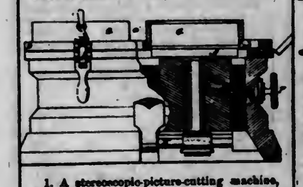
160,959. POCKET COOKING APPARATUS. G. B. Siskain, Chicago, Ill., assignor to Frank Sturges & Co., same place. [Filed Apr. 12, 1875.]

Brief.—The support can be folded together and the dome pushed down into the lamp-body, and the whole put in the box. The size of the flame may be regulated by means of the cap, which is removable, and its pivoted lid.

1. A folding heating apparatus, consisting of a folding support or standard, and of a telescopic lamp, adapted for use in connection with each other, substantially as specified.

2. The combination of the folding standard B with the vertically-adjustable and folding lamp-support C C, substantially as and for the purposes specified.

3. The combination of the box A, the folding standard B, and the folding lamp-support C C, vertically adjustable on the legs of the standard, substantially as and for the purposes specified.



4. The combination, substantially as specified, of the box A, the folding standard B, the folding and vertically-adjustable lamp-support C C, and a telescopic lamp, for the purposes set forth.

5. A telescopic lamp, having a perforated dome combined with the annular cap C, having the lid H pivoted thereto, in combination substantially as described, with a folding and adjustable lamp-support, for the purposes set forth.

6. The lamp D, having therein the removable, annular, and perforated diaphragm E, and the vertically adjustable and perforated dome F, substantially as described, in combination with a folding standard or support, for the purposes set forth.

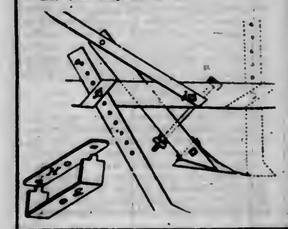
160,960. STEREOSCOPIC-PRINT CUTTERS. Thomas W. Smillie and Albert Siebert, Washington, D. C. [Filed Apr. 14, 1874.]

Brief.—The dies are adjustable toward and from each other, so that two prints can be cut out at once, with any desired distance between them.

1. A stereoscopic-picture-cutting machine, formed essentially of two pairs of dies A A', having interval *c* between them, and springs E E to hold the picture, substantially as shown and described.

2. The dies A A', having a lateral adjustment by swiveled screw passing through post *e*, as and for the purpose set forth.

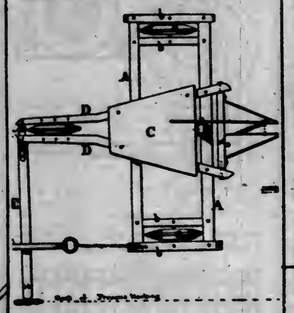
3. The picture-boxes G, hinged to dies A', and forming a continuation of the female dies, as and for the purpose specified.



4. The hinged gage H, combined with dies, as and for the purpose specified.

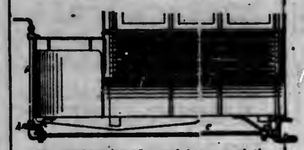
160,961. STEAK-COOKING PANS. David B. Smith, Bastrop, La. [Filed Apr. 6, 1875.]

The cooking-pan, consisting of the separate pans A A', fitted together with a recess, *a*, and lip *b*, to form a closed chamber, and held by a hook, *c*, and curved lip *d*, and the griddles C, having legs *f*, all constructed, combined, and arranged as shown and described.



160,962. PLOWS. David B. Smith, Bastrop, La. [Filed Apr. 6, 1875.]

The combination, with the subsoil-plow having its shank perforated with adjusting-holes of the diagonal strap G, detachable plate H, and central bolt *f*, substantially as and for the purpose described.



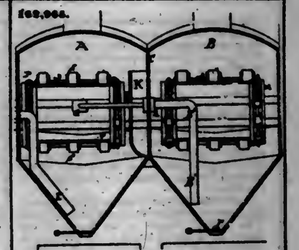
160,963. CORN-ROW MARKERS. Wm M. Startipor, Henry, Ill. [Filed Feb. 13, 1875.]

Brief.—At each end of the square frame is journaled a marking-wheel. Fixed to the main frame are two converging beams, at the rear of which is journaled a marking-wheel. Pivoted to and extending out at right angles from the converging beams is a bar having a marking-wheel. This bar is adjusted by rope attachment extending from it to the main frame.

The frame A, having double bars *b b* to receive the marking-wheels *a a*, in combination with the converging bars D D, provided with platform C, and arranged to receive the marking-wheel *a'*, the said bars D D being joined by a bar, *m*, provided with an eye or staple, *d*, having spring-stems to receive the gage-bar E, constructed and arranged to operate substantially as shown and set forth.

160,964. STREET-CARS. John Stephenson, New York, N. Y. [Filed Apr. 27, 1875.]

The combination of a rack-bar, *c*, and the rear or entrance door of a street-car with an operating gear, shaft C, bevel-gears *g* and *h*, and crank-lever *i*, substantially as and for the purpose set forth.



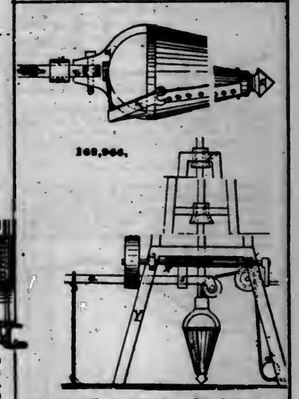
160,965. PETROLEUM-STILLS. J. L. Stewart, Philadelphia, Pa. [Filed Aug. 3, 1874.]

Brief.—The compartments of the still, or the separate stills, are placed over fires of different heat, and the distillation is progressive. Scrapers on endless chains remove the sediment. Overflow-pipes take heavy oil from the bottom of one still into the next still near the surface of its contents, and, with an automatic float-valve, prevent back-set of the oil, and maintain proper relative levels in the stills. An intermediate trough connects the rear of one still with the front of the next still.

1. In a series of stills operating in conjunction for the continuous distillation of petroleum into products of various specific gravities, the combination of the said stills A B, the overflow-pipes E' E, and the automatic regulating-valves *h*, substantially as herein described.

2. In a series of stills operating in conjunction for the continuous distillation of petroleum into products of various specific gravities, the combination of the said stills A B, the overflow-pipes E' E, the automatic regulating-valves *h*, and scrapers upon endless chains, substantially as herein described.

160,966.



3. The combination of the scrapers S, the rods *r'*, the cross-bars *r*, and the chain P operating in a petroleum-still, as herein described.

4. The combination of the endless chain P, and the L-shaped scrapers S hinged and having a limited movement upon the chain, substantially as herein described.

5. The L-shaped scraper S hinged and having a limited movement, as and for the purpose described, in combination with the chilled-iron points S.

6. In a compartment, A, operating with others for the continuous distillation of petroleum, the combination of the trough K conveying the overflow from the pipe E', and discharging it upon the surface of the oil at the front of the still, as herein described.

160,966.

160,966. EARTH-AUGERS. Geo. S. Strong, Mount Vernon, Ohio, assignor of one-half his right to Benj. A. F. Greer, same place. [Filed Jan. 12, 1874.]

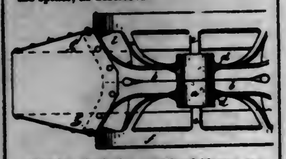
1. The combination, in an earth-boring auger, of the long hollow cone-shaped auger C B, straight cutting-blade A, removable point D, internal inwardly-opening valve O, air-passage P P', and extension-blade F, all constructed, arranged, and adapted to operate substantially as and for the purposes described.

2. In combination with the auger C and blade A, constructed as described, the removable independent extension-blade F, hinged to the blade A, and extending and braced at an angle outward from the top rim of the auger C, substantially as and for the purposes described.

3. In combination with the auger C, provided with the ball B, the square shaft G, hinged to the ball B, and coupling *g*, sliding loosely on the shaft G, and fitting over the top portion of the ball B, whereby the shaft is locked in a vertical position to the auger, substantially as and for the purposes described.

4. The supporting frame-work I Y, provided at intervals with cross-bars I', which contain flaring mouth-shaped guides J, substantially as described.

5. The mechanism for raising the auger, consisting of the two ropes Z Z, attached to the lever and at each side of the shaft G, pulleys O' O', drum *c*, worm *n*, and worm-gear *i*, all constructed, arranged, and adapted to operate substantially as and for the purposes described.

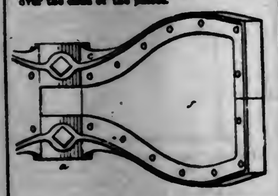


6. As an additional means for raising the auger a slight distance when desired, the levers or frame Q Q, pivoted or fulcrumed to the frame-work Y, and provided at their ends with pulleys O', held in bearings which revolve with the shaft, but are forced up or down by the levers Q through a collar, K, substantially as described.

7. The machine for boring wells, &c., herein described, consisting of the cone-shaped auger C D, shaft G, hinged to the bail B of the auger C, supporting-frame I I' Y, operating mechanism H M *g*, guides J, raising mechanism Z Z *c*, O' O' K, all constructed, arranged, and adapted to operate substantially as and for the purposes described.

8. In combination with the cone-shaped auger C, provided with the blade A and air-passage P P', the long slot in the side of the auger, and elastic inwardly-opening valve O, substantially as and for the purposes described.

168,967. FAN-BLOWERS. B. F. Sturtevant, Boston, Mass. [Filed Mar. 27, 1875.]



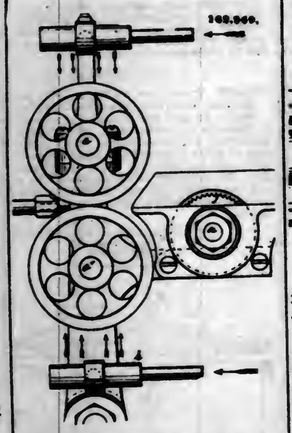
Brief.—The fan-plates are united to the side plates, and to the webs and flanges of the spider, as described.

The fan-wheel of a centrifugal blower, consisting of the fan-plates *l* united to the side plates *h* and to the webs *b*, and flanges *g* of the spider, constructed substantially as described.

168,968. FAN-BLOWERS. B. F. Sturtevant, Boston, Mass. [Filed Mar. 27, 1875.]

Brief.—A fan-wheel of which the plates are connected to the hub by webbed and flanged arms, extending along the sides and over the ends of the plates.

In the construction of rotary fan-wheels for blowers, the combination of the plates *f* with the hubs *a* by means of webbed and flanged arms, the webs and flanges of which extend from the hubs along the sides and over the ends of the plates, substantially as and for the purpose set forth



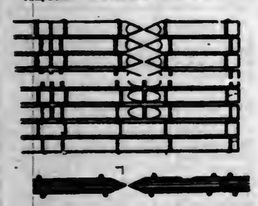
---

168,969. APPARATUS FOR PREPARING SOLE-FASTENING MATERIAL. B. F. Sturtevant, Boston, Mass. [Filed Mar. 17, 1875.]

Brief.—The material is fed to the cutters in the form of long slips or straps, and leaves them in the form of rods, which are compressed, reduced, and hot-pressed by the rolls into proper diameters for pegs.

1. The combination of the series of circular toothed cutters with the annularly-grooved condensing-rollers, adapted to operate upon the material passing from the cutters, substantially as described.

2. The combination, with the annularly-grooved condensing-rollers, adapted to operate substantially as described, of the heating apparatus, substantially as and for the purpose specified.



168,969. SOLE-FASTENINGS. B. F. Sturtevant, Boston, Mass. [Filed Mar. 6, 1875.]

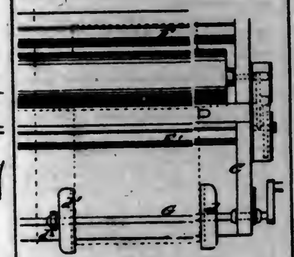
1. A woven web of sole-fastenings the clinching-points of which are arranged to turn in positive and predetermined directions, substantially as described.

2. The process of forming a web of sole-fastenings, having clinching-points to turn in a predetermined direction, consisting of first weaving the fastenings as a web, and then dividing the web by cutting through each individual weft diagonally, and at the same or opposite directions, substantially as described.

168,971. PROCESSES FOR MANUFACTURE OF SOLE-FASTENINGS. B. F. Sturtevant, Boston, Mass. [Filed Mar. 6, 1875.]

That improvement in the art or process of forming sole-fastenings consisting of forming a web, substantially as set forth, and then dividing such web into two or more narrow webs of suitable lengths for fastenings, substantially as described.

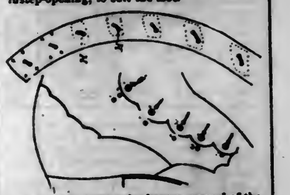
168,972. RODS FOR SOLE-FASTENINGS. B. F. Sturtevant, Boston, Mass. [Filed Mar. 17, 1875.]



As a new article of manufacture, peg-sized, consolidated, hot-pressed rods of lignecous material, of several pegs' length, hardened and adapted to form weft of sole-fastening webs, and separate pegs, substantially as described

---

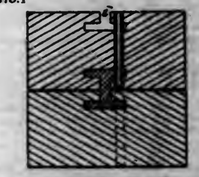
168,973. CLOTH-MEASURING MACHINES. John Sullivan, Independence, Mo. [Filed Sept. 19, 1874.]



Brief.—The cloth-board checks are placed upon a rod, which also serves as a support to the cloth-board.

In a cloth measure and roller, the removable winding-rod G, having thereupon the winding-board clutches *d* and *d'*, substantially as and for the purpose set forth.

168,974. SHOE-FASTENINGS. T. Tucker, Oakland, Cal. [Filed June 26, 1874.]

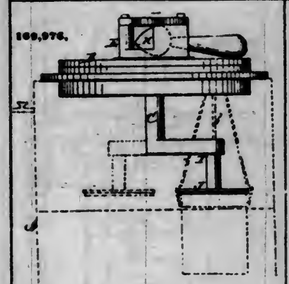


Brief.—The button or hook strip is received in a pocket in the under lap of the shoe, and the buttons adjusted, by means of the series of perforations, nearer to or farther from the instep-opening, to suit the foot.

1. A shoe, having the front composed of the outside K, with two or more series of perforations, the lining J forming a pocket to receive the adjustable button-strap, substantially as set forth.

2. The series of hook-buttons H, attached to the broad base P, and curved forward, substantially as and for the purposes set forth.

168,975. EXTENSION-TABLE SLIDES. John C. Turner, Newark, N. J. [Filed Jan. 15, 1875.]

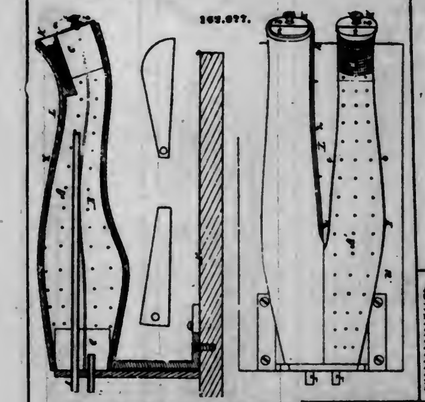


In an extension-table slide, the double-flanged angle-iron having flanges *a b*, provided with slot *c* and shoulder *e*, in combination with pin *d* passing through one wing of the mortise in the groove-sections into the slot *c* in the iron to hold the iron in its place, and at the same time act as a hook stop-pin, substantially as and for the purpose set forth.

168,976. FIRE-EXTINGUISHERS. Chas. Van Duzen, New Albany, Ind., assignor of one-half his right to F. S. Duvol and E. A. Maginness, same place. [Filed Feb. 24, 1875.]

Brief.—To the crank of a rod is attached the stopper of the acid-bottle. By raising the arm of an eccentric pivoted to the rod, and turning it to one side, the stopper is lifted from the bottle and carried away therefrom.

168,976.



1. The eccentric H, constructed as described with bearing-points *x y* and curved surface *z*, in combination with the rod C and a fire-extinguisher tank, A B, substantially as and for the purposes herein set forth.

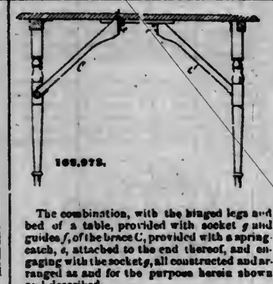
2. The combination, with the cover B, having hub D, of the rod C, with flange *d* and rubber ring *e*, and the eccentric H, all substantially as and for the purposes herein set forth.

3. The combination of the cover B, having hub D and box E, the rod C, lever G, and eccentric H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

168,977. APPARATUS FOR SHAPING PANTALOONS. E. B. Vista, Boston, Mass. [Filed Apr. 29, 1875.]

168,977.

1. The combination of the steam-inducts H and the drying-pipes I I with the pantaloon-former or main leg portions X Y, composed of the chambered parts A A' B B', arranged as shown.

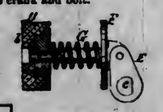


2. The series of crotch-pieces l m, in combination with the pantaloon-former, the parts A A' B B', chambered and applied together as described.

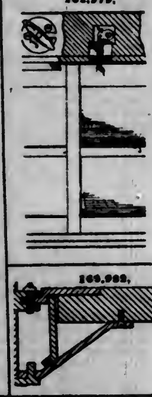
3. The combination of separate extensile covers K K, substantially as described, with the chambered parts A A' B B' of the pantaloon-former.

4. The removable instep-pieces N, toothed or grooved on their upper surfaces, as described.

5. An elastic presser or jacket, L, in combination with each of the chambered main portions X Y of the former, for steaming and shaping pantaloons.



168,978. FOLDING TABLES. Saml. T. Waggoner, Coldwater, Mich., assignor to F. O. Porter, Buffalo, N. Y. [Filed Oct. 6, 1874.]



The combination, with the hinged legs and bed of a table, provided with socket *g* and guides *f*, of the brace C, provided with a spring catch, *s*, attached to the end thereof, and engaging with the socket *g*, all constructed and arranged as and for the purpose herein shown and described.

168,979. SASH-HOLDERS. Thos. Walker, Pleasantville, Md. [Filed Mar. 18, 1875.]

Brief.—A bolt, screw-threaded at one end, and provided with an adjustable friction-pad at the other, is mortised in the window-frame, and pivoted to a suitable crank handle. Interposed between a washer and the pad is a spiral spring, which forces the friction-pad automatically against the edge of the sash, thus holding it firmly in place until retracted by action of the crank and bolt.

168,979.

1. The combination of the bolt C, the friction-pad D, consisting of a nut, *a*, and rubber cushion *b*, the washer F, spiral spring G, crank-piece E, and detachable shaft H, substantially as and for the purpose described.

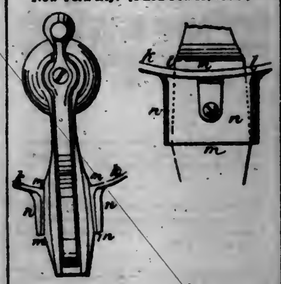
2. The bolt C, having a screw-threaded end, in combination with the adjustable friction-pad D, consisting of a nut, *a*, and rubber cushion *b*, substantially as and for the purpose described.

168,980. HAME-FASTENINGS. W. H. Ward, Virginia, Mo. [Filed Feb. 26, 1875.]

1. A swiveled horse awning or protector, supported by a single central standard on the pole of the car, substantially as shown and described.

2. In combination with the pole A, the stud B, having brackets *b b*, and the stay-braces C, substantially as shown and described.

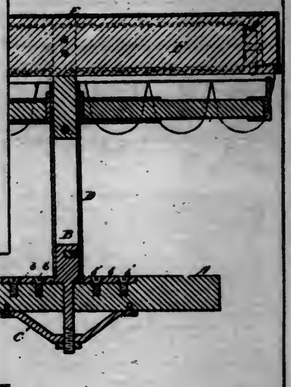
3. In combination with the stud B, the hollow standard D, inclosing the former at its lower end, substantially as shown and described.



4. In combination with the standard D, the canopy G, sustaining the curtains *h h*, substantially as set forth and illustrated.

5. In combination with the standard D and canopy G, holding the curtains *h h*, the transverse arms *i i*, for holding said curtains extended, as set forth.

6. The combination of the following elements: a pole or tongue, A, standard D, canopy or frame G, rollers H R, curtains *h h*, and transverse arms *i i*, substantially as shown, for the purpose set forth.

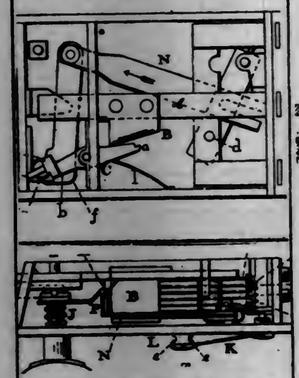


The bar A, provided with the teeth *a*, in combination with the bar B, provided with the ears C, forked thumb-piece D, tongue *b'*, and arched spring E, substantially as set forth.

168,981. SAD-IRON HANDLES. J. Webster, Brooklyn, N. Y., assignor to J. C. Kelley, New York city. [Filed Oct. 15, 1874.]

A handle for sad-irons, having the holding-arms of wedge form *m m'*, with beveled edges *l l*, in combination with the shield *k*, having socket ends *n*, corresponding in form to the arms, whereby the shield is dovetailed with the arms, and holds said clamps them intact with the handle.

168,982. HORSE-AWNINGS. F. D. Webster, Philadelphia, Pa. [Filed Mar. 2, 1875.]



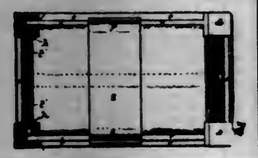
162,922. SCREW-THREADING DIES. F. B. Wells, Greenfield, Mass., assignor to the Wiley & Russell Manufacturing Company, same place. [Filed Dec. 21, 1874.]

Brief.—A spring placed in semicircular recesses in each of the divided dies tends to continually force them together. The adjustment of the dies against the action of the spring is effected by taper-headed screws.

The interposed taper or taper-headed screws, the dies, the spring, and the circular plate, combined together as described.

162,924. LOCKS FOR DOORS, &c. P. Wernl, Philadelphia, Pa., assignor of one-half his right to E. L. Richie, same place. [Filed Mar. 30, 1875.]

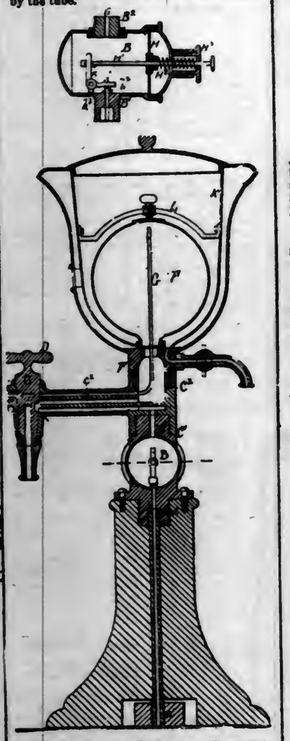
1. The tumblers C, in combination with the plates D, forming passages for a worm-bit key, by which the tumblers are operated, substantially as and for the purpose set forth.



2. The combination of the post F' with the series of passage-plates D and guide E, substantially as and for the purpose set forth.

3. The knob with sliding spindle G and the arm H, in combination with the bar N, arm M, and the key-hole guard K, substantially as and for the purpose set forth.

4. The bolt A with leg E and pin *d*, and spring-bar N with leg F, in combination with the slotted arm H and sliding knob-spindle G, substantially as and for the purpose set forth.

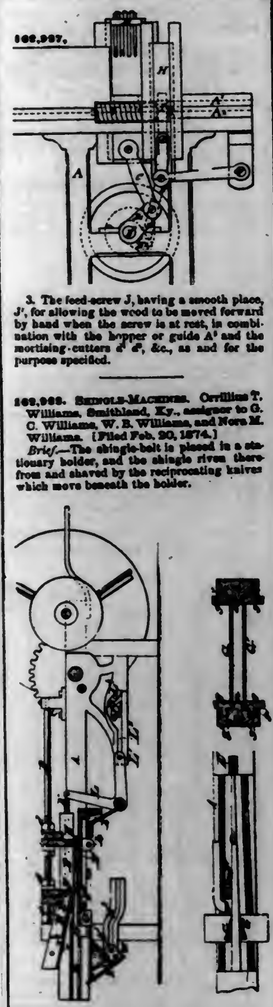


162,925. INVALID-BEDSTEADS. Robert D. Whittemore, Belvidere, Vt. [Filed July 9, 1874.]

In an invalid-bedstead, the combination of the posts *a*, having the slots *g h*, side rails *i*, head and foot rails *r*, moving in opposite directions, and attached to the rollers V by the straps *t*, rollers *n*, windlass *m*, and straps *t'*; the slots *g* serving to prevent the side rails *i* from swaying laterally, substantially as shown and described.

162,926. APPARATUS FOR DRAWING EFFERVESCENT LIQUIDS. Frederick W. Wiesebrock, Brooklyn, N. Y., assignor to H. W. Shepard and Robert Seaman. [Filed Mar. 19, 1875.]

Brief.—An apparatus having a pressure-regulator between the supply-vessel and the dispensing-vessel. The faucet has a supplemental discharge or pressure-escape tube, whereby any surplus pressure in the discharge-vessel is relieved from the liquid, and escapes by the tube.



1. In an apparatus for drawing effervescent liquids, a pressure-regulator, B, arranged in connection with a dispensing-vessel, F, the whole being combined and arranged to operate substantially as described.

2. A dispensing-vessel, F, faucet C, having a nozzle, D', communicating through its opening d^2 with channel c^2 of the faucet, and tube G, the whole being combined and arranged to operate substantially as described.

162,927. MORTISING-MACHINES. Orrilliam T. Williams, Smithland, Ky., assignor to G. C. Williams, W. B. Williams, and Nora M. Williams. [Filed Feb. 20, 1874.]

Brief.—The shingle-bolt is placed in a stationary holder, and the shingle riven therefrom and shaved by the reciprocating knives which move beneath the holder.

1. The feed-screw J, having a smooth place, J', for allowing the wood to be moved forward by hand when the screw is at rest, in combination with the hopper or guide A^1 and the mortising-cutters d^3 d^3, &c., as and for the purpose specified.

162,928. SHINGLE-MACHINES. Orrilliam T. Williams, Smithland, Ky., assignor to G. C. Williams, W. B. Williams, and Nora M. Williams. [Filed Feb. 20, 1874.]

Brief.—The shingle-bolt is placed in a stationary holder, and the shingle riven therefrom and shaved by the reciprocating knives which move beneath the holder.

1. The fixed frow F and knife F', in combination with the shaping-knives G G', which, besides their traversing motion, move toward and from each other, substantially as and for the purpose set forth.

2. The fixed frow F and knife F' and shaping-knives G and G', in combination with the fixed immovable cross-bar E, armed with soft metal, substantially as specified.

3. The knife F', in combination with the tilting or yielding bottom plate B' of the carriage, substantially as specified.

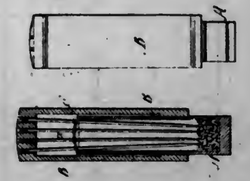
4. The shaping-knife O, in combination with the push-bar K, substantially as specified.

5. The combination of the push bar K, bell-cranks L, fulcrumed on carriage B, connecting-rod D', grooves D', and automatic switches D^1, substantially as specified.

6. The receiver H, provided with a gutter, M, for the reception of the shingles and plate I, over which the top shaving passes, substantially as specified.

162,929. MORTISING-MACHINES. Solomon Wilder, Meriden, assignor to Pratt, Read & Co., Deep River, Conn. [Filed Mar. 19, 1875.]

Brief.—The machine is constructed to mortise what are termed buttons, one of which is glued upon the back of each key of a piano, and other musical instruments using similar keys.

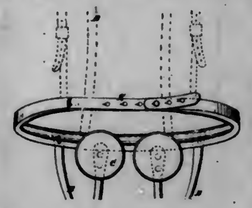


1. The gang of mortising-tools d^3 d^3, &c., elevated and depressed together, in combination with an intermittent-feed mechanism, which moves the wood between each stroke to an extent equal to the distance of the tools apart, as herein specified.

2. The hopper box A^3, feed-screw J, intermittent impelling mechanism H I K L, and mortising-cutters d^3 d^3, combined and arranged as herein specified.

7. The combination of the fork N n n' n', rod N', reciprocating receiver H, and cam-grooves N', substantially as specified.

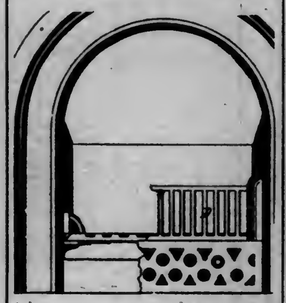
8. The combination of the adjustable cross-heads C C', carriage B, and cross-bar E, substantially as specified.



162,930. NEEDLE-CASES. William Henry Yeomans, Astwood, Redditch, England. [Filed Mar. 17, 1875.]

A needle-holder consisting of an inner casing, A, for the reception of needles, an outer casing, B, sliding on the inner casing, and perforated at the top, and a spring, *c*, whereby the outer casing is maintained in an elevated position, as set forth.

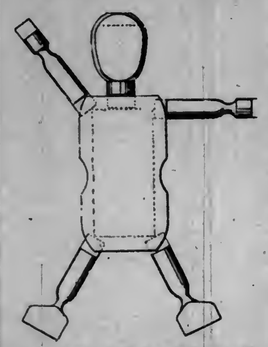
162,931. TRUSSES. Joseph M. Zirkle, New Market, Va. [Filed Apr. 3, 1875.]



Brief.—The pad is held with an upward pressure from a metal rod extending forward from the metal back-belt, and passing between the thighs.

The combination of the belt *A*, arranged to encircle the body, one or more springs, B, attached to the back of the belt, and arranged to pass around underneath the thighs, one or more pads, C, suspenders D, and the straps E, all substantially as specified.

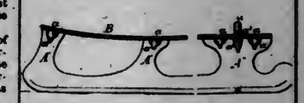
REISSUES.



6,407. GRATES. Frank S. Bissell, Pittsburg, Pa. Patent No. 155,293, dated Sept. 22, 1874. [Filed Apr. 17, 1875.]

1. As a new article of manufacture, a bent knee and beam consisting of a single piece, substantially as set forth.

2. The combination of the rigidly-connected cross-piece B with the bent knee and beam, substantially as set forth.



6,409. TOY BUILDING-BLOCKS. Charles M. Crandall, Montrose, Pa., assignor to C. M. Crandall & Co., same place. Patent No. 61,721, dated Feb. 5, 1867; reissue No. 5,356, dated Mar. 30, 1875. [Filed Apr. 26, 1875.]

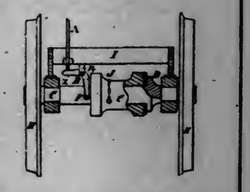
1. As a new article of manufacture, children's building-blocks or other toys, constructed with interchangeable mortise-and-tenon joints, substantially as described, so that the several parts of the toy, irrespective of size or shape, may be fitted together and retain any desired position or combination by the clamping or friction caused by one part fitting or entering into another part, substantially as and for the purpose set forth.

2. Children's toys provided with one or more jaws, grooves, recesses, or similar clamping devices, within which corresponding tongues, tenons, or other projections of the toy are fitted, and retained in position by friction alone, substantially as described, so that a given combination and arrangement of the several parts is maintained, as specified.

6,410. SKATES. Oliver Edwards, Florence, Mass. Patent No. 154,176, dated Aug. 18, 1874. [Filed Jan. 15, 1875.]

1. The skate-runner A, with its risers A' and A'', rivets *a*, button or stud *a''*, and their enlarged bases *a'*, in one piece of metal, in the manner and for the purpose described.

2. The skate-runner A, having rivets *a*, stud *a''*, with their enlarged bases *a'*, in combination with the plates B and B', substantially as and for the purposes described.



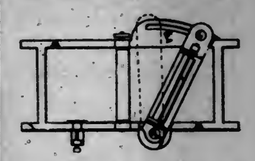
3. A skate-runner, A, with its risers A' and A'', rivets *a a a a*, and their enlarged bases *a'*, in one piece of metal, as described.

4. A skate-runner, A, with its risers A' and A'', rivets *a a a a*, their enlarged bases *a'*, and projections *d d*, in one piece of metal, as described.

5. A skate-runner, A, with its risers A' and A'', rivets *a a a a*, button *a''*, and their enlarged bases *a'* and projections *d d* in one piece of metal, substantially as described.

6,411. CAR-BRAKES. Albert F. Gue, Chicago, Ill., assignor to Luman Jenison, Jenisonville, Mich., Jas. M. Kelly and Geo. R. Plumbe, Austin, Ill., and Saml. W. Comings and George F. Field, Boston, Mass. Patent No. 151,118, dated May 19, 1874. [Filed Mar. 5, 1875.]

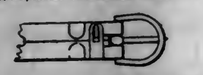
Brief.—Brakes operated by winding chain on sleeve, made to rotate axle by friction-clutches provided with pad.



1. In a car-brake, the combination of collar D, frictional pad E, spool C, and devices for forcing the spool against the pad, substantially as and for the purpose set forth.

2. In a car-brake, the lever A, provided with the cam *m*, in combination with the clutch-lever B, substantially as and for the purpose set forth.

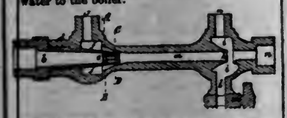
3. In a car-brake, the combination of chain J, sheaves K L, pad E, lever O, and spool C, substantially as and for the purpose set forth.



6,412. PLANING-MACHINES. O. G. Howes, Fort Ann, N. Y., assignor of one-half interest to Wm. R. Norris, same place. Patent No. 149,128, dated Mar. 31, 1874. [Filed Apr. 16, 1875.]

Brief.—The sides of paneled doors and similar articles are dressed by means of an unyielding bed, in connection with a revolving cutter-head, secured at any angle, other than a right angle, to the sides of the machine.

The cutter-head C, attached to the bed, as shown and described, in combination with the frame A of a planing-machine, as and for the purposes herein specified.



6,413. PROCESSES OF MANUFACTURING HARD SUGAR. Frans O. Matthiessen, New York, N. Y. Patent No. 161,404, dated May 30, 1870. [Filed Apr. 23, 1870.]

As an improvement in manufacturing hard sugar, the process herein described, which consists in removing the sugar from the molds in which it is purged and drained while it is yet soft, and when so removed cutting it into slabs of the desired thickness, and in cutting such slabs into pieces of the required size, and then subjecting such pieces to the drying operation, as and for the purposes specified.

6,414. INJECTORS. Wm. Randall, Salem, Mass., assignor of one-half interest to J. M. Crocker. Patent No. 140,414, dated Apr. 7, 1874. [Filed Mar. 29, 1875.]

Brief.—The overflow parts are so constructed and provided with pipe and valve, connecting them with a water-heater, as to operate as a secondary injector, to feed heated water to the boiler.

1. The combination of the nozzle *b* and the T-pipe *e*, arranged in manner and to operate substantially as specified.

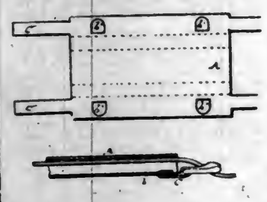
2. The combination of the nozzle *b* and its T-pipe *e*, with the annular chamber *f* and the pipe or induct *g*, all being arranged substantially as explained and represented.

3. The combination of the nozzle *b*, annular chamber *f*, and the pipe or induct *g*, with the nozzle *h*, annular chamber *i*, feed-pipe or induct *k*, and the delivery-pipe *n*, all being arranged and applied substantially as specified and shown.

4. The combination of the discharge-pipe *l*, and stop-valve *m*, the nozzle *h*, annular chamber *i*, induct *k*, educt *a*, conduit *c*, nozzle *b*, annular chamber *f*, and induct *g*, all being arranged and applied substantially as shown and described.

6,415. SPINDLE-BOLSTERS FOR SPINNING-MACHINES. G. Richardson, Lowell, Mass., assignor of one-half interest to the Lowell Machine-Shop. Patent No. 142,625, dated Mar. 17, 1874. [Filed Oct. 28, 1874.]

Brief.—Similar to Patent No. 143,783, but applied to a long bolster, and combined with a channel or groove, to conduct the oil from the educt down into the reservoir.



The bolster, constructed so as when in use to extend into the bobbin and above its base or lower end, and provided with the reservoir or trough *c*, one or more capillary inducts, *e*, one or more helical grooves *b*, and educt, *d*, and the connecting channel or groove *f*, all arranged substantially as specified.

6,416. BOBBINS FOR SPINNING-MACHINES. G. Richardson, Lowell, Mass., assignor of one-half interest to the Lowell Machine-Shop. Patent No. 142,626, dated Mar. 17, 1874. [Filed Nov. 9, 1874.]

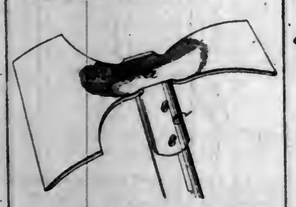
The ring-spinning bobbin, constructed with the middle adhesive spindle-bearing D, and end the two chambers *a d*, open at their outer ends, without having at either of such ends an adhesive spindle-bearing, all being substantially as specified.

6,417. STRAP-LOOPS. Samuel C. Talcott, Ashtabula, Ohio. Patent No. 164,727, dated Sept. 1, 1874. [Filed Mar. 26, 1875.]

1. The loop A provided with the ties C, having the notches *a'*, in combination with the tie E, constructed as specified, and arranged to operate between the buckle and slots *b'* of the loop, all substantially as and for the purpose specified.

2. A loop, A, having ties C, constructed with relation to the slots *b'* to be folded and bent to hold the buckle B, substantially as specified.

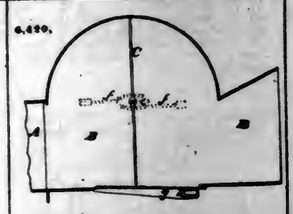
3. The blank shown in Fig. 5, for the uses and purposes substantially as shown and described.



6,418. SPRING-BOTTOMS FOR BEDS. Jesse L. Branson and August Juergens, Cincinnati, Ohio. Patent No. 166,272, dated Oct. 27, 1874. [Filed Feb. 23, 1875.]

1. In combination, the metal strap, and the flat strip or strips of spring-tempered steel, spirally bent, connected to each other substantially as shown and described.

2. The combination, with a spirally-bent flat strip or strips, of two metal steadying bars or straps, the bars or straps being placed at opposite sides of the coiled strip, and fastened at each coil to said strip, substantially as shown and described.



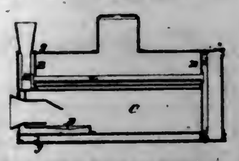
6,419. HOES. Moses Johnson, Three Rivers, Mich., assignor to the Union Manufacturing Company. Patent No. 159,332, dated Feb. 2, 1875. [Filed Mar. 30, 1875.]

1. A hoe, the contracted portion *a* of which forms an unbroken arch from edge to edge in cross-section, and flares toward the blade, and is flush therewith at its terminus, substantially as shown and described.

2. In a hoe, the cave C C, combined with the narrow curved portion *a*, substantially as described.

6,420. STRAW-FEEDING ATTACHMENTS FOR FURNACES. David Moroy, Watsonville, Cal. Patent No. 135,650, dated Feb. 11, 1873. [Filed Apr. 6, 1875.]

1. The boiler A, having the furnace C, grate D, return flues or tubes *c c*, and stack or chimney B, arranged as described, in combination with the straw-feeding furnace-door attachment, substantially as and for the purpose described.



2. In a horizontal steam-boiler, the furnace C, formed with a grate, D, to serve as a fireplace, in combination with shell return-flues *c c*, when the tubes and tube-sheets are secured by flanges *f* and bolts *g*, so as to be removable from the shell in a body, substantially as and for the purpose described.

6,421. BOOTS AND SHOES. Wm. F. Prusha and Elisha L. Wales, Marlborough, Mass., assignor, by mesne assignments, to Wm. B. Rice, trustee. Patent No. 114,340, dated May 2, 1871. [Filed Apr. 2, 1875.]

1. A leather sole having a crease or indentation, *c*, and projecting struck-up portion *b* for attachment to the upper, substantially in the manner and for the purpose described.

2. A leather toe-tip or projection struck up in one and the same piece with a sole outside of the upper leather, and with a crease or indentation, *c*, substantially as set forth.

6,422. STEAM-BOILERS. Harvey W. Rice, Haywood, Cal. Patent No. 146,614, dated Jan. 20, 1874. [Filed Mar. 17, 1875.]

1. A leather sole having a crease or indentation, *c*, and projecting struck-up portion *b* for attachment to the upper, substantially in the manner and for the purpose described.

2. A leather toe-tip or projection struck up in one and the same piece with a sole outside of the upper leather, and with a crease or indentation, *c*, substantially as set forth.

OFFICIAL GAZETTE

OF THE

United States Patent Office.

VOL. 7.—NO. 19. TUESDAY, MAY 11, 1875. PRICE { $6,00 per year—single. $5,00 per year in clubs.

The OFFICIAL GAZETTE is published on Tuesday of each week, from the United States Patent Office. The subscription price for 1875 is six dollars per year for single subscribers; five dollars per year to clubs of not less than five sent at one time, and which will be mailed free of postage to separate addresses if desired. Subscriptions will commence and terminate with the year. All orders should be addressed to the Commissioner of Patents, Washington, D. C.

DECISIONS OF THE COURTS.

U. S. CIRCUIT COURT, DISTRICT OF MASSACHUSETTS.

GEORGE G. SAXE *et al vs.* A. H. HAMMOND *et al.*

[*In equity.—Before* SHEPLEY, *J.—January*, 1875.]

Different parties may all infringe by respectively making or selling, each of them, one of the elements of a patented combination, provided those separate elements are made for the purpose and with the intent of their being combined by a party having no right to combine them.

The mere manufacture of a separate element of a patented combination, unless such manufacture be proved to have been conducted for the purpose of aiding infringement, is not, in and of itself, infringement.

A patent which claims the application of means to a musical instrument whereby the air may be agitated to produce a tremulous note "*by agency external to the wind-chest, which shall not check the flow of the air past the reeds*," so as to give a continuous tremulous note, but not cut off the sound and make a succession of notes, is not infringed by the simple making of a fan capable of revolving and the selling of the same to a manufacturer of musical instruments.

Whether such a device would infringe, would depend upon the position and arrangement of it in the organ—whether or not it be placed external to the wind-chest, and whether it be placed so as to cut off the sound and produce a succession of notes, or merely to agitate the air and vary the notes without interrupting their continuity.

Where complainants had licensed large numbers of manufacturers to put a patented tremolo attachment upon their instruments, and had agreed to license all reputable makers who might apply: *Held*, that one who simply made and sold the attachment could not be held as an infringer, unless it appeared that the sale was to an unlicensed manufacturer.

The case of *Wallace and Sons* vs. *Holmes et al.* commented on, with approval.

[*Whitney* and *Betts*, for complainants.
B. E. Valentine and *W. W. Blackmar*, for defendants.]

SHEPLEY, *J.*:

This bill in equity alleges that the respondents infringe certain letters patent reissued to the complainants, as assignees of R. W. Carpenter, on the 5th of October, 1869, No. 3,665, for a "tremolo" attachment to musical instruments. The defendants deny infringement, and allege prior knowledge and use of the patented invention by La Fayette Louis and others more than two years before the date of the application of R. W. Carpenter; and, also, that the same invention and discovery, and the same device described in said patent, and substantial and material parts thereof, were patented on the 18th day of November, 1856, to La Fayette Louis.

If the defendants could be held as infringers of the Carpenter patent, if it be a valid patent, and not anticipated by the devices which were made and used by La Fayette Louis at Chicago and other places, it would be necessary carefully to consider and decide upon the probative force and effect of the testimony in relation to those devices of Louis, which, if the testimony of the witnesses in relation to them is to be received with full credit, acted substantially as agitators to, or reflectors of, the waves or currents of air passing through the reeds in the musical instrument, and not as valves to interrupt the continuity of the musical notes. If they operated in the way first described, they would seem to have operated in the same manner and with the like result as Carpenter's fan-tremolo, although Louis appears to have been ignorant of the philosophy of the operation—a want of knowledge which is imputable as well to Carpenter, and even to those who have the benefit of the theories (which are only claimed to be theories) of the most learned scientists who have testified as experts on this subject.

If, however, the evidence in this record is not sufficient to charge the respondents as infringers of the complainants' patent, it is not necessary to decide that question in this case.

The respondents are manufacturers of supplies of materials which are elemental parts of organs and other musical instruments. They sell to the organ manufacturers. It is not claimed that they have made any musical instruments or sold any in which the tremolo attachments of any kind are arranged, or to which they are applied in any manner. The complainants allege that they (the complainants) have licensed large numbers of manufacturers to put these fans in their organs, and prove that they agreed to license every reputable manufacturer who should apply. There

is no evidence in this record of a sale to an unlicensed manufacturer of organs. The thing made by the defendants is shown by the exhibit produced in the case; a wooden structure of the simplest kind, which is in itself no infringement, and which, in order to constitute an infringement of the complainants' patent, must be placed by an unlicensed manufacturer in a musical instrument, and placed in a certain position in that instrument, external to the wind-chest. A revolving fan is not new. All the respondents make is a fan capable of being made to revolve.

The complainants claim as their invention the application of any means to the musical instrument whereby the air may be agitated to produce a tremulous note "by agency *external to the wind-chest*, which shall not check the flow of the air past the reeds," so as to give a continuous tremulous note, but not cut off the sound and make a succession of notes, instead of a continuation of one note. Whether the fan made by the respondents would infringe this claim when placed in the instrument depends upon the position and arrangement of it in the organ, whether or not it be placed external to the wind-chest, whether it be placed so as to cut off the sound and produce a succession of notes, or merely to agitate the air and vary the musical notes without interrupting their continuity. Even if all these alternative conditions were on the side of infringement there must be the additional element of a sale for use by an unlicensed manufacturer, which is not proved in this case.

The complainants rely upon the case of *Wallace* vs. *Holmes*, (9 Blatchford, C. C. R., 65.) There can be no doubt as to the soundness of the conclusions of the court in that case, or the cogency of the reasons given by the learned judge (Woodruff) in his opinion. But, without rehearsing the facts in that case, it is sufficient to say that they were very different from the case now before the court; the gist of the decision in that case was, that the actual concert of the makers of the different elements in the combination was a certain inference from the fact in that case and the distinct efforts of the defendants to bring into use those elements of the combination which comprised the whole invention, although they could not be used without adding one other element, were found to be proved. No such state of facts is proved in this case, as has already been shown.

I must, therefore, repeat what I stated to counsel at the argument of the cause. As defendants only make one element of the patented invention, in order to hold them guilty, I must find proof connecting them with the infringement. Different parties may all infringe by respectively making or selling, each of them, one of the elements of a patented combination, provided those separate elements are made for the purpose and with the intent of their being combined by a party having no right to combine them. But the mere manufacture of a separate element of a patented combination, unless such manufacture be proved to have been conducted for the purpose and with the intent of aiding infringement, is not, in and of itself, infringement. A patent is valid for a new combination of old elements. A person who uses one or more of the old elements is not an infringer, unless he uses the new combination. (*Prouty* vs. *Ruggles*, 16 Peters, 336, 341; *Byam* vs. *Farr*, 1 Curtis, C. C. R., 260, 265; *Foster* vs. *Moore*, ib. 279, 288; *Eames* vs. *Godfrey*, 1 Wall., 78, 79.) The use of a part less than the whole is no infringement.

I infer from the remarks of counsel at the argument that, although respondents deny infringement, and do not waive this defense, it is desired that the court should pass upon the question of the validity of the interfering patents for the respective inventions of Louis and Carpenter. If the court should find the complainants' patent to be valid, no decree could be made in their favor, as respondents do not infringe. To find the complainants' patent invalid, in a case in which the defendants do not infringe, would partake too much of the nature of a moot case.

Complainants' bill dismissed.

The OFFICIAL GAZETTE of the United States Patent Office is published weekly by the Patent Office. It is printed by authority of an act of Congress, which provides for its gratuitous distribution to libraries at the rate of eight for each congressional district.

The GAZETTE contains the decisions of the Commissioner of Patents, and such decisions of the courts in patent causes as are believed to possess general interest to inventors and patentees.

During the past year a complete synopsis of foreign patent laws, prepared by members of the British Legation in foreign countries, has been printed in the GAZETTE. Also an epitome of the proceedings of the Vienna International Patent Congress, with the action of that body to perpetuate itself. Matters of this character will receive further attention in the GAZETTE.

The claims of all patents granted are printed in the GAZETTE, bearing the same date as the issue of the patent, accompanied by a brief synopsis of the invention and a portion of the drawing.

The illustrations are photographic reproductions on a reduced scale of the drawings accompanying the original application, and preserve their fidelity, which was sometimes lost under the old plan of drawing or tracing and engraving.

Application for extension of patents, and the action of the Office in such cases, have their earliest publication in the GAZETTE.

Disclaimers filed in the Office are nowhere else published.

Changes in the rules of practice of the Office are announced in the GAZETTE, which affords a much readier mode of communication with parties interested than to await a new edition of the Rules of Practice.

Finally, any matter believed to be of interest to inventors in their official intercourse with the Office, will receive in the GAZETTE the attention the subject warrants.

COPIES OF SPECIFICATIONS AND DRAWINGS.

Persons desiring copies of all specifications and drawings of any particular class of patents can purchase them at the rate of ten cents each, and have them mailed, free, to their address, as soon as possible after the patents are issued, by leaving a deposit of not less than three dollars with the Commissioner of Patents. The index of classes for subscribers, date of September, 1871, is furnished gratis to any applicant.

In ordering copies of any drawing or specification, the name of the inventor and patentee, the title of the invention, and the date of the patent must be given; and for any search required in consequence of the omission of any of these data a charge of one dollar may be made. So in ordering a copy of an assignment, the liber and page of the record, as well as the name of the inventor, must be given; otherwise an extra charge will be made for the time consumed in making any search that may become necessary.

Copies of the specifications and drawings of design patents will be furnished by the Patent Office at the cost of making them. All orders should be addressed to the Commissioner of Patents, Washington, D. C.

DESIGNS PATENTED DURING THE WEEK.

[Each Design bearing date May 11, 1875.]

8,315 and **8,316.—Fancy Cassimeres.**—FREDERICK S. BOSWORTH, Providence, R. I., assignor to THE WEYBOSSET MILLS, same place.—Nos. 1 and 2. Applications filed April 12, 1875. Term of patents 7 years.

8,317.—Font of Printing-Types.—JAMES M. CONNER, Greenville, N. J. Application filed February 26, 1875. Term of patent 14 years.

8,318 to **8,320**, inclusive.—**Embroidery Patterns.**—EMIL CRISAND, New Haven, Conn., assignor to HENRY ST. JOHN, same place.—Cases A A, B B, and C C. Applications filed May 4, 1875. Term of patents 3½ years.

8,321.—Toy Money-Boxes.—CHARLES M. FERGUSON and WILLIAM F. GILBERT, Derby, Conn. Application filed April 22, 1875. Term of patent 3½ years.

8,322.—Shanks of Table-Forks.—JOSEPH W. GARDNER, Shelburne, Mass. Application filed March 18, 1875. Term of patent 7 years.

8,323.—Wainscoting.—JAMES MILNE, Philadelphia, Pa. Application filed April 26, 1875. Term of patent 3½ years.

8,324.—Medal.—JOHN H. SCHREINER, Philadelphia, Pa. Application filed April 21, 1875. Term of patent 3½ years.

8,325.—Vase-Pedestal.—WILLIAM TWEEDDALE, Brooklyn, N. Y. Application filed April 24, 1875. Term of patent 7 years.

8,326.—Fancy Cassimere.—WILLIAM B. WEEDEN, of Providence, R. I., assignor to THE WEYBOSSET MILLS, same place. Application filed April 12, 1875. Term of patent 7 years.

8,327.—Coffin-Handle Socket.—GILBERT ROGERS, West Meriden, Conn., assignor to C. ROGERS & BROTHERS, same place. Application filed May 4, 1875. Term of patent 7 years.

TRADE-MARKS REGISTERED DURING THE WEEK.

[Each certificate bearing date May 11, 1875.]

2,440.—Mustard and Spices.—PINCKNEY, JACKSON & Co., New York, N. Y., Chicago, Ill., and London, England. Application filed April 22, 1875.

"a monogram composed of the letters 'P., J. & Co.' as a center, surrounded by a double circle, on the inner one of which are inscribed the words 'QUALITY, PURITY, UNIFORMITY,' with the letter 'Y' at the end of each of said words, enlarged and elongated toward said center."

2,441.—Salve.—JOHN W. ROTHSCHILD, St. Louis, Mo. Application filed December 12, 1874.

"words Invincible Salve, arranged, preferably, as shown in the accompanying fac-simile, below a portrait of myself."

2,442.—Pins.—STAR PIN COMPANY, Birmingham, Conn.—Case A. Application filed March 13, 1875.

"'ORIENTAL PINS.'"

2,443.—Pins.—STAR PIN COMPANY, Birmingham, Conn.—Case B. Application filed March 13, 1875.

"words 'Merchants' ADAMANTINE PINS.'"

2,444.—Pins.—STAR PIN COMPANY, Birmingham, Conn. Application filed March 6, 1875.

"The representation of five-pointed stars, and the word 'star.'"

2,445.—Pins.—STAR PIN COMPANY, Birmingham, Conn.—Case D. Application filed March 27, 1875.

"words 'STAR PIN.'"

2,446.—Pins.—STAR PIN COMPANY, Birmingham, Conn.—Case E. Application filed April 10, 1875.

"words 'Star Pin Company' with five-pointed star beneath them."

2,447.—Coal.—THE LYKENS VALLEY COAL COMPANY, Wilconisco, Pa. Application filed April 29, 1875.

"words 'Lykens Valley Coal.'"

2,448.—Coal.—THE MINERAL RAILROAD AND MINING COMPANY, Shamokin, Pa. Application filed April 29, 1875.

"words 'Cameron Coal.'"

2,449.—Coal.—THE SUMMIT BRANCH RAILROAD COMPANY, Williamstown, Pa. Application filed April 29, 1875.

"words 'Franklin Coal of Lykens Valley.'"

2,450.—Whisky.—H. K. THURBER & Co., New York, N. Y. (Re-registration.) Application filed June 15, 1852.

"words 'Century Whiskey.'"

2,451.—Roasted Coffee.—ZOLLER & LITTLE, Baltimore, Md. Application filed April 23, 1875.

"words 'NEW MOON,' and a landscape view in which the representation of a new moon is seen in the clouds above a city, and its sheen is thrown across a sheet of water in the foreground."

2,452.—Roasted Coffee.—ZOLLER & LITTLE, Baltimore, Md. Application filed April 23, 1875.

"words 'BETSY'S CHOICE,' and a picture of a male and female figures at a table, on which is represented a coffee-urn."

2,453.—Gin.—ADAMS & TAYLOR, Boston, Mass. (Re-registration.) Application filed January 4, 1872.

"Inside two concentric circles is a representation of a honeysuckle plant, or a spray of the same. Upon each side of the spray is an initial letter of one of the firm-names. Between the said circles are the following: 'Honey-Suckle' and 'Schiedam,' the former above, and the latter below, the spray."

2,454.—Fertilizers.—JOSIAH J. ALLEN'S SONS, Philadelphia, Pa.—Case A. Application filed April 15, 1875.

"words 'SOLUBLE MARINE GUANO.'"

2,455.—Fertilizers.—JOSIAH J. ALLEN'S SONS, Philadelphia, Pa.—Case B. Application filed April 15, 1875.

"word 'PELICAN.'"

2,456.—Baking-Powder.—ATKINS & LADD, New York, N. Y. Application filed April 10, 1875.

"a representation of a suspension-bridge."

2,457.—Writing-Paper.—ABEL BEACH, Iowa City, Iowa. (Re-registration.) Application filed December 14, 1872.

"an outline-map, in miniature, of the State of Iowa."

2,458.—Oatmeal.—S. G. BOWDLEAR & Co., Boston, Mass. Application filed April 14, 1875.

"'B B Oat Meal. S. G. B. & Co.'"

2,459.—Wagon-Axles.—D. ARTHUR BROWN & Co., Fisherville, N. H. (Re-registration.) Application filed November 19, 1870.

"'Concord, N. H., Use.'"

2,460.—Wagons.—S. N. BROWN & Co., Dayton, Ohio. (Re-registration.) Application filed October 17, 1871.

"words 'The Trade Wagon.'"

2,461.—Tobacco.—DAVID BUCHNER, New York, N. Y. Application filed May 3, 1875.

"words 'SUN FLOWER.'"

2,462.—Twines, Yarns, Shoe-Threads, &c.—CABLE FLAX MILLS, Schaghticoke, N. Y. (Re-registration.) Application filed April 1, 1872.

"words 'Cable Flax Mills.'"

2,463.—Whisky.—F. CHEVALIER & Co., San Francisco, Cal. (Re-registration.) Application filed September 4, 1872.

"word 'Castle.'"

2,464.—Stopping for Dental Purposes.—IRA COLE, Norwalk, Conn., administrator of ASA HILL, deceased. Application filed March 30, 1875.

"words 'Hill's Stopping,' and directly below said words a copy of his autograph, 'A. Hill, D. D. S.'"

2,465.—Blasting Squibs and Fuses.—SAMUEL HARRIES DADDOW, St. Clair, Pa. (Re-registration.) Application filed October 21, 1872.

"two parallel bars, representing squibs held in place at either end by a St. Andrew's cross encompassing the words 'Miners' Safety Squib and Fuses, Fire, water, and gas proof.'"

2,466.—Champagne-Wine.—F. DE BARY & Co., New York, N. Y. (Re-registration.) Application filed December 21, 1872.

"words and letters 'G. H. Mumm & Co.,' 'Reims,' the figure of an eagle in an upright position, front view, with extended wings and uplifted head, *regardant*, clasping an olive-branch in his talons, a circle, and the words and letters 'G. de Bary,' and two stars."

2,467.—Cigars.—F. DE BARY & Co., New York, N. Y. (Re-registration.) Application filed January 18, 1873.

"words 'El Principe de Gales,' used in combination with the fac-simile signature of 'Vicente Martinez Ybor.'"

2,468.—Lead-Pencils.—EAGLE PENCIL COMPANY, New York, N. Y. Application filed April 29, 1875.

"'Chromo.'"

2,469.—Churn.—WILLIAM P. EMMERT, Freeport, Ill. Application filed May 1, 1875.

"word 'CLIMAX,' in connection with the word 'Churn.'"

2,470.—Hams.—EVANS, LIPPENCOTT & CUNNINGHAM, Cincinnati, Ohio. (Re-registration.) Application filed June 15, 1872.

"a figure representing an American shield, containing the thirteen stars and stripes or bars, in connection with the words 'Banner Hams.'"

2,471.—Medicine.—COCHRAN FLEMING, Sewickley, Pa. (Re-registration.) Application filed March 23, 1872.

"the fac-simile of the signatures of 'Fleming Bros.,' and 'C. McLane.'"

2,472.—Medicine.—COCHRAN FLEMING, Sewickley, Pa. (Re-registration.) Application filed March 23, 1872.

"the fac-simile of the signatures of 'C. McLane' and that of 'Fleming Bros.'"

2,473.—Medical Preparation.—HENRY D. FOWLE, Boston, Mass. Application filed April 1, 1875.

"words 'Original Pile and Humor Cure,' with two different monograms of my initials, viz., 'H. D. F.'"

2,474.—Silk Goods.—LOUIS FRANKE, New York, N. Y. Application filed April 3, 1875.
"the representation of a shield with a silk-worm on a mulberry leaf in the center of the same, and two shuttles above, and two cocoons below."

2,475.—Cakes, Crackers, and Biscuits.—D. B. FULLER & Co., Philadelphia, Pa. Application filed May 5, 1875.
"a picture of our patented cake-machine, with the figure of a workman engaged at his work near it."

2,476.—Coffee.—JAMES W. HAMBLET, Brooklyn, N. Y. Application filed May 3, 1875.
"word 'Cream.'"

2,477.—Cotton and Woolen Fabrics.—HAMILTON WOOLEN COMPANY, Southbridge, Mass. (Re-registration.) Application filed July 5, 1872.
"words 'Red Riding Hood Alpaca.'"

2,478.—Cotton and Woolen Fabrics.—HAMILTON WOOLEN COMPANY, Southbridge, Mass. (Re-registration.) Application filed July 5, 1872.
"words 'Niobe Alpaca.'"

2,479.—Whisky.—HOFFHEIMER BROTHERS, Cincinnati, Ohio. Application filed April 28, 1875.
"words 'OLD HOMESTEAD.'"

2,480.—Anti-Friction Metal and Journal Bearings.—I X L METAL COMPANY, St. Louis, Mo., and Sacramento, Cal. (Re-registration.) Application filed January 27, 1873.
"letters 'I X L.'"

2,481.—Canned Goods.—KEMP, DAY & Co., New York, N. Y. Application filed May 3, 1875.
"word 'BELL' and the figure of a bell."

2,482.—Shirtings, &c.—LANGDON MANUFACTURING COMPANY, Manchester, N. H. (Re-registration.) Application filed February, 28, 1872.
"letters 'G. B.'"

2,483.—Medicine.—LEE & BROTHERS, Ridgewood, N. Y. (Re-registration.) Application filed January 14, 1871.
"letters 'A. R. L.'"

2,484.—Whisky.—LILIENTHAL & Co., San Francisco, Cal. Application filed April 23, 1875.
"words 'Cyrus Noble,' 'Old Bourbon,' and the device of three coronets."

2,485.—Dress-Shields.—H. D. & R. LOCKWOOD, Boston, Mass. Application filed April 7, 1875.
"word 'Royal.'"

2,486.—Preserved Fish.—ISRAEL C. MAYO, Gloucester, Mass. (Re-registration.) Application filed December 22, 1871.
"word 'Pescatine.'"

2,487.—Woolen Cloth.—MIDDLESEX COMPANY, Lowell, Mass. (Re-registration.) Application filed December 14, 1871.
"word 'Yacht.'"

2,488.—Wrought-Iron Pipe, Tubing, &c.—NATIONAL TUBE-WORKS COMPANY, Boston, Mass., and McKeesport, Pa. Application filed March 27, 1875.
"letter 'B,' surrounded by a rhombus.'"

2,489.—Tobacco.—WILLIAM F. NOLEN, Brooklyn, N. Y. Application filed April 3, 1875.
"words 'DUBLIN CUT CAVENDISH.'"

2,490.—Horse-Nails.—NORTHWESTERN HORSE-NAIL COMPANY, Chicago, Ill. (Re-registration.) Application filed December 17, 1870.
"words 'Western Horse-Nail.'"

2,491.—Telegraph Instruments and Appurtenances.—PARTRICK & CARTER, Philadelphia, Pa. Application filed April 13, 1875.
"word 'CHAMPION.'"

2,492.—Medical Fluid Compound.—PIERRE E. PICAULT, Montreal, Canada. Application filed March 23, 1875.
"word 'Treasure,' or the French word 'Trésor.'"

2,493.—Ladies' and Gentlemen's Collars and Cuffs.—PINE, MILLER & DUNHAM, Troy, N. Y. Application filed April 30, 1875.
"word 'CENTENNIAL.'"

2,494.—Cigars.—PINCUS POHALSKI, New York, N. Y. Application filed April, 23, 1875.
"words 'Monte-Cristo.'"

2,495.—Milk.—JULIUS R. POND, New York, N. Y. Application filed May 1, 1875.
"words 'PEARL MILK.'"

2,496.—Plantation-Wagons.—WILLIAM M. PRICE, St. Louis, Mo. Application filed May 4, 1875.
"words and letters 'THE GRANGE WAGON, P. of H.'"

2,497.—Fertilizing Material.—CHARLES O. ROOT, Binghamton, N. Y. Application filed April 1, 1875.
"letters 'A. P.' and the word 'Ash.'"

2,498.—Gin.—I. D. RICHARDS & SONS, Boston, Mass. (Re-registration.) Application filed October 30, 1871.
"representation of a thistle."

2,499.—Baking-Powder.—STOCKDALE, SMITH & Co., Baltimore, Md. Application filed April 29, 1875.
"words 'Patapsco Baking-Powder and the monogram P. B. P.'"

2,500.—Cooking-Stoves.—SHINNICK, WOODSIDE & GIBBONS, Zanesville, Ohio. (Re-registration.) Application filed September 7, 1872.
"word 'Sensation.'"

2,501.—Friction-Matches.—THE SWIFT & COURTNEY & BEECHER COMPANY, New Haven, Conn. Application filed May 1, 1875.
"words 'THREE NOES,' in combination with a trinasal device of a human face.'"

2,502.—Yeast.—THE NATIONAL YEAST COMPANY, Seneca Falls, N. Y. (Re-registration.) Application filed December 10, 1870.
"the illustration of an eagle in suitable posture, and of the words 'National Dry-Hop Yeast.'"

2,503.—Medicine.—GEORGE TALCOT, Brooklyn, N. Y. Application filed April 29, 1875.
"words 'MAGIC CURE.'"

2,504.—Pills.—GEORGE TALCOTT, Brooklyn, N. Y. Application filed April 29, 1875.
"words 'MAGIC PILLS.'"

2,505.—Stoves and Ranges.—THOMAS, ROBERTS, STEVENSON & Co., of Philadelphia, Pa. Application filed April 17, 1875.
"words 'HARVEST HOME.'"

2,506.—Printing-Presses, &c.—JOB C. TRIPP, Fairhaven, Mass., assignor to BOSTON AND FAIRHAVEN IRON WORKS. (Re-registration.) Application filed January 13, 1873.
"words 'Improved Fairhaven.'"

2,507.—Watches.—JOHN W. TUCKER, San Francisco, Cal. Application filed May 1, 1875.
"word 'MINER.'"

2,508.—Watches.—JOHN W. TUCKER, San Francisco, Cal. Application filed May 1, 1875.
"word 'PALACE-CAR,' and the figure of a palace-car."

2,509.—Fertilizer.—J. J. TURNER & Co., Baltimore, Md. (Re-registration.) Application filed July 25, 1870.
"word 'Excelsior.'"

2,510.—Medical Compound.—ERNST A. WEBER, Brooklyn, N. Y. Application filed April 3, 1875.
"words 'Weber's Alpine Herb Tea,' or, in German, 'Weber's Alpin Kräuter Thee,' in connection with the portrait of the applicant."

2,511.—Wine.—WELLINGTON, KIDDER & Co., New York, N. Y. Application filed March 22, 1875.
"letters and figures 'L D,' in a triangle, and '1831' immediately underneath."

2,512.—Plows, Cultivators, &c.—WIARD & HOUGH, East Avon, N. Y. (Re-registration.) Application filed March 20, 1872.
"a character consisting of a combination of five circles or rings, viz., one in the center; one above the center; one below the center; one on the right of the center; and one on the left of the center."

LABELS REGISTERED DURING THE WEEK.

[Each certificate bearing date May 11, 1875.]

233.—Title: "**Blut & Säfte Reinigungs Thee.**"—L. HERZINGER, New York, N. Y. Application filed May 1, 1875.

234.—Title: "**Duane Mills.**"—WALTER V. CLARK & EDW. HUNTINGTON, New York, N. Y. Application filed May 3, 1875.

235.—Title: "**Sperry's Cough and Croup Sirup.**"—DR. H. J. WIERS, Hartford, Conn. Application filed April 24, 1875.

236.—Title: "**H. H. Elliott's Pain-Reliever.**"—HORACE H. ELLIOTT, Boston, Mass. Application filed April 28, 1875.

237.—Title: "**Dr. I. J. Sperry's Female Monthly Pills.**" Dr. H. J. WIERS, Hartford, Conn. Application filed April 24, 1875.

238.—Title: "**Hand-Loom Silk.**"—EDWARD M. BENJAMIN, New York, N. Y. Application filed April 3, 1875.

239.—Title: "**National Rubber Co., Providence, Rhode Island.**"—NATIONAL RUBBER CO., Providence, R. I. Application filed April 12, 1875.

APPLICATION FOR EXTENSION.

UNITED STATES PATENT OFFICE,
Washington, D. C., May 19, 1875.

On the petition of ANN JENNETTE HATHAWAY, of Milwaukee, Wis., executrix of JOSHUA HATHAWAY, deceased, authorized by act of Congress approved February 18, 1875, praying for the extension of a patent granted to the said JOSHUA HATHAWAY, on the 3d day of April, 1860, for an Improvement in Devices for Converting Reciprocating into Rotary Motion,

It is ordered that the testimony in the case be closed on the 20th day of July next; that the time for filing arguments and the Examiner's report be limited to the 30th day of July next; and that said petition be heard on the 4th day of August next.

Any person may oppose this extension.

J. M. THACHER, *Commissioner.*

INDEX OF INVENTIONS PATENTED MAY 11, 1875.

	Class No.	No. of Patent.
Advertising card rack, G. Willett	54	163,039
Album, F. F. Kullrich	146	163,212
Animal poke, J. F. Palmer	144	163,240
Anger and auger bit, W. Tucker	29	163,282
Auger, earth, H. Cull	51	163,159
Bale tie, J. B. Arrants	7	163,133
Bale tie, C. J. Beasley	7	163,138
Bank notes, &c., needle board for registering, J. D. Smith	117	163,271
Bed bottom, spring, B. P. Noteman	62	163,234
Bed bottom, spring, C. D. Rawson	62	163,106
Bed, spring, C. L. Alvord	62	163,131
Bell, door, F. M. Johnson	24	163,015
Bill file, M. Langhorne	146	163,216
Blank and envelope, combined, Gross and Kelchner	146	163,185
Blind slat adjuster, S. M. G. Lund	24	163,019
Blind slats and rods, machine for wiring, W. S. Gray	30	163,065
Blind stop, N. Holz	24	163,073
Boiler, circulating steam, L. Knight	148	163,062
Boiler feeder and regulator, T. G. Gardner	146	163,177
Boom, sheer, W. C. Culbertson	13	163,002
Boot and shoe, T. R. Evans	16	163,171
Boot and shoe heels, metal wear plate for the treads of, J. M. Ewing	16	163,004
Bottle stopper, T. W. Murray	1	163,026
Bottles, apparatus for cleaning, A. Bosquet	1	163,045
Box machine, S. K., G. W. and J. A. Paige	29	163,037
Bridge, extensible safety, W. Campbell	21	163,048
Broom handle socket, J. H. Pitts	22	163,245
Broom press, A. Boyer	52	162,997
Brush, tooth, S., J., and A. Bidwell	161	163,043
Buckle, M. Hester	23	163,195
Buckle, Himelrigh and Smith	23	163,070
Burner, gas, W. Garland	64	163,007
Burner, gas, G. W. Tinsley	64	163,118
Buttons, attaching, S. W. Shorey	23	163,270
Can for oils, tank, H. E. Wolcott	107	163,289
Canister, S. A. Healy	88	163,075
Car axle boxes, device for lubricating and preventing the heating of, E. A. Warren	122	163,285
Car coupling, Shelley, Bozarth, and Spring	122	163,111
Car buffer, railway, P. E. Drake	122	163,165
Car, hand, J. H. Gabert	121	163,176
Car, single rail railway, C. McWayne	121	163,227
Car, street, J. Stephenson, (reissue)	121	6,427
Car, street, J. Stephenson, (reissue)	121	6,428
Car, street, J. Stephenson, (reissue)	121	6,429
Car trucks, guide wheel for, T. H. Lane	122	163,215
Car window, L. S. Starrett	121	163,113
Carriage clip, A. W. Doty	31	163,075
Carriage dash board, J. Curtis	31	163,053
Carriage door, G. Shaffner	31	163,208
Carriage spring, H. Sprague	31	163,112
Carriage top, J. H. Gibson	31	163,178
Carriage window, G. A. Keene	31	163,016
Carts, shifting body for hand, J. M. Jones	31	163,078
Cartridge, ball, R. F. Cook	32	163,154
Cartridge loading machines, feeding attachment for, A. C. Carey	55	163,151
Cartridges, machine for making and loading, J. V. Meigs	55	163,024
Castings, rumbler for cleaning, L. I. Todd	33	163,034
Ceiling and floor, fire-proof, G. B. Post	4	163,248
Chair base, W. T. Doremus	62	163,054
Chair, reclining, J. S. Leas	62	163,218
Chair, rocking, C. Brada	62	163,145
Churn, rotary, S. S. Beekly	45	162,995
Cider, manufacturing, W. H. Gilmore	19	163,182
Cigar press, W. P. Smith	160	163,272
Cigar tip, F. Bourne	160	163,141
Clamp, C. H. Fuchs	29	163,006
Clock escapement, White and Leary	36	163,125
Coal holder, Whiteside and Holliday	154	163,126
Coal mines, ventilating apparatus for, F. Murphy	166	163,098
Column, rolled iron, J. B. and J. M. Cornell	21	162,999
Copying press pad, C. and J. G. Rowland	146	163,029
Cordage, &c., machine for finishing, T. Tebow	17	163,280
Counter or heel stiffener blanks, machine for dividing, S. Moore	16	163,231
Cradle, F. C. Wireman	62	163,288
Crank and lever, A. R. Crihfield	67	163,001
Cultivator and chopper, rotary, G. W. Fenley	43	163,061
Cylinders, drying, J. Butterworth	150	163,150
Damper, ventilating, A. A. Schroder	154	163,109
Derrick for stacking hay, H. J. Hay	79	163,193
Dissolving and crystallizing, apparatus for, J. B. Root	26	163,260
Door sill, T. F. McEy	30	163,224
Drill chuck, rock, Reynolds and Tufts	124	163,257
Drills, hand protecting attachment for, W. M. Hance	100	163,067
Dripping stand for vessels, H. C. Collison	88	162,998
Egg carrier, J. L. Stevens	116	163,274
Emery wheel, S. G. Morrison	70	163,025
Engine, oscillating, J. Hall	150	163,186
Engine valve gear, steam, H. E. Marchand	152	163,090
Excavator, J. S. and W. C. Whitecarver	54	163,124
Exercising apparatus, W. A. Knight	143	163,061
Eyelets, manufacture of, E. Parker, (reissue)	23	6,426
Fan, paper, C. C. E. Schwartz	165	163,266
Fare register, alarm, T. B. Doolittle	42	163,164
Fatty matters from tanners' scraps, &c., extracting, W. Adamson	35	163,130
Faucet, P. Schofield	167	163,263
Faucet, basin, J. Farrell	167	163,005
Feather renovator, U. B. Waddle	62	163,283
Fence, farm, S. Stout	52	163,116
Fence wire, R. Ellwood	52	163,169
Fire arm, revolving, D. Smith	123	163,032
Fire arm, revolving, D. B. Wesson	123	163,036
Fire arms, cartridge for, J. H. Gill	32	163,181
Fire place, E. M. Deey	154	163,053
Flowers in boxes, device for holding artificial, Andrews and Talcott	54	163,132
Flue cleaner, A. W. Abrams	148	163,129
Founder's pattern, S. J. Gold	33	163,010
Fuel, process and apparatus for generating gaseous, A. Ponsard	61	163,247
Furnace, hot air, W. O. Crocker	154	163,050
Furnace, hot air, S. J. Gold	154	163,069
Furnace, steam boiler, D. P. Beard	149	163,137
Game table, T. L. Hawkins	143	163,192
Gas apparatus, hydrocarbon, G. W. Tinsley	64	163,117
Gas fixture for lighting vaults, R. H. Watson	64	163,035
Gas governor, Dunbar and Stowell	64	163,166
Gas regulator, S. S. Ingalls	64	163,014
Gas regulator, I. Rehn	64	163,255
Gate, automatic, H. Krom	52	163,084
Glass molds, detachable plate for, G. Storm	68	163,276
Glove clasp or fastener, L. Lewine	23	163,219
Glue pot, T. C. Howes	29	163,303
Grain fur grinding, preparing, Bertelsen and Martens	57	163,139
Grass seed cleaner, blue, Wilcox and Dejarnatt	159	163,037
Grate, W. A. Holbrook	154	163,012
Harness knife, A. Friderick	78	163,062
Harvester, Stickle, Parker, and Moore	74	163,275
Harvester, F. F. White	74	163,121
Harvester rake, W. A. Wood	74	163,127
Harvester seat, Wheeler and Case	74	163,287
Hasp for trunk locks, F. W. Mix	94	163,230
Hay stacking derrick, H. J. Hay	79	163,193
Heater, feed water, Orme and Burk	148	163,100
Hook, snap, J. Eberle	23	163,056
Horse collar pads, machine for pressing, Mason and Chamberlin	72	163,091
Hose coupling, J. Rappenthal	81	163,261
Ice machine, D. Boyle	83	163,142
Ice machine, D. Boyle	83	163,143
Ice machine, D. Boyle	83	163,144
Ice machine, A. H. Tait	83	163,279
Index, C. W. Seaton	146	163,267
Indicator, F. M. and M. E. Amsden	146	162,992
Indicator, station, A. M. Smith	121	163,041
Iron into steel, converting old, A. Jullien	85	163,080

	Class No.	No. of Patent.
Jelly press, hand, V. Knecht	19	163,210
Journal box, self-lubricating, W. Dame	87	163,160
Kaleidorama, Ferris and School	157	163,173
Kneading board, T. M. Hobson	88	163,200
Knitting machine, D. Bickford, (reissue)	89	6,423
Knitting machine, D. Bickford, (reissue)	89	6,424
Knitting machines, take up for, I. and A. Tompkins	89	163,179
Ladder, extensible, E. Clark	30	163,049
Ladder, step, J. Blauvelt	30	163,044
Ladder, step, Isaacs and Halliday	30	163,205
Ladder, step, H. P. Stichter	30	163,114
Lamp chimney, mica, W. E. Johnson	90	163,206
Lamp, cooking, G. P. Houston	65	163,202
Lamp-black, apparatus for making, P. Neff	107	163,027
Lantern, C. S. S. and A. L. Baron	99	163,136
Lanterns, lime-light apparatus for magic, L. J. Marey	157	163,087
Latch, gate, J. L. Giessler	93	163,179
Leather finishing machine, J. P. Friend	92	163,063
Leather punching machine, H. Mott	92	163,096
Life preserving bed, A. G. Haskell	138	163,011
Locomotive, J. V. Meiga	94	163,228
Locomotive smoke stack, H. V. Faries	94	163,172
Loom, needle, J. H. Greenleaf	95	163,184
Loom shedding mechanism, R. B. Goodyear	95	163,064
Lumber matching machine G. J. Shimer	173	163,269
Mandrel, expanding, P. B. Lawson	100	163,217
Manures, treating blood for the manufacture of, T. Myerson	96	163,099
Motion, device for transmitting, R. DeLeidl	67	163,003
Mowing machine, Gordon, Telford, and Myers	74	163,183
Mowing machine, W. A. Wood	74	163,128
Needle board for registering bank notes, &c., J. D. Smith	117	163,271
Night soil, transit tank for, W. Painter	96	163,238
Nursing apparatus, Marsh and Thompson	156	163,022
Oar lock, folding Thornton and Vice	13	163,115
Oil, tank for retailing coal, J. H. Boardman	107	163,140
Ordnance, J. G. Buttler	105	163,149
Ore concentrator, J. V. Pomeroy	3	163,104
Organ reed board, W. W. Walker	106	163,121
Padlock, combination, M. B. Brooks	93	163,147
Paint, mineral, Sneed and Kirtley	107	163,273
Pavement, L. Dutertre	110	163,168
Paving and roofing, composition for, J. R. McClintock	110	163,222
Paving and roofing, composition for, J. R. McClintock	110	163,223
Photograph burnisher, W. G. Entrekin	111	163,170
Picture frame hanger, F. A. Phillippi	82	163,244
Pile driver, M. McDermott	82	163,226
Pinchers, G. H. Strong	100	163,277
Pinch bar, M. G Collins	79	163,151
Pipes, flexible joint for, J. P. Culver	167	163,051
Pipes, shield for, H. Patmont	167	163,241
Plate lifter and toaster, J. A. Rakestraw	88	163,105
Pliers, cutting, J. G. Foreman	170	162,175
Pocket books, safety attachment to, G. S. Knapp	146	163,017
Pot, coffee, H. W. Watson	136	163,206
Pot, coffee and tea, Noland and Neidich	136	163,233
Pottery, machine for molding, W. Linton, (reissue)	115	6,425
Powder and shot charger, Hicks and Weatherwax	55	163,196
Power, device for transmitting, G. J. Tschenlin	67	163,281
Press for cider, &c., H. Krumsick	19	163,085
Press, soap, A. Neupert	26	163,232
Printed sheets, machine for calendering, H. J. Gill	117	163,180
Printers' rollers, machine for washing, T. Muir	117	163,087
Printing instrument, electro mechanical, Hansen and Jurgensen	50	163,190
Printing presses, feed gage for cylinder, H. Barth	117	162,993
Printing presses, guide roller for Webb, J. W. Kelberg	117	163,207
Printing, &c., relief plate for, B. B. Huntoon	117	163,204
Pump, E. D. Leavitt, Jr	118	163,018
Pump bucket, chain, E. Hoyt	118	163,013
Purifier, middlings, Huntley, Holcomb, and Heine	57	163,074
Purifier, middlings, K. Schwab	57	163,030
Quilting frame clamp, U. N. Partridge	38	163,102
Rag cutting machine, W. C. Harrison	95	163,069
Railway, elevated, J. M. Hannahs	120	163,188
Railway, elevated, J. M. Hannahs	120	163,189
Railway signaling apparatus, pneumatic, A. Chambers	120	163,152
Railway spike, J. M. Kent	120	163,208
Railway switch, B. Hinkley	120	163,198
Railway switch stand, J. H. Lukens	120	161,220
Railway tie, S. H. Hamilton	120	163,187
Railway tie, H. Reese	120	163,254
Railway track cleaner, I. N. Haines	120	163,006
Rake, horse hay, G. Platt	77	163,103
Rein holder and whip socket, combined, J. H. Sunderman	31	163,278
Roasting apparatus, L. Dutertre	154	163,167
Sad iron, McEy and McClain	91	163,225
Sash fastener, Gillespie and Coffin	24	163,008
Sash fastener, H. A. House	24	163,201
Sash fastener, M. Judd	24	163,079
Sash fastener, T. Wilson	24	163,040
Saw-gummer, T. S. Disston	131	161,163
Saw-set, H. Disston	131	163,162
Saw teeth, device for swaging and setting, M. J. Rahilly	131	163,252
Saws, attachment to crosscut, A. H. Riley	130	163,256
Saw mill, A. Rodgers	130	163,259
Scales, O. T. Baker	132	163,135
Scales, weighing, T. Fairbanks	132	163,060
Scales, weighing, J. Foller	132	163,174
Screw machine, wood, C. Elliott	171	163,059
Seed and guano distributer, R. Sappelt	133	163,108
Separator, grain, H Kurth	159	163,213
Separator, grain, H. Kurth	159	163,214
Sewage apparatus, R. A. McCauley	51	163,095
Sewing machine ruffling attachment, C. H. Palmer	134	163,239
Sewing machine table, F. R. Wolfinger, (reissue)	134	6,430
Sewing machine tucker, J. H. Cleveland	134	163,290
Sheet metal box, H. Martyn	136	163,088
Ship's berth, J. Mahony	137	163,020
Shoe stretcher, C. and P. Miller	16	163,229
Sled, log, H. S. Bartlett	31	163,042
Sock, mitten, &c., J. Kent	89	163,209
Stamp, hand, B. B. Hill	146	163,197
Staples, machine for pointing, J. Adt	103	162,991
Stereoscopes and graphoscopes, stand for, J. Cremer	157	163,060
Stirrup, J. B. Waggoner	72	163,120
Stove, fire place, H. P. Ohm	154	163,235
Stove implement, L. A. Perry	154	163,243
Stove leg fastening, A. J. Redway	154	163,253
Stove, reservoir cooking, Corse and Fagan	154	163,155
Stove, reservoir cooking, Corse and Fagan	154	163,156
Stove, reservoir cooking, Corse and Fagan	154	163,157
Stove, reservoir cooking, Corse and Fagan	154	163,158
Stove, reservoir cooking, Corse and Fagan	154	163,194
Stove, reservoir cooking, G. Hayner	59	163,068
Sugar, apparatus for molding and liquoring, F. O Matthiessen	155	163,092
Sugar, apparatus for refining, F. O. Matthiessen	155	163,093
Sugar, apparatus for refining, F. O. Matthiessen	155	163,094
Syringe, vaginal, J. S. Wilkin	156	163,038
Table, folding, F. C. Wheeler	62	163,122
Table, game, T. L. Hawkins	62	163,192
Table, ironing, Hinz and Gehrke	91	163,199
Tan vat, C. H. Manning	92	163,021
Tanners, scraps, &c., extracting fatty matters from, W. Adamson	35	163,130
Tanning compound, Haswell and Long	92	163,191
Telegraph wire, compound insulating, A. A. Magianghlin	50	163,221
Thrashing machines coupling for, E. Knock	159	163,083
Thrashing machines, distributer for feeding belts of, B. Jackson	159	163,077
Thrashing machines, feeder for, B. Jackson	159	163,076
Tin plate, decorating, Schmidt and Radbruch	54	163,262
Toilet bracket, R. A. Smith	62	163,111
Tongue support, L. Schruben	31	163,264
Toy, H. T. Lee	143	163,086
Toy dancer, E. C. Barton	143	162,994
Toy gun, J. B. McHarg	143	163,023
Trap, moth, W. Hollis	9	163,071
Treadle, S. W. Wardwell	67	163,284
Trunk fastener, A. V. Romadka	93	163,028
Trunk locks, hasp for, F. W. Mix	93	163,230
Tubing, core for, W. F. Brooks	163	163,148
Turn table, H. F., G. S., and A. Snyder	120	163,033
Tuyere, Krein and Franck	12	162,211
Umbrella runner, G. E. Bringman	165	163,146
Valve for air brakes, C. H. Perkins	122	163,242
Valve for steam and air brakes, H. E. Marchand	122	163,089
Valve gear for steam engines, H. E. Marchand	152	163,090
Valve, operating, J. A. Ayres	152	163,134
Varnish, M. Zingler	107	163,041
Vehicle spring, C. Hotz	31	163,072
Vehicle wheel hub, L. Rodenhausen	31	163,258
Vessels, dripping stand for, H. C. Collison	98	162,998
Vest, C. R. Plymton	38	163,246
Wagon brake block, G. G. Buckland	31	163,046
Wagon, device for locking ice tongs, &c., to the, L. D. Ormsby	31	163,236
Wagon end gate, B. F. Bulkley	31	163,047
Washing machine, W. A. Bowen	91	162,996
Washing machine, P. Schweikhart	91	163,265
Washing machine, wool, J. K. Proctor	28	163,249
Washing machine, wool, J. K. Proctor	28	163,250
Washing machine, wool, Proctor and Lindsay	28	163,251
Watches, mainspring for, J. A. Dawson	36	163,161
Water distributer, automatic, G. J. Orr	167	163,101
Wind wheel, Edwards and Huntoon	118	163,058
Wind wheels, frame or turn table for, Edwards and Huntoon	118	163,057
Wringer roll, R. W. Rexford	91	163,107

INDEX OF PATENTEES TO WHOM PATENTS WERE GRANTED MAY 11, 1875.

	Patent No.
Abernethy, W. P., assignee	163,178
Abrams, A. W., Flue cleaner	163,129
Adamson, W., Extracting fatty matters from tanners' scraps, &c	163,130

	Patent No.
Adt, J., Machine for pointing staples	162,991
Alvord, C. L., Spring bed	163,131
American Ring Company, assignee, (reissue)	6,426
Amsden, F. M. and M. E., Indicator	162,992
Andrews, T., Jr., and S. C. Talcott, Device for holding artificial flowers in boxes	163,132
Armstrong, F., assignee	163,001
Arranta, J. B., Bale tie	163,133
Ayres, J. A., Operating valve	163,134
Baker, O. T., Scales	163,135
Baron, C. S. S. and A. L., Lantern	163,136
Barth, H., Feed gage for cylinder printing presses	162,993
Bartlett, H. S., Log sled	163,042
Barton, E. C., Toy dancer	162,994
Beard, D. P., Steam boiler furnace	163,137
Beasley, C. J., Bale tie	163,138
Beckly, S. S., Rotary churn	162,995
Bertelsen, A., and M. Martens, Preparing grain for binding	163,139
Bickford, D., Knitting machine, (reissue)	6,423
Bickford, D., Knitting machine, (reissue)	6,424
Bidwell, S., J., and A., Tooth brush	163,043
Blauvelt, J., Step ladder	163,044
Boardman, J. H., Tank for retailing coal oil	163,140
Bosquet, A., Apparatus for capsuling bottles	163,045
Bourne, F., Cigar tip	163,141
Bowen, W. A., Washing machine	162,996
Boyer, A., Broom press	163,142
Boyle, D., Ice machine	163,143
Boyle, D., Ice machine	163,144
Boyle, D., Ice machine	163,145
Bozarth, Spring, and Shelley	163,146
Brada, C., Rocking chair	163,147
Bringman, G. E., Umbrella runner	163,148
Brooks, M. B., Combination padlock	163,112
Brooks, W. F., Core for tubing	163,046
Brown, W. S., assignee	163,047
Buckland, G. G., Wagon brake block	163,150
Bulkley, B. F., Wagon end gate	163,149
Burk and Orme	163,096
Butterworth, J., Drying cylinder	163,048
Buttler, J. G., Ordnance	163,151
Caldbreath, J. C., assignee	163,287
Campbell, W., Extensible safety bridge	163,091
Carey, A. C., Feeding attachment for cartridge loading machines	163,091
Case and Wheeler	163,152
Chamberlin and Mason	163,016
Chamberlin, G., and Sons, assignees	163,049
Chambers, A., Pneumatic railway signaling apparatus	163,290
Clapp, C. M., assignee	163,008
Clark, E., Extensible ladder	163,153
Cleveland, J. H., Sewing machine tucker	162,998
Coffin and Gillespie	163,154
Collins, M. G., Pinch bar	162,999
Collison, H. C., Dripping stand for vessels	163,155
Cook, R. F., Ball cartridge	163,156
Cornell, J. B. and J. M., Rolled iron column	163,157
Corse, A. C., and M. G. Fagan, Reservoir cooking stove	163,158
Corse, A. C., and M. G. Fagan, Reservoir cooking stove	163,000
Corse, A. C., and M. G. Fagan, Reservoir cooking stove	163,001
Corse, A. C., and M. G. Fagan, Reservoir cooking stove	163,050
Crocker, W. O., Hot air furnace	163,002
Culbertson, W. C., Sheer boom	163,159
Cull, H., Earth anger	163,051
Culver, J. P., Flexible joint for pipes	163,052
Curtis, J., Dash board for carriages	163,160
Dame, W., Self-lubricating journal box	161,161
Dawson, J. A., Mainspring for watches	163,053
Deey, E. M., Fire place	163,037
Dejarnett and Wilcox	163,003
De Leidl, R., Device for transmitting motion	163,162
Disston, H., Saw set	163,163
Disston, H., & Sons, assignees	163,163
Disston, T. S., Saw gummer	163,164
Doolittle Manufacturing Company, assignee	163,164
Doolittle, T. B., Alarm fare register	161,054
Doremus, W. T., Chair base	163,055
Doty, A. W., Carriage clip	163,165
Drake, P. E., Railway car buffer	163,166
Dunbar, F. M., N. Stowell, and E. M. Dunbar, Gas governor	163,167
Dutertre, L., Roasting apparatus	163,168
Dutertre, L., Pavement	163,230
Eagle Lock Company, assignee	161,056
Eberle, J., Snap hook	163,194
Eddy, Corse & Co., assignees	163,057
Edwards, C. T., and G. H. Huntoon, Frame or turn table for wind wheels	163,058
Edwards, C. T., and G. H. Huntoon, Wind wheel	163,059
Elliott, C., Wood screw machine	163,169
Eliwood, R., Fence wire	163,170
Entrekin, W. G., Photograph burnisher	163,171
Evans, T. R., Boot and shoe	161,004
Ewing, J. M., Metal wear plate for the treads of boot and shoe heels	163,158
Fagan and Corse	163,155, 163,156, 163,157,
Fairbanks, T., Weighing scales	163,060
Faries, H. V., Smoke stack for locomotives	163,172
Farrell, J., Basin faucet	163,005
Fenley, G. W., Rotary cultivator and chopper	163,061
Ferris, A. C., and C. E. School, Kaleidorama	163,173
Fitch, J., assignee	163,187
Foller, J., Weighing scales	163,174
Forman, J. G., Cutting pliers	163,175
Franck and Krein	163,211
Friderick, A., Harness knife	163,062
Friend, J. P., Leather finishing machine	163,063
Fuchs, C. H., Clamp	163,006
Gabert, J. H., Hand car	163,176
Gardner, T. G., Boiler feeder and regulator	163,177
Garland, W., Gas burner	163,007
Gay, O. M., assignee	163,135
Gehrke and Hinz	163,199
Gibson, J. H., Carriage top	163,178
Giessler, J. L., Gate latch	163,179
Gill, H. J., Machine for calendering printed sheets	163,180
Gill, J. H., Cartridge for fire arms	163,181
Gill, J. M., assignee	163,147
Gillespie, J. E., and G. Coffin, Sash fastener	163,008
Gilmore, W. H., Manufacturing cider	163,182
Gold, S. J., Hot air furnace	163,009
Gold, S. J., Founder's pattern	163,010
Goodyear, R. B, Loom shedding mechanism	163,064
Gordon, A., G. Telford, and J. H. Myers, Mowing machine	163,183
Gray, W. S., Machine for wiring blind slats and rods	163,065
Greenleaf, J. H., Needle loom	163,184
Gross, W. L., and W. W. Kelchner, Combined blank and envelope	163,185
Haines, I. N., Railway track cleaner	163,066
Hall, J., Oscillating engine	163,186
Halliday and Isaacs	163,205
Hamburg American Sewing Machine Company, assignee	163,262
Hamilton, S. H., Railway tie	163,187
Hance, W. M., Hand protecting attachment for drills	161,057
Hancock, T., Straw cutter	163,067
Hannahs, J. M., Elevated railway	163,188
Hannahs, J. M., Elevated railway	163,189
Hansen, H. R. M. J. and C. P. Jurgensen, Electro-mechanical printing instrument	163,190
Harrison, W. C., Rag-cutting machine	163,069
Haskell, A. G., Life preserving bed	163,011
Haswell, A., and J. C. Long, Tanning compound	163,191
Hawkins, T. L., Game table	163,192
Hay, H. J., Derrick for stacking hay	163,193
Hayner, G., Reservoir cooking stove	163,194
Heine, Huntley, and Holcomb	163,074
Hester, M., Buckle	163,195
Hicks, T., and G. W. Weatherwax, Powder and shot charger	163,196
Hill, B. B., Hand stamp	163,197
Himelrigh, W., and J. Smith, Buckle	163,070
Hinkley, B., Railway switch	163,198
Hinz, H. P., and F. Gehrke, Ironing table	163,199
Hobson, T. M., Kneading board	163,200
Hodges, J. S., assignee	163,086
Holbrook, W. A., Grate	163,012
Holcomb, Heine, and Huntley	163,174
Holliday and Whiteside	163,126
Hollis, W., Moth trap	163,071
Hotz, C., Vehicle spring	163,072
Hotz, N., Blind stop	163,073
House, H. A., Sash fastener	163,201
Houston, G. P., Cooking lamp	163,202
Howes, T. C., Glue pot	163,203
Hoyt, E., Chain pump bucket	163,013
Hubbard, A., assignee	163,235
Hubbard Harvester Company, assignee	163,183
Huntley, W. W., A. P. Holcomb, and A. Heine, Middlings purifier	163,074
Huntoon, B. B., Relief plate for printing, &c	163,204
Huntoon and Edwards	163,057, 163,058
Insley, S. A., Canister	163,075
Insley, S. A., & Co., assignees	163,075
Ingalls, S. S., Gas regulator	163,014
Isaacs, J. L., and R. Halliday, Step ladder	163,205
Jackson, B., Thrashing machine feeder	163,076
Jackson, B., Distributer for feeding belts of thrashing machines	163,077
Johnson, F. M., Door bell	163,015
Johnson, L. H., assignee	163,241
Johnson, W. E., Mica lamp chimney	163,206
Jones, F. A., assignee	163,161
Jones, J. M., Shifting body for hand carts	163,078
Judd, M., Sash fastener	163,079
Jullien, A., Converting old iron into steel	163,080
Jurgensen and Hansen	163,190
Keene, G. A., Carriage window	163,016
Kelchner and Gross	163,185
Kellberg, J. W., Guide roller for Webb printing presses	163,207
Kent, J., Sock, mitten, &c	163,209
Kent, J. M., Railway spike	163,208
Kirtley and Sneed	163,273
Knapp, G. S., Pocket book safety attachment	163,017
Knecht, V., Hand jelly press	163,210
Knight, L., Circulating steam boiler	163,082
Knight, W. A., Exercising apparatus	163,081
Knock, E., Coupling for thrashing machines	163,083
Krein, F., and H. Franck, Tuyere	163,211
Krom, H., Automatic gate	163,084
Krumsick, H., Press for cider, &c	163,085
Kullrich, F. F., Album	163,212

	Patent No.
Hurth, H., Grain separator	163 213
Hurth, H., Grain separator	163,214
Lane, T. H., Guide wheel for car trucks	163,215
Laughorne, M., Bill file	163,216
Lawson, P. B., Expanding mandrel	163,217
Leary and White	163,125
Lee, J. S., Reclining chair	163,218
Leavitt, E. D., Jr., Pump	163,018
Lee, H. T., Toy	163,086
Lewine, I., Glove clasp or fastener	163,219
Lindsay and Proctor	163 251
Linton, W., Machine for molding pottery, (reissue)	6,425
Long and Haswell	163,191
Lukens, J. H., Railway switch stand	163,220
Lund, S. M. G., Blind slat adjuster	163,019
Maglaughlin, A. A., Compound insulating telegraph wire	163 221
Mahony, J., Ship's berth	163,020
Manning, C. H., Tan vat	163,021
Marchand, H. E., Valve for steam and air brakes	163,089
Marchand, H. E., Valve gear for steam engines	163,090
Marcy, L. J., Lime light apparatus for magic lanterns	163,087
Marsh, F. F., and A. F. Thompson, Nursing apparatus	163,022
Martens and Bertelsen	163,139
Martyn, H., Sheet metal box	163,088
Mason, A. P. and G., and H. W. Chamberlin, Machine for pressing horse collar pads	163 091
Matthews, C. G., assignee	163,133
Matthiessen, F. O., Apparatus for molding and liquoring sugar	163,092
Matthiessen, F. O., Apparatus for refining sugar	163 093
Matthiessen, F. O., Apparatus for refining sugar	163,094
McClain and McEy	163,225
McCauley, R. A., Sewage apparatus	163,095
McClintock, J. R., Composition for paving and roofing	163,222
McClintock, J. R., Composition for paving and roofing	163,223
McDermott, M., Pile driver	163,226
McEy, T. F., Door sill	163 224
McEy, T. F., and E. C. McClain, Sad iron	163 225
McGee, J. L., assignee	163,004
McHarg, J. B., Toy gun	163,023
McWayne, C., Single rail railway car	163,227
Meigs, J. V., Locomotive	163,228
Meigs, J. V., Machine for making and loading cartridges	163 024
Miller, C. and P., Shoe stretcher	163,229
Mix, F. W., Hasp for trunk locks	163,230
Moecker, H., assignee	163,278
Moore, S., Machine for dividing counter or heel stiffener blanks	163,231
Moore, Stickle, and Parker	163,275
Morrison, S. G., Emery wheel	163,025
Mott, H., Leather punching machine	163,096
Muir, T., Machine for washing printers' rollers	163 097
Murphy, F., Ventilating apparatus for coal mines	163,098
Murray, T. W., Bottle stopper	163 026
Myers, Gordon, and Telford	163,183
Myerson, T., Treating blood for the manufacture of manures	163 099
Neff, P., Apparatus for making lamp-black	163,027
Neidich and Noland	163 233
Neupert, A., Soap press	163,232
Noland, J., and C. Neidich, Coffee and tea pot	163 233
Noteman, B. P., Spring bed bottom	163,234
Nye, A. T., Jr., assignee	163,068
Ohm, H. F., Fire place stove	163 235
Orme, A., and W. H. Burk, Feed water heater	162,100
Ormsby, L. D., Device for locking ice tongs, &c., to the wagon	163 236
Orr, G. J., Automatic water distributer	163,101
Paige, S. K., G. W., and J. A., Box machine	163 237
Painter, W., Transit tank for night soil	163 238
Palmer, C. H., Sewing machine ruffling attachment	163,239
Palmer, J. F., Animal poke	163,240
Palmieri, H., Shield for pipes	163,241
Parker, E., Manufacture of eyelets, (reissue)	6,426
Parker, Moore, and Stickle	163,275
Partridge, C. N., Quilting frame clamp	163 102
Perkins, C. H., Valve for air brakes	163,242
Perry, I. A., Stove implement	163 243
Phelps, W. J., assignee	163,178
Phillippi, F. A., Picture frame hanger	163 244
Phipps, F. H., assignee	163,244
Phipps, F. H., assignee	163,181
Pickles, J. C., assignee	163,153
Pitts, J. H., Broom handle socket	163,245
Platt, G., Horse hay rake	163 103
Plymton, C. R., Vest	163,246
Pomeroy, J. V., Ore concentrator	163,104
Ponsard, A., Process and apparatus for generating gaseous fuel	163 247
Post, G. B., Fire proof ceiling and floor	163 248
Proctor, J. K., Wool washing machine	163 249
Proctor, J. K., Wool washing machine	163,250
Proctor, J. K., and C. R. Lindsay, Wool washing machine	163 251
Raibrnck and Schmidt	163 252
Rahilly, M. J., Device for swaging and setting saw-teeth	163,252
Rakestraw, J. A., Plate lifter and toaster	163,105
Rawson, C. D., Spring bed bottom	163,106
Redway, A. J., Stove leg fastening	163 253
Reese, H., Railway tie	163 254
Rehn, L., Gas regulator	163,255
Rexford, R. W., Wringer roll	163,107
Reynolds, G. H., and W. Tefft, Rock drill chuck	163,257
Riley, A. H., Attachment to crosscut saws	163 256

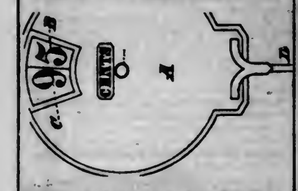
TITLES, DRAWINGS, AND CLAIMS

OF



PATENTS GRANTED MAY 11, 1875.

163,201. MACHINES FOR POINTING STAPLES. John Adt, New Haven, assignor to the Stanley Works, New Britain, Conn. [Filed Jan. 4, 1875.]

In a machine for swaging or pointing staple-legs, the rollers B E, provided with dies C D E, having tapering V-shaped recesses b b, formed at the junction of the parts C D E, distant from one another equal to the distance from one another of the two limbs of the staple, all substantially as described.

163,202. INDICATORS. Fayette M. Amsden, Middleborough, and Marcus B. Amsden, Clinton, Mass. [Filed Oct. 12, 1874.]

The card B, containing the ordinals and slots C, arranged between and in combination with the card C, marked with the digits, and card A, provided with the opening F and tine D, all operating as and for the purpose set forth.

163,204. TOY DANCERS. H. C. Barton, East Hampton, Conn. [Filed Oct. 16, 1874.]

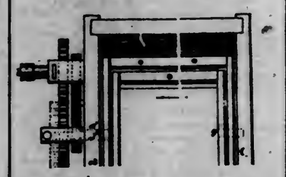
Brief.—By slight agitation of the plate while held in the hand the figure dances, moves in a circle, and the bell-wire furnishes appropriate music.

1. In a toy, the combination of the plate A, provided with a handle, a, and having a socket, c, and the wire B, bent to fit the socket, extending over the face of the plate, projecting upward, and carrying a jointed figure, F, as set forth.

2. The combination, in a toy, of the plate A, having a handle, a, and a wire bail, D, arranged below the plate, to strike the latter when vibrated, as described.

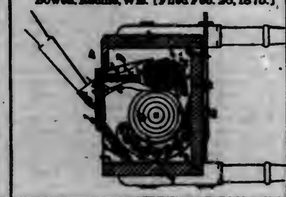
3. The combination, with a plate, A, constructed to be supported by the hand of a jointed figure, F, connected to a wire attached to the plate, and a bell, D, secured below the plate, so that the movement of the figure and the sounding of the bell are both effected by agitating the plate, as specified.

163,222. FEED-GAGES FOR CYLINDER PRINTING-PRESSES. Henry Barth, Cincinnati, Ohio. [Filed Jan. 12, 1876.]



Brief.—The gage is secured in a depression in the cylinder, instead of on the feed-board, and is adjustable by set-screws.

In combination with the impression-cylinder of a printing-press, a gage of guide, when said gage is made vertically and circumferentially adjustable upon the face of the cylinder, substantially as shown.

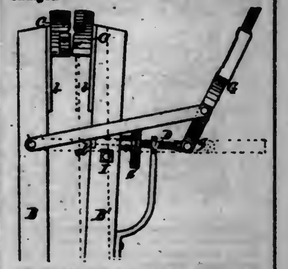


163,205. ROTARY CHURNS. Samuel S. Beckly, Lenark, Ill. [Filed Jan. 20, 1876.]

Brief.—A rotary churn in which, by throwing one of a system of gear-wheels in or out of gear, a motion of rotation in opposite or same directions is given to two dashers.

A churn the dashers b c of which are operated by the combination of the wheels 1 2 3 4 5, the wheel 2 being adapted to be thrown out of gear, so that the dashers will revolve together, substantially as described.

163,206. WASHING-MACHINES. Wm. A. Bowen, Racine, Wis. [Filed Feb. 26, 1875.]



1. In a washing-machine, the vibrating wash-board D, composed of the fluted portion d, the segmental-grooved and plain-surfaced portion d', yielding, lift'-g, and pressing portion d'', side pieces E E, short journals b b, and sockets f f, in the manner and for the purpose specified.

2. In combination with bearings d d, cover-sections b b, rubber bearings l l, and board E, constructed with the portions d d' d'', and with side pieces E E, journals b b, sockets f f, and handles g g, in the manner and for the purpose described.

3. The combination of the circularly-corrugated end pieces C, the segmental roller wash-board E, the vibrating pounding, washing, and rubbing and lifting board D d d' d'', springs s', passages e e', inclined fluted bottom board F, cover-sections b b', sockets f f, journals b b, spring f, and handles g g, all constructed in the manner and for the purpose described.

163,207. BROOM-FRAMES. Aaron Boyer, Galesburg, Ill. [Filed Jan. 9, 1875.]

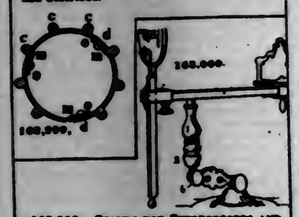
Brief.—The lever that operates the two clamping-jaws has its short arm adjusted by a thumb-screw, to regulate the movement of the jaws. The faces of the jaws are constructed to hold a broom evenly, firmly, and permit the horizontal seam to be made straight.

1. The stationary upright B and pivoted upright B', having clamps C, and operated by means of the screw-rod D and adjusting-nut e, attached to the pivoted upright, the lever G, and the connecting-rods H, the latter being pivoted to the lever and to the stationary upright, substantially as and for the purpose specified.

2. The clamps C, constructed as described, with an upper concave edge, c', to facilitate sewing, substantially as described, and for the purpose specified.

3. The clamps C, having the projecting side lugs c' and dovetailed projections c, in combination with the gib-plates b'' and fixed plates b, substantially as and for the purpose set forth.

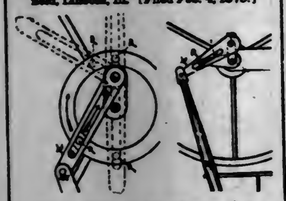
163,208. DRIPPING-STANDS FOR VESSELS. Henry C. Collison, Dover, Del. [Filed Mar. 26, 1875.]



In combination with a close box, case, or stand, A, having side doors B B, the inclined and grooved shelves C C, stop-pieces b b, and receiver D, as and for the purpose described and represented.

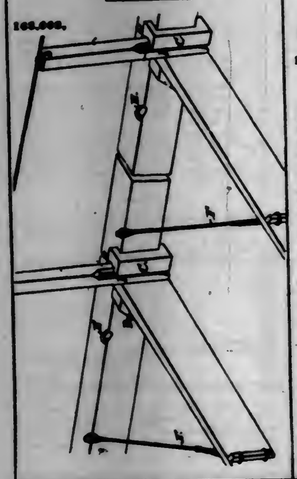
HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

163,099. ROLLED IRON COLUMNS. John S. Cornell and John M. Cornell, New York, N. Y. [Filed Apr. 23, 1875.]



The improved post or column herein described, formed of the rolled segmental ribbed plates *c* with the strips *n o* along one edge set inward when formed in the rolls with the shoulder *m* of the rabbet immediately back of one of the ribs *c*, so that the joint on the outside will come against the side of the rib, and there be practically hidden, and the segments riveted together with the lap-joint *d*, as shown and described.

163,000. STANDS FOR STEREOSCOPES AND GRAPHOSCOPES. James Cremer, Philadelphia, Pa. [Filed Apr. 14, 1875.]



The adjustable stand for stereoscopes and graphoscopes, consisting of the handle 1, the socket-piece 2, the clamping hinge-joint 6, and the base *c'*, the said parts being constructed and arranged substantially in the manner described, for the purposes herein before set forth.

163,001. CRANKS AND LEVERS. A. R. Orthfield, Lincoln, Ill. [Filed Feb. 4, 1875.]

The combination of the stationary shaft O, the revolving shaft *q*, the slotted crank K, the pins *p* and *t*, operating together for the purposes herein described.

163,002.

163,002. STANDS FOR STEREOSCOPES AND GRAPHOSCOPES. James Cremer, Philadelphia, Pa. [Filed Apr. 14, 1875.]

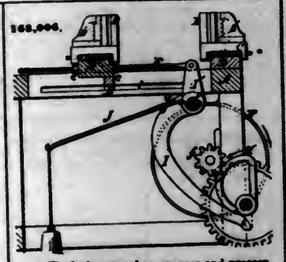
The adjustable stand for stereoscopes and graphoscopes, consisting of the handle 1, the socket-piece 2, the clamping hinge-joint 6, and the base *c'*, the said parts being constructed and arranged substantially in the manner described, for the purposes herein before set forth.

163,003. SHEER-BOOMS. Wm. O. Culbertson, Girard, Pa. [Filed Mar 16 1875.]

1. In a sheer-boom the rudders thereof, adapted to turn on their longitudinal axes, in combination with their operating cords and windlass, and back-stops C, substantially in the manner and for the purpose described.

2. In a sheer-boom the rudders thereof, adapted to rotate on their longitudinal axes so as to present a horizontal or vertical surface to the water, in combination with the stops C and E, and hold-backs F, substantially as described.

163,004. DEVICES FOR TRANSMITTING MOTION. Raphael De Leidi, Brooklyn, N. Y. [Filed Aug 21, 1874.]



The combination of the tube A and rod B with the two pivoted arms C C, arranged and operating in relation to each other, substantially as represented and described.

163,005. METAL WEAR-PLATES FOR THE TREADS OF BOOT AND SHOE HEELS. Jas. M. Ewing, Washington, D. C., assignor of one-half his right to J. L. McGee, same place. [Filed Mar. 8, 1875.]

Brief.—The metal wear-plate revolves slightly every time the foot strikes the ground.

A circular revolving plate or disk, pivoted at its center, and attached to the under side of a boot or shoe heel, all arranged and operating so that a portion of its perimeter shall correspond with the side of the heel at the point where it first meets the ground, substantially as shown and described.

163,006.

1. The lock-corner-box squarer and presser, consisting of two stationary and two movable angle-blocks, B, said blocks B having recesses *b*, for receiving the corners of the box, and suitable mechanism for bringing the movable blocks toward the stationary blocks, substantially as and for the purpose described.

2. The combination, with a hinged block, B, of bed-plates C and guides D', whereby said blocks may be adjusted laterally, thus corresponding to different-sized boxes, substantially as and for the purpose described.

3. The hinged blocks B, provided with a right-angular mouth and spring B', substantially as and for the purpose described.

4. The block B, provided with an angular recess, *b*, for receiving the ends of the tenons, substantially as and for the purpose described.

5. The combination of the cam H, the lever I I', and rod E with the sliding guide D' and mechanism J K, for causing the said guide D' to recede, substantially as and for the purpose described.

6. The combination, with a screw-cut shaft, E, and nuts *e*, of guide-blocks D and block B, whereby the said blocks may be adjusted to any position on the shaft, substantially as and for the purpose described.

163,007. GAS-BURNERS. William Garland, Boston, Mass., assignor to Chas. A. Shaw, same place. [Filed Mar. 10, 1875.]

Brief.—The flow of gas is regulated by adjusting the inner cap upon the slotted tube.

In a gas-burner, the slotted tube B B, inner cap C, outer cap or casing G G, and tip H, combined to operate substantially as and for the purpose specified.

163,008. SASH-FASTENERS. Jas. B. Gillespie and Galen Coffin, Boston, Mass. [Filed Dec. 23, 1874.]

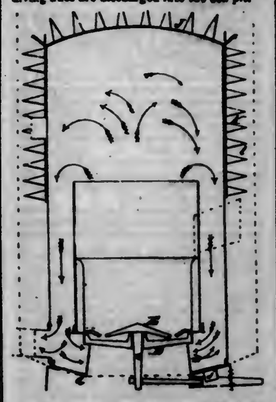
Brief.—A vertical catch-bolt is incased and secured in the side of the sash, its outwardly-projecting beveled head passing through an aperture in the plate, and resting in notches in the window-frame. There is also a spring of sufficient tension to somewhat more than sustain the weight of the sash, so that while there is no appreciable resistance to raising the sash, a slight downward pressure is required to force the beveled head inward by overcoming the spring. There is additionally a pivoted locking-dog, held in position by the friction of the spring, and operated by a key, by which the dog is turned over against the lower end of the catch-bolt, thus preventing it from being forced inward, and locking the device.

1. The catch-bolt A, with its beveled projecting head *a*, and its stem *b*, suitably attached to the plate B, in combination with the spring C, substantially as shown and described.

2. The dog *f*, in combination with the catch-bolt A, plate B, and spring C, substantially as and for the purpose shown and described.

163,009. SASH-FASTENERS. John Farrell, Pittsburg, Pa. [Filed Feb. 11, 1875.]

1. The combination of a valve closing against the pressure, a screw-ring adjustable in the case or chamber independently of the valve-stem which passes through it, and a spring interposed between the screw-ring and valve, substantially as and for the purposes set forth.



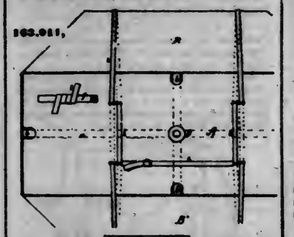
2. The piece *c*, having double inclines in opposite directions, made independent of the cap in which it is seated, in combination with the counter-piece *b*, made independent of the stem which passes through it, but rigidly connected with the handle, the parts being arranged and combined substantially as set forth.

163,010. CLAMPS. Charles H. Fuchs, Sandusky, Ohio, assignor to M. F. Cowdery and J. S. Cowdery. [Filed Feb. 16, 1875.]

Brief.—Wooden boxes formed of pieces with their corners locked may be pressed into shape and squared by means of four laterally and horizontally adjustable spring angle-blocks located upon the top of a suitable frame, and operated upon guides by a cam and lever-arm of peculiar shape, for bringing the blocks together, and imparting pressure thereto, each of the blocks being provided with a recess at the angle for receiving the projecting ends of the tenons.

163,011. HOT-AIR FURNACES. S. J. Gold, Cornwall, Conn. [Filed Sept. 10, 1874.]

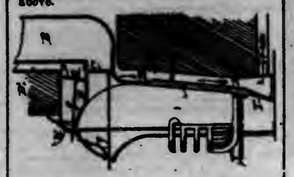
Brief.—The serrated radiating-plates may be detachable. Ashes which collect in the diving-flues are discharged into the ash-pit.



1. The combination, with the shell of the furnace, of radiating-plates, the flat surfaces of which are parallel to and in contact therewith, and studded with projections, substantially as hereinbefore set forth.

2. The combination, with the ash-pit and with a perforated bottom to the smoke-chamber or smoke-flues, of the plate H, whereby the ashes in said smoke chamber or smoke-flues are dumped directly into the ash-pit, substantially as hereinbefore set forth.

3. The combination, with the plate H, of the grate E, projection *j*, and lever *f g*, or its equivalent, substantially as hereinbefore set forth.



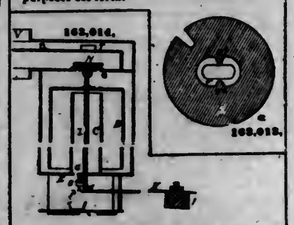
163,012.

3. The strap or straps *i*, combined and arranged with the footable body A, and series of cushions B B', substantially as described.

163,012. GRATES. Walter A. Holbrook, Milwaukee, Wis. [Filed Jan. 8, 1874.]

Brief.—Air can be admitted to the chamber in the rear of the grate from the outside or from the ash-pit, and warm air may be admitted to the room through a register above the fire-place, or be allowed to pass to rooms above.

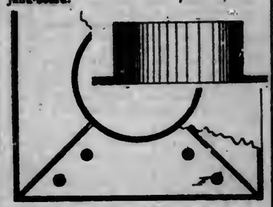
The combination of the open grate, the fire-back A, the air-space D, the cold-air aperture V, the registers T, the damper G, register H, and chamber or space D', all as and for the purposes specified.



163,013. CHAIN-PUMP BUCKETS. E. Hoyt, Stamford, Conn. [Filed Mar. 20, 1875.]

Brief.—A bucket of india-rubber, with a central hub, also a flange with annular indentations on both sides. In the periphery of the rim is a V-shaped recess. This is connected with the flange of the link by a recess inside the hub. Also, there are two recesses in the link-flange, to receive corresponding projections on the interior of the recess of the bucket-hub.

1. An india-rubber bucket, *a*, constructed with a central hub, *a'*, having the recess *a''*, and provided with projections *a'''*, adapted to be received within recesses on a link, and a flange, *a''*, provided with a V-shaped recess, *b*, substantially as and for the purposes described.



2. A link, *c*, provided with eyes or loops *c'* and a central flange, *c*, formed with recesses *c''* in its periphery, substantially as and for the purposes set forth.

163,014.

163,014. FOUNDERS' PATTERNS. S. J. Gold, Cornwall, Conn. [Filed Mar. 8, 1875.]

Brief.—Patterns composed of sheet-metal outer surfaces, with an interposed filling of junk-board.

1. A founder's pattern, the principal surfaces of which are made of sheet metal and combined with an inner filling, substantially as hereinbefore set forth.

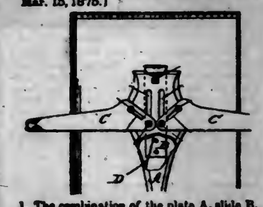
2. A founder's pattern, embodying the combination with the sheet-metal shell or sides, and a filling between them, of strengthening-pieces inserted between the edges or other portions of the outside plates, substantially as hereinbefore set forth.

3. The combination, with the said outside plates and filling above described, of the connections F, connecting the outside plates to each other, substantially as hereinbefore set forth.

163,015.

163,015. DOOR-BELLS. Frank M. Johnson, Bristol, Conn. [Filed Nov. 3, 1874.]

The star wheel secured to the base-plate A, in combination with suitable springs, lever G, and hammer D, all substantially as described, and for the purpose set forth.

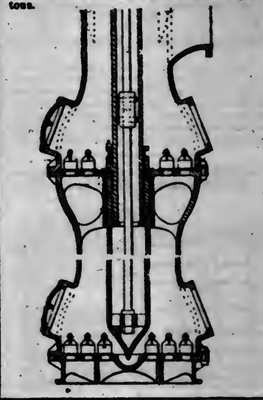


163,016. CARRIAGE-WINDOWS. George A. Keene, Lynn, assignor to himself and G. M. Clapp, Boston, Mass. [Filed Mar. 20, 1873.]

1. The rubber molding B, provided with groove *d* and scarfed into the sash, substantially as described.

2. The rubber molding *e*, framing one side of the glass and clamped into the sash, substantially as described.

163,017. SAFETY ATTACHMENTS TO POCKET-BOOKS. G. S. Knapp, Chicago, Ill. [Filed Mar. 15, 1875.]



1. The combination of the plate A, slide B, and slotted swinging arms C, as shown and described.

2. In combination with the swinging arms C and slide B, an alarm, D, operated substantially as described.

163,018. PUMPS. Erasmus D. Leavitt, Jr., Cambridge, Mass. [Filed Dec. 7, 1874.]

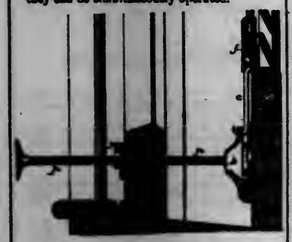
Brief.—The plunger *a* made of two parts of differing diameters—the smaller rigidly secured to the upper part of the pump-case, and the larger sliding upon it, by which the pump discharges at each stroke a quantity of water equal to the difference in area of the two pistons.

163,019. LIFE-PRESERVING BEDS. Asa G. Haskell, North Andover, Mass. [Filed Mar. 24, 1875.]

1. The life-preserving bed, composed of the floatable body A, and series of cushions B B' hinged together and arranged as specified.

2. The combination of the rotary mouthpiece D, and the series of pipes or conduits *b*, with the body A, and its series of inflatable cushions, arranged and combined substantially as explained.

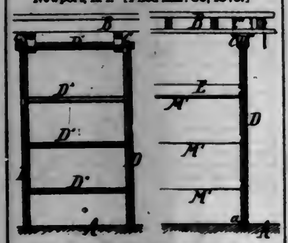
163,020. GAS-REGULATORS. S. S. Ingalls, Chicago, Ill. [Filed Mar. 11, 1875.]



Brief.—A key for insertion between a leg upon the valve-rod and the bottom of the case for cutting off the gas. A lever with adjustable weight attached to the valve-rod.

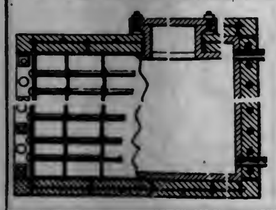
The valve-rod D, extended through the bottom of the case, in combination with the cap B, upper guides Q Q, weighted lever H I, key K, and pin S, as and for the purpose set forth.

The differential plunger having the two parts of different diameters made separate from each other, the smaller of which is fixed and the larger movable, as described, in combination with the two chambers communicating with other by valves, and operating substantially as described.



163,019. BLIND-SLAT ADJUSTERS. Sven M. G. Lind, Racine, Wis. [Filed Apr. 3, 1875.]

Brief.—A movable cam or knob, working on a divided plate, is attached by a bulbous-headed pitman to the connecting-rod of the blind, the pitman-head, in connection with a two-part guide, forming a ball-and-socket joint. The knob or cam is operated either by hand, or by the use of a short key, and there is also provided alternately a longer rod, extending into the room, with the key attachment, and there is additionally a connecting-rod or link hooked to the operating-rod of the upper and lower series of blind-slats, by which they can be simultaneously operated.



The combination of the divided plate a carrying knob or cam *b*, having stops 2, and adapted to be operated either by hand or by a rod and key, *p o*, extending into the room, the rod or pitman *c* connected with the blind-slat-rod *h* by a ball-and-socket joint, and the two-part guide *f i*, with or without connecting rod or link *l*, all substantially as described and shown, for the purpose set forth.

163,020. SHIPS' BERTHS. James Mahony, Newport, R. I. [Filed Mar. 30, 1875.]

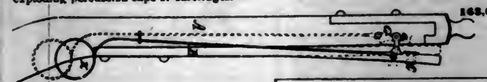
The frames D D¹ D², both turning and sliding vertically in deep loops C, in combination with such loops, allowing vertical motion, and with sockets *a* in the deck below, adapted to support the beds M¹ M², and allow the whole to be readily folded, extended, and firmly placed and supported, as herein set forth.

163,021. TAN-VATS. Charles H. Manning, Washington, D. C. [Filed May 26, 1874.]

A wooden vat or cistern, supported, as shown, by a metallic frame net-work, the whole incased with a covering of artificial stone or cement, as shown and described.

163,022. NURSING APPARATUS. Frank F Marsh and Arthur F. Thompson, Boston, Mass. [Filed Apr. 8, 1875.]

Brief.—Between the rubber nipple and the rubber tube is a short length of glass tube, which carries a mouth-guard as an integral part. This glass connection shows whether the milk is flowing freely or not.



1. The combination of the milk-noter C (or glass piece arranged between the nipple and the elastic tube, to indicate the flow of milk from the tube to the nipple) with the nipple D, the tube B, and the breast-cap A, all being arranged as specified.

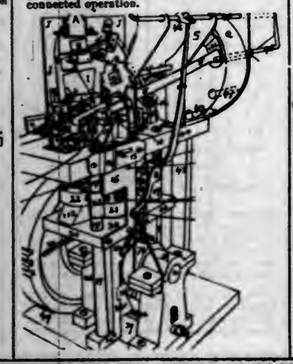
2. The milk-noter, as provided with the guard E in one piece with the tube, all as represented.

163,023. TOY GUNS. John B. McHarg, Rome, N. Y. [Filed Mar. 3, 1875.]

Brief.—Relates to that class of toy guns for exploding percussion-caps or cartridges.

1. In a toy gun, the combination of the stock and barrel A and the spring B, having the thimble C, as and for the purposes described.

2. In a toy gun, the combination of the stock and barrel A, the spring B, and the eccentric pivoted lever D, as and for the purpose described.



3. In a toy gun, the stock and barrel A, the spring B, the catch-lever G, and the rod I, as and for the purpose described.

4. In a toy gun, the stock and the barrel A, having secured to its forward end the bracket P, in which is secured a detachable thimble, M, as and for the purpose described.

5. In a toy gun, the combination of the stock and barrel A, the spring B, the bracket P, firing-lever N, and thimble M, as and for the purpose described

163,024. MACHINES FOR MAKING AND LOADING CARTRIDGES. Joe V. Meigs, Lowell, Mass. [Filed Dec. 8, 1874.]

Brief.—It consists of a combination of mechanism whereby cartridge-cases are formed from pieces of metal, or partially-completed cases are headed, primed, charged with powder, and the bullet inserted by a continuous and connected operation.

1. The combination of the driving-gear, the crank-shaft, the spring-pawl, the notch in the bearing-surface of the gear, and the compressing-pin for disconnecting the clutch and gear, as set forth.

2. The combination of the crank-shaft the segmental eccentric crank, the carriage, and the sector secured to the carriage, and acted upon by the eccentric portion of the crank, substantially as set forth.

3. The combination of the crank-shaft, the driving-gear, its clutch mechanism, the segmental eccentric crank, the hubs on the crank-shaft, the sliding carriage, the sector thereon, and the sectors secured to the bed-plate, these members being constructed and operating substantially as set forth.

4. The combination of a fixed punch, a moving die-plate, and a resisting-die, locked with the die-plate during the operation of the punch, substantially as set forth.

5. The combination of the hopper, the open-ended feed-drum, the troughs in the feed-drum, the reciprocating push-rod, and the conveying-tube, these members being constructed and operating substantially as set forth.

6. The combination of the conveying-tube, the carrier, the tilting fingers, the tube, and the feed-plate, these members being constructed and operating substantially as set forth.

7. The assorting tilting fingers, constructed and operating substantially as set forth.

8. The combination of the fulminate-reservoir, having an opening in its side, the yielding paddles revolving in the reservoir, and the fulminate-receiver, these members being constructed and operating substantially as set forth

9. The combination of the fulminate-receiver, its sliding sleeve, the vibrating arm, carrying the receiver, and the die-plate, carrying the shell to be primed, these members being constructed and operating substantially as set forth.

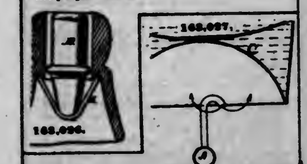
10. The combination, in a machine for loading cartridges, of the valved powder-conveying tube, the conveying-tube I, the valved scale-pan, arranged between the tubes, its scale-beam, and the hooked rocking lever, these members being constructed and operating substantially as set forth.

11. The combination, in machines for loading cartridges, of the valved conveying-tube, the valved scale-pan, the rocking lever, connected with the valves of the conveying-tube and scale-pan, the electrically-charged scale-beam, the electro-magnets, and connecting-wires, these members being constructed and operating substantially as set forth.

12. The combination of the main gear, its clutch, the disconnecting-pin, a catch engaging therewith, a lever, and an inspector connected thereby with the catch-rod, these members being constructed and operating substantially as set forth.

163,025. EMERY-WHEELS. S. G. Morrison, Williamsport, Pa. [Filed Aug. 18, 1874.]

Brief.—The emery surface is formed on a corrugated metallic ring, which is applied on a metallic wheel.



The combination of the metal wheel A and the metal ring B, with their corresponding bevels, and the emery surface *b b*, when used for the purposes substantially as described.

163,026. BOTTLE-STOPPERS. Thomas W. Murray, New York, N. Y., assignor of one-half his right to Henry Van Derbeck, same place. [Filed Mar. 17, 1875.]

Brief.—The hollow ballasted stopper, rising with the liquid, is caught and held fast by the forked springs striking the two projections inside the mouth of the bottle; while the rubber ring, expanding by the gases, hermetically seals it.

A hermetic stopper for gaseous liquids, operating as herein described, made of a hollow shank, D, to which, about midway of its length, is fastened the elastic band B, and at its end or base the forked or double spring S, the latter acting in the two-fold capacity of holding and locking fast the shank D, all working in combination with a bottle having the pendent projection *c*, substantially as and for the purpose set forth.

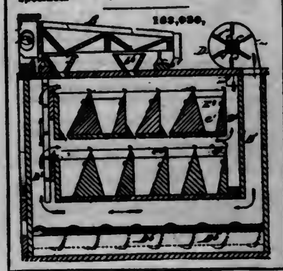
163,027. APPARATUS FOR MAKING LAMP-BLACK. Peter Neff, Gambier, Ohio. [Filed Mar. 8, 1875.]

Brief.—The water-covered domes depend on all sides. They may be of any-shaped perimeter in plan. When they have sides projecting upward from the base of the dome, such sides are steadied by braces connecting them.

In the manufacture of lamp-black, the combination, with the burner or burners B, of overhanging domes or concave surfaces C, filled with water upon their upper sides, the edges of the said domes or concaved surfaces made to project downward on all sides, to impede the progress and condense the products of combustion therein, substantially as and for the purpose described.

163,028. TRUNK-FASTENERS. Antony V. Romadka, Milwaukee, Wis. [Filed Apr. 10, 1875.]

In a trunk-fastener, the catch C, provided with lips, pivoted in the side of the case B, and, when locked, forming a part of it, in combination with the spring E and hasp or catch b, all constructed and arranged to operate as described.



163,029. COPYING-PRESS PADS. Charles Rowland, New York, N. Y., and J. G. Rowland, Quincy, Ill. [Filed Nov. 24, 1874.]

Brief.—Blotting-pads waterproofed on one side.

1. A bibulous paper for blotting and copying purposes, coated on one side with asphaltum varnish, substantially as set forth.

2. A bibulous paper for blotting and copying purposes, coated on one side with asphaltum varnish and litharge, substantially as specified.

163,030. MIDDLINGS-PURIFIERS. Elias Schwab, Lebanon, Ill. [Filed Jan. 13, 1875.]

Brief.—Relative arrangement of air-chambers, fan, and separators, whereby a continuous circulation of air acts upon the middlings in their passage to and from the separators, the air returning to the fan-case, and carrying with it all light impurities, which are finally deposited and carried off in conveyor-chamber

In combination with the separators, the fan and its case D, air-chambers D^1 D^2 D^3 D^4, and conveyer D^5, all constructed and arranged to operate substantially in the manner and for the purpose set forth.

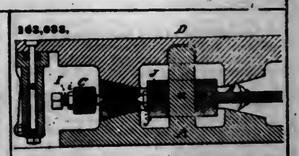
163,031. STATION-INDICATORS. Amos M. Smith, Chicago, Ill., assignor to the Vermont Home Company, Springfield, Vt. [Filed Jan. 23, 1875.]

Brief.—The indicating-ribbon is drawn one way by the action of a pivoted dog, and permitted to move back one tooth at a time by a rocking lever taking into one tooth at a time on second ratchet-wheel.

1. The combination of the pivoted pawl Q, provided with the projecting arm R, ratchet-wheel N, pins P, and the sliding piece T, as and for the purpose specified.

2. The combination of the pivoted pawl Q, provided with a projecting arm, R, the ratchet-wheels N and 1, the roller C, the pawl J, constructed so as to be removed from the ratchet-wheel when the pawl Q is operated, and the spring *b*, for drawing the ribbon from the roller C to reverse the indicator, all substantially as described.

163,032. REVOLVING FIRE-ARMS. Dexter Smith, Springfield, Mass. [Filed Jan. 21, 1875.]



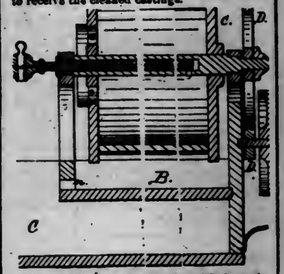
1. An extractor-plate, E', provided with a peripheral shoulder, *e'*, combined with a chambered cylinder, and arranged to be held stationary by one or more catches, *c*, operated in the rear of the extractor, substantially as described.

2. An extractor-plate, E', provided with a peripheral shoulder, *e'*, combined with a chambered cylinder, and arranged to be held stationary by one or more catches, *c*, while the cylinder is moved forward longitudinally to extract the shells, and operated by the movements of the hammer, substantially as described.

3. The combination of the extractor-plate E', provided with a peripheral shoulder, *e'*, the cylinder E, and the recessed recoil-plate F, to receive said extractor-plate, substantially as described.

163,033. TURN-TABLES. Henry F. Snyder and George S. Snyder, Williamsport, and Antes Snyder, Springdale, Pa. [Filed Sept. 24, 1874.]

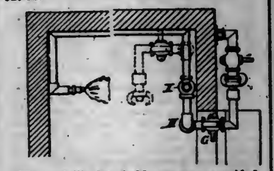
Brief.—The supporting-rollers of a turn-table are adjusted by means of conical-pointed screws, which enter the front and rear face of the rolls; said screws carrying jam-nuts, whereby the adjustment is secured. The sections of the supporting-girders of the turn-table are secured together by strong iron ties having heads at each end, and enlargements or swells between said heads, through which pass vertical bolts, which extend down through the girder. These ties are sunk into corresponding recesses in the upper surface of the girders.



1. In combination with a turn-table, the center-screws I J, matching their conical points into corresponding holes in the ends of the anti-friction rolls B, and secured by jam-nuts *i j*, substantially as and for the purposes herein specified.

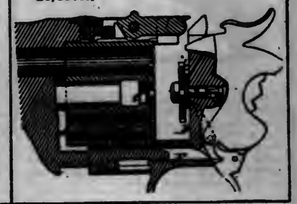
2. A turn-table having the two parts of the girder M connected by longitudinal ties having eyes G^1, with vertical bolts *e* extending through such eyes, both sets of bolts exerting their force in the central plane of the girder, substantially as and for the purposes specified.

163,034. RUMBLERS FOR CLEANING CASTINGS. Lyman I. Todd, Chicago, Ill. [Filed Mar. 24, 1874.]



Brief.—A water-receptacle is placed beneath the rumbler, and provided with a shelf to receive the cleaned castings.

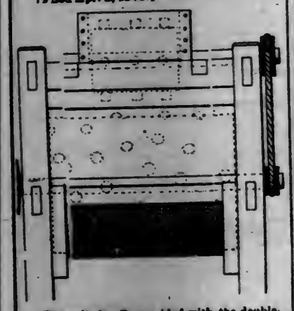
The rumble A, in combination with the tank C, provided with the shelf B, for the purpose set forth.



163,035. GAS-FIXTURES FOR LIGHTING VAULTS. Richd. H. Watson, Philadelphia, Pa. [Filed Apr. 15, 1875.]

Brief.—The adjustable section, hinged to the fixed section within the vault, is provided with a cock with two ways, the smaller of which is for a supply of gas when the larger is cut off.

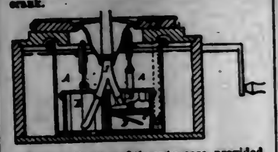
The metallic detachable gas-pipe, provided with the manual coupling F and swinging joints I and H, as herein shown, in combination with the supply-pipes K and D, as and for the purpose herein set forth.



163,036. REVOLVING FIRE-ARMS. Daniel B. Wesson, Springfield, Mass. [Filed Jan. 26, 1875.]

1. In combination with a lock-frame, a single barrel, and a revolving cylinder of chambers, an extractor so arranged that the bearing upon which it revolves is wholly in rear of the front face of the recoil-shield.

2. In combination with a single barrel and revolving cylinder of chambers, a revolving extractor having a central shaft or other projection extending in a rearward direction from the front face of the recoil-shield, for the purpose of holding the said extractor, for withdrawing the cartridge-shells from the said chambers.



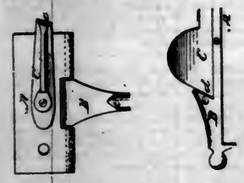
162,037. BLUE-GRASS-SEED CLEANERS. J. W. Wilcox and R. L. Dejarnatt, Paris, Ky. [Filed Apr. 2, 1875.]

The cylinder B, provided with the double-spiral rows of rubbing-teeth b, running in opposite directions from the middle, and rotating within a concave screen, A, to conduct the material from the middle to either end of said screen during the cleansing operation, substantially as set forth.

162,038. VAGINAL SYRINGES. J. S. Wilkin, Chicago, Ill. [Filed Sept. 15, 1874.]

Brief.—The vaginal tube is attached to a bifurcated pipe connected to two force-pumps, working in a receptacle containing medicated water. The vaginal tube passes up through a depressed cup sunk in the cover of the box containing the apparatus. It is worked by a crank.

The combination of the outer case, provided with a cast or cover having the drain-basin N arranged therein; the tank A, arranged in the said case; the double force-pumps B B, arranged in the said tank; the bifurcated discharge-pipe I, and the nozzle J, all substantially as and for the purposes specified.

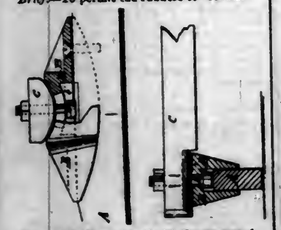


162,039. ADVERTISING CARD-RACKS. Geo. Willett, Burlington, Vt. [Filed Oct. 29, 1874.]

The combination card-holder and advertiser, composed of the concave band B, having pinned thereon the annular wire holders c c c, the movable index-cards A B C D &c., and the metallic or other back E, having the spurs d d d thereon for the purpose of holding the advertisements, all as herein described, and for the purpose as set forth.

162,040. FASTENERS FOR THE MEETING-RAILS OF SASHES. Thomas Wilcox, Belleville, N. J. [Filed Mar 1, 1875.]

Brief.—A jointed flap, suitably notched, is hinged on the edge of a base-plate, which is secured to the bottom rail of the upper sash, and a swinging button, with beveled projection, is likewise attached to the base-plate, in such manner as to move laterally upon, and engage with, the jointed flap, when it lies over the top rail of the lower sash, thus securely locking the meeting-rails together.

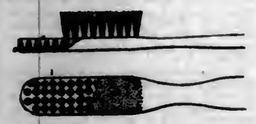


The jointed flap B, hinged to the base-plate A, in combination with the button C, likewise attached to the base-plate, all substantially as shown and described, for the purpose set forth.

162,041. VARNISHES. Maximilian Zingler, 10 Buckland Crescent, Belsize Park, England. [Filed Sept. 24, 1874.]

A varnish consisting of powdered gum, bisulphide of carbon, camphine, benzole, and methylated spirits, substantially as and in the proportions specified.

162,042. LOG-SLEDS. Hiram S. Bartlett, Midland, Mich. [Filed Mar. 20, 1875.]

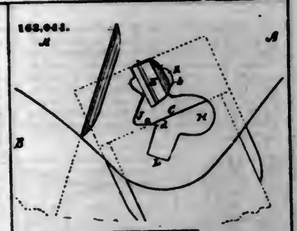


Brief.—To permit the runners to vibrate.

The saddle B, combined with the runners A, the beam C, and the bolt D, substantially as shown and described.

162,043. TOOTH-BRUSHES. Susan Bidwell, James Bidwell, and Arthur Bidwell, London, England. [Filed Sept. 19, 1874.]

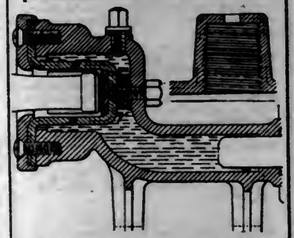
Brief.—The cavities in the brush-stock are bell-mouthed at their outer edges, so that the bristles held therein will not be broken off by striking against the corner when in use.



A tooth-brush in which the bristles are inserted into holes with curved and flaring entrances, for the purposes set forth.

162,044. STEP-LADDERS. Jacob Blauvelt, Blauveltville, N. Y. [Filed Oct. 17, 1874.]

Brief.—The metallic brackets for the top support of the stay-props are provided with notched holes for the insertion of angular-headed pivots attached to the props. The notches afford a means for adjusting the props at the desired angle.

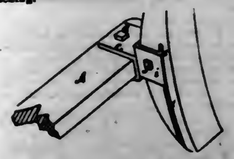


The plate A, having notched hole H, notches I, J, K, and L, in combination with plate C, having the angular-headed pivot M, substantially as specified.

162,045.

162,045. APPARATUS FOR CAPSULING BOTTLES. Antoine Bocquet, Paris, France. [Filed Apr. 17, 1875.]

Brief.—Hydraulic capsuling-machine in which the elastic diaphragm or chamber is secured to the surrounding casing at both ends, so that the pressure acts on the cylindrical or conical part, to compress the corresponding part of the capsule around the neck of the bottle. The diaphragm may have grooves or corrugations on the inner surface, for the purpose set forth.



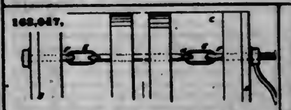
1. In machines for capsuling bottles, the combination of the elastic diaphragm or chamber with the surrounding casing by being secured at both ends, so that the hydraulic pressure acts only on the cylindrical or conical part, and compresses the corresponding part of the capsule around the neck of the bottle, substantially in the manner and for the purpose specified.

2. The elastic diaphragm or chamber, having grooves or corrugations at the inner surface, to obtain either regular plaits or hardly perceptible folds on the compressed part of the capsule, as desired, substantially as specified.

162,046. WAGON BRAKE-BLOCKS. George G. Buckland, Milton, Cal. [Filed Mar. 24, 1875.]

Brief.—Brake bar and block each provided with clasping-plates, one of which has diagonal serrated slots, and the other a corresponding raised portion, for attaching and detaching.

1. The brake-beam A, in combination with the plate c, having the diagonal button f, and shank g, the block B, and plate h, having the diagonal slot o, all substantially as and for the purpose set forth.



2. In a brake-block attachment for wagons, the roughened or toothed shank g of the button f, in combination with the roughened or toothed side of the slot o, substantially as and for the purpose set forth.

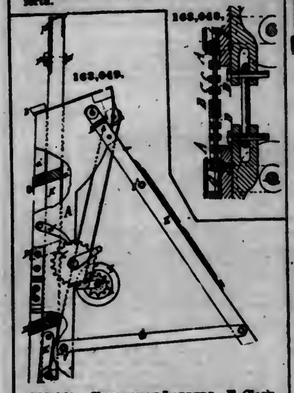
162,047. WAGON END-GATES. Benjamin F. Bulkley, Southport, Conn. [Filed Mar. 13, 1875.]

Brief.—By unfastening one side the rod is uncoupled.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

162,047.

The combination, with a wagon end-gate, having cleats C' C', of a hook-ended slide-rod, D, adjustable symbolts F F, and links E E, substantially as set forth.



162,048. EXTENSIBLE SAFETY-BRIDGE. Wm. Campbell, Floyd C. H., Va. [Filed Apr. 10, 1875.]

Brief.—Cars provided with recess to allow play of rods through rigidly-attached end bars. Intermediate slats play out and in with bars. The ends of the slats are loosely connected by links. Whether the cars crowd or draw apart, there is thus always a platform connecting them

1. The combination of end bars A A, middle bar or bars B, intermediate bars C, rods D, and the links E, forming an extensible car platform, substantially as set forth.

2. The combination of bars A A, middle bar or bars B, intermediate bars C, rod D, and connecting-links E with two cars, each of which has a covered recess, G, in the platform, all substantially as and for the purpose set forth.

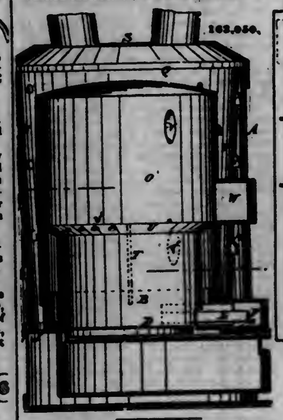
162,049.

162,049. EXTENSIBLE LADDERS. H. Clark, New York, N. Y. [Filed Oct. 10, 1874.]

Brief.—The top section is hinged to the top of the next section below, and when extended for use is held by lock-bolts. Stop-bars are pivoted to the lower sliding section, which engage with the steps to hold the ladder extended.

1. The combination of the pivoted buttons or stop-bars X, with the side bars of the lower extension-section, and with the forward part A B of a step-ladder.

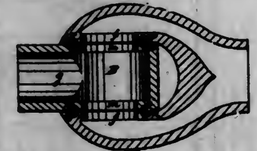
2. The combination of the pivoted or hinged bars M, and the lock-bolts N, with the adjacent ends of the side bars of the extension-sections, substantially as herein shown and described.



162,050. HOT-AIR FURNACES. William O. Crocker, Turner's Falls, Mass. [Filed Dec. 10, 1874.]

Brief.—The direct draft is through the upper exit-opening. The indirect draft is downward through the orifices in the flange of the fire-pot, thence forward, passing the vertical diaphragm, to the lower opening in the vertical flue.

1. In a heating-furnace, the combination, with an outer casing, A, and inner combustion-chamber O', of an intermediate jacket, M, which has openings N, and is made of a greater diameter at the top than at the bottom, as and for the purpose described.



2. The combination of the fire-pot having a flaring flange, U, external partition-plates T, and openings U' in the flange, with the combustion-chamber O', base B, and indirect draft-flue V', as and for the purpose described.

3. The combination of the base B, having a double series of openings, I J, at its top, with the casing A, perforated jacket M, and combustion-chamber O', as herein set forth.

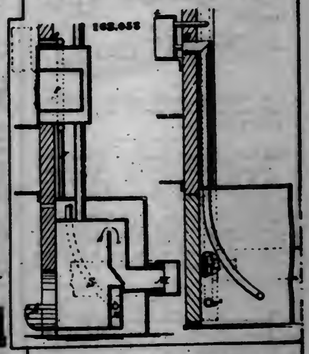
162,051. FLEXIBLE JOINTS FOR PIPES. John P. Culver, Jersey City, N. J. [Filed Apr. 5, 1875.]

Brief.—A joint having two hollow sections, communicating with each other by suitable passages, and connected by annuluses of soft metal, so arranged as to serve the purpose of packing the joint, providing a hinge or pivot thereto, and holding the sections together against tension or strain lengthwise.

The two hollow sections A B, communicating with each other by means of the passages m f, in combination with the annuluses C, of soft metal, cast into the grooves n n', and surrounding the passages m f, the whole constructed and arranged for operation, substantially as and for the purpose set forth.

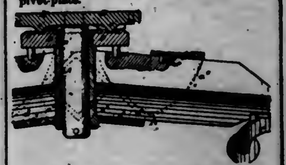
162,052. DASH-BOARDS FOR CARRIAGES. John Curtis, Cincinnati, Ohio. [Filed Oct. 26, 1874.]

Brief.—Improvement on Patent No. 122,966, January 23, 1872.



The mode of securing the terminal G to the molding or bead B of a dash-board by the shank g of said terminal or rivet, clinched against the end of core C and anchored in the binding D, for the purpose stated.

162,053. FIRE-PLACES. H. Mortimer Deey, New York, N. Y. [Filed Aug. 20, 1874.]



Brief.—From a water-back behind the grate a steam-pipe leads through the smoke-flue to a steam-radiator in an upper apartment. From this radiator another steam-pipe passes to the chimney-flue. From the air-chamber issuing the fire-place, an air-pipe, which incases the steam-pipe, extends to the room above, and discharges through a register. The radiator, by rarefying the air in front of the register, accelerates the flow of air through the air-pipe.

3. The combination, with fire-place grate, of the water-chamber R, pipe S, hot-air pipe I, and drum T, as and for the purpose specified.

162,054. CHAIN-BARRS. Wm. T. Doremus, New York, N. Y. [Filed Mar. 1, 1875.]

Brief.—The ring-groove and rib between the top plate and pivot-plate are intended to steady and regulate the movement of the pivot-plate.

1. The base-plate A, cast with the socket a' to receive the pivot or screw, and the sockets a² a² to receive the legs, substantially as herein shown and described.

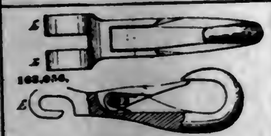
2. The combination of the top plate D, provided with a tapering central hole and pins or points d³, with the tapering projecting upper end of the socket a and sockets a² a² of the base plate A, substantially as herein shown and described.

3. The top plate D having the ring-groove d² formed therein, in combination with the ring-rib d' formed upon the pivot-plate, substantially as herein shown and described.

162,055. CARRIAGE-CLIPS. Alfred W. Doty, Windham Centre, N. Y. [Filed Mar. 12, 1875.]

1. The combination, in a wagon-clip, of attaching-plates f, side pieces B, pivots E, and the spring-rests I, substantially as set forth.

2. The combination, in a wagon-clip, of socket d, straps c, and eye f, substantially as set forth.



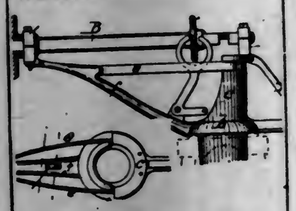
3. The combination of brace X, its attaching-arm, and clip M, for holding the brace X parallel with the bar A, substantially as set forth.

4. The malleable cast-metal spring and bar-clip C, in combination with the step b, substantially as set forth.

5. The combination of the block i with the body-bars A and clip M, substantially as set forth.

162,056. SNAP-HOOKS. J. G. Eberle, Glasgow, Mo., administrator of John Eberle, deceased. [Filed Apr. 26, 1874.]

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

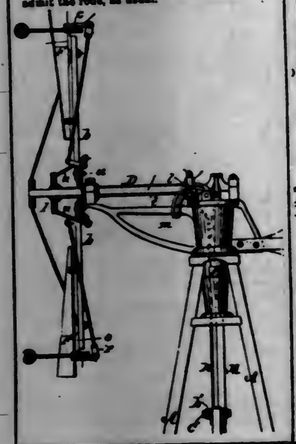


162,636.

A snap-hook, having reverse, bifurcated, and rear-shouldered hook E, as and for the purpose described.

162,637. FRAMES OR TURN-TABLES FOR WIND-WHEELS. Charles T. Edwards and G. E. Huntoon, Moline, Ill.; said Huntoon assignor to said Edwards. [Filed Mar. 31, 1875.]

Brief.—The features of the frame are the journal having the three converging arms, to sustain the front bearing of the shaft. The support for the rear bearing may be cast with the body, or made in a separate piece and bolted in place.



1. The frame for a wind-wheel, consisting of the tubular journal *a*, provided with the three converging arms, *c*, *c*, and *f*, cast in a single piece, as shown and described.

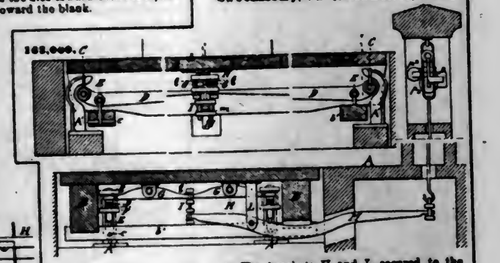
2. In combination with the open frame constructed as shown and described, the shaft B, sliding collar *h*, and the elbow-levers *i*, constructed and operating as shown.

162,638. WIND-WHEELS. Charles T. Edwards and G. E. Huntoon, Moline, Ill.; said Huntoon assignor to said Edwards. [Filed Feb. 16, 1875.]

Brief.—The improvement is in the form and construction of a fan-bar cap, and a bracket to support the fans or sails; also, in the use of one or more eccentrics to operate the sliding collar, through which the fans are controlled; also, a peculiar manner of connecting the controlling rods or bars to the fans, and in a peculiar arrangement of rods and levers, by which the movement of the fans is controlled without slitting their inner ends to admit the rods, as usual.

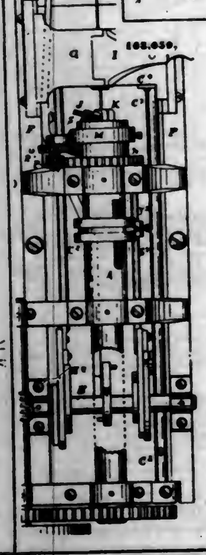
1. The cap or socket *d*, inclosing the end of the fan-bar, made in two parts, having their inner edges notched to leave an opening between them for the admission of the supporting journal or pivot.

2. In combination with the flanged or headed journals *f*, the caps or sockets *d*, constructed and arranged substantially as shown.



3. In combination with the sliding collar *i* and band *k*, the eccentric *m*, arranged to hold and move the collar, substantially as shown.

4. In combination with the fan-bar *c*, the flat plate *p*, secured thereto, the block *r*, pivoted to the end of said plate, and the controlling-rod *s*, having its end threaded and screwed directly into the block *r*, as shown, the arrangement forming an adjustable hinge-connection of the rod to the fan, consisting of two pieces only, without nuts or extra parts.



5. The sliding collars I and *i*, mounted on the main shaft, and connected by rods *t*, in combination with the pivoted fans F and the elbow-levers *w*, with the connecting-rods *s* and *u*, all constructed and arranged to operate substantially as described.

162,639. WOOD-SCREW MACHINES. Caleb Elliott, Richmond, Ind. [Filed Sept. 25, 1874.]

Brief.—The cutters rotate on their axis, and revolve around the blank, which is drawn outward while they are operating upon it by the cross-head. The finishing-dies revolve with the cutters around the blank. The cutters are thrown in at the point of the screw by means of a plunger within the mandrel, which plunger, by virtue of its peculiar construction, actuates the dies toward each other, and the cutters toward the blank.

162,639.

162,639.

1. The combination of the main mandrel A with the circular cog-rack N, pinion P, gear O, pinion R, and mills or rotary cutters J, substantially as shown and described.

2. In combination with the block L, the dies K, jaw-lever T, and mills or rotary cutters J, substantially as and for the purpose set forth.

3. The combination of the sleeve C' with the plunger A', dies K, jaw-lever T, and mills or rotary cutters J, substantially as shown and described.

4. The plunger A', consisting of two sections or leaves, the upper one E' being adjustable by means of the set-screw F', substantially as shown and described.

5. The clamp-lever A', pivoted to the cross-head G, in combination with the clamp-lever A', pivoted to the lever A' at B', substantially as shown and described.

6. The cam B', in combination with the levers A' and A' and springs *a* and *b*, substantially as shown and described.

7. The combination of the cam-leaf J' and spring R', as and for the purpose set forth.

8. The cam-leaf K' and spring Q', in combination with the pawl M', cam H', and slide-head N', for the purpose set forth.

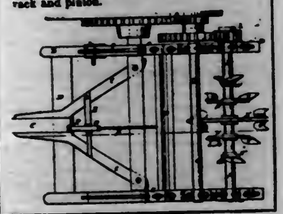
9. The rod C', attached to the cross-head G by means of the hanger C', as shown in Figs. 1 and 2, and sliding through the bearing C', in combination with the pins *h* and *i* and feathers *k* and *n*, as shown and described.

10. The cam H', in combination with the pawl L', connection G', cross-head G, and clamp I, as and for the purpose described.

162,640. WEIGHING-SCALES. T. Fairbanks, St. Johnsbury, Vt. [Filed Dec. 10, 1874.]

162,640.

1. The brackets H and L, secured to the cross-plank A, so that both shall be carried by the platform B, and supporting the intermediate lever G and last lever M, as and for the purpose specified.

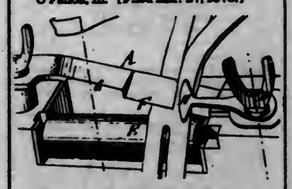


2. The cross timbers or bars *b' b'* and loops E, in combination with the main platform-sticks B B and the main levers D D, as and for the purpose herein specified.

3. The obliquely-mounted transverse levers G, having their inner ends adjacent, but out of contact with each other, and provided with conical points *n*, in combination with the twisting yoke I, and the last lever M and its connections, as herein specified.

4. The yokes I F and conical bearing-points *d g n*, in combination with the longitudinally-arranged main levers D, transverse levers G, and suitable connections therefrom to the weighing-beam, as herein specified.

162,641. ROTARY CULTIVATORS AND CHOPPERS. George W. Fenley, Nacogdoches, Tex. [Filed Mar. 6, 1875.]



Brief.—The revolving cultivator-shaft is adjustable upon the pivoted frame by means of rack and pinion.

1. The combination of the sliding bars H, the gear-wheels E F K L, and the plow-shaft M with the frame D and the wheels A, substantially as herein shown and described.

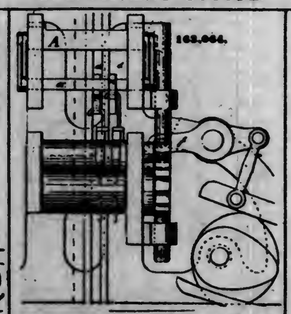
2. The combination of the rack-bars I and gear-wheels J with the frame D and the sliding bars H, that carry the gearing F K L and the plow-shaft M, substantially as herein shown and described.

162,642. HARVESTER-KNIVES. A. Frederick O'Fallon, Ill. [Filed Mar. 27, 1875.]

The blade A, having the two edges F G, arranged as described, in combination with the guide-roller E and fastenings, which hold it obliquely thereto, and either side up, substantially as specified.

162,643. MACHINES FOR FINISHING LEATHER. J. P. Friend, Peabody, Mass. [Filed Feb. 2, 1875.]

Brief.—Improvement on United States Patent No. 117,877, of August 8, 1871.



In a machine for finishing leather, the combination and arrangement of the links or connecting-bars N and O with the vibrating arm A, substantially as set forth and shown.

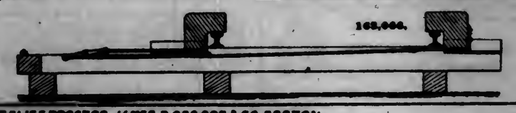
162,644. SHEDDING MECHANISMS FOR LOOMS. Robt. Burns Goodyear, Wilmington, Del., assignor of one-half his right to Wolfenden, Shorey & Co., Darlington, Pa. [Filed Mar. 16, 1875.]

1. The combination of cross-head or yoke A, cross-connections 1, 2, 3, and 4, lifter *a*, depressor *b*, and hooks *b' b* upon the lever-jacks F F', as and for the above-described purpose.

2. The hinged lever-finger *d*, spring *e*, and hooks *b b*, in combination with a pattern roller or chain, as described, and for the purpose specified.

162,644.

1. The combination of frame A, holder C, hand-lever B, feeding-pawl E'', lever E'', bracket-groove V, rod-wiring head D, and slat-wiring head K, punches G M, inclined guides F F', back plates H, separately-adjustable springs H' H'', and stop I''', all substantially as set forth.



2. The combination of the upright wiring-heads D K, placed at right angles to each other, with the frame A, and arranged to operate in the manner and for the purpose as shown and described.

3. The combination of the plate H, held by spring, punch M, and inclined guide F, when so arranged that the plate will rest against the side of the punch at the top of its stroke, substantially as set forth.

4. The staple-stop I''', arranged to prevent feeding staples by operating the machine, for safety, substantially as set forth.

162,645. RAILWAY-TRACK CLOSERS. Isaac M. Haines, Pomeroy, Pa. [Filed Apr. 10, 1875.]

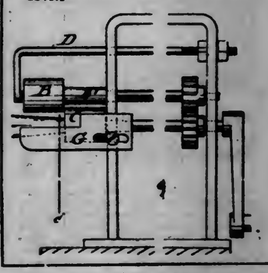
A track-closer for railway-tracks, composed of sliding blocks extending over the rails, guide-shoes, and operating double-crank and lever mechanism, applied substantially as specified.

162,646.

162,647. HAND-PROTECTING ATTACHMENTS FOR DRILLS. Wm. M. Hance, Dover, N. J. [Filed Mar. 29, 1875.]

The combination, with a drill or other tool, of the slotted disk B B', the sliding block C, the rubber block D, and the swiveled screw E, substantially as herein shown and described.

162,648. STRAW-CUTTERS. Thos. Hancock, Marietta, Ohio, assignor to A. T. Nye, Jr., same place. [Filed Sept. 14, 1874.]



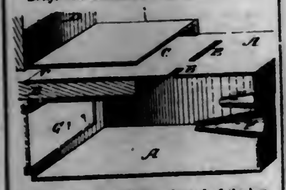
Brief.—The upper roller is pivoted to a vibrating frame, and is permitted to rise and fall, and still receive rotary motion from a vertical shaft, which instinctively adapts itself to the movements of the roller. This shaft is held in ball-and-socket joints for the above purpose, and can be elevated to change the gearing and speed from fast to slow.

1. The combination of the vertical shaft D, the ball-joint F, and its supporting-socket E, with the ball-joint and worm-gear F', and its supporting-socket E', and vibrating frame H, whereby the shaft is adapted to adjust itself to the vibration of the frame, substantially as described.

2. The combination of the vertical shaft D, loosely held in the ball-and-socket joints E F' F F', and the pivoted supporting-bracket S, provided with unequal sides, as described.

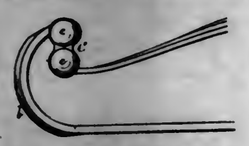
162,649. RAG-CUTTING MACHINES. Wm. C. Harrison, Goshen, N. Y. [Filed Mar. 1, 1875.]

The combination of cutting-roll B, feeding-roll B', cutting and feeding roll C, tension-spring rod D, extension-shaft F, and gage G, all arranged and operating together as and for the purpose specified.



162,070. BUCKLES. Wm. Himsirigh and Jacob Smith, Franklin Township, Summit County, Ohio. [Filed Mar. 20, 1875.]

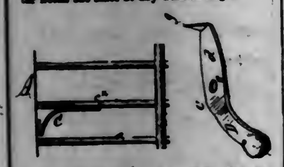
The combination of the tongue G, loop F, and tubular extension E, having a tooth, D, constructed to be applied to the strap, substantially as described.



162,071. MOTH-TRAPS. Washington Hollis, Pembroke, Ky. [Filed Apr. 17, 1875.]

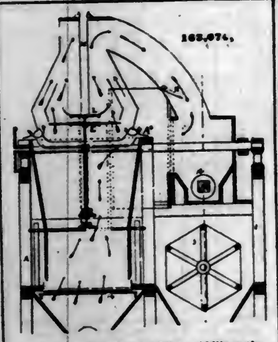
Brief.—To be attached to any hive.

An improved moth-trap formed of the box A, provided with the slot B, the passage C, the flange D, the slits E, (one or more,) the tapering tubes F, (one or more,) and the glass plate G, substantially as herein shown and described.



162,072. VEHICLE-SPRINGS. Christoph Hotz, Chicago, Ill. [Filed Mar. 9, 1875.]

The combined laminated and C spring, having corrugation b on the concave or convex side of the bent portion of the scroll, as and for the purpose set forth.

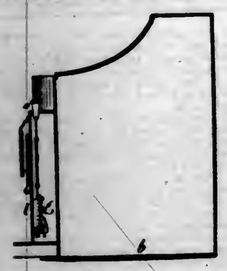


162,073. BLIND-STOPS. Nicholas Hotz, Green Point, Brooklyn, N. Y. [Filed Aug. 22, 1874.]

Brief.—A single struck-up piece of sheet metal carries a raised boss at one end and a spur at the other. A single screw secures the device to the side of a blind-slat, and the friction of the boss against the frame of the shutter holds the slats at any desired angle.

As a new article of manufacture, the automatic spring regulator A, stamped or struck up from a single piece of metal, having at one end the locking-spur g, bent at right angles thereto, and the upwardly-curved yielding spring-plate D, terminating in the boss or enlargement e, with an intermediate orifice, e, adapted to receive a fastening-screw, for the purpose specified.

162,074. MIDDLINGS-PURIFIERS. Wm. W. Hunting, Abel P. Holcomb, and A. Heine, Silver Creek, N. Y. [Filed Mar. 13, 1876.]

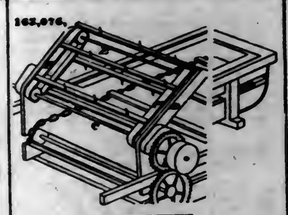


1. In a machine for purifying middlings the combination, substantially as described, of a fan for producing an ascending air-current, a whipper or agitator for disintegrating the material, a reciprocating sieve for separating the middlings after they have been acted upon by the whipper or agitator into different grades, and a revolving bolt for separating any flour that may be carried from the disintegrator by that portion of the air which passes it, from the the worthless material which passes with such flour, the parts being arranged to operate substantially as set forth.

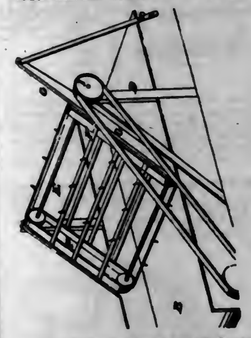
2. The double-acting disintegrator, it being composed of two series of whippers or beaters, the upper ones being curved upward at their outer ends for the purpose of causing them to more effectually beat and disintegrate the material, and the lower ones being straight and extending outward to or beyond the inner surface of the interior hood.

3. A double conical hood, constructed with an air-passage between the two portions thereof, through which an ascending air-current passes, in combination with whippers or beaters, arranged to operate substantially as and for the purpose set forth.

4. In a machine for purifying middlings, the combination, substantially as described, of a disintegrator, a fan for creating an air-current, a revolving bolt, and a dust-deposit chamber, the parts being arranged to operate substantially as and for the purpose set forth.



162,075. CANISTERS. Silas A. Ilsley, New York, N. Y., assignor to S. A. Ilsley & Co., same place. [Filed Mar. 18, 1876.]

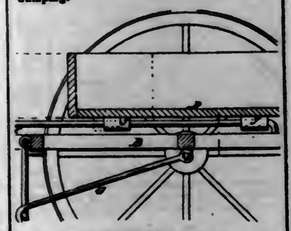


The canister made with the projecting portion l at the front thereof, provided with a thermometer, and having openings for the barometrical figures g h, and provided with the adjusting-knob o of the barometer within, substantially as set forth.

162,076. FEEDERS FOR THRASHING-MACHINES. Byron Jeshson, Woodland, Cal. [Filed Mar. 24, 1876.]

The toothed endless feeding-belt F, mounted above the carrier-belt B upon frame E, journaled at its lower end upon shaft C, and having upper end free to vibrate according to the feed, substantially as and for the purpose described.

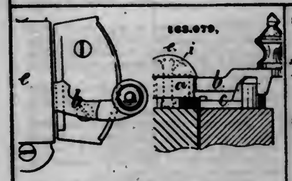
162,077. DISTRIBUTERS FOR FEEDING-BELTS OF THRASHING-MACHINES. Byron Jackson, Woodland, Cal. [Filed Mar. 24, 1876.]



1. The adjustable distributing-belt F, supported in carrying-frame G, upon the shaft E, above the carrier-belt, and with its proximate face driven in an opposite direction to that of the carrier-belt, for the purpose of regulating the supply of straw passing beneath it, substantially as herein described.

2. The combination, in straw-carriers, of the endless belt B, with the distributing-belt F, adjustably mounted upon the shaft E, and having the side piece G' of its carrying-frame extended to serve as a lever by which the lower end of the belt can be raised or lowered and retained at any point by a cord, J, substantially as herein described.

162,078. SHIFTING BODIES FOR HAND-CARTS. Joseph Matthias Jones, Paris, Ky. [Filed Mar. 1, 1876.]

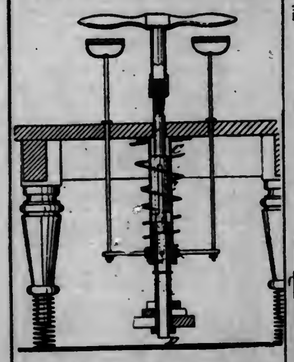


Brief.—Box adapted to slide forward for dumping.

The combination of the sliding box D and suitable supporting-clips I with the parallel runners H, frame B, and axle C, whereby said box is adapted to be shifted, as and for the purposes set forth.

162,079. FASTENINGS FOR THE MEETING-RAILS OF SASHES. Morton Judd, Wallingford, Conn. [Filed Mar. 27, 1875.]

Brief.—The invention is sufficiently pointed out in the claim; a nickel-plated or highly-polished cap-piece being attached by a concealed pin cast upon its inner side, and riveted to the bed-plate.



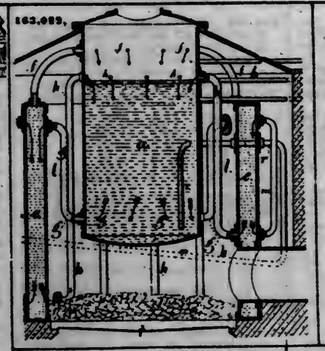
The cap-plate c, to which the attaching screw or rivet f is connected at its under side, so as not to appear upon the upper and smooth or polished surface, in combination with the lever-fastening b and box a, substantially as set forth.

162,080. CONVERTING OLD IRON INTO STEEL. Alexandre Jullien, Paris, France. [Filed July 12, 1874.]

Brief.—Melts cast-iron containing the minimum of phosphorus in a Siemens-Martin furnace, and adds wrought-iron scrap to reduce the carbon. To the molten mass adds ferro-manganese.

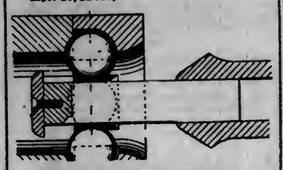
The compound or alloy, consisting of wrought-iron, cast-iron, and ferro-manganese, combined in or about the proportions herein set forth.

162,081. REMEDYING APPARATUS. Wm. A. Knight, Worcester, Mass. [Filed Apr. 10, 1875.]



The combined adjustable spring and weight lift or exercising device, constructed of outer slotted guide-socket, sliding interior piston, carrying-yoke, and spring, together with perforated and weighted supporting intermediate tube, admitting separate or joint graduated use of apparatus, all substantially as and for the purpose set forth.

162,082. CIRCULATING STEAM-BOILERS. Luther Knight, Arlington, Vt. [Filed Feb. 9, 1875.]

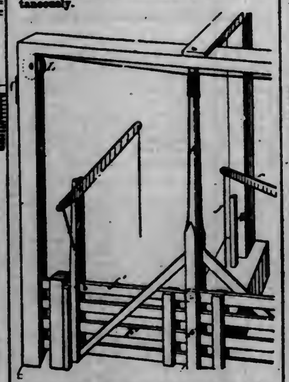


Brief.—Circulation is maintained between an inner and outer boiler by means of one series of pipes connecting the lower portion of the inner with the upper portion of the outer boiler, and another series of pipes connecting the lower portion of the outer with the water-line of the inner boiler.

1. The central vessel *a*, annular boiler *c*, and circulating-tubes *g*, passing from near the lower part of the vessel *a* to the upper part of the boiler *c*, in combination with the tubes *h*, that connect, from the lower part of the boiler *c*, to the vessel *a* near or above the water-line, as and for the purposes set forth.

2. The circulating-pipes *f*, passing from the top of the annular boiler *c* to the central vessel *a* above the water-line, in combination with the circulating-pipes *e*, as set forth.

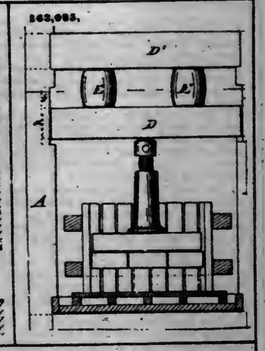
162,083. COUPLINGS FOR THRASHING-MACHINES. B. Knock, Vermont, Ill. [Filed Apr. 17, 1875.]



1. A coupling having balls therein, between which balls the clevis-shank is confined, substantially as shown and described.

2. A joint consisting of a socket-piece, a bar surrounded by balls, substantially as shown and described.

162,084. AUTOMATIC GATES. Hiram Krom, Dartford, Wis. [Filed Mar. 20, 1875.]

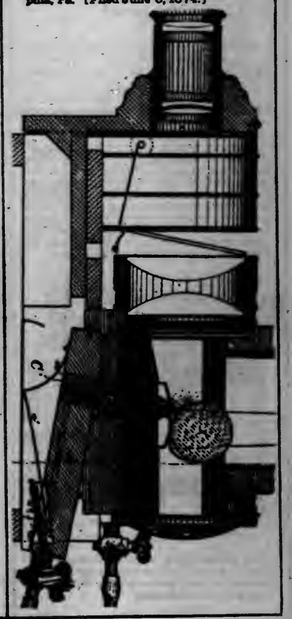


Brief.—A double gate in which the latches are connected to work together and simultaneously.

The combination, with the double gate, the central pivot-bar, and latch-posts G, of the latches *f'*, connected at their inner ends to admit of simultaneous operation, as shown and described.

162,085. PRESSES FOR OILERS, &c. Henry Krumsiek, Nashville, Ill. [Filed Oct. 31, 1874.]

In a press, the arrangement of the springs B, fixed and movable cross-bars D' D, and the uprights A A, having elongated mortises *b b*, all as shown and described.



162,086. TOYS. Harvey T. Lee, Chicago, Ill., assignor to J. S. Hodges, same place. [Filed Feb. 20, 1875.]

Brief.—For a return-ball or to be whirled by the hand.

The toy described, consisting of a hollow globe, provided with the central partition, having reed or whistle openings, as described, adapted to give sound when the ball is moving in either direction, as set forth.

162,087. LAKE-LIGHT APPARATUS FOR MAGIC LANTERNS. Lorenzo J. Marcy, Philadelphia, Pa. [Filed June 6, 1874.]

1. In a lime-light magic lantern, the flat-mouthed jet, constructed as described, in combination with the lime-wheel, whereby the flame impinges against the lime-wheel in a thin sheet, and acts upon a larger portion of its surface than was practicable with the round jet heretofore employed in this class of instruments.

2. The combination, substantially as set forth, of a base-plate, the jet mounted thereon, and the lime-holder, adjustable on the base-plate, whereby the cap of the jet operates as a stop to insure the correct relative adjustment of the lime-wheel and jet.

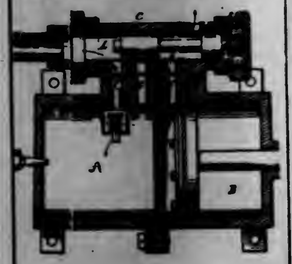
3. The combination, substantially as herein before set forth, of the base-plate, its conducting-tube and burner-nozzle, and its adjustable plate which supports them, whereby the burner may be adjusted vertically relatively to the lime-light, as set forth.

4. The combination, substantially as set forth, of the lime-wheel and its holder, in which the lime is loosely held, and by which it is presented vertically and edgewise to the light, for the purposes set forth.

5. The combination, substantially as set forth, in a magic lantern, of a lime-wheel, a cradle in which it is held adjustable vertically in a laterally-adjustable standard on the base which supports the burner, whereby the lime-wheel is rendered adjustable both vertically and horizontally.

6. The combination, substantially as set forth, in a magic lantern, of a base-plate, adapted to be inserted through the body of the lantern, and a lime-holder adapted to be inserted through the chimney, whereby the two may be applied without interfering with the diaphragm or base of the flame-chamber.

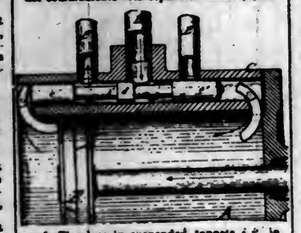
162,089. SHEET-METAL BOXES. Henry Martyn, Boston, Mass. [Filed Apr. 5, 1875.]



Brief.—The box is made from a single piece of metal, and the fold of the corners equally disposed on each side thereof.

The box A, having its corners continuous by the equally-disposed folds C C, substantially as described, for the purpose specified.

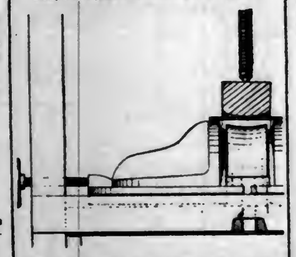
162,090. VALVES FOR STEAM AND AIR BRAKES. Henry B. Marchand, Pittsburg, Pa. [Filed Nov. 11, 1874.]



Brief.—A duplex valve controls the ports of the reservoir and the piston-cylinder. When air is being compressed in the reservoir, the pressure of the same forces the valve back, and opens the outer port in said reservoir. When the brakes are set the pressure in the connecting-tube is relieved, which releases the valve and allows a spring to throw it forward, thus establishing communication between the reservoir and piston-cylinder.

The duplex valve L, working in a valve-chest, C, in combination with the ports F G H, reservoir A, and piston-cylinder B, substantially as herein described.

162,092. VALVE-GEARS FOR STEAM-ENGINES. Henry B. Marchand, Pittsburg, Pa. [Filed Oct. 23, 1874.]

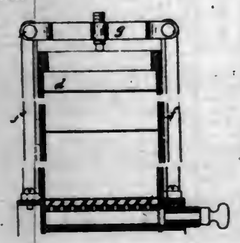


Brief.—The valve is operated by tappets hung loosely in the ends of the shell of the cylinder. Two ports at each end of the cylinder communicate with separate exhaust-pipes.

1. The loosely-suspended tappets *i i'*, in combination with the valve F, steam cylinder A, and piston B, substantially as and for the purpose described.

2. The valve F, composed of three bends, *c d c'*, in combination with channels *f f' h h'*, ports *g g'*, steam-pipe D, and exhaust-pipes E E, substantially as set forth.

162,091. MACHINES FOR PRESSING HORN-COLLAR PADS. Arnold F. Mason, George Chamberlin, and H. W. Chamberlin, Olean, N. Y., assignors to George Chamberlin & Son, same place. [Filed Apr. 10, 1875.]



1. In a machine for shaping and pressing collar-pads, the adjustable curved-face side jaws, sliding and spring-cushioned center piece and follower in combination, all substantially as and for the purpose described.

2. The adjustable side jaws, having projecting guide-ribs, in combination with the grooved and sliding center-piece and the perforated supporting-piece of frame, for guiding head and shank of center-piece, as set forth.

162,093. APPARATUS FOR MOLDING AND LIQUORING SUGAR. Frans O. Matthiessen, New York, N. Y. [Filed Apr. 9, 1875.]

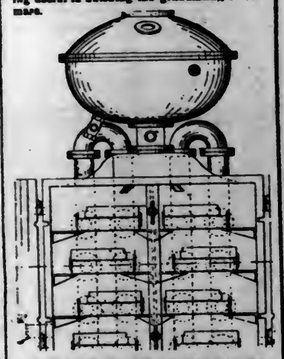
Brief.—The hot product of the vacuum-pan is injected at the bottom of a series of molds. An overflow-mold at the top regulates the charge. The liquoring is effected also from the bottom, the overflow-mold retaining the crust. The molds removed afford a series of loaves.

---

1. The combination of a series of sugar-molds with guides for preserving their alignment, for the purpose of coabling the sugar-molds to be filled with the sugar mass at one operation.

2. The combination of one or more sugar molds with a surplus frame or box, for containing an excess of the sugar mass.

3. The combination of a liquoring-table with a series of sugar-molds, consecutively arranged thereupon, and a liquoring-pipe, for the purpose of liquoring the sugar mass contained in the molds at one operation.



4. The combination of a liquoring-table provided with a liquoring-pipe, with a series of consecutively-arranged sugar-molds and a surplus frame or box.

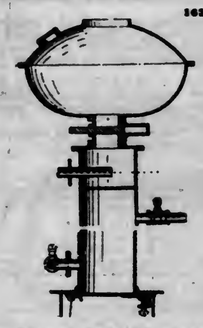
5. The combination of a series of consecutively-arranged sugar-molds with elastic packing-strips placed between the several molds and their respective bearings, and a set-screw, for the purpose of compressing the series of molds, and thus making tight joints at all the bearings.

6. The combination of the vertical guides *f* and *f'* with the removable cross-bar *g*, for the purpose of permitting the introduction or removal of the sugar-molds, substantially as shown and described.

162,095. APPARATUS FOR REFINING SUGAR. Frans O. Matthiessen, New York, N. Y. [Filed Apr. 14, 1875.]

Brief.—A vacuum-chamber contains removable trays set upon hollow sheives, in which a hot-air or hot-water circulation is maintained. Hermetically-closing doors complete the vacuum. The chamber is preferably beneath the pan. When charged into the chamber, the product of the pan drips from the upper to the lower trays, its own heat being useful in finishing the granulating of the mass.

1. In combination with a vacuum-pan, a vacuum-chamber provided with heating-shelves and removable trays or pans, substantially as and for the purpose set forth.



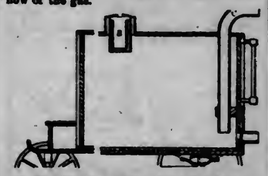
2. A chamber containing heating-shelves and provided with an exhaust-pipe for withdrawing the air from the chamber, and having a removable side capable of hermetical application.

3. In combination with a vacuum-pan, a vacuum-chamber provided with heating-shelves, and a hot-air injection-pipe and removable trays or pans, for the purpose of heating the material contained in the trays or pans by direct contact with hot air, substantially as set forth.

162,094. APPARATUS FOR REFINING SUGAR. Frans O. Matthiessen, New York, N. Y. [Filed Apr. 20, 1875.]

Brief.—The elevated vacuum-chamber, situated preferably beneath the vacuum-pan, contains near the top a finely-perforated diaphragm, to receive the charge from the pan. A two-branch pipe near the bottom admits hot or cold air. An exhaust-pipe below the diaphragm, and one above, draw off the air, to make the vacuum. The chamber is provided with a hermetically-closing door at bottom, through which the granulated sugar is drawn off.

162,096.



1. In an apparatus for refining sugar, the combination of a vacuum-pan with a vacuum chamber, which is provided near the top with a perforated diaphragm, substantially as shown and described.

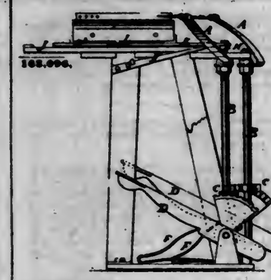
2. The combination, in a vacuum-chamber, of a perforated diaphragm placed near the top of the chamber, and an exhaust pipe or pipes, with an injection-pipe near the base of the chamber, for the purpose of introducing and establishing within the vacuum-chamber an upward current of heated air, for acting upon the sugar-spray discharged through the diaphragm, substantially as described.

3. The combination of a vacuum-chamber, substantially such as described, with a branch pipe situated near the base of the chamber, for the purpose of regulating the temperature of the chamber by injecting therein currents of air of variable temperatures.

162,095. SEWAGE APPARATUS. Reuben A. McCauley, Baltimore, Md. [Filed Mar. 30, 1875.]

Brief.—The deodorizer is charged with chemicals graduated to set by their weight as a safety-valve, and thus prevent danger from an overpressure of gas from within. This does not interfere with its ordinary action as a deodorizer. A stand-pipe conducts the matter to a discharging point near the bottom of the receptacle, thus making the discharged matter act as a seal against the backward flow of the gas.

1. The deodorizer and safety-valve B, combined and connected with and operating by direct pressure from the ventilating-tank or sewage-receptacle A, substantially as and for the purpose specified.



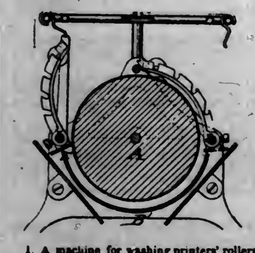
2. The combination of the ventilating sewage-receptacle A, deodorizer and safety-valve B, and stand-pipe C, substantially as and for the purpose specified.

162,096. LEATHER-PUNCHING MACHINES. Henry Mott, Fotteville, Iowa, assignor to himself and J. C. Calbreath, same place. [Filed Mar. 20, 1875.]

Brief.—The awl-carrying arms are automatically operated by semi-rotatial vertical shafts, to which they are attached. The stock is fed forward by mechanism actuated by the awl-bearing shafts.

1. The combination of the foot-power awl-carrying arms A, attached to semi-rotating shafts, intermittingly-reciprocating work-holding clamp I, and feed mechanism, substantially as specified.

2. The combination of the adjustable awl-carrying arms and semi-rotative shafts, adapted for relative adjustment, all substantially as and for the purpose described.



162,096.

3. The combination of the slide O with the feed-pawl and the notched feed bar, substantially as specified.

4. The foot-treadles D, springs F, gears C, shafts B, and the awl-carrying arms A, combined and arranged substantially as specified.

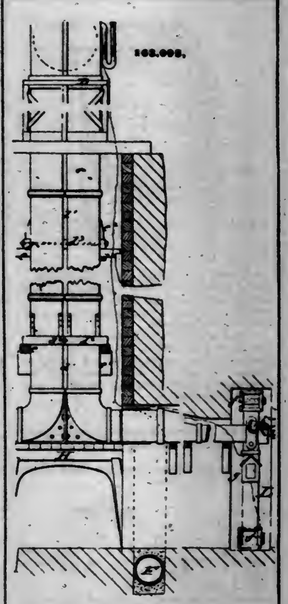
162,097. MACHINES FOR WASHING PRINTERS' ROLLERS. Thos. Muir, Glasgow, Scotland. [Filed Mar 6, 1875.]

Brief.—The rollers are hung in notches in pivoted quadrantal arms, which hold them in contact with a flannel clothed cylinder revolving in a lye-trough. The arms are then raised to a vertical position under perforated water-pipes, the water being prevented from entering the lye-trough by an inclined plate attached to the under part of the arms.

1. A machine for washing printers' rollers, composed of a revolving and laterally-vibrating cylinder, A, a lye-trough, B, pivoted quadrantal roller-bearing standards, and a system of perforated spray water-pipes, the whole being arranged and operated substantially in the manner and for the purpose set forth.

2. The pivoted roller-carrying standards, having an adjustable arm keyed to their pivot-rod, in combination with devices for retaining the standards in exact position from the rubbing-cylinder, and in upright position, substantially as shown and described.

3. A lateral guard-plate arranged below the pivoted standards, in combination with the cleaning-cylinder, and an outer inclined plate for conveying off the drip-water of the roller and prevent its entering the lye-trough, substantially as set forth.

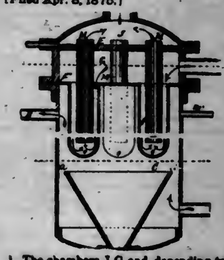


162,098. VENTILATING APPARATUS FOR COAL-MINES. Francis Murphy, Streator, Ill. [Filed Aug. 15, 1874.]

Brief.—The valves upon the ends of the main pipes can be opened by a current of air forced in by the fan, after which the fan is reversed to withdraw the noxious gases from the mine. Each branch pipe is provided with a flexible pipe to withdraw powder smoke after blasting.

1. The combination of reversing fan G and valves D with the lower weighted end valves A of the main tubes, for producing the automatic opening of the same by the forcing in of the air, as described.

2. The combination, with the branch pipe L, of a flexible movable tube, M, for exhausting the smoke and other gases in newly-opened parts of the mine, in the manner specified.

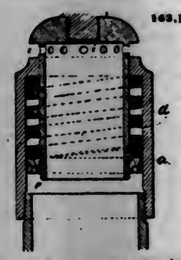


162,099.

162,099. PROCESSES OF TREATING BLOOD FOR THE MANUFACTURE OF MANURES. T. Myerson, London, England. [Filed Apr. 13, 1875.]

The process herein described of treating blood for the preparation of manure with a salt of alumina, for the purpose of retaining the ammonia, for the purpose set forth.

162,100. FEED-WATER HEATERS. Alex. Orme and William H. Burk, Chicago, Ill. [Filed Apr. 8, 1875.]



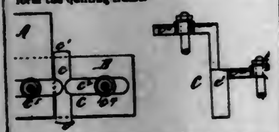
1. The chambers J G and depending tubes L and M, attached at their upper ends to the diaphragms E and F, all acting in conjunction to admit and discharge the steam at the upper end of the heater, whereby only the upper portion of the column of water is heated by direct radiation of heat, as specified.

2. The diaphragm C, located at the base of the heater, and arranged to form the annular space *a*, through which the volume of water ascends, as specified.

162,101. AUTOMATIC WATER-DISTRIBUTORS. Gilbert J. Orr, New York, N. Y. [Filed Apr. 10, 1875.]

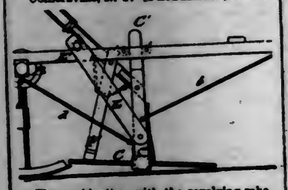
Brief.—Automatic water-distributor containing a sliding cylinder, a valve, and lateral discharge-orifices, combined with a spring or weight, that keeps the parts closed until the maximum pressure has been exceeded.

163,101.



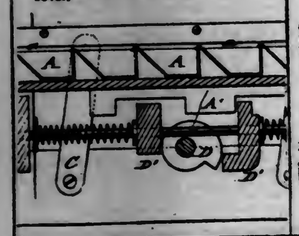
1. The cylinder *a*, containing the cylinder *c*, that is provided with lateral discharge-orifices *i*, in combination with the spring *d* and adjusting screw-ring *a*, substantially as and for the purposes set forth.

2. The automatic water-distributer, containing a sliding cylinder or valve and lateral discharge-orifices, combined with a spring or weight that keeps the parts closed until the maximum pressure has been exceeded, substantially as specified.



163,102. QUILTING-FRAME CLAMPS. Uberto N. Partridge, Boston, N. Y. [Filed Apr. 3, 1875.]

Brief.—The clamp joins the bars which form the quilting-frame.



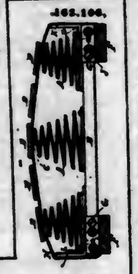
The clamp C, composed of the transverse ribs *c* and *c'*, the longitudinal ribs *c²* and *c³*, and the set-screws *c⁴* and *c⁵*, in combination with the quilting-frame A B, substantially as and for the purpose set forth.

163,103. HORSE HAY-RAKES. Glood Platt, Collierville, N. Y. [Filed Mar. 13, 1875.]

The combination, with the revolving rake, operating lever *d*, hinged slide-pieces G, and wheeled supporting frame of the cords and weights *b d d*, and supporting frame E E', all constructed and arranged to operate substantially in the manner and for the purpose specified.

163,104. CANE-CONCENTRATORS. James V. Pomeroy, Boulder, Colo. [Filed Mar. 1, 1875.]

The combination of level table B, having legs A', the series of overlapping pans A, supported at both ends by oscillating standards C C, the revolving cam D, and the sliding spring-plates D' D', all arranged substantially as and for the purpose specified.



163,105. PLATE-LIFTERS AND TOASTERS. John A. Rakestraw, Altoona, Pa. [Filed Feb. 23, 1875.]

A combined plate-lifter and toaster, constructed with a handle, A, having forks D D, provided with prongs *a a*, and a loop, B, and hook K, adapted to receive, with capability of backward and forward motion, a handle, F, provided with a bend, *g*, and forks I, having prongs *f f*, the whole being constructed and operating in the manner and for the purpose described.

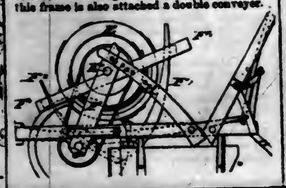
163,106.

163,106.

163,106. SPRING BED-BOTTOMS. Chandler D. Rawson, Worcester, Mass. [Filed Oct. 7, 1874.]

Brief.—By adjusting the slotted angle-irons on the screws attached to the supporting-bars, the webbing is adjusted and tightened on the springs.

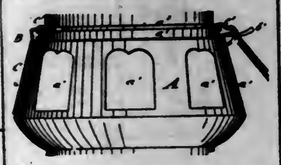
The combination of the supporting-bars B B, cross-bars F F, angle-irons J, having the slots I, and headed screws or bolts G, with the adjustable webbing H, supported by springs A and K, and sustaining the slats D, all in the manner and for the purpose specified.



163,107. WRINGER-ROLLS. R. W. Rexford, Boston, Mass. [Filed Apr. 9, 1875.]

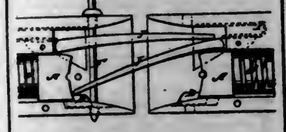
The grooved shaft *a*, in combination with the washers *a a*, having lips or projections *d d* fitting the grooves *b b* in the shaft, and the wires *f f* passing through perforations *e e* in the washers, substantially as and for the purpose set forth.

163,108. SEED AND GUANO DISTRIBUTERS. Robert Sappelt, Springfield, N. Y. [Filed Jan. 25, 1875.]



Brief.—Mounted upon a supplemental frame are two revolving drums, adjustable on arms to throw their weight to the front or rear. To this frame is also attached a double conveyer.

The revolving drums E E, and seed-conveyer F', mounted on frame F', in combination with pivoted standards F, and adjusting-arms H, as and for the purpose specified.



163,109. VENTILATING-DAMPERS. Anson Augustus Schroder, Warren Ill. [Filed Apr. 17, 1875.]

Brief.—The inclined flanges are operated to elevate or depress the dampers.

The pipe A, made with a conical enlargement in its middle part, having openings *a'* formed in it, with two shoulders, *a² a³*, at the upper end of said enlargement, and with holes above said shoulders, the ring B, having inclined flanges or cams *b'*, and a handle, *b²*, formed upon it, and the dampers C, having stems *c'* formed upon their upper edges, in combination with each other, substantially as herein shown and described.

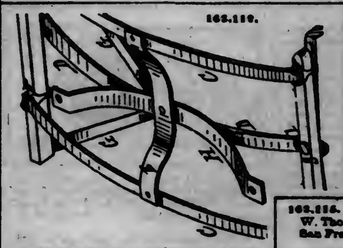
163,110. CAR-COUPLINGS. Nathan G. Shelley, Stephen P. Bozarth, and D. V. Spring, Austin, Tex. [Filed Jan. 30, 1875.]

The combination of the sliding block A, rest D, spring G, pivoted coupling-link J, spring I, and the coupling-pin F with the draw-head of a car, substantially as specified.

163,111. TOILET-BRACKETS. Reuben A. Smith, East Weare, N. H. [Filed Feb. 27, 1875.]

As a new article of manufacture, the bracket herein described and shown, consisting of the back A, side pieces D, and strip C, all united by grooves formed in said back and side pieces, the towel-roll B, and mirror E, the latter being hung at the extremity of the outwardly-projecting side arms, and above the back A, as and for the purpose described.

163,113. CARRIAGE-SPRINGS. H. Sprague, Churchville, assignor of one-half his right to W. S. Brown, Le Roy, N. Y. [Filed Apr. 19, 1875.]

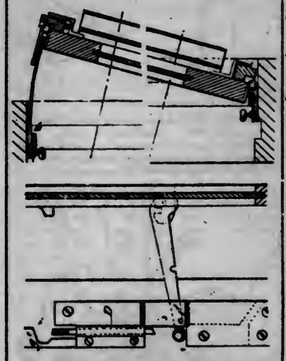


1. The combination of the side springs C C, spring-reach D, cross-strap E, body-loop H, and the angular braces G G, extending from the center of the reach to the outer ends of the rear axle, substantially as and for the purpose set forth.

2. The combination, with the springs C C and spring-reach D, of the cross-strap E and the angular braces G G, substantially as set forth

163,114. STEP-LADDERS. H. P. Stichter, Pottsville, Pa. [Filed Mar. 20, 1875.]

A ladder having the upper ends of brace-legs hook-hold in groove-cents *d d* of the body, as shown and described, to prevent the brace from slipping or folding up.



163,112.

3. The combination of the pivoted side springs C C of the rear axle and boleter, the reach D, attached on the bottom of the axles, and the body-loop H, fastened to center of the reach, to prevent longitudinal motion thereof from turning the axles, substantially as set forth.

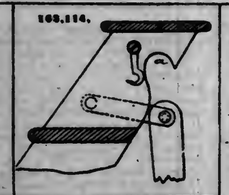
163,113. CAR-WINDOWS. La Roy S. Starrett, Athol Depot, Mass. [Filed Mar. 20, 1875.]

Brief.—A car-window opening at either side, according to the direction in which the car is moving. When the window is open at one side the sash-hinge of the other is held locked by a spring-bolt of the jamb lock-plate with the recessed leg of the hinge-plate of the sash. The lock-plate of the sash-casing has downwardly-inclined channel for conducting away dust. The window-sash is provided with outer self-adjusting weather-stripe, sliding in guide-bands with spring-cushions.

1. A car-window provided with a hinged face-plate and operating-lever at each side, in combination with a lock and guide plate of the jamb of the window-casing, substantially as shown and described.

2. The combination of the spring-bolt of the jamb lock-plate with the recessed leg of the hinged plate of the sash, for locking sash-hinge at one side while sash is opened at the opposite side, substantially as specified.

3. The projecting lip of sash, in combination with top part of spring-bolt of lock-plate, to secure still further locking of one side of window, as set forth.



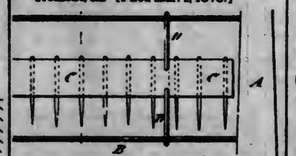
4. The lock-plate of sash-casing, having recess and downwardly-inclined channel at inside for conducting off the dust particles gathering therein, as shown and described.

5. The car-window sash provided with outer self-adjusting side weather-strips, sliding in guide-bands with spring-cushions, for the purpose set forth.

163,114. STEP-LADDERS. H. P. Stichter, Pottsville, Pa. [Filed Mar. 20, 1875.]

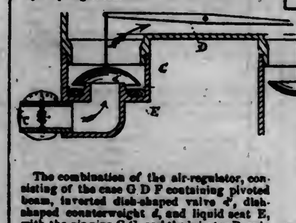
A ladder having the upper ends of brace-legs hook-hold in groove-cents *d d* of the body, as shown and described, to prevent the brace from slipping or folding up.

163,114.



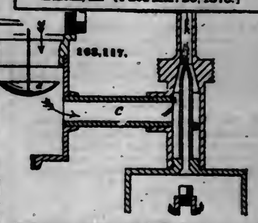
163,116. FOLDING CAR-LOCKS. Augustus W. Thornton, Oakland, and Martin Vice, San Francisco, Cal. [Filed Feb. 10, 1875.]

The angle-plate B, arranged to fit the gunwale A, in combination with the recessed stops F F and thole-pins C and D, constructed with projecting ribs G, substantially as and for the purpose set forth.



163,116. FARM-FENCES. Stephen Stout, Tremont, Ill. [Filed Mar. 1, 1875.]

The combination, with posts A A and wires B B, of the intermediate board C and U-shaped wires D, constructed and arranged substantially as and for the purpose specified.

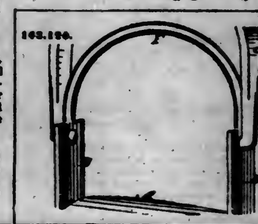


163,117. HYDROCARBON-GAS APPARATUS. G. W. Tinsley, Minneapolis, Minn. [Filed Mar. 1, 1875.]

Brief.—The quantity of air admitted to the injector is regulated by an inverted cup-valve, sealing in mercury, and balanced by a cup-shaped counter-weight. The air entrance may be set at any desired size of opening by a valve controlled by a disk having stops caught by a spring-catch.

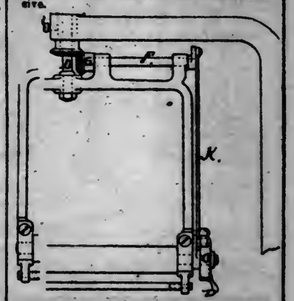
The combination of the air-regulator, consisting of the case G D F containing pivoted beam, inverted dish-shaped valve *d'*, dish-shaped counterweight *d*, and liquid seat E, with the air-pipe C C, and the injector B, substantially as and for the purpose set forth.

163,117.



163,118. GAS-BURNERS. G. W. Tinsley, Minneapolis, Minn. [Filed Oct. 16, 1874.]

Brief.—The key may be revolved to regulate the flow of gas which supports the outer ring of flame. It may be drawn downward against the power of the spring, to release the drip.

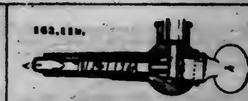


1. The key A, provided with the elongated tube C, constructed with the notches *d d*, in combination with the burner A, provided with the side ports *e e*, substantially as and for the purpose set forth.

163,118.

163,119. TAKE-UPS FOR KNITTING-MACHINES. Ira Tompkins and Albert Tompkins, Troy, N. Y. [Filed Mar. 26, 1875.]

Brief.—The differential wheels cause the take-up pawl to operate at constantly varying points around the cylinder of the machine, thus distributing the strain and the wear. The spring-keeper and stops retain the disk in either position to which it may be moved, to allow or prevent the operation of the take-up pawl. The devices of the third clause of the claim prevent the operation of the take-up pawls when the tension of the web is excessive.



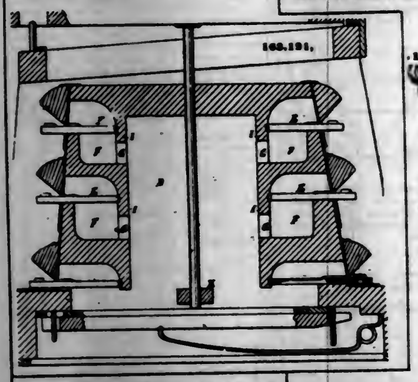
1. In combination with a take-up roll of a knitting-machine the differential gear-wheels and intermediate mechanism, as described, and for the purposes set forth.

2. The combination, with the take-up roll of a knitting-machine and its operating pawls, of the flanged disk O, having stops on its sides, and the spring-keeper R, as and for the purpose described.

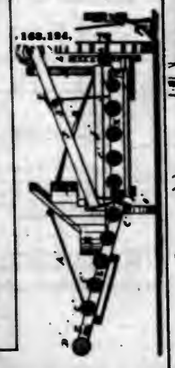
3. The combination, with the crank-shaft F, of rod K, having a long slot to fit upper end, the pivoted arms T, provided with the supplementary roller, the spring S, screw V, and pivoted lever W, and its link, all as shown and described, to operate as specified.

163,120. STRAINER. Joseph R. Waggoner, Athens, Ill. [Filed Mar. 20, 1875.]

2. In combination with the tube C, key A, and barrier A, the collar *g* and spring *s*, constructed to operate as described, and for the purpose specified.



As a new article of manufacture, a stirrup consisting of the foot-piece A B, having bow or guard F, the whole pivoted in yoke C, as shown and described.

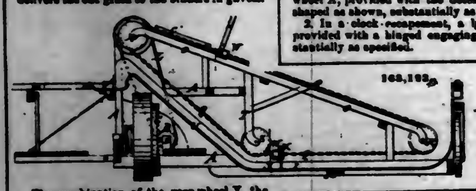


163,181. ORGAN REED-BOARDS. Wesley W. Walker, Brattleborough, Vt. [Filed May 1, 1874.]

The socket-board of a reed-organ having two opposite sets of reeds, E, cells F, passages G, sweet portions I, and median cell D, all relatively arranged substantially as and for the purpose specified

163,182. EXCAVATORS. John S. Whitecarver and William C. Whitecarver, Pontiac, Ill. [Filed Mar. 20, 1875.]

Brief.—A ditching-machine consisting of a triangular frame with a hinged elevator, provided with rollers, swiveled screws, and sliding frame for tightening the belt, and supporting-chains for regulating the height thereof. The plow and its standard, braces, and beams are regulated by a hinged lever. The endless belt is operated by gearing from the drive-wheel. The rear axle is made extensible, and connected to the triangular frame. The tongue is connected to a transverse lever, attached at one end by a chain to the frame, and at the other to the plow-beam.



163,183. FOLDING TABLES. F. C. Wheeler, St. Joseph, Mo. [Filed Mar. 20, 1875.]

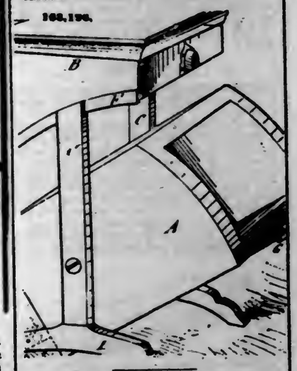
In a folding table, the combination, with rail D, connecting the upper ends of movable legs, of the cushion E E, movable by means of tongued and grooved parts E F, and held at any adjustment by screws I I, all as shown and described.

163,184. HARVESTERS. Frederic F. White, Stacyville, Iowa. [Filed Sept. 26, 1874.]

Brief.—An endless chain at the rear of the platform and elevator carries a rake, which delivers the cut grain to the binders in gavels.

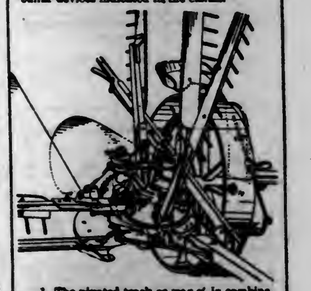
The combination of the gear-wheel Y, the toothed bar Z, the pin A', and the guides B' with the rake X, the cross-bar W, the endless chains Q Q, and the inclined bars O O, substantially as herein shown and described.

163,185. CLOCK-ESCAPEMENTS. Geo. W. White and Walter I. Leary, Edenton, N. C. [Filed July 17, 1874.]



1. The plates D', provided at their ends with the hooks E, the shanks of which are pivoted to the plate, in combination with the wheel A, provided with the detents or teeth, shaped as shown, substantially as specified.

2. In a clock-escapement, a bar or arm, provided with a hinged engaging-teeth, substantially as specified.



1. A single dust-tight box, consisting of pivoted body A and stationary cover B, the two coming together on a curved joint, F, and supported on stand C I, as shown and described.

2. The stop-blocks K, either one or two, hung to the base to turn eccentrically, in combination with the box A, for the purpose described.

163,187. HARVESTER-RAKES. W. A. Wood, Albany, N. Y. [Filed Jan. 4, 1875.]

Brief.—The reel-arms are made to act as rakes, at the will of the operator, by the peculiar devices indicated in the claims.

1. The pivoted track or way *a'*, in combination with the dog or pawl h, on the rotating rake-head or crown-wheel, substantially as described.

2. The pivoted dog h for actuating the rake-track *a'*, in combination with the locking-pawl h^1, for holding the dog h away from said track *a'*, as described.

3. The dog or pawl h, which actuates the rake-track *a'*, in combination with the locking-pawl h^1 and the pivoted track J^1, controlled by the attendant in his seat on the machine, substantially as described, whereby said attendant is enabled to cause the arm or arms set to act as rake-arms, to act as reel or gathering arms only.

4. The combination of the locking-lever *i*, with the arm *f* of the toggle-link connection between the rake and reel-arms and the eccentric pivot, substantially as described.

5. The crane post or arm E provided with the tripping-spur *e'*, for raising the pawl h^1, and releasing the dog h, as described.

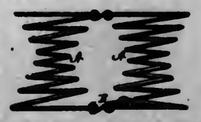
163,188. COAL-HOLDERS. Saml. M. Whiteside and Amos C. Holliday, Wheeling, W. Va. [Filed Mar. 20, 1875.]

163,189. MOWING-MACHINES. W. A. Wood, Albany, N. Y. [Filed Jan. 4, 1875.]

1. The double-jointed coupling-arm F, which connects the cutting apparatus with the main frame, provided with the sleeve F^1, connecting it with the crank-shaft sleeve, and made to curve upward in front of and to form a shield for the pitman, and also provided with the hemispherical shield F^2, covering and protecting the crank-wheel, and vibrating with the coupling-arm, as described.

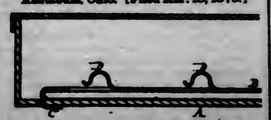
2. The pivoted guiding-loop G, applied to the coupling-arm F, and retained in position for guiding and holding the pitman-rod by means of the spring g^1, substantially as described.

163,190. FLUE-CLEANERS. A. W. Abrams, Springfield, Mass. [Filed Apr. 10, 1875.]



The improved brush described, consisting of the rod A, nuts J H, disks B B, and cones E E, constructed and arranged to operate substantially as and for the purpose specified.

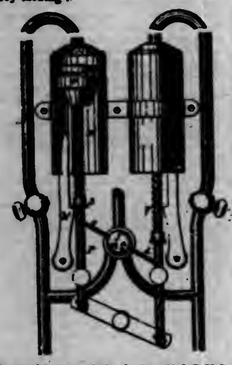
163,191. EXTRACTING FATTY MATTERS FROM TANNERS' SCRAPS, &c. W. Adamson, Philadelphia, Pa. [Filed Sept. 1, 1874.]



The process of extracting fatty and oily matter from carriers' and tanners' scraps and other offal, by kneading and crushing the same in dilute acid in the manner described.

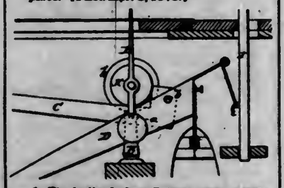
163,192. SPRING-BEDS. C. L. Alvord, New York, N. Y. [Filed Mar. 20, 1875.]

The S-shaped connections B B, in combination with the double spiral springs A A, substantially as and for the purposes herein set forth.



163,193. DEVICES FOR HOLDING ARTIFICIAL FLOWERS IN BOXES. Thos. Andrews, Jr., New York, N. Y., and Samuel C. Talcott, Ashtabula, Ohio. [Filed Mar. 13, 1875.]

The strip B, having its edges bent at right angles, and thus brought in contact with the bottom of the box A, and its upper surface, which is provided with the hooks D, correspondingly elevated above the bottom of the box, and held in position by the legs C, substantially as specified.

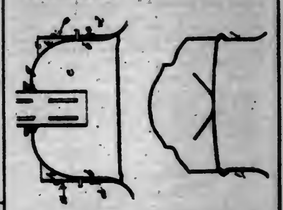


163,194. OPERATING VALVES. J. A. Ayres, Hartford, Conn. [Filed Nov. 14, 1874.]

Brief.—A small portion of air admitted through the main cock passes to the cylinders, and operates upon the pistons therein, the lower surfaces of which are inclined. When the pistons descend, said inclined surfaces strike the lever, which enters the cylinder and releases the collar, which is thrown down by the spring, and strikes the arm of the cock, thereby turning it

The combination of the devices M O P V S W, arranged in duplicate to move reciprocally, and operate the cock J by means of a small portion of the compressed air passing through it, substantially as herein described.

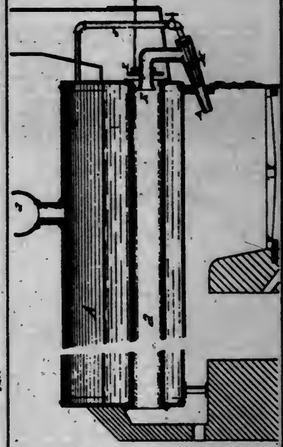
163,195. SCALES. Owen T. Baker, Wamego, Kans., assignor to Oscar M. Gay, same place. [Filed Apr. 8, 1875.]



1. The inclined plane C, hung upon pivots *a* near one end, the other end vibrating in a slotted bar, E, and provided beyond the pivots *a* with pivots *b*, for the reception of the levers D, said pivots *b* being above a horizontal line through the center of motion of the vibrating end of the incline, substantially as herein set forth.

2. The combination, in a scale, of the vibrating incline C, levers D D, rolling weight K, and weighted index I, pivoted in the center of the weight at one end, substantially as and for the purposes herein set forth.

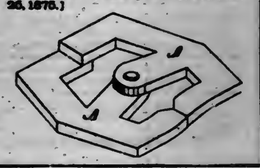
3. The combination, with the incline C, levers D, and rolling weight K, of the counter-scale and platform-scale, connected to the levers, substantially as and for the purposes herein set forth.



163,196. LANTERNS. Charles S. S. Baron and Alfred L. Baron, Bellaire, Ohio. [Filed Jan. 20, 1874.]

A lantern having the base composing the oil-cup top *c*, foot *a*, attaching-band *b*, and the shoulder *d*, and the dome composing the reflector *h*, the top band *i*, and the ventilator *n*, produced each from a single sheet, with its several parts integral and without seam or cutting, and having smooth surfaces throughout when finished, as a new article of manufacture, as herein specified.

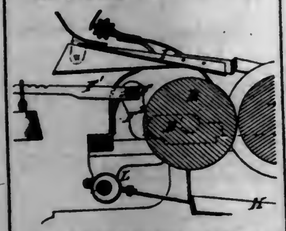
163,197. STEAM-BOILER FURNACES. David P. Beard, St. Louis, Mo., assignor of one-half his right to Patrick G. Rooney. [Filed Dec. 12, 1874.]



Brief.—A flaring-mouthed tube faces the smoke-flue, and by means of a steam-injecting pipe the smoke is drawn through said tube and forced in the furnace.

1. In a boiler of the character stated, the return flue H, arranged with its mouth *h'* facing the fire or fires *a* of the boiler, substantially as and for the purpose specified.

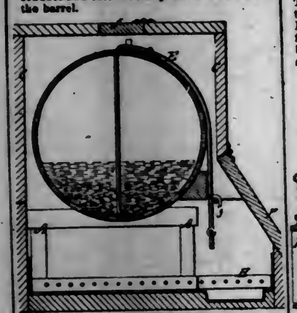
2. In combination with the return flue H *h* and boiler-flue or flues *a*, the adjustable plate I, operating substantially as and for the purpose specified.



163,198. BALE-TIES. Charles J. Beasley, Petersburg, Va., assignor to W. H. Tapscy and Alex. Steel, same place. [Filed Mar. 20, 1875.]

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

A bale-tie or buckle made in two pieces, A A, joined together by a rivet, and capable of opening at one end to such extent that the hoop or loop may pass vertically into the opening, and the two ends of said pieces brought together to form a bar through the loop, these ends being kept in position by the other loop being drawn into the narrower space between the opposite ends, as specified.



162,139. PROCESSES OF PREPARING GRAIN FOR GRINDING. Andrew Bertelsen, West Salem, and Marten Martens, Wrightsville, Wis. [Filed Dec. 1, 1874.]

The herein-described process of loosening the hull of grain previous to grinding—that is to say, rolling the grain under pressure between hard surfaces without crushing it, so as to merely destroy the adhesion between the hull and the flour-producing portions of the berry immediately underlying it.

162,140. TANKS FOR RETAILING COAL-OIL. John H. Boardman, Baltimore, Md. [Filed Mar. 27, 1875.]

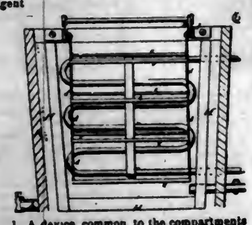
Brief.—The barrel rests upon a frame, being wholly inclosed within a case. The contents are drawn off through a siphon into measuring-vessels, which stand upon a drainer. The bottom of the case is lined with sheet metal, descending into a trough in front, to conduct and catch the drip and overflow from the barrel.

1. A closed barrel-case having one side of the lower part of it extended, so as to form, with a portion of the drip-tray, a closed dispensing-tray, with independent movable entrance therein, for the purpose and in the manner substantially as described.

2. The siphon, in combination with the adjustable cross-bar *g*, the barrel, and the barrel-case, substantially as set forth.

3. The troughed tray in the bottom of, and in combination with, the barrel-case, substantially as and for the purpose set forth.

162,141. CIGAR-TIPS. Francis Bourne, Boston, Mass. [Filed Apr. 20, 1875.]

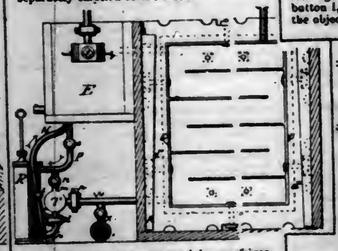


Brief.—Any suitable comminuted substance is saturated with collodion, and applied while wet to the end of the cigar, the collodion causing the mixture to adhere, and, being highly inflammable, the cigar can be easily lighted.

A tip for cigars, composed of a combustible comminuted material or mixture, saturated with collodion, and thus rendered highly combustible, and at the same time adhesive.

162,142. ICE-MACHINES. David Boyle, Washington, D. C. [Filed Nov. 10, 1874.]

Brief.—One device at the same time agitates the water to be frozen, and causes a current of the uncongealable fluid around and in contact with the coil containing the volatile agent



1. A device common to the compartments and spaces between them, whereby the uncongealable fluid in the compartments and the water in the spaces between the compartments are operated upon, producing simultaneously a current around the evaporator-coil in the compartment, and agitating the water between the freezing-plates, substantially as specified.

2. The pyramidal stripe *e*, for agitating the water and creating a current in the uncongealable fluid, as set forth.

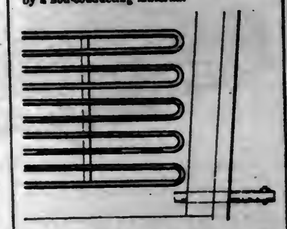
3. An evaporator-tank surrounded by a non-conductor, in combination with the stripe *e*, draw-rods *d*, and means of operating the rods, substantially as stated.

162,143. ICE-MACHINES. David Boyle, Washington, D. C. [Filed Oct. 24, 1874.]

Brief.—Each hollow partition, through which the brine passes, is surrounded with a frame of non-conducting material. The brine is sent directly or reversely in a circuit from the tank containing the refrigerating-coil through the hollow partitions and the pump. The gas enters the distributer, passes into and through the coil, and out to condensing-pump. Pockets at ends of water-spaces are to be filled with water, to aid in detaching the blocks of ice. Each hollow partition may be separately emptied of the brine.

1. A freezing-plate, operated by a refrigerant, and encompassed by a non-conducting frame.

2. The combination of a freezing surface or a freezing-plate, encompassed by a non-conducting-frame, with a series of partitions open at their alternate ends, for the purpose of producing a uniform flow of the chilling-fluid and evenly chilling the plates.



3. The combination of a hollow partition, encompassed by a non-conductor, with an evaporator-tank, as stated.

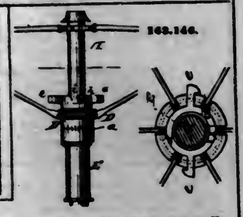
4. The combination of the pump E with the pipe N having the cock *i*, A having the cock *l*, P having the cock *o*, T and *m* having the cock *n*, W having the cock *p*, substantially as set forth, for the purpose of directing the flow of the chilling agent in a circuit beginning and ending in the tank E, and including the hollow partitions B, and either upward or downward through the partitions, as described.

5. The wedge-shaped pocket R, in combination with the freezing-tank, for the uses stated.

162,144. ICE-MACHINES. David Boyle, Quincy, Ill. [Filed Apr. 14, 1875.]

Brief.—The volatile agent circulates through coils in the uncongealable fluid, which is held in compartments (of the tank) whose sides are the freezing-plates, and which are enframed by a non-conducting material.

A hollow compartment composed of a non-conducting frame connected by freezing-plates, and containing an evaporator-coil, substantially as set forth.



162,145. ROCKING-CHAIRS. Chas. Brada, New York, N. Y. [Filed Feb. 13, 1875.]

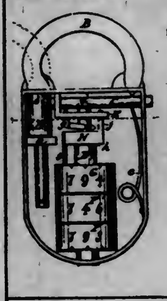
Brief.—The rocker is adjusted to any position on the supporting-frame, and is secured therein by the locking-bar engaging with the catch on the supporting-frame. The locking-bar is operated by the rock-shaft and connecting-lever, and is locked in position by the spring-catch engaging with the notched thumb-button on the rock-shaft.

The combination, with the rocker A and supporting-frame B, having a catch, *b*, of the locking-arm E, lever G, rock-shaft H, thumb-button I, and stop *d*, substantially as and for the object specified.

162,146. UMBRELLA-RUNNERS. George B. Bringman, Philadelphia, Pa. [Filed Apr. 15, 1875.]

1. In combination with the stick A and stretchers C, the runner D, tube E, spring *e*, and catches *c c*, constructed and arranged to operate substantially as and for the purposes herein set forth.

2. In combination with the subject-matter of the above claim, the bayonet-lock *h* and pin *i* in the stick A, substantially as and for the purposes herein set forth.



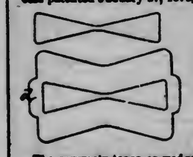
162,147. COMBINATION-PADLOCKS. Mott B. Brooks, Brockville, Canada, assignor to J. M. Gill, same place. [Filed Apr. 9, 1875.]

1. The combination of the case A, semicircular link B, having a pivoted extension, B', and a recess, *b*, the transverse bolt C, having a recess, *d*, the spring *e*, and the longitudinal bolt D, substantially as and for the purpose described.

2. The combination of the link B, having extension B', the bolt C, the bolt D, having studs *c c'*, the rings F F', having grooves *f f'* *g g'*, the bent pin *g'*, and the perforated disk E, substantially as and for the purpose described.

3. The combination of the collar H, having extensions *i* and *j*, the perforated disk E, the bolt C, the bolt D, and the ring G, having longitudinal groove *h*, substantially as and for the purpose described.

4. The combination of the link B, bolt C, bolt D, perforated disk E, the collar H, and the rings F F' G, substantially as and for the purpose described.



162,147.

162,148. COILS FOR TUBING. William F. Brooks, New York, N. Y., assignor to Geo. J. Brooks, Brattleborough, Vt. [Filed Dec. 1, 1874.]

Brief.—Improved core to be used in the process patented January 27, 1874, No. 146,808.

The reversely taper or wedge shaped core for use within a block of similar construction externally and internally, substantially as and for the purpose herein set forth.

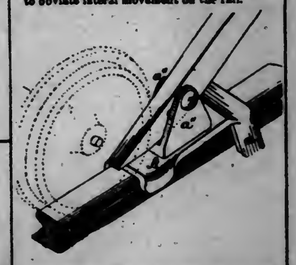
162,149. ORDNANCE. John G. Butler, New York, N. Y. [Filed Mar. 18, 1875.]

1. The eccentric annular collars *h i* applied either to trunnions of full or reduced diameter, substantially as and for the purpose hereinbefore set forth.

2. The method of preserving or restoring the equilibrium of ordnance by eccentrically changing the trunnions, and thereby changing the centers thereof to correspond to the center of gravity, substantially as described.

162,150. DETENT-CYLINDERS. Jos. Butterworth, Philadelphia, Pa., assignor to Jas. Butterworth and Charles C. Butterworth, same place. [Filed Apr. 15, 1875.]

162,151. FEEDING ATTACHMENTS FOR CARTRIDGE-LOADING MACHINES. A. C. Carey, Boston, Mass. [Filed Mar. 27, 1875.]

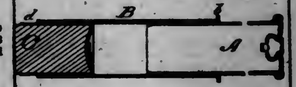


162,151.

1. In a machine-feeder for cartridges, the tube A, having grooves or recesses *b b'*, adapted for use with a hopper and a transversely-grooved feed-wheel, substantially as specified.

2. The guide-flanges *i*, in combination with the grooves or recesses *b' b* of a feed-tube, A, substantially as specified.

162,152. PINCH-BARS. M. Grier Collins, Wilmington, Del., assignor of two-thirds his right to James C. Pickels and Wm. P. Smith, same place. [Filed Apr. 1, 1875.]



Brief.—The fulcrum-plate of one piece, with lugs above for pivoting the lever, and below to obviate lateral movement on the rail.

The fulcrum-plate A, provided with the lugs *a* and *a*, grooves *a'* and *a'*, ears *a''* and *a''*, and formed in one piece from cast-steel, substantially as and for the purpose shown.

162,154. BALL-CARTRIDGES. R. F. Cook, Potsdam, N. Y. [Filed Mar. 20, 1875.]

Brief.—In connection with fixed ammunition, the means referred to in claim for seating a patched ball in a breech-loading gun.

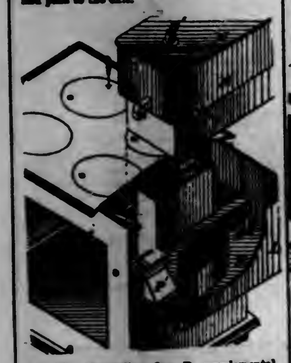
A cartridge for breech-loading fire-arms, consisting of the outer tube B, provided with flange *b*, powder-shell A, having flange *a*, and ball C, covered with a suitable patch, *d*, substantially as and for the purpose set forth.

162,155. RESERVOIR COOKING-STOVES. A. C. Corse and Michel G. Fagan, Troy, N. Y. [Filed Apr. 14, 1875.]

Brief.—The supplemental flue is in the rear of the ascending flue, and adjacent. It communicates with the reservoir-space, and at its sides with the descending flues, and by means of dampered openings in its bottom with the ascending flue, also. The descending flues are dampered near a plane passing through the upper line of the openings from them into the reservoir-space.

1. The combination and arrangement, between the ascending flue I and reservoir-chamber L, of the supplemental flue N, which communicates at its lower end with the latter, and at its sides with the descending flues H and H, substantially as and for the purpose specified.

2. The combination of the descending flues H and H, supplemental flue N, reservoir-chamber L, and openings *h*, *n*, and *n'*, substantially as and for the purpose shown.



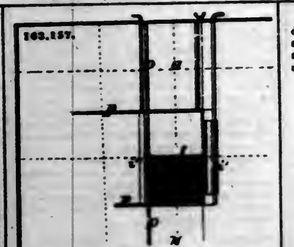
3. In combination with the top oven-flue F and reservoir-chamber L, the descending flues H and H, ascending flue I, supplemental flue N, openings h, n, and n', and dampers H' and I', substantially as and for the purpose set forth.

160,156.

160,156.—RESERVOIR COOKING-STOVES. A. C. Corse and Michel G. Fagan, Troy, N. Y. [Filed Apr. 14, 1875.]

Brief.—When all the dampers are closed, the products of combustion pass around the oven into the reservoir-space, around the flue-strip to the exit-flue. When only the damper closing the direct draft is closed, they dive in both side flues, enter the reservoir-space, and pass to the exit.

1. The descending flue P, supplemental flue P', openings p and q, and dampers P' and Q', in combination with the boiler-chamber M, substantially as and for the purpose shown.



2. The descending flue P, supplemental flue P', the ascending flue Q, the exit-flue O, the openings o, p, and q, and the dampers P' and Q' in combination with the top flue I, bottom flues K and K', and the boiler-chamber M, substantially as and for the purpose shown and described.

160,157. RESERVOIR COOKING-STOVES. A. C. Corse and Michel G. Fagan, Troy, N. Y. [Filed Apr. 14, 1875.]

Brief.—The products of combustion may be sent directly to the exit, or down the rear diving-flue and the supplemental flue into the space beneath the reservoir, and thence up the ascending and exit flue, or down the rear diving-flue to the return-flues under the oven, and thence up the rear ascending flue.

1. In combination with the flues H and I, provided with the openings h, h', i, and i', and dampers h', i', and i'', the supplemental flue M, communicating at its upper end with the top oven-flue F, and at its lower end with the reservoir sheet-flue M, substantially as and for the purposes specified.

160,157.

2. In combination with the sheet-flues F and M, the flue H, provided with the openings h and h'' and damper h', and the flue I, having the openings i and i'' and the dampers i' and i''', substantially as and for the purpose shown.

3. The sheet-flues F and M, vertical flues H, I, and N, communicating openings h, h'', i, i'', and n', and dampers h', i', and i''', all combined to operate in the manner and for the purpose substantially as set forth.

160,158. RESERVOIR COOKING-STOVES. A. C. Corse and Michel G. Fagan, Troy, N. Y. [Filed Apr. 14, 1875.]

Brief.—Smoke may be sent direct or around the oven, first being passed through the reservoir-space, if desired. In the latter case the diagonal flue-strips direct it to the center of the lower portion of the space under the reservoir.

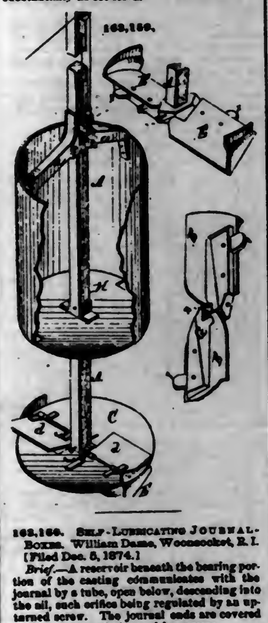
1. In combination with the flues G and G and the reservoir-chamber L, the openings g and g', and dampers G' and G', substantially as and for the purpose specified.

2. In combination with the reservoir-chamber L, the sheet-flue I, located at its lower front side, and furnishing communication between said chamber and the lower portion of the descending flues G and G, substantially as and for the purpose shown.

3. In combination with the reservoir-chamber L, and with the openings g and g, the vertical diagonal flue-strips O and O, arranged substantially as and for the purpose set forth.

4. In combination with the descending flues G and G, and with the reservoir-chamber L, the inlet and outlet openings g and g', respectively, the rolling dampers G' and G', the sheet-flue strip N, and the vertical diagonal flue-strips O and O, all arranged to operate in the manner and for the purpose substantially as shown and described.

160,159. EARTH-AUGERS. Henry Cull, Marshalltown, Iowa. [Filed Apr. 13, 1875.]



Brief.—The auger-shaft is provided with a pulley at the top, and another on the arms of the basket, over which a rope passes for elevating the basket. The shaft carries a disk for forcing out the earth, and a bottom plate with valves and cutters. The basket is movable on the shaft, and the L-shaped cutters are detachably connected to a cross-piece.

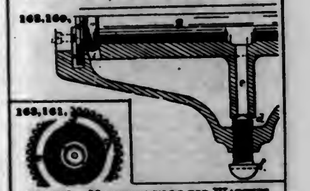
1. In combination with a shaft, A, and its pulley b and circular disk H, the movable cylinder B, having arms a a, and the pulley b, substantially as and for the purposes set forth.

2. The combination of the shaft A and disk H, movable cylinder B, open at both ends, the metallic piece G, with its L-shaped cutters E E, substantially as and for the purpose set forth.

3. The combination of the shaft A and its disk H, the movable cylinder B, and detachable L-shaped cutters E E, and the detachable disk C, provided with valves d d, all substantially as set forth.

160,160.

160,160.—SELF-LUBRICATING JOURNAL-BOXES. William Dame, Woonsocket, R. I. [Filed Dec. 5, 1874.]



Brief.—A reservoir beneath the bearing portion of the casting communicates with the journal by a tube, open below, descending into the oil, such orifice being regulated by an upturned screw. The journal ends are covered with washers and clamped by screws.

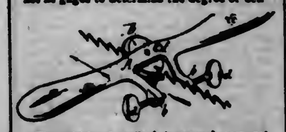
1. In a sectional journal-box, the combination, with an oil-reservoir, C, of the lower section of the feed-tube e, having a countersunk lower end, and the adjustable screw f, having a correspondingly-beveled upper end, substantially as specified.

2. The cut-offs or washers i and the clamp-plates m, arranged in recesses h, and clamped by set-screws n, combined and arranged substantially as specified.

3. The combination of the oil-reservoir C, valve d, screw f, cut-offs i, with clamp-plates m, set-screws n, grooves o, with oil-holes s, substantially as and for the purpose described.

160,160.

163,161.

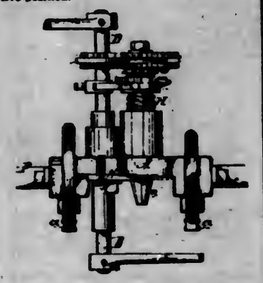


163,161.—MAINSPRINGS FOR WATCHES. Jno. A. Dawson, Boston, Mass., assignor to Florentine A. Jones, Schaffhausen, Switzerland. [Filed Dec. 10, 1874.]

Brief.—A mainspring safety attachment, consisting of a supplemental piece attached to and swinging on the outer end of main-spring, to engage in a recess in the barrel, and act as a stop-work for the winding mechanism.

In combination with the spring B and barrel A, the intermediate swinging piece C, hinged to the outer end of the spring at one end, and bearing against an abutment on the barrel at the other end, substantially as described, for the purpose specified.

160,162. SAW-SETS. Henry Disston, Philadelphia, Pa. [Filed Nov. 20, 1874.]

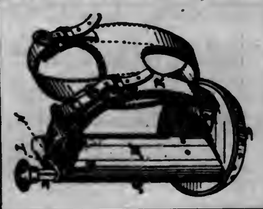


Brief.—A disk, with notches in the edge of various widths, is pivoted in a slotted frame, midway of the two handles, and is held in position by a set-screw. Two arms situated in the plane of the disk carry set-screws, that act as gages to determine the degree of set.

The within-described improved saw-set, consisting of the frame A having handles a a, arms b b, set-screws f and d, and the slotted and recessed disk B, all as set forth.

160,163. SAW-GUMMERS. Thos. S. Disston, Philadelphia, Pa., assignor to himself and Henry Disston & Sons, same place. [Filed Aug. 7, 1874.]

Brief.—An eccentric on the driving-shaft works between the bifurcated ends of a bell-crank lever, hung loosely upon the tubular feed-screw. A pawl carried by said lever engages with a ratchet-wheel attached to the feed-screw, and, upon the vibration of the lever by the eccentric, turns said wheel, and feeds the screw and tool-spindle forward. A central collar on the pinion is adapted to a groove in the cog-wheel, so that the pinion and wheel must always retain the same relative position.



1. The combination, in a saw-gummer, of the saddle A, provided with set-screws c, the driving-shaft D, tubular screw H, spindle G, carrying the conical cutter n, turning in the tubular screw, and moving longitudinally with, but rotating independently of, the latter, and appliances, substantially as described, for communicating a rotary motion from the driving-shaft to the spindle, and a longitudinal motion from the latter to the driving-shaft, all as set forth.

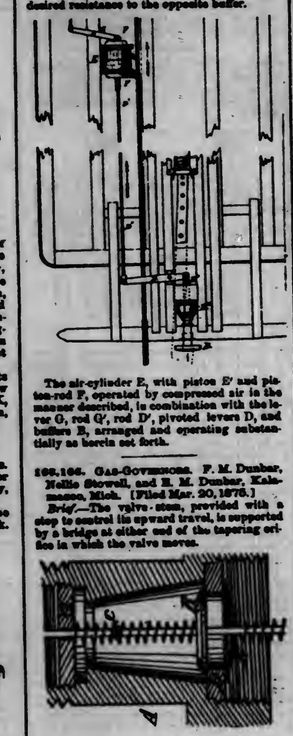
2. The combination of the saddle A, its driving-shaft D, spindle G, and tubular screw H, the ratchet q, eccentric p, and the lever K, carrying a pawl, t, and having an elastic arm, as and for the purpose set forth.

160,164. ALARM FARE-REGISTERS. Thos. B. Doolittle, Bridgeport, Conn., assignor to the Doolittle Manufacturing Company, same place. [Filed Mar. 18, 1875.]

Brief.—Arranged to be carried on or in the hand, the fingers being left free for other work.

160,164.

1. The case for an alarm-register, consisting of a round, oval, or equivalent formed barrel, A, adapted to be held on or in the hand, and containing the registering mechanism, and the perforated case D for the bell, substantially as described.



2. In a case for an alarm-register, the barrel A, provided with the sliding plates L M and seal-cavity N, substantially as and for the purpose described.

3. The combination, with the registering devices and with the alarm mechanism, arranged in relation to each other, as shown, of the straight push-rod B, passing down one side of the barrel, and provided with spring-arms J K, operating the register and the alarm, substantially as set forth.

4. An alarm-register embodying in its construction an oval, round, or equivalent formed barrel, carrying the registering mechanism, and adapted to be carried on or in the hand, a gong-containing case attached to such barrel, a series of registering-wheels, an alarm apparatus, and a straight push-rod, provided with spring-arms, and actuating the register and alarm, substantially as set forth.

160,165. RAILWAY-CAR BUFFERS. Prince R. Drake, Belle Ewart, Canada. [Filed Jan. 16, 1875.]

Brief.—A piston actuated by compressed air is combined with the buffer, to give it the desired resistance to the opposite buffer.

The air-cylinder E, with piston E' and piston-rod F, operated by compressed air in the manner described, in combination with the lever G, rod G', rod D', pivoted levers D, and buffers B, arranged and operating substantially as herein set forth.

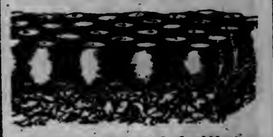
160,166. GAS-GOVERNORS. F. M. Dunbar, Nellie Stowell, and R. M. Dunbar, Kalamazoo, Mich. [Filed Mar. 20, 1875.]

Brief.—The valve-stem, provided with a stop to control its upward travel, is supported by a bridge at either end of the tapering orifice in which the valve moves.

The screw-threaded pipe-section A, having a tapering orifice and carrying the rings D G, provided with perforated bridges, in combination with the spring-valve B and valve-rod C, with stop c, substantially as described, and for the purpose set forth.

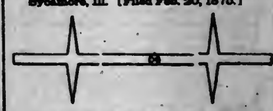
160,167. ROASTING APPARATUS. Louis Dutertre, San Francisco, Cal. [Filed Mar. 22, 1875.]

Brief.—The flanges at the top, bottom, and ends prevent contact with the walls of the inclosing vessel or chamber.



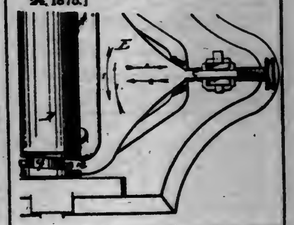
1. In a reversible roasting apparatus, the combination of the inner box B, provided with cover b b', and the outer box A, provided with cover a a, projecting supports and top pieces m m' n n', respectively, and fastenings p q p' q', all substantially as specified.

2. In a reversible roasting apparatus, the combination of the supporting angle-plates r r' o o' and handles r r' s s' with the box B and its cover b b', all substantially as and for the purpose specified.



160,168. PAVEMENTS. Louis Dutertre, San Francisco, Cal. [Filed Feb. 15, 1875.]

Brief.—Cobble-stones having their ends clipped off are set in a bed of sand spread on a prepared foundation of cement or broken stone. The interstices between the cobble-stones are filled with a composition consisting of two per cent. petroleum, five per cent. pulverized limestone, ten per cent. gravel, and eighty-three per cent. asphaltum.



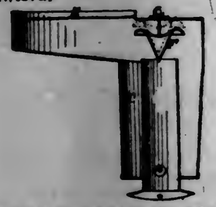
A pavement constructed of cobble-stones clipped at the top, set in a bed of gravel or sand spread on a prepared foundation of concrete or broken stone, and cemented together by an asphaltum preparation, all substantially as specified.

160,169. FENCE-WIRES. Reuben Hilwood, Sycamore, Ill. [Filed Feb. 20, 1875.]

A fence-wire, having barbs formed out of the metal of its body, and forming an integral part thereof, substantially as described, and for the purpose set forth.

160,170. PHOTOGRAPH-BURNISHERS. Wm. G. Entrekin, Philadelphia, Pa. [Filed Apr. 24, 1875.]

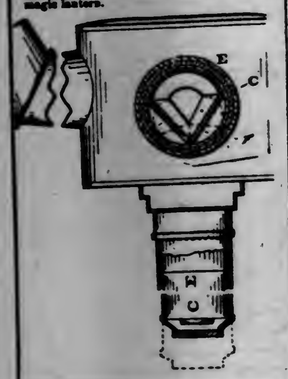
1. The burnisher *a*, combined with the roughened feed-roller D, and with appliances for imparting both a lateral and a longitudinal reciprocating movement to the burnisher, substantially as set forth.



2. The combination of the scroll-groove *m*, of the roller D and eccentric portion *q* of the same with the forked stud *n*, attached to the burnisher arm E, all substantially as set forth.

162,173. BOOTS AND SHOES. T. R. Evans, Philadelphia, Pa. (Filed Feb. 15, 1875.)

A shoe or boot, having a central strip, *c*, forming a continuation of, and in one piece with, the vamp, and on each side of said strip a graduated elastic gore, broadest at its ends, as set forth.



162,174. SMOKE-STACKS FOR LOCOMOTIVES. H. V. Farlee, Topeka, Kans. (Filed Dec. 17, 1874.)

In combination with the smoke-stack of a locomotive, a rearward-extending chamber, covered upon its upper side by means of wire-gauze, and having its lower side inclined forward and downward, so as to enable cinders to pass, by the force of gravity, directly from the same into the outer pipe of said stack, substantially as and for the purpose set forth.

162,175. KALEIDOSCOPE. Alfred C. Ferris and Charles E. School, Philadelphia, Pa. (Filed Mar. 16, 1875.)

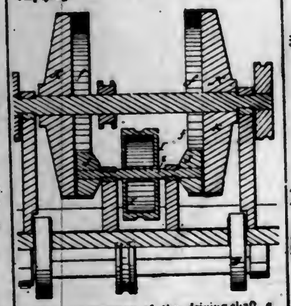
Brief.—Obtains kaleidoscopic effects by magic lantern.

1. The kaleidorama, consisting of the tapering or conical reflectors F, and adapted to operate with the condensers of the lantern A, substantially as and for the purpose set forth.

2. The cylinder C, with cone D and reflector F thereto, and the collar E encircling the cylinder, substantially as and for the purpose set forth.

162,176. WEIGHING-SCALES. John Foller, Washington, D. C. (Filed Apr. 7, 1875.)

In weighing scales, the combination, with the bar B, provided with screw threads or serrations, of the weight A, adapted to be rotated and reciprocated upon said bar, substantially as and for the purpose specified.



162,178. CUTTING-PLIERS. James G. Foreman, Corry, Pa. (Filed Mar. 1, 1875.)

The rectangular blades *f f*, having cutting-edges on all sides, adjusted and secured as specified, and for the purpose shown.

162,174. HAND-CARS. Joseph H. Gabert, Athens, Ohio. (Filed Mar. 30, 1875.)

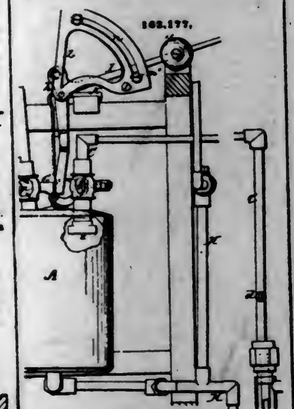
Brief.—Hollow fly-wheels filled with sand, and provided with doors for convenience in emptying.

The combination of the driving-shaft *a*, hollow fly wheel H, and pulley *b*, belt *d*, shaft *e*, hollow equalizing-wheel I, friction-pulleys J J, wheels K K, having projecting rims *f f*, and a truck, substantially as and for the purpose set forth.

162,177. BOILER FEEDERS AND REGULATORS. Thomas G. Gardner, Lincoln, Ill. (Filed Jan. 13, 1875.)

Brief.—When the cylinder is empty the weighted lever raises it, opening an exhaust-pipe and closing the steam-pipe. Water then flows into the cylinder until its weight overcomes the weighted lever; it falls a short distance, which closes the exhaust and opens the steam-pipe. The water from said cylinder then flows through a bottom pipe into the boiler.

1. The pipe D, provided with elbows or connections E E', for attachment to a steam-boiler, and connected by pipes C and H with the rising and falling cylinder A, substantially as and for the purposes herein set forth.



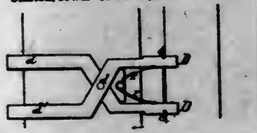
2. The steam-pipe C, passing from the intermittently-reciprocating cylinder A to the pipe D, and provided with a globe-valve, *b*, and with an inverted T at each end, substantially as and for the purposes herein set forth.

3. The combination of the cylinder A, pipe D, connections E E', pipe C, having valve *b*, and inverted T at each end, and the forked pipe H, having valves *f' f'*, all substantially as set forth.

4. The combination, with the intermittently-reciprocating water-cylinder A, of the exhaust-pipe with valve *a*, and the steam-pipe C with valve *b*, the two valves being connected by a bar, G, and operated by means of a weighted lever in such a manner as to open one valve and close the other simultaneously at each stroke of the lever, substantially as and for the purposes herein set forth.

5. The combination, with the intermittently-reciprocating water-cylinder A, of the oscillating elbow-lever I, with adjustable weight J, and knife-edge pivots *i*, bearing-plate K, slotted plates L L, with adjustable stops *m' m*, and arm P, and the bar G connecting the valves *a b*, all substantially as and for the purposes herein set forth.

162,177.



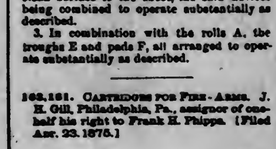
162,178. CARRIAGES. Jacob H. Gibson, Springfield, assignor to William J. Phelps, same place, and W. P. Abernethy, Northampton, Mass. (Filed Mar. 26, 1875.)

The combination of the support A, the socket and pivot joint B, the curved bar *d*, the slide *b*, provided with its set-screw *a*, and the canopy C, all forming an attachment to a carriage, substantially as described.

162,179. GATE-LATCHES. John L. Glessner, Clinton, Iowa. (Filed Apr. 24, 1875.)

The combination, with a gate and posts, of two crossed and pivoted latches, D D, having handles *d' d'*, the spring E, and the opposite catches *c c*, as and for the purpose specified.

162,180. MACHINES FOR CALENDERING PRINTED SHEETS. Henry Jos. Gill, Dublin, Ireland. (Filed Nov. 6, 1874.)

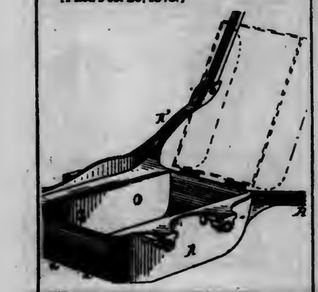


1. The hot-press cylinder-rolls A A, arranged side by side, in combination with troughs E E, for containing a liquid solvent of printers' ink, said rolls and troughs being constructed and arranged to operate substantially as and for the purpose set forth.

2. An apparatus for calendering printed paper consisting of two rolls placed side by side, so that the paper can be passed between and in direct contact with both rolls, a trough arranged under each roll for supplying a solvent thereto, and a rubber scraper for wiping each roll dry, so as to constantly present a clean surface to the sheet, the said devices being combined to operate substantially as described.

3. In combination with the rolls A, the troughs E and pads F, all arranged to operate substantially as described.

162,181. CARTRIDGES FOR FIRE-ARMS. J. H. Gill, Philadelphia, Pa., assignor of one-half his right to Frank H. Phipps. (Filed Aug. 23, 1875.)

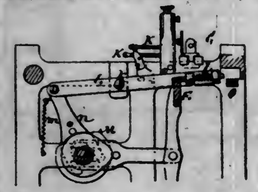


A cartridge-shell having a slot across the bottom of the pocket or recess *c*, with a solid anvil, *a*, secured in said pocket, substantially as described, whereby the anvil is retained in place, and a vent-opening is provided at the sides thereof, as set forth.

162,182. PROCESSES OF MANUFACTURING CIDER. William H. Gilmore, Shiloh, Ohio. (Filed Feb. 13, 1875.)

Brief.—To a solution of refined sugar and tartaric acid adds water and apple-essence obtained by freezing cider.

A cider compound made of refined sugar, tartaric acid, apple-essence, and water, substantially as described.

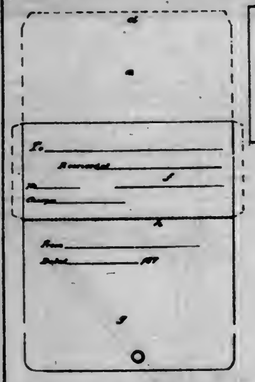


162,183. MOWING-MACHINES. Alexander Gordon, Geo. Telford, and Jacob H. Myers, Rochester, N. Y., assignors to the Hubbard Harvester Company, Minneapolis, Minn. (Filed Feb. 20, 1875.)

The open or slotted bottomed frame or body A, provided with the rack or gear guard *a*, grooved crank-axle arm A', tongue arm or socket A', and lever-arm A', constructed and arranged substantially as and for the purpose set forth.

162,184. NEEDLE-LOOMS. J. H. Greenleaf, New Haven, Conn. (Filed Oct. 23, 1874.)

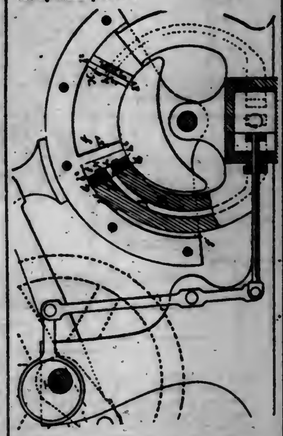
Brief.—The tension device consists of a perforated blade-spring and rocking bearing, together with front and rear guides. A spring take-up finger controls the stop mechanism by means of a sliding bolt on a vibrating arm, the bolt being driven forward by the lay against the shipping lever when the thread breaks. The sliding friction clutch of the stop mechanism, when disconnected from the loose pulley, is thrown into gear with a fixed disk, thereby acting as a brake.



1. The combination, with the eye-pointed needle G, of one or more perforated springs, J, and rocking bearings *f*, for operation in connection with suitable eyes or guides, to control the tension of the needle-thread, substantially as specified.

2. The combination of one or more fingers or feelers, K, with the lever L, the forked lever n, the cam M, the spring m, the spring-stop *l*, the lay E, and the lever O, substantially as and for the purposes specified.

3. The combination of the double-faced clutch D, adapted to slide on and to turn with the driving-shaft of the loom, the loose pulley C on the said shaft, and the stationary brake cup or disk H, secured to the loom framing, the whole constructed and operating substantially as and for the purpose herein described.



162,185. COMBINED BLANKS AND ENVELOPES. William L. Gross and William W. Kelchner, Springfield, Ill.; said Gross assignor to said Kelchner. (Filed June 27, 1874.)

The combined telegraphic-message and envelope blank, having the address portion *f* on the same side of the sheet with the face of the message portion *g*, the two being separated or divided by the perforations *h*, the folding envelope-flap *e d* above the address-surface, and the side sealing-flaps *d*, all as shown and set forth.

162,186. OSCILLATING ENGINES. Jno. Hall, Brooklyn, N. Y. (Filed Apr. 10, 1875.)

Brief.—The curved cylinder oscillates the curved pistons, the packing of which is set out by steam-pressure.

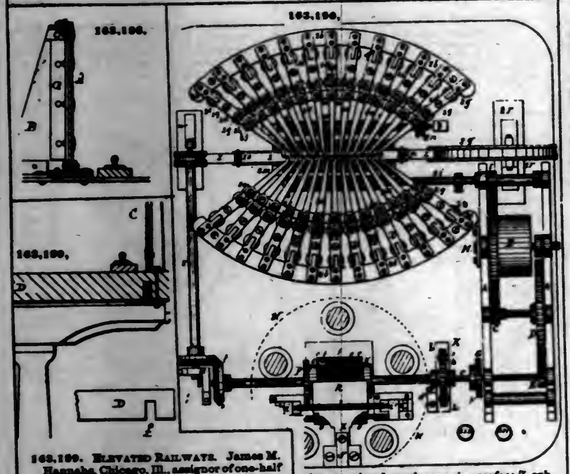
The packing, composed of the angle-plates G, fitted together with tenons *g'*, mortises *g'*, and lips or flanges *g'*, and the plate H, provided with the opening A, extension A', steam-ports or channels *i*, and flanged edges A', in combination with the abutments B B and the chambers *f f* of the cylinder, substantially as herein described.

162,187. RAILWAY-TIES. Silas H. Hamilton, Bushnell, Ill., assignor of one-half his right to John Fitch, Toledo, Ohio. (Filed May 4, 1875.)

Brief.—A railway-tie with tubular ends, having inner or gage lugs cast thereon, and having outer detachable lugs resting upon inclined seats, the upper outer ends of which have a wedge-shaped incline; said detachable lugs being fastened on the tie by a slotted bolt secured by a nut on inside of tie.

1. The metallic tie with tubular ends, the lips B C, and bolts D, having nuts within the tubular ends, as set forth.

2. The tubular-ended tie, having the ledges B C, bolt D, and inclines H, all arranged substantially as set forth.



3. The tie with the inclines H, abutments I, clamps C, and bolt D, having nut and key K on its lower end, as set forth.

162,188. ELEVATED RAILWAYS. James M. Hannaha, Chicago, Ill., assignor of one-half his right to Louis Wahl and Christn. Wahl, same place. (Filed Dec. 26, 1874.)

Brief.—A metal-plate girder for elevated railways, having outside lateral braces or brackets, the several parts being strengthened and connected by angle-irons, and the inner side of the girder forming practically a smooth surface, to prevent injury to the cars should they leave the rails.

Girders for elevated railways, consisting of the iron plates A and outside bars or brackets B, the several parts being strengthened and connected together by angle-irons, as described, and constructed with a practically-smooth surface upon the inside, substantially as and for the purposes specified.

163,189.

163,190.

163,189. ELEVATED RAILWAYS. James M. Hasmahs, Chicago, Ill., assignor of one-half his right to Louis Wahl and Christn. Wahl, same place. [Filed Dec. 26, 1874.]

Brief.—A sheet-metal girder for elevated railways, having perforations near its lower flange, into which are passed notched ties, which rest upon the bottom flange of the girder.

1. The girder C, having openings *a* to receive the ties D, substantially as and for the purposes specified.

2. In an elevated railway, the girders C, in combination with the ties D, said ties being supported upon, and placed above, the lower angle-irons or chords, substantially as specified.

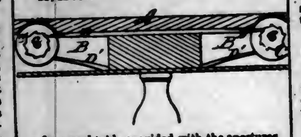
163,190. ELECTRO-MECHANICAL PRINTING-INSTRUMENTS. Hans R. M. J. Hansen and Christopher P. Jurgensen, Copenhagen, Denmark. [Filed Feb. 14, 1874.]

1. The writing-ball U and keys K *p*, having their points of contact arranged in a straight or diagonal line over the cylinder *e*, as set forth, in combination with the disk cylinder *e*, centers *f*, the shield T, provided with a series of contact-pieces, arranged either in a straight or diagonal line, to correspond with the points of contact of the keys K *p*, substantially as specified, the escapement E, spindle O, contact-wheel E, teeth *c*, electro-magnets 2*g*, armatures 2*d*, armature type-arms 2*a*, and a clock-work, substantially as and for the purposes set forth.

2. The writing-ball U and keys K *p*, arranged as described, the disk-cylinder *e*, centers *f*, the shield T, having a series of contact-pieces arranged thereon, substantially as set forth, and a clock-work, when used as a separate apparatus, and at any distance from and in combination with the electro-magnets 2*g*, armatures 2*d*, armature type-arms 2*a*, an escapement regulated by electro-magnetism, and a clock-work, as another and separate apparatus, the two being connected together by a series of wires of the same number as the keys K *p*, and each wire being joined in a cable, when the two apparatus may be used as an electric printing-telegraph, substantially as set forth.

3. The disk-cylinder *e* and centers *f*, in combination with the drum S, substantially as and for the purposes specified.

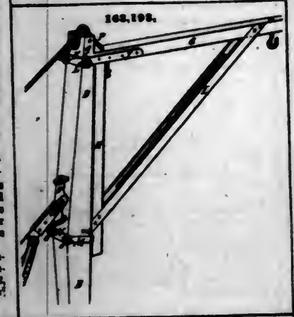
4. The writing-ball U, keys K *p*, disk-cylinder *e*, centers *f*, escapement E, and a clock-work, in combination with the pinion I, rollers 2*f* 2*f* 2*m*, having a carbonized paper band wound around them, the armature type-arms 2*a*, and a moving surface, such as a paper band, S, substantially as and for the purposes set forth.



5. The writing-ball U, keys K *p*, disk-cylinder *e*, escapement E, and a clock-work, in combination with the spindle O, pinions *f* and *e f*, spindle V, carrying milled-edge wheel *x*, and the paper band or other moving surface Z, substantially as and for the purposes described.

6. The rollers 2*p*, in combination with the paper band Z, substantially as and for the purposes set forth.

163,191. TANNING COMPOUNDS. Arthur Haswell and John C. Long, Webster City, Iowa. [Filed Mar. 6, 1875.]

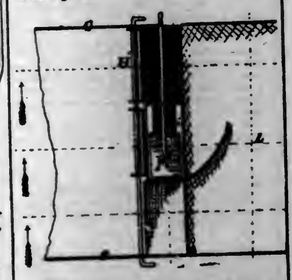


The herein-described compound, consisting of sumach, japonica, salt, sal-soda, oil of vitriol, spirits of turpentine, and potash, substantially as specified.

163,192. GAME-TABLES. Thomas L. Hawkins, Liberty Centre, Ohio. [Filed Mar. 12, 1875.]

In a card-table provided with the apertures 4, the disks C C', having numbers on their peripheries arranged in an ascending scale, and ratchet-wheels *e*, in combination with the pawls D D', arranged, one at the upper, and the other at the lower, part of the block B, whereby the disks C C' are allowed to turn only in opposite directions when operated by thumb-screws E E, substantially as described.

163,193.



163,193. DERRICKS FOR STACKING HAY. Henry John Hay, Omph Ghent, Ill. [Filed Apr. 10, 1875.]

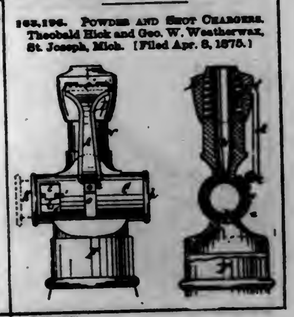
Brief.—Portable. A step for the post, and two rear braces pinned to the ground. Arm and diagonal brace together adjustable as to height.

An improved hay-derrick formed of the foot-board A, the pivoted shaft B, the braces E F and their couplings, the adjustable arm G H I and its couplings, the adjusting rope and pulley P Q, and the rigid arm R, constructed and combined with each other, substantially as herein shown and described.

163,194. RESERVOIR COOKING-STOVES. G. Hayner, Troy, N. Y., assignor to himself and Eddy, Corse & Co., same place. [Filed Apr. 14, 1875.]

Brief.—The products of combustion can be sent directly to the exit, or down the supplemental flue into the space under the reservoir, and thence either under the oven, or directly up to the exit by means of the damper in division-plate between the ascending and descending flues.

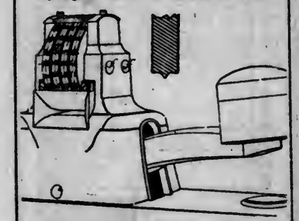
In combination with the top oven-flue F, descending flue H, ascending flue I, and reservoir-chamber L, constructed and relatively arranged as shown, the supplemental flue M, extending between said top oven-flue and reservoir-chamber, and the opening *i* and damper I', which afford direct communication between said flues H and I, substantially as and for the purpose specified.



163,195. BUCKLES. Myron Hester, Grand Rapids, Mich. [Filed Sept. 5, 1873.]

Brief.—The cam-lever has a slot at one end, through which the strap is passed, and the other end is held by a catch or swinging loop, which is pivoted to the frame.

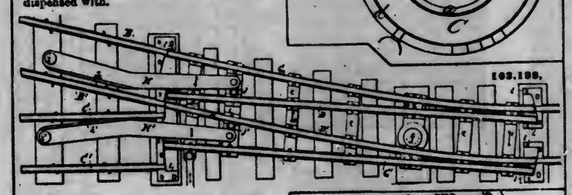
In a trunk-fastening, the combination of the body *a*, lever *d*, having the slot *s* through its upper end, and catch *j*, substantially as shown and described.



163,196.

163,196. POWDER AND SHOT CHARGERS. Theobald Hick and Geo. W. Weatherwax, St. Joseph, Mich. [Filed Apr. 6, 1875.]

The combination, in the top of a powder-flask, of the fixed exterior cylinder C, having the slotted openings *a* and *a'*, and the openings *c* and *c'*, communicating, respectively, into the flask F, and the nozzle-piece N, the movable interior cylinder *c*, with its openings *b* and *b'*, the screw-head *h*, and the extension-head *h'*, provided with the catch *d'*, engaging in the notched slot *s*, the hinged arm A, the collar D, and the coil-spring *g*, as described.

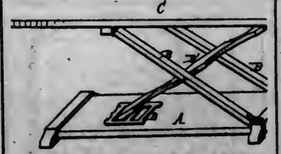


163,197. HAND-STAMPS. Benjamin B. Hill, Springfield, Mass. [Filed Mar. 17, 1875.]

In a dating-stamp, a series of revolving type-wheels provided with characters or figures upon the periphery having such a sharp cutting-edge as to readily pierce the ticket, and leave an indent of the said characters or figures in the ticket, in combination with a platen to support the ticket while being stamped, substantially as described.

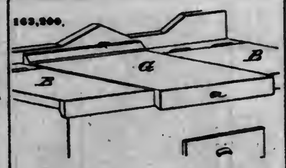
163,198. RAILWAY-SWITCHES. Benj. Hinkley, Troy, N. Y. [Filed Jan. 10, 1874.]

Brief.—Both ends of the switch swing open; four rail-sections being rigidly connected, and turning upon a central pivot. The rail-sections do not cross, and the diverging lines of the main track do not cross. Frogs are thus dispensed with.



163,198.

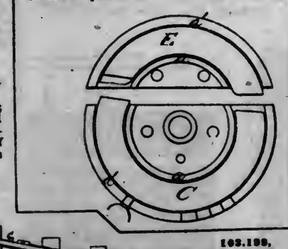
1. The two inside-converging switch-rails D D', connected together and pivoted between their ends, in combination with the stationary rails A A' and the fixed converging rails B' C, terminating at or before reaching the point to which they converge, as shown and described.



2. The combination of the inside-converging switch-rails D D', outside switch-rails G G', and safety switching-levers H H', with the fixed rails A A', B B', and C C', substantially as described.

163,199. IRONING-TABLES. Henry P. Hins and Friedrich Gehrke, Arlington Heights, Ill. [Filed Mar. 29, 1875.]

The base-board A, bars B B, brace B', table C, and ratchet-plates D D, constructed, arranged, and combined substantially in the manner and for the purpose set forth.

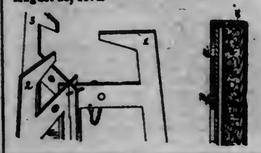


163,200. KNEADING-BOARDS. T. M. Hobson, Paola, Kans. [Filed Mar. 27, 1875.]

The reversible kneading board G, formed with flanges *a* at each end, and applied as a cover over a receptacle, E, and held between the covers B B of receptacles A A, substantially as described.

163,201. FASTENERS FOR THE MEETING-RAILS OF SASHES. H. A. House, Bridgeport, Conn., assignor to Frank Armstrong, same place. [Filed Apr. 10, 1875.]

Brief.—A circular bolt, in two sections, fitted in a suitable case, carries a recessed spring, so arranged that, when one of the sections of the bolt is thrust out of its case into that of the other by reaction of the spring, the other section enters the end of the case thus vacated, and securely locks the meeting-rails of the sashes; there being also a notched and toothed slot in the bolt-case, to hold the bolt in position, when desired, at intermediate points.



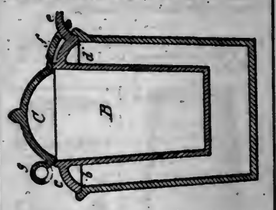
163,201.

1. The spring S, recessed into bolt C, in combination with sliding segmental bolt E, substantially as specified.

2. The case A, having a slot, *c*, with notch *d*, and teeth *e*, in combination with sliding bolts C E, and spring S, substantially as specified.

163,202. COOKING-LAMPS. G. P. Houston, Washington, D. C. [Filed Apr. 24, 1875.]

Brief.—Improvement on Patent No. 154,484, August 25, 1874.



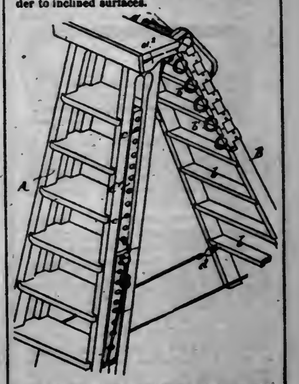
1. In a cooking lamp or stove constructed as described, the valve D, in combination with the holder *a* and cap *a'*, substantially as and for the purpose set forth.

2. In combination with a cooking lamp or stove, the plates 1, 2, and 3, forming the support, substantially as described.

163,203. GLUE-POTS. Thomas C. Howes, Cohoes, N. Y. (Filed Aug. 6, 1874.)

Brief.—The flange which sustains the glue-pot within the water-vessel is cast upon the glue-pot. This obviates the necessity of using a core in casting the outer vessel.

A glue-pot consisting of the inner vessel B, having the wide annular flange *c*, in combination with the outer vessel A, substantially as specified.



163,204. RELIEF-PLATES FOR PRINTING, &c. Benj. B. Huntoon, Louisville, Ky. (Filed Feb. 10, 1875.)

1. The herein-described method of producing relief-plates, consisting in striking up a sheet-metal face, filling the back of the same with cement, and then attaching a fabric to the back thereof, substantially as specified.

2. As an article of manufacture, a printing or relief plate composed of a sheet-metal face, cement filling, and cloth backing, constructed and arranged substantially as shown.

163,205. STEP-LADDERS. Jacob L. Isaacs and Richd. Halliday, St. Louis, Mo. (Filed Apr. 1, 1875.)

Brief.—The bolts that connect the back props with the main portion of the ladder are secured to strap-springs. The back props are provided with hooks, and when the ladder is used as an extension-ladder the hooks engage with the steps of the ladder proper. The cords that connect the back props are secured thereto by hooks, and pass through eyes on the lower step of the main ladder, and through the open stile, and hook at any desired adjustment into a perforated bar, to adapt the ladder to inclined surfaces.

1. The herein described and shown combination of parts—that is, the journals *a* and *b'*, the spring-bolt *a'*, and ladders A B, as and for the purpose set forth.

2. The combination of parts—that is, the journals *a b'*, the spring-bolt *a'*, and catch-hooks E—with ladder parts A B, by means whereof an extension for ladders is formed, as herein shown and described.

3. In combination with the ladder parts A B, the strip C, having slots *c*, buckle *c'*, cord D, and hooks *d*, for adapting the cord attachment to secure said ladders in varying positions, and as herein shown and described.

4. The hooks *d*, constructed as herein shown and described, to obtain a double fastening, as and for the purpose set forth.

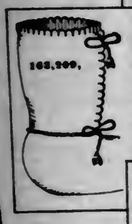
5. The combination of the ladder parts A B, journals *a b'*, spring-bolt *a'*, cord D, hooks *d*, buckle *c'*, slotted strip C, to operate in the manner herein shown and described.

163,206. MICA LAMP-CHIMNEYS. William H. Johnson, Chicago, Ill. [Filed Apr. 13, 1875.]

The combination of the mica chimney A, metallic top rim E, metallic base-rim B, band C, and the vertical exterior and interior strips D D, connected together and to the chimney and bands by the rivets *x x*, all substantially as and for the purposes herein set forth.

163,207. GUIDE-ROLLERS FOR WEB-PRINTING PRESSES. John W. Kellberg, Philadelphia, Pa. [Filed July 22, 1874.]

Brief.—The web of paper is led to the printing-press over a guide-roller, held in a frame which is pivoted to swing vertically, so that either end of the roller will sink to allow the smooth passage of paper, one margin of which is shorter than the other.

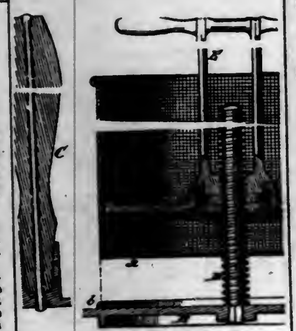


In a rotary printing-press, the roller B, mounted in a frame, A, A, A', and A', and that frame pivoted at *c c* on the frame C and C, in such a manner that its ends will yield vertically, substantially as and for the purpose described and set forth.

163,208. RAILROAD-SPIKES. Jas. M. Kent, Campbell, N. Y. [Filed Oct. 24, 1874.]

Brief.—The hook-spike is inserted in a previously-bored hole, the point, including the hook, entirely filling it, and the key *D'* driven behind it not only firmly holding the spike, but, by virtue of the inclined upper surface of the hook, exerting a strong downward pressure on the flange of the rail.

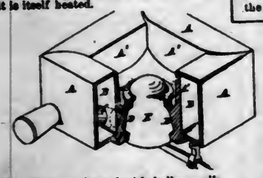
The half-headed semi-cylindrical holding-spike *A'*, provided at its lower end with the hook *a'*, having its upper face downwardly inclined and its back, or flat face, rounded opposite the hook, in combination with the semi-cylindrical half-headed key *D'*, substantially as and for the purpose set forth.



163,209.

163,209. SOCKS, MITTENS, &c. John Kent, New York, N. Y. [Filed Mar. 15, 1875.]

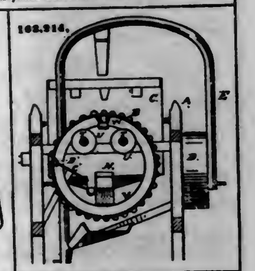
As a new and improved article of manufacture, a sock, mit, or other article of wearing apparel, composed of two thicknesses of knitted plush fabric, each having a plain knitted surface on one side and a plush surface on the other side, the plain knitted surfaces thereof being placed face to face, as and for the purposes herein set forth.



163,210. HAND JELLY-PRESSES. V. Knecht, Cincinnati, Ohio. [Filed Mar. 22, 1875.]

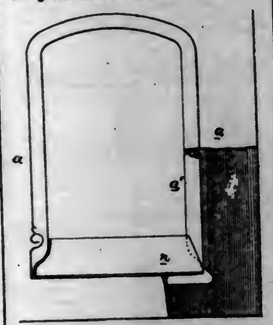
The base B, provided with fixed handle C and central screw-spindle D, in combination with the detachable cylinder A, having a bottom, *a*, follower F, and screw-handle E, all substantially as and for the purpose specified.

163,211. TUYERES. Franz Krein and Henry Franck, St. Louis, Mo. [Filed Apr. 23, 1875.]



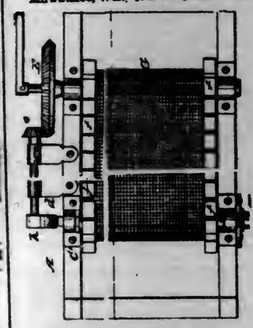
Brief.—The whole fire-box is formed of four hollow cast walls, the interior forming a passage for the blast, it cooling them at the same time it is itself heated.

1. The tuyere A, formed with hollow walls A', with interior air-passage B, and constituting the walls of the fire-place, and combined with interior annular chamber D and opening *a*, substantially as set forth.



2. The combination of hollow walls A', passage B, chamber D, blast-opening *c*, and dropping E, all substantially as set forth.

163,212.



163,212. ALBUMS. Franz Friedr. Kulbrich, Berlin, Prussia. [Filed Mar. 10, 1875.]

Brief.—Lips *a* of paper are attached to each of the outer strips *a c'* at the lower edge of the opening, for the lower portion of the cards or pictures to rest upon, thereby facilitating their insertion and withdrawal.

The combination of the enlargements *s* in the openings of the strips *a* and *a'* of a photograph-album leaf, with strips *a c* arranged to underlap the inserted pictures, as and for the purpose specified.

163,213. GRAIN-SEPARATORS. H. Kurth, Milwaukee, Wis. [Filed Apr. 12, 1875.]

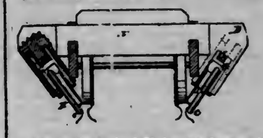
1. The revolving endless conveyer-belt G, made of rubber cloth, with longitudinal and transverse or other grooves made in its outer surface, to form cavities therein, for the purposes herein set forth.

2. The combination of the rotating roller B, reciprocating rotating roller B', rubber conveyer-belt screen G, gears *e* E, shaft D, eccentric A, and spring *b*, substantially as and for the purposes herein set forth.

163,214.

163,214. GRAIN-SEPARATORS. H. Kurth, Milwaukee, Wis. [Filed Apr. 12, 1875.]

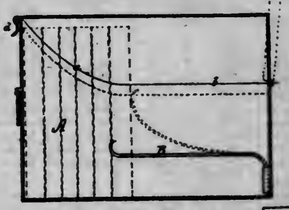
Brief.—Pocketed or pitted cylinder suspended upon parallel shafts, which serve both to rotate and steady it. The vibrating blade, which receives the dust, &c., from the pockets, is provided with a clearing-edge of rubber.



1. The combination, with the revolving cylinder B, of the rings V and the grooved wheels U on the parallel shafts T, substantially as described, whereby the cylinder is suspended and steadied at both ends and revolved, as set forth.

2. The vibrating blade C', provided with the rubber edge B', and arranged within the revolving cylinder B, substantially as and for the purpose herein set forth.

3. The revolving cylinder B, rings V, grooved wheels U, and parallel shafts T T, in combination with vibrating blade C', having rubber edge B', all substantially as and for the purpose specified.



163,215. GUIDE-WHEELS FOR CAR-TRUCKS. T. H. Lane, Holly Springs, Miss. [Filed Apr. 13, 1875.]

Brief.—Yielding socket for guide-wheels, preventing strain and wear.

The inclined wheel H, having flange *c*, in combination with the frame G, the spring I, and the extension D, substantially as and for the purpose described.

163,216. BULL-FILES. Maurice Langhorne, Maysville, Ky. [Filed Apr. 1, 1875.]

The sheet-metal box A, having its sides cut down horizontally at *b*, and obliquely at *c*, so as to leave the front of the box flush with the top of the files, and having its cover provided with a lap-flange, *f*, with a spring, B, to hold up the files, all as and for the purpose specified.

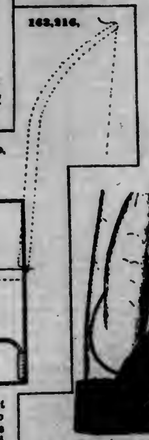
163,217. EXPANDING MANDRELS. Peter B. Lawson, Cold Springs, N. Y. [Filed Apr. 26, 1875.]

Brief.—The nuts or rings are made of metal, and serve to center the cylindrical body operated upon, while the other rings are of rubber, and serve, when compressed by the screw and nut, and consequently expanded circumferentially, to hold the body to be operated upon from turning.

An expanding-mandrel, consisting of a central screw-threaded spindle, A, a nut, B, one or more centering-collars, C, and one or more expanding-collars, D, combined substantially as herein described.

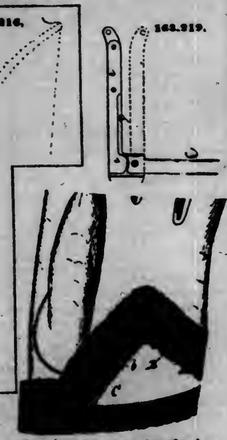
163,218. RECLINING-CHAIRS. J. Silas Lees, Rock Island, Ill. [Filed Nov. 26, 1874.]

163,218.



1. The combination, with the chair-frame A B C and hinged back D, of the bars *b*, hinged or pivoted ratchet-bars *d*, and springs *e*, substantially as and for the purposes herein set forth.

2. The shaft *h*, provided with lugs or projections *i i* and knob *f*, or its equivalent, in combination with the pivoted ratchet-bars *d*, springs *e*, and bars *b*, as and for the purposes herein set forth.

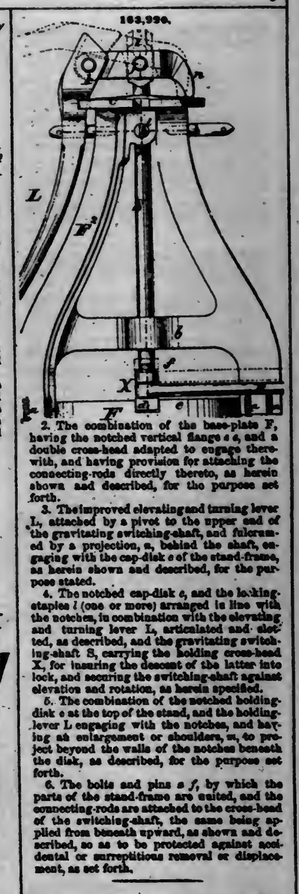


163,219. GLOVE CLASPS OR FASTENERS. Isaac Lewine, New York, N. Y. [Filed Apr. 6, 1875.]

Brief.—Two levers, one of them having a spring riveted to it, are pivoted together and operate after the manner of the blade of a jack-knife. The spring holds the levers open until the hand is inserted in the glove, and keeps them closed afterward.

163,216.

163,219.



In combination with the opening of a glove, the levers B and C, pivoted together, as described, and the spring *e*, which is rigidly secured to the lever B, and bears against the pivoted end of the lever C, substantially as and for the purpose specified.

163,220. RAILWAY-SWITCH STANDS. Jos. H. Lukens, Burlington, N. J. [Filed Mar. 6, 1875.]

Brief.—A switch-stand having a vertical rotating gravitating-shaft, carrying at its lower end a cross-head secured in notches in bottom of stand; said shaft being elevated and turned by a jointed lever pivoted to the shaft, and having a fulcrum-point projecting back of shaft, and resting upon top of notched cap-disk. When in the desired position, the switch is locked by dropping the lever into the notches in the cap-disk, and, in addition, the lever is provided with a swell or enlargement, which takes under the disk, and prevents vertical displacement of shaft; also, a staple passes through the shaft for locking down the same by a padlock.

1. The base-plate F, having a vertical marginal flange, *c*, with index-notches therein, in combination with a cross-head, X, at the lower end of the gravitating switching-shaft, engaging at each end with the said notches for holding the switching-shaft in its different positions, in the manner herein specified.

163,220.

2. The combination of the base-plate F, having the notched vertical flange *c c*, and a double cross-head adapted to engage therewith, and having provision for attaching the connecting-rods directly thereto, as herein shown and described, for the purpose set forth.

3. The improved elevating and turning lever L, attached by a pivot to the upper end of the gravitating switching-shaft, and fulcrumed by a projection, *n*, behind the shaft, engaging with the cap-disk *c* of the stand-frame, as herein shown and described, for the purpose stated.

4. The notched cap-disk *c*, and the locking-staples *l* (one or more) arranged in line with the notches, in combination with the elevating and turning lever L, articulated and slotted, as described, and the gravitating switching-shaft S, carrying the holding cross-head X, for insuring the descent of the latter into lock, and securing the switching-shaft against elevation and rotation, as herein specified.

5. The combination of the notched holding-disk *c* at the top of the stand, and the holding-lever L engaging with the notches, and having an enlargement or shoulders, *m*, to project beyond the walls of the notches beneath the disk, as described, for the purpose set forth.

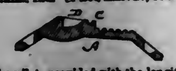
6. The bolts and pins *s f*, by which the parts of the stand-frame are united, and the connecting-rods are attached to the cross-head of the switching-shaft, the same being applied from beneath upward, as shown and described, so as to be protected against accidental or surreptitious removal or displacement, as set forth.

163,221. COMPOUNDS FOR INSULATING TELEGRAPH-WIRES. Alfonso A. Magtenphlin, Coldwater, Mich., assignor of one-half his right to Llewellen H. Johnson, same place. [Filed Feb. 2, 1875.]

Brief.—Pine-tar, eleven; coal-tar, four; resin, fifty; pulverized coke, sixteen; india-rubber, three and a half.

An insulating material composed of pine-tar, coal-tar, resin, coke, and india-rubber, mixed and compounded in the proportions and manner substantially as herein set forth.

163,222. COMPOSITIONS FOR PAVING AND ROOFING. James R. McClintock, New Orleans, La. [Filed Apr. 3, 1875.]



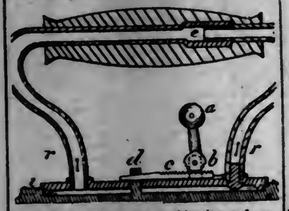
A semi-fluid solution of asphaltum in spirits of turpentine of commerce, put up and ready for use for paving, roofing, and other purposes, substantially as described.

163,223. COMPOSITIONS FOR PAVING AND ROOFING. James R. McClintock, New Orleans, La. [Filed Apr. 3, 1875.]

A semi-fluid solution of asphaltum in benzine, naphtha, or other similar light hydrocarbons, put up and ready for use for paving, roofing, and other purposes, substantially as described.

HELIOTYPE RELIEF PROCESS. JAMES R. OSGOOD & CO. BOSTON

163,224. DOOR-SILLS. Thomas F. McEy, Franklin, Ind. [Filed Mar. 17, 1875.]



1. The sill A, provided with the longitudinal groove D and one or more transverse grooves, c, substantially as and for the purposes herein set forth.

2. The sill A, provided with the rise or offset C, having longitudinal groove or gutter D, and one or more transverse grooves or gutters, c, leading outward from the main gutter, substantially as and for the purposes herein set forth.

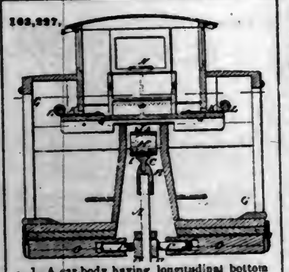
163,225. SAD-IRONS. Thomas F. McEy and Edwin C. McClain, Franklin, Ind. [Filed Mar. 17, 1875.]

Brief.—A tubular handle and plate attached to and detached from a sad-iron by a slide-rack and pinion.

1. In a sad-iron, the combination and arrangement of the lever a, the pinion b, the rack-slide c, the lug or post d, and the handle-plate f, substantially as and for the purpose set forth.

2. The combination of the iron g, having recess s and leg d, the handle-plate f, having legs e, and secured by the slide c, and the detachable hollow handle r, all constructed substantially as set forth.

163,226. PILE-DRIVERS. M. McDermott, Galveston, Tex. [Filed Jan. 22, 1875.]

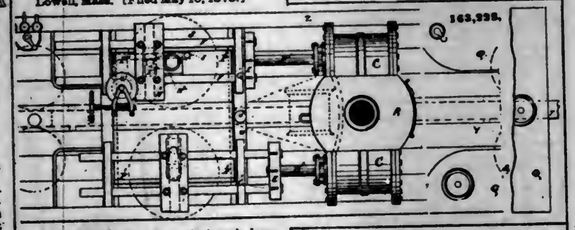


Brief.—A slide-block is provided with pivoted spring-nippers, that engage with permanent jaws on the hammer-block, on which is secured a pivoted sharpened spring-lever, that opens the nippers when they descend, to engage with the jaws on the hammer. The lever strikes a cross-bar in ascending, and releases the hammer. A portable frame and windlass are moved forward by a pulley and cord, and held by a hook against the cross-ties.

1. The combination of slide S, with P, spring-nippers T T Y Y c c, jaws U U, lever V, and spring X, operating substantially as and for the purpose specified.

2. In combination with the portable frame E and windlass F G H I J, the beam L and pulley M, connected and operating substantially as and for the purpose specified.

163,227. STEEL-RAIL-RAILWAY CARS. O. McWayne, Colfax, Cal. [Filed Dec. 5, 1874.]



1. A car-body having longitudinal bottom cavity, provided with aligned vertical truck-wheels, having room for side play in the upper part thereof, and horizontal spring-pressed wheels P P, arranged as shown and described, for the purpose specified.

2. The laterally-sliding floor J in the car-body G, above the recess that receives the trucks and rails, substantially as shown and described.

3. The combination of the shafts L, ropes or chains K and M, and the vertical shaft N with the sliding floor J and the car-body G, substantially as shown and described.

4. The combination of the slides O, horizontal wheels P, and springs Q with the car-body G and the flat rails or plates P, attached to the posts A, substantially as shown and described.

163,228. LOCOMOTIVES. Jos V. Meigs, Lowell, Mass. [Filed May 16, 1873.]

1. The combination of a swivel-truck, bearing-wheels mounted thereon to run on a rail, and adjustable clamping or balancing wheels mounted on the truck, and bearing upon the vertical sides of the rail, as set forth.

2. The combination of two rails, one above the other, a truck, bearing-wheels mounted thereon, one behind the other, and adjustable clamping or balancing wheels, one above the other, and bearing on opposite vertical sides of the rails, as set forth.

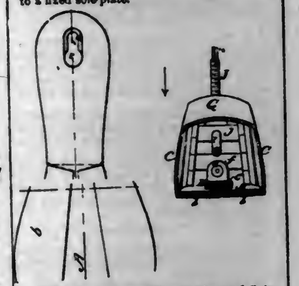
3. The combination of a truck-frame, a turn-table, bearing-wheels adapted to run on top of the rail, and clamping or balancing wheels to run on the side of the rail, as set forth.

4. The combination of the turn-table, the truck-frame, the posts, the overlapping sliding tubes, and the springs inclosed therein, as set forth.

5. A supplementary supporting wheel or truck interposed between and combined with the end trucks, whereby one end of the car may be supported, while the other may be projected across a gap in the track, substantially as and for the purpose set forth.

6. The method of propelling cars by driving from the clamping-wheels instead of from the bearing-wheels, substantially as set forth.

7. The combination of longitudinally reciprocating transversely-slotted cross-heads, and blocks sliding in said slots, and carrying the wrists of the driving-cranks, as set forth.



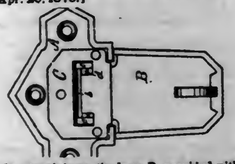
8. The method of mounting the driving-wheels in a frame adapted to slide laterally, to accommodate itself to curves in the track, substantially as and for the purpose set forth.

9. The method of varying the pressure of the driving or of the balancing or clamping wheels upon the track by shafts laterally adjustable in the truck-frame, as set forth.

10. The method of constructing a locomotive with the cylinders and boiler between the tank and driving-wheels, all combined as set forth.

163,229. SHOE-STRETCHERS. Clemens Miller and Peter Miller, Marietta, Ohio. [Filed Apr. 17, 1875.]

Brief.—Laterally-sliding plates are attached to a fixed sole-plate.



1. The screw-threaded operating-rod J, in combination with the detachable instep-plate G, intermediate fixed sole-plate A, toggle-jointed rods i i', link H, and actuating-rod I, substantially as specified.

2. The combination of the sliding plate E and T-rail c with the toggle-jointed rods D, plates C, and their actuating mechanism, substantially as specified.

3. The combination of the toggle-jointed rods i i', link H, and their actuating-rod I with movable instep-plate G and intermediate fixed sole-plate A, substantially as specified.

163,230. HASPS FOR TRUNK-LOCKS. Frank W. Mix, Terryville, Conn., assignor to the Eagle Lock Company, same place. [Filed Apr. 20, 1875.]

In a trunk-hasp, the hasp B, provided with the hub formed of the parts a b c, as shown and described, in combination with the plate d, upper portion A a a, and the plate C, all substantially in the manner specified.

163,231. MACHINES FOR DIVIDING COUNTER OR HEEL-STIFFENER BLANKS. S. Moore, South Sudbury, Mass., assignor to himself and H. Rogers, same place. [Filed Mar. 15, 1875.]

Brief.—An elliptically-cut stiffener-blank is divided through its middle or longer axis, leaving a beveled edge upon each opposite cut edge.

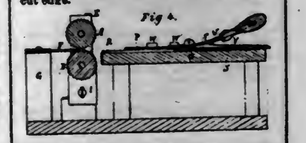


Fig 4.

1. The combination of the feed-rollers A B, the knife F, and the two gage-plates H I, arranged relative to the feed-rolls as described.

2. The knife or cutter F, provided with the shoulders d d, in combination with the gage-plates H I, provided with the hooks e e, to engage with the said shoulders, as set forth.

3. The hooked gage-plates H I, pivoted to the shafts of the feed-rolls and provided with springs M N to hold them in connection with the knife.

4. The combination of the gages W and the slide-jaws T U, applied to the table, as set forth.

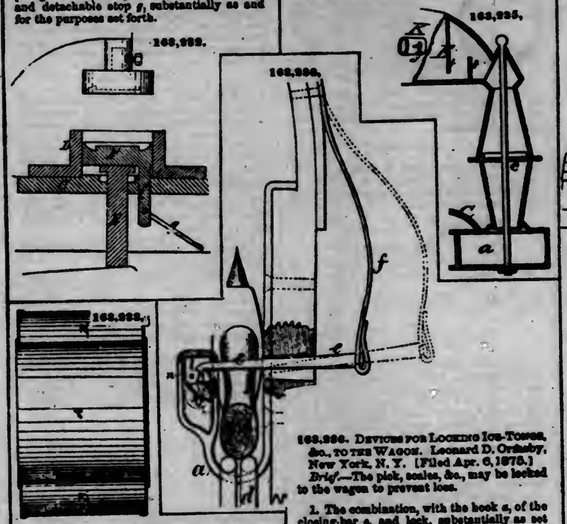
5. The combination of the feed-rolls A B, provided with mechanism for operating them, the knife F, the gage-plates H I, the table O, the abutments or gages W, the slide-plate T, and the jawed lever U, all being arranged substantially in manner and for the purpose specified.

163,232. SOAP-PRESSES. Anthony Neupert, Buffalo, N. Y. [Filed Mar. 22, 1875.]

The combination, in a soap-press, with the bed C and pressing-box D, of the removable lower die F, actuated by the disconnected plunger-rod E, and provided with guide-pin f and detachable stop g, substantially as and for the purposes set forth.

163,233. FIRE-PLACE STOVES. Henry P. Ohm, Baltimore, Md., assignor of one-half his right to Alva Hubbard, same place. [Filed Apr. 7, 1875.]

Brief.—The draft may be either direct through, or indirect, in the latter case passing into the chamber of the radiator; thence downward through the column; thence through the chamber, annular flue, and column D', into the chamber, and finally out through the pipe.



1. Outstanding heat-radiating columns D D', forming part of the indirect draft-flue, in combination with deflectors e, substantially as described.

2. The heat-radiating box E, divided as described, in combination with the combustion-section J and the escape E', substantially as described.

3. Outlets K K', combined with the combustion-chamber section J and radiator E, divided as described.

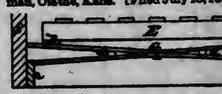
4. Chambers a a, columns D D', flue C, and radiator E, combined with outlet-pipes K K' and damper g, substantially as described.

5. The cylindrical section H of the fire-pot, provided with the flange i resting on the annular perforated shelf L, in combination with the inclined perforated ring l and combustion-chamber J, substantially as described.

163,234. DEVICES FOR LOCKING ICE-TONGS, &c., TO THE WAGON. Leonard D. Ormsby, New York, N. Y. [Filed Apr. 6, 1875.]

Brief.—The pick, scales, &c., may be locked to the wagon to prevent loss.

1. The combination, with the hook a, of the closing-bar c, and lock, substantially as set forth.

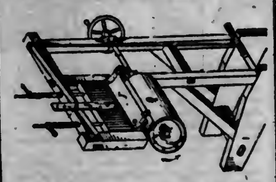


2. The spring-tumbler n, and bolt l, in combination with the hook a, closing-bar c, and spring f, substantially as set forth.

163,235. COFFEE-POTS AND TEA-POTS. Jno. Noland and Charles Neidich, Oil City, Pa. [Filed Dec. 14, 1874.]

Brief.—A box for containing the coffee or tea, surrounded by an air-chamber, to float the same.

The box A, having the perforated bottom and removable perforated top, in combination with the concentric air-chamber B, whereby the box is supported in the liquid, as specified.



163,236. SPRING BED-BOTTOMS. R. F. Notoman, Olathe, Kans. [Filed July 18, 1874.]

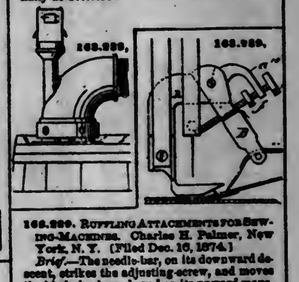
The spring bed-bottom herein described, consisting of two sets of springs, each pair C C of which are united at their centers, and arranged transversely of the bedstead, with the ends of the lower springs resting in notches in the longitudinal cleats a a, attached to the side rails A A, adjustable blocks d d, longitudinal spring-bars D, transverse bars E E', and spring-slats F, all constructed and arranged substantially as set forth.

163,237. BOX-MACHINES. Sam. K. Paige, George W. Paige, and Jeremiah A. Paige, Hennikor, N. H. [Filed Mar. 1, 1875.]

Brief.—The material is wound upon a forming-cylinder, and its ends held in position by a pressure-bar while being secured.

In a box-machine, substantially such as described, the presser-bar I combined to operate with the drum C, substantially as and for the purpose set forth.

163,238. TRANSIT-TANKS FOR NIGHT-SOIL. William Painter, Baltimore, Md. [Filed Dec. 22, 1874.]



Brief.—The induction-pipe is attached to an induction-elbow. Said elbow is provided with a vent-standard, upon which is mounted the deodorizer. When filled the elbow is detached and the cap fastened in its place.

1. A night-soil tank, provided with an open air-vent, in combination with a deodorizing apparatus, which is attached directly to and mounted upon said tank, and in direct communication with the tank-vent, substantially as described.

2. The combination with a transit-tank, of an induction-pipe, provided with a tank-coupling device, and an independent vent-passage, substantially as described.

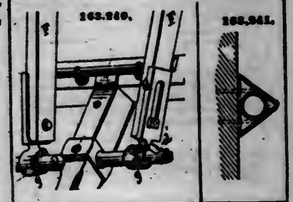
3. The combination with a night-soil transit-tank, of the induction pipe, the independent vent-passage, and a deodorizing apparatus, mounted upon said induction-pipe and connected with said vent-passage, substantially as described.

4. The combination, with a night-soil transit-tank, of the sealing-cap, composed of the annular-flanged cap, provided with the inclined-faced lugs and the gasket-plate, provided with a central upper bearing for contact with the coincident inner surface of the cap, substantially as described.

163,239. RUFFLING ATTACHMENTS FOR SEWING-MACHINES. Charles H. Palmer, New York, N. Y. [Filed Dec. 16, 1874.]

Brief.—The needle-bar, on its downward descent, strikes the adjusting-screw, and moves the blade backward, and on its upward movement strikes the upper end of the pivoted lever, and carries the blade and cloth forward. The adjusting-screw, that regulates the length of the gather, has a stop-ring on it, by which the changes are measured.

1. The combination of the standard A, lever B, and adjusting-screw F, the parts being relatively arranged as described, whereby the needle-bar is its ascent and descent alternately comes in contact with the lever and adjusting-screw, for the purpose of giving proper movement to the crimping-blade, substantially as described.



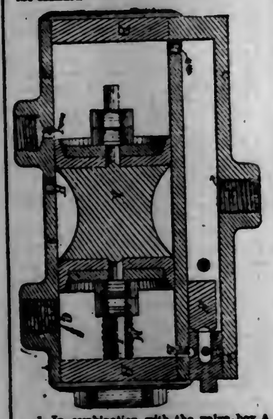
2. The crimping-blade, provided with an extension adapted to serve as a handle, substantially as described.

3. The combination of the standard A, having arm a^{10}, lever B, with the adjusting-screw F and stop-ring f, as described.

163,240. ANIMAL-POKERS. Josiah F. Palmer, Auburn, N. Y. [Filed Dec. 20, 1874.]

1. In combination with the trunnions D and D, and with the pivotal eyes g and g of the bow F, the stop d and detent d' d'', arranged to operate in the manner and for the purpose substantially as set forth.

2. In combination with the spurs f and f, the collars P and P, secured to or upon the pins I and I, and operating as stops to prevent the further inward passage of said spurs, substantially as specified.



162,941. SHIELDS FOR PIPES. H. Palmieri, New York, N. Y. [Filed Dec. 23, 1874.]

Brief.—A continuous shield for water or other conducting pipes of a triangular shape, and completely covering the pipe, so that one of the sides may lie flush against the wall.

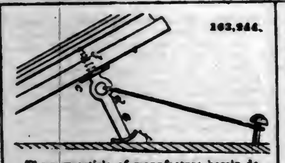
A continuous shield for water or other conducting pipes, constructed substantially as described, so that it shall be impossible to climb the same.

162,942. VALVES FOR AIR-BRAKES. Chas. H. Perkins, Bloomington, Ill., assignor to George Westinghouse, Jr., Pittsburg, Pa. [Filed Mar. 12, 1875.]

Brief.—Compressed air passes through the small valve to a tank, from which it passes to the operating-cylinder, as soon as the pressure is taken from the right-hand side of the large piston-valve, allowing said valve to uncover the cylinder-port. When the pressure is equalized on both ends of the large valve, the spring forces it over the cylinder port, and retains the air therein. A greater pressure of air on the spring side of the valve opens the exhaust.

1. In combination with the valve-box A, provided with the inlet-port G, outlet-port I, and exhaust-port H, and connected through suitable mechanism with an air-pressure tank, the valve K, arranged to move longitudinally within said valve-box, having greater width of bearing than, and capable of covering and uncovering, said outlet-port I, and of connecting the same with said exhaust-port H, substantially as and for the purpose specified.

2. In combination with the valve-box A and valve K, the spring M, placed between one end of said valve-box and said valve, and having such length as to cause said valve to cover the outlet-port whenever the air-pressure upon its ends is equal, substantially as and for the purpose shown.



162,943. STOVE IMPLEMENTS. I. A. Perry, Oxford, Pa. [Filed Apr. 16, 1874.]

Brief.—An ordinary plate-lifter is constructed upon the extremity of one leg of a pair of tongs, the other leg assisting to hold the article while being lifted.

The combination, with a pair of lifting-tongs, of the rigid prong *c*, forming a part of one of the jaws, and extending inwardly and downwardly therefrom toward the other to form a purchase, substantially as specified.

162,944. PICTURE-FRAME HANGERS. F. A. Phillippi, Reading, Pa. [Filed Mar. 30, 1875.]

162,944.

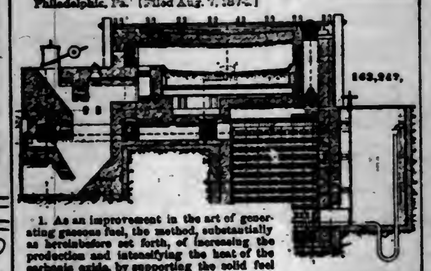
The new article of manufacture herein described, consisting of screw *b*, collar *c*, eyelet *d*, projection *e*, and rocker *f*, for the purpose set forth

---

162,945. BROOM-HANDLE SOCKETS. John H. Pike, San Francisco, Cal. [Filed Feb. 6, 1875.]

Brief.—The socket is provided with an indentation or hood upon the inside near one end, into which a projection upon the mandrel of the broom-machine takes to hold the socket to rotate it. Rough punched perforations assist in holding the broom-corn upon the socket.

The herein-described broom handle socket A, provided with barred perforations *e* and hood or bulge *m*, substantially as and for the purposes specified.



162,946. VESTS. Chas. R. Fiympton, Jersey City, N. J. [Filed Oct. 31, 1874.]

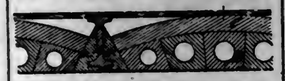
Brief.—Pantaloons are suspended by short strap attached to the vest.

The vest A, provided with buttons on the lower part of its inside, in combination with the strap C, having a button-hole, *c*, at its upper end, and a buckle, D, at its lower end, and strap E, provided with button-holes at each end, which engage with buttons *a a* on the waistband, substantially as described, and for the purpose set forth.

162,947. PROCESSES AND APPARATUS FOR GENERATING GASEOUS FUEL. A. Ponsard, Paris, France, assignor to William Sellers, Philadelphia, Pa. [Filed Aug. 7, 1874.]

1. As an improvement in the art of generating gaseous fuel, the method, substantially as hereinbefore set forth, of increasing the production and intensifying the heat of the carbonic oxide, by supporting the solid fuel upon the hearth of the producer, and supplying to it above the hearth a regulated continuous current of highly-heated air.

2. The method, substantially as hereinbefore set forth, of supplying to the producer a regulated continuous current of highly-heated air above the hearth, and confining the traverse of the air supplied and the gas produced to the hottest section of the producer, substantially as described.



3. The combination, substantially as hereinbefore set forth, of a gas-producer, a furnace, a recuperator, through which the air is supplied which supports the combustion in the gas-producer, and a recuperator, through which the air is supplied which supports the combustion in the furnace.

4. The combination, with the gas-producer, the furnace, and the recuperator, of the regulating-valves, substantially as set forth.

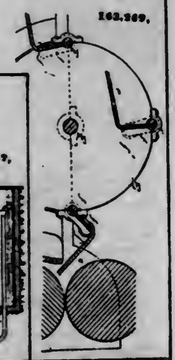
5. The divided recuperator, substantially as described.

6. The bricks provided with recesses, substantially as and for the purposes set forth.

162,948. FIRE-PROOF CEILINGS AND FLOORS. George B. Post, Bernards, N. J. [Filed Mar. 12, 1875.]

The combination of a flat-bottomed hollow tile arch, B, and a solid arch, C, with each other, and with the floor-beams, the hollow-tile arch B forming a permanent center for the solid arch C, which supports the load above, while at the same time a level ceiling is produced, substantially as shown and described.

162,949. WOOL-WASHING MACHINES. J. K. Proctor, Philadelphia, Pa., assignor of one-half his right to James Smith & Co., same place. [Filed Jan. 28, 1870.]

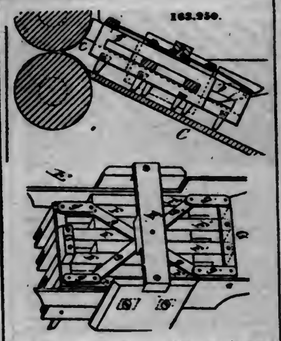


Brief.—In a tank with a curved bottom is journaled a cylinder, which carries pivoted teeth on shafts having crank-arms, for forcing the wool up an incline to a pair of rollers.

1. In a wool-washing machine, a lifting cylinder having revolving shafts F F and teeth *e f*, as described.

2. The shafts F, having winches *f*, anti-friction rollers *f' f'*, and teeth *e*, substantially as shown and set forth.

3. A lifting-cylinder, having an under-feed motion forward toward the incline B, and carrying teeth pivoted on its periphery, which move concentric with said incline on their upward motion, and drop by gravity into position for re-engagement with the stock, as set forth.



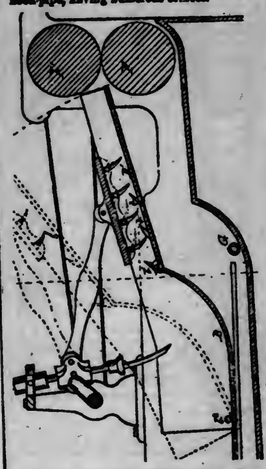
4. In combination with the revolving shafts F F of a wool-washing lifting-cylinder, having winches *f* and anti-friction rollers *f'*, the curved way *b b*, substantially as shown and described.

162,949.

162,950. WOOL-WASHING MACHINES. J. K. Proctor, Philadelphia, Pa., assignor of one-half his right to James Smith & Co., same place. [Filed Apr. 28, 1870.]

Brief.—In the tank is an inclined false bottom; also a fixed carrier, which has alternating reciprocating projecting hinged swinging teeth, connected by heads and arms.

162,950.



1. In a wool-washing machine a carrier provided with two series of alternately-reciprocating bars, F F', having downwardly-projecting hinged or swinging teeth *f f'*, substantially as shown and described.

2. In combination with the incline C, the fixed carrier E, provided with the reciprocating bars F moving over said incline, substantially as shown and described.

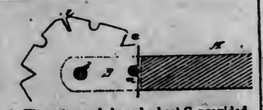
3. In combination with the bars F and F' secured to the cross-heads G and G', the arms *g g'* for producing an alternate reciprocation of said bars, substantially as shown and described.

162,951. WOOL-WASHING MACHINES. J. K. Proctor and Chas. R. Lindsay, Philadelphia, Pa.; said Lindsay assignor to James Smith & Co., same place. [Filed Oct. 9, 1873.]

Brief.—Within a tank or bowl is a hinged adjustable chute, with fixed and pivoted teeth, above which is a reciprocating carrier with pivoted teeth. Below the chute is a transverse feed-pipe, having numerous orifices.

1. In a wool-washing machine, the combination of the following elements: a chute or incline for bearing the stock to the squeeze-rolls, a fork or deliverer for placing the stock on said incline, and a reciprocating carrier, moving to and fro in the same plane above said incline, and having hinged or pivoted teeth.

2. The combination of a reciprocating carrier, having hinged or pivoted teeth, and a fork or deliverer for transferring the wool from the bottom of the bowl to said carrier, the latter moving to and fro in the same plane.



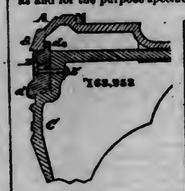
3. The chute or incline B, hinged or pivoted substantially as described, so as to admit of adjustment with reference to the squeeze-rolls, and allow easy access to the bowl for the purpose of cleansing the same, as set forth.

4. The hinged or pivoted pins *b'*, located on or above the surface of the bottom of the chute B, substantially as and for the purpose set forth.

5. In a wool-washing machine, a transverse flood-pipe, G, having discharge-orifices *g g*, and constructed substantially as shown and described, so that the water therefrom will be discharged in an even sheet over the bottom of the bowl, for the purpose set forth.

162,952. DEVICES FOR SWAGING AND SETTING SAW-TEETH. Maurice J. Rahilly, Beaver Falls, Pa. [Filed Mar. 3, 1875.]

Brief.—A polygonal-shaped wheel provided with notches *c* of varying degrees of angularity for swaging saw-teeth; and with slots *i* of different widths for setting the same. The wheel is arranged between the bifurcated arms of a lever, and is so formed that it cannot be locked in place by the center-pin, until the groove in one of the square portions rests over a rib, *e*, secured transversely in the handle.



1. The polygonal-shaped wheel C, provided with two or more V-shaped notches, *c*, of different angles, and two or more V-shaped slots, *i*, of different width, and held in a handle, A, for the purposes herein set forth.

2. The combination of the handle A with jaws B B and rib *e*, the polygonal-shaped wheel C, having grooved sides, and provided with notches *c* and slots *i*, and the pin *b*, all substantially as and for the purposes herein set forth.

162,953. STOVE-LEG FASTENINGS. Albert J. Redway, Cincinnati, Ohio. [Filed Mar. 22, 1875.]

Brief.—The catch turns upon the bolt by which it is attached to the stove-leg.
